Introductory statement	1
Inventory	3
Index of common and scientific names	41

INTRODUCTORY STATEMENT

During the period represented by this inventory David Fairchild continued his explorations of the countries on the West Coast of Africa, including the Gold Coast, Cameroon, Gambia, and French Guinea. Included in his collections were ornamental trees and shrubs and also a number of local varieties of fruits and vegetables, all tropical or subtropical in their requirements.

An interesting series of cotton varieties (*Gossypium* spp.; Nos. 73125 to 73137) was obtained in French West Africa by R. H. Forbes, Compagnie Générale des Colonies. The curator of the Lloyd Botanic Garden at Darjiling, India, G. H. Cave, presented a number of ornamental perennials and woody plants (Nos. 73140 to 73155) adapted for growing in the southern United States. A rather large collection of new or rare woody ornamentals (Nos. 73401 to 73450), largely from eastern Asia, was presented by Vicary Gibbs, Aldenham House Gardens, Herts, England. From the botanic garden at Tashkent, Turkestan, Russia, there were obtained seeds of a miscellaneous collection (Nos. 73595 to 73619, 73810 to 73819) of hardy fruits, vegetables, cereals, and ornamentals, which will be tested in the colder parts of the United States. A collection of seeds consisting chiefly of cereal varieties and also adapted for trial in the northern part of this country (Nos. 74023 to 74111) was presented by the bureau of introduction, Institute of Applied Botany, Leningrad, Russia.

The botanical determinations of introductions have been made and the nomenclature determined by H. C. Skeels, and the descriptive matter has been prepared under the direction of Paul Russell, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

OFFICE OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., January 30, 1929.

41436—29

SMITHSONIAN

INVENTORY[1]

73050 to 73056.

From Cape St. Mary, Gambia, West Africa. Seeds presented by Archibald J. Brooks, Director, Department of Agriculture, through H. N. Vinall, Bureau of Plant Industry. Received June 10, 1927.

73050 and 73051. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

73050. *Basso.* **73051.** *Kinto.*

73052 to 73055. PENNISETUM GLAUCUM (L.) R. Br. (*P. typhoideum* Rich.). Poaceae. **Pearl millet.**

73052. *Majyo.* **73054.** *Tanyo.*

73053. *Mor. fingo.* **73055.** *Tuno.*

73056. DIGITARIA EXILIS (Kippist) Stapf. Poaceae. **Fundi.**

Findo. A tropical African annual grass 18 inches high. The seeds are used by the natives as food.

For previous introduction see No. 55974.

73057 to 73059.

From Leningrad, Russia. Seeds presented by A. Kol, chief, bureau of introduction, Institute of Applied Botany, through J. W. Pincus, Amtorg Trading Corporation, New York, N. Y. Received June 7, 1927.

73057. BETULA ERMANI Champ. Betulaceae. **Birch.**

A tree up to 100 feet in height, with peeling, creamy white bark and orange-brown branches. Native to Manchuria, Chosen, and Japan. It is said to be liable to injury by spring frosts, owing to its habit of starting into early growth.

For previous introduction see No. 50289.

73058. SCHIZANDRA CHINENSIS (Turcz.) Baill. Magnoliaceae.

A hardy ornamental woody vine with compact bunches of small red berries.

For previous introduction see No. 65287.

73059. TILIA MANDSHURICA Rupr. and Maxim. Tiliaceae.

A very large-leaved linden which is locally used for making water troughs, barrels, and also beehives. It may be utilized in the colder parts of the United States as an ornamental park and shade tree.

For previous introduction see No. 57246.

73060. MEIBOMIA RENSONI Painter. Fabaceae.

From San Juan, Porto Rico. Seeds presented by O. W. Barrett, agricultural director, Department of Agriculture and Labor. Received June 10, 1927.

As described in the Revista de Agricultura Tropical, El Salvador, vol. 1, p. 65, the barajillo is a rapidly growing shrub native to the Republic of El Salvador at altitudes ranging from 2,000 to 4,000 feet. Under favorable conditions it sometimes becomes a small tree about 18 feet high. The trifoliate leaves are softly hairy and up to 3½ inches in length, and the small purplish flowers are borne in terminal racemes late in October. The roots of the barajillo are very large and penetrate deeply into the soil; the tubercles formed by the nitrogen-gathering bacteria are usually found only on the upper third of the root. All kinds of cattle are exceedingly fond of this plant; furthermore, it is capable of enduring prolonged drought and of thriving in very poor soil.

For previous introduction see No. 55446.

73061. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Rasikulu, Nadroga, Lautoka, Fiji Islands. Seeds presented by R. B. Howard. Received April 8, 1927.

Rahari. A variety grown in the Fiji Islands.

73062. SOLANUM TUBEROSUM L. Solanaceae. Potato.

From Bolivia. Tubers of unknown origin received through the Federal Horticultural Board, May 20, 1927.

A yellow-fleshed variety.

73063 and 73064.

From China. Seeds collected by F. A. McClure, agricultural explorer, Bureau of Plant Industry. Received February 24, 1927. Numbered June, 1927.

73063. CUDRANIA sp. Moraceae.

No. 972. Near Lungnamki, December 19, 1926. A thorny shrub 3 meters high, producing abundant clusters of golden-yellow fruits.

73064. EUGENIA sp. Myrtaceae.

No. 977. Wild plants growing near Kanchow, Kiangsi, December 14, 1926. *Kwa tsz cha.* A low compact shrub with dense foliage and black fruits the size of a pea or larger. It is apparently not particular as to soil and does well even on sterile slopes.

[1] It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designation appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

73065. CARICA PAPAYA L. Papayaceae. **Papaya.**

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received June 13, 1927.

One of the best varieties in the Canal Zone.

73066. PSEDERA HENRYANA (Hemsl.) C. Schneid. Vitaceae.

From Coimbra, Portugal. Plants collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 29, 1927.

No. 1316. April 8, 1927. An ornamental subtropical vine with variegated foliage, which clings to stone walls by means of round flat pads.

73067 to 73072.

From West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received March and April, 1927.

73067. JASMINUM DICHOTOMUM Vahl. Oleaceae. **Jasmine.**

No. 1241. Near Aburi, Gold Coast, February 26, 1927. A climbing tropical shrub with deep-green leaves in pairs and fragrant white flowers..

73068. PTERYGOTA KAMERUNENSIS Schum. and Engl. Sterculiaceae.

No. 1162. Botanic garden, Victoria, Cameroon, February 10, 1927. A handsome tropical African tree with large scarlet fruits the size of an orange, but irregular in shape.

73069. RITCHIEA REFLEXA (Schum. and Thonn.) Gilg and Benedict. Capparidaceae.

No. 1227. Between Akkra and Aburi, Gold Coast, February 26, 1927. An ornamental tropical shrub with large greenish fragrant flowers in umbels and large elongated podlike fruits.

73070. STERCULIA sp. Sterculiaceae.

No. 1212. Near village of Doblo, between Akkra and Winneba, Gold Coast, February 27, 1927. A large handsome tropical tree with large deep-green leaves and pods the size of apples.

73071. SYNSEPALUM DULCIFICUM (Schum.) Daniell. Sapotaceae.

No. 1173. Botanic garden, Victoria, Cameroon, February 10, 1927. *Miraculous fruit.* An ornamental tropical African shrub about 6 feet high, with dark-red fruits which, when eaten, make sour things taste sweet.

73072. MALACANTHA WARNECKEANA Engler. Sapotaceae.

No. 1244. Between Akkra and Aburi, Gold Coast. An attractive tropical shrub with a profusion of red berries similar to coffee berries. These berries contain a single large seed surrounded by sweet yellow pulp, which is very refreshing.

73073. ELYMUS DELILEANUS Schult. Poaceae. **Grass.**

From Giza, Egypt. Seeds presented by Mah Abaza, director, horticultural section, Ministry of Agriculture. Received June 13, 1927.

An annual tufted grass up to a foot high, with narrow, rigid leaves. Native to Asia Minor and Egypt.

73074. LOLIUM PERENNE L. Poaceae. **Perennial ryegrass.**

From Ayr, Scotland. Seeds presented by McGill & Smith, at the request of R. G. Stapledon, director, Welsh Plant-Breeding Station, Aberystwyth, Wales, through H. N. Vinall, Bureau of Plant Industry. Received June 13, 1927.

Scotch-grown seeds.

73075. LARIX sp. Pinaceae. **Larch.**

From Dunkeld, Perth, Scotland. Seeds presented by B. R. Hoffman, Philadelphia, Pa. Received June 15, 1927.

A hybrid larch, a cross between a Japanese and a Scotch larch, said to be faster growing than either parent.

73076. STERCULIA FOETIDA L. Sterculiaceae. **Hazel bottle tree.**

From Mayaguez, Porto Rico. Seeds presented by T. B. McClelland, horticulturist, agricultural experiment station. Received June 15, 1927.

A tall handsome tropical tree with large compound leaves and spreading panicles of dull-red flowers. Native to tropical Asia.

73077 and 73078. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Moca, Dominican Republic. Seeds presented by Dr. R. Ciferri, director, Estación Nacional Agronómica y Colegio de Agricultura. Received June 15, 1927.

Locally developed varieties.

73077. From Monte Criste.

73078. From Samana.

73079. CEIBA ACUMINATA (S. Wats.) Rose. Bombacaceae. **Pochote.**

From Jalisco, Mexico. Seeds obtained through L. H. Dewey, Bureau of Plant Industry. Received April 26, 1927.

This close relative of the kapok tree (*Ceiba pentandra*) is described by P. C. Standley (Contributions from the United States National Herbarium, vol. 23, pt. 3) as a large or medium-sized tree with a greenish spiny trunk, compound leaves, and hard, oblong fruits about 7 inches long which contain whitish down used for stuffing pillows, mattresses, life preservers, insulation, and for making candlewicks. It is native to western and southern Mexico.

For previous introduction see No. 66168.

73080. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soy bean.**

From Algiers, Algeria. Seeds presented by Dr. L. Trabut, Government botanist, through W. T. Swingle, Bureau of Plant Industy. Received June 18, 1927.

73081. CASIMIROA EDULIS Llave. Rutaceae. **White sapote.**

From Chico, Calif. Plants from the United States Plant Introduction Garden. Received June 21, 1927.

Plants grown from scions originally received from O. E. Orpet, Santa Barbara, Calif. The fruits are up to 3½ inches in diameter and are of excellent quality.

73082 to 73085. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Mandalay, Burma, India. Seeds presented by M. McGibbon, economic botanist, Department of Agriculture. Received June 21, 1927.

Locally developed varieties.

73082. A. Cultivators' mixed varieties.

73083. B. Selection C/10.

73084. C. Selection C/19.

73085. D. Mixed prolific varieties.

73086. APIUM PROSTRATUM Labill. Apiaceae.

From Wellington, New Zealand. Seeds presented by A. H. Cockayne, director, fields division, Department of Agriculture. Received June 20, 1927.

A white-flowered herbaceous New Zealand plant of prostrate habit, which is closely related to common celery (*Apium graveolens*).

73087 and 73088.

From Algeria, North Africa. Plants presented through W. T. Swingle, Bureau of Plant Industry. Received June 17, 1927.

73087. EUPHORBIA LARO Drake. Euphorbiaceae.

From the botanic garden, Algiers. A drought-resistant tree 8 feet high, which may be of value as stock for *Euphorbia intisy*, a rubber-yielding tree.

73088. OLEA EUROPAEA L. Oleaceae. **Olive.**

From Biskra. An Algerian variety of large size and good quality.

73089. BOMBAX FLAMMEUM Ulbrich. Bombacaceae.

From South Bank Province, Gambia, West Africa. Seeds presented by Maj. L. A. W. Brooks, traveling commissioner. Received June 16, 1927.

A tropical West African tree, probably of ornamental value.

73090 to 73093. LEPTOSPERMUM spp. Myrtaceae.

From New Plymouth, New Zealand. Seeds purchased from Duncan & Davies. Received June 16, 1927.

73090. LEPTOSPERMUM SCOPARIUM Forst. **Manuka.**

An evergreen shrub which is one of the most abundant in New Zealand. It is of compact, bushy habit, sometimes 30 feet high. The hard, leathery, sharp-pointed leaves are very aromatic, for which reason they have sometimes been used for making tea. The flowers, borne in great profusion, are white or pink, and about three-fourths of an inch across.

For previous introduction see No. 61060.

73091. LEPTOSPERMUM SCOPARIUM Forst.

Variety *roseum*. An ornamental evergreen shrub 10 feet high, with numerous pink flowers. Native to New Zealand.

73092. LEPTOSPERMUM SCOPARIUM NICHOLLI (Darr.-Smith) Turrill.

A red-flowering variety of this very abundant tree or shrub, the beautiful colonial counterpart of the English broom or gorse, sometimes 30 feet high. Early voyagers and colonists sometimes used its pungent leaves in place of tea. Indeed, the whole plant, including leaves, flowers, fruit, and young shoots, is highly aromatic, and the oil which it contains will perhaps

73090 to 73093—Continued.

in the future be put to some useful purpose. The wood is largely used for fences and firewood. The Maoris made use of it for their paddles and spears, and a bunch of the twigs makes an excellent broom.

For previous introduction see No. 53928.

73093. LEPTOSPERMUM sp.

An evergreen ornamental shrub with numerous white or pink flowers. Native to New Zealand.

73094. COMBRETUM sp. Combretaceae.

From Cape St. Mary, Gambia, West Africa. Seeds presented by Archibald J. Brooks, Director, Department of Agriculture. Received June 22, 1927.

A tropical woody ornamental with flowers produced in spikes.

73095 to 73099.

From Ceylon. Seeds presented by A. A. Ward, American Ceylon Mission, Tellippalai. Received June 18, 1927.

Seeds from trees growing in the Jaffna Peninsula, northern Ceylon, at 9 to 20 feet altitude. The soil is a stiff red clay and contains a small amount of sand. Coral rock underlies the whole region at depths varying from 10 inches to 15 feet.

73095. AZADIRACHTA INDICA (L.) Juss. Meliaceae.

Vempu, vermpoo. A large handsome tropical Indian tree, with long spreading branches and small fragrant white flowers. The timber is hard and is not eaten by termites. The tree is suited to the seacoast as well as to the interior. The leaves and fruits are used medicinally, and the seeds contain an oil which is used for rheumatism.

For previous introduction see No. 46573.

73096 and 73097. CAESALPINIA PULCHERRIMA (L.) Swartz. Caesalpiniaceae. **Flower fence.**

Peacock flower. A handsome tropical evergreen shrub, about 7 feet high, which in Ceylon withstands a drought of two or three months. It has mimosalike foliage and showy flowers which appear on the new growth.

73096. A yellow-flowered variety.

73097. A red-flowered variety.

73098. CHALCAS KOENIGII (L.) Kurz. Rutaceae.

Karu vempu, catu vermpoo. A small tropical tree found chiefly in the dry region. The seeds are in season generally during April. It prefers light rich soil and with cultivation will thrive at an altitude of 2,000 feet. In Ceylon the dried leaves are used in curries, soups, etc. This variety is propagated by seeds.

73099. MADHUCA LONGIFOLIA (L.) Coville (*Bassia longifolia* L.). Sapotaceae.

Illupai, il loop pay. A medium-sized tree of attractive habit and thick foliage, which thrives in the dry districts of northern Ceylon. The flowers have a pungent odor and are dried and eaten, and in India alcohol is obtained from them. The seeds yield an edible oil used in cooking both by the Europeans and the natives of Ceylon. It could probably be refined so as to compete with olive oil. The oil cake makes good fertilizer, and it may prove useful in making soap. The timber is hard and heavy and useful for wall plates, doors, and window frames.

73100 and 73101.

From Amoy, China. Seeds presented by H. H. Chung, University of Amoy. Received May 3, 1927.

73100 and 73101—Continued.

73100. ARDISIA CRISPA (Thunb.) A. DC. (*A. crenata* Sims). Myrsinaceae.

A small ornamental tropical shrub, about 7 feet high, with narrow green leaves and red fruits. Native to southeastern Asia.

For previous introduction see No. 67758.

73101. GLYPTOSTROBUS PENSILIS (Staunton) Koch. Pinaceae.

A handsome coniferous subtropical tree from southeastern China. The timber is very durable.

73102 to 73109. CITRUS spp. Rutaceae.

From Soledad, Cienfuegos, Cuba. Cuttings presented by Robert M. Grey, superintendent, Harvard Botanic Garden. Received May 9, 1927.

73102. CITRUS LIMONIA × AURANTIFOLIA.

Lemon × native lime. A very productive variety with thin skin; it is intermediate between the parents in size and flavor. (*Grey.*)

73103 and 73104. CITRUS NOBILIS DELICIOSA × SINENSIS.

73103. No. 1. *Tangerine × orange.*

73104. No. 2. *Tangerine × orange.*

73105 and 73106. CITRUS SINENSIS (L.) Osbeck. **Sweet orange.**

73105. *Orange seedling.*

73106. *Valencia sport.*

73107 and 73108. CITRUS SINENSIS × NOBILIS DELICIOSA.

73107. No. 1. *Orange × tangerine.*

73108. No. 2. *Orange × tangerine.*

73109. CITRUS sp.

Hybrid Harvard No. 1.

73110 to 73122.

From West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April, 1927.

73110. AMOMUM GRANUM-PARADISI L. Zingiberaceae.

A gingerlike tender plant 4 feet high, with stems red at the base, narrow leaves up to 8 inches long, and yellow flowers. At one time it was a well-known condiment, but is now used in veterinary medicine only. It is used by the natives of the Cameroon region as a drug.

73111. AMOMUM MELEGUETA Roscoe. Zingiberaceae.

Aburi, Gold Coast. A gingerlike bushy perennial, 5 feet high, with small golden seeds which are used as spice.

For previous introduction see No. 72992.

73112. PHIALODISCUS UNIJUGATUS Radlk. Sapindaceae.

No. 1225. February 27, 1927. *Etu dua.* A handsome shade tree with dense dark-green foliage and salmon-pink fruits which open and expose black seeds.

73113. APODYTES BENINENSIS Hook. f. Icacinaceae.

No. 1266. French Guinea, March 10, 1927. A small tropical tree, 3 to 5 meters high, found on very dry rocky land near Mamou. It produces attractive red berries which are bitter and not edible.

73110 to 73122—Continued.

73114. BOMBAX BUONOPOZENSE Beauv. Bombacaceae.

No. 1261. Near Mamou, French Guinea, March 10, 1927. A small tropical tree 8 to 10 meters high, with a spiny trunk. The large deep-red flowers, which appear before the leaves, are said to be darker on the young trees than on the old trees.

73115. DACTYLOCTENIUM AEGYPTIUM (L.) Richter (*Eleusine aegyptiaca* Desf.) Poaceae. **Grass.**

No. 1235. Collected near the village of Mibye, near Winneba, Gold Coast, February 27, 1927. A tropical prostrate annual grass which forms mats by rooting at the nodes.

For previous introduction see No. 51496.

73116. ERAGROSTIS CILIARIS (L.) Link. Poaceae. **Grass.**

No. 1224. Collected near the village of Mibye, near Winneba, Gold Coast, February 27, 1927. A tropical annual grass which grows in sandy places.

For previous introduction see No. 38010.

73117. EUGENIA CORONATA Schum. and Thonn. Myrtaceae.

No. 1216. March 1, 1927. A tropical evergreen shrub or tree with white flowers and dark-red berries, found near the seacoast within reach of the salt spray, near Elmina Castle, Gold Coast.

73118. FICUS PLATYPHYLLA Delile. Moraceae.

No. 1218. Cape Coast, Gold Coast, March 1, 1927. A handsome shade tree which grows to 80 feet in height and 24 feet in circumference, with dark-green stiff leathery leaves, about 10 inches in length, arranged in picturesque groupings on the branches. This tree is said to be the source of Kano rubber. The latex is used as bird lime, and tannin is obtained from the bark. A fabric is made from the bast by some of the natives of central Africa.

73119. INDIGOFERA MACROPHYLLA Schum. and Thonn. Fabaceae.

No. 1243. Between Akkra and Aburi, Gold Coast, February 26, 1927. A tall bushy tropical leguminous plant producing a large quantity of seed, found in stiff clay soil in the lowlands.

73120. MOMORDICA FOETIDA Schum. and Thonn. Cucurbitaceae.

No. 1171. Near Bouea, Cameroon, February 11, 1927. A tropical ornamental cucurbitaceous vine with egg-shaped orange fruits which are covered with soft spines and which split open to expel the seeds.

73121. MUSANGA SMITHII R. Br. Moraceae.

No. 1213. Near the Ekona estate, Cameroon, March 18, 1927. The corkwood tree of West Africa, which owes its name to the lightness of its white wood. It is 60 to 80 feet high and is a rapid grower. The leaves are palmate with drooping leaflets.

73122. PENNISETUM CILIARE (L.) Link (*P. cenchroides* Rich.). Poaceae. **Grass.**

No. 1294. Near Cape Manuel Lighthouse, Dakar, Senegal, March 16, 1927. A tropical grass 8 to 18 inches high, which grows in bunches 6 to 8 inches in diameter on sandy and rocky soil.

For previous introduction see No. 51648.

73123 and 73124.

From Soledad, Cienfuegos, Cuba. Seeds presented by Robert M. Grey, superintendent, Harvard Botanic Station. Received May, 1927.

73123 and 73124—Continued.

73123. ACACIA SCORPIOIDES (L.) W. F. Wight (*A. arabica* Willd.). Mimosaceae.

According to J. H. Holland (Useful Plants of Nigeria, pt. II, p. 288), a large proportion of the gum arabic of commerce is furnished by this tree, which is native to northern Africa and southwestern Asia. True gum arabic, however, is said to come only from another species, *Acacia senegal*. The pods and bark of *A. scorpioides* are used for tanning, and the leaves and young pods are sometimes fed to cattle. The wood is hard and durable and is used in India for making tools.

For previous introduction see No. 64663.

73124. OCHROMA LAGOPUS Swartz. Bombacaceae. **Balsa wood.**

A West Indian tree up to 18 meters high, with large yellowish white flowers. The extremely light wood is used for refrigeration purposes, insulation, and life preservers.

For previous introduction see No. 54332.

73125 to 73137. GOSSYPIUM spp. Malvaceae. Cotton.

From Kulikoro, Sudan, French West Africa. Seeds presented by R. H. Forbes, Compagnie Générale des Colonies. Received April 13, 1927.

73125. GOSSYPIUM ARBOREUM L.

Variety *Sanguineum*. Originally from Dahomey.

For previous introduction see No. 66870.

73126. GOSSYPIUM HERBACEUM L.

Korean silk.

73127 to 73129. GOSSYPIUM HIRSUTUM L.

73127. *Cambodia.* Originally from India.

73128. *Hardwick 20.*

73129. *Over the top.*

73130. GOSSYPIUM NANKING Meyen.

Karagani. Originally from India.

73131. GOSSYPIUM OBTUSIFOLIUM Roxb.

Originally from northern Nigeria.

For previous introduction see No. 67524.

73132. GOSSYPIUM PERUVIANUM Cav.

Originally from Dahomey.

For previous introduction see No. 65125.

73133 and 73134. GOSSYPIUM PUNCTATUM Schum. and Thonn.

73133. *Koroniba, Eikasso.*

73134. *Soudan Francais.*

73135. GOSSYPIUM sp.

Garrabe hills. Originally from India.

73136. GOSSYPIUM sp.

A kidney cotton.

73137. GOSSYPIUM sp.

Sea Island cotton originally from Dahomey.

73138. HERMODACTYLUS TUBEROSUS (L.) Mill. Iridaceae.

From Philadelphia, Pa. Tubers presented by Mrs. J. Norman Henry. Received May 16, 1927.

A hardy irislike plant a foot or more high with leaves 1 to 2 feet long and dark-purple and green flowers. Native to southern Europe.

73139. VIGNA CYLINDRICA (Stickm.) Skeels. Fabaceae. Catjang.

From Giza, Egypt. Seeds presented by Mah Abaza, director, horticultural section. Received May 13, 1927.

Lubia. A locally grown variety.

73140 to 73155.

From Darjiling, India. Seeds presented by G. H. Cave, curator, Lloyd Botanic Garden. Received April 21, 1927.

73140. ABIES SPECTABILIS Lambert (*A. webbiana* Lindl.). Pinaceae. **Himalayan fir.**

An Asiatic fir which, as described by W. J. Bean (Trees and Shrubs Hardy in the British Isles, vol. 1, p. 128), is a tree sometimes 150 feet high in its native home in the Himalayas. The dark-green leaves are arranged in two opposite series so as to leave a V-shaped opening along the top; the individual leaves are 1 to 2 inches long. The cones, about 5 inches long, are violet-purple at first, becoming brown.

For previous introduction see No. 65751.

73141. ACER PECTINATUM Wall. Aceraceae. **Maple.**

A small subtropical maple, with 5-lobed, heart-shaped leaves about 4 inches long. Native to Sikkim, India, at altitudes of 8,000 to 12,000 feet.

For previous introduction see No. 56455.

73142. ACONITUM LURIDUM Hook. f. and Thoms. Ranunculaceae.

A subtropical herbaceous ornamental perennial, 2 to 3 feet high, with dull-red flowers.

For previous introduction see No. 38994.

73143. AINSLIAEA PTEROPODA DC. Asteraceae.

An erect herbaceous perennial, native to the temperate Himalayas, with hairy oval or heart-shaped leaves and small heads of white flowers.

73144. ANAPHALIS CONTORTA (Don) Hook. f. Asteraceae.

A bushy subtropical perennial up to 2 feet high, with narrow-oblong leaves and white or yellowish flowers. Native to the temperate Himalayas.

73145. ASTER SIKKIMENSIS Hook. f. and Thoms. Asteraceae.

An erect subtropical perennial, about 3 feet high, with numerous blue flower heads. Native to Sikkim, India.

73146. ASTER TRICEPHALUS C. B. Clarke. Asteraceae.

A small vigorous subtropical herbaceous perennial, with reddish flower heads. Native to Sikkim, India.

73147. ASTILBE RIVULARIS Buch.-Ham. Saxifragaceae.

A subtropical herbaceous perennial with creeping rhizomes and yellowish white flowers borne on stems 5 feet high.

For previous introduction see No. 50362.

73148. BERBERIS NAPAULENSIS (DC.) Spreng. Berberidaceae. **Barberry.**

A fine ornamental shrub, which grows to a good size, with stiff, bright-green, thorny leaves, yellow flowers, and maroon-colored berries. Native to eastern Asia.

For previous introduction see No. 67676.

73140 to 73155—Continued.

73149. BETULA UTILIS D. Don (*B. bhojpattra* Wall.). Betulaceae. **Birch.**

A tree 40 to 60 feet high, with reddish brown trunk and branches and bark which peels off in papery flakes. It is native to subtropical regions of the Himalayas. The oval coarsely toothed sharp-pointed leaves are 3 inches long, dark green above and paler beneath. In winter the orange-chocolate color of the twigs is very striking.

For previous introduction see No. 56400.

73150. CLEMATIS MONTANA Buch.-Ham. Ranunculaceae.

A vigorous ornamental climber, 30 feet or more high, with pure-white solitary flowers about 2 inches across. It is native to the Himalayas.

For previous introduction see No. 50337.

73151. CORYLUS FEROX Wall. Betulaceae. **Hazel.**

A wild hazel from Sikkim, India, whose small nuts, closely resembling the common hazelnut in taste, are much prized by the natives. The tree, 20 feet high, grows at altitudes of 8,000 to 10,000 feet. The wood is pinkish white, even grained, and moderately hard.

For previous introduction see No. 58488.

73152. DICHROA FEBRIFUGA Lour. Hydrangeaceae.

A tall shrub, abundant in the temperate Himalayas from 5,000 to 8,000 feet. It has narrow leaves 3 to 8 inches long, terminal panicles of blue or purplish flowers, and berries of an intense blue.

For previous introduction see No. 47675.

73153. PITTOSPORUM FLORIBUNDUM Wight and Arnott. Pittosporaceae.

A handsome subtropical tree, with a short straight trunk and spreading branches and numerous yellowish flowers in terminal panicles. The tree has light-colored, strong, tough wood and yields an aromatic yellow resin or oleoresin having very adhesive properties. It is a native of the outer Himalayas, ascending to 3,500 feet.

For previous introduction see No. 57273.

73154. SAUSSUREA DELTOIDEA (DC.) C. B. Clarke. Asteraceae.

A tall herbaceous perennial, 4 to 8 feet in height, with large leaves having cottony lower surfaces. The extremely variable flower heads are often tipped with purple, and the corollas are white. It is native to the central and eastern Himalayas, growing at altitudes of 6,000 to 11,500 feet.

For previous introduction see No. 47786.

73155. VIBURNUM CORDIFOLIUM Wall. Caprifoliaceae.

A large subtropical shrub with heart-shaped sharply toothed leaves and small dense corymbs of white flowers. Native to the temperate Himalayas.

73156 to 73164.

From Magyarovar, Hungary. Seeds presented by John Suranyi, Agricultural Experiment Station for Plant Industry. Received May 5, 1927.

73158. LOLIUM PERENNE L. Poaceae. **Perennial ryegrass.**

Variety *hungaricum.*

73157. PHLEUM PRATENSE L. Poaceae. **Timothy.**

H.

73156 to 73164—Continued.

73158 to 73161. PISUM SATIVUM L. Fabaceae. **Pea.**

73158. *Mg.* 73160. *Fg.*

73159. *No. 1. Mo.* 73161. *No. 2. Mo.*

73162 and 73163. POA PRATENSIS L. Poaceae. **Bluegrass.**

73162. Variety *latifolia.*

73163. Variety *angustifolia.*

73164. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

Variety *pilosum.*

73165. RUBUS sp. Rosaceae. Blackberry.

From Lovedale, Cape Province, South Africa. Seeds presented by D. A. Hunter. Received April 13, 1927.

A large blackberry from the cool damp region about 20 miles south of Lovedale, on the Hogsback Mountains. (*Hunter.*)

73166 to 73170. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Leningrad, Russia. Seeds presented by A. Kol, chief, bureau of introduction, Institute of Applied Botany. Received May 14, 1927.

Locally grown seeds.

73166. No. 2. *Aran.* Collected at Kabul, Afghanistan, by Prof. N. Vavilov during his expedition in 1925.

73167. No. 6. Originally from the Agricultural Department, Nairobi, Kenya Colony, East Africa.

73168. No. 12. *Arhar No. 1.* From India.

73169. No. 16. From Colon, Panama. Collected by S. M. Bukassov during his expedition in 1926.

73170. No. 19. Obtained in 1925 in the market, city of Guatemala.

73171. PHASEOLUS RADIATUS L. Fabaceae.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, director, botanic gardens. Received May 13, 1927.

Locally grown seeds.

73172 to 73175.

From Sumatra and Taiwan. Seeds collected by H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received May 5, 1927.

73172. ELEUSINE CORACANA Gaertn. Poaceae. **Ragi.**

No. 6281. Plants grown with millet by the Tsuo aborigines at Namakaban, on Mount Morrison, Taiwan, at an altitude of 2,700 feet.

73173. QUERCUS sp. Fagaceae. **Oak.**

No. 6732. A large tropical oak tree growing at Pargambiran, Asahan, Sumatra.

73174. SALAKKA sp. Phoenicaceae. **Palm.**

No. 6815. Silo Maradja, Asahan, Sumatra. A very beautiful little palm growing in wet places. The fruits are used for acid by the natives, and the leaves make durable palm-leaf thatches.

73175. GOSSYPIUM sp. Malvaceae. **Cotton.**

No. 6380. *Kapas koelenbang.* This species is cultivated by the natives at Silo Maradja, Asahan, Sumatra. It is a curious shrub with greatly elongated fruits and seeds adhering in masses, from which all the fiber may be pulled off without separating the seeds.

73176. GOSSYPIUM sp. Malvaceae. **Cotton.**

From French Guinea, West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received May 16, 1927.

No. 1268. Dalaba. March 10, 1927. A tall-growing cotton used in making a coarse fabric. This cotton is cultivated and used by the Fullas, a very ancient race.

73177. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From the island of Guam. Seeds presented by C. W. Edwards, director, Guam Agricultural Experiment Station. Received May 16, 1927.

Locally grown small-seeded pigeon peas of the so-called Guam variety.

73178 to 73204.

From Moscow, Russia. Seeds presented by the secretary, Institute of Applied Botany and New Cultures. Received April, 1927.

73178. ALLIUM JESDIANUM Boiss. and Buhse. Liliaceae.

A pink-flowered onion, about 2 feet high, with flat linear leaves and a many-flowered umbel. Native to the Caucasus Mountains.

73179. ALTHAEA ROSEA (L.) Cav. Malvaceae. **Hollyhock.**

Black mallow. A local variety of the common hollyhock from western Russia.

73180. APOCYNUM VENETUM L. Apocynaceae.

A hardy herbaceous perennial, 2 feet high, with white flowers. The roots are used in medicine as a purgative and emetic.

73181 to 73184. ASTRAGALUS spp. Fabaceae.

73181. ASTRAGALUS CANDIDUS M. Pop.

A hardy leguminous perennial.

73182. ASTRAGALUS FILICAULIS Fisch. and Mey.

An erect annual leguminous plant, 3 to 10 inches high, native to Asia Minor and Turkestan.

73183. ASTRAGALUS RETAMOCARPUS Boiss. and Hohen.

A hardy herbaceous perennial about 2 feet high, native to Asia Minor.

73184. ASTRAGALUS sp.

A hardy leguminous plant.

73185. CALLIGONUM ARBORESCENS Litv. Polygonaceae.

A drought-resistant shrub 10 feet high, said to be a good sand binder. It is found in the region of the Caspian Sea.

73186. CAMPANULA sp. Campanulaceae. **Bellflower.**

A hardy herbaceous perennial with large blue flowers.

73187. DELPHINIUM FLEXUOSUM Bieb. Ranunculaceae.

A hardy herbaceous perennial with violet flowers. Native to the mountains of Armenia.

73188 to 73190. EREMURUS spp. Liliaceae.

73188. EREMURUS LACTIFLORUS O. Fedtsch.

A hardy herbaceous perennial with light-yellow flowers.

73178 to 73204—Continued.

73189. EREMURUS OLGAE Regel.

A hardy herbaceous perennial with white flowers produced in a dense raceme. Native to Turkestan.

73190. EREMURUS ROBUSTUS Regel. **Giant desert candle.**

A tall hardy herbaceous perennial with pink flowers on a stalk 5 to 8 feet high. Native to Turkestan.

73191. EXOCHORDA KOROLKOWI Lavall. Rosaceae. **Turkestan pearlbush.**

A hardy ornamental shrub with large masses of white flowers. Native to the mountains of Turkestan.

73192. FERULA ASSAFOETIDA L. Apiaceae.

A large herbaceous perennial, 6 to 12 feet high, with yellow flowers. The plant, which has a bad odor, is one source of asafetida.

73193. MISCANTHUS SACCHARIFLORUS (Maxim.) Hack. Poaceae. **Grass.**

A tall perennial Chinese grass with large feathery fan-shaped panicles; related to sugar cane.

For previous introduction see No. 66395.

73194. ONOBRYCHIS PULCHELLA Schrenk. Fabaceae.

A hardy herbaceous perennial native to western Russia.

73195. PAEONIA ALBIFLORA Pall. Ranunculaceae. **Chinese peony.**

A hardy herbaceous ornamental perennial about 2 feet high, with white flowers. Native to Siberia.

73196 to 73200. PAPAVER SOMNIFERUM L. Papaveraceae. **Poppy.**

Decorative Mongolian varieties.

73196. A double red and black variety.

73197. A double pink variety.

73198. A double lilac-flowered variety.

73199. A single white variety with a pink edge.

73200. A double red and black variety.

73201. SILENE COMPACTA Fisch. Silenaceae.

A hardy herbaceous perennial with deep rose-colored flowers, found on dry slopes in Armenia.

73202. SPINACIA TETRANDRA Stev. Chenopodiaceae.

A wild spinach which grows in heavy soil from central Asia to Turkestan.

73203. VICIA SATIVA L. Fabaceae. **Common vetch.**

Seeds grown in western Russia.

73204. ZIZIPHORA CLINOPODIOIDES Lam. Menthaceae.

An ornamental perennial evergreen with pink flowers. Native to Siberia.

73205 to 73221. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soy bean.**

From Mandalay, Burma, India. Seeds presented by M. McGibbon, economic botanist. Received May 20, 1927.

73205 to 73221—Continued.

73205. No. 1. *Pe ngapi P. N. 1.* From Mandalay.

73206. No. 2. *Behrum 17010.* From the Chin Hills.

73207. No. 3. *Pe ngapi.* From Falam, Chin Hills.

73208. No. 4. *Pe ngapi.* From Sinlungaba, Bhamo district.

73209. No. 5. *Pe bôk.* From Bhamo.

73210. No. 6. *Pe ngapi.* From Kanpetlet, Pakokku Hill Tracts.

73211. No. 7. *Myet mai pe bôk.* From Yawnghwe, Southern Shan States.

73212. No. 8. *Pe bôk* (large variety). From Yawnghwe, Southern Shan States.

73213. No. 9. *Kyet tin nge pe bôk.* From Yawnghwe, Southern Shan States.

73214. No. 10. *Pe hto nin.* From Yawnghwe, Southern Shan States.

73215. No. 11. *Pe bôk.* From Hsipaw, Northern Shan States.

73216. No. 12. *Pe bôk.* From Mongtat, Namtu, Northern Shan States.

73217. No. 13. *Pe bôk.* From Lashio, Northern Shan States.

73218. No. 14. *Field pe bôk.* From Hsipaw, Northern Shan States.

73219. No. 15. *Taung ya pe bôk.* From Ksipaw, Northern Shan States.

73220. No. 16. *Pe ngapi.* From Akyab.

73221. No. 17. Green *pe bôk.* From Lashio, Northern Shan States.

73222. MELOCANNA HUMILIS Kurz. Poaceae. Bamboo.

From Sumatra. Plants collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the Allison V. Armour expedition. Received May 20, 1927. Numbered June, 1927.

No. 710. Sibolangit. March 26, 1926. A clump species of bamboo with thin-walled culms and internodes 30 inches long. The wood is of fair quality, and the stems are never more than 2½ inches in diameter. A single clump may produce 1,000 culms 10 meters long. It is from this species that the Battaks make their flutes. The Battak names are *boloeh* and *krapat*.

73223 to 73262.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, director, botanic gardens. Received May 4, 1927.

73223. ALBIZZIA LUCIDA (Roxb.) Benth. Mimosaceae.

A handsome spreading leguminous tree with attractive feathery leaves, native to the East Indies.

For previous introduction see No. 69144.

73224. AMOMUM LONGIPES Valet. Zingiberaceae.

A tropical gingerlike herb with a creeping rootstock and aromatic seeds. Native to the East Indies.

73225. AMOMUM TRUNCATUM Gagn. Zingiberaceae.

A tropical herbaceous gingerlike plant with a creeping rootstock and aromatic seeds.

73226 to 73229. BARRINGTONIA spp. Lecythidaceae.

73223 to 73262—Continued.

73226. BARRINGTONIA ASIATICA (L.) Kurz.

As described by Rock (The Ornamental Trees of Hawaii, p. 663) this is a large, handsome East Indian tree with thick leathery shining bright-green leaves and very conspicuous flowers with four white petals and numerous crimson-tipped stamens, resembling a brush. The fruit is quite large and is the shape of a 4-sided pyramid; it is smooth on the outside and contains one seed. The tree forms extensive forests along the shores of some of the Pacific islands. In the Molukkas an illuminating oil is extracted from the seeds, and the dry fruits are gathered by the natives and used as floats for their fish nets.

For previous introduction see No. 58459.

73227. BARRINGTONIA RACEMOSA (L.) Roxb.

An evergreen tropical ornamental tree, 30 feet high, with racemes of red flowers. Native to the East Indies.

73228. BARRINGTONIA SPICATA Blume.

A tropical ornamental shrub 5 feet or more high, with narrowly oblong leaves and rosy pink flowers in slender pendulous spikes a foot or more long. Native to Java.

73229. BARRINGTONIA SUMATRANA Miquel.

A large ornamental spreading East Indian shrub with leathery elliptic leaves and small whitish flowers in long pendulous spikes. Native to the Malay Peninsula.

73230. BELLUCIA AXINANTHERA Triana. Melastomaceae.

A small ornamental tropical American tree with large leaves, white flowers tinged with pink and yellow globose fruits about an inch in diameter. The white acidulous flesh is eaten by the natives of Venezuela.

73231. CARISSA SPINARUM L. Apocynaceae.

A spiny evergreen tropical ornamental tree, 20 feet high, with white axillary flowers. Native to the East Indies.

73232. CARYOTA GRIFFITHII Beccari. Phoenicaceae. Palm.

A medium-sized palm, 20 feet high, with pinnate leaves up to 9 feet long. Native to Burma.

73233. CARYOTA RUMPHIANA Mart. Phoenicaceae. Palm.

An East Indian palm about the size of the coconut, with graceful bipinnate leaves.

For previous introduction see No. 51710.

73234. CASUARINA RUMPHIANA Miquel. Casuarinaceae.

A tropical leafless tree with very slender pendent green branchlets. Native to Java.

For previous introduction see No. 67679.

73235. CHALCAS EXOTICA (L.) Millsp. Rutaceae.

A small ornamental white-flowered tree with pinnate dark-green leaves and roundish red fruits about half an inch long. Native to eastern Asia.

For previous introduction see No. 40392.

73236. CRACCA VOGELII (Hook. f.) Kuntze (*Tephrosia vogelii* Hook. f.). Fabaceae.

A shrubby legume from tropical Africa, the leaves of which are macerated and thrown into the water to kill fish.

For previous introduction see No. 66250.

73223 to 73262—Continued.

73237. CROTALARIA MYSORENSIS Roth. Fabaceae.

A much-branched tropical leguminous annual, 2 feet high, with yellow flowers. Native to eastern Asia.

For previous introduction see No. 72435.

73238. DAMMARA ALBA Rumph. (*Agathis loranthifolia* Salisb.). Pinaceae. **White dammar pine.**

A large Malayan coniferous tree, up to 100 feet, which is the source of the gum known commercially as dammar, which is used in the making of varnish.

For previous introduction see No. 51815.

73239. ELAEOCARPUS GRANDIFLORUS J. E. Smith. Elaeocarpaceae.

An ornamental evergreen shrub about 20 feet high, with white and crimson flowers. Native to Mauritius.

For previous introduction see No. 69153.

73240. ELAEOCARPUS TREUBII Hochr. Elaeocarpaceae.

A tropical Asiatic tree with clusters of small flowers. It may be of value as an ornamental.

73241. ELETTARIA ATROPURPUREA Teysm. and Binn. Zinziberaceae.

A herbaceous tropical plant, up to 4 meters high, leaves marked with red and greenish sour edible fruits.

73242. GARDENIA GJELLERUPII Valet. Rubiaceae.

A tropical East Indian shrub or small tree up to 5 meters high, with fragrant showy yellow flowers.

73243 and 73244. HONCKENYA FICIFOLIA Willd. Tiliaceae.

For previous introduction see No. 67572.

73243. A purple-flowered ornamental shrub, native to the East Indies.

73244. Variety *alba*. A white-flowered form.

73245. JATROPHA MULTIFIDA L. Euphorbiaceae.

An ornamental tropical tree, 5 to 15 feet high, with palmately divided leaves and scarlet flowers. Native to Java.

For previous introduction see No. 60398.

73246. JATROPHA PODAGRICA Hook. Euphorbiaceae.

A handsome Central American shrub 1 or 2 feet high, with peltate, 3-lobed to 5-lobed leaves 4 to 8 inches wide and orange flowers with scarlet petals.

For previous introduction see No. 69157.

73247. LIVISTONA COCHINCHINENSIS (Blume) Mart. Phoenicaceae. **Palm.**

A tall fan-leaved palm, 50 feet high, native to Malakka.

73248. MELIA CANDOLLEI Juss. Meliaceae.

A tropical ornamental tree with pinnate foliage and panicled flowers.

73249. PANDANUS FURCATUS Roxb. Pandanaceae. **Screw pine.**

An East Indian ornamental tree, up to 5 meters high, with dark-green linear spiny leaves.

For previous introduction see No. 51728.

73223 to 73262—Continued.

73250. PANGIUM EDULE Reinw. Flacourtiaceae.

A Philippine tree up to 25 meters high, with very large leaves, yellowish green flowers, and oval brown fruits, 6 inches long, with edible flesh. The seeds are poisonous when fresh, but are edible after steeping in water.

For previous introduction see No. 56067.

73251. PAYENA LEERII (Teysm. and Binn.) Kurz. Sapotaceae.

The gutta sundek tree of the Malay Peninsula; of possible value as a source of gutta-percha.

For previous introduction see No. 66233.

73252. PHAEOMERIA MAGNIFICA (Roscoe) Schum. (*P. imperialis* Lindl.). Zinziberaceae.

A tropical herbaceous perennial, up to 20 feet high, with leaves 1 to 2 feet long and numerous scarlet flowers. Native to Mauritius.

For previous introduction see No. 67585.

73253. PHASEOLUS CARACALLA L. Fabaceae. **Bertoni bean.**

Java-grown seeds.

For previous introduction see No. 61006.

73254. PITHECOLOBIUM CLYPEARIA (Jack) Benth. Mimosaceae.

A tropical ornamental low tree with finely cut foliage and small whitish flowers. Native to the East Indies.

73255. PITHECOLOBIUM HYMENEAEFOLIUM (Humb. and Bonpl.) Benth. Mimosaceae.

An ornamental leguminous tree with pinnate foliage, native to tropical America.

73256. PSIDIUM ARACA Raddi. Myrtaceae.

A tropical American shrub which bears small edible yellow fruits, said to contain few seeds.

For previous introduction see No. 38944.

73257. RHODOMYRTUS TOMENTOSA (Ait.) Wight. Myrtaceae. **Rose myrtle.**

A small handsome shrub with abundant pink flowers and small edible purplish fruits the size of gooseberries. Native to southeastern China.

For previous introduction see No. 65849.

73258. SACCIOLEPIS INTERRUPTA (Willd.) Stapf. Poaceae. **Grass.**

A tall stout tropical grass, 3 to 5 feet high, native to swampy places in the East Indies.

73259. SARACA DECLINATA (Jack) Miquel. Caesalpiniaceae.

A tropical ornamental pinnate-leaved tree with bright-yellow, red-tinged flowers, native to Java.

For previous introduction see No. 44900.

73260. SARACA INDICA L. Caesalpiniaceae.

An ornamental tropical tree with large heads of scarlet flowers, native to southern India.

For previous introduction see No. 66154.

73261. SESBANIA PAULENSIS Barb.-Rodr. Fabaceae.

A leguminous shrub described by Rodrigues (Plantes Novas Cultivadas Jardim Botanico do Rio de Janeiro, vol. 2, p. 13) as of erect habit, about 10 feet high, with narrow, angular branches, finely pinnate leaves, and handsome yellow flowers in few-flowered racemes.

For previous introduction see No. 65306.

73223 to 73262—Continued.

73262. TRICHOLAENA ROSEA Nees. Poaceae.

Java-grown seeds. **Natal grass.**

73263 to 73266.

From Ventimiglia, Italy. Seeds presented by S. W. McLeod Braggins, superintendent, La Mortola. Received May 7, 1927.

73263 to 73265. CISTUS spp. Cistaceae. **Rockrose.**

73263. CISTUS CORBARIENSIS Pourr.

An ornamental shrub up to 5 feet high, with white flowers about an inch in diameter. Native to Spain.

73264. CISTUS FLORENTINUS Lam.

An ornamental shrub, 3 feet high, which is a hybrid between *Cistus monspeliensis* and *C. salvifolius*. It has very narrow leaves and white flowers.

For previous introduction see No. 67636.

73265. CISTUS PURPUREUS Lam.

A shrub, 4 feet or less in height, which is a hybrid between *Citus ladaniferus* and *C. villosus*. The narrowly oblong leaves are wrinkled above, and the lilac-purple flowers with yellow petal bases are 3 inches across and usually in threes.

For previous introduction see No. 67637.

73266. CLERODENDRUM sp. Verbenaceae.

A hardy ornamental shrub, native to western China.

73267. LOTUS ULIGINOSUS Schkuhr. Fabaceae.

From Auckland, New Zealand. Seeds presented by the New Zealand Loan & Mercantile Agency. Received May 7, 1927.

A herbaceous perennial pasture plant of considerable importance in New Zealand, where it grows in wet swampy ground.

For previous introduction see No. 62378.

73268 to 73270.

From Ventimiglia, Italy. Seeds presented by S. W. McLeod Braggins, superintendent, La Mortola. Received May 7, 1927.

73268 and 73269. RAPHIOLEPIS INDICA (L.) Lindl. Malaceae.

For previous introduction see No. 63632.

73268. A low ornamental evergreen shrub, up to 5 feet high, with loose panicles of pink flowers about half an inch across and red fruits. Native to southern China.

73269. Variety *Phaeostemon*.

73270. SCHINUS DEPENDENS Ortega. Anacardiaceae.

An ornamental spiny shrub or small tree with pinnate fragrant foliage and dense racemes of small yellow flowers.

For previous introduction see No. 42878.

73271 to 73273.

From Bordeaux, Gironde, France. Seeds presented by Prof. L. Beille, director, botanic garden of Talence. Received May 9, 1927.

73271. CHENOPODIUM QUINOA Willd. Chenopodiaceae. **Quinoa.**

A South American herbaceous plant about 5 feet high, the seeds of which are used as food.

73271 to 73273—Continued.

73272. ELAEAGNUS PUNGENS REFLEXA (Morr. and Dec.) Rehder. Elaeagnaceae.

An ornamental spreading, hardy, somewhat spiny Japanese shrub up to 4 meters high, with oval-lanceolate leaves, fragrant silvery white flowers in small pendulous clusters followed by red fruits.

For previous introduction see No. 32941.

73273. PTEROCARYA FRAXINIFOLIA (Lam.) Spach (*P. caucasica* Meyer). Juglandaceae.

A handsome spreading tree 60 feet or less in height, with attractive dark-green, pinnate leaves about a foot long. It is native to the Caucasus and will probably not be hardy north of Massachusetts.

For previous introduction see No. 64208.

73274 to 73285.

From Paris, France. Seeds presented by Vilmorin-Andrieux & Co. Received May 9, 1927.

73274. CLEMATIS VEITCHIANA Craib. Ranunculaceae.

A Chinese woody climber with papery leaves and long loose clusters of drooping yellowish white flowers.

For previous introduction see No. 53660.

73275. DIERVILLA CORAEENSIS (Thunb.) DC. Caprifoliaceae.

An ornamental Japanese shrub, 6 to 10 feet high, with oval long-pointed leaves 3 to 5 inches long and flowers which are at first pale pink, later changing to carmine.

For previous introduction see No. 43841.

73276. GENISTA FLORIDA L. Fabaceae.

An evergreen shrub about 6 feet high, with yellow flowers. It is native to Spain.

73277. HYPERICUM sp. Hypericaceae.

A yellow-flowered Chinese shrub which will probably prove hardy throughout most of the United States.

73278. ILEX AQUIFOLIUM L. Aquifoliaceae. **English holly.**

Variety *wilsonii*. A hardy ornamental tree, native to western China, with dark-green oval spiny leaves and ovoid red berries.

73279. LIGUSTRUM WALKERI Decaisne. Oleaceae. **Privet.**

An evergreen shrub native to southern India, with oval or lanceolate leaves and large panicles of white flowers.

For previous introduction see No. 67041.

73280. PHILADELPHUS sp. Hydrangeaceae.

An ornamental Chinese shrub which will probably prove hardy throughout most of the United States.

73281. SKIMMIA FOREMANNII Knight. Rutaceae.

A low, densely branched Japanese evergreen shrub with narrow yellowish green leaves and roundish red berries. It is considered to be a hybrid between *Skimmia japonica* and *S. fortunei*.

For previous introduction see No. 67375.

73282. SPIRAEA HENRYI Hemsl. Rosaceae. **Spirea.**

An ornamental hardy Chinese shrub up to 2 meters high, with loose clusters of white flowers.

73274 to 73285—Continued.

73283. STRANVAESIA DAVIDIANA UNDULATA (Decaisne) Rehd. and Wills. Malaceae.

A low spreading evergreen shrub, or occasionally a small tree, native to western China. The leathery oval leaves are glossy green, 1 to 3 inches long, and the white flowers, about half an inch across, appear in terminal clusters. Its greatest charm as an ornamental is the abundant crop of orange fruits.

For previous introduction see No. 66312.

73284. SYRINGA TOMENTELLA Bur. and Franch. Oleaceae. **Wilson lilac.**

A bushy shrub about 8 feet high, with elliptic leaves, hairy beneath, and white or lilac flowers in clusters 6 inches long. Native to western China.

For previous introduction see No. 67055.

73285. TROCHODENDRON ARALIOIDES Sieb. and Zucc. Trochodendraceae.

A hardy evergreen shrub 3 feet high with greenish flowers. Native to Japan.

73286 and 73287.

From El Salvador, Central America. Seeds presented by Dr. Salvador Calderon, through Paul C. Standley, United States National Museum. Received May 16, 1927.

73286. TABEBUIA PENTAPHYLLA (L.) Hemsl. Bignoniaceae.

A handsome tropical deciduous tree, about 35 feet high, native to Central America. During its flowering period, from January to March, the numerous large clusters of pink flowers make the tree very attractive.

For previous introduction see No. 55737.

73287. TRIPLARIS AMERICANA L. Polygonaceae.

A large tropical timber tree with curious, 3-angled woody fruits. Native to Central America.

73288. SACCHARUM OFFICINARUM L. Poaceae. Sugar cane.

From Muzaffarpur, Bengal, India. Cuttings obtained from Noel Deer, superintendent of factories, through E. W. Brandes, Bureau of Plant Industry. Received May 21, 1927.

A locally developed variety.

73289 to 73388.

From Gandja, Transcaucasia, Russia. Seeds presented by the Central Transcaucasian Agricultural Plant Breeding and Experiment Station. Received May 26, 1927.

73289 to 73304. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. **Six-rowed barley.**

Numbers 73289 to 73298 are local varieties.

73289. No. 630. A white variety from Azerbaijan.

73290. No. 634. A black variety from Azerbaijan.

73388. TRITICUM SPELTA L. Poaceae. **Spelt.**

No. 2868. *Polba.* From Armenia.

73389. PHYLLOSTACHYS sp. Poaceae. **Bamboo.**

From Florida. Plants and rhizomes collected by K. A. Young, Bureau of Plant Industry. Numbered April, 1927.

A bamboo from a small grove of uncertain age growing on the Laughlin estate, Zellwood, Fla. The culms are up to 45 feet in height, 11 inches in circumference, and more elliptic in cross section than those of any other bamboo I have seen. The space between the nodes and what I am calling the "supranodal ring" is distinctly black. Otherwise this is much like *Phyllostachys bambusoides.* (*Young.*)

73390 to 73393.

From Auckland, New Zealand. Seeds presented by the New Zealand Loan & Mercantile Agency. Received May 7, 1927.

73390 and 73391. AGROSTIS CAPILLARIS L. Poaceae. **Rhode Island bent.**

Selections grown in New Zealand.

For previous introduction see No. 66625.

73390. A. 73391. B.

73392. FESTUCA RUBRA FALLAX (Thuill.) Hack. Poaceae. **Chewing's fescue.**

Grere. A perennial grass with loosely tufted culms, grown in New Zealand.

73393. LOTUS ANGUSTISSIMUS L. Fabaceae.

Variety *A–1.* An upright slender-stemmed leguminous annual about a foot high, with yellow flowers.

For previous introduction see No. 51856.

73394. JUGLANS sp. Juglandaceae. **Tocte.**

From Ecuador. Seeds presented by Dr. Francisco Banda, Legation of Ecuador, Washington, D. C. Received May 19, 1927.

A wild walnut which resembles closely the black walnut of the United States. The thick-shelled nut contains a kernel of mild pleasant flavor.

For previous introduction see No. 63588.

73395. TERAMNUS UNCINATUS (L.) Swartz. Fabaceae.

From Sao Paulo, Brazil. Seeds presented by Amadeu A. Barbiellini. Received May 20, 1927.

A slender tropical American leguminous vine, used as forage in Brazil and the Virgin Islands.

For previous introduction see No. 67889.

73396 to 73398. PISTACIA VERA L. Anacardiaceae. **Pistache.**

From Aleppo, Syria. Seeds obtained through Harry L. Troutman, American consul. Received May 31, 1927.

Varieties grown in the vicinity of Aleppo.

73396. *Aintab.* 73398. *Ashoori.*

73397. *Alemi.*

73399. BORASSUS FLABELLIFER L. Phoenicaceae. **Palmyra palm.**

From West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received June 1, 1927.

No. 1245. From the market at Secundee, Gold Coast, March 1, 1927. An African form of the Palmyra palm of India, which resembles the cabbage palm of Florida. It stands drought well and is a slow grower, though palms have attained a height of 7 feet in three years. The edible fruits taste a little like a mango, but they are very fibrous. In the number of uses to which this palm is put it rivals the coconut palm. A delicate sugar is made from the sap, which flows in abundance from its inflorescence when cut. The seeds are germinated, and the young subterranean hypocotyl is used as a vegetable.

For previous introduction see No. 66649.

73400. PRUNUS sp. Amygdalaceae. Plum.

From Lemberg, Moselle, France. Plants and scions presented by Paul Wack, Newark, N. J. Received April 7, 1927.

A French-grown plum with small yellow fruits. The tree is about 6 feet high, unarmed, with the upper branches pendulous.

73401 to 73450.

From Elstree, Herts, England. Plants presented by Hon. Vicary Gibbs, Aldenham House Gardens. Received April 8, 1927.

73401. ABELIA SERRATA Sieb. and Zucc. Caprifoliaceae.

An ornamental Japanese shrub with small pink flowers.

73402. ABELIA TRIFLORA R. Br. Caprifoliaceae.

An ornamental Himalayan shrub up to 15 feet high. It is of upright habit with rosy white flowers.

For previous introduction see No. 37478.

73403. ALNUS HIRSUTA Turcz. Betulaceae. **Alder.**

A rather handsome, medium-sized tree, native to Japan and Manchuria, with rounded-elliptic, slightly lobed leaves which are hairy beneath.

For previous introduction see No. 65912.

73404. ARTEMISIA INCANA (L.) Druce. Asteraceae. **Wormwood.**

An ornamental hardy bush having intense gray foliage which becomes blue with age.

73405. ARTEMISIA LACTIFLORA Wall. Asteraceae.

An ornamental white-flowered hardy herbaceous perennial native to Nepal.

73406. ASTRAGALUS MASSILIENSIS (Mill.) Lam. Fabaceae.

An attractive slow-growing spiny shrub with white flowers; native to western Europe.

73407. FAGELIA VIOLACEA (Cav.) Kuntze (*Calceolaria violacea* Cav.). Scrophulariaceae.

A shrubby evergreen plant from Chile with an abundance of showy purple-mauve flowers.

73408 to 73410. CASSINIA spp. Asteraceae.

73408. CASSINIA FULVIDA Hook. f.

An ornamental heathlike shrub which is covered with a yellowish down and produces white flowers. It is native to New Zealand.

For previous introduction see No. 72788.

73409. CASSINIA LEPTOPHYLLA (Forst.) R. Br.

A heathlike evergreen shrub 4 feet high, with silver-tinted foliage. Native to New Zealand.

73410. CASSINIA VAUVILLIERSII (Homb. and Jacq.) Hook. f.

An erect compact shrub, 6 to 10 feet high, with small narrow leathery leaves half an inch long and dense terminal corymbs of white flowers. Native to New Zealand.

For previous introduction see No. 72789.

73411 to 73414. CEANOTHUS DELILIANUS Spach. Rhamnaceae.

73411. *Arnoldii.* A compact bush with blue flowers.

73412. *Georges Simon.* A variety with lilac-rose flowers.

73401 to 73450—Continued.

73413. *Perle rose.* A variety with light-rose flowers.

73414. *Topaze.* A variety with panicles of pure blue flowers.

73415. CERATOSTIGMA GRIFFITHII C. B. Clarke. Plumbaginaceae.

A handsome shrub with bronzy leaves and dense clusters of blue flowers. Native to the Himalayas.

73416 to 73421. CISTUS spp. Cistaceae. **Rockrose.**

73416. CISTUS CYPRIUS Lam.

A stout ornamental bush up to 6 feet high, with narrow-oblong leaves and large white flowers. Native to southern Europe.

73417. CISTUS FLORENTINUS Lam.

For previous introduction and description see No. 73264.

73418. CISTUS OBTUSILOBUS Hort.

A dwarf spreading bush with small clusters of white flowers, which does well in partial shade.

73419. CISTUS PURPUREUS Lam.

For previous introduction and description see No. 73265.

73420. CISTUS ROSMARINIFOLIUS Pourr.

A low shrub, from southeastern Europe, with a profusion of small yellow flowers.

73421. CISTUS VILLOSUS L.

An erect hairy shrub, 3 to 4 feet high, with wrinkled gray-green leaves and one to three reddish purple flowers about 2 inches in diameter. Native to the Mediterranean region.

For previous introduction see No. 67350.

73422. CLEMATIS GLOBULOSA Hort. Ranunculaceae.

A semihardy climbing clematis, a hybrid between *Clematis scottii* and *C. coccinea*, which has small purple flowers.

73423. CLERODENDRUM TRICHOTOMUM FARGESII (Dode) Rehder. Verbenaceae.

A rapid-growing Chinese shrub, with dark-green or purplish, strongly veined, oval leaves and fragrant whitish flowers, borne in summer in panicles. The globular, peacock-blue fruits, about the size of peas, are set on the purple or crimson persistent calyx.

For previous introduction see No. 67638.

73424. CLERODENDRUM FOETIDUM Bunge. Verbenaceae. **Rose glory bower.**

A semihardy evergreen Chinese shrub, up to 5 feet high, with dark-crimson flowers.

73425. COPROSMA ACEROSA A. Cunn. Rubiaceae.

A low spreading evergreen shrub with prostrate wiry stems and attractive sky-blue berries. Native to New Zealand.

73426. COPROSMA PETRIEI Cheeseman. Rubiaceae.

A dwarf shrub, with prostrate stems, small leaves, and purplish fruits. Native to New Zealand.

73427. CORIARIA TERMINALIS XANTHOCARPA Rehd. and Wils. Coriariaceae.

A semihardy shrubby perennial with amber-colored fruits. Native to the Himalayas.

73401 to 73450—Continued.

73428. CORYLOPSIS WILLMOTTIAE Rehd. and Wils. Hamamelidaceae.
Willmott winter hazel.

A deciduous shrub, up to 12 feet high, native to central China. The leaves, 1 to 3 inches long, are oval or somewhat heart-shaped with sinuate margins, and the fragrant yellow flowers, which appear in early spring, are in racemes about 3 inches long.

For previous introduction see No. 65768.

73429. COTONEASTER FROEBELLII Hort. Malaceae.

A hardy shrub of graceful habit, with large pale-green leaves and large scarlet berries.

73430. CHAENOMELES sp. Malaceae.
Chinese quince.

Forrest No. 24781. A hardy ornamental shrub, native to southwestern China.

73431 to 73435. DEUTZIA spp. Hydrangeaceae.

73431. DEUTZIA LONGIFOLIA VEITCHII (Veitch) Rehder. **Long-leaf deutzia.**

This deutzia, from Yunnan, China, which bears its large flowers in dense many-flowered corymbs, is one of the handsomest of the genus, but has proved hardy only under protection at the Arnold Arboretum, Jamaica Plain, Mass.

For previous introduction see No. 66560.

73432. DEUTZIA MONBEIGII W. W. Smith.

A hardy ornamental shrub from southwestern China, about 1 meter high, with narrowly oval or oval leaves about 2 centimeters long and small cymes of white flowers.

73433. DEUTZIA SCABRA Thunb.

Variety *elegantissima*. A tall ornamental shrub, a hybrid between *Deutzia scabra* and *D. discolor purpurascens*, with carmine buds and pink flowers.

73434. DEUTZIA SETCHUENENSIS Franch.

A handsome Chinese shrub with corymbs of large white flowers.

73435. DEUTZIA WILSONI Duthie.

A very handsome Chinese shrub with reddish brown bark, soon peeling, and scabrous oblanceolate leaves, 3 to 5 inches long. The white flowers, nearly an inch across, are in open corymbs, and the petal margins are wavy and hooded.

For previous introduction see No. 66289.

73436. HYDRANGEA SERRATA (Thunb.) DC. Hydrangeaceae.

A small ornamental Japanese shrub with dark-green leaves and pale-pink flowers.

For previous introduction see No. 43848.

73437. HYPERICUM sp. Hypericaceae.

Wilson No. 256. A hardy bush of rounded habit, with a profusion of golden yellow flowers.

73438. ILEX YUNNANENSIS Franch. Aquifoliaceae.

A slow-growing evergreen holly with spineless oval leaves and red fruits. Native to western China.

73439. LESPEDEZA CYRTOBOTRYA Miquel. Fabaceae.

A small deciduous bush clover, native to Japan and Chosen, which bears racemes of rosy purple, pea-shaped flowers in midsummer.

For previous introduction see No. 66294.

73401 to 73450—Continued.

73440 to 73442. LONICERA spp. Caprifoliaceae.

73440. LONICERA CHAETOCARPA Rehder.
Honeysuckle.

Lonicera chaetocarpa was originally collected in Kansu, western China, by E. H. Wilson. It is described (Curtis's Botanical Magazine, pl. 8804) as a shrub of compact habit about 5 feet in height. The oblong leaves are bright green and more or less hairy, and the primrose-yellow flowers are an inch or more in length, opening in early June.

For previous introduction see No. 66297.

73441. LONICERA PILEATA YUNNANENSIS (Franch.) Rehder. **Privet honeysuckle.**

A yellow-flowered shrub of creeping prostrate habit, from western China.

73442. LONICERA SYRINGANTHA Maxim.
Lilac honeysuckle.

A handsome bush honeysuckle with lilac-purple flowers, native to China.

For previous introduction see No. 54058.

73443. MELALEUCA SQUAMEA Labill. Myrtaceae.

A tall rigid semihardy shrub with spikes of purplish or yellow flowers. Native to Australia.

73444. PERNETTYA MUCRONATA (L. f.) Gaud. Ericaceae. **Broadleaf pernettya.**

According to W. J. Bean (Trees and Shrubs Hardy in the British Isles, vol. 2, p. 127), this is one of the finest ornamental shrubs, native to South America about the Straits of Magellan. It is one of the hardiest from that continent, and is rarely injured by frost in the neighborhood of London. The shrub is evergreen, 2 to 5 feet high, and spreads freely by suckers, forming ultimately a dense, low thicket. The white nodding flowers, one-fourth of an inch long, are produced singly in the axils of the leaves at the ends of the shoots. The round berries, up to half an inch in diameter, vary in color from white to pink, lilac-crimson purple, or almost black, and remain on the branches throughout the winter and following spring. At Kew, near London, the berries are untouched by the birds.

For previous introduction see No. 62286.

73445. POTENTILLA FRUTICOSA PARVIFOLIA (Fisch.) Wolf. Rosaceae.

A hardy dwarf shrub with small leaves and bright-yellow flowers. Native to China.

73446. PYRACANTHA CRENULATA RODGERSIANA A. B. Jacks. Malaceae. **Firethorn.**

A low evergreen shrub with bright-green leaves, white flowers, and yellow berries. Native to southwestern China.

73447. ROSA DAVIDI Crepin. Rosaceae.
David rose.

A pink-flowered, orange-fruited rose 3 to 18 feet high, native to western Szechwan, China, at altitudes of 4,000 to 9,000 feet. It is the nearest Chinese relative of *Rosa macrophylla* of the western Himalayas.

For previous introduction see No. 61986.

73448. SKIMMIA REEVESIANA RUBELLA (Carr.) Rehder. Rutaceae.

A dwarf evergreen of dainty habit with reddish stems and flower buds.

73449. STRANVAESIA DAVIDIANA UNDULATA (Decaisne) Rehd. and Wils. Malaceae.

For previous introduction and description see No. 73283.

73401 to 73450—Continued.

73450. SYRINGA YUNNANENSIS Franch. Oleaceae. **Yunnan lilac.**

A handsome species related to *Syringa wilsonii*, but with pale, pure pink flowers in large panicles. The downy leaves have a distinct red midrib, the color being continued through the leafstalk.

For previous introduction see No. 66315.

73451 to 73453.

From Avery Island, La. Presented by E. A. McIlhenny, at the request of R. A. Young, Bureau of Plant Industry. Received April, 1927.

73451. FORTUNELLA sp. Rutaceae. **Kumquat.**

Owrie. Scions of a hybrid kumquat which is the result of a cross of the *Meiwa* (pollen parent) on the *Nagami*. The almost round fruits, up to 1½ inches in diameter, have sweet skin and flesh and contain neither acid nor irritating oil.

73452. PHYLLOSTACHYS HENRYI Rendle. Poaceae. **Bamboo.**

Plants of the edible bamboo of central China.

73453. PHYLLOSTACHYS sp. Poaceae. **Bamboo.**

Plants of a bamboo originally obtained from a Japanese importer in California. The yellowish green culms are thoroughly coated with a white waxy bloom which gives them a grayish white appearance.

73454. RUBUS sp. Rosaceae. Raspberry.

From Avery Island, La. Plants collected by R. A. Young, Bureau of Plant Industry. Received April 9, 1927.

Locally grown plants of a red Chinese variety originally collected by F. N. Meyer in China. The berries are excellent for home use.

73455 to 73469.

From Granada, Spain. Plants presented by Juan Leyva. Received April 11, 1927.

73455 to 73458. PRUNUS spp. Amygdalaceae.

73455. PRUNUS ARMENIACA L. **Apricot.**

Boulbon.

73456 and 73457. PRUNUS CERASUS L. **Sour cherry.**

73456. *Negro de la Rivera.*

73457. *Risada de Kentar.*

73458. PRUNUS DOMESTICA L. **Plum.**

Encarnada fina.

73459. PUNICA GRANATUM L. Punicaceae. **Pomegranate.**

Rojie.

73460 to 73462. PYRUS COMMUNIS L. Malaceae. **Pear.**

73460. *Calabacita Real.*

73461. *Cermeño.*

73462. *Madrileño.*

73463 to 73469. VITIS VINIFERA L. Vitaceae. **European grape.**

Spanish varieties.

73463. *Chanez Rosada.*

73464. *Corazonde Cabrito.*

73465. *Imperial.*

73466. *Jeresana Blanca.*

73455 to 73469—Continued.

73467. *La Mollar.*

73468. *Real Blanca.*

73469. *Santa Paula.*

73470 to 73472.

From Nanking, China. Seeds presented by the Chinese nurseries. Received April 1, 1927.

73470. DAVIDIA INVOLUCRATA Baill. Cornaceae. **Dove tree.**

The Chinese dove tree, as this is sometimes called, is a native of the mountain forests of central and western China. In its native home it becomes a tree 75 feet tall, with a shapely pyramidal crown. When in bloom the tree is unusually striking because of the two or three large, snow-white bracts which subtend each flower. These bracts are of unequal size, the largest being 4 to 8 inches long and 2 to 4 inches broad. The bright-green, oval, sharply toothed leaves are 3 to 6 inches long.

For previous introduction see No. 65439.

73471. HALESIA MACGREGORII Chun. Styracaceae.

An ornamental tree up to 80 feet, with large white flowers and fruits over an inch long. It is a southern Chinese relative of the American silverbell (*Halesia carolina*.)

73472. TORREYA JACKII Chun. Taxaceae.

A hardy yewlike evergreen tree from eastern China, of possible value as an ornamental.

73473 to 73501.

From Persia. Seeds obtained from the Persian exhibit at the Sesquicentennial Exposition, Philadelphia, Pa. Received April 1, 1927.

Persian-grown seeds.

73473 and 73474. ALLIUM CEPA L. Liliaceae. **Onion.**

73473. No. 1. 73474. No. 2.

73475. BETA VULGARIS L. Chenopodiaceae. **Beet.**

73476 and 73477. CICER ARIETINUM L. Fabaceae. **Chick-pea.**

73476. Small black seeds.

73477. Large white seeds.

73478. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

73479. CUCUMIS SATIVUS L. Cucurbitaceae. **Cucumber.**

73480. CUCURBITA MOSCHATA Duchesne. Cucurbitaceae. **Cushaw.**

73481. CUCURBITA PEPO L. Cucurbitaceae. **Pumpkin.**

73482. IPOMOEA sp. Convolvulaceae. **Morning-glory.**

73483. IRIS sp. Iridaceae.

73484 to 73486. LENS ESCULENTA Moench. Fabaceae. **Lentil.**

73484. No. 1. 73486. No. 3.

73485. No. 2.

73487. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

73488. MELISSA OFFICINALIS L. Menthaceae. **Balm.**

73489 and 73490. NIGELLA SATIVA L. Ranunculaceae.

73489. No. 1. 73490. No. 2.

73491. OCIMUM BASILICUM L. Menthaceae. **Basil.**

73473 to 73501—Continued.

73492. PHASEOLUS AUREUS Roxb. Fabaceae. **Mung bean.**

73493 to 73495. PHASEOLUS VULGARIS L. Fabaceae. **Common bean.**

73493. No. 1. 73495. No. 3.

73494. No. 2.

73496. RAPHANUS SATIVUS L. Brassicaceae. **Radish.**

73497 and 73498. SESAMUM ORIENTALE L. Pedaliaceae. **Sesame.**

73497. No. 1. 73498. No. 2.

73499. TRIFOLIUM SUAVEOLENS Willd. Fabaceae. **Fragrant clover.**

73500. TRIGONELLA FOENUM-GRAECUM L. Fabaceae. **Fenugreek.**

73501. VIGNA SINENSIS (Torner) Savi. Fabaceae. **Cowpea.**

73502. CORYLUS CHINENSIS Franch. Betulaceae. Chinese hazel.

From Nanking, China. Seeds purchased from the Chinese nurseries. Received April 1, 1927.

The Chinese hazel is closely allied to the tree hazel (*Corylus colurna*), differing in leaf and stem characters. It becomes a tall tree, sometimes over a hundred feet high, with heart-shaped leaves about 7 inches long. The nuts are borne in clusters of four to six. It is native to western China.

For previous introduction see No. 63680.

73503. PITTOSPORUM FLORIBUNDUM Wight and Arnott. Pittosporaceae.

From Darjiling, India. Seeds presented by G. H. Cave, curator, Lloyd Botanic Garden. Received April 2, 1927.

For previous introduction and description see No. 73153.

73504 and 73505. NICOTIANA TABACUM L. Solanaceae. Tobacco.

From Klaten, Java. Seeds presented by the director, Proefstation voor Vorstenlandsche Tabak. Received April 2, 1927.

Java varieties.

73504. *Santiago.* 73505. *Timor.*

73506. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Buitenzorg, Java. Seeds presented by Dr. L. Koch, chief, plant-breeding station for annual crops. Received April 4, 1927.

A local variety which grows to a height of 2.5 meters in about 6 months.

73507 to 73521.

From West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 2, 1927.

73507. CALOTROPIS PROCERA Ait. Asclepiadaceae.

No. 1153. Georgetown, Gambia, January 7, 1927. The giant milkweed which becomes a small tree. The stems furnish fiber and the floss is used for stuffing mattresses. The juice or sap is poisonous when taken internally; it is mixed with salt to remove hair from hides.

For previous introduction see No. 54451.

73507 to 73521—Continued.

73508. CARPODINUS DULCIS Sabine. Apocynaceae.

No. 1146. Near Jala Experiment Station, Sierra Leone, January 21, 1927. A low shrub with edible fruits the size of a large plum, which is supposed to yield a species of rubber. The latex when coagulated is used as birdlime.

73509. CHRYSOPHYLLUM PRUNIFORME Engler. Sapotaceae.

No. 1152. Near Jala Experiment Station, Sierra Leone, January 21, 1927. A tree 30 feet high related to the star apple which should be grown and tested as a stock for it and for breeding purposes.

73510. COMBRETUM MICRANTHUM Don. Combretaceae.

No. 1137. En route from Georgetown, to Kuntaur, Gambia, January 9, 1927. A tree 20 to 25 feet high, producing axillary racemes of rather small, pinkish flowers which are not very conspicuous, and attractive seed pods.

73511. GOSSYPIUM sp. Malvaceae. **Cotton.**

No. 1147. January 21, 1927. A native cotton which grows more or less wild near the Jala Experiment Station, Sierra Leone.

73512. HEERIA sp. Anacardiaceae.

No. 1138. January 9, 1927. A tree of small size and attractive shape, found on the dry soil of Gambia, between Georgetown and Kuntaur.

73513. HONCKENYA FICIFOLIA Willd. Tiliaceae.

No. 1151. Jala, Sierra Leone, January 21, 1927. The *bolo-bolo* of the natives of Nigeria. A very decorative plant with large showy rose pink flowers which fade rapidly when the plants are cut. The fiber is said to be of value.

For previous introduction see No. 67572.

73514. INDIGOFERA STENOPHYLLA Guill. and Perr. Fabaceae.

No. 1139. Gambia, January 10, 1927. An erect herbaceous plant 1 to 3 feet high, with rose-colored flowers.

73515. MELINIS MINUTIFLORA Beauv. Poaceae. **Molasses grass.**

No. 1142. Jala Experiment Station, Sierra Leone, January, 1927. *Watakala* grass of Sierra Leone which is said to be identical with the molasses grass.

73516. PAHUDIA BRACTEATA (Vog.) Prain (*Afzelia bracteata* Vog.). Caesalpiniaceae.

No. 1136. En route from Monrovia to Mount Barkley, Liberia, January, 1927. A small handsome shapely tropical tree producing scarlet flowers, which have only one petal, and curved woody pods 6 inches long and 1 inch thick. When the pods open 10 or more brilliant scarlet seeds are exposed, the scarlet part being the arillus which covers two-thirds or more of the chocolate-brown seeds. These seeds are made into watch charms in West Africa and are very attractive and interesting.

73517. STERCULIA TOMENTOSA Guill. and Perr. Sterculiaceae.

No. 1148. A tree found on very dry land near McCarthys Island, Gambia. The flowers have a faint unpleasant odor, and the pods have brittle hairs on them though otherwise they are attractive. A gum resembling gum tragacanth exudes from the stem.

73507 to 73521—Continued.

73518. TETRACERA ALNIFOLIA Willd. Dilleniaceae.

No. 1145. Freetown, January 23, 1927. A large ornamental vine with panicles of white flowers and scarlet fruits which when open expose black seeds covered with a brilliant scarlet arillus, making the vine quite showy.

73519. TRACHYPHRYNIUM sp. Marantaceae.

No. 1150. January 22, 1927. A handsome tropical foliage plant with large green leaves, found in the jungle on the Taia River, near Mano, Sierra Leone.

73520. PHYSEDRA EGLANDULOSA Hutchins. and Dalziel. Cucurbitaceae.

No. 1140. Monrovia, Liberia, January 28, 1927. A tropical African vine with ornamental red fruits.

For previous introduction see No. 70926.

73521. (Undetermined.)

No. 1154. Tiama, near Jala, Sierra Leone, January 20, 1927. A climbing shrub with pods 6 inches long and characteristic brown seeds which have long silky hairs attached to them. It may prove useful as a source of rubber.

73522 to 73548.

From Cambridge, England. Seeds presented by H. G. Carter, director, botanic garden, University of Cambridge. Received April 6, 1927.

73522 to 73529. ALLIUM spp. Liliaceae.

73522. ALLIUM CARINATUM L.

The leaves of this European species are narrowly linear, and the lilac-purple flowers are produced in a comparatively large head.

It is found throughout southern Europe, especially in the Alps.

For previous introduction see No. 58676.

73523. ALLIUM CYANEUM Regel.

A rather dwarf plant, less than a foot high, with small pendulous bright-blue flower heads. Native to northern China.

For previous introduction see No. 66426.

73524. ALLIUM NARCISSIFLORUM Vill.

An elegant Italian species, about 9 inches high, with nodding heads of beautiful rose-colored flowers.

For previous introduction see No. 67344.

73525. ALLIUM OBLIQUUM L.

A species cultivated in Siberia as a substitute for garlic. It has a narrowly egg-shaped bulb and a stem up to 3 feet in height.

For previous introduction see No. 59340.

73526. ALLIUM ODORUM L.

This onion, which is native to Europe, is cultivated in Japan for the sake of its leaves which are produced abundantly in the spring and are eaten as greens.

For previous introduction see No. 60229.

73527. ALLIUM OSTROWSKIANUM Regel.

This species, native to Turkestan, has rose-colored flowers produced freely in many-flowered umbels on scapes 6 inches high.

For previous introduction see No. 66533-

73522 to 73548—Continued.

73528. ALLIUM SCORODOPRASUM L.

Variety *sibiricum*. The sand leek or rocambole of Europe and Asia Minor resembles garlic, but has smaller bulbs of milder flavor which are produced at the tip of the stem as well as at its base.

For previous introduction see No. 59387.

73529. ALLIUM SCORODOPRASUM BABINGTONII (Borer) Richter.

This is a much larger plant than the typical form, the scape being 4 to 6 feet high, and the more numerous leaves are broader, sometimes 2 inches wide at the base. The flowers are pale reddish purple. The bulbous base of the plant is globose, with solid white bulbs attached to the hard white crown of the root. This variety is native to England and probably also to Ireland.

For previous introduction see No. 59388.

73530 to 73532. BERBERIS spp. Berberidaceae. **Barberry.**

73530. BERBERIS CHITRIA D. Don.

A spiny shrub, 6 feet or less high, with oblong leaves 1 to 3 inches long, deep-yellow or reddish flowers in long-stemmed panicles, and ovoid purple berries. Native to the Himalayas.

For previous introduction see No. 67347.

73531. BERBERIS DARWINII Hook.

An evergreen shrub, 6 feet or more high, from southern Chile. The orange flowers are succeeded by oval plum-colored berries.

For previous introduction see No. 53631.

73532. BERBERIS EMPETRIFOLIA Pers. **Crow barberry.**

A low, densely branched barberry, 1 or 2 feet high, with linear, bright-green leaves, and bluish black fruits. Native to southern South America.

For previous introduction see No. 67348.

73533. CORIARIA NEPALENSIS Wall. Coriariaceae.

A shrub with arching branches, broadly heart-shaped leaves, small green flowers in short racemes, and small black fruits. Native to southwestern China and northern India.

73534. CORIARIA TERMINALIS XANTHOCARPA Rehd. and Wils. Coriariaceae.

An ornamental shrub, up to 1 meter in height, with pinkish flowers and small yellow fruits. Native to western China.

73535. CYCLAMEN NEAPOLITANUM Tenore. Primulaceae.

A hardy perennial, 3 inches high, with red flowers. Native to Italy.

73536 to 73544. CYTISUS spp. Fabaceae.

73536. CYTISUS BIFLORUS L'Herit. **Broom.**

A leguminous shrub 3 feet high, with slender branches and leaflets with silky lower surfaces. The yellow flowers are single or in pairs. Native to Europe and western Asia.

For previous introduction see No. 67352.

73537. CYTISUS DANUBIALIS Velen.

A yellow-flowered shrub, about 2 feet high, native to Bulgaria.

73522 to 73548—Continued.

73538. CYTISUS HIRSUTUS L.

A hardy yellow-flowered shrub, 5 feet high, native to southern Europe.

73539. CYTISUS MONSPESSULANUS L.

A leguminous shrub, 10 feet high, with small racemes of yellow flowers.

For previous introduction see No. 67353.

73540. CYTISUS NIGRICANS L. **Spike broom.**

A leguminous shrub about 3 feet high with racemes of yellow flowers. Native to Austria.

73541. CYTISUS PRAECOX Wheeler. **Warminster broom.**

An ornamental shrub with pale sulphur-yellow flowers. A hybrid between *Cytisus purgans* and *C. multifloris*.

73542. CYTISUS PURGANS (L.) Spach. **Province broom.**

A yellow-flowered leguminous shrub about 3 feet high. Native to southern France and Spain.

For previous introduction see No. 67354.

73543. CYTISUS PURPUREUS Scop. **Broom.**

An erect or procumbent shrub, 2 feet or less in height, with small clusters of purple flowers and black pods. Native to southern Europe.

For previous introduction see No. 67355.

73544. CYTISUS SESSILIFOLIUS L. **Sessile broom.**

A low shrub, 2 to 4 feet high, with erect branches, nearly sessile leaves, and short racemes of yellow flowers. Native to southern Europe.

For previous introduction see No. 67030.

73545 to 73547. IRIS spp. Iridaceae.

73545. IRIS CHRYSOGRAPHES Dykes. **Gold-vein iris.**

One of the handsomest of the Siberian irises; the velvety dark-purple flowers are brightened by golden reticulations at the throat.

For previous introduction see No. 67033.

73546. IRIS SISYRINCHIUM L. **Moraea iris.**

A tender, rather low iris, 6 inches to a foot high, native to southern Europe, Asia, and Africa. The fugitive flowers are lilac-purple with a yellow spot on the outer segments.

For previous introduction see No. 67366.

73547. IRIS WILSONI Wright.

An iris, about a foot high, from western China. The flowers are yellow with the falls purple-veined.

73548. LILIUM FARRERI Turrill. Liliaceae. **Lily.**

From a packet of mixed seeds collected in China by the well-known botanical explorer, Reginald Farrer, there was grown this handsome lily, described in Curtis's Botanical Magazine (pl. 8847) as having erect stems, nearly 3 feet in height, and numerous narrow leaves scattered along the entire stem. The relatively small but fragrant flowers, white with purple spots, are terminal, and either solitary or in loose 6-flowered umbels. This lily has proved hardy in the mild-wintered region of southeastern England.

For previous introduction see No. 61747.

73549 to 73552.

From Brignoles, France. Seeds presented by René Salgues, director, Brignoles Botanic Station. Received April 8, 1927.

73549. ERICA MULTIFLORA L. Ericaceae.

A hardy evergreen shrub, up to 2 feet high, with rose-colored flowers.

73550. TRIFOLIUM SCABRUM L. Fabaceae.

An annual, white-flowered clover about 3 inches high.

73551. TRIFOLIUM TOMENTOSUM L. Fabaceae.

A dense, low-growing, annual or biennial clover, with stems usually less than 8 inches long. Native to dry barren places in the Mediterranean region.

For previous introduction see No. 64995.

73552. VICIA HYBRIDA L. Fabaceae. **Vetch.**

An annual vetch, native to the Mediterranean region, and requiring about the same climatic conditions as the common vetch (*Vicia sativa*). It is a less vigorous grower than either common (*V. sativa*) or hairy vetch (*V. villosa*), and for this reason it is less well adapted for growing under cultivation. However, it may be of value for pasturage. (*Note by Roland McKee under No. 52272.*)

73553. DESMONCUS OXYACANTHOS Mart. Phoenicaceae. **Palm.**

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received May 16, 1927.

A tropical American climbing palm, having scattered pinnate leaves armed with hooked spines and small red fruits.

73554 to 73558. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Dominica, British West Indies. Seeds presented by F. L. Squibbs, second assistant curator, botanic gardens. Received April 12, 1927.

Locally grown seeds.

73554. No. 1. *Blood.*

73555. No. 2. *Toetola.*

73556. No. 3. *Bahama.*

73557. No. 4. *Speckled.*

73558. *Early Asha.*

73559. CYPERUS ESCULENTUS L. Cyperaceae. **Chufa.**

From Valencia, Spain. Tubers purchased through Clement S. Edwards, American consul. Received April 18, 1927.

Spanish-grown tubers.

For previous introduction see No. 52899.

73560. LINUM USITATISSIMUM L. Linaceae. **Flax.**

From Blairgowrie, Perth, Scotland. Seeds presented by E. A. Foley, agricultural commissioner, London, England, through L. H. Dewey, Bureau of Plant Industry. Received April 18, 1927.

The fiber flax variety *J. W. S.* was originated by John W. Stewart, County Antrim, Ireland. It has been carefully propagated under the direction of the Linen Research Association of Belfast, and increased under contract by the Flax Industry Development Society of Yeovil, Sussex, England. The *J. W. S.* variety grows well in the cool, moist

climate of Ireland and Scotland, where it gives a very much better yield of fiber than that from Blue Blossom or Riga seed. Tests of *J. W. S.* by the Office of Fiber Plants in the plots of fiber flax at East Lansing, Mich., indicate that it is not well adapted to warmer and drier conditions. Like all of the best fiber flaxes, it yields very little seed. (*Dewey.*)

73561. JUGLANS REGIA L. Juglandaceae. **Walnut.**

From Tashkent, Turkestan. Seeds presented by Hilaria Rajkova, botanic garden. Received April 12, 1927.

Variety *fallax*. A form with very thick-shelled nuts.

73562 to 73594.

From Manchuria. Seeds obtained by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received April 7, 1927.

73562 to 73570. HORDEUM spp. Poaceae. **Six-rowed barley.**

73562. HORDEUM VULGARE NIGRUM (Willd.) Beaven.

No. 9053. Obtained through the economic bureau of the South Manchurian Railway.

73563 to 73570. HORDEUM VULGARE PALLIDUM Seringe.

Numbers 73563 and 73564 were obtained through the economic bureau of the South Manchurian Railway.

73563. No. 9051. **73564.** No. 9052.

Numbers 73565 to 73570 were obtained through D. McLorn, postal commissioner, Harbin.

73565. No. 9075. **73568.** No. 9087.

73566. No. 9080. **73569.** No. 9090.

73567. No. 9083. **73570.** No. 9093.

73571 to 73575. PHASEOLUS AUREUS Roxb. Fabaceae. **Mung bean.**

Manchurian-grown seeds obtained through D. McLorn, postal commissioner, Harbin.

73571. No. 9076. **73574.** No. 9085.

73572. No. 9078. **73575.** No. 9092.

73573. No. 9082.

73576 to 73587. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soy bean.**

Numbers 73576 to 73579 were obtained through the economic bureau of the South Manchurian Railway.

73576. No. 9047. **73578.** No. 9049.

73577. No. 9048. **73579.** No. 9050.

Numbers 73580 to 73587 were obtained through D. McLorn, postal commissioner, Harbin.

73580. No. 9071. **73584.** No. 9081.

73581. No. 9072. **73585.** No. 9084.

73582. No. 9073. **73586.** No. 9088.

73583. No. 9077. **73587.** No. 9091.

73588 to 73594. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

Numbers 73588 to 73590 were obtained through the economic bureau of the South Manchurian Railway.

73588. No. 9054. **73590.** No. 9056.

73589. No. 9055.

Numbers 73591 to 73594 were obtained through D. McLorn, postal commissioner, Harbin.

73562 to 73594—Continued.

73591. No. 9074. **73593.** No. 9086.

73592. No. 9079. **73594.** No. 9089.

73595 to 73619.

From Tashkent, Turkestan. Seeds presented by Hilaria Rajkova, botanic garden. Received April 8, 1927.

73595 to 73601. ALLIUM spp. Liliaceae.

73595. ALLIUM BARSCZEWSKII Lipsky.

A hardy bulbous plant a foot or more in height, with a rounded umbel of rose-purple flowers. Native to Turkestan.

73596. ALLIUM BODEANUM Regel.

A white-flowered onion about a foot high, from Turkestan.

73597. ALLIUM CAESIUM Schrenk.

A lavender-flowered onion, native to Turkestan.

73598. ALLIUM HYMENORRHIZUM Ledeb.

A perennial moisture-loving Russian species with linear leaves and purplish violet flowers.

For previous introduction see No. 66428.

73599. ALLIUM JESDIANUM Boiss. and Buhse.

For previous introduction and description see No. 73178.

73600. ALLIUM KARATAVIENSE Regel.

An onion, native to Turkestan, with broad leaves and dense umbels of pink flowers.

For previous introduction see No. 66951.

73601. ALLIUM SUWOROWI Regel.

A hardy bulbous plant with very narrow flat leaves up to 40 centimeters long and hemispherical umbels of fragrant violet-rose flowers. Native to the Kirghiz Desert, central Asia.

73602. AMYGDALUS PETUNNIKOWI Litw. Amygdalaceae.

A hardy thorny shrub, up to 1 meter high, with fruit about 2 centimeters long, which may prove useful as a stock for stone fruits. Native to Turkestan.

73603. EREMURUS LACTIFLORUS Fedtsch. Liliaceae.

A tall hardy bulbous drought-resistant plant with a spike of white flowers on a long flower stalk. Native to Turkestan.

73604. HALIMODENDRON HALODENDRON (Pall.) Voss. Fabaceae. **Salt tree.**

A drought-resistant hardy ornamental shrub, 6 feet high, with pink flowers. Native to Turkestan.

For previous introduction see No. 60341.

73605. HEDYSARUM JAXARTICUM M. Pop. Fabaceae.

A hardy herbaceous leguminous perennial native to western Asia.

73606. HEDYSARUM SEMENOWII Regel and Herd. Fabaceae.

An erect hardy herbaceous perennial native to Turkestan.

For previous introduction see No. 42193.

73607. LIMONIUM OTOLEPIS (Schrenk) Kuntze (*Statice otolepis* Schrenk). Plumbaginaceae. **Sea lavender.**

A perennial plant, native to Turkestan, with small narrowly ovate leaves and short spikes of white flowers.

For previous introduction see No. 61433.

73595 to 73619—Continued.

73608 to 73611. ONOBRYCHIS spp. Fabaceae.

73608. ONOBRYCHIS MEGALOBOTRYS Aitch. and Baker.

A hardy perennial, 2 to 3 feet high, with spikes of purple-veined flowers almost a foot in length. Native to western Asia.

73609. ONOBRYCHIS MICRANTHA Schrenk.

An annual erect leguminous plant with very narrow acute leaflets, stems about 2 feet high, and dull-yellow flowers. Native to Russia.

73610 and 73611. ONOBRYCHIS PULCHELLA Schrenk.

A low annual, less than a foot high, with narrow leaflets and pink flowers. Native to Russia.

73610. No. 1. **73611.** No. 2.

73612 to 73616. PRUNUS spp. Amygdalaceae.

73612 to 73614. PRUNUS CERASIFERA Ehrh.

Ornamental varieties of myrobalan plums.

73612. Variety *atroviolaceum.*

73613. Variety *flavis.*

73614. Variety *purpurea.*

73615. PRUNUS MAHALEB L. **Mahaleb cherry.**

Seeds grown in Turkestan; for testing as stock.

For previous introduction see No. 53415.

73616. PRUNUS PROSTRATA Labill. **Mountain cherry.**

A hardy bush cherry with small red fruits. Native to western Asia.

For previous introduction see No. 43869.

73617. PYRUS HETEROPHYLLA Regel and Schmalh. Malaceae.

A small hardy tree about 25 feet high, with white flowers and fruits like small pears.

For previous introduction see No. 44046.

73618. SORBUS TURKESTANICA (Franch.) Hedl. (*Pyrus turkestanica* Franch.). Malaceae.

A hardy shrub or small tree with purplish twigs, cream-colored flowers, and purplish fruits about half an inch long. Native to Turkestan.

73619. VICIA HYRCANICA Fisch. and Mey. Fabaceae. **Vetch.**

An annual yellow-flowered vetch cultivated in northern Persia and Armenia.

73620 to 73629. MEDICAGO SATIVA L. Fabaceae. Alfalfa.

From Valki, District of Kharkof, Russia. Seeds presented by Mr. Bordacoff, director, Ukraine station. Received April 13, 1927.

Locally grown varieties.

73620. No. 254.

73621. No. 403. District of Kherson.

73622. No. 404. District of Podolian.

73623. No. 500. District of Kharkof.

73624. No. 525. District of Cupians.

73625. No. 536. District of Kharkof.

73626. No. 634. District of Kherson.

73627. No. 635. District of Kherson; originally from France.

73620 to 73629—Continued.

73628. No. 688. District of Poltawa.

73629. No. 746. Ascania, Nova Tavia.

73630 and 73631. COFFEA spp. Rubiaceae. Coffee.

From Chiapas, Mexico. Seeds obtained through O. F. Cook, Bureau of Plant Industry. Received April 15, 1927.

73630. COFFEA ARABICA L.

Bourbon. An early-maturing variety; Mexican-grown seeds.

For previous introduction see No. 65236.

73631. COFFEA ARABICA MARAGOGIPE Froehn.

Maragogipe. A variety with large thick leaves and beans of excellent flavor. Mexican-grown seeds.

For previous introduction see No. 50626.

73632 and 73633. AGAVE FOURCROYDES Lem. Amaryllidaceae. Henequen.

From Nuevitas, Cuba. Suckers presented by M. T. Walsh, manager, Spanish-American Sisal Co., through L. H. Dewey, Bureau of Plant Industry. Received April 15, 1927.

Henequen varieties grown in Cuba.

73632. No. 1. **73633.** No. 2.

73634. PERSEA AMERICANA Mill. (*P. gratissima* Gaertn. f.). Lauraceae. Avocado.

From Spain. Scions collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 16, 1927.

No. 1295. Churiana, near Malaga, March 30, 1927. From a tree 20 years old which is a seedling of a century-old tree. The leathery green-skinned fruits are of the West Indian type and are said to be identical to those borne by the parent tree.

73635 and 73636.

From Brooksville, Fla. Plants obtained from the Plant Introduction Garden by R. A. Young, Bureau of Plant Industry. Received April 19, 1927.

73635. BAMBUSA VULGARIS Schrad. Poaceae. **Bamboo.**

Variety *thouarsii.* An Indian clump bamboo with bright-green stems, 20 to 80 feet high, and numerous branches bearing dense foliage.

For previous introduction see No. 21349.

73636. RUBUS sp. Rosaceae. **Raspberry.**

Said to be a Chinese red raspberry of value for home use in the South.

73637. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Kuala Lumpur, Federated Malay States. Seeds presented by B. Bunting, agriculturist, Department of Agriculture. Received April 8, 1927.

Locally grown seeds.

73638 to 73640. PHASEOLUS spp. Fabaceae.

From Rasikulu, Nadroga, Lautoka, Fiji Islands. Seeds presented by R. B. Howard. Received April 9, 1927.

Locally grown seeds.

73638 to 73640—Continued.

73638. PHASEOLUS AUREUS Roxb. **Mung bean.**

Chorta munga.

73639. PHASEOLUS CALCARATUS Roxb. **Rice bean.**

Burra munga.

73640. PHASEOLUS MUNGO L. **Urd.**

Urdi.

73641 to 73644. VITIS spp. Vitaceae. **Grape.**

From Montpellier, Herault, France. Plants purchased from Pépinières Richter. Received April 23, 1927.

French hybrid grapes.

73641. VITIS BERLANDIERI × LONGII.

Berlandieri Novo Mexicana R. 31.

73642 and 73643. VITIS BERLANDIERI × RUPESTRIS.

73642. *Rupestris × Berl R. 57.*

73643. *Rupestris × Berl R. 99.*

73644. VITIS BERLANDIERI × LONGII.

Rupestris × Berl R. 110.

73645. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Moca, Dominican Republic. Seeds presented by Dr. R. Ciferri, director, Estación Nacional Agronómica y Colegio de Agricultura. Received April 12, 1927.

Locally grown seeds.

73646 to 73648. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Port au Prince, Haiti. Seeds presented by Knowles A. Ryerson, Haiti Department of Agriculture. Received April 15, 1927.

Locally grown seeds.

73646. No. 1.

73647. No. 2.

73648. No. 3.

73649. PANICUM MILIACEUM L. Poaceae. **Proso.**

From Persia. Seeds obtained from the Persian exhibit at the Sesquicentennial Exposition, Philadelphia, Pa. Received April 1, 1927.

Persian-grown seeds.

73650 to 73663. ORYZA SATIVA L. Poaceae. **Rice.**

From Manchuria. Seeds obtained by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry, through the economic bureau of the South Manchurian Railway. Received April 17, 1927.

73650. No. 9057.

73651. No. 9058.

73652. No. 5059.

73653. No. 9060.

73654. No. 9061.

73655. No. 9062.

73656. No. 9063.

73657. No. 9064.

73658. No. 9065.

73659. No. 9066.

73660. No. 9067.

73661. No. 9068.

73662. No. 9069.

73663. No. 9070.

73664. ORYZA SATIVA L. Poaceae. **Rice.**

From Cuttack, Orissa, India. Seeds presented by D. R. Sethi, deputy director of agriculture. Received April 12, 1927.

Patna, a paddy variety from India.

73665. SESAMUM ORIENTALE L. Pedaliaceae. **Sesame.**

From the City of Mexico, Mexico. Seeds presented by Alexander W. Weddell, American consul general. Received April 15, 1927.

Locally grown seeds.

73666 to 73676. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Coimbatore, India. Seeds presented by R. O. Iliffe, paddy specialist. Received April 21, 1927.

Locally grown seeds.

73666. No. 1. From Berhampur, Ganjam district.

73667. No. 2. *Desavali.* From Vinukonda, Guntur district.

73668. No. 3. From Tenali, Guntur district.

73669. No. 4. From Nandyal, Kurnool district.

73670. No. 5. From Markapur, Kurnool district.

73671. No. 6. *Erranthulu.* From Kurnool district.

73672. No. 7. *Pulakanthulu.* From Kurnool district.

73673. No. 8. From Adoni.

73674. No. 9. From Tirupathur, North Arcot district.

73675. No. 10. From Coimbatore.

73676. No. 11. From Salem.

73677 to 73683. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Moca, Dominican Republic. Seeds presented by Dr. R. Ciferri, director, Estación Naciónal Agronómica y Colegio de Agricultura. Received April 22, 1927.

Locally grown seeds.

73677. No. 1. *Albejas.*

73678. No. 2. *Jinas.*

73679. No. 3–a. *Todo el año.*

73680. No. 3–b. *Todo el año.*

73681. No. 4. *Burque's.*

73682. No. 5.

73683. No. 6.

73684. SACCHARUM OFFICINARUM L. Poaceae. **Sugar cane.**

From Pusa, Bihar, India. Cuttings presented by the imperial agriculturist, Agricultural Research Institute, through E. W. Brandes, Bureau of Plant Industry. Received April 23, 1927.

A locally grown variety.

73685. CITRUS sp. Rutaceae.

From Seattle, Wash. Seeds obtained by W. T. Swingle, Bureau of Plant Industry. Received April 26, 1927.

Seeds from fruits possibly of Japanese origin.

73686. PERSEA AMERICANA Mill. (*P. gratissima* Gaertn. f.). Lauraceae.

From Lakeland, Fla. Cuttings collected by Gordon Galloway, Takoma Park, D. C. Received April 13, 1927.

Cuttings from an unusually cold-resistant tree.

73687. DAHLIA MAXONII Safford. Asteraceae.

From the city of Guatemala, Guatemala. Seeds presented by Dr. Jorge Salas, director general of agriculture, through B. E. Gilbert, Kingston, R. I. Received April 21, 1927.

A tree dahlia, native to Guatemala, where it becomes about 15 feet high and bears clusters of large lilac-pink flowers. A detailed description of this tree dahlia with a discussion of its horticultural possibilities is given in the Journal of Heredity, volume 11, pages 265 to 268, 1920.

For previous introduction see No. 56665.

73688. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Moca, Dominican Republic. Seeds presented by Dr. R. Ciferri, director, Estación Nacional Agronómica y Colegio de Agriculture. Received April 23, 1927.

Locally grown seeds.

73689. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

From Kotoni, Sapporo, Japan. Seeds presented by the Hokkaido Agricultural Experiment Station, through C. R. Ball, Bureau of Plant Industry. Received April 23, 1927.

Hokuiku No. 44.

73690. NYPA FRUTICANS Wurmb. Phoenicaceae. **Nipa palm.**

From Manila, Philippine Islands. Seeds presented by S. Youngberg, director, Bureau of Agriculture. Received April 26, 1927.

According to Brown and Merrill (Philippine Palms and Palm Products, p. 98), the nipa palm has a stout creeping underground stem and the pinnate leaves, which are in erect clusters, are about 25 feet long. The flat fruits, 5 inches long, 4 inches wide, and 2 inches thick, are crowded in a large round head which is borne on a special erect stalk. The juice obtained by cutting this stalk just below the fruiting head is a promising source of sugar and alcohol. The leaves are extensively used for thatching and for making baskets and mats.

For previous introduction see No. 67228.

73691. TOLUIFERA sp. (*Myroxylon* sp.). Fabaceae.

From Kandy, Ceylon. Seeds presented by Dr. Andreas Nell. Received April 21, 1927.

A tropical American leguminous shade tree with pinnate leaves and white flowers.

73692. VIGNA sp. Fabaceae.

From Luchenza, Nyasaland Protectorate, Africa. Seeds presented by L. S. Norman. Received April 23, 1927.

A herbaceous perennial with large roots which are said to yield a gum used for waterproofing baskets. The seeds are eaten by the natives.

73693 and 73694.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received April 18, 1927.

73693. ADONIDIA MERRILLII Beccari. Phoenicaceae. **Palm.**

A medium-sized palm with graceful pinnate leaves and moderately large bunches of crimson fruits an inch long.

For previous introduction see No. 46531.

73694. PYRENOGLYPHIS sp. Phoenicaceae. **Palm.**

A large handsome spiny palm with large clusters of pinnate leaves. Native to Panama.

73695 to 73712.

From Manchuria. Seeds obtained by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry, through D. McLorn, postal commissioner, Harbin. Received April 27, 1927.

Manchurian-grown seeds.

73695. AVENA SATIVA L. Poaceae. **Oats.**

No. 9134.

73696. CHAETOCHLOA ITALICA (L.) Scribn. (*Setaria italica* Beauv.). Poaceae. **Millet.**

No. 9112.

73697 to 73702. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. **Six-rowed barley.**

73697. No. 9102.	73700. No. 9123.
73698. No. 9106.	73701. No. 9127.
73699. No. 9119.	73702. No. 9136.

73703 to 73712. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

73703. No. 9101.	73708. No. 9122.
73704. No. 9105.	73709. No. 9126.
73705. No. 9108.	73710. No. 9131.
73706. No. 9114.	73711. No. 9133.
73707. No. 9118.	73712. No. 9135.

73713. HICORIA PECAN (Marsh.) Britton. Juglandaceae. **Pecan.**

From Malaga, Spain. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 28, 1927.

A local variety obtained in the market.

73714. ALLIUM CEPA L. Liliaceae. **Onion.**

From Valencia, Spain. Seeds purchased through Clement S. Edwards, American consul. Received April 28, 1927.

Valencia. A variety of Spanish onion.

73715. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

From Russia. Seeds presented by J. W. Pincus, Amtorg Trading Corporation, New York City. Received April 29, 1927.

Orloff. A Russian variety.

73716. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Manila, Philippine Islands. Seeds presented by S. Youngberg, director, Bureau of Agriculture. Received April 26, 1927.

Locally grown seeds.

73717 to 73734.

From Manchuria. Seeds obtained by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry, through D. McLorn, postal commissioner, Harbin. Received April 27, 1927.

Manchurian-grown seeds.

73717 to 73725. PHASEOLUS AUREUS Roxb. Fabaceae. **Mung bean.**

73717. No. 9103.
73718. No. 9107.
73719. No. 9109.

73725. No. 9137.

73726 and 73727. PHASEOLUS VULGARIS L. Fabaceae. **Common bean.**

73726. No. 9110.
73727. No. 9138.

73728 to 73734. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soy bean.**

73728. No. 9104.
73729. No. 9113.
73730. No. 9117.
73731. No. 9121.
73732. No. 9125.
73733. No. 9129.
73734. No. 9130

73735 and 73736.

From Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 21, 1927.

73735. BAUHINIA ACUMINATA L. Caesalpiniaceae. **Snowy bauhinia.**

Botanic Garden, Victoria, Cameroon. An ornamental tropical upright bush 6 feet or less high, with oval leaflets which close at night and white flowers 2 to 3 inches in diameter. Native to West Africa and suitable for greenhouse culture or for growing outside in summer.

For previous introduction see No. 66863.

73736. LAGERSTROEMIA SPECIOSA (Muenchh.) Pers. (*L. flos-reginae* Retz.). Lythraceae. **Crape myrtle.**

Experiment station, Cape St. Mary, Bathurst, Gambia. An ornamental tropical shrub or tree up to 50 feet high, with panicles of large pink or purple flowers. Native to West Africa.

73737. DEGUELIA sp. Fabaceae.

From Inhambane, Mozambique, Africa. Seeds presented by Rev. Pliny W. Keys, Methodist Episcopal Mission. Received April 28, 1927.

A tropical African leguminous tree, parts of which (possibly the leaves and stems) are used by the natives to poison water and kill fish.

73738 to 73797.

From Manchuria. Seeds obtained by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received April, 1927.

Manchurian-grown seeds.

Numbers 73738 to 73749 were received through D. McLorn, postal commissioner, Harbin.

73738 and 73739. AVENA SATIVA L. Poaceae. **Oats.**

73738. No. 9182.
73739. No. 9186.

73740 to 73749. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. **Six-rowed barley.**

73796. No. 9185.
73797. No. 9189.

73798. CHAYOTA EDULIS Jacq. (*Sechium edule* Swartz). Cucurbitaceae. **Chayote.**

From Moca, Dominican Republic. Fruits presented by Dr. R. Ciferri, director, Estación Nacional Agronómica y Colegio de Agricultura. Received May 3, 1927.

A local variety.

73799. LARIX SIBIRICA Ledeb. Pinaceae. **Siberian larch.**

From Indian Head, Saskatchewan, Canada. Seeds presented by Norman M. Ross, forestry branch, Department of the Interior. Received April 30, 1927.

A tall, very hard, deciduous coniferous tree, up to 40 meters high. It has a straight trunk and short branches. Native to Siberia.

For previous introduction see No. 58392.

73800. STURTIA GOSSYPIOIDES R. Br. Malvaceae.

From Sydney, New South Wales, Australia. Seeds presented by G. P. Darnell-Smith, director, botanic gardens. Received May 9, 1927.

An Australian shrub, several feet in height, with broadly oval leathery leaves about 2 inches long, and large purple flowers with darker centers. It is closely related to cotton (*Gossypium* spp.).

73801 to 73807. FRAGARIA spp. Rosaceae. **Strawberry.**

From Kingsley, Borden, Hants, England. Plants presented by C. Howard Jones, Kingsley Fruit Farm and Nursery. Received May 6, 1927.

European varieties not carried in the American trade.

73801. FRAGARIA sp.

Kentish Favourite.

73802. FRAGARIA sp.

King George.

73803. FRAGARIA sp.

Madame Kooi.

73804. FRAGARIA sp.

Reliance.

73805. FRAGARIA sp.

Royal Sovereign.

73806. FRAGARIA sp.

Sir Joseph Paxton.

73807. FRAGARIA sp.

The Duke.

73808. SOLANUM MACRANTHUM Dunal. Solanaceae.

From Washington, D. C. Seeds obtained from C. B. Doyle, Bureau of Plant Industry. Received February 7, 1927. Numbered April, 1927.

An ornamental Brazilian tree, about 12 feet high, with large prickly veined leaves and axillary racemes of pale-lilac flowers.

For previous introduction see No. 43665.

73809. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Vicosa, Minas Geraes, Brazil. Seeds presented by P. H. Rolfs, Escola Superior de Agricultura e Veterinaria. Received April 27, 1927.

A local variety which grows to a height of 3 meters.

73810 to 73818. ORYZA SATIVA L. Poaceae. **Rice.**

From Tashkent, Turkestan. Seeds presented by Hilaria Rajkova, botanic garden, Central Asiatic State University, through C. E. Chambliss, Bureau of Plant Industry. Received May 3, 1927.

Locally grown varieties.

73810. C. I. No. 6256. *Kyrmycy.*

73811. C. I. No. 6257. *Arpa.*

73812. C. I. No. 6258.

73813. C. I. No. 6259. *Dungan.*

73814. C. I. No. 6260. *American.*

73815. C. I. No. 6261.

73816. C. I. No. 6262. *Kora.*

73817. C. I. No. 6263. *Kizyl.*

73818. C. I. No. 6264. *County Ashmot.*

73819 to 73822.

From Soledad, Cienfuegos, Cuba. Seeds presented by Robert M. Grey, superintendent, Harvard Botanic Station. Received April 26, 1927.

73819. CALYCOPHYLLUM CANDIDISSIMUM DC. Rubiaceae. **Degame.**

This Central American timber tree, known commercially as the degame, is described by S. J. Record (Timbers of Tropical America, p. 547) as being 40 to 65 feet high with a straight trunk free from limbs. The wood has the strength, toughness, and resilience of hickory and is used for making agricultural implements, tool handles, and similar articles.

For previous introduction see No. 66769.

73820. MONTEZUMA sp. Bombacaceae.

A small ornamental tree with pale-pink flowers, native to Cuba.

73821. POSOQUERIA MULTIFLORA Lem. Rubiaceae.

A small tropical Brazilian tree with terminal clusters of large erect fragrant white flowers.

73822. TILMIA CARYOTAEFOLIA O. F. Cook. (*Martinezia caryotaefolia* H. B. K.). Phoenicaceae. **Palm.**

A small graceful palm, becoming 30 feet high, which is native to tropical South America. The erect stem is slightly swollen at the base and is clearly ringed; these rings are armed with stiff black slender spines 2 or 3 inches long. The bright-green terminal pinnate fronds are 4 to 5 feet long, spreading and drooping.

For previous introduction see No. 51739.

73823. BUTIA CAPITATA Beccari (*Cocos capitata* Mart.). Phoenicaceae. **Palm.**

From St. Leo, Fla. Seeds presented by Father Jerome, St. Leo Academy, through R. A. Young, Bureau of Plant Industry. Received April 29, 1927.

A large coconutlike palm, of ornamental appearance, with a spineless trunk, pinnate leaves, and large bunches of fruit, which is said to be hardier than any other species of cocos.

For previous introduction see No. 45009.

73824. CITRUS sp. Rutaceae.

From Soledad, Cienfuegos, Cuba. Cuttings presented by Robert M. Grey, superintendent, Harvard Botanic Station. Received May 9, 1927.

Orange seedling.

73825 to 73862.

From Africa, Balearic Islands, Spain, and Portugal. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April, 1927.

73825. AMOMUM sp. Zinziberaceae.

No. 1210. Buea, Cameroon, West Africa, February 12, 1927. An ornamental gingerlike plant with large leaves and purple flowers. Native to tropical Africa.

73823 to 73829. AMYGDALUS COMMUNIS L. Amygdalaceae. **Almond.**

Iviza, Balearic Islands, August, 1925. Locally grown varieties.

73826. *Pau.* **73828.** *Fitas.*

73827. *Duro.* **73829.** *Mollar.*

73830. ANNONA CHERIMOLA Mill. Annonaceae. **Cherimoya.**

From Malaga, Spain.

73831. ASPARAGUS sp. Convallariaceae.

Near Agadiz, Morocco. Locally grown seeds.

73832. BAUHINIA sp. Caesalpiniaceae.

No. 1236. Assuausi, Gold Coast, West Africa, March 1, 1927. A small ornamental tropical bush with yellowish white flowers.

73833. BELIS LANCEOLATA (Lamb.) Sweet (*Cunninghamia sinensis* R. Br.). Pinaceae. **Chinese fir.**

No. 1303. Bussaco, Portugal, April 7, 1927. A hardy evergreen Chinese tree which sprouts readily from the base. It has very attractive, dark-green foliage.

For previous introduction see No. 44665.

73834. CALLITRIS CUPRESSIFORMIS Vent. Pinaceae.

No. 1313. Bussaco, Portugal, April 7, 1927. A handsome subtropical cypresslike tree which is native to Australia.

For previous introduction see No. 51754.

73835. CALONCOBA BREVIPES (Stapf) Gilg (*Oncoba brevipes* Stapf). Flacourtiaceae.

No. 1223. Assuausi, Gold Coast, West Africa, March 1, 1927. An attractive tropical tree 20 feet high, which bears fragrant pure-white flowers, 3 inches in diameter, during the winter when the tree is leafless. The fruits are yellow and the size of a lime.

73836. CAPSICUM ANNUUM L. Solanaceae. **Red pepper.**

No. 1285. Obtained in the market at Akkra, Gold Coast, West Africa, February 26, 1927. A tropical African variety with very small yellow fruits the shape of the large bullnose pepper.

73837. CARICA QUERCIFOLIA (St. Hil.) Benth. and Hook. Papayaceae.

No. 1312. Coimbra, Portugal, April 8, 1927. A low, rapid-growing tree with small yellow fruits, which is a South American relative of the papaya.

For previous introduction see No. 48661.

73838. CASUARINA CUNNINGHAMIANA Miquel. Casuarinaceae.

No. 1306. Bussaco, Portugal, April 7, 1927. A slender-branched, leafless Australian ornamental tree, the so-called "beefwood," which has branchlets suggesting horsetails.

For previous introduction see No. 49720.

73825 to 73862—Continued.

73839. CATALPA sp. Bignoniaceae.

No. 1319. Lisbon, Portugal, April 5, 1927. A small ornamental catalpa with large leaves and flowers.

73840. CEIBA PENTANDRA (L.) Gaertn. (*Eriodendron anfractuosum* DC.). Bombacaceae. **Kapok.**

No. 1283. Bufuedru, en route to Assuausi, Gold Coast, West Africa, February 28, 1927. A local type producing an abundance of pods.

For previous introduction see No. 50746.

73841. CHRYSOPHYLLUM AFRICANUM A. DC. Sapotaceae.

No. 1237. Experiment station, Aburi, Gold Coast, February 26, 1927. A tree 60 feet high, related to the star apple. The golden-yellow fruits, 2 inches in diameter, have a sticky guttalike gum in the thick rind, and the pulp contains a rather small amount of acid. This may have value as a stock for the star apple.

73842. CLITORIA TERNATEA L. Fabaceae.

No. 1234. Agricultural experiment station, Assuausi, Gold Coast, March 1, 1927. A white-flowered variety of a tropical leguminous annual vine. This white variety seems to have larger flowers than the blue variety.

For previous introduction see No. 53988.

73843. CUCURBITA sp. Cucurbitaceae.

No. 1253. Obtained in the market at Akkra and said to have come originally from Lagos, Nigeria. March 27, 1927. A plant called *agushi* by the natives.

73844. CUPRESSUS LUSITANICA Mill. Pinaceae. **Portuguese cypress.**

No. 1300. Bussaco, Portugal, April 7, 1927. An ornamental evergreen Mexican tree which is cultivated as a forest tree in northern Portugal. Its soft aromatic straight-grained wood is considered valuable.

73845. CYPERUS ESCULENTUS L. Cyperaceae. **Chufa.**

No. 1254. Obtained in the market at Akkra, Gold Coast, February 27, 1927. A tropical African variety with large tubers which contain oil.

For previous introduction see No. 52899.

73846. DIALIUM GUINEENSE Willd. Caesalpiniaceae. **Velvet tamarind.**

No. 1240. Obtained in the market at Akkra, Gold Coast, February 27, 1927. A tropical leguminous tree with small black edible pods which, when ripe, contain a dry sweetish acid pulp with the flavor of a tamarind and are used as pickles. This variety is best suited to regions with light rainfall, though it does occur where the rainfall is heavier. The wood is strong and excellent for carpentry.

For previous introduction see No. 67313.

73847. DIOSCOREA sp. Dioscoreaceae. **Yam.**

No. 1298. Abuko, near Bathurst, Gambia, January, 1927. A fast-growing tropical vine which may be of ornamental value. The tubers are perhaps edible.

73848. DIOSPYROS EBENUM Koen. Diospyraceae. **Ebony.**

No. 1249. Botanic garden, Victoria, Cameroon, February 15, 1927. An evergreen tropical tree up to 50 feet high, which may be of use as a stock for *Diospyros kaki* in Florida. The fruits are round, about an inch in diameter, and contain five or six seeds surrounded by a rather thin pulp.

73825 to 73862—Continued.

73849. ERYTHRINA CRISTA-GALLI L. Fabaceae.

No. 1301. Bussaco, Portugal, April 7, 1927. An ornamental shrub or small tree with dark-red flowers in large clusters a foot long. Native to southern South America.

73850. ERYTHRINA SENEGALENSIS DC. Fabaceae.

No. 942. Bathurst, Gambia, January 4, 1927. A small ornamental tree 8 to 16 feet high, with thorny branches and large crimson flower clusters 6 to 9 inches long. The pods are constricted, and each segment contains a brilliant red seed.

73851. FIRMIANA BARTERI (Masters) Schum. (*Sterculia barteri* Masters). Sterculiaceae.

No. 1239. Akkra, Gold Coast, February 27, 1927. A handsome tropical forest tree with coral-pink flowers.

73852 to 73854. GOSSYPIUM spp. Malvaceae. **Cotton.**

73852. GOSSYPIUM HIRSUTUM L.

No. 1221. Assuausi, Gold Coast, March 1, 1927. "Black rattler" cotton.

73853. GOSSYPIUM sp.

No. 1229. Winneba, Gold Coast, February 28, 1927. A tall plant which probably has escaped from cultivation.

73854. GOSSYPIUM sp.

Lisbon, Portugal. [No other notes.]

73855. HAKEA ACICULARIS (Vent.) Knight. Proteaceae.

No. 1311. Bussaco National Forest, Portugal, April 7, 1927. A tall evergreen shrub or small bushy tree, native to Australia, with very handsome foliage which is rigid and spiny, thus serving to protect the plant against animals. The plant is suitable for hedges and shrubberies and requires but little moisture or cultivation.

For previous introduction see No. 56879.

73856. HOMALIUM DOLICHOPHYLLUM Gilg. Flacourtiaceae.

No. 1258. Village of Bufuedru, en route from Winneba to Swedru, Gold Coast, February 27, 1927. A tropical ornamental tree with large racemes of pink flowers which turn to deep brown as the winged seeds mature.

73857. LAUROCERASUS OFFICINALIS Roemer (*Prunus laurocerasus* L.). Amygdalaceae. **English cherry laurel.**

No. 1308. Bussaco National Forest, Portugal, April 7, 1927. A very free-flowering, low-spreading evergreen shrub with narrow, flat foliage. It is perhaps more hardy than the common type.

For previous introduction see No. 67802.

73858 and 73859. LYCOPERSICON ESCULENTUM Mill. Solanaceae. **Tomato.**

73858. No. 1314. Malaga, Spain, March 30, 1927. A Spanish variety with small, deep-red fruits which keep well.

73859. From Malaga, Spain. [No other data.]

73860. MICHELIA CHAMPACA L. Magnoliaceae.

No. 1230. Agricultural experiment station, Aburi, Gold Coast, West Africa, February 27, 1927. An ornamental tropical tree with fragrant cream-colored flowers which is used as an avenue tree in this region.

For previous introduction see No. 67416.

73825 to 73862—Continued.

73861. MORINDA CONFUSA Hutchins. Rubiaceae.

No. 1233. En route from Winneba to Assuausi, Gold Coast, West Africa, February 26, 1927. A woody tropical climber with fragrant white flowers and large orange fruits. The roots are used as a remedy for fever.

73862. PHASEOLUS LUNATUS L. Fabaceae. **Lima bean.**

No. 1228. These seeds were obtained in the market at Secundee, Gold Coast, West Africa, and perhaps were originally grown in the interior of Africa.

73863. OXYTENANTHERA ABYSSINICA (A. Rich.) Munro. Poaceae. **Bamboo.**

From Africa. Seeds obtained from the department of agriculture, Southern Rhodesia, through the Federal Horticultural Board, United States Department of Agriculture. Received September 16, 1926. Numbered in April, 1927.

A large bamboo 25 to 50 feet high and 1½ to 3 inches in diameter, reported to have a wide range in Africa. It has a very different appearance from the remainder of the genus, but the structure of the spiculae in all the species is very similar.

For previous introduction see No. 42835.

73864 to 73880.

From Africa and Portugal. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April, 1927.

73864. PTEROCARYA STENOPTERA DC. Juglandaceae. **Chinese wing nut.**

No. 1309. Bussaco National Forest, Portugal. A handsome shade tree up to 60 feet high with leaves 6 to 12 inches long.

For previous introduction see No. 61938.

73865. SORGHUM sp. Poaceae. **Grass.**

No. 1222. En route from Winneba to Assuausi, Gold Coast, West Africa, February 28, 1927. A tropical grass 7 feet high with reddish leaves, resembling Sudan grass.

73866. STROPHANTHUS SARMENTOSUS DC. Apocynaceae.

No. 1271. Fouta Jalon Mountains, French Guinea, March 10, 1927. An ornamental tropical woody climber with white and purple flowers. The seeds contain a poisonous alkaloid which is used as a heart stimulant.

73867. TRISTANIA CONFERTA R. Br. Myrtaceae. **Brisbane box.**

No. 1307. Bussaco, Portugal, April 7, 1927. An attractive evergreen drought-resistant tree with white flowers, which will probably be hardy only in the southern United States.

For previous introduction see No. 43783.

73868 and 73869. VIGNA SINENSIS (Torner) Savi. Fabaceae. **Cowpea.**

73868. No. 1255. Obtained in the market at Akkra, Gold Coast, February 27, 1927. The Aiye bean from Togoland.

73869. No. 1256. Obtained in the market at Akkra, Gold Coast, February 27, 1927.

73870 to 73874. ZEA MAYS L. Poaceae. **Corn.**

73870. No. 1188. A white flint variety obtained in the market at Tico, Cameroon, and originally from Mbassi, February 16, 1927.

73864 to 73880—Continued.

73871. No. 1189. A pinkish variety of dent corn obtained in the market at Tico, Cameroon, and originally from Mbassi, February 12, 1927.

73872. No. 1238. Obtained in the market at Secundee, Gold Coast, March 2, 1927.

73873. No. 1250. A white flint variety obtained in the market at Asebu, near Assuausi, Gold Coast.

73874. No. 1257. Obtained in the market at Tico, Cameroon, February 15, 1927. The native name is *mbassi*, which is also the name of a village. The long husk covering the ear may indicate a protection against the corn worm which is generally bad in tropical regions.

73875. (Undetermined.)

No. 1226. Akkra, en route to Assuausi, Gold Coast, February 27, 1927. A large-leaved tropical herbaceous plant.

73876. ERIOSEMA GLOMERATA (Guill. and Perr.) Hook. f. Fabaceae.

Nos. 1247 and 1248. En route from Buea to Moyuca, Cameroon, February 15, 1927. A tropical leguminous plant growing along the roadside. It is very leafy and may be a good cover crop.

73877. (Undetermined.)

No. 1251. March 15, 1927. A tropical forest tree used as a shade tree in the cacao plantations near Victoria, Cameroon.

73878. (Undetermined.)

No. 1273. En route from Mamou to Dalaba, Fouta Jalon, French Guinea, March 10, 1927. A tropical vine the latex of which is very sticky and may contain rubber.

73879. PACHIRA FASTUOSA (DC.) Decaisne. Bombacaceae.

No. 1287. Konakry, French Guinea, March 10, 1927. *Noix de Cayenne.* A tropical woody plant with pods the size and shape of small cacao pods, containing edible nuts which are the size of hazelnuts and have the flavor of raw peanuts.

For previous introduction see No. 63779.

73880. (Undetermined.)

No. 1292. Near Mamou, Fouta Jalon, French Guinea, March 10, 1927. A tropical cucurbitaceous vine with bright-red oval fruits which are half an inch long.

73881. PRUNUS SERRULATA SACHALINENSIS (Schmidt) Makino (*P. sargenti* Rehder). Amygdalaceae. Sargent's cherry.

From Kagoshima, Japan. Seeds presented by Dr. K. Temari, director, Kagoshima Imperial College of Agriculture and Forestry. Received April 18, 1927.

A tall handsome tree, native to northern Japan, up to 25 meters in height, with smooth, dark-brown bark and ovate or ovate-lanceolate sharply serrate leaves 6 to 12 centimeters long. The single pink flowers, 2.5 to 4 centimeters wide are in few-flowered clusters, and the black fruits are about the size of peas. This wild Japanese cherry is considered by E. H. Wilson (Arnold Arboretum, Jamaica Plain, Mass.) to be the parent of several of the finest double-flowering varieties of flowering cherries and also to be the most satisfactory stock on which to work these varieties.

73882 to 73899.

From Tiehlingho P. O., Kirin Province, Manchuria. Seeds presented by A. D. Woeikoff, director, experiment farm, Echo. Received May 25, 1927.

73882 to 73898. AVENA SATIVA L. Poaceae. Oats.

Locally developed varieties.

73882. No. 344–288.	73891. No. 377–2234.
73883. No. 345–2229.	73892. No. 379–2236.

73889. No. 369–2239.	73898. No. 403–2240.
73890. No. 375–226.	

73899. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. Soy bean.

No. 698. A locally grown variety.

73900 to 73905. PHLEUM PRATENSE L. Poaceae. Timothy.

From Svalof, Sweden. Seeds presented by Dr. G. Nilsson-Leissner, assistant, forage-crop department. Received May 26, 1927.

Local selections of timothy.

73900. No. 21–21.	73903. No. 49–23.
73901. No. 42–22.	73904. No. 818.
73902. No. 48–23.	73905. *Gloria.*

73906. SACCHARUM OFFICINARUM L. Poaceae. Sugar cane.

From Soledad, Cienfuegos, Cuba. Cuttings presented by Robert M. Grey, superintendent, Harvard Botanic Station, through E. W. Brandes, Bureau of Plant Industry. Received June 2, 1927.

A locally grown variety.

73907 to 73910.

From Leningrad, Russia. Seeds presented by B. L. Issatchenko, director, botanic garden. Received May 20, 1927.

73907. CARAGANA FRUTEX (L.) Koch. Fabaceae. Russian pea shrub.

A hardy ornamental shrub 6 to 10 feet high, native from southeastern Russia to western China. The solitary yellow flowers are about an inch long.

For previous introduction see No. 52695.

73908 to 73910. CITRULLUS VULGARIS Schrad. Cucurbitaceae. Watermelon.

Russian varieties.

73908. No. 1.	73910. No. 3.
73909. No. 2.	

73911 and 73912.

From Victoriaborg, Akkra, Gold Coast, Africa. Seeds presented by L. A. King-Church, conservator of forests. Received May 28, 1927.

73911. FIRMIANA BARTERI (Masters) Schum. (*Sterculia barteri* Masters). Sterculiaceae.

A tropical African tree, about 35 feet high, with reddish yellow bark, rounded cordate leaves, and loose panicles of small scarlet flowers.

73911 and 73912—Continued.

73912. PARKIA sp. Mimosaceae.

A tropical African ornamental tree, said to have white flowers.

73913 and 73914.

From Matania el Saff, Egypt. Seeds presented by Alfred Bircher, Middle Egypt Botanic Station. Received May 31, 1927.

73913. ACACIA SCORPIOIDES (L.) W. F. Wight (*A. arabica* Willd.). Mimosaceae.

A tropical African leguminous tree of variable size, with bipinnate foliage and heads of small white flowers. The pods are used in tanning.

73914. CASUARINA FRASERIANA Miquel. Casuarinaceae.

A tall erect shrub or small tree closely related to *Casuarina distyla*, with leafless rigid branches and with the leaves represented by very small scales in whorls. Native to Australia.

73915 and 73916.

From Tashkent, Turkestan. Seeds presented by Hilaria Rajkova, botanic garden. Received June 2, 1927.

73915. EXOCHORDA KOROLKOWI Lavall. Rosaceae. **Turkestan pearlbush.**

A hardy upright slender-stemmed shrub up to 4 meters high, with racemes of white flowers 4 centimeters in diameter. Native to central Asia.

73916. THERMOPSIS ALTERNIFOLIA Regel and Schmalh. Fabaceae.

A hardy herbaceous yellow-flowered perennial, native to central Asia.

73917 to 73920. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Moca, Dominican Republic. Seeds presented by Dr. R. Ciferri, director, Estación Nacional Agronómica y Colegio de Agricultura. Received June 2, 1927.

Local varieties.

73917. *Todo el ano.* A small-seeded variety.

73918. No. 3.

73919. No. 2.

73920. No. 1.

73921 and 73922.

From West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received May 16, 1927.

73921. BALANITES AEGYPTIACA (L.) Delile. Zygophyllaceae.

No. 1288. Obtained in the market at Dakar, Senegal, March 17, 1927. The *morotodi* of the Foulani people, which is sometimes called the "desert date." A handsome tropical evergreen shrub with fragrant flowers and fruits which resemble the "dry" date as it is sold on the market. The wood is very hard and is used for plowhandles. The bark is used for fish poison, the seeds for the oil contained in them, and the leaves are used as a vegetable.

For previous introduction see No. 50121.

73922. BAUHINIA TOMENTOSA L. Caesalpiniaceae. **St. Thomas tree.**

No. 1286. Agricultural experiment station Aburi, Gold Coast, March 26, 1927. An erect tropical shrub with pale-yellow flowers.

For previous introduction see No. 66150.

73923. BUTIA ERIOSPATHA (Mart.) Beccari (*Cocos eriospatha* Mart.). Phoenicaceae.

From Soledad, Cienfuegos, Cuba. Seeds presented by Robert M. Grey, superintendent, Harvard Botanic Station. Received May 19, 1927.

A handsome pinnate-leaved palm with violet-colored stems, creamy flowers, and edible yellow fruits the size of a small plum. Native to Brazil.

For previous introduction see No. 45045.

73924 to 73942.

From West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received May 16, 1927.

73924. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

No. 1274. Folota, near Kanakry, French Guinea, March 10, 1927.

73925. CAPSICUM ANNUUM L. Solanaceae. **Red pepper.**

No. 1284. February 27, 1927. A yellow variety obtained in the market at Akuse, near Akkra, Gold Coast.

73926 and 73927. CARICA PAPAYA L. Papayaceae. **Papaya.**

73926. No. 1280. Botanic garden, Victoria, Cameroon, February 17, 1927. A variety with deep-salmon flesh of excellent quality.

73927. No. 1281. Konakry, French Guinea, March 12, 1927. A selected strain, said to be excellent.

73928. CASSIA SIEBERIANA DC. Caesalpiniaceae.

No. 1259. Dalaba, Fouta Jalon, French Guinea, March 10, 1927. A handsome tropical tree with long racemes of large yellow flowers.

73929. CLEMATIS GRANDIFLORA DC. Ranunculaceae.

No. 1264. Mamou, Fouta Jalon, French Guinea, March 10, 1927. A delicate climbing ornamental shrub with large greenish white flowers which produce balls of seeds 2 or 3 inches in diameter.

73930. COMBRETUM sp. Combretaceae.

No. 1263. Mamou, Fouta Jalon, French Guinea, March 10, 1927. A large handsome tropical shrub.

73931. COMBRETUM sp. Combretaceae.

No. 1269. Dalaba, Fouta Jalon, French Guinea, March 10, 1927. An ornamental tropical woody climber producing long arching shoots covered with masses of deep-scarlet flowers which are arranged in cushionlike clusters.

73932. CROTALARIA RETUSA L. Fabaceae.

No. 1290. Near Dakar, Senegal, March 17, 1927. A yellow-flowered tropical annual legume.

For previous introduction see No. 64061.

73933. ELAEIS GUINEENSIS Jacq. Phoenicaceae. **African oil palm.**

Seeds from the Gold Coast.

73934. ERYTHROPHLOEUM GUINEENSE Don. Caesalpiniaceae.

No. 1279. Near Mamou, Fouta Jalon, French Guinea, March 10, 1927. The "ordeal tree," so called because an infusion of the poisonous bark is used in many parts of Africa as an ordeal to test the guilt of a suspected person. It is also used as an arrow poison. This is a large handsome tropical tree up to 50 feet high, and the wood is very hard and durable.

For previous introduction see No. 48457.

73924 to 73942—Continued.

73935. FICUS CAPENSIS Thunb. Moraceae.

No. 1262. Near Mamou, en route to Dalaba, Fouta Jalon, French Guinea, March 10, 1927. A small tropical tree with smooth, juicy fruits 1½ inches in diameter, which are eaten with milk by the natives of French Guinea. It may prove valuable as stock for the cultivated fig.

For previous introduction see No. 56533.

73936. INDIGOFERA sp. Fabaceae.

No. 1275. En route from Mamou to Dalaba, Fouta Jalon, French Guinea, March 10, 1927. A tall upright herbaceous tropical plant 8 feet high, which produces small brown pods containing five or six seeds. It is probably a perennial, and may be a good cover plant.

73937. MEMECYLON SPATHANDRA Blume. Melastomaceae.

No. 1270. Near Mamou, Fouta Jalon, French Guinea, March 10, 1927. A tall ornamental tropical shrub, up to 25 feet high, with large green leaves and deep-blue flowers.

73938. PAHUDIA AFRICANA (Smith) Prain (*Afzelia africana* Smith). Caesalpiniaceae.

No. 1272. En route to Dalaba, Fouta Jalon, French Guinea, March 10, 1927. A handsome tropical shade tree producing large ornamental pods 6 inches long, which contain dull-black seeds with scarlet arils. These seeds are very attractive and are used by the natives for beads.

For previous introduction see No. 47501.

73939. PARINARI BENNA S. Elliot. Rosaceae.

No. 1282. Fouta Jalon, French Guinea, March 10, 1927. A shapely tropical tree called *sigon* by the natives of this region. The fruits are used medicinally by the natives, especially as a vermifuge.

73940. TETRAPLEURA TETRAPTERA (Schum.) Taub. Mimosaceae.

No. 1276. Obtained in the market at Akkra, Gold Coast, March 9, 1927. A tall, unarmed tree which has alternate compound leaves with leathery leaflets and small flowers in spikelike clusters. The pods are roasted and ground to make black soup, a common native dish in parts of tropical Africa. The soft pulp of these pods contains sugar, tannin, and a small quantity of saponin. The presence of saponin enables the natives to use the pods for washing purposes also.

For previous introduction see No. 62918.

73941. UVARIA CHAMAE Beauv. Annonaceae.

No. 1265. Near Mamou, Fouta Jalon, French Guinea, March 10, 1927. A small tropical drought-resistant tree with shiny fragrant leaves and large greenish brown flowers, followed by clusters of small tomentose fruits, filled with seeds, which are edible but insipid. The roots are used medicinally, and the wood is made into oars. This species may be valuable in the breeding of hardier Annonas.

73942. ZEA MAYS L. Poaceae. **Corn.**

No. 1278. Mamou, Fouta Jalon, French Guinea, March 10, 1927. The brown color is caused by the smoke in drying.

73943 to 73950.

From Moscow, Russia. Seeds presented by the secretary, Institute of Applied Botany and New Cultures. Received May 11, 1927.

73943. ALLIUM BARSCZEWSKII Lipsky. Liliaceae.

A hardy bulbous plant which may be of ornamental value. Native to western Russia.

73943 to 73950—Continued.

73944. ASTRAGALUS BORROVIANUS Hort. Fabaceae.

A hardy leguminous herbaceous plant native to Russia.

73945. CALAMAGROSTIS sp. Poaceae. **Grass.**

A rather tall hardy perennial grass, native to Russia.

73946. CONVALLARIA MAJALIS L. Convallariaceae. **Lily of the valley.**

Variety *Mandschurica*. A Manchurian form of the lily of the valley.

73947 to 73950. PAPAVER SOMNIFERUM L. Papaveraceae. **Poppy.**

Decorative Mongolian varieties.

73947. A double salmon variety.

73948. A double white variety.

73949. A double crimson variety.

73950. A double white variety with rosy margins.

73951. MUSANGA SMITHII R. Br. Moraceae.

From Cameroon, West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received June 1, 1927.

No. 1213. En route to the Ekona estate, March 18, 1927. The corkwood tree of West Africa, so called because of the lightness of the wood, which is used for building purposes. It is a handsome tropical tree, related to the mulberry, and becomes 60 to 80 feet in height, with palmate leaves having drooping lobes.

73952. PERSEA sp. Lauraceae. **Aguacate.**

From Venezuela. Seeds presented by H. Pittier, Museo Comercial, Ministerio de Relaciones Exteriores, Caracas. Received May 23, 1927.

A small-fruited wild avocado from the Tuy Valley, State of Miranda. The fruits have a delicate flavor.

73953. OPHIOPOGON JAPONICUS Ker. Liliaceae. **Japanese snake's-beard.**

From Peradeniya, Ceylon. Roots presented by T. H. Parsons, curator, Royal Botanic Gardens. Received May 20, 1927.

A tropical grasslike ornamental with variegated foliage, native to tropical Asia.

For previous introduction see No. 48720.

73954 and 73955.

From West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April, 1927.

73954. FIRMIANA BARTERI (Masters) Schum. Sterculiaceae.

No. 1239. Akkra, Gold Coast, February 27, 1927. A tropical ornamental tree with coral-pink flowers. The wood is light and used for fish-net floats, and the fiber is used for making rope.

73955. PICRALIMA KLAINEANA Pierre. Apocynaceae.

No. 1252. Agricultural experiment station, Aburi, Gold Coast, February 26, 1927. An ornamental tropical tree with attractive foliage and large bitter fruits used as a substitute for quinine.

73956. ELAEIS GUINEENSIS Jacq. Phoenicaceae. **African oil palm.**

From Cameroon, West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received March 25, 1927. Numbered April, 1927.

No. 1192. Botanic garden, Victoria, February 17, 1927. Variety *Poissonii*. A form of the African oil palm with flowers having a so-called "fleshy perianth" (probably abortive fruits) which contain 69 per cent of oil. The common type has a papery perianth. The native name is *diwakkawakka*.

73957 to 73962.

From Yokohama, Japan. Plants purchased from the Yokohama Nursery Co. Received February 24, 1927. Numbered April, 1927.

A collection of bamboos to be grown for identification.

73957. ARUNDINARIA FASTUOSA (Marl.) Makino. Poaceae. **Bamboo.**

73958. BAMBUSA NANA Roxb. Poaceae. **Bamboo.**

73959. BAMBUSA ALPHONSO KARRI Hort. Poaceae. **Bamboo.**

73960. PHYLLOSTACHYS PUBERULA NIGRA (Lodd.) H. de LeHaie (*P. nigra* Munro). Poaceae. **Bamboo.**

73961. SASA ARGENTEO-STRIATA (Regel) E. G. Camus. Poaceae. **Bamboo.**

73962. SASA AUREO-STRIATA (Regel) E. G. Camus. Poaceae. **Bamboo.**

73963 to 73967. VITIS VINIFERA L. Vitaceae. **European grape.**

From Baghdad, Iraq. Cuttings presented by J. F. Webster, inspector general, Department of Agriculture. Received March 16, 1927. Numbered April, 1927.

73963. *Baid al haman.*

73964. *Dais al anz.*

73965. *Kishmishi.*

73966. *Saidi.*

73967. *Shadda.*

73968 and 73969.

From Bathurst, Gambia, West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received in February, 1927.

73968. ARACHIS HYPOGAEA L. Fabaceae. **Peanut.**

No. 1128. January 8, 1927. A white-seeded selection from the red-seeded Philippine variety which was introduced from the Philippine Islands several years ago. This white-seeded selection is the biggest yielder in Gambia.

73969. CYMBOPOGON sp. Poaceae. **Grass.**

No. 986. Bigelo Beach, near Cape St. Mary, January, 1927. A scented grass 6 feet high, with fragrant leaves, which may be valuable for the production of a variety of citronella oil.

73970. BAUHINIA sp. Caesalpiniaceae.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received June 1, 1927.

A tropical leguminous ornamental shrub.

73971 to 73977.

From Moscow, Russia. Seeds presented by the secretary, Institute of Applied Botany and New Cultures. Received May 13, 1927.

73971 to 73977—Continued.

73971. ASTRAGALUS VARIEGATUS Franch. Fabaceae.

A hardy herbaceous leguminous perennial. Native to Russia.

73972. CAMPANULA sp. Campanulaceae. **Bellflower.**

A hardy herbaceous perennial with large blue flowers. Native to damp woods in Armenia.

73973. DELPHINIUM FLEXUOSUM Bieb. Ranunculaceae. **Larkspur.**

A hardy perennial larkspur with violet flowers. Native to Armenia.

73974. FRAGARIA sp. Rosaceae. **Strawberry.**

A wild strawberry from the region of the Amur River, eastern Siberia.

73975. HEDYSARUM SEMENOWII Regel and Herd. Fabaceae.

For previous introduction and description see No. 73606.

73976. SPIRAEA sp. Rosaceae.

A hardy ornamental shrub from the region of the Amur River, eastern Siberia.

73977. VICIA ERVILIA (L.) Willd. Fabaceae. **Vetch.**

A hardy annual erect vetch native to the Mediterranean countries.

73978 to 73980.

From Moca, Dominican Republic. Seeds presented by Dr. R. Ciferri, director, Estación Nacional Agronómica y Colegio de Agricultura. Received June, 1927.

73978. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

A local large-seeded variety.

73979 and 73980. RICINUS COMMUNIS L. Euphorbiaceae. **Castor bean.**

73979. A rapid-growing vigorous form from Panama.

73980. Variety *Bailudensis*. A good yielder from Palermo, Italy.

73981 to 73984.

From Nikita, Yalta, Crimea, Russia. Seeds presented by George V. Heintz, manager, library of the Government botanical gardens. Received June 3, 1927.

73981. CELTIS AUSTRALIS L. Ulmaceae. **European hackberry.**

A shade tree, up to 60 feet high, with elmlike foliage and small purple edible fruits.

For previous introduction see No. 52285.

73982. CISTUS TAURICUS J. and C. Presl. Cistaceae.

A hardy purple-flowered shrub about 2 feet high, native to southwestern Europe.

73983. EXOCHORDA KOROLKOWI Lavall. Rosaceae. **Turkestan pearlbush.**

For previous introduction and description see No. 73915.

73984. PISTACIA MUTICA Fisch. and Mey. Anacardiaceae.

A deciduous tree, up to 35 feet high, with pinnate foliage. It is sometimes used as stock for pistache (*Pistacia vera*).

73985 to 73987. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Nairobi, Kenya Colony, Africa. Seeds presented by W. Lyne Watt, assistant agricultural officer, Department of Agriculture. Received June 3, 1927.

Locally grown varieties.

73985. No. 1. 73987. No. 3.

73986. No. 2.

73988 and 73989.

From Paris, France. Seeds presented by Maurice Jeanson. Received June 3, 1927.

73988. CARICA CESTRIFLORA (A. DC.) Solms. Papayaceae.

A small tropical Brazilian tree with 7-lobed leaves and fleshy fruits which may be of value for eating.

73989. RUBUS sp. Rosaceae.

A raspberry said to have large fruits. Originally from Bogota, Colombia.

73990. GOSSYPIUM CERNUUM Todaro. Malvaceae. **Cotton.**

From Nagpur, Central Provinces, India. Seeds presented by W. Youngman, economic botanist to the Government, through T. H. Kearney, Bureau of Plant Industry. Received June 3, 1927.

A variety cultivated in the vicinity of Nagpur.

73991. FUNTUMIA ELASTICA (Preuss) Stapf. Apocynaceae. **Lagos rubber tree.**

From Soledad, Cienfuegos, Cuba. Seeds presented by Robert M. Grey, superintendent, Harvard Botanic Station. Received June 3, 1927.

A large forest tree which is very widely distributed throughout central Africa and is the source of Lagos rubber, which is of excellent quality.

For previous introduction see No. 64541.

73992. ALECTRYON EXCELSUM Gaertn. Sapindaceae. **Tioki.**

From Avondale, Auckland, New Zealand. Seeds presented by H. R. Wright. Received June 6, 1927.

As described by Cheeseman (Manual of New Zealand Flora), this is a handsome evergreen tree, 30 to 60 feet high, native to New Zealand. The bark is almost black, and the young branches, under surfaces of the compound leaves, and inflorescences are covered with a very fine silky pubescence. The shining-black oily seeds are half embedded in a fleshy, scarlet cup-shaped aril. The tough, elastic wood is used for tool handles.

For previous introduction see No. 62250.

73993 to 73998.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, director, botanic gardens. Received June 8, 1927.

73993. CASSIA POPULNEA Hort. Caesalpiniaceae.

A tropical Asiatic leguminous plant. [No other data.]

73994. CASSIA ROTUNDIFOLIA Pers. Caesalpiniaceae.

An annual bushy leguminous plant native to tropical America, with small hairy compound leaves and yellow flowers.

For previous introduction see No. 69150.

73993 to 73998—Continued.

73995. FICUS FULVA Reinw. Moraceae.

A small tropical tree with dense foliage and yellow-red fruits about three-fourths of an inch in diameter. Native to Burma and the East Indies.

For previous introduction see No. 67696.

73996. FICUS PARIETALIS Blume. Moraceae.

An attractive tropical Asiatic tree of good habit, with shining green leaves and golden-yellow fruits three-fourths of an inch in diameter.

For previous introduction see No. 67702.

73997. SACCHARUM SPONTANEUM L. Poaceae. **Grass.**

A coarse tropical grass with silvery panicles. It resembles sugar cane.

For previous introduction see No. 55668.

73998. SCLERIA COCHINCHINENSIS (Lour.) Druce (*S. elata* Thwaites). Cyperaceae.

A large tropical sedge 3 feet high, with panicles 1 foot long.

73999. ANANAS sp. Bromeliaceae. **Wild pineapple.**

From Vicosa, Minas Geraes, Brazil. Seeds presented by Prof. P. H. Rolfs, director, Escola Superior de Agricultura e Veterinaria. Received June 10, 1927.

A species of pineapple which is considered wild and is very abundant here. In general the fruits are cylindrical, about 4 inches in diameter and 6 inches long. (*From note by P. H. Rolfs under No. 56851.*)

74000 to 74010. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Dar es Salaam, Tanganyika Territory, Africa. Seeds presented by Dr. A. H. Kirby, director, Department of Agriculture. Received June 14, 1927.

74000 to 74007. *Tendekwa.*

74000. No. 1. From Djojiro village, Nera, Mwanza district.

74001. No. 2. From Ikoma village, Nera, Mwanza district.

74002. No. 3. From Bukumbi, Mwanza district.

74003. No. 4. From Urima, Mwanza district.

74004. No. 5. From Bukungukira, Mwanza district.

74005. No. 6. From Seke, Shinyanga district.

74006. No. 7. From Kizumbi, Shinyanga district.

74007. No. 8. From Ibadakuli, Shinyanga district.

74008. No. 9. From Utchunga, Shinyanga district.

74009. No. 10. From the Kola Ndota mission, Shinyanga district.

74010. No. 12. *Tendekwa.* From Biharamulo, Bukoba district.

74011. AMYGDALUS PERSICA NECTARINA Ait. Amygdalaceae. **Pineapple nectarine.**

Plant growing at the United States Plant Introduction Garden, Chico, Calif. Numbered June, 1927.

Row 18, tree 8, new test orchard. Worked on Lovell peach stock, P. I. G. 21343. A very fine yellow-fleshed variety received from James Marlboro, Topfield, Mass.

74012 and 74013. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Dar es Salaam, Tanganyika Territory, Africa. Seeds presented by Dr. A. H. Kirby, director, Department of Agriculture. Received June 14, 1927.

74012. No. 13. *Ndunge wima.* From Kibata, Kilwa district.

74013. No. 14. *Ndunge miti.* From Kibata, Kilwa district.

74014 to 74017. PYRUS spp. Malaceae. Pear.

From Manchuria. Scions collected by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received January 2, 1926. Numbered June, 1927.

74014. PYRUS sp.

No. 4711. Ta Lu Hua Temple, Kuangning, November 7, 1925. *Huang hsiang shui li* (yellow fragrant water pear). Scions of one of the four pears which are said to be the best and most blight resistant of the Chinese pears. The fruits, 2 inches in diameter, are yellow and ripen the middle of August.

74015. PYRUS sp.

No. 4712. Ta Lu Hua Temple, Kuangning, November 7, 1925. *Hsiao hsiang shui li* (fragrant water pear). Scions of one of the four pears which are said to be the best and most blight resistant of the Chinese pears. The light-yellow fruits, 1 inch in diameter, ripen the middle of August.

74016. PYRUS sp.

No. 4716. Ta Lu Hua Temple, Kuangning, November 7, 1925. *Ma li* (mottled pear). Fruits 1½ inches in diameter and 2 inches long are picked when greenish and are stored for six or seven days, finally becoming yellow. They ripen the end of September.

74017. PYRUS sp.

No. 4719. Ta Lu Hua Temple, Kuangning, November 7, 1925. *An li* (peace pear). Scions of a tree with green fruits 3 inches in diameter which ripen in October. The fruits are stored seven or eight months and finally become yellow before they are eaten.

74018. BACCAUREA RACEMOSA (Blume) Muell.-Arg. Euphorbiaceae.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, director, botanic gardens. Received February 11, 1927. Numbered in June, 1927.

A tropical ornamental tree native to Java. The berries may be edible.

74019 to 74022.

From West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received February and March, 1927. Numbered in June, 1927.

74019. ARTOCARPUS FALCATUS Hort. Moraceae.

No. 1186. Botanic Garden, Victoria, Cameroon, February 17, 1927. A large handsome tropical tree with coarse leaves and small yellow fruits, irregular in shape, with pinkish flesh.

74020. BOSQUIEA ANGOLENSIS Ficalho. Moraceae.

No. 1190. Botanic Garden, Victoria, Cameroon, February 17, 1927. A handsome tree 50 feet or less in height, with a loosely pyramidal head and a trunk often free of branches to nearly half its height. The rigid leathery leaves are elliptic and 2 to 6 inches long. The fruits contain a large single fleshy seed which is cooked and said to be of excellent flavor. Native to western tropical Africa.

For previous introduction see No. 62900.

74019 to 74022—Continued.

74021. LANDOLPHIA STOLZII Busse. Apocynaceae.

No. 1178. Between Bouea and Victoria, Cameroon, February 11, 1927. A tropical climbing shrub with small oval glossy green leaves, dense clusters of fragrant white flowers, and fruits resembling small oranges.

For previous introduction see No. 63773.

74022. (Undetermined.)

No. 1112. Jala Experiment Station, Sierra Leone, January 21, 1927. A handsome tropical African tree with golden-yellow figlike fruits which are edible.

74023 to 74111.

From Leningrad, Russia. Seeds presented by A. Kol, chief, bureau of introduction, Institute of Applied Botany. Received in June, 1927.

74023. AVENA BREVIS Roth. Poaceae. Oats.

No. 10184. A selection of a late-maturing sandy variety from the Moscow Plant Breeding Station, Timiriasev Agricultural Academy. The straw makes good feed.

74024 to 74055. AVENA SATIVA L. Poaceae. Oats.

74024. No. 10159. *Ilbiu.* Variety *montana.* A selection of an early prolific variety from the Tulun Experiment Station.

74025. No. 10273. *Severianin.* Variety *mutica.* A long-grained, thin-hulled, prolific early variety from the Viatka Reg. Experiment Station.

74026. No. 10274. *Sumrak.* Variety *cinerea.* A small-grained, thin-hulled variety from the Viatka Reg. Experiment Station. The straw makes good feed.

74027. No. 10275. Variety *aristata.* A large-grained prolific variety, resistant to lodging, from the Viatka Reg. Experiment Station.

74028. No. 10276. *Magistral.* Variety *obtusata.* A small-grained, side variety, resistant to lodging, from the Viatka Reg. Experiment Station.

74029. No. 10277. *Gentleman.* Variety *obtusata.* A small-grained, side variety from the Viatka Reg. Experiment Station.

74030. No. 25536. *Horoshkovsky.* Variety *aurea.* A large-grained, medium early variety, resistant to lodging, obtained from the Beresotochsk Experiment Station.

74031. No. 25537. *Rykhlik.* Variety *aurea.* A medium early, drought-resistant variety from the Sobezhinsk Experiment Station; resistant to lodging.

74032. No. 25538. Variety *aurea.* A medium early, small-grained variety from the Moscow Plant Breeding Station, Timiriasev Agricultural Academy.

74033. No. 25540. A selection from *Schwedischer Weisser.* Variety *aristata.* A large-grained, medium-early variety, resistant to lodging, from the Moscow Plant Breeding Station, Timiriasev Agricultural Academy.

74034. No. 25542. Variety *aristata.* A selection from *Duppavsky.* A large-grained, medium-early variety, resistant to lodging, from the Moscow Plant Breeding Station, Timiriasev Agricultural Academy.

74035. No. 25545. *Korall.* Variety *mutica.* A white-kerneled variety, resistant to lodging, obtained from the Viatka Reg. Experiment Station.

74023 to 74111—Continued.

74036. No. 25548. Variety *aurea*. A large-grained variety, resistant to lodging, which is a good yielder. It is from the Moscow Plant Breeding Station, Timiriasev Agricultural Academy.

74037. No. 25549. Variety *aurea*. A large-grained variety, resistant to lodging, which is a good yielder. It is from the Moscow Plant Breeding Station, Timiriasev Agricultural Academy.

74038. No. 25558. *Orlovsky*. Variety *brunnea*. A small-grained, medium-early variety from the Viatka Reg. Experiment Station.

74039. No. 25566. Variety *mutica*. A white-kerneled, large-grained, late variety from the Mironovsk Experiment Station.

74040. No. 25567. *Shatilovsky Neulutchenny*. Variety *mutica*. A white-kerneled, large-grained, late variety from the Shatilov Reg. Experiment Station.

74041. No. 25569. Variety *mutica*. A large-grained, prolific, late variety obtained from the Shatilov Reg. Experiment Station.

74042. No. 25570. Variety *mutica*. A white-kerneled, large-grained, late variety from the Moscow Plant Breeding Station.

74043. No. 25571. Variety *mutica*. A white-kerneled, large-grained, prolific late variety, resistant to lodging, from the Moscow Plant Breeding Station.

74044. No. 25572. Variety *mutica*. A white-kerneled, small-grained, late variety, resistant to lodging, from the Moscow Plant Breeding Station. The percentage of hulls is low.

74045. No. 25573. Variety *mutica*. A white-kerneled, large-grained, prolific, late variety, resistant to lodging, from the Moscow Plant Breeding Station.

74046. No. 25574. A selection from *Beseler*. Variety *aristata*. A late variety, resistant to lodging, from the Moscow Plant Breeding Station, Timiriasev Agricultural Academy.

74047. No. 25575. Variety *aristata*. A large-grained, good-yielding, late variety from the Moscow Plant Breeding Station, Timiriasev Agricultural Academy. It originated in Germany.

74048. No. 25576. Variety *aurea*. A small-grained, prolific, late variety obtained from the Moscow Plant Breeding Station, Timiriasev Agricultural Academy. It originated in Breslau, Germany.

74049. No. 25577. *Zenit*. Variety *mutica*. A white-kerneled, large-grained, prolific late variety from the Viatka Reg. Experiment Station.

74050. No. 25579. *Practica*. Variety *montana*. A small-grained, prolific late variety from the Viatka Reg. Experiment Station.

74051. No. 25580. *Kosmach*. Variety *montana*. A small-grained, late variety, resistant to lodging, from the Viatka Reg. Experiment Station.

74052. No. 25581. *Gentleman*. Variety *obtusata*. A small-grained, prolific, late side variety, resistant to lodging, obtained from the Viatka Reg. Experiment Station.

74053. No. 25582. *Zhemchuzhina*. Variety *mutica*. A white-kerneled, small-grained, prolific late variety, resistant to lodging, obtained from the Viatka Reg. Experiment Station.

74023 to 74111—Continued.

74054. No. 25583. *Vitias*. Variety *aristata*. A small-grained, good-yielding. late variety, inclined to lodging, obtained from the Viatka Reg. Experiment Station.

74055. No. 25584. *Magistral*. Variety *obtusata*. A white-kerneled, small-grained, prolific, late side variety, resistant to lodging, obtained from the Viatka Reg. Experiment Station.

74056. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

No. 35881. *Zheltokoryj*. From Galakan, Afghanistan. Sixty-seven days from sowing to ripening. Fruit globular, flattened, 16 by 18 centimeters, chrome yellow. Rind thin, slightly segmented. Flesh carmine tinted, sweet, juicy. Seeds black, few.

74057 to 74064. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

74057. No. 18601. *Khandaliak*. Variety *reticulatus*. From Ashkabad, Turkestan. Early melon. Sixty-four days from sowing to ripening. Fruit globular, flattened, slightly segmented, 13 by 17 centimeters, pale yellow, 10 green stripes with metallic luster from stem end to top. Rind thin with irregularly traced netting. Flesh white, stringy, sweet, juicy, slightly aromatic. Placenta firm.

74058. No. 22206. *Shakar Palak*. Variety *inodorus*. From Marghelan, Turkestan. One hundred and fourteen days from sowing to ripening. Fruit cylindric, 38 by 18 centimeters, green with dark-green stripes. Rind thick, segmented, completely netted. Flesh green, crisp, sweet, juicy, with a flavor of vanilla. Placenta firm.

74059. No. 22214. *Bos woldy*. Variety *saccharinus*. From Tashkent. Ninety-six days from sowing to ripening. Fruit elliptic, 21 by 19 centimeters, lemon yellow, 10 green stripes with metallic luster from stem end to top. Rind thick, segmented, without netting. Flesh white, mellow, with strong aroma. Placenta weak.

74060. No. 35884. *Khandaliak*. Variety *reticulatus*. From Tashkent. Early melon, 75 days from sowing to ripening. Fruit globular, flattened, 11 by 13 centimeters, pale yellow with small, greenish yellow spots. From stem end to top 10 bluish green stripes with metallic luster. Rind smooth, thin, with weak netting. Flesh pale salmon, melting, sweet, juicy, aromatic. Placenta firm.

74061. No. 35885. *Khandaliak*. Variety *reticulatus*. From Tashkent. Early melon, 78 days from sowing to ripening. Fruit globular, flattened, segmented, 9 by 13.5 centimeters, lemon yellow, 10 silvery gray stripes from stem end to top. Rind thin, green inside, with fine irregularly traced netting. Flesh salmon tinted, mellow, sweet, juicy, with flavor of pear. Placenta firm.

74062. No. 35887. *Khandaliak*. Variety *reticulatus*. From Bajram-Ali, Turkmenistan. Eighty-five days from sowing to ripening. Fruit globular, flattened, 17 by 19 centimeters, yellow with broad chrome yellowish stripes, 10 whitish green stripes with metallic luster from stem end to top. Rind thin, without netting. Flesh white, mellow, sweet, juicy, with flavor of pear. Placenta firm.

74063. No. 35889. *Kisyl Uruk*. Variety *inodorus*. From Tashkent. Ninety days from sowing to ripening. Fruit cylindric, 38 by 20 centimeters, greenish yellow. Rind thick, completely netted. Flesh white, thick, crisp, very sweet, juicy without aroma. Placenta firm.

74023 to 74111—Continued.

74064. No. 35891. *Ytch Kysyl.* Variety *inodorus.* From Tashkent. Ninety days from sowing to ripening. Fruit oval, 27 by 16 centimeters, yellowish green with dark-green stripes. Rind thick, completely netted. Flesh salmon tinted, very sweet, crisp, juicy. Placenta firm.

74065 to 74076. LENS ESCULENTA Moench. Fabaceae. Lentil.

74065. No. 1074. Variety *daghestanicum.* Pure line reproduction of the Stepnaya Experiment Station, State Institute of Experimental Agronomy and the northern Caucasian section, 1925. Seeds brown (chocolate) with black pattern, 4 to 4.5 millimeters in diameter, cotyledons orange, length of pod about 1 centimeter, flowers blue, from 6.5 to 7 millimeters long, leaves with six to eight pairs of elongated leaflets, sprouts violet.

74066. No. 3006. *Dymchataya Chechevitza.* Variety *nummularia.* Reproduction of the Stapnaya Experiment Station, State Institute of Experimental Agronomy, 1924, and the northern Caucasian section, 1925. A moderately prolific, late variety.

74067. No. 3456. Variety *nummularia.* Obtained from the Timiriasev Agricultural Academy. Reproduction of the Stepnaya Experiment Station, State Institute of Experimantal Agronomy, 1924, and the northern Caucasian section, 1925. A prolific, medium-early variety.

74068. No. 3460. *Dymchataya Chechevitza.* Variety *nummularia.* Reproduction of the Stepnaya Experiment Station, State Institute of Experimental Agronomy, 1924, and the northern Caucasian section, 1925. A moderately prolific, late variety.

74069. No. 3462. Variety *persicum.* Pure line reproduction of the Stepnaya Experiment Station, Institute of Experimental Agronomy and the northern Caucasian section, 1925. Seeds one, colored salmon pink, 3.5 to 5 millimeters in diameter, cotyledons orange, length of pod about 1 centimeter, flowers white, standard veined with blue, length of flower about 6 millimeters, leaves with four to six pairs of narrow leaflets. Drought resistant, early.

74070. No. 10046. Variety *nummularia.* From the middle Asiatic section, 1925. A prolific, late variety.

74071. No. 10047. *Tarelochanaya Chechevitza.* Variety *nummularia.* From the northern Caucasian and the middle Asiatic sections, 1925. A large-grained, late variety.

74072. No. 10048. Variety *nummularia.* From the middle Asiatic section, 1925. A moderately prolific, late variety.

74073. No. 10049. Variety. *nummularia.* From the middle Asiatic section, 1925. A late variety.

74074. No. 10050. Variety *nummularia.* From the northern Caucasian section, 1925. A prolific variety.

74075. No. 10051. Variety *nummularia.* From the middle Asiatic section, 1925. A late variety.

74076. No. 10052. Variety *nummularia.* From the middle Asiatic section, 1925. A medium-early variety.

74077 to 74083. PISUM SATIVUM L. Fabaceae. Pea.

74077. No. 10015. Obtained from the Viatka Reg. Experiment Station. Small grained, pods well filled.

74023 to 74111—Continued.

74078. No. 10016. Obtained from the Viatka Reg. Experiment Station. Small grained, pods well filled.

74079. No. 10017. Obtained from the Engelhardt Reg. Experiment Station. Small grained, pods well filled.

74080. No. 10019. Obtained from the Viatka Reg. Experiment Station. Small grained, pods well filled.

74081. No. 10257. *Gorokh Machinsky, Mulk, Mullak.* From the upper part of Zaravshan, Turkestan. An early variety used as green manure.

74082. No. 10299. Variety *griseum.* Obtained from the Timiriasev Agricultural Academy. A medium-ripening variety used as green fodder.

74083. No. 10296. *Gorokh Mestny.* From Lobanovo, Nikolsk district, North Dvinsk Government. A late variety used as green fodder.

74084 to 74103. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. Common wheat.

74084. No. 2999. *Belokoloska.* Variety *lutescens.* An awnless, prolific variety obtained from the Saratov Reg. Experiment Station, Saratov Government.

74085. No. 3000. *Beloziornaya.* Variety *albidum.* From the Saratov Reg. Experiment Station, Saratov Government. A white awnless prolific spring variety having good milling and baking qualities.

74086. No. 3001. *Beloziornaya.* Variety *albidum.* A white awnless prolific spring variety suited to sandy soil. From the Saratov Reg. Experiment Station, Saratov Government.

74087. No. 6984. *Krasnaya Ostistaya* (red, awned). Variety *ferrugineum.* A drought-resistant spring variety from the Ekaterinoslav Reg. Experiment Station, Ukrainia.

74088. No. 6985. *Krasnaya Bezostaya* (red awnless). Variety *milturum.* A prolific, drought-resistant spring variety from the Ekaterinoslav Reg. Experiment Station, Ukrainia.

74089. No. 9446. Variety *caesium.* A prolific, flinty, red-grained, spring variety from the West Siberian Reg. Experiment Station, Omsk, Siberia.

74090. No. 9447. Variety *lutescens.* A large-grained, awnless, prolific variety from the West Siberian Reg. Experiment Station, Omsk, Siberia.

74091. No. 9449. Variety *milturum.* An awnless, drought-resistant, prolific variety, resistant to lodging, from the West Siberian Reg. Experiment Station, Omsk, Siberia.

74092. No. 9450. Variety *milturum.* An awnless, prolific, drought-resistant variety from the West Siberian Reg. Experiment Station, Omsk, Siberia.

74093. No. 10158. Variety *ferrugineum.* A hardy, prolific winter variety from the plant-breeding station, Timiriasev Agricultural Academy, Moscow. The original sample was obtained in 1901 from Vilmorin-Andrieux & Co., Paris, France, under the name *Blé Victoria d'automne.*

74094. No. 10159. Variety *erythrospermum.* A hardy, prolific winter variety from the plant-breeding station, Timiriasev Agricultural Academy, Moscow.

74023 to 74111—Continued.

74095. No. 10162. Variety *ferrugineum*. A large-grained hardy, prolific variety from the plant-breeding station, Timiriasev Agricultural Academy, Moscow.

74096. No. 10163. Variety *ferrugineum*. A hardy, prolific winter variety from the plant-breeding station, Timiriasev Agricultural Academy, Moscow.

74097. No. 10164. Variety *lutescens*. A hardy, prolific awnless winter variety from the plant-breeding station, Timiriasev Agricultural Academy, Moscow.

74098. No. 10165. Variety *albidum*. A hardy, prolific, awnless, winter variety from the plant-breeding station, Timiriasev Agricultural Academy, Moscow.

74099. No. 10166. Variety *milturum*. A hardy, prolific, large-grained, awnless, winter variety from the plant-breeding station, Timiriasev Agricultural Academy, Moscow. The original sample was obtained in 1902 from the Breslau Experiment Station, under the name *Blé rouge de St. Land*.

74100. No. 10167. Variety *alborubrum*. A hardy, prolific, awnless, winter variety from the plant-breeding station, Timiriasev Agricultural Academy, Moscow.

74101. No. 10244. Variety *graecum*. From Karshinsk Vilaet, West Bokhara. An early, prolific, large-grained, lax-eared, spring variety which is drought resistant.

74102. No. 10245. Variety *graecum*. From Karshinsk Vilaet, West Bokhara. An early, prolific, compact-eared, spring variety which is drought resistant.

74103. No. 35911. *Kooperatorka*. Variety *erythrospermum*. From the Odessa Experiment Station, Odessa. A white-eared, red-grained variety. It is one of the most early, productive, and valuable winter wheats of Ukrainia.

74104 to 74109. TRITICUM DICOCCUM Schrank. Poaceae. **Emmer.**

74104. No. 35894. Variety *farrum, f. armeniacum*. From the Stepnaya Ret. Experiment Station, State Institute of Experimental Agronomy, 1925. Affected by *Puccinia triticina* Eriks. A late form.

74105. No. 35895. Variety *farrum, f. caucasicum*. From the Stepnaya Ret. Experiment Station, State Institute of Experimental Agronomy, 1925. Affected by *Puccinia triticina* Eriks.

74106. No. 35896. Variety *farrum, f. iranicum*. From the Stepnaya Ret. Experiment Station, State Institute of Experimental Agronomy, 1925. Susceptible to *Erysiphe graminis* DC., *Puccinia glumarum* Eriks., and *Puccinia triticina* Eriks.

74107. No. 35898. Variety *farrum, f. vasconica*. From the middle Asiatic section. A winter variety prominent among other forms by its late maturity, large ear, high growth, and thick culm.

74108. No. 35900. Variety *rufum, f. asetivale*. From the Stepnaya Experiment Station, State Institute of Experimental Agronomy, 1925. Similar to *f. caucasicum* [No. 74105] except in color of ear.

74109. No. 35902. Variety *rufum, f. maturatum*. From the Stepnaya Experiment Station, State Institute of Experimental Agronomy, 1925. It is similar to *f. tataricum* except in color of ear. Susceptible to yellow rust (*Puccinia glumarum* Eriks.), brown rust (*P. triticina* Eriks.), and stem rust (*P. graminis* Pers.).

74023 to 74111—Continued.

74110 and 74111. TRITICUM PERSICUM (Bois.) Aitch. and Hemsl. Poaceae. **Persian wheat.**

74110. No. 35919. Variety *rubiginosum*. From Tiflis. Partly immune to *Erysiphe graminis* DC. An early spring variety.

74111. No. 35920. Variety *stramineum*. From Tiflis, 1925. Immune to *Erysiphe graminis* DC. An early spring variety.

74112 to 74127.

From Sumatra. Seeds collected by H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received June 20, 1927.

74112. BOTOR TETRAGONOLOBA (L.) Kuntze (*Psophocarpus tetragonolobus* DC.). Fabaceae. **Goa bean.**

Borong. From Silo Maradja, Asahan. A tropical Asiatic herbaceous perennial with blue flowers. The unripe pods are eaten as a vegetable.

For previous introduction see No. 66263.

74113. CALAMUS sp. Phoenicaceae. **Palm.**

No. 7085. From Silo Maradja, Asahan. *Rotan alas*. A climbing pinnate-leaved palm with fruits resembling those of Salakka. The flesh around the seeds, however, is of a purplish gray color and has a sweet mawkish disgusting taste.

74114. DAEMONOROPS DRACO (Willd.) Blume (*Calamus draco* Willd.). Phoenicaceae.

No. 6957. From Loendoet, Koealoe. *Tjat djernang*. This is the species which yields the dragon's blood (*tjat djernang*) of the Malays.

74115. CEIBA PENTANDRA (L.) Gaertn. (*Eriodendron anfractuosum* DC.). Bombacaceae. **Kapok.**

Kaboe kaboe. From Silo Maradja, Asahan. A local form of the silk-cotton tree. The seed pods contain fiber used to stuff pillows, etc.

74116 to 74118. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

From Silo Maradja, Asahan.

74116. *Goendoer bolon*.

74117. *Pitoela*.

74118. *Djelok*. The Javanese name is *waloe*. An edible-seeded variety.

74119. DRACONTOMELON sp. Anacardiaceae.

No. 7599. *Hihing*. Growing near the water at Aek Sordang, Loendoet, Koealoe. A wild species with pinnately compound alternate leaves. The clingstone fruits, about an inch in diameter, are russet yellow when ripe, with a rather nondescript but not unpleasant acid taste, and contain a single large hard seed. This species is not cultivated, as far as could be learned, but is utilized when found.

74120. DRYMOPHLOEUS sp. Phoenicaceae. **Palm.**

Boenet, Asahan. (Cultivated ornamental.) A semidwarf cespitose palm 9 to 12 feet high, with unarmed pinnate leaves and an abundance of brilliant red fleshy fruits half an inch in diameter, containing spindle-shaped longitudinally 5-furrowed seeds. The flesh probably contains rhaphides, because it is irritating to tender skin.

74121 to 74123. GNETUM spp. Gnetaceae.

Tropical Asiatic woody vines with jointed knotty branches and opposite leaves.

74121. GNETUM sp.

No. 6868. From Loendoet, Koealoe. This species may be the same as No. 7062 [No. 74122].

74112 to 74127—Continued.

74122. GNETUM sp.

No. 7062. From near Aek Sordang, Loendoet, Koealoe.

74123. GNETUM sp.

No. 7354. From Loendoet, Koealoe.

74124. MYRISTICA sp. Myristicaceae.

No. 7177. From the swampy jungle along the Soengei Moeka, downstream from Tanah Datar, Batu Bara. A tropical aromatic tree with entire leaves, inconspicuous flowers, and orange-colored fruits.

74125. PITHECOLOBIUM KUNSTLERI Prain. Mimosaceae.

No. 6374. From Hoeta Padang, Asahan. A small handsome tropical leguminous tree with attractive red pods from which purple-black seeds are suspended when the pods open.

74126. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

Tijoeng, Terong. From Silo Maradja, Asahan.

74127. VIGNA SESQUIPEDALIS (L.) Fruwirth. Fabaceae. **Asparagus-bean.**

Kasang poroet (stomach beans). The Javanese name is *katjang oesoes.*

74128 to 74131. LOLIUM PERENNE L. Poaceae. Perennial ryegrass.

From Aberystwyth, Wales. Seeds presented by R. G. Stapledon, director, Welsh Plant-Breeding Station, through H. N. Vinall, Bureau of Plant Industry. Received June 21, 1927.

74128. Ba 1767.
74129. Ba 1772.
74130. Ba 1773.
74131. Ba 1774.

74132. ACACIA MACRACANTHA Humb. and Bonpl. Mimosaceae.

From Caracas, Venezuela. Seeds presented by H. Pittier, Museo Comercial, Ministerio de Relaciones Exteriores. Received June 21, 1927.

A low thorny tropical tree with a depressed crown, large compound leaves, and yellow flower heads. Native to northern South America.

74133 to 74136. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Sabour, India. Seeds presented by S. K. Basu, officiating economic botanist, Bihar and Orissa. Received June 22, 1927.

Locally developed varieties.

74133. *Rahar.* Type 2 (erect).

74134. *Rahar.* Type 7 (erect).

74135. *Rahar.* Type 7 (spreading).

74136. *Rahar.* Type 12 (erect).

74137 to 74155. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Decca, Bengal, India. Seeds presented by D. Dutta, second economic botanist, Bengal Department of Agriculture. Received June 23, 1927.

Locally developed varieties.

74156. CLIVIA MINIATA (Lindl.) Regel. Amaryllidaceae.

From Gibraltar. Plants collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 29, 1927.

A South African bulbous plant 1½ feet high, with a tuft of sword-shaped leaves and bright scarlet flowers with yellow throats, in a many-flowered umbel. The ovoid red fruits are about an inch long.

74157. CASTANEA MOLLISSIMA Blume. Fagaceae. Hairy chestnut.

From Singapore, Straits Settlements. Seeds presented by R. E. Holttum, director, botanic garden. Received March 12, 1927. Numbered in June, 1927.

A hardy chestnut, native to northeastern Asia, with edible nuts.

74158 to 74174.

From Paris, France. Seeds presented by Prof. D. Bois, Paris Museum of Natural History. Received June 24, 1927.

74158. AGROSTIS INTERRUPTA L. Poaceae. **Grass.**

An annual bushy grass up to 2 feet high, native to sandy places in the Mediterranean countries.

74159. BROMUS ADOENSIS Hochst. Poaceae. **Grass.**

An Abyssinian plant 1 or 2 feet high with softly hairy foliage and nodding panicles, 3 to 5 inches long, of shining awned spikelets.

For previous introduction see No. 53036.

74160. CATAPODIUM LOLIACEUM (Huds.) Link. Poaceae. **Grass.**

A low annual prostrate-spreading grass up to 4 inches high. It is native to sandy rocky places in the Mediterranean countries.

74161. CATAPODIUM TUBERCULOSUM Moris. Poaceae. **Grass.**

An annual grass about 8 inches high, with slender stems. Native to southern Europe.

74162. CHAETURUS FASCICULATUS Link. Poaceae. **Grass.**

An annual bushy grass, upright or ascending, up to 10 inches in height. Native to the Mediterranean countries.

74163. CHLORIS CUCULLATA Bisch. Poaceae. **Grass.**

A subtropical, perennial, cespitose grass native to Mexico.

74164. CHLORIS SUBMUTICA H. B. K. Poaceae. **Grass.**

A subtropical, perennial, cespitose grass native to Mexico.

74158 to 74174—Continued.

74165. DEMAZERIA SICULA (Jacq.) Dum. Poaceae. Grass.

An annual bushy upright slender-stemmed grass usually about 8 inches high. Native to the Mediterranean countries.

74166. FESTUCA MAIREI St. Yves. Poaceae. Grass.

A Moroccan grass.

74167. GAUDINIA FRAGILIS (L.) Beauv. Poaceae. Grass.

An annual, ascending grass, up to 2 feet high, with thick, rough-hairy leaves. It is confined almost entirely to the Mediterranean countries.

For previous introduction see No. 63986.

74168. LAGURUS OVATUS L. Poaceae. Rabbit-tail grass.

A hardy annual grass native to the Mediterranean countries. The small white flower heads are used for dry bouquets.

For previous introduction see No. 66009.

74169. PASPALUM RACEMOSUM Lam. Poaceae. Grass.

A tropical American grass which is best adapted to the moist or alluvial soils of the southern United States. It grows from a rootstock, with rather coarse, tender stems and leaves, reaching a height of about 2 feet. It has promise as a hay or pasture grass.

For previous introduction see No. 63991.

74170. PHLEUM ARENARIUM L. Poaceae. Grass.

An annual, tufted, erect or ascending grass, up to a foot in height, with smooth leaves about an inch long, and cylindrical spikes. It is native to Europe and the northern coast of Africa.

For previous introduction see No. 44698.

74171. PHLEUM PANICULATUM Huds. (*P. asperum* Jacq.). Poaceae. Grass.

An erect annual or ascending grass 4 to 16 inches high. Native to the Mediterranean countries.

74172. PSILURUS ARISTATUS (L.) Lange. Poaceae. Grass.

A bushy annual grass with slender stems up to a foot high. It is native to dry rocky places in the Mediterranean countries.

74173. SCHISMUS BARBATUS (L.) Chase. Poaceae. Grass.

An annual grass with numerous spreading slender stems up to 10 inches long. Native to dry places in the Mediterranean countries.

74174. SESLERIA ARGENTEA Savi. Poaceae. Grass.

A perennial cespitose grass with stems up to a foot and a half high. Native to sandy places in the Mediterranean countries.

74175 to 74194.

From North Africa. Seeds presented through W. T. Swingle, Bureau of Plant Industry. Received June 30, 1927.

74175. ADENOCARPUS BACQUEI Batt. and Pitard. Fabaceae.

Botanic garden, Algiers, Algeria. A low ornamental leguminous shrub with yellow flowers.

74176. ALOE sp. Liliaceae.

Botanic garden, Algiers, Algeria. A tender ornamental fleshy plant with red or yellow flowers.

74175 to 74194—Continued.

74177. CITRULLUS COLOCYNTHIS (L.) Schrad. Cucurbitaceae. Colocynth.

A perennial herbaceous vine allied to the watermelon. The small round hard green and yellow fruits, 3 inches in diameter, are used medicinally as a purgative.

74178. CONVOLVULUS TRABUTIANUS Schweinf. and Muschler. Convolvulaceae.

University of Algiers, Algeria. A subtropical ornamental vine.

74179. CYTISUS BATTANDIERI Maire. Fabaceae.

As described by Dr. René Maire (Bulletin de la Station de Recherches Forestières du Nord de l'Afrique, vol. 1, p. 72), this is a handsome unarmed shrub, with large, rounded, silvery leaflets and elongated clusters of golden yellow flowers. It is native to northern Morocco, and, in the opinion of Doctor Maire, merits cultivation as an ornamental.

For previous introduction see No. 65469.

74180 and 74181. EPHEDRA ALTISSIMA Desf. Gnetaceae. Climbing joint fir.

From the Botanic Garden, Algiers, Algeria.

For previous introduction see No. 66007.

74180. A plant about 10 feet high climbing over a palm. The pink-fleshed berries are slightly oval.

74181. An attractive woody climber.

74182. FERULA COMMUNIS L. Apiaceae. Giant fennel.

A stout herbaceous perennial 8 to 12 feet high, forming a clump. The leaves are light green and the flowers yellow.

74183. HYOSCYAMUS FALEZLEZ Cos. Solanaceae. Henbane.

A coarse annual or biennial herb, possibly of medicinal value. It is eaten by goats and sheep, but is very poisonous to horses.

For previous introduction see No. 62667.

74184. HYOSCYAMUS MUTICUS L. Solanaceae. Henbane.

Like the henbane (*Hyoscyamus niger*), this plant, which is native to Egypt and western Asia, is a source of hysocyamin, an alkaloid used in the treatment of various nervous disorders. It is a thick-stemmed perennial with fleshy, ovate leaves about 4 inches long and violet-spotted, whitish flowers nearly an inch in length.

For previous introduction see No. 58601.

74185. MEDICAGO SATIVA L. Fabaceae. Alfalfa.

Lucerne de temacine. A local variety from Algeria.

74186. PHOENIX DACTYLIFERA L. Phoenicaceae. Date palm.

Algerian-grown date seeds.

74187. RHUS OXYACANTHA Cav. Anacardiaceae.

A shrub with twisted thorny branches and ternate leaves.

74188. SEVERINIA BUXIFOLIA (Poir.) Ten. (*Atalantia buxifolia* Oliver). Rutaceae.

A thorny subtropical shrub resistant to alkali and salt. It has shiny green leaves, clusters of small white flowers, and dark-red berrylike fruits.

For previous introduction see No. 55495.

74189. TRITICUM TURGIDUM L. Poaceae. Poulard wheat

Krolof.

74175 to 74194—Continued.

74190. ZIZIPHUS LOTUS (L.) Lam. Rhamnaceae.

Botanic garden, Algiers, Algeria. A prickly shrub 4 feet high, with small round yellow fruits.

74191. (Undetermined.)

A poisonous leguminous plant.

74192 to 74194. TRITICUM spp. Poaceae.

Algerian varieties.

74192. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). **Common wheat.**

No. 1.

74193. TRITICUM DURUM Desf. **Durum wheat.**

No. 2.

74194. TRITICUM TURGIDUM L. **Poulard wheat.**

No. 3.

74195. ERIOXYLUM ARIDUM Rose and Standl. Malvaceae.

From Mazatlan, Sinaloa, Mexico. Seeds presented by Jesus Gonzalez Ortega. Received June 30, 1927.

A tropical shrub or small tree, closely related to cotton, from the dry hills of Sinaloa, Mexico. The dark purple flowers are about 4 inches across.

74196. GOSSYPIUM sp. Malvaceae. **Cotton.**

From Silo Maradja, Asahan, Sumatra. Seeds collected by H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received June 20, 1927.

Kapas koelembang. A shrubby cotton cultivated on the East Coast, Sumatra. It is probably a type of ancient cultivation.

74197. GOSSYPIUM BREVILANATUM Hochr. Malvaceae. **Cotton.**

From Paris, France. Seeds presented by Prof. D. Bois, Paris Museum of Natural History. Received June 24, 1927.

A wild cotton relative which is native to Madagascar.

74198. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Dacca, Bengal, India. Seeds presented by D. Dutta, second economic botanist. Received June 23, 1927.

No. 18. *Rungpur rahar.* Locally grown seeds.

74199. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

From Cape St. Mary, Gambia, West Africa. Seeds presented by Archibald J. Brooks, director, Department of Agriculture. Received June 24, 1927.

Red kinto.

74200 and 74201.

From Paris, France. Seeds presented by Prof. D. Bois, Paris Museum of Natural History. Received June 24, 1927.

74200. CORNUCOPIAE CUCULLATUM L. Poaceae. **Grass.**

An ornamental annual grass native to the Mediterranean countries.

74201. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

A variety from the region near Lake Chad, Africa.

74202. IRIS DICHOTOMA Pall. Iridaceae. **Vesper iris.**

From Chihli Province, China. Plants collected by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received January 11, 1927. Numbered in June, 1927.

No. 8833. Fa Hua Ssu Temple, November 19, 1927. A tall iris, said to have white flowers, found on a very dry rocky mountain side. It is native to northern China.

For previous introduction see No. 71147.

74203. ULMUS PUMILA L. Ulmaceae. **Chinese elm.**

From Lind, Wash. Seeds presented by H. M. Wanser, superintendent, Adams Branch Experiment Station. Received June 1, 1927.

A hardy, rapid-growing Chinese elm which is drought resistant and thrives in poor soil.

74204. PHOENIX DACTYLIFERA L. Phoenicaceae. **Date palm.**

From Boudenib, Morocco. Offshoots obtained through W. T. Swingle, Bureau of Plant Industry. Received June 23, 1927.

A Moroccan variety of date.

74205. PYRUS sp. Malaceae. **Pear.**

A variety growing at the United States Plant Introduction Garden, Chico, Calif. Numbered in June, 1927.

Row 46, tree 2, old test orchard. Tree spreading, limbs small, twigs slender, and leaves small; in these characters it resembles the Seckel. Crop heavy; fruits obovate, pyriform, 2⅝ inches long and 2½ inches in diameter; skin light yellow with small inconspicuous dots; flesh white, granular, of good quality, moderately sweet; core small. The tree has shown but little injury by blight.

74206. LITCHI CHINENSIS Sonner. Sapindaceae. **Lychee.**

From China. Plants collected by F. A. McClure, agricultural explorer, Bureau of Plant Industry. Received June 28, 1927.

Noh mai. From Lohkongtung.

74207. GOSSYPIUM PERUVIANUM Cav. Malvaceae. **Cotton.**

From Peru. Seeds obtained through O. F. Cook, Bureau of Plant Industry. Received June 24, 1927.

C. B. 613. *Peruvian Tanguis cotton.*

74208. WERCKLEA INSIGNIS Pitt. and Standl. Malvaceae.

From San Jose, Costa Rica. Seeds presented by Carlos Wercklé. Received March 29, 1927. Numbered in April, 1927.

A handsome subtropical shrub 15 feet high, branching close to the ground, with bright-lilac flowers resembling those of Chinese hibiscus (*Hibiscus rosa-sinensis*).

For previous introduction see No. 51125.

74209. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

From Upper Senegal, Africa. Seeds obtained by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 21, 1927.

No. 1299. A sorghum found near Timbuktu.

74210 to 74212.

From Canton, China. Plants collected by F. A. McClure, agricultural explorer, Bureau of Plant Industry. Received June 28, 1927.

74210. CITRUS sp. Rutaceae.

Sour kat.

74211 and 74212. CLAUCENA LANSIUM (Lour.) Skeels. Rutaceae. **Wampi.**

74211. *Sweet wampi* grafted on *sour kat.*

74212. *Sour wampi.*

Introductory statement	1
Inventory	2
Index of common and scientific names	25

INTRODUCTORY STATEMENT

In August, 1927, one of the months included in the period covered by this inventory, an interesting collection of subtropical vegetables (Nos. 74554 to 74572) was received from the Province of Kwangtung, southeastern China, as the result of the activities of F. A. McClure, agricultural explorer. These locally developed varieties of vegetables will be tested chiefly in the Southern States, to which region they are probably best adapted.

Fourteen species and varieties of cotton (*Gossypium* spp., Nos. 74447 to 74459, 74660) were presented by the Royal Botanic Garden at Sibpur, near Calcutta, India. Also two native varieties of cotton (*Gossypium* spp., Nos. 74242, 74243) from Colombia were presented by Stanley F. Morse, of Cali, Colombia. These will be of interest to cotton breeders.

An unusual number of wheat introductions are featured in this inventory. From the College of Agriculture and Forestry at Nanking, China, four lots of local varieties were received (*Triticum* spp., Nos. 74248 to 74399, 74480 to 74485, 74708 to 74779, 74786 to 75126). The Institute of Applied Botany and New Cultures, Moscow, Russia, also sent in an interesting collection (*Triticum* spp., Nos. 74489 to 74502).

Dr. Augustine Henry, of the College of Science for Ireland, Dublin, sent in seeds of an interesting lot of ornamentals which he had collected in the French Alps (Nos. 74681 to 74690, 74703). Included in this shipment were dwarf shrubs as well as herbaceous plants.

The botanical determinations of these introductions have been made and the nomenclature determined by H. C. Skeels, and the descriptive matter has been prepared under the direction of Paul Russell, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

OFFICE OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., April 17, 1929.

49628—29——1

INVENTORY[1]

74213. TERMINALIA SAFFORDII Merr. Combretaceae.

From the island of Guam. Seeds presented by C. W. Edwards, director, Guam Agricultural Experiment Station. Received August 11, 1927.

A tropical ornamental tree with broadly oval leaves and axillary racemes of small oblong fruits. Native to Guam.

74214 and 74215.

From Sumatra. Seeds collected by H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received August 12, 1927.

74214. CYPERUS sp. Cyperaceae. Sedge.

No. 8214. *Galamaija.* Seeds collected between Djoema Tombak and Aek Na Gerger. A tall, soft-stemmed species used for making mats and bags. It grows wild in the little swamps, and where it occurs naturally it is increased by cutting up the clumps and tucking the divisions into new places.

74215. JATROPHA CURCAS L. Euphorbiaceae.

No. 8213. *Doelang patila.* Seeds collected between Djoema Tombak and Aek Na Gerger. A poisonous plant 5 or 6 feet high, used as a hedge plant and ornamental by the natives.

For previous introduction see No. No. 68966.

74216. BAMBUSA sp. Poaceae. **Bamboo.**

From Dehra Dun, United Provinces, India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute and College. Received August 15, 1927.

A tall bamboo, native to India, which is said to resemble *Bambusa tulda.*

74217. MERCURIALIS ANNUA L. Euphorbiaceae.

From Paris, France. Seeds presented by Prof. D. Bois, Paris Museum of Natural History. Received August 15, 1927.

An erect European annual which bears seeds said to contain a high percentage of drying oil.

74218 and 74219. MACADAMIA TERNIFOLIA F. Muell. Proteaceae. **Macadamia.**

From Sydney, Australia. Seeds purchased from Anderson & Co. Received August 11, 1927.

Evergreen trees up to 50 feet in height, which are cultivated for their edible nuts.

74218. A thin-shelled variety.

74219. A medium-shelled variety.

74220. LITCHI CHINENSIS Sonner. Sapindaceae. **Lychee.**

From Tela, Honduras. Plants presented by Dr. Wilson Popenoe, United Fruit Co. Received September 29, 1927.

Seedling plants procured for further experimental testing in southern Florida.

For previous introduction see No. 51472.

74221. LILIUM TIGRINUM Ker. Liliaceae. **Tiger lily.**

From Yaomin, Manchuria. Bulblets collected by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received September 22, 1925. Numbered September, 1927.

No. 4004. August 14, 1925. Aerial bulblets from leaf axils of plants 4 feet high. These plants have from three to eight or more good flowers and leaf-axil bulblets.

74222. QUERCUS MYRSINAEFOLIA Blume. Fagaceae. **Oak.**

Trees growing at the Barbour Lathrop Plant Introduction Garden, Savannah, Ga. Numbered September, 1927.

Bell No. 1232. A handsome evergreen Japanese oak 30 to 40 feet high, with lanceolate-serrate leaves 3 to 5 inches long, smooth and shining above and covered with a whitish bloom underneath. The ovoid acorns, nearly an inch long and one-third covered by the smooth cup, are borne in short spikes.

[1] It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

74223. CITRUS GRANDIS (L.) Osbeck (*C. decumana* Murr.). Rutaceae. Grapefruit.

From Gujranwala, Punjab, India. Seeds presented by H. S. Nesbitt, American Mission. Received September 6, 1927.

A variety called *chagodra* or *pummelo* in this region. The fruits are considerably larger than those of the American variety. The skin of light pulp is about an inch thick, and the reddish pink flesh has a fine flavor. (*Note by Mr. Nesbitt in letter of December 1, 1926.*)

74224. PLUKENETIA CONOPHORA Muell.-Arg. Euphorbiaceae.

From Victoria, Cameroon, West Africa. Seeds presented by T. S. Maitland, Superintendent, Botanic Gardens. Received August 31, 1927.

A tropical African creeping plant with thin-shelled nuts containing kernels which yield an oil used for cooking and other purposes.

74225. VALLARIS HEYNEI Spreng. Apocynaceae.

From Allahabad, India. Seeds presented by W. B. Hayes, Allahabad Agricultural Institute. Received August 31, 1927.

A climbing shrub with fragrant white flowers three-fourths of an inch wide, often cultivated as an ornamental in India, where it is native. It has milky juice, which is used medicinally and is also a possible source of rubber.

For previous introduction see No. 58594.

74226 to 74228.

From Sumatra. Seeds collected by H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received September 6, 1927.

74226. ALEURITES MOLUCCANA (L.) Willd. (*A. triloba* Forst.). Euphorbiaceae. Lumbang.

No. 8743. *Boelra keras, Boewa kemiri.* From Silo Maradja, Asahan. A tropical spreading tree native to the East Indies and closely related to the tung-oil tree. The oil may be used in making varnishes.

For previous introduction see No. 67535.

74227. CALAMUS sp. Phoenicaceae. Palm.

No. 8740. *Rotan.* From Silo Maradja, Asahan. A climbing spiny tropical palm.

74228. PINANGA sp. Phoenicaceae. Palm.

From Deleng Koetoe, Karoland. A small, spineless ornamental tropical palm with a canelike habit.

74229. DENDROCALAMUS MEMBRANACEUS Munro. Poaceae. Bamboo.

From Dehra Dun, India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute and College. Received September 7, 1927.

A bamboo native to eastern India, probably becoming very tall, with comparatively small leaves.

For previous introduction see No. 64810.

74230 to 74234.

From Calaroa, Colombia. Seeds presented by Eduardo Hernandez, Director de Agricultura y Estadistica Municipal. Received September 7, 1927.

74230. ANNONA CHERIMOLA Mill. Annonaceae. Cherimoya.

Locally grown seeds.

74231. BAUHINIA sp. Caesalpiniaceae.

Japón. An attractive subtropical tree useful as a shade tree.

74232. JUGLANS sp. Juglandaceae. Walnut.

Cedro. A subtropical timber tree with edible nuts.

74233. OCHROMA LAGOPUS Swartz. Bombacaceae. Balsa wood.

A rapid-growing tropical tree. The very light wood is useful in insulation and for life preservers.

74234. ROLLINIA MUCOSA (Jacq.) Baill. Annonaceae.

Guanabano. A small-fruited subtropical tree which is a close relative to the cherimoya. The flavor of the fruit is inferior to that of the custard-apple.

74235. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Belgian Congo, Africa. Seeds obtained through Rev. Emory Ross, Disciples of Christ Congo Mission, Bolenge, Coquilhatville. Received September 2, 1927.

Locally grown seeds from the southern part of Belgian Congo, about 100 miles from the Atlantic coast.

74236. CORNUS NUTTALLII Audub. Cornaceae.

From Seattle, Wash. Cuttings presented by A. W. Sandholm. Received September 16, 1927.

A variegated-leaved form of the western flowering dogwood. The colored bracts are usually six, tinged with pink, and often 3 inches long.

74237. ATALANTIA CITROIDES Pierre. Rutaceae.

From Santiago de las Vegas, Cuba. Seeds presented by Dr. Gonzalo M. Fortun, Director, Estación Experimental Agronómica, through W. T. Swingle, Bureau of Plant Industry. Received September 6, 1927.

A small, tropical, usually spiny tree which is of possible use as citrus stock. It is a native of Indo-China. The orangelike fruits are three-fourths of an inch in diameter.

74238. OREODOXA sp. Phoenicaceae. Palm.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received September 8, 1927.

A tall, slender, erect palm 40 to 50 feet high, with a smooth, straight, cylindrical stem and copper-red pinnate leaves 8 to 10 feet long. The hard, black wood is extensively used by the natives for construction. This palm is native to the Atlantic side of the Isthmus of Panama.

74239. MERCURIALIS ANNUA L. Euphorbiaceae.

From Montevideo, Uruguay. Seeds presented by Nicolas Lombardo, Director, Botanic Garden. Received September 15, 1927.

For previous introduction and description see No. 74217.

74240. PENNISETUM CLANDESTINUM Hochst. Poaceae. **Kikuyu grass.**

From Nairobi, Kenya Colony, Africa. Seeds presented by W. Lyne Watt, assistant agricultural officer, Scott Agricultural Laboratories. Received September 13, 1927.

A rapid-growing perennial stoloniferous grass, native to South Africa, where it is considered a valuable drought-resistant summer pasture grass.

For previous introduction see No. 48818.

74241 to 74246.

From Cali, Colombia. Seeds presented by Stanley F. Morse. Received September 27, 1927.

74241. ERIOCHLOA POLYSTACHYA H. B. K. Poaceae. **Carib grass.**

Janeiro. A grass similar to Para grass, but which makes a thicker mat and smothers weeds better.

74242. GOSSYPIUM sp. Malvaceae. **Cotton.**

From El Carmen, Cauca Valley. A cotton growing in red clay soil with little humus.

74243. GOSSYPIUM sp. Malvaceae. **Cotton.**

74244. MELINIS MINUTIFLORA Beauv. Poaceae. **Molasses grass.**

Gordura. A hardy grass with a great range of climatic and soil tolerance, growing well under very dry or very wet conditions. It grows from sea level to over 5,000 feet altitude.

For previous introduction see No. 56484.

74245. PHASEOLUS VULGARIS L. Fabaceae. **Common bean.**

Huesito, Blanquillo. A bush variety 18 inches high, which is a soft, well-flavored bean. It stands hot weather conditions and may thrive in the South as a rotation crop for cotton. This variety is also used as a snap bean.

74246. (Undetermined.)

Chonta. From Santa Maria, Colombia. A palm growing at altitudes between 3,000 and 5,000 feet. It is used for house rafters.

74247 to 74399.

From Nanking, China. Seeds obtained from the College of Agriculture and Forestry, University of Nanking. Received September 12, 1927.

Local varieties.

74247. HORDEUM VULGARE COELESTE L. Poaceae. **Six-rowed barley.**

No. 275.

74248 to 74399. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

74247 to 74399—Continued.

74400 and 74401. DATURA spp. Solanaceae.

From Brisbane, Queensland, Australia. Seeds presented by C. T. White, Government botanist, botanic gardens. Received July 1, 1927.

74400 and 74401—Continued.

74400. DATURA FEROX L.

A coarse annual herb, 3 feet high, with white flowers, native to China. It is of possible medicinal value.

74401. DATURA LEICHHARDTII F. Muell.

A tall coarse herb with irregularly toothed oval leaves 3 to 4 inches long, yellowish white flowers about 3 inches long, and very prickly globular capsules about an inch in diameter. The plant is native to northern Australia. It is of possible medicinal value.

For previous introduction see No. 55622.

74402 to 74404.

From Baghdad, Iraq. Seeds presented by F. K. Jackson, Officiating Inspector General of Agriculture. Received July 1, 1927.

74402. LATHYRUS SATIVUS L. Fabaceae. Bitter vetch.

Iraq vetch. From the Central Experiment Station at Rustam.

74403 and 74404. VIGNA SINENSIS (Torner) Savi. Fabaceae. Cowpea.

From the Central Experiment Station at Rustam.

74403. A red variety.

74404. A white variety.

74405. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Montserrat, British West Indies. Seeds presented by C. A. Gomez, Curator, Grove Botanic Garden. Received July 2, 1927.

Early Asher. A locally grown variety.

74406 and 74407. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Port of Spain, Trinidad, British West Indies. Seeds presented by W. G. Freeman, Director, Department of Agriculture. Received July 5, 1927.

Locally grown varieties.

74406. *Hawaii.* 74407. *Trinidad.*

74408. CROTALARIA JUNCEA L. Fabaceae. Sunn hemp.

From Mayaguez, Porto Rico. Seeds purchased from Dr. D. W. May, Agricultural Experiment Station. Received July 7, 1927.

Porto Rican grown seeds.

74409. CARICA PAPAYA L. Papayaceae. Papaya.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received July 7, 1927.

A selected cylindrical type of papaya grown in the Canal Zone.

For previous introduction see No. 73065.

74410 and 74411. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Manila, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture. Received July 7, 1927.

74410 and 74411—Continued.

Locally grown varieties.

74410. *Ordinary.* 74411. *Pinogo.*

74412. DANTHONIA SEMIANNULARIS (Labill.) R. Br. Poaceae. Grass.

From Sydney, New South Wales, Australia. Seeds purchased from Arthur Yates & Co. Received July 8, 1927.

A perennial tufted grass, producing a fair amount of soft succulent fodder suitable for either sheep or cattle. The leaves are narrow, usually hairy, and light green. The flower stems grow about 2 feet high, and the seed, which sheds easily, is produced in clusters that have a white woolly appearance when ripe. *Wallaby* grass provides good pasturage during the spring and summer and remains green in the winter months.

For previous introduction see No. 59361.

74413. BAMBUSA TULDA Roxb. Poaceae. Bamboo.

From Dehra Dun, United Provinces, India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute and College. Received July 8, 1927.

One of the most promising species introduced, though it does not stand much frost. The culms are green and smooth and under good conditions may reach a height of 60 to 70 feet and a diameter of 2 to 5 inches. They are nearly solid and extremely tough and strong. The culms split easily and therefore lend themselves to many uses. The plant is quite leafy and proves a beautiful ornamental with its graceful leaning stems and tropical frondage. Native to Bengal, India.

For previous introduction see No. 67507.

74414. CEIBA PENTANDRA (L.) Gaertn. (*Eriodendron anfractuosum* DC.). Bombaceae. Kapok.

From Surabaya, Java. Seeds obtained through W. S. Fields, Federal Horticultural Board. Received July 5, 1927.

A tall tropical American tree. The pods contain down which is used for stuffing mattresses, etc.

For previous introduction see No. 73840.

74415 to 74421.

From Leningrad, Russia. Seeds presented by A. Kol, chief, bureau of introduction, Institute of Applied Botany and New Cultures. Received July 6, 1927.

74415. BRASSICA sp. Brassicaceae.

Material received as a round, white, red-topped turnip.

74416 to 74421. DATURA STRAMONIUM L. Solanaceae.

Locally grown seeds of jimson weeds from Russia.

74416. No. 1. From the Mohilev Government.

74417. No. 2. From the botanic garden, Kharkof.

74418. No. 3. From the Nikitsky Botanic Garden, Yalta, Crimea.

74419. No. 4. From Lubny.

74420. No. 5. From Volynia.

74415 to 74421—Continued.

74421. No. 6. From the botanic garden, Tashkent, Turkestan.

74422 to 74424.

From Richmond, Victoria, Australia. Seeds presented by F. H. Baker. Received July 6, 1927.

74422. ACACIA DECURRENS Willd. Mimosaceae. Green wattle.

A handsome Australian tree with light-green foliage and bright-yellow flowers.

For previous introduction see No. 67946.

74423. ACACIA DISCOLOR Willd. Mimosaceae.

A tall, unarmed shrub or small tree, native to southeastern Australia and Tasmania, which bears, in autumn, terminal and axillary clusters of yellow flowers.

For previous introduction see No. 67947.

74424. CALLISTEMON CITRINUS (Curtis) Skeels (*C. lanceolatus* DC.). Myrtaceae. Lemon bottlebrush.

An ornamental red-flowered shrub with rigid branches. Native to Australia.

74425. CORYPHA ELATA Roxb. Phoenicaceae. Palm.

From Manila, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture. Received July 7, 1927.

A tall Philippine palm up to 60 feet high, with spiny stems and fan-shaped leaves.

For previous introduction see No. 35639.

74426. FICUS CRASSIUSCULA Warb. Moraceae.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received July 6, 1927.

A large Central American tree with a rounded crown, dark-green leathery, oblong-oval leaves up to 20 centimeters long, and pink fruits about 2 centimeters in diameter.

74427 to 74430. PRUNUS spp. Amygdalaceae.

From Jamaica Plain, Mass. Cuttings presented by E. H. Wilson, Arnold Arboretum. Received July 11, 1927.

74427. PRUNUS CERASUS L. Sour cherry.

Variety *Rhexii*. A weeping variety.

74428. PRUNUS INCISA Thunb. Mame cherry.

An ornamental Japanese cherry which is described (Arnold Arboretum Bulletin of Popular Information, vol. 8, no. 3) as a large shrub, or sometimes a small tree, about 25 feet high. The flowers, which appear in drooping clusters before the deeply cut leaves, are white or rosy, with bright-red calyxes and bright-yellow anthers. The petals fall early, but the calyxes, which gradually grow brighter, remain on the young fruits for some time and are quite showy.

For previous introduction see No. 64669.

74427 to 74430—Continued.

74429. PRUNUS MEYERI Rehder.

In 1906 Frank N. Meyer, while carrying on agricultural explorations in northern Chosen, collected seeds of a small wild cherry (No. 20084), which, according to his note, was of handsome appearance and suited for growing in parks. At the Arnold Arboretum a tree grown from one of these seeds was described as new by Alfred Rehder (Journal of the Arnold Arboretum, vol. 2, no. 2, p. 123) and named for Mr. Meyer. Doctor Rehder states that this appears to be a hybrid between *Prunus maackii* and *P. maximowiczii*, since it has characters intermediate between these two species. The tree is about 20 feet high, of vigorous growth, with a dense pyramidal habit and pleasing bright-green foliage. The small white flowers are in dense racemes.

For previous introduction see No. 68949.

74430. PRUNUS SERRULATA SACHALINENSIS (Schmidt) Mak. Sargent cherry.

A hardy vigorous Japanese wild cherry with single pink flowers. The tree is tall and very attractive.

74431. FICUS sp. Moraceae.

Plants growing at the Chapman Field Garden, Coconut Grove, Fla. Numbered July, 1927.

An undetermined species to be grown for identification.

74432. ORYZA SATIVA L. Poaceae. Rice.

From Canton, China. Seeds presented by L. A. Whitney, Honolulu, Hawaii, through E. R. Sasscer, Federal Horticultural Board. Received July 8, 1927.

Nyn jim (sharp silver). A superior variety of Chinese rice which is said to be resistant to the blast disease.

74433 to 74438. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Poona, Bombay, India. Seeds presented by Prof. G. B. Patwardhan, agricultural economic botanist, Bombay Agricultural Department. Received July 13, 1927.

Locally developed strains.

74433. No. 1.
74434. No. 2.
74435. No. 3.
74436. No. 4.
74437. No. 5.
74438. No. 6.

74439 to 74441. AVENA SATIVA L. Poaceae. Oats.

From Carignan, Ardennes, France. Seeds presented by Denaiffe & Fils. Received July 11, 1927.

French winter-oat varieties.

74439. A black variety.

74440. A gray variety.

74441. A white variety.

74442. CITRUS SINENSIS (L.) Osbeck. Rutaceae. Sweet orange.

74442—Continued.

From Soledad, Cienfuegos, Cuba. Cuttings presented by Robert M. Grey, superintendent of the biological laboratory and botanic garden of the Institute for Tropical Biology and Medicine of Harvard University. Received July 18, 1927.

Harvard No. 2. A locally grown variety.

74443. GOSSYPIUM ARBOREUM L. Malvaceae. **Cotton.**

From Sibpur, near Calcutta, India. Seeds presented by C. C. Calder, Superintendent, Royal Botanic Garden, through T. H. Kearney, Bureau of Plant Industry. Received July 5, 1927.

Locally grown seeds.

For previous introduction see No. 73125.

74444. ACHRAS ZAPOTA L. Sapotaceae. **Sapodilla.**

From Bathurst, Gambia, West Africa. Seeds presented by James Howie. Received July 18, 1927.

A small tropical American tree with dark-green, leathery leaves, and roundish fruits about 3 inches in diameter; these have thin skin and pale-brown soft juicy sweet pulp.

For previous introduction see No. 50466.

74445 and 74446.

From Paris, France. Seeds presented by Maurice Jeanson. Received July 15, 1927.

74445. CARISSA EDULIS Vahl. Apocynaceae.

A tropical African shrub, producing small purple edible fruits, which is said to endure some frost.

74446. MUSA sp. Musaceae.

An Abyssinian wild banana with edible roots, which is said to endure slight frost.

74447 to 74459. GOSSYPIUM spp. Malvaceae. **Cotton.**

From Sibpur, near Calcutta, India. Seeds presented by C. C. Calder, Superintendent, Royal Botanic Garden, through T. H. Kearney, Bureau of Plant Industry. Received July, 1927.

74447. GOSSYPIUM ARBOREUM L.

A red variety.

74448. GOSSYPIUM INTERMEDIUM Todaro.

A yellow variety.

74449 to 74453. GOSSYPIUM NEGLECTUM Todaro.

74449. No. 2. Variety *vera.*

74450. No. 3. Variety *vera.* Subvariety *malvensis.*

74458 and 74459. GOSSYPIUM SANGUINEUM Hassk.

74458. No. 9. *Major.*

74459. No. 10. *Major.*

74460 to 74469.

From Konjeni Siding, Luchenza, Nyasaland Protectorate, Africa. Seeds presented by L. S. Norman. Received July 18, 1927.

74460. ANDROPOGON SCHIRENSIS Hochst. Poaceae. **Grass.**

A tall erect perennial grass 3 to 10 feet high, densely tufted, with very narrow leaves. Native to tropical Africa.

74461. CHAETOCHLOA sp. Poaceae. **Grass.**

A tropical African grass.

74462. CLEISTACHNE SORGHOIDES Benth. Poaceae. **Grass.**

A coarse tropical annual grass up to 9 feet high, sparingly branched, with long flat leaves. Native to tropical Africa.

74463. ERAGROSTIS CILIARIS (L.) Link. Poaceae. **Grass.**

An annual tufted grass up to 2 feet high, growing on sandy soil. It is said to afford good grazing in India.

74464. PANICUM MAXIMUM Jacq. Poaceae. **Grass.**

An erect perennial bunch grass 4 to 6 feet high, with open spreading panicles of spikelets. It is a native of Africa, introduced into tropical America, where it is cultivated for forage, furnishing pasture and green food.

For previous introduction see No. 56284.

74465. PASPALUM SCROBICULATUM L. Poaceae. **Grass.**

An erect annual grass, averaging 2 feet in height, native to India, where it is also extensively cultivated for the edible grain. The grain is poisonous, however, unless kept for a number of years. Cattle are fond of the grass when it is young; at the time of ripening it is poisonous to stock.

For previous introduction see No. 56789.

74466. PENNISETUM PURPUREUM Schumach. Poaceae. **Napier grass.**

A variety growing under dry-land conditions.

For previous introduction see No. 54513.

74467. PENNISETUM SETOSUM L. Rich. Poaceae. **Grass.**

A robust perennial grass 2 to 4 feet high, distributed throughout the Tropics of both hemispheres, and often used for forage.

For previous introduction see No. 58037.

74460 to 74469—Continued.

74468. RYTILIX GRANULARIS (L.) Skeels. Poaceae. **Grass.**

An erect annual grass 1 to 2 feet high, with softly hairy flaccid leaves. Native to tropical India.

For previous introduction see No. 47783.

74469. SPOROBOLUS sp. Poaceae. **Grass.**

A tropical African grass.

74470. STURTIA COSSYPIOIDES R. Br. Malvaceae.

From Adelaide, South Australia. Seeds presented by J. F. Bailey, Director, Botanic Garden. Received July 21, 1927.

A large Australian shrub, with broadly oval, stiff leaves up to 2 inches long, and large purple flowers. It is closely related to cotton (*Gossypium* spp.).

For previous introduction see No. 72621.

74471 and 74472. PHOENIX DACTYLIFERA L. Phoenicaceae. **Date palm.**

From Merowe, Dongola, Anglo-Egyptian Sudan, Africa. Offshoots presented through Silas C. Mason, Bureau of Plant Industry. Received July 25, 1927.

Rare Sudan varieties.

74471. *Kumla.* **74472.** *Medina.*

74473. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Pretoria, Union of South Africa. Seeds presented by I. B. Pole Evans, Chief, Division of Botany. Received July 25, 1927.

Locally grown seeds from Muhlati, Natal, South Africa.

74474 to 74478.

From Sumatra. Seeds collected by H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received July 20, 1927.

74474. CASUARINA SUMATRANA Jungh. Casuarinaceae.

No. 7493. From the Toba trail between Adian Langge, Asahan, and Si Makkoek, Toba. A handsome tropical tree with large cones.

For previous introduction see No. 68021.

74475. PHYTOLACCA sp. Phytolaccaceae.

No. 7006. An ornamental annual, weedy in the uplands, but cultivated by the natives in the lowlands.

74476. SCIRPUS sp. Cyperaceae. **Sedge.**

No. 7426. Kampong Halado, between Adian Langge and Si Martoloe, Toba. A Sumatran sedge with glabrous 3-angled stems, used by natives for making matting and bags.

74477. SLOANEA sp. Elaeocarpaceae.

No. 7386a. A large handsome tropical forest tree with fruits that look like chestnut burs.

74478. DRACAENA sp. Liliaceae.

From the Soengei Masihi Forest Reserve, Asahan. Collected by H. S. Yates. An ornamental monocotyledonous tropical tree with long, thickish, glossy mottled leaves and orange-yellow fruits about an inch in diameter.

74479. MELILOTUS ALTISSIMA Thuill. Fabaceae.

From Chico, Calif. Seeds obtained from the United States Plant Introduction Garden. Received July 20, 1927.

A perennial Melilotus attaining a height of from 4 to 6 feet and in general growth habits similar to the more common *Melilotus alba.*

74480 to 74485. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

From Nanking, China. Seeds obtained from the College of Agriculture and Forestry, University of Nanking. Received September 12, 1927.

Local varieties.

74480. No. 2451.	**74483.** No. 2469.
74481. No. 2459.	**74484.** No. 2479.
74482. No. 2464.	**74485.** No. 2483.

74486 to 74488.

From Dehra Dun, United Provinces, India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute and College. Received July 26, 1927.

74486. BAMBUSA ARUNDINACEA Retz. Poaceae. **Bamboo.**

A large Indian bamboo growing in clumps 40 to 60 feet high, with spiny lower branches.

74487. DENDROCALAMUS HAMILTONII Nees and Arn. Poaceae. **Hamilton bamboo.**

The common bamboo of the eastern Himalayas, where it grows to a height of from 40 to 60 feet, with horizontal branches, and stems 4 to 7 inches in diameter. The foliage is very variable, the broadly lanceolate leaves being 4 to 16 inches long and up to 5 inches wide. The plant is said to flower every year, and the young shoots are boiled and eaten.

For previous introduction see No. 64809.

74488. DENDROCALAMUS MEMBRANACEUS Munro. Poaceae. **Bamboo.**

For previous introduction and description see No. 74229.

74489 to 74502. TRITICUM sp. Poaceae.

From Moscow, Russia. Seeds presented by V. Talanoff, Institute of Applied Botany and New Cultures, through C. R. Ball, Bureau of Plant Industry. Received July 26, 1927.

Locally developed varieties.

74489 to 74499. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). **Common wheat.**

74489. No. 062. *Lutescens.* A spring wheat from the Saratov Experiment Station.

74490. No. 0111. *Caesium.* A spring wheat from the West Siberian Experiment Station.

74491. No. 0274. *Mildurum.* A spring wheat from the Odessa Experiment Station.

74492. No. 0321. *Mildurum.* A spring wheat from the West Siberian Experiment Station.

74489 to 74502—Continued.

74493. No. 0604. *Albidum.* A spring wheat from the Saratov Experiment Station.

74494. No. 0721. *Albidum.* A spring wheat from the Saratov Experiment Station.

74495. No. 0237. *Nostianum.* A winter wheat from the Saratov Experiment Station.

74496. No. 0329. *Lutescens.* A winter wheat from the Saratov Experiment Station.

74497. *Cooperatorka.* A winter wheat from the Odessa Experiment Station.

74498. *Stepniatschka.* A winter wheat from the Odessa Experiment Station.

74499. *Ukrainka.* A winter wheat from the Vironovsk Experiment Station.

74500 to 74502. TRITICUM DURUM Desf. Durum wheat.

74500. No. 010. *Hordeiforme.* From the Ekaterinoslav Experiment Station.

74501. No. 069. *Melanopus.* From the Krasnokut Experiment Station.

74502. No. 0189. *Hordeiforme.* From the Krasnokut Experiment Station.

74503. PHYTELEPHAS MACROCARPA Ruiz and Pav. Phoenicaceae. **Ivory-nut palm.**

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received July 25, 1927.

A tall tropical American palm with a thick rough trunk and foliage resembling that of the coconut palm. The bony fruits are used for making buttons, etc.

For previous introduction see No. 47513.

74504. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

From Tschechnitz und Kattern, Germany. Seeds obtained from Doctor Kroll, through A. J. Pieters, Bureau of Plant Industry. Received September 15, 1927.

Locally grown seeds.

74505. MANGIFERA INDICA L. Anacardiaceae. **Mango.**

From Eldorado, Sinaloa, Mexico. Seeds presented by Redo & Co. Received July 27, 1927.

Seeds from a tree said to be a Mulgoba seedling. The fruits are of very good quality.

74506. PHYLLOCLADUS RHOMBOIDALIS L. Rich. Taxaceae.

From Hobart, Tasmania. Seeds presented by L. A. Evans, Secretary of Agriculture, Agricultural and Stock Department. Received July 25, 1927.

An ornamental tree, related to the yew, up to 60 feet high, with leaflike branches and minute leaves. Native to Australia.

74507. SCHIZOSTACHYUM LUMAMPAO (Blanco) Merr. Poaceae. **Bamboo.**

From Manila, Philippine Islands. Seeds presented by Arthur F. Fischer, Director, Bureau of Forestry. Received July 29, 1927.

74507—Continued.

An erect thin-walled bamboo growing in large patches, especially where forests have been burned away, in the Philippine Islands. According to Munro, sticks from this plant are said to be commonly sold in Manila.

74508. TECOMELLA UNDULATA (J. E. Smith) Seem. (*Tecoma undulata* Don). Bignoniaceae.

From Nice, France. Seeds presented by Dr. A. Robertson-Proschowsky. Received July 21, 1927.

A subtropical shrub or small tree with narrow-oblong leaves up to 6 inches long and orange flowers 1½ inches wide produced in small clusters. It is native to western India.

74509. TECOMELLA UNDULATA (J. E. Smith) Seem. (*Tecoma undulata* Don). Bignoniaceae.

From Dehra Dun, United Provinces, India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute and College. Received July 25, 1927.

For previous introduction and description see No. 74508.

74510. PRUNUS CAPULI Cav. Amygdalaceae. **Capulin.**

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received July 21, 1927.

Seeds collected in Vera Cruz, at an altitude of 2,000 meters.

74511. CLEMATIS ARMANDI Franch. Ranunculaceae. **Armand clematis.**

From Ventimiglia, Italy. Seeds presented by S. W. McLeod Braggins, superintendent, La Mortola. Received July 29, 1927.

A fragrant white-flowered species which is characterized by the abundance and the persistence of its foliage. Native to Hupeh Province, China.

For previous introduction see No. 63392.

74512 to 74515.

From Montevideo, Uruguay. Seeds presented by Nicolas Lombardo, Director, Botanic Garden. Received August 1, 1927.

74512. ANTHEPHORA HERMAPHRODITA (L.) Kuntze. Poaceae. **Grass.**

A leafy ascending or decumbent branching annual grass with thin flat blades. A common weed in the lowlands of tropical America.

74513. CHLORIS CARIBAEA Spreng. Poaceae. **Grass.**

An annual, erect, leafy grass, native to the West Indies, with linear, flat leaves about a foot high.

For previous introduction see No. 62040.

74514. CHLORIS CILIATA Swartz. Poaceae. **Grass.**

A perennial grass with erect stems, 10 to 20 inches high. Native to Uruguay.

For previous introduction see No. 62041.

74512 to 74515—Continued.

74515. CISTUS CYPRIUS Lam. Cistaceae.

An erect shrub up to 6 feet high, bearing large white flowers which are blotched with purple at the base. Native to southern Europe.

74516 to 74522. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Kampala, Uganda Protectorate, Africa. Seeds presented by S. Simpson, Director, Department of Agriculture. Received August 4, 1927.

Locally developed.

74516. No. 1.
74517. No. 2.
74518. No. 3.
74519. No. 4.
74520. No. 5.
74521. No. 6.
74522. No. 7.

74523. PSIDIUM GUAJAVA L. Myrtaceae. **Guava.**

From Calcutta, India. Seeds presented by S. Percy Lancaster, Secretary, Agri-Horticultural Society of India. Received August 3, 1927.

Seeds of a usually seedless guava which may again develop the seedless variety.

74524 to 74526. DIOSPYROS LOTUS L. Diospyraceae. **Dateplum.**

From Seoul, Chosen (Korea). Seeds presented by Charles H. Stephan, American vice consul. Received August 2, 1927.

74524. From Kokai Province.

74525. From Hokwa district, North Keisho Province.

74526. From North Chusei Province.

74527. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Saigon, Cochin China. Seeds presented by I. Bobin, Chief of Agricultural Service. Received August 8, 1927.

Locally grown seeds.

74528. (Undetermined.)

From Freetown, Sierra Leone, Africa. Seeds presented by M. T. Dawe, Lands and Forests Department. Received August 8, 1927.

The fruits make a fine jelly not unlike guava jelly.

74529 to 74543.

From Sumatra. Seeds collected by H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received August 4, 1927.

74529. BOTOR TETRAGONOLOBA (L.) Kuntze (*Psophocarpus tetragonolobus* DC.). Fabaceae. **Goa bean.**

Ksang borong. From Silo Maradja, Asahan.

74530. CALAMUS sp. Phoenicaceae. **Palm.**

Rotan tolpaktolpang. From the jungle near Aek Sordang, Loendoet, Koealoe.

74531. CALAMUS sp. Phoenicaceae. **Palm.**

No. 8184. *Rotan mallo.* From Pargambiran, Asahan.

74529 to 74543—Continued.

74532. CALOPOGONIUM MUCUNOIDES Desv. Fabaceae.

From Loendoet, Koealoe. A tropical American plant supposed to have been introduced into Sumatra with mimosa seed shipped from South America, which within three or four years has become an important economic plant. It is extensively used as a cover plant in rubber plantations in Sumatra. A fair cover is obtained after three months from sowing, when flowering commences. The plant is a vigorous creeping herb which forms a mat of foliage 1½ feet or so in thickness over the soil. The stems, 3 to 10 feet long, form roots at each node. The pale blue flowers are in racemes 1 to 4 inches long.

For previous introduction see No. 68845.

74533. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

From Silo Maradja, Asahan. *Goendoer bandihe.* A variety used for food.

74534. DRACAENA sp. Liliaceae.

No. 8150. Silo Maradja, Asahan. A giant species having glossy green mottled leaves over 2 feet long. The fruits are orange colored for a long time, then turn vermilion when dead ripe. This species probably will grow only in the warmest parts of the United States. Perhaps the same as No. 74478.

74535. GAULTHERIA sp. Ericaceae.

No. 8028. From the summit of Dolok Soeroengan, Habinsaran, Tapianoeli. A very pretty white-flowered species about 2 or 3 feet high, having the odor of wintergreen oil.

74536 to 74538. MOMORDICA CHARANTIA L. Cucurbitaceae. **Balsam-pear.**

From Silo Maradja, Asahan.

74536. *Parija sina.* This is a good variety.

74537. *Parija gading* (ivory parija).

74538. *Parija-parija paet.* This variety is like *parija,* but it is bitter.

74539. PHASEOLUS AUREUS Roxb. Fabaceae. **Mung bean.**

Kasang riti. From Silo Maradja, Asahan.

74540. RHODODENDRON sp. Ericaceae.

No. 7998. From the summit of Dolok Soeroengan, Habinsaran, Tapianoeli.

74541. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

Tijoeng boelat. From Silo Maradja, Asahan. A variety with edible fruits.

74542. VIBURNUM sp. Caprifoliaceae.

No. 7849. Between Pardoeaan and Maranti, Habinsaran, Tapianoeli.

74543. VIGNA SESQUIPEDALIS (L.) Fruwirth. Fabaceae. **Asparagus bean.**

Kasang gomboeng. From Silo Maradja, Asahan.

74544 and 74545.

From Montpellier, France. Seeds presented by the director of the botanic garden of the University of Montpellier. Received August 8, 1927.

74544 and 74545—Continued.

74544. EUPHORBIA AMYGDALOIDES L. Euphorbiaceae.

A semishrubby plant whose seeds yield a drying oil.

74545. MERCURIALIS TOMENTOSA L. Euphorbiaceae.

A herbaceous plant the seeds of which yield a drying oil.

74546 to 74548.

From Argentina. Seeds presented by Prof. Lorenzo R. Parodi, University of Buenos Aires. Received August 8, 1927.

74546. BROMUS COLORATUS Steud. Poaceae. Grass.

From Tierra del Fuego.

74547. CHLORIS ARGENTINA (Hack.) Lillo and Parodi. Poaceae. Grass.

From Santiago del Estero. An erect, perennial grass 1 to 3 feet high, native to sandy places in Argentina.

For previous introduction see No. 62066.

74548. CHLORIS POLYDACTYLA (L.) Swartz. Poaceae. Grass.

From Santiago del Estero. A grass about 1½ feet high, with seed stalks running up to 3 feet. It seeds profusely and is said to be good, when young, as a pasture grass.

74549 to 74553.

From Paris, France. Seeds presented by Maurice Jeanson. Received August 8, 1927.

74549. BRASSICA sp. Brassicaceae.

An edible wild cabbage originally from Ankober, Ethiopia.

74550. CUCURBITA MAXIMA Duchesne. Cucurbitaceae. Squash.

A very interesting variety, originally from northern France. It should be tested in the southern United States.

74551. GUIZOTIA ABYSSINICA (L. f.) Cass. Asteraceae.

Originally from Ankober, Ethiopia. An annual plant, 6 to 8 feet high, with showy yellow flower heads. The black shining seeds furnish the Niger oil of commerce.

For previous introduction see No. 58741.

74552. IPOMOEA sp. Convolvulaceae. Morning-glory.

Originally from Ankober, Ethiopia.

74553. RUBUS MACROCARPUS Benth. Rosaceae. Colombian blackberry.

Originally from Bogota, Colombia. A rather coarse-growing blackberry with rough leaves and large maroon-red juicy berries. Native to moist regions in the South American Andes at altitudes of 8,500 to 9,500 feet.

For previous introduction see No. 72989.

74554 to 74572.

From China. Seeds collected by F. A. McClure, agricultural explorer, Bureau of Plant Industry. Received August 15, 1927.

74554. ALLIUM sp. Liliaceae.

No. A–17. Canton, June, 1927. *Tsung.* An onion planted in this region during February and March.

74555. BASELLA RUBRA L. Basellaceae.

No. A–14. Canton, June, 1927. *Uen ip tang tsoi.* A variety planted during the early spring; the stems are ready to use by May and are eaten at a potherb.

74556 to 74559. BENINCASA HISPIDA (Thunb.) Cogn. Cucurbitaceae. Waxgourd.

74556. No. A–5. Canton, June, 1927. *Tsing pei tung kwa.* A variety planted in this region during February.

74557. No. A–6. Konmoon, June, 1927. *Paak pei tung kwa* (white-skinned wax melon). A variety planted during February; the fruits are ready to be harvested in July.

74558. No. A–18. From Fatshan, Kwangtung, June, 1927. *Wong no tsit kwa.* A variety planted during February.

74559. No. A–19. From Fatshan, Kwangtung, June, 1927. *Tsing pei tsit kwa.* A variety planted during February.

74560. CACARA EROSA (L.) Kuntze (*Pachyrhizus angulatus* Rich.). Fabaceae. Yam bean.

No. A–16. From Shuitung, Kwangtung, June, 1927. *Shui tung sha kat.* A variety planted during February or March; the roots are ready to use by the end of summer.

74561. CORIANDUM SATIVUM L. Apiaceae. Coriander.

No. A–20. From Canton, June, 1927. *Uen sai.* A variety planted throughout the year.

74562. CUCUMIS MELO L. Cucurbitaceae. Melon.

No. A–9. From Hanau, Kwangtung, June, 1927. *Mau pack kwa.* A variey planted during February and May; the first harvest begins in June.

74563. CUCUMIS SATIVUS L. Cucurbitaceae. Cucumber.

No. A–8. From Fatshan, Kwangtung, June, 1927. *Tai tsing pi wong kwa.* A variety planted during February and June; the first harvest begins in June.

74564. CUCURBITA MOSCHATA Duchesne. Cucurbitaceae. Cushaw.

No. A–10. From Canton, June, 1927. *Tai chung faan kwa.* A variety planted during February and harvested in the late summer.

74565. IPOMOEA REPTANS (L.) Poir. (*I. aquatica* Forsk.). Convolvulaceae.

No. A–15. From Canton, June, 1927. *Pak kwat ung tsoi.* A variety planted during February and March; the stems are ready to use in May.

74554 to 74572—Continued.

74566. LUFFA ACUTANGULA (L.) Roxb. Cucurbitaceae. **Singkwa towelgourd.**

No. A–7. From Namshektan, Kwangtung, June, 1927. *Shing kwa.* An annual climber planted in February and harvested in June.

74567. MOMORDICA CHARANTIA L. Cucurbitaceae. **Balsam-pear.**

No. A–12. From Canton, June, 1927. A cucurbitaceous vine planted in February and harvested in July.

74568. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

No. A–13. From Canton, June, 1927. *Paak pei ai kwa.* A variety planted in January and February; the harvesting begins in May.

74569 to 74572. VIGNA SESQUIPEDALIS (L.) Fruwirth. Fabaceae. **Asparagus-bean.**

74569. No. A–1. From Chiuchow, Kwangtung, June, 1927. *Paat uet kok.* A variety planted in March.

74570. No. A–2. From Fatshan, Kwangtung, June, 1927. *Chi kap tsing tan.* A variety planted from February until April.

74571. No. A–3. From Fatshan, Kwangtung, June, 1927. *Sai uen tan kok.* A variety planted during February.

74572. No. A–4. From Hapoonue, Kwangtung, June, 1927. *Kam shan tan kok.* A variety planted during February.

74573. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

From Florence, Tuscany, Italy. Seeds purchased from Comizio Agrario di Firenze. Received August 18, 1927.

Locally grown seed.

74574 to 74587.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director, Botanic Gardens. Received August, 1927.

74574. AESCHYNOMENE AMERICANA L. Fabaceae.

A West Indian bushy leguminous herbaceous annual, 2 feet high, with yellow flowers.

74575. ASSONIA PALMATA (Cav.) Kuntze (*Dombeya acutangula* Cav.). Sterculiaceae.

An evergreen subtropical tree, up to 16 feet high, with rounded heart-shaped leaves crowded at the ends of the branchlets and loose clusters of white or reddish flowers. Native to the Mascarene Islands, Indian Ocean.

74576. CALOPOGONIUM MUCUNOIDES Desv. Fabaceae.

For previous introduction and description see No. 74532.

74577. CASSIA BICAPSULARIS L. Caesalpiniaceae.

A tropical-American evergreen shrub 4 feet high, with pinnate leaves and yellow flowers.

For previous introduction see No. 50654.

74574 to 74587—Continued.

74578. CASSIA PAPUANA Hort. Caesalpiniaceae.

A tropical ornamental shrub with pinnate foliage and yellow flowers.

For previous introduction see No. 69148.

74579. CLITORIA HETEROPHYLLA Lam. Fabaceae.

An East Indian perennial climber with very slender stems, compound leaves, and solitary blue flowers.

For previous introduction see No. 65298.

74580. CROTALARIA ANAGYROIDES H. B. K. Fabaceae.

A tropical American shrubby leguminous plant, up to 6 feet high, used as a cover plant in the East Indies.

For previous introduction see No. 66251.

74581. HOMALOCENCHRUS HEXANDRUS (Swartz) Kuntze. Poaceae. **Rice grass.**

An Australian perennial grass, common along watercourses in New South Wales and Queensland. It becomes about 3 feet high, is very leafy, and livestock are very fond of it.

For previous introduction see No. 47025.

74582. LICUALA AMPLIFRONS Miquel. Phoenicaceae. **Palm.**

A showy dwarf fan palm with leaves about 2½ feet long and usually 12 parted. Native to Sumatra.

For previous introduction see No. 68121.

74583. PITHECOLOBIUM UMBELLATUM (Vahl) Benth. Mimosaceae.

A low ornamental leguminous tree with feathery foliage, native to the East Indies.

For previous introduction see No. 69161.

74584. PONGAMIA PINNATA (L.) W. F. Wight (*P. glabra* Vent.). Fabaceae.

A tall erect tree, or sometimes a climbing shrub, with compound leaves composed of five to seven pairs of oblong leaflets, and simple racemes of white flowers. The woody pods are about one-fourth of an inch thick and an inch and a half long. Native to tropical Asia. Because of its bright, handsome foliage this tree has been recommended as an ornamental for mild-wintered regions.

For previous introduction see No. 66152.

74585. SESBANIA PALUDOSA Jacq. Fabaceae.

A yellow-flowered annual with compound leaves.

74586. SINDORA SUMATRANA Miquel. Caesalpiniaceae.

An unarmed ornamental East Indian tree with panicles of small flowers and stiff pinnate leaves with few leaflets.

For previous introduction see No. 69165.

74574 to 74587—Continued.

74587. VIGNA LUTEA (Swartz) A. Gray. Fabaceae.

An East Indian leguminous creeper, of possible value as a cover plant or green forage.

For previous introduction see No. 60253.

74588. CITRUS SINENSIS (L.) Osbeck. Rutaceae. **Sweet orange.**

From Brisbane, Queensland, Australia. Plants presented by G. Williams, Department of Agriculture and Stock, through W. T. Swingle, Bureau of Plant Industry. Received August 11, 1927.

Byfield seedless orange. A very vigorous and productive tree originating near Brisbane. The fruit is of excellent quality with no seeds.

74589. CITRUS sp. Rutaceae.

From Pasoeroean, Java. Seeds presented by E. de Vries, Government horticulturist. Received August 11, 1927.

A very prolific Citrus of unknown origin, growing in Java, which is called the Japanese lemon, though it is not a lemon. Perhaps it is a natural hybrid between the lemon and tangerine. The fruits make an excellent orange-colored squash. In the experiment garden at Java it is used as a stock for *Citrus nobilis*, the only good stock which we so far have in Java. It is also an excellent stock for *C. grandis*. The tree is susceptible to scab (Cladosporium)). In Java the seedlings bear freely at 3 or 4 years old. (*Note by Mr. de Vries in letter dated May 22, 1927.*)

74590. BORASSUS FLABELLIFER L. Phoenicaceae. **Palmyra palm.**

From Gambia, West Africa. Seeds presented by A. J. Brooks, Director, Department of Agriculture. Received August 29, 1927.

An African form of the famous Palmyra palm of India. Though a slow grower, it is a very handsome palm when old. Inasmuch as it grows in the dry coastal regions of Ceylon, is apparently able to withstand any amount of lime, and is said to have even been successfully used as a binder for sand dunes, it should prove of real value in the calcareous soils of southern Florida. In the number of uses to which it is put in Ceylon it rivals the coconut. A delicate sugar is made from the sap, which flows in abundance from its inflorescence when cut. The seeds are germinated, and the young subterranean hypocotyl is used as a vegetable. The leaves are used in many different ways. The fruit, half the size of a coconut, is very attractive in appearance and when ripe exhales a delicate fragrance. The hull is eaten by the Tamils of Ceylon.

For previous introduction see No. 73399.

74591 to 74593. FICUS spp. Moraceae.

From the island of Guam. Seeds presented by C. W. Edwards, Director, Agricultural Experiment Station. Received August 8, 1927.

74591. FICUS MARIANNENSIS Merr.

A giant banyan fig which is epiphytic on other trees. The latex is astringent and is used to stop the flow of blood. This variety is native to Guam.

74591 to 75593—Continued.

74592. FICUS PHILIPPINENSIS Miquel.

A tropical tree, from Guam, with aerial roots growing from the trunk.

74593. FICUS TINCTORIA Forst. f.

A tropical tree from Guam, with branching aerial roots and small red fruits.

74594 to 74596.

From Bordeaux, Gironde, France. Seeds presented by Prof. L. Beille, Director, Botanic Garden of Talence. Received August 8, 1927.

74594. CHENOPODIUM QUINOA Willd. Chenopodiaceae. **Quinoa.**

A South American herbaceous plant about 6 feet high, the seeds of which are used for food.

For previous introduction see No. 73271.

74595. ELAEAGNUS PUNGENS REFLEXA (Morr. and Dec.) Rehder. Elaeagnaceae. **Bronze elaeagnus.**

An ornamental spreading hardy somewhat spiny Japanese shrub up to 4 meters high, with oval-lanceolate leaves, silvery white, fragrant flowers in small pendulous clusters, followed by red fruits.

For previous introduction see No. 73272.

74596. PTEROCARYA FRAXINIFOLIA (Lam.) Spach (*P. caucasica* Meyer). Juglandaceae. **Caucasian wingnut.**

A handsome spreading tree 60 feet or less in height, with attractive dark-green pinnate leaves about a foot long. It is native to the Caucasus and will probably not prove hardy north of Massachusetts.

For previous introduction see No. 73273.

74597 to 74652.

From Tientsin, China. Seeds presented by Rev. B. M. Flory, the Church of the Brethren Mission. Received August 8, 1927.

74597. ACER sp. Aceraceae. **Maple.**

A hardy species.

74598. ASCLEPIAS sp. Asclepiadaceae. **Milkweed.**

A hardy perennial.

74599. ASTRAGALUS sp. Fabaceae.

A hardy leguminous herbaceous plant which may be an ornamental.

74600 to 74602. BERBERIS spp. Berberidaceae. **Barberry.**

74600. BERBERIS sp.

74615. CLEMATIS sp.

No. 6.

74616. COTONEASTER sp. Malaceae.

A hardy shrub.

74617 and 74618. CUCUMIS MELO L. Cucurbitaceae. Melon.

Local varieties.

74617. No. 1. **74618.** No. 2.

74619. DAUCUS CAROTA L. Apiaceae. Carrot.

A local variety.

74620 to 74622. DELPHINIUM spp. Ranunculaceae. Larkspur.

Hardy herbaceous perennials.

74620. DELPHINIUM sp.

No. 1.

74621. DELPHINIUM sp.

No. 2.

74622. DELPHINIUM sp.

No. 3.

74623. DIOSPYROS KAKI L. f. Diospyraceae. Kaki.

74624 and 74625. EUONYMUS spp. Celastraceae.

Hardy woody plants which are usually ornamental.

74624. EUONYMUS sp.

No. 1.

74625. EUONYMUS sp.

No. 2.

74626. FAGOPYRUM ESCULENTUM Moench. Polygonaceae. Buckwheat.

Locally grown seeds.

74627. FRAXINUS sp. Oleaceae. Ash.

74628. HYDRANGEA sp. Hydrangeaceae.

A hardy ornamental shrub.

74629. HYPERICUM sp. Hypericaceae.

A hardy yellow-flowered ornamental shrub.

74597 to 74652—Continued.

74630 and 74631. LILIUM spp. Liliaceae. Lily.

Hardy lilies.

74630. LILIUM sp.

No. 1.

74631. LILIUM sp.

No. 2.

74632 and 74633. LYCOPERSICON ESCULENTUM Mill. Solanaceae. Tomato.

Local varieties.

74632. No. 1. **74633.** No. 2.

74634. ORYZA SATIVA L. Poaceae. Rice.

Locally grown seeds.

74635. PHASEOLUS AUREUS Roxb. Fabaceae. Mung bean.

A local variety.

74636. PHASEOLUS VULGARIS L. Fabaceae. Common bean.

A local variety.

74637. PHILADELPHUS sp. Hydrangeaceae.

A hardy ornamental shrub.

74638. RAPHANUS SATIVUS L. Brassicaceae. Radish.

A local variety.

74639. RHODODENDRON sp. Ericaceae.

A hardy ornamental shrub.

74640. RIBES sp. Grossulariaceae. Currant.

A wild red currant.

74641 to 74644. ROSA spp. Rosaceae. Rose.

74641. ROSA sp.

No. 1.

74642. ROSA sp.

No. 2.

74643. ROSA sp.

No. 1.

74646. SPIRAEA sp.

No. 2.

74647. SPIRAEA sp.

No. 3.

74648. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. Common wheat.

Locally grown seeds.

74649 and 74650. VIBURNUM spp. Caprifoliaceae.

Hardy ornamental shrubs.

74649. VIBURNUM sp.

No. 1.

74650. VIBURNUM sp.

No. 2.

74597 to 74652—Continued.

74651 and 74652. ZEA MAYS L. Poaceae. Corn.

Locally grown seeds.

74651. No. 1. 74652. No. 2.

74653. CARPOTROCHE BRASILIENSIS (Raddi) Endl. Flacourtiaceae.

From Vicosa, Minas Geraes, Brazil. Seeds presented by Prof. P. H. Rolfs, Escola Superior de Agricultura e Veterinaria. Received May 10, 1926. Numbered September, 1927.

A tropical tree native to central Brazil. A sirup said to cure leprosy and an ointment used for skin affections are prepared from the seeds.

For previous introduction see No. 64443.

74654. RIBES sp. Grossulariaceae. Black currant.

From Shitoukhetsy, Manchuria. Plants obtained by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received November 17, 1926. Numbered September, 1927.

No. 7268. A cultivated form of the Manchurian wild black currant.

74655 and 74656.

From West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received March and April, 1927. Numbered September, 1927.

74655. COLA ACUMINATA (Beauv.) Schott and Endl. Sterculiaceae. Cola nut.

No. 1157. From the jungle near Duala, Cameroon, February 6, 1927. An unusually vigorous strain of the cola nut. The tree is 40 feet high, with large leathery leaves and large pods inclosing purplish seeds which contain caffein.

For previous introduction see No. 42359.

74656. NAGEIA sp. (*Podocarpus* sp.). Taxaceae.

No. 1206. Buea, Cameroon, February 12, 1927. A tall handsome tropical evergreen tree with somewhat pendulous branches.

74657 and 74658. PSIDIUM GUAJAVA L. Myrtaceae. Guava.

From Calcutta, India. Seeds presented by S. Percy Lancaster, Secretary, Agri-Horticultural Society of India. Received August 29, 1927.

74657. A soft-seeded variety which is sweet and very prolific.

74658. For previous introduction and description see No. 74523.

74659. CAJANUS INDICUS Spreng. Fabaceae. Pigeon pea.

From Tananarive, Madagascar. Seeds presented by the Chief of the Agricultural Service. Received August 29, 1927.

A variety cultivated in Madagascar.

74660. GOSSYPIUM ARBOREUM L. Malvaceae. Cotton.

74660—Continued.

From Sibpur, near Calcutta, India. Seeds presented by C. C. Calder, Superintendent, Royal Botanic Garden, through T. H. Kearney, Bureau of Plant Industry. Received August 18, 1927.

Locally grown seeds.

For previous introduction see No. 74443.

74661. LEEA INDICA (Burm. f.) Merr. Vitaceae.

From Takengon, Sumatra. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the Allison V. Armour expedition. Received May 14, 1926. Numbered July, 1927.

A tropical shrub or small tree with attractive pinnate-crenate bronzy leaves.

74662 to 74667.

From Sumatra. Seeds collected by H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received August 30, 1927.

74662. CITRUS sp. Rutaceae.

No. 8600. The wild orange of Si Naboen, growing in the forest belt around the middle of the mountain near the path leading up from Kampong Goeroe Kinajan, Karoland. The tree, as it grows in the jungle, is 6 to 8 inches in diameter, smooth barked, and branched above. The fruits are sour but have a very good flavor and are about 3½ inches in diameter and 2½ inches long. The skin is thick and peels off only moderately easily. The stem end is indented, and the other end has a low prominence. This species has been planted in the kampongs to a small extent, but is said by the natives to be wild, whereas the following [No. 74663], sent for comparison, is cultivated only.

74663. CITRUS sp. Rutaceae.

Bĕrastagi, Karoland. The sweet fruits are smaller than those of the former [No. 74662], often being only 2 inches in diameter, or even less; the largest fruits are about 3 inches in diameter. The skin is very thin and easy to peel.

74664. CROTALARIA STRIATA D.C. Fabaceae.

Hisik-kisik. From Silo Maradja, Asahan. A tropical East Indian leguminous plant, possibly useful as a cover crop.

74665. MAGNOLIA sp. Magnoliaceae.

No. 8535. From Dĕlĕng Singkoet, near Bĕrastagi, Karoland. A large, handsome tropical tree.

74666. PINANGA sp. Phoenicaceae. Palm.

No. 8554. From Dĕlĕng Singkoet, near Bĕrastagi, Karoland. An attractive tropical palm 6 to 12 feet high with reedlike stems.

74667. QUERCUS sp. Fagaceae. Oak.

No. 8654. From Goenoeng Si Naboen, Karoland. A large tree.

74668. IRIS SINTENISII Janka. Iridaceae.

From Philadelphia, Pa. Plants presented by Mrs. J. Norman Henry. Received September 30, 1927.

A rather small iris from southeastern Europe and Asia Minor, which has stiff, very narrow leaves a foot long, a slender stem, and small bright-lilac flowers.

74669 to 74671.

From Haiti. Seeds and plants presented by F. C. Baker, Bureau of Plant Industry. Received September 19, 1927.

74669 and **74670.** BACTRIS PLUMERIANA Mort. Phoenicaceae. **Palm.**

A rather low Brazilian palm with a spiny stem, pinnate leaves, and pale greenish yellow flowers.

74669. Seeds. **74670.** Plant.

74671. COCCOTHRINAX ANOMALA Beccari. Phoenicaceae. **Palm.**

A medium-sized West Indian palm with terminal fan-shaped leaves and small berrylike juicy black fruits.

74672 and 74673.

From Leningrad Russia. Seeds presented by A. Kol, chief, bureau of introduction, Institute of Applied Botany and New Cultures. Received September 19, 1927.

74672. AVENA SATIVA L. Poaceae. **Oats.**

No. 10274. *Sumrak.* Variety *cinerea.* A small-grained, thin-hulled variety obtained from the Viatka Reg. Experiment Station, Viatka Government.

74673. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

No. 36106. *Kooperatorka.* Variety *erythrospermum.* From the Odessa Experiment Station, Odessa. A white-eared, red-grained variety which is one of the earliest, most productive, and valuable winter wheats of the Ukraine.

74674 to 74679.

From Brignoles, France. Seeds presented by R. Salgues. Brignoles Botanic Station. Received September 20, 1927.

74674. ARMERIA BUPLEUROIDES Gren. and Godr. Plumbaginaceae.

A plantainlike hardy herbaceous perennial a foot high, with red flowers. Native to southern Europe.

74675. ASTRAGALUS GLYCYPHYLLOS L. Fabaceae.

A prostrate, spreading herbaceous perennial, native to Asia Minor.

For previous introduction see No. 66520.

74676. CISTUS MONSPELIENSIS L. Cistaceae. **Montpelier rockrose.**

An ornamental white-flowered shrub, native to the Mediterranean region.

74677. JUNIPERUS PHOENICEA L. Pinaceae. **Phoenician juniper.**

A low, ornamental evergreen tree about 20 feet high, native to dry places in the Mediterranean countries.

For previous introduction see No. 69855.

74678. PISTACIA CHINENSIS Bunge. Anacardiaceae. **Chinese pistache.**

A fairly rapid-growing tree native to central China. The wood is durable and much used for furniture and agricultural implements. The young shoots are edible, and the seeds furnish an illuminating oil.

For previous introduction see No. 72633.

74674 to 74679—Continued.

74679. TEUCRIUM FLAVUM L. Menthaceae.

A hardy herbaceous perennial mint, 2 feet high, with yellow flowers. Native to the Mediterranean countries.

74680. GREVILLEA BANKSII R. Br. Proteaceae.

From Santa Barbara, Calif. Seeds collected by John A. Stevenson, Bureau of Plant Industry. Received September 23, 1927.

An upright ornamental subtropical Australian tree which has carmine flowers.

For previous introduction see No. 50332.

74681 to 74690.

From Europe. Seeds collected by Dr. Augustine Henry, College of Science for Ireland, Dublin, Irish Free State. Received September 19, 1927.

These seeds were growing in the French Alps at altitudes between 4,500 and 7,500 feet.

74681. AMELANCHIER ROTUNDIFOLIA (Lam.) Dum.-Cours. Malaceae.

A hardy ornamental European shrub or small tree, about 20 feet high, growing at an altitude of 5,000 feet. The leaves are rounded, the white flowers being over an inch in diameter, and the fruits are first red, later becoming black.

74682. CENTAUREA RHAPONTICUM L. Asteraceae.

A hardy herbaceous purple-flowered European perennial growing at an altitude of 7,000 feet.

74683. CLEMATIS ALPINA Mill. Ranunculaceae.

A hardy herbaceous climber, native to the mountains of Europe, Siberia, and western Canada, growing at an altitude of 5,000 feet. It has white leaves, and the flowers vary from blue to white.

For previous introduction see No. 53137.

74684. HIPPOPHAE RHAMNOIDES L. Elaeagnaceae. **Common sea-buckthorn.**

A spiny deciduous hardy shrub with silvery foliage and orange-yellow fruits, native to western Asia, at an altitude of 5,000 feet.

74685. LATHYRUS sp. Fabaceae.

A climbing leguminous plant with conspicuous red flowers, growing at altitudes between 5,000 and 6,000 feet.

74686. LONICERA ALPIGENA L. Caprifoliaceae. **Honeysuckle.**

A hardy ornamental European shrub 6 feet high, growing at an altitude of 7,000 feet. It has yellow, red-tinged flowers and red cherrylike berries.

For previous introduction see No. 53707.

74687. ONONIS sp. Fabaceae.

A small leguminous alpine plant growing at an altitude of 5,000 feet.

74688. PRIMULA sp. Primulaceae. **Primrose.**

A small alpine primrose growing at an altitude of 5,000 feet.

74681 to 74690—Continued.

74689. SAMBUCUS RACEMOSA L. Caprifoliaceae. European red elder.

A hardy ornamental shrub, 12 feet high, growing at an altitude of 5,000 feet. The terminal cymes of small yellowish flowers are succeeded by scarlet fruits. Native to continental Europe and Asia.

For previous introduction see No. 65506.

74690. SORBUS CHAMAEMESPILUS Crantz. Malaceae. Mountain-ash.

A hardy European shrub about 6 feet high, growing at an altitude of 5,000 feet. It has pinkish flowers and brownish red fruits in dense corymbs.

74691. RUBUS sp. Rosaceae. Blackberry.

From Kosseir, Syria (near Damascus). Seeds collected by F. G. Krauss, University of Hawaii. Received September 23, 1927.

A variety producing an abundance of small fruits. The plants from which these seeds were obtained were of virogous growth, notwithstanding the very arid condition along the roadway.

74692. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. Six-rowed barley.

From Iraq. Seeds collected by F. G. Krauss, University of Hawaii. Received September 26, 1927.

A local variety collected at Iraq in August, 1927.

74693 and 74694. ZEA MAYS L. Poaceae. Corn

From Palestine. Seeds collected by F. G. Krauss, University of Hawaii. Received September 26, 1927.

74693. No. 771. A local variety received as *Palestinian white point.*

74694. No. 454. A local variety received as *Palestinian white dent.*

74695. KENNEDIA RUBICUNDA Vent. Fabaceae.

From Richmond, Australia. Seeds presented by R. H. Baker. Received September 27, 1927.

A leguminous climbing shrub with dark-green leaves and large attractive dark-red flowers.

For previous introduction see No. 58036.

74696 and 74697.

From Matania el Saff, Egypt. Seeds presented by Alfred Bircher, Director, Middle-Egypt Botanic Station. Received September 30, 1927.

74696. CASUARINA LUEHMANNI R. T. Baker. Casuarinaceae.

A tree 80 to 100 feet high, with light-colored branchlets and flattened cones half an inch in diameter. The wood is hard and close-grained.

74697. EHRETIA LAEVIS Roxb. Boraginaceae.

A subtropical evergreen shrub 12 feet high, with white flowers. Native to southern Asia.

74698 and 74699. DATISCA CANNABINA L. Datiscaceae.

From Cluj, Rumania. Seeds presented by Dr. A. Borza, Director, Botanic Garden, University of Cluj. Received September 30, 1927.

A hardy herbaceous perennial 4 feet high, with greenish yellow flowers. It is native to the Himalayas. The roots are used as a source of yellow dye.

74698. No. 926. 74699. No. 927.

74700 to 74702. OXALIS TUBEROSA Molina. Oxalidaceae.

From Tucuman, Argentina. Tubers presented by S. Heredia Luna, National University of Tucuman. Received September 6, 1927.

A South American plant related to the wood sorrel of the United States. It is grown in the Andes for its edible tubers.

74700. No. 1.

74701. No. 2.

74702. No. 3. A red variety.

74703. (Undetermined.)

From Europe. Seeds collected by Dr. Augustine Henry, College of Science for Ireland, Dublin, Irish Free State. Received September 19, 1927.

A small erect leguminous alpine plant growing in the French Alps at an altitude of 5,000 feet.

74704. MERCURIALIS ANNUA L. Euphorbiaceae.

From Cluj, Rumania. Seeds presented by Dr. A. Borza, Director, Botanic Garden, University of Cluj. Received September 2, 1927.

An annual erect herb with opposite narrow leaves, native to Europe. It is to be grown to determine the iodin content of the seeds.

For previous introduction see No. 74217.

74705 to 74707. PHOENIX DACTYLIFERA L. Phoenicaceae. Date palm.

From Africa. Offsboots presented by Dr. L. Trabut, Government botanist, Algiers, Algeria, through W. T. Swingle, Bureau of Plant Industry. Received August 23, 1927.

74705. *Deglet beida.* From near El Arfiane, in the vicinity of Biskra, Algeria.

74706. *M'sh degla.* From B'skra, Algeria.

74707. *Arishty.* From Biskra, Algeria.

74708 to 74779. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. Common wheat.

From Nanking, China. Seeds obtained from the College of Agriculture and Forestry, University of Nanking. Received September 12, 1927.

Local varieties.

74708. No. 1569.

74709. No. 1572.

74780 to 74785. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Dar es Salaam, Tanganyika Territory, Africa. Seeds presented by Dr. A. H. Kirby, Director, Department of Agriculture. Received July 25, 1927.

74780. No. 15. *Tendekwa.* From Sima, Mwanza district.

74781. No. 16. *Balaschoo.* From Kilimanjaro, Moshi district.

74782. No. 17. *Tendekwa.* From Nassa, Maswa district.

74783. No. 18. *Itendekwa.* From Buchossa, Uzinza district.

74784. No. 19–A. *Mbaazi, Shoo.* From Upare, Moshi district.

74785. No. 20–B. *Mbaazi, Shoo.* From Upare, Moshi district.

74786 to 75126. TRITICUM spp. Poaceae.

From Nanking, China. Seeds obtained from the College of Agriculture and Forestry University of Nanking. Received September 12, 1927.

74786 to 75114. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). **Common wheat.**

Introductory statement	1
Inventory	2
Index of common and scientific names	30

INTRODUCTORY STATEMENT

In presenting an inventory of the material which has passed through the Office of Foreign Plant Introduction for the period included between October 1 and December 31, 1927, it is scarcely enough to report that the serial numbers include 718 introductions, a statement as dull in itself as the reading of any inventory is likely to be. But before commenting in any way upon the items which make up this list, the reader should be reminded of several things.

Before all else, this inventory must be considered as a record, a historical document. In it are listed the names of all species and varieties received, together with brief notes concerning the nature of the material, the source, and a description. It in no way indicates the disposition of the material, nor does it suggest its present whereabouts. The reader is urged to remember that this is not a statement of material on hand, to be consulted like a catalogue from a nursery. It should be consulted to discover how far about the globe the office reaches out to procure the plants which it brings in for use in this country. The mere list of contributing countries fires the imagination—Argentina, Australia, Brazil, Cameroon, Canal Zone, Ceylon, Chile, China, Chosen, Colombia, Egypt, England, Fiji Islands, France, French Guinea, Gambia, Germany, Gold Coast, Hawaii, India, Italy, Japan, Java, Kenya Colony, Manchuria, Mexico, New South Wales, New Zealand, Nyasaland Protectorate, Palestine, Persia, Philippines, Rhodesia, Russia, Scotland, Sierra Leone, Spain, Tanganyika Territory, and Uganda. Practically every corner of the globe has contributed to the stream of introductions which are being brought in for our national development. Here are recorded findings of several collectors and two expeditions, as well as the varied contributions of the many collaborators who further the work of the office.

Conspicuous among these are the chestnuts that have been sent in by R. Kent Beattie, of the Office of Forest Pathology, who has been studying chestnuts in the Orient with a view to collecting trees that will be valuable in replacing our American chestnuts, which are disappearing as a result of the chestnut blight. Other collections from Mr. Beattie which are specifically related to projects within the department here are the azaleas and lilies which appear conspicuously among the ornamentals he has sent.

More than 100 numbers are used to record the plants sent in from the expedition in Africa under Messrs. Kephart and Piemeisel, whose particular interest centered in forage crops, both the grasses and legumes.

57034—29——1

Tropical plants of particular value for southeastern Florida were sent in from the Allison V. Armour expedition and are recorded under Nos. 75270 to 75285.

An interesting collection of native types and varieties of peaches and apricots (75228 to 75238) were sent in from Persia, and a smaller group of mangos (75264 to 75269) from Honolulu may add valuable new fruits for several localized areas in our country.

Interest in rubber-producing plants is noted—three importations of Cryptostegia (75218, 75219, 75752), latex-producing shrubby vines which seem to promise well in southern Florida.

The increasing interest in bamboos is reflected in the collection (Nos. 75146 to 75170) sent in by Dr. A. W. Hill, Director of the Royal Botanic Gardens, Kew, England, for study in regard to hardiness and suitability for use in ornamental and commercial plantings in the warmer parts of the country.

Of more isolated interest, one finds a gladiolus (No. 75657) sent in from South America, where it was collected apparently in the wild, a new location for this genus.

Large collections from the Melbourne Botanic Garden, Victoria (Nos. 75534 to 75574), and the Sydney Botanic Gardens, New South Wales (Nos. 75576 to 75612), are rich in both Acacia and Eucalyptus, genera of great value and importance in California and the Southwest. Many of these are species or horticultural forms not previously introduced into this country.

Even from so brief an outline as this, it is possible to see how diverse are the materials that are brought in by this office. It is impossible to suggest at this time the specific reasons for which they were secured or to indicate the disposition that has been made in each case, but the reader is urged once more to recall that the activities recorded here are all related to problems under consideration by the department and do not represent a check list of materials for distribution.

The botanical determinations of these introductions have been made and the nomenclature determined by H. C. Skeels, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

OFFICE OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., June 5, 1929.

INVENTORY[1]

75127 to 75136.

From Derbent, Daghestan, Caucasus, Russia. Seeds presented by W. Berg, Director of the Daghestan Agricultural Plant-Breeding Station. Received November 17, 1927.

75127 to 75129. AVENA SATIVA L. Poaceae. **Oats.**

75127. From Andi District, Gadsberi. A variety growing at an altitude of 150 meters.

75128. From Darghin District, Ulal.

75129. From Ossetia, Digor District, Dushta.

75130. HORDEUM VULGARE NIGRUM (Willd.) Beaven. Poaceae. **Six-rowed barley.**

A mass selection.

75127 to 75136—Continued.

75131. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. **Six-rowed barley.**

A mass selection.

75132 to 75134. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

75132. *Kara kilchik.*

75133. *Giur ghimi.*

75134. *Baku cugda.*

75135 and 75136. TRITICUM DURUM Desf. Poaceae. **Durum wheat.**

75135. *Ak cugda.*

75136. *Narghia ava.*

[1] It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

75137. MENTHA ARVENSIS PIPERASCENS Malinv. Menthaceae. **Japanese mint.**

From Japan. Plants obtained through the Federal Horticultural Board. Received October 17, 1927.

A cultivated variety with larger leaves and yielding more oil than the ordinary mint.

75138. JUGLANS SIEBOLDIANA Maxim. Juglandaceae. **Japanese walnut.**

From Sapporo, Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received November 12, 1927.

No. 16. Collected at the botanic garden, Hokkaido Imperial University. A broad-headed Japanese tree up to 50 feet high which bears its ovoid nuts in long racemes often containing 20 nuts.

75139. BAMBUSA ARUNDINACEA Retz. Poaceae. **Bamboo.**

From Dehra Dun, India. Seeds presented by R. N. Parker, forest botanist of the Forest Research Institute. Received November 18, 1927.

A tall bamboo, native to India, rising to a height of 60 feet. The stems are produced in dense clumps, green and shining when young, but becoming golden. The lower branches are spiny.

75140 to 75143. FRAGARIA spp. Rosaceae. **Strawberry.**

From Berlin, Germany. Plants purchased from L. Späth. Received December 28, 1925. Numbered November, 1927.

75140. FRAGARIA sp.

Kaisers sämling. Fruits large, bright red; flesh sweet and melting; a heavy yielder.

75141. FRAGARIA sp.

Lucida perfecta. Late-ripening variety; fruits large; flesh white, sweet, with an aromatic flavor; a heavy yielder.

75142. FRAGARIA sp.

Sieger. Early ripening variety; fruits large, bright red, juicy, of excellent flavor; a heavy yielder.

75143. FRAGARIA sp.

Späte von Leopoldshall. Fruits large, bright red; flesh dark red.

75144. FRAGARIA sp. Rosaceae. **Strawberry.**

From Bedford, England. Plants purchased from Laxton Bros. Received March 25, 1926. Numbered November, 1927.

Grove End scarlet. An old and well-known, midseason variety with small round fruits which remain whole when preserved.

75145. RUBUS sp. Rosaceae. **Raspberry.**

From Shitoukhetsy, Manchuria. Plants collected by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received November 17, 1926. Numbered November, 1927.

No. 7267. October 8, 1926. A wild Manchurian raspberry cultivated for its abundance of red berries, which are of good size and quality.

75146 to 75170.

From Kew, England. Plants presented by Dr. A. W. Hill, Director of the Royal Botanic Gardens. Received May 11, 1925. Numbered December, 1927.

75146 to 75170—Continued.

75146 to 75152. ARUNDINARIA spp. Poaceae. **Bamboo.**

75146. ARUNDINARIA FASTUOSA (Marl.) Makino.

A slender hollow-stemmed Japanese bamboo about 20 feet high. The dark-green stems have purple markings.

For previous introduction see No. 73957.

75147. ARUNDINARIA HINDSII GRAMINEA Mitf.

A very handsome and hardy Japanese bamboo with slender stems 10 to 15 feet high and very narrow leaves 6 to 10 inches long.

75148. ARUNDINARIA MACROSPERMA Michx. **Cane reed.**

A native American bamboo growing along streams in the southeastern part of the United States. The stems are 20 to 30 feet high with numerous short divergent branches and lanceolate leaves 10 to 15 inches long.

75149. ARUNDINARIA NAGASHIMA (Marl.) Aschers. and Graebn.

A small Japanese bamboo 3 to 5 feet high, with erect stems, upright branches, and linear leaves 6 to 9 inches long. The nodes are covered with white wax.

75150. ARUNDINARIA NITIDA Mitf.

A hollow Chinese bamboo up to 20 feet high, with the stems leafless the first year and branching and arching the second year. The pubescent sheaths are purplish, and the small lanceolate leaves are bright green above and glaucescent beneath. This is one of the hardiest of the Arundinarias and thrives in moist shady places.

75151. ARUNDINARIA SIMONII (Carr.) A. and C. Riviere.

A hollow bamboo, native to China and Japan, with stems 25 feet high and an inch thick, young sheaths purplish, and leaves 6 to 12 inches long which are bright green above, often striped with white, and glaucescent beneath on one side of the midrib and nearly green on the other side.

75152. ARUNDINARIA SIMONII VARIEGATA Hook. f.

A form of *Arundinaria simonii* with smaller and narrower leaves which are irregularly striped with white.

75153 to 75160. PHYLLOSTACHYS spp. **Bamboo.**

75153. PHYLLOSTACHYS AUREA Carr. **Golden Japanese bamboo.**

A yellow-stemmed bamboo, native to China and Japan, with erect stems 15 to 18 feet high and an inch thick, and with dark-green leaves 4 to 6 inches long and nearly an inch wide.

75154. PHYLLOSTACHYS BAMBUSOIDES Sieb. and Zucc.

A Chinese bamboo with stems over 50 feet high and 4 to 6 inches in diameter, bright green with a bloom below the nodes, and the sheaths mottled with purple.

75155. PHYLLOSTACHYS BAMBUSOIDES CASTILLONI (Marl.) H. de Lehaie.

A smaller and more slender Japanese form of *Phyllostachys bambusoides* with yellow stems striped with green and the shorter and narrower leaves often striped with pale yellow.

75146 to 75170—Continued.

75156. PHYLLOSTACHYS FLEXUOSA A. and C. Riviere.

A Chinese bamboo 10 to 20 feet high, with stems bright green at first, but becoming almost black, long flexuous branches, and leaves dark green above and glaucous beneath.

75157. PHYLLOSTACHYS KUMASASA (Zoll.) Munro.

A small Japanese bamboo with flattened zigzag green stems 4 to 8 feet high, two to four branchlets at each node, and ovate-lanceolate dark-green leaves.

75158. PHYLLOSTACHYS PUBERULA (Miquel) Munro.

A Chinese bamboo with bright-green hollow stems 15 to 20 feet high, arching and very leafy; the leaves are dark green above and glaucous beneath.

75159. PHYLLOSTACHYS PUBERULA NIGRA (Lodd.) H. de LeHaie.

A form of *Phyllostachys puberula* with the stems soon turning black, the nodes edged below with white, and the branchlets spotted.

75160. PHYLLOSTACHYS VIRIDI-GLAUCESCENS A. and C. Riviere.

A Chinese bamboo with yellowish green hollow stems, 20 to 24 feet high, purplish at the nodes and the sheaths striped with purple.

75161 to 75170. SASA spp. Poaceae. **Bamboo.**

75161. SASA AURICOMA (Mitf.) E. G. Camus.

A dwarf Japanese bamboo 3 to 5 feet high, with slender dark purplish green tufted stems and green and golden yellow striped leaves.

75162. SASA CHRYSANTHA (Mitf.) E. G. Camus.

A spreading Japanese bamboo with hollow stems 5 to 7 feet high and glabrous bright-green leaves often variegated with yellow.

75163. SASA DISTICHA (Mitf.) E. G. Camus.

A dwarf Japanese bamboo with zigzag hollow green stems less than 3 feet high, and bright-green leaves arranged in two rows.

75164. SASA HUMILIS (Mitf.) E. G. Camus.

A dwarf Japanese bamboo with very slender green stems 2 to 4 feet high, having two or three long branches at each node, purplish sheaths, and pale-green leaves.

75165. SASA JAPONICA (Sieb. and Zucc.) Makino.

A Japanese bamboo with stout stems 10 to 15 feet high, having pale-brown sheaths and leaves 4 to 10 inches long, lustrous dark green above and glaucescent beneath except a green strip on one margin.

75166. SASA PUMILA (Mitf.) E. G. Camus.

A Japanese dwarf bamboo 1 to 2 feet high, with slender hollow stems, purple-tinged sheaths, and bright-green slightly hairy leaves.

75167. SASA TESSELLATA (Munro.) Mak. and Shib.

A dwarf Japanese bamboo 3 to 5 feet high, with arching stems, very striking on account of the large leaves forming broad rounded masses.

75168. SASA VARIEGATA (Siebold) E. G. Camus.

A Japanese dwarf bamboo 2 to 3 feet high, spreading rapidly and forming large tufts of very slender somewhat zigzag stems with green leaves striped with white.

75146 to 75170—Continued.

75169 and 75170. SASA VEITCHII (Carr.) Rehder.

A rapidly spreading dwarf Japanese bamboo usually 2 feet high, but rarely 5 feet, with green stems and leaves dark green above, glaucous beneath, and turning yellow on the margin in autumn.

75169. No. 1. 75170. No. 2.

75171. BETA VULGARIS L. Chenopodiaceae. **Beet.**

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received November 29, 1927.

Française riche. This variety gives a very large yield in deep, rather light soil.

75172. PASSIFLORA MALIFORMIS L. Passifloraceae.

From Calarca, Colombia. Seeds presented by Eduardo Hernandez, Direccion de Agricultura. Received November 25, 1927.

A locally grown variety.

For previous introduction see No. 55028.

75173 and 75174. ZEA MAYS L. Poaceae. **Corn.**

From Angol, Chile. Seeds presented by D. S. Bullock, of the Instituto Agricola Bunster. Received November 21, 1927.

Maiz Indiana. Collected in the Andes at Palugin, near Pucon.

75173. No. 1. 75174. No. 2.

75175 to 75181. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Tanganyika Territory, Africa. Seeds presented by T. H. Marshall, Department of Agriculture, Dar es Salaam. Received November 15, 1927.

75175. *Bonombo.* A variety with red flowers and large soft white to pinkish seeds.

75176. *Bonongwa.* A variety with white flowers and small hard white to pinkish seeds.

75177. *Kipera.* A yellow-flowered variety with small hard pinkish to greenish seeds.

75178. *Kiswaswa.* A red-flowered variety with soft medium-sized purple-spotted seeds.

75179. *Mkulyungu.* A black-flowered variety with medium-sized hard purple seeds.

75180. *Mrugulu.* A variety with mottled flowers and medium-sized hard fawn-colored seeds.

75181. *Mtoteke.* A black-flowered variety with medium-sized hard brownish seeds.

75182. DIOSPYROS CONZATTII Standley. Diospyraceae. **Persimmon.**

From Oaxaca de Juarez, Oaxaca, Mexico. Seeds presented by Dr. C. Conzatti. Received November 14, 1927.

A subtropical tree of particular interest on account of the exquisite flavor of its edible, green-skinned fruits, 4 centimeters in diameter and 2 centimeters long. Propagation of this magnificent tree is relatively simple because of its vigor and the altitude at which it thrives, 1,000 meters above sea level. Native to south-central Mexico.

For previous introduction see No. 53176.

75183 to 75199. PRUNUS CERASUS MARASCA (Host.) C. Schneid. Amygdalaceae. **Maraschino cherry.**

From Milan, Italy. Plants purchased from Fratelli Ingegnoli. Received December 4, 1927.

Local varieties.

75183. *Bicentenaria.*

75184. *Inglese precoce.*

75185. *Nera grossa di Piemonte.*

75186. *Regina ortensia.*

75187. *Rossa grossa di Piemonte.*

75188. *Bella di Barbanti.*

75189. *Bella di Toscana.*

75190. *Bianco grosso.*

75191. *Bianco rosato di Piemonte.*

75192. *Garibaldi.*

75193. *Giallo di Doenissen.*

75194. *Morreau.*

75195. *Napotitana.*

75196. *Nero di Tarcento.*

75197. *Nero di Winkler.*

75198. *Olivo.*

75199. *Citirgio duracino gigante.*

75200. EHRHARTA CALYCINA J. E. Smith. Poaceae. **Perennial African veldt grass.**

From Burringbar, New South Wales, Australia. Seeds presented by B. Harrison. Received October 8, 1927.

A grass 4 feet high, which is popular as a forage grass in Western Australia, where it was introduced accidentally by camel owners in fodder imported from South Africa. It is said to be very nutritious.

75201. LUCUMA NERVOSA DC. Sapotaceae. **Canistel.**

From Homestead, Fla. Seeds presented by Dr. J. Petersen. Received October 8, 1927.

A small tree up to 25 feet high, with spreading branches and oblong leaves 4 to 8 inches long. The ovoid orange-yellow edible fruits are 2 to 4 inches long with soft mealy bright orange flesh of rich sweet flavor. The tree is native to northern South America.

75202 and 75203. NOTHOFAGUS spp. Fagaceae.

From Wellington, New Zealand. Seeds presented by L. Ellis, Director of the Department of Forestry. Received October 8, 1927.

75202. NOTHOFAGUS FUSCA (Hook. f.) Oerst. **Dusky beech.**

A large New Zealand tree often reaching a height of 100 feet and having a trunk diameter of 12 feet. It is sparsely distributed throughout the islands in damp situations.

For previous introduction see No. 46643.

75203. NOTHOFAGUS SOLANDRI (Hook. f.) Oerst. **Solander's beech.**

A forest tree up to 100 feet high, with small leaves less than an inch long and fruits resembling small chestnuts. This is the most abundant of the New Zealand beeches, forming immense forests on the drier mountain slopes.

75204. LYCOPERSICON ESCULENTUM Mill. Solanaceae. **Tomato.**

From Fundo Ursula, near Nancagua, Chile. Seeds presented by H. L. Westover, Bureau of Plant Industry. Received October 11, 1927.

Seeds collected from a waste place, May 7, 1924. The fruits are small, but very solid, and seem to contain less acid than the tomatoes in the United States.

75205 and 75206.

From Gold Coast, Africa. Seeds presented by L. A. King-Church, conservator of forests, Victoriaborg, Akkra. Received October 12, 1927.

75205. MONODORA MYRISTICA (Gaertn.) Dunal. Annonaceae. **Calabash nutmeg.**

The Calabash nutmeg is described in Curtis's Botanical Magazine (plate 3059) as a large, spreading, tropical African tree with shining, pale-green leaves and fragrant flowers. The latter, borne singly in the leaf axils, are about 6 inches across, with six petals; three of these are spreading and yellow, the other three are erect and creamy white, and all are dotted with red. The fruit, 4 to 6 inches in diameter, contains a number of cylindric seeds about an inch long; these have a flavor closely resembling that of the common nutmeg.

For previous introduction see No. 61499.

75206. PARKIA sp. Mimosaceae.

A tall unarmed tree with compound leaves and small, dense panicles of flowers which are followed by large, strap-shaped pods. Native to tropical Africa.

75207 to 75213. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Pusa, Bihar and Orissa, India. Seeds collected by Dr. F. G. Krauss, of the University of Hawaii. Received October 12, 1927.

Locally grown varieties collected in August, 1927.

75207. *Pusa No. 1.*

75208. *Pusa No. 2a.*

75209. *Pusa No. 2b.*

75210. *Pusa No. 4a.*

75211. *Pusa No. 5a.*

75212. *Pusa No. 5b.*

75213. *Amber No. 10.*

75214 to 75216. ZEA MAYS L. Poaceae. **Corn.**

From India. Seeds collected by Dr. F. G. Krauss, of the University of Hawaii. Received October 12, 1927.

Locally grown varieties, collected in August, 1927, at the Agricultural Experiment Station, Pusa, Bihar and Orissa.

75214. No. 1. An early-maturing variety.

75215. No. 2. An intermediate-maturing variety.

75216. No. 3. A late variety.

75217. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

From Altoona, Pa. Seeds presented by William Hallman. Received October 8, 1927.

A melon originally from China, which is reported to produce as many as 60 fruits to a hill.

75218 and 75219. CRYPTOSTEGIA spp. Asclepiadaceae.

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received October 10, 1927.

75218. CRYPTOSTEGIA GRANDIFLORA R. Br. **Palay rubbervine.**

A climbing shrubby vine of unknown nativity, but now cultivated in many places in the Tropics of both hemispheres as an ornamental, and occasionally growing as an escape from cultivation. The leaves are short and leathery, with dull surfaces and purple midribs, and the whitish or pink flowers are 2 to 3 inches in diameter. This vine is now being tested as a source of rubber. In India the plant is called palay.

For previous introduction see No. 61795.

75219. CRYPTOSTEGIA GRANDIFLORA R. Br.

Received as *Cryptostegia madagascariensis*, but plants grown at Chapman Field, near Miami, Fla., appear to be *C. grandiflora*.

75220. ZEA MAYS L. Poaceae. **Corn.**

From Darjiling, India. Seeds collected by Dr. F. G. Krauss, of the University of Hawaii. Received October 12, 1927.

Collected August 10, 1927. A variety growing at an altitude of 7,000 feet.

75221. (Undetermined.)

From Kabiti, near Nairobi, Kenya Colony, East Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received October 15, 1927.

No. 83. July 8, 1927. A bulbous liliaceous plant with flowers about 1 inch in diameter produced on flower stalks 6 feet high. The leaves are thin, 2 to 2½ feet long, and 1½ inches broad at the base, tapering gradually to a point. The pods are one-fourth to one-half inch long, and the bulbs are 4 inches in diameter, with several small bulbs attached to the side.

75222 to 75225. PHOENIX spp. Phoenicaceae. **Palm.**

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received October 10, 1927.

75222. PHOENIX RUPICOLA T. Anders.

A slender date palm up to 20 feet high, with leaves 10 feet long and oblong shining yellow fruits. Native to India.

75223 and 75224. PHOENIX RECLINATA Jacq. **Senegal date palm.**

A date palm 25 or more feet tall, which has bright-green 2-ranked leaves with rigid leaflets. Native to tropical Africa.

75223. [No data.]

75224. Variety *leonensis*.

75225. PHOENIX ROEBELENII O'Brien. **Roebelin palm.**

A dwarf palm, resembling the date palm, but only about 2 feet high. Native to Cochin China.

75226. CITRUS SINENSIS (L.) Osbeck. Rutaceae. **Orange.**

From Palestine. Bud wood collected by Knowles A. Ryerson, of the Joint Palestine Survey Commission. Received October 5, 1927.

The Jaffa or Shamouti orange from Jaffa, Palestine, is a large oval fruit of bright orange color, maturing from October to April. The fruit is practically seedless, the skin usually thick, and the flesh of excellent quality. This variety is the basis of the rapidly developing Palestine orange industry. Ninety-five per cent of the fruit is marketed in England.

75227. JATROPHA SPATHULATA Muell. Arg. Euphorbiaceae. **Tocote prieto.**

From San Antonio, Tex. Plants collected by Dr. J. N. Rose, of the United States National Museum, and Paul Russell, of the Bureau of Plant Industry. Received October 24, 1927.

No. 24139. October 19, 1927. A stoloniferous shrub up to 15 feet high, with fleshy branches, sessile spathulate leaves, and fascicles of pale-rose flowers. Native to Texas, Mexico, and Central America. For testing as a possible source of rubber.

75228 to 75238.

From Teheran, Persia. Seeds presented by E. S. Haskell, Director General of Agriculture and Public Domains. Received October 17, 1927.

Local varieties collected at Tajrish, near Teheran.

75228 and 75229. AMYGDALUS PERSICA L. (*Prunus persica* Stokes). Amygdalaceae. **Peach.**

75228. No. 1. Small mealy fruits.

75229. No. 2. Small sweet fruits.

75230. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

No. 3. Aromatic fruits.

75231 to 75238. PRUNUS spp. Amygdalaceae. **Plum.**

75231. PRUNUS sp.

No. 4. Large round black fruits.

75232. PRUNUS sp.

No. 5. Large round white fruits.

75233. PRUNUS sp.

No. 6. Large round red fruits.

75234. PRUNUS sp.

No. 7. Very small round yellowish fruits.

75235. PRUNUS sp.

No. 8. Small oval yellowish fruits.

75236. PRUNUS sp.

No. 9. Small oval reddish fruits.

75237. PRUNUS sp.

No. 10. Small oval red fruits.

75238. PRUNUS sp.

No. 11. Large round yellowish white fruits.

75239. (Undetermined.) Poaceae.

From Concepcion, Chile. Seeds presented by S. P. Price, Concepcion, through H. L. Westover, Bureau of Plant Industry. Received October 24, 1927.

A mixture of local grass varieties.

75240. TRIFOLIUM FRAGIFERUM L. Fabaceae. **Strawberry clover.**

From Melbourne, Australia. Seeds purchased from F. H. Brunning. Received October 21, 1927.

The strawberry clover has in some unknown way become introduced into northeastern Oregon, where, on the seepage irrigated lands that are too alkali for alfalfa, it seems to thrive excellently. It seems probable that the seed was originally introduced with alfalfa, but at the present time this variety has escaped into the pastures, wherever the seepage from the irrigation ditches provides sufficient moisture.

75241. CALOPHYLLUM KUNSTLERI King. Clusiaceae.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Agronomist in Charge, Plant Introduction Gardens. Received October 22, 1927.

A tree up to 60 feet high, native to the Malay Peninsula. The 4-angled branchlets are red pubescent, and the elliptical leaves are prominently nerved. The small axillary clusters of white flowers are followed by drupes about one-third of an inch in diameter.

75242 and 75243. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

From Ispahan, Persia. Seeds presented by A. Mohammed Hossain Guiahi. Received October 25, 1927.

Locally grown varieties.

75242. No. 2. *Kharboozeh*. An oval-shaped variety.

75243. No. 4. *Semsoori*. A round variety.

75244. LOBELIA FULGENS Willd. Campanulaceae. **Mexican lobelia.**

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received October 25, 1927.

A herbaceous perennial plant about 4 feet high with bright-red flowers.

For previous introduction see No. 45353.

75245. GALANTHUS FOSTERI Baker. Amaryllidaceae. **Snowdrop.**

From London, England. Bulbs purchased from Barr & Sons. Received October 28, 1927.

A bulbous, spring-flowering plant native to Asia Minor. The leaves are nearly an inch wide, and the small flowers are white with the lower half of the segments green.

75246. SAGUERUS PINNATUS Wurmb (*Arenga saccharifera* Labill.). Phoenicaceae. **Sugar palm.**

From Manila, Philippine Islands. Seeds presented by S. Youngberg, Director of the Bureau of Agriculture. Received December 20, 1927.

Kaong. A handsome palm 30 to 40 feet high, with immense leaves and enormous bunches of fruit. A rich-flavored palm sugar is made from the sap which flows from the bruised fruit stalk. It also furnishes a valuable black fibrous substance, ejoo fiber, superior in quality, cheapness, and durability to that obtained from the husk of the coconut, and renowned for its power to resist moisture. It is used by the natives of the Indian Islands for every purpose of cordage. Underneath this material is found a substance of a soft gossamerlike texture which is imported into China, where it is applied as oakum in calking the seams of ships and more generally as tinder for kindling fire.

For previous introduction see No. 67178.

75247. LILIUM sp. Liliaceae. **Lily.**

From Tokyo, Japan. Bulbs collected by R. K. Beattie, Bureau of Plant Industry. Received October 31, 1927.

No. 1. (*Yuri*.) Obtained in the market, September 30, 1927. A local variety with edible bulbs.

75248. DOLICHOS LABLAB L. Fabaceae. **Hyacinth bean.**

From Cairo, Egypt. Seeds presented by William Carlton McQuiston, of the American University. Received October 29, 1927.

A locally grown variety.

75249. ALEURITES FORDII Hemsl. Euphorbiaceae. **Tung-oil tree.**

From Pineville, La. Seeds presented by Placide Rodriguez, Superintendent of the Alexandria National Cemetery. Received October 17, 1927.

Seeds from trees growing in the Alexandria National Cemetery.

75250. CARICA PAPAYA L. Papayaceae. **Papaya.**

From Brownsville, Tex. Seeds collected by Dr. J. N. Rose, of the United States National Museum, and Paul Russell, of the Bureau of Plant Industry. Received November 12, 1927.

October 30, 1927. A local variety of excellent quality with an unusually hard shell.

75251 to 75253. MACADAMIA TERNIFOLIA F. Muell. Proteaceae. **Macadamia.**

From Sydney, New South Wales, Australia. Seeds purchased from Anderson & Co. Received October 18, 1927.

An evergreen tree up to 50 feet in height, which is cultivated for its edible nuts.

For previous introduction see No. 74219.

75251. The true thin-shelled variety.

75252. Medium thick-shelled variety with smooth leaves.

75253. Thick-shelled variety of the ordinary type.

75254 and 75255. LILIUM spp. Liliaceae. **Lily.**

From Chosen. Obtained through C. H. Stephan, American vice consul in charge, Seoul. Received November 11, 1927.

Seeds and bulbs of a wild pink lily from the Chosen Government-General's Model Farming Station, Suigen, near Seoul. According to that station, the wild lily in Suigen is chiefly of the species of *Lilium concolor buschianum*, and the Japanese name is *Aka hime yuri*.

75254. Bulbs. 75255. Seeds.

75256. CYNOMETRA CAULIFLORA L. Caesalpiniaceae.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Doctors van Leeuwen, director of the botanic gardens. Received February 11, 1927. Numbered October, 1927.

A curious tree producing an abundance of greenish yellow fruits which are the shape of triangular apple tarts. They have an acid flavor with little character, but when cooked are said to make excellent pies. These fruits are produced from knotlike excrescences on the trunk, often near the ground.

For previous introduction see No. 67692.

75257 to 75262.

From Texas and Mexico. Seeds collected by Dr. J. N. Rose, of the United States National Museum, and Paul Russell, of the Bureau of Plant Industry. Received November, 1927.

75257. CHIOCOCCA ALBA (L.) Hitchc. Rubiaceae.

No. 24289. Brownsville, Tex., October 29, 1927. A much-branched climbing shrub with leathery shining, oval leaves about 2 inches long, small, white flowers, and small globular, white berries. Native to Mexico.

75257 to 75262—Continued.

75258. INODES TEXANA O. F. Cook. Phoenicaceae. **Palm.**

No. 24268. Brownsville, Tex., October 28, 1927. A tall erect handsome fan-leaved palm, up to 50 feet in height, native to the banks of the lower Rio Grande below Brownsville, Tex., and Matamoros, Mexico. The trunks of the older trees are smooth, while the persistent leafstalks form a network on the trunks of the younger ones. The leaves are light green, about 5 feet wide, and are borne in a large terminal cluster. While this palm is grown as an ornamental in this vicinity, it is not cultivated elsewhere. The edible fruits are round, fleshy, black and about five-eighths of an inch in diameter. They are sold in the Matamoros market under the name of micharo.

For previous introduction see No. 42280.

75259. IPOMOEA FISTULOSA Mart. Convolvulaceae. **Morning-glory.**

No. 24228. Brownsville, Tex., October 26, 1927. A shrubby subtropical morning-glory up to 15 feet high, with rather thick entire leaves about 5 inches long and handsome purplish flowers about 3 inches long. Native to Brazil.

For previous introduction see No. 46966.

75260. KARWINSKIA HUMBOLDTIANA (Roem. and Schult.) Zucc. Rhamnaceae.

No. 24201. Near Brownsville, Tex., October 24, 1927. A small, attractive tree 22 feet high, with oblong-oval opposite leaves up to 3 inches long and small round black berries. It is found in dry situations between southern Texas and Central America.

75261. PITHECOLOBIUM BREVIFOLIUM Benth. Mimosaceae.

No. 24217. October 25, 1927. Near Matamoros, Mexico. An ornamental evergreen shrub or small tree about 18 feet high, found in semiarid situations. It has short spines, pinnate leaves, and pale cream-colored flowers in headlike spikes. The Mexican name is tanasa.

75262. SAPIUM SEBIFERUM Roxb. (L.) Euphorbiaceae. **Chinese tallowtree.**

No. 24198. Brownsville, Tex., October 28, 1927. An attractive tree, native to China, which is long-lived, and at maturity has a height of 40 to 50 feet and a diameter of 5 to 6 feet. The 3-celled, flattened-ovoid fruits are about three-fifths of an inch in diameter. When ripe they are blackish brown and woody in appearance; in China these are either gathered by hand or knocked down by poles. After being collected, the fruits are spread in the sun, where they open, and each liberates three elliptical seeds covered with a white substance which is a fat or tallow. After this substance has been removed by steaming and rubbing through a bamboo sieve, the fat is collected and melted, molded into cakes, and sold as the Pi yu of commerce. After the fat is removed the seeds are crushed, and the oil expressed from them is called Ting yu. In China the oil and tallow are used in the manufacture of candles, and these products are also exported in quantity to Europe, where they are used in the manufacture of soap. The tree is occasionally grown as a shade tree in the Gulf and South Atlantic States.

For previous introduction see No. 51897.

75263. GARCINIA sp. Clusiaceae.

From near Lungnam, Kiangsi Province, China. Seeds collected by F. A. McClure, agricultural explorer, Bureau of Plant Industry. Received February 24, 1927. Numbered in October, 1927.

No. 973. *Chuk tsz, shaan chuk.* December 19, 1926. This species, said to be wild, will probably be of interest as a cold-resistant stock on which to graft the commercial mangosteen.

75264 to 75269. MANGIFERA INDICA L. Anacardiaceae. **Mango.**

From Honolulu, Hawaii. Plants presented by W. T. Pope, horticulturist of the Hawaii Agricultural Experiment Station. Received November 11, 1927.

Locally grown varieties.

75264. No. 2946. *Pirie.*

75265. No. 3715. *Cowasjee patel* × *pirie.*

75266. No. 4800. *Kalihi.*

75267. No. 4802. *Victoria.*

75268. No. 5298. *Ludwig.*

75269. No. 5299. *Ono.*

75270 to 75285.

From West Africa. Seeds and plants collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received March and April, 1927. Numbered in October, 1927.

75270. BROWNEA COCCINEA Jacq. Caesalpiniaceae.

No. 1170. Victoria Botanic Garden, Cameroon, February 10, 1927. An ornamental tropical tree with pale-brown leaves and large heads of scarlet flowers.

75271. CYRTOSPERMA SENEGALENSE (Schott) Engler. Araceae.

No. 1156. Collected near Duala, Cameroon, February 6, 1927. A curious aroid which sends up its spathe on a spiny stem 10 feet high. The spathe itself is 16 inches long. This plant requires sandy wet soil, tropical conditions and moist atmosphere.

75272. DIOSCOREA sp. Dioscoreaceae. **Yam.**

No. 1143. Growing in the jungle at Jala, Sierra Leone, January 21, 1927. A wild species which may be valuable as an edible yam.

75273. DIOSCOREA sp. Dioscoreaceae. **Yam.**

No. 1149. A wild yam from Abuko, Gambia, January 10, 1927.

75274. GARCINIA sp. Clusiaceae.

No. 1102. Konakry, French Guinea, January 15, 1927. A small tropical African tree with typical Garcinia leaves and white flowers half an inch in diameter. The yellow fruits, an inch in diameter, contain very large seeds surrounded by a thin layer of yellow flesh which is sweet and palatable, though rather dry.

75275. GARCINIA sp. Clusiaceae.

No. 1102. Konakry, French Guinea. Seedlings of the same species as No. 75274.

75276. GARCINIA sp. Clusiaceae.

No. 1164. Botanic Garden, Victoria, Cameroon, February 10, 1927. An East Indian species producing ribbed obovate fruits which have eight grooves, and a distinct mammillate protuberance on which is placed the stigma. The arillus of the seeds is salmon pink, somewhat like the outside of the fruit. When ripe, the rind softens up like a small melon.

75277. ISOLONA LEONENSIS Sprague and Hutchins. Annonaceae.

No. 1215. From the jungle near the road between Akkra and Winneba, Gold Coast, March 27, 1927. A small tropical tree which may be of value as stock for the Annonas. The fruits are about the size of a small North American pawpaw, greenish yellow with small white dots and black longitudinal stripes. The seeds are very abundant and the fruit pulp is scanty.

75270 to 75285—Continued.

75278. LANDOLPHIA STOLZII Busse. Apocynaceae.

No. 1181. Obtained in the market at Moliko, near Buea, Cameroon, February 12, 1927. A tropical climbing shrub producing large pear-shaped fruits 4 inches in diameter and of a rusty orange-brown color, with rough protruding lenticels. The flesh is composed of a fibrous arillus of a light-brown color and pleasant acid taste with perhaps a slight acridity. This vine may prove useful as a source of rubber.

For previous introduction see No. 63773.

75279. LISSOCHILUS HEUDELOTII Reichenb. f. Orchidaceae.

No. 1231. Near Akkra, Gold Coast, February 27, 1927. An ornamental terrestrial orchid bearing flesh-colored flowers with a purple-spotted lip, on scapes up to 4½ feet high, and strings of tubers as large as potatoes.

75280. LISSOCHILUS MILLSONI Rolfe. Orchidaceae.

No. 1232. Between Akkra and Winneba, Gold Coast, February 27, 1927. A terrestrial herbaceous tropical orchid similar to No. 1231 [No. 75279], but not so attractive.

75281. MONODORA MYRISTICA (Gaertn.) Dunal. Annonaceae.

No. 1242. Agricultural Experiment Station, Aburi, Gold Coast, February 26, 1927. A handsome tropical evergreen tree bearing an abundance of large fragrant yellow and white flowers. These flowers are followed by large fruits containing many oily seeds which are aromatic and used as a condiment by the natives of West Africa.

For previous introduction see No. 61499.

75282. MUSA ARNOLDIANA Wildem. Musaceae.

No. 1239. Victoria, Cameroon, February 17, 1927. A tropical banana relative about 12 feet high with leaves 7 feet long and fruits 4 inches long.

For previous introduction see No. 55101.

75283. SYNSEPALUM DULCIFICUM (Schum.) Daniell. Sapotaceae.

No. 1173. Agricultural Experiment Station, Assuansi, Gold Coast. An ornamental tropical African shrub about 6 feet high, with dark-red fruits which, when eaten, make sour things taste sweet.

For previous introduction see No. 73071.

75284. BUTIA CAPITATA PULPOSA (Barb.-Rodr.) Beccari.

No. 1200. Botanic Garden, Victoria, Cameroon. An ornamental palm.

75285. (Undetermined.)

No. 1220. From the jungle between Winneba and Assuansi, Gold Coast, February 28, 1927. A tropical herbaceous plant with large ovate leaves 10 inches long, which are a delicate crimson on the under side. The flowers are also attractive though rather small.

75286 to 75403.

From East Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received October, 1927.

75286. ABUTILON sp. Malvaceae.

No. 49. Near Nairobi, Kenya Colony, July 3, 1927. A tropical shrub 3 feet or more high, with purple pubescence on the upper part of the stems. The leaves are thin, broad, and heart-shaped, the flowers yellow to orange, and the sharply pointed pods are in clusters an inch across.

75286 to 75403—Continued.

75287. ANDROPOGON PERTUSUS (L.) Willd. Poaceae. **Grass.**

No. 216. Scott Agricultural Laboratory, Kenya Colony. A perennial grass with hairy nodes, which grows abundantly on the Athi Plains and is commonly found in the Kinangop and Aberdares Mountains up to 9,000 feet altitude. It appears leafy and productive, and spreads by its strong rhizomes. As the seeds shatter when ripe, this grass may be rather difficult to harvest.

For previous introduction see No. 49510.

75288. ANDROPOGON sp. Poaceae. **Grass.**

No. 89. July 10, 1927. An important grass growing on the plains between the Athi River and Nairobi, Kenya Colony.

75289. ANDROPOGON sp. Poaceae. **Grass.**

No. 152. July 27, 1927. A perennial grass growing in wet meadows near Uplands, Kenya Colony.

75290. ASTREBLA sp. Poaceae. **Grass.**

No. 202. Scott Agricultural Laboratory, Kenya Colony. A bunch grass introduced from Australia by the Scott Agricultural Laboratory.

75291. AVENA BYZANTINA Koch. Poaceae. **Oats.**

No. 277. *Boer.* A local variety from Southern Rhodesia.

75292. AVENA SATIVA L. Poaceae. **Oats.**

No. 278. *Ruakur.* A local variety from Southern Rhodesia.

75293. BRACHIARIA BRIZANTHA (Hochst.) Stapf. Poaceae. **Grass.**

No. 209. Scott Agricultural Laboratory, Kenya Colony. A rather uncommon big leafy grass, resembling a large Paspalum, which seeds rather sparingly and shatters badly. The seed heads are sticky. It is apparently a fine grass for the hills.

For previous introduction see No. 50687.

75294 to 75300. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

Local varieties.

75294. No. 233. Arusha District, Tanganyika Territory.

75295. No. 234. Moshi District, Tanganyika Territory.

75296. No. 235. A variety grown by the Wakabe tribe, Northern Province, Arusha District, Tanganyika.

75297. No. 237. Tanga District, Tanganyika Territory.

75298. No. 254. From the Government plantation, Serere, Eastern Province, Uganda.

75299. No. 255. From the Government plantation, Serere, Eastern Province, Uganda.

75300. No. 256. From the Government plan tation, Serere, Eastern Province, Uganda.

75301. CALAMAGROSTIS sp. Poaceae. **Grass.**

No. 230. Kinangop Plains, Kenya Colony. A rare perennial grass with a Poalike head.

75302. CANAVALIA ENSIFORMIS (L.) DC. Fabaceae. **Jack bean.**

No. 266. From the Government plantation, Serere, Eastern Province, Uganda.

75286 to 75403—Continued.

75303. CASSIA sp. Caesalpiniaceae.

No. 80. Kabiti, near Nairobi, Kenya Colony, July 8, 1927. A tropical shrubby legume 3 to 4 feet high with six to eight smooth sharp-pointed leaflets 2 to 3 inches long, orange flowers, and thin pods 3 to 4 inches long.

75304. CHAETOCHLOA AUREA (Hochst.) Hitchc. Poaceae. **Grass.**

No. 208. Scott Agricultural Laboratory and vicinity, Kenya Colony. A common grass 5 feet high, eaten by cattle and game animals. It produces an abundance of seeds and retains them better than most African grasses.

For previous introduction see No. 51336.

75305 and 75306. CHAETOCHLOA ITALICA (L.) Scribn. (*Setaria italica* Beauv.). Poaceae. **Millet.**

Local varieties from Southern Rhodesia.

75305. No. 282. *Red Manna.*

75306. No. 283. *Boer Manna.*

75307. CHAETOCHLOA SULCATA (Aubl.) Hitchc. Poaceae. **Grass.**

No. 218. Scott Agricultural Laboratory and vicinity, Kenya Colony. A broad-leaved, rather brittle grass, with prominent leaf-veins, much relished by cattle. It occurs chiefly in cool, moist, shady places or at an altitude of 6,000 feet or more. The seed habits are good except that birds are very fond of the seeds and strip the plants rather badly.

For previous introduction see No. 62903.

75308. CHLORIS GAYANA Kunth. Poaceae. **Rhodes grass.**

No. 88. A grass growing on the plains between the Athi River and Nairobi, Kenya Colony, July 10, 1927. A perennial grass, native to South Africa, first cultivated by Cecil Rhodes in South Africa about 1895. It is fine stemmed, very leafy, and about 3 feet high. The flowering head consists of a cluster of 10 to 15 long spreading spikes, and the seeds are produced abundantly. The grass also spreads by running branches, 3 to 6 feet long, which root at every node. On fertile land in central and southern Florida six to seven cuttings are secured in a single season. A good stand will yield from 1¼ to 1½ tons of hay to a cutting. This hay is of very fine quality and is eagerly eaten by horses and cows.

For previous introduction see No. 47104.

75309 and 75310. CICER ARIETINUM L. Fabaceae. **Chickpea.**

From Southern Rhodesia.

75309. No. 279. A large-seeded variety.

75310. No. 280. A white-seeded variety.

75311. CROTALARIA SPECTABILIS Roth. Fabaceae.

No. 73. July 8, 1927, Kenya Colony. A plant 4 to 6 feet high, growing at Kabiti, near Nairobi. The upper stems, petioles, and pods are covered with a brown pubescence. The flowers, an inch in diameter, are yellow with brown markings. There are three leaflets which are darker above and whitish pubescent beneath. The pods, 2 to 2½ inches long, are subtended by a large loose, 5-parted calyx.

75312. CUCUMIS sp. Cucurbitaceae.

No. 94. July 10, 1927, Kenya Colony. A herbaceous vine growing on the dry plains or clearings between the Athi River and Nairobi.

75286 to 75403—Continued.

75313. CYMBOPOGON AFRONARDUS Stapf. Poaceae. **Grass.**

No. 126. July 20, 1927. A variety common on the better land of the plains or on clearings between Kabiti and Juja, Kenya Colony, but not frequent on the driest part of the plains. It is a tall, compactly tufted, perennial grass with very narrow leaves about 2 feet long and flowers in interrupted, oblong panicles.

75314. DIGITARIA sp. Poaceae. **Grass.**

No. 231. July 12, 1927. This species is very widespread on the Athi Plains, Kenya Colony, judging from the abundance of old roots. At this season, however, the aboveground parts are extremely rare.

75315. DOLICHOS LABLAB L. Fabaceae. **Hyacinth bean.**

No. 288. Southern Rhodesia. A. E. S. white-seeded variety.

75316. ECHINOCHLOA PYRAMIDALIS (Lam.) Hitchc. and Chase. Poaceae. **Grass.**

No. 219. Scott Agricultural Laboratory, Nairobi, Kenya Colony. A widely scattered but not uncommon grass, appearing usually in moist places in the highlands. It is leafy, productive, and a heavy seed bearer, retaining its seeds well. It is rather promising for locations with 20 inches or more of rainfall, but is not known to withstand frost.

For previous introduction see No. 54343.

75317. EHRHARTA sp. Poaceae. **Grass.**

No. 224. Scott Agricultural Laboratory, Nairobi, Kenya Colony. A perennial, panicum-like grass.

75318. ELEUSINE CORACANA (L.) Gaertn. Poaceae. **Ragi.**

No. 289. *Rapoko.* A grass with milletlike seeds from Southern Rhodesia.

75319. ELEUSINE FLOCCIFOLIA (Forsk.) Spreng. Poaceae. **Grass.**

No. 217. Uplands, Kenya Colony. Large patches of almost pure Eleusine occur throughout the highlands, especially on the Kinangop Plains and the slopes of the Aberdares. Although considered a weed in America, it is said here to provide a good deal of dry-season grazing. It grows 2 feet high and is stiff and harsh to the touch.

75320 and 75321. ELICHRYSUM sp. Asteraceae. **Strawflower.**

75320. No. 114. Strawflower growing in the clearings above Kiambu, Kenya Colony, July 15, 1927.

75321. No. 164. Camp Gusiru, July 29, 1927. White strawflowers common in grasslands above an altitude of 9,000 feet.

75322. ERAGROSTIS sp. Poaceae. **Grass.**

No. 118. Near Nairobi, Kenya Colony, July 16, 1927. An important grass on the dry Athi Plains. It is found with *Themeda triandra* and Setaria.

75323. ERAGROSTIS sp. Poaceae. **Grass.**

No. 221. Scott Agricultural Laboratory, Nairobi, Kenya Colony. A handsome grass when in flower, but not suited for forage, rather frequently seen on the border of the Athi Plains. It is not known to the natives and the Europeans.

75286 to 75403—Continued.

75324. ERLANGEA CORDIFOLIA (Benth.) S. Moore. Asteraceae.

No. 79. Kabiti, near Nairobi, Kenya Colony, July 8, 1927. A tropical herbaceous plant with an abundance of deep-purple, tubular-shaped flowers in heads. The stems are purple at the base and light green at the top, and are finely pubescent. The alternate leaves have a soft white pubescence beneath.

75325. FESTUCA sp. Poaceae. **Grass.**

No. 175. July 31, 1927. A grass frequent on the Kinangop Plains, just below the Kinangop Forest Station, Kenya Colony.

75326. FESTUCA sp. Poaceae. **Grass.**

No. 229. A rare grass of good forage habit, growing at Uplands, Kenya Colony, July 26, 1927.

75327. GLADIOLUS sp. Iridaceae.

No. 161. July 28, 1927. Bulblets of a red herbaceous perennial found in a cedar forest above the Kinangop Forest Station. This gladiolus frequently grows at an altitude of 10,000 feet. It is possibly a common and well-known species, but is said to be strictly confined to the higher altitudes in the Aberdares and in West Kenya (Mount Kenya).

75328. GUIZOTIA ABYSSINICA (L. f.) Cass. Asteraceae.

No. 281. Southern Rhodesia. An annual plant, 6 to 8 feet high, with showy yellow flower heads. The black, shining seeds furnish the Niger oil of commerce.

For previous introduction see No. 58471.

75329. HARPACHNE SCHIMPERI Hochst. Poaceae. **Grass.**

No. 86. A stout annual grass found on hillsides and parched shallow soil between Kabiti and Kikuyu, near Nairobi, Kenya Colony, July 9, 1927. It has cespitose stems up to a foot high, and narrow leaves up to 6 inches long. The lax, secund spikes are from 1 to 3 inches long.

For previous introduction see No. 51594.

75330 and 75331. HELIANTHUS ANNUUS L. Asteraceae. **Sunflower.**

From Southern Rhodesia.

75330. No. 275. **75331.** No. 276.

75332. HIBISCUS sp. Malvaceae.

No. 42. July 2, 1927. A yellow-flowered, tropical shrub, 3 to 4 feet high, found near Nairobi, Kenya Colony.

75333 to 75335. HYPARRHENIA spp. Poaceae. **Grass.**

75333. HYPARRHENIA sp.

No. 70. Near Nairobi, Kenya Colony, July 4, 1927. A bunch grass, 3 to 5 feet high, with harsh bluish leaves.

75334. HYPARRHENIA sp.

No. 160. July 27, 1927. An oatlike grass found on the Kinangop Plains, Kenya Colony.

75335. HYPARRHENIA sp.

No. 225. Near Scott Agricultural Laboratory, Kenya Colony. One of the most common grasses in the old fields of the Kikuyu Reserve, near Nairobi, Kenya Colony. It is always part of the general mixture of grasses and is never seen in pure stand.

75336. LATHYRUS SATIVUS L. Fabaceae. **Bitter vetch.**

No. 274. Southern Rhodesia. *Wedge.*

75286 to 75403—Continued.

75337. LEPTOCHLOA OBTUSIFLORA Hochst. Poaceae. **Grass.**

No. 215. Scott Agricultural Laboratory, Kenya Colony. A handsome grass of medium height, quite common on the plains, though not indigenous. In the region of Nairobi it is not leafy enough for good forage.

75338 and 75339. LINUM USITATISSIMUM L. Linaceae. **Flax.**

From Southern Rhodesia.

75338. No. 284. A small-seeded variety.

75339. No. 285. A large-seeded variety.

75340. MOMORDICA sp. Cucurbitaceae.

No. 74. A tendril-bearing vine found at Kabiti, near Nairobi, Kenya Colony, July 8, 1927. There are five serrate sharp-pointed leaflets, about 2 inches long, covered with soft, thin pubescence. The middle leaflet is larger and the two inner ones small, and the midrib is at one side. The ovoid fruits, 2 to 4 inches long, have angular ridges the entire length, and the thick soft pulpy outer flesh is pink to orange. The seeds, with black and white markings, are enveloped in the red inner flesh.

75341. MOMORDICA sp. Cucurbitaceae.

No. 101. Region of Kabiti, near Nairobi, Kenya Colony, July 11, 1927. A tendril-bearing vine with simple, heart-shaped, serrat leaves. The fruits, tinged with orange, are covered with dense soft spines, and the seeds are enveloped in the red pulp, as are those of No. 74 [No. 75340].

75342. ORYZA SATIVA L. Poaceae. **Rice.**

No. 286. From Southern Rhodesia. *Wataribune.*

75343. PASPALUM SCROBICULATUM L. Poaceae. **Grass.**

No. 210. Scott Agricultural Laboratory, Nairobi, Kenya Colony. A creeping grass, forming a heavy mat, which is very resistant to drought, though no more so than *Paspalum notatum* and *P. dilatatum*. It does not occur in the grazing areas and only sparingly in the bush. This variety seeds well, but the seed heads are mixed with the foliage, making the harvesting difficult.

For previous introduction see No. 56789.

75344. PASSIFLORA EDULIS Sims. Passifloraceae. **Purple granadilla.**

From Lemora, Kenya Colony. A locally grown variety.

75345 to 75348. PENNISETUM spp. Poaceae. **Grass.**

75345. PENNISETUM CILIARE (L.) Link (*P. cenchroides* Rich.).

No. 212. Scott Agricultural Laboratory, Nairobi, Kenya Colony. Originally from a dry region near Archeis Station, in the arid Northern Frontier Province. A very promising grass for semiarid places. At Nairobi it produces a fine leafy growth of excellent forage appearance. There is an abundance of seeds in heads resembling those of crimson clover when ripe. The seeds strip easily while the remainder of the plant is still green.

For previous introduction see No. 51648.

75346. PENNISETUM sp.

No. 176. A grass abundant on the plains near the Kinangop Forest Station, Kenya Colony, July 31, 1927.

75286 to 75403—Continued.

75347. PENNISETUM sp.

No. 211. Scott Agricultural Laboratory, Nairobi, Kenya Colony. A tall bunch grass, very resistant to drought, which is indigenous above Nairobi, but not in the grazing areas. It is harsh in texture and not used for forage, but makes excellent thatch which lasts for years. The grass is planted in rows to divide the shambas (fields or farms).

75348. PENNISETUM sp.

No. 214. Scott Agricultural Laboratory, Nairobi, Kenya Colony. A prostrate grass which seeds sparingly, found in marshy places at Uplands, Kenya Colony. The stems are red and 4 to 6 feet long.

75349. PHALARIS ARUNDINACEA L. Poaceae. **Reed canary grass.**

No. 213. *Muikoigo, Kikuyu.* Scott Agricultural Laboratory, Nairobi, Kenya Colony. A tall rough grass usually considered indigenous to the northern part of the Northern Hemisphere, but it is apparently native in marshy land in the Kenya highlands. The natives regard it as a good forage grass.

For previous introduction see No. 68146.

75350 to 75373. PHASEOLUS spp. Fabaceae.

75350. PHASEOLUS AUREUS Roxb. **Mung bean.**

No. 257. *Mpokya.* Government plantation, Serere, Eastern Province, Uganda.

75351 to 75353. PHASEOLUS LUNATUS L. **Lima bean.**

Locally grown varieties from the Upare Mountains, Moshi District, Tanganyika.

75351. No. 244. From Kinkwema (Kipare). Only the seeds of this plant are edible, the green parts being poisonous.

75352. No. 249. An unknown variety.

75353. No. 250. From Kinkwema (Kipare). Only the seeds of this plant are edible, the green parts being poisonous.

75354. PHASEOLUS MUNGO L. **Urd.**

No. 265. A locally grown variety from the Government plantation, Serere, Eastern Province, Uganda.

75355 to 75373. PHASEOLUS VULGARIS L. **Common bean.**

Nos. 75355 to 75361 are from Moshi District, Tanganyika Territory.

75355. No. 245.
75356. No. 246.
75357. No. 247.
75358. No. 248.
75359. No. 251.
75360. No. 252.
75361. No. 253.

Nos. 75362 to 75368 are from the Government plantation, Serere, Eastern Province, Uganda.

75362. No. 258.
75363. No. 259.
75364. No. 260.
75365. No. 261.
75366. No. 262.
75367. No. 263.
75368. No. 264.

Nos. 75369 to 75373 are from Southern Rhodesia.

75369. No. 267. *Mont sor.*
75370. No. 268. *Lyonnais.*
75371. No. 270. *Parisian.*
75372. No. 271. *Algerian white wax.*
75373. No. 272. *Natal sugar.*

75286 to 75403—Continued.

75374. SOLANUM sp. Solanaceae.

No. 43. *Mtongu.* Near Nairobi, Kenya Colony, July 2, 1927. A tropical shrub, thorny at the base, with thick pubescent, simple potato-like leaves, deep-purple flowers having yellow stamens, and pale-green fruits with dark-green markings near the calyx.

75375. WITHANIA SOMNIFERA Dunal. Solanaceae.

No. 99. From the region of Kabiti, near Nairobi, Kenya Colony, July 11, 1927. A tropical plant, about 2½ feet high, with small red fruits.

75376. SORGHUM TRICHOPUS Stapf. Poaceae. **Grass.**

No. 205. Scott Agricultural Laboratory, Nairobi, Kenya Colony. A stiff coarse grass, 5 feet high, found in bush land.

75377. SORGHUM sp. Poaceae. **Grass.**

No. 178. A common grass on the Kinangop Plains, between the Kinangop Forest Station and Nainasha, Kenya Colony. It is of very soft texture and is a promising grass for high altitudes.

75378. SPOROBOLUS sp. Poaceae. **Grass.**

No. 222. *Kikuyu, kigutu.* Scott Agricultural Laboratory, Nairobi, Kenya Colony. A tall grass used by the natives as fences or hedges for dividing their shambas (fields or farms). It is also used for thatching, but, so far as known, it is not grazed to any extent by cattle or game animals, though it is said to be relished by horses.

75379. SPOROBOLUS sp. Poaceae. **Grass.**

No. 223. Scott Agricultural Laboratory, Nairobi, and Athi Plains, Kenya Colony. A common grass in stream beds and low places on the plains at an altitude of 5,000 feet or less. It is not seen in the highlands and is probably not an important element in grazing.

75380 to 75382. STIZOLOBIUM spp. Fabaceae.

From Southern Rhodesia.

75380. STIZOLOBIUM ATERRIMUM Piper and Tracy. **Mauritius bean.**

No. 269. *Tracy's early black.*

75381. STIZOLOBIUM NIVEUM (Roxb.) Kuntze. **Chinese velvetbean.**

No. 273. *White stringless.*

75382. STIZOLOBIUM VELUTINUM Piper and Tracy. **Velvetbean.**

No. 287.

75383. STREBLOCHAETA sp. Poaceae. **Grass.**

No. 169. A local grass found above the bamboo forest, between Camp Gustiru and the Kinangop Forest Station, Kenya Colony, July 30, 1927.

75384. THEMEDA TRIANDRA Forsk. Poaceae. **Rooi grass.**

No. 204. *Nirigeta, kikuyu.* Scott Agricultural Laboratory, Nairobi, Kenya Colony. This is the predominant, most conspicuous, and most valuable grass on the Kapiti and Athi Plains, and is common up to an altitude of 8,000 feet or more. It is regarded as a fine feeding grass even when dry, and comes back quickly after burning. The seeds dry as soon as ripe and quickly penetrate the ground because of their horny points. The seeds are difficult to germinate artificially, and are probably difficult to harvest.

For previous introduction see No. 54044.

75286 to 75403—Continued.

75385. TRIFOLIUM JOHNSTONI Oliver. Fabaceae. **Kenya clover.**

No. 227. A creeping white clover almost indistinguishable from *T. repens*. It is widely distributed in the Kenya highlands but rarely occurs in pure stands. Although acknowledged to be highly palatable and nutritious, it was not found in cultivation. It withstands some frost, but not freezing.

75386. TRIFOLIUM sp. Fabaceae. **Clover.**

No. 228. Uplands creeping red clover. Uplands, Kenya Colony. A clover which is fairly common in the Kenya highlands between 7,000 and 9,600 feet altitude. It occurs higher than *T. johnstoni*, but is not so abundant. The foliage is rather stiff, and is claimed by some to be neither palatable nor nutritious. Several forms and colors of blossoms were met with, but are believed to be variations of the same species. The flowers are wine colored or lighter, turning blue when ripe; not a profuse bloomer and usually a shy seeder.

75387. VERNONIA sp. Asteraceae.

No. 11. Near Nairobi, Kenya Colony, June 28, 1927. A composite with tubular purple flowers and swollen stalks, found in a clearing with oatgrass.

75388. VERNONIA sp. Asteraceae.

No. 20. Near Nairobi, Kenya Colony, June 29, 1927. A semiclimbing herbaceous plant with purple flowers, often seen on the edge of the woods along the side of the road, where it covers the low trees and bushes.

75389 to 75395. VIGNA SINENSIS (Torner) Savi. Fabaceae. **Cowpea.**

Collected in Tanganyika Territory.

75389. No. 236. From Moshi District.

75390. No. 238. From Tanga District.

75391. No. 239. From Tanga District.

75392. No. 240. From Moshi District.

75393. No. 241. From Moshi District.

75394. No. 242. From Moshi District.

75395. No. 243. From Newanza District.

75396 to 75402. Collected in Kenya Colony.

75396. (Undetermined.)

No. 22. Near Nairobi, June 29, 1927. A vine resembling Parthenocissus in habit, with thick brittle leaves.

75397. (Undetermined.)

No. 58. Near Nairobi, July 4, 1927. A legume with leaflets 2 to 3 inches across and a large underground root which the natives boil and use as a remedy for fever.

75398. (Undetermined.)

No. 83. July 8, 1927. Bulbs collected at Kabiti, near Nairobi.

For previous introduction of seeds and description see No. 75221.

75399. (Undetermined.)

No. 100. From the region of Kabiti, near Nairobi, July 11, 1927. A shrub, about 6 feet high, with rhamnuslike leaves and fruits four in a cluster, loosely attached at the base, which become red.

75400. (Undetermined.)

No. 147. A small tree found at the edge of the forest near Uplands, July 26, 1927.

75286 to 75403—Continued.

75401. (Undetermined.)

No. 149. A shrub or small tree found on the upper slopes of the Rift Valley, July 27, 1927.

75402. (Undetermined.)

No. 226. A small leguminous plant found in the region of Kikuyu, near Nairobi, July 12, 1927.

75403. CYRTANTHUS SANGUINEUS (Lindl.) Hook. f. Amaryllidaceae.

No. 232. Athi Plains. A handsome amaryllidaceous plant, native to Kaffraria, South Africa. The narrow, dark-green leaves taper into a rounded petiole, and the flower, yellowish on the outside and bright orange-red within, is borne on a scape 3 or 4 inches high.

75404. CITRUS NOBILIS UNSHIU Swingle. Rutaceae. Satsuma orange.

From Silverhill, Ala. Bud wood presented by F. Mays, through W. T. Swingle, Bureau of Plant Industry. Received October 29, 1927.

A hybrid Satsuma orange.

75405. PICEA GLEHNI (Schmidt) Masters. Pinaceae. Spruce.

From Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received November 12, 1927.

Nos. 25 and 26. Collected in the mountains near Jozankei, south of Sapporo, October 17, 1927. A large tree up to 150 feet in height, native to northern Japan. The seeds are said to retain their vitality for seven years.

75406. CARYA TONKINENSIS Lecomte. Juglandaceae.

From Kangpoki, Assam, India. Seeds presented by G. C. Crozier, of the American Baptist Foreign Missionary Society. Received November 16, 1927.

A hickory tree native to Assam, India. The leaves are made up of five to seven ovate-lanceolate leaflets, and the depressed globose nuts are about 1½ inches in diameter, with a thick shell.

75407. DIOSCOREA sp. Dioscoreaceae. Yam.

From the Fiji Islands. Tubers presented by Gerrit P. Wilder, Honolulu, Hawaii. Received January 29, 1926. Numbered December, 1927.

Fijian pearl yam. This variety is known in the Fiji Islands as Kawhai. According to Mr. Wilder, the tubers are smaller than those of the coarser varieties. He also considers this variety of better quality than a sweetpotato.

75408 to 75438.

From Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received in November, 1927.

75408 to 75414. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

75408. No. 28. A wild form found near Nabaribetsu Station, Hokkaido, October 17, 1927.

75409. No. 29. *Shiba-guri*. A wild variety from the botanic garden, Hokkaido Imperial University, Sapporo, Hokkaido, September 20, 1927.

75410. No. 30. A cultivated variety originally from Shinshu, Nagano Ken, growing in the botanic garden, Hokkaido Imperial University, Sapporo, Hokkaido, October 13, 1927.

75408 to 75438—Continued.

75411. No. 31. A cultivated variety, originally from Shinshu, Nagano Ken, growing in the botanic garden, Hokkaido Imperial University, Sapporo, Hokkaido, September 20, 1927.

75412. No. 32. *Sho-gwatsu.* A late, cultivated variety from Fukuchi farm, Mamada Cho, Nishikuroda, Tochigi Ken, October 21, 1927.

75413. No. 33. October 21, 1927. Seeds from the same tree as No. 32 [No. 75412].

75414. No. 34. *Cho-bei.* A cultivated variety from Fukuchi farm, Mamado Cho, Nishikuroda, Tochigi Ken, October 21, 1927.

75415. BETULA JAPONICA Siebold. Betulaceae. **Japanese white birch.**

No. 35. *Shira kamba.* Near Sapporo, October 17, 1927. A Japanese tree about 60 feet high.

75416 to 75438. CASTANEA CRENATA Sieb. and Zucc. Fagaceae.

75416. No. 36. *Shimo-kaiangi.* A cultivated variety from Fukuchi farm, Mamada Cho, Nishikuroda, Tochigi Ken, October 21, 1927.

75417. No. 37. Seeds from the same tree as No. 36 [No. 75416].

75418. No. 38. *Otamba.* A cultivated variety from Fukuchi farm, Mamada Cho, Nishikuroda, Tochigi Ken, October 21, 1927.

75419. No. 39. *Yoro.* A cultivated variety, originally from Angyo, growing at the Fukuchi farm, Mamada Cho, Nishikuroda, Tochigi Ken, October 21, 1927.

75420. No. 40. *Kamasu-guri.* A cultivated variety from Fukuchi farm, Mamada Cho, Nishikuroda, Tochigi Ken, October 21, 1927.

75421. No. 41. *Yoro.* A late cultivated variety from Fukuchi farm, Mamada Cho, Nishikuroda, Tochigi Ken, October 21, 1927.

75422. No. 42. *Okutamba.* A cultivated variety from Sunaga farm, Oyama Cho, Tochigi Ken, October 20, 1927. This tree was a seedling and was not grafted. A seedling is much older before it bears than a grafted tree.

75423. No. 43. *Chusei tamba.* A very prolific, cultivated variety from Sunaga farm, Oyama Cho, Tochigi Ken, October 20, 1927.

75424. No. 44. *Yamaguchi-ganne.* A very late, cultivated variety from Sunaga farm, Oyama Cho, Tochigi Ken, October 20, 1927. A grafted tree.

75425. No. 45. *Togenashi-guri.* A cultivated variety from Sunaga farm, Oyama Cho, Tochigi Ken, October 20, 1927. A rare variety and not of much commercial value. It bears fewer fruits than other kinds, and these are attacked by worms.

75426. No. 46. *Okutamba.* A cultivated variety from Sunaga farm, Oyama Cho, Tochigi Ken, October 20, 1927. A grafted tree whose fruit is not good for storing because it is attacked by the fruit worms.

75427. No. 47. A cultivated variety, originally from Angyo, growing at the Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927. The tree grows well, but does not have many fruits. The varietal name is unknown.

75408 to 75438—Continued.

75428. No. 48. *Shimo-katsugi.* A cultivated variety, originally from Ayabe, Kyoto, growing at the Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927.

75429. No. 49. *Wazo.* A cultivated variety from Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927.

75430. No. 50. *Ganne.* A cultivated variety from Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927.

75431. No. 51. *Chobei.* A cultivated variety from Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927. The main stem is infected with chestnut blight, and the owner said that the tree would die in three or four years.

75432. No. 52. *Kinyoshi.* A cultivated variety, originally from Okitsu, Schizuaka Ken, growing at the Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927.

75433. No. 53. *Tamba-guri.* A late cultivated variety from Sunaga farm, Oyama Cho, Tochigi Ken, October 20, 1927.

75434. No. 54. *Banseki.* A cultivated variety, originally from Angyo, growing at the Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927. The trunk is infected with blight. The fruit ripens the last part of October and the first part of November.

75435. No. 55. *Otamba, chokoji.* A cultivated variety originally from Angyo, growing at the Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927.

75436. No. 56. *Kenaga.* A cultivated variety from Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927.

75437. No. 57. *Kin-seki* (golden red). A cultivated variety originally from Angyo, growing at the Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927. The varietal name was given by the owner of this tree and is not a recognized variety.

75438. No. 58. *Sho-gwatsu.* A cultivated variety, growing at the Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken, October 21, 1927. The original scions of this tree came from Ayabe, Kyoto, and were grafted on wild stock of Shiba-guri.

75439. IRIS sp. Iridaceae.

From Spain. Bulbs collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 21, 1927. Numbered in December, 1927.

No. 1297. March 31, 1927. A dwarf blue-flowered iris, not over 6 or 8 inches tall, covering patches of hundreds of square yards of dry sandy soil near the sea along the southern coast of Spain between Malaga and Gibraltar.

75440 to 75525.

From Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received in November, 1927.

Nos. 75440 to 75455 were collected near Sapporo, Hokkaido, Japan, in October, 1927.

75440. PICEA JEZOENSIS (Sieb. and Zucc.) Carr. Pinaceae. **Yeddo spruce.**

No. 60. *Kuro-ezo.* October 17, 1927. A Japanese tree, up to 150 feet in height, with dark-gray bark and slender horizontally spreading branches. The leaves are silvery white above and dark green beneath, and the staminate flowers are orange-crimson.

For previous introduction see No. 65942.

75440 to 75525—Continued.

75441. ACTINIDIA ARGUTA (Sieb. and Zucc.) Planch. Dilleniaceae. **Bower actinidia.**

No. 61. *Kokuwa.* October 17, 1927. A white-flowered shrubby Japanese vine with broadly oval leaves and greenish yellow fruits having a sweet flavor.

For previous introduction see No. 69359.

75442. CORNUS CONTROVERSA Hemsl. Cornaceae. **Giant dogwood.**

No. 62. *Midzuki.* October 17, 1927. A Japanese tree up to 60 feet high, with a trunk 7 feet in girth. The numerous, long branches extend at right angles to the trunk, with the lowest branches sometimes touching the ground. The white or slightly yellowish flowers are in flat clusters 6 or 7 inches in diameter, appearing from late May to early June.

For previous introduction see No. 61775.

75443. ABIES SACHALINENSIS (Schmidt.) Masters. Pinaceae. **Sakhalin fir.**

No. 63. *Todomatsu.* October 17, 1927. A tree 150 feet high, native to northern Japan. It has the *nordmanniana* arrangement of leaf, but in the forward-pointing leaves, which are three-fourths of an inch to 1½ inches long and very white beneath; it resembles *Abies veitchii.* The buds are white and resinous, and the cones are 2½ to 3¼ inches long. This tree is liable to injury by late frost in the United States.

75444. FRAXINUS LONGICUSPIS Sieb. and Zucc. Oleaceae. **Ash.**

No. 64. *Aodamo.* October, 1927. A graceful Japanese tree up to 45 feet high, with compound leaves of five to seven lanceolate long-pointed leaflets. The white flowers appear in June, and the foliage turns purple in autumn.

75445. JUGLANS SIEBOLDIANA Maxim. Juglandaceae. **Japanese walnut.**

No. 65. *Omigurumi.* October 17, 1927. A round-headed Japanese tree up to 60 feet high, with 9 to 17 ovate-serrulate leaflets and ovoid, thick-shelled nuts.

75446 to 75525. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

These varieties were obtained in October, 1927.

Nos. 75446 to 75468 are cultivated trees growing at the Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken.

75446. No. 66. Seeds from the same tree as No. 47 [No. 75427].

75447 and 75448. Seeds from the same tree as No. 48 [No. 75428].

75447. No. 67. **75448.** No. 68.

75449 to 75451. Seeds from the same tree as No. 51 [No. 75431].

75449. No. 69. **75451.** No. 71.

75450. No. 70.

Nos. 75452 to 75455 are from cultivated trees growing at the Sunaga farm, Oyama Cho, Tochigi Ken.

75452. No. 72. An unknown variety.

75453. No. 73. Seeds from the same tree as No. 53 [No. 75433].

75454 and 75455. Seeds from the same tree as No. 72 [No. 75452].

75454. No. 74. **75455.** No. 75.

75456 to 75480. Seeds from the same tree as No. 54 [No. 75434].

75456. No. 76. **75459.** No. 79.

75457. No. 77. **77460.** No. 80.

75458. No. 78.

75440 to 75525—Continued.

75461. No. 81. Seeds from the same tree as No. 51 [No. 75431].

75462. No. 82. Seeds from the same tree as No. 54 [No. 75434].

75463 to 75465. Seeds from the same tree as No. 58 [No. 75438].

75463. No. 83. **75465.** No. 85.

75464. No. 84.

75466. No. 86. Seeds from the same tree as No. 55 [No. 75435].

75467 and 75468. Seeds from the same tree as No. 57 [No. 75437].

75467. No. 87. **75468.** No. 88.

Nos. 75469 to 75475, *Shiba-guri* or *yama-guri,* are wild trees growing at Chojagahara, Karasawa Valley, Kitakano Mura, Tagata Gun, Shizuoka Ken. The field where these trees are growing is burned over every three or four years.

75469. No. 89. **75473.** No. 93.

75470. No. 90. **75474.** No. 94.

75471. No. 91. **75475.** No. 95.

75472. No. 92.

75476. No. 96. *Shiba-guri* or *yama-guri.* Wild trees growing in a mixed forest at Tagata Gun, Shizuoka Ken.

75477 to 75481. *Shiba-guri* or *yama-guri.* Wild trees growing at Chojagahara, Karasawa Valley, Kitakano Mura, Tagata Gun, Shizuoka Ken. The field where these trees are growing is burned over every three or four years.

75477. No. 97. **75480.** No. 100.

75478. No. 98. **75481.** No. 101.

75479. No. 99.

75482 to 75484. From wild trees growing in a forest at Dodoko.

75482. No. 102. **75484.** No. 104.

75483. No. 103.

75485. No. 105. *Shiba-guri.* Wild trees growing in the forest at Sekido, Tamagawa Mura, Tokyo-fuka.

75486 to 75490. *Tamba-guri.* Cultivated trees growing at Kobara, Kitakami Mura, Tagata Gun, Shizuoka Ken.

75486. No. 106. **75489.** No. 109.

75487. No. 107. **75490.** No. 110.

75488. No. 108.

75491 to 75493. *Shiba-guri.* Wild trees growing at Ohna, Kitakano Mura, Tagata Gun, Shizuoka Ken.

75491. No. 111. **75493.** No. 113.

75492. No. 112.

75494 and 75495. Obtained at Tokyo and said to have come originally from Chosen.

75494. No. 114. **75495.** No. 115.

75496 and 75497. Wild trees growing at Susono, Fukara Mura, Sunto Gun, Shizuoka Ken.

75496. No. 116. **75497.** No. 117.

75498 and 75499. *Shiba-guri.* Wild trees growing at Subashiri-yama, on the east side and at the foot of Mount Fuji, Sunto Gun, Shizuoka Ken.

75498. No. 118. **75499.** No. 119.

75500. No. 120. Wild trees growing at Tsukuhara, Nishikida Mura, Tagata Gun, Shizuoka Ken. Seeds obtained at Mishima Machi.

75440 to 75525—Continued.

75501. No. 121. A cultivated tree growing at Noboribetsu, Hokkaido.

75502 and 75503. Wild trees growing on the east side of Mount Fuji, Omikami-yama, Subashiri Mura, Sunto Gun, Shizuoka Ken.

75502. No. 122. 75503. No. 123.

75504 to 75508. *Shiba-guri.* Wild trees growing at Subashiri-yama, on the east side of Mount Fuji, Subashiri Mura, Sunto Gun, Shizuoka Ken.

75504. No. 124. 75507. No. 127.

75505. No. 125. 75508. No. 128.

75506. No. 126.

75509. No. 129. Wild trees growing at Subashiri-yama, Subashiri Mura, Sunto Gun, Shizuoka Ken.

75510 and 75511. Wild trees growing in the forest on the north side of Subashiri-yama, Subashiri Mura, Sunto Gun, Shizuoka Ken.

75510. No. 130. 75511. No. 131.

75512 to 75516. Wild trees growing in the forest at Omikami-yama, Subashiri Mura, Sunto Gun, Shizuoka Ken.

75512. No. 132. 75515. No. 135.

75513. No. 133. 75516. No. 136.

75514. No. 134.

75517 and 75518. *Shiba-guri, yama-guri.* Wild trees growing at Yata, Nishikida Mura, Tagata Gun, Shizuoka Ken.

75517. No. 137. 75518. No. 138.

75519 to 75525. Wild trees growing at the foot of Mount Fuji in the forest at Omikami-yama, Subashiri Mura, Sunto Gun, Shizuoka Ken.

75519. No. 139. 75523. No. 143.

75520. No. 140. 75524. No. 144.

75521. No. 141. 75525. No. 145.

75522. No. 142.

75526. ERIOSEMA CAJANOIDES (Guill. and Perr.) Hook. f. Fabaceae.

From Luchenza, Nyasaland Protectorate, Africa. Seeds presented by L. S. Norman. Received January 22, 1927. Numbered in December, 1927.

No. 5. An erect branching tropical African shrub 4 to 5 feet high, with three oblanceolate leaflets 2 to 3 inches long, coated beneath with fine gray pubescence. The yellow flowers are in moderately close racemes 2 to 4 inches long, and the short broad pods are thinly covered with long grayish silky hairs.

75527 and 75528. BROMUS COLORATUS Steud. Poaceae. Bromegrass.

From Castro, Chiloe Island, Chile. Seeds presented by Raymond and Elnora Shannon, through Paul Russell, Bureau of Plant Industry. Received March 23, 1927. Numbered in November, 1927.

A grass 1 to 2 feet high, with linear leaves and long slender panicles. Native to southern South America.

75527. No. 1. 75528. No. 2.

75529 and 75530.

From Brignoles, France. Seeds presented by R. Salgues, Director of the Brignoles Botanic Station. Received November 9, 1927.

75529 and 75530—Continued.

75529. BRACHYPODIUM PHOENICOIDES (L.) Roem. and Schult. Poaceae. Grass.

A perennial grass 1 to 2 feet high, native to the Mediterranean region, with very narrow leaves tufted at the base, and long spikelets of 16 to 20 florets resembling wheatgrass.

75530. TRIFOLIUM STELLATUM L. Fabaceae. Clover.

An annual upright clover about a foot high, native to the Mediterranean region, possibly of value as a forage crop.

For previous introduction see No. 69863.

75531. EPHEDRA SINICA Stapf. Gnetaceae.

From Peking, China. Seeds presented by B. E. Read, through W. T. Swingle, Bureau of Plant Industry. Received November 1, 1927.

A low branching shrub about a foot high, native to northern China. The leaves are minute and scalelike, This shrub is considered valuable as a source of ephedrin.

75532. PRUNUS sp. Amygdalaceae.

From Otaru, Japan. Seeds presented by C. H. McCrory, of the Rose Kindergarten. Received November 8, 1927.

These seeds, which were received without any information, are apparently a form of Japanese flowering cherry.

75533. DELPHINIUM GRANDIFLORUM L. Ranunculaceae. Siberian larkspur.

From Japan. Seed collected by R. K. Beattie, Bureau of Plant Industry. Received in November, 1927.

No. 18. A variety, originally from Russia, growing in the botanic garden, Hokkaido Imperial University, Sapporo, Hokkaido, October 10, 1927.

75534 to 75574.

From Melbourne, Victoria, Australia. Seeds obtained from the Melbourne Botanic Gardens, through Miss Anne MacIlvaine, Trenton, N. J. Received November 3, 1927.

75534 to 75541. ACACIA spp. Mimosaceae.

75534. ACACIA ACCOLA Maiden and Betche.

An erect bushy shrub 6 to 8 feet high, native to New South Wales, Australia. The linear, slightly curved phyllodes are 3 to 5 inches long and one-twelfth of an inch wide. The flowers are borne in racemes about 2 inches long and are arranged in heads of 10 to 20 flowers each. The linear waxy pods are flat and about 4 inches long.

75535. ACACIA ACINACEA Lindl.

A much-branched shrub with oblique phyllodes less than an inch long and globular heads of small flowers. Native to Australia.

75536. ACACIA DECURRENS Willd. Green wattle.

Variety *normalis.* A variety of the green wattle with sepals as long as the petals, which is cultivated in California. The typical form is a handsome tree with light-green feathery foliage and bright-yellow flowers.

For previous introduction see No. 67946.

75537. ACACIA DISCOLOR Willd.

An unarmed shrub or small tree native to southeastern Australia and Tasmania. The terminal axillary clusters of yellow flowers are produced during the autumn.

For previous introduction see No. 74423.

75534 to 75574—Continued.

75538. ACACIA TERMINALIS (Salisb.) Macbride (*A. elata* A. Cunn.).

A handsome unarmed tree 60 feet or more in height, native to New South Wales. The young shoots are often tinged with a golden-yellow pubescence, and the globular, yellow flower heads are in clusters often 6 inches long.

For previous introduction see No. 56559.

75539. ACACIA HOWITTI F. Muell.

A shrub often 15 feet high, native to Australia. The branchlets are slender and flexible, bearing curved lanceolate dark-green phyllodes and axillary clusters of small flower heads.

75540. ACACIA LINIFOLIA PROMINENS (A. Cunn.) Moore.

An unarmed shrub, 12 to 18 feet high, native to New South Wales. It has angular branchlets and very narrow phyllodes. The small, globular, yellow flower heads are borne in racemes about as long as the phyllodes.

For previous introduction see No. 56560.

75541. ACACIA NERIIFOLIA A. Cunn. Bald acacia.

A handsome tree, native to eastern Australia, 40 to 50 feet high, with slender branchlets, mealy-tomentose when young, but soon glabrous. The small globular flower heads are in simple slender racemes, shorter than the linear phyllodes. The straight, flat pods are several inches long. The heartwood is light yellow, and the rest of is a darker color. It is close grained and tough and has attractive markings.

For previous introduction see No. 48056.

75542. AGONIS FLEXUOSA (Willd.) DC. Myrtaceae.

A tall shrub or tree up to 40 feet high, native to Western Australia. The young shoots are silky, and the linear-lanceolate leaves, 2 to 6 inches long, have in their axils small heads of flowers with persistent white petals.

75543. ALECTRYON SUBCINEREUM (A. Gray) Radlk. (*Nephelium leiocarpum* F. Muell.) Sapindaceae.

A small evergreen Australian tree.

For previous introduction see No. 51000.

75544. BAECKEA VIRGATA Andrews. Myrtaceae.

An erect, loosely branched shrub, up to 12 feet high, native to Australia. The narrowly oblong leaves, less than an inch in length, are opposite, and the small, white flowers are in clusters of two or three in the axils of the upper leaves.

75545. BANKSIA INTEGRIFOLIA L. f. Proteaceae.

A small tree with the young shoots covered with rich brown woolly hairs. The scattered, lanceolate leaves, up to 6 inches long, are silvery white beneath, and the large, greenish yellow flowers are in oblong spikes 6 inches long. Native to Australia.

75546. BANKSIA SPINULOSA J. E. Smith. Proteaceae.

A tall evergreen shrub native to Australia. The narrowly linear leaves, 3 inches long, are notched at the end with a prominent point in the notch and have revolute margins. The large yellow flowers are borne in ovoid spikes 2 to 3 inches long.

75534 to 75574—Continued.

75547. BRACHYCHITON ACERIFOLIUM F. Muell. (*Sterculia acerifolia* Cunn.). Sterculiaceae.

An Australian tree, up to 35 feet high, with dark-green shining, maplelike leaves 6 to 10 inches wide, and scarlet, bell-shaped flowers which hang from the tree in large clusters.

For previous introduction see No. 44958.

75548. CALLISTEMON ACUMINATUS Cheel. Myrtaceae.

An Australian shrub with lanceolate sharp-pointed leaves and spikes of ornamental flowers.

75549. CALLISTEMON RIGIDUS R. Br. Myrtaceae.

A tall shrub, sometimes 30 feet high, native to New South Wales. The leaves, 2 to 5 inches long, are narrowly linear, and the red flowers, with dark-red stamens an inch long, are borne in large dense spikes.

For previous introduction see No. 47549.

75550. CASSIA ARTEMISIOIDES Gaud. Caesalpiniaceae.

An erect bushy shrub covered with silky white tomentum. The leaves are made up of three to six pairs of linear-terete leaflets an inch long, and the yellow flowers are in short dense racemes. Native to Australia.

75551. CASUARINA GLAUCA Sieber. Casuarinaceae. Beefwood.

An Australian tree, 60 to 70 feet high, usually straight and of rapid growth. The timber is red, beautifully marked, hard and tough, and is used for cabinetwork, staves, and fuel. In periods of drought the foliage is used for feeding stock. When the trees are cut down, the young growth shoots up quickly from the stump. This variety grows in the coastal districts, marshy country, and frequently in land submerged with tidal water. It makes a handsome shade tree.

For previous introduction see No. 42286.

75552. CHORIZEMA CORDATUM Lindl. Fabaceae.

A tall slender glabrous evergreen shrub, 7 to 10 feet high, with weak branches, more or less prickly leaves about 2 inches long, and numerous red flowers. It is propagated from cuttings and may be grown in the open in southern California and southern Florida, being excellent for training on pillars and trellises. In colder regions it is an attractive plant for the cool greenhouse.

For previous introduction see No. 44831.

75553. CORREA BAUERLENII F. Muell. Rutaceae.

An Australian shrub which has branchlets covered with dark-brown hairs, opposite lanceolate thin leaves pale beneath, and yellowish green tubular flowers in the axils.

75554. DORYANTHES LARKINI C. Moore. Amaryllidaceae. Spearlily.

A perennial herb, with sword-shaped leaves 6 feet long, native to Australia. The flower stem is 8 feet high, the upper 3 feet being a compact panicle of flowers which are 2 inches long, red outside and white inside.

75555 to 75562. EUCALYPTUS spp. Myrtaceae.

75555 to 75557. EUCALYPTUS CALOPHYLLA Lindl. Port Gregory gum.

Varieties developed in Australia.

For previous introduction see No. 44959.

75555. A variety with salmon-colored flowers.

75534 to 75574—Continued.

75556. A white-flowered variety.

75557. A rose-flowered variety.

75558. EUCALYPTUS CANALICULATA Maiden. Tall gray gum.

An Australian tree which reaches a height of 120 feet and a diameter of 4 feet. The leaves are narrowly lanceolate, the fruits are hemispheric with two ridges around the outside, forming a canal, and the snuff-brown wood is coarse and tough.

75559 to 75561. EUCALYPTUS FICIFOLIA F. Muell. Scarlet gum.

Brilliant-flowered Australian trees.

For previous introduction see No. 49842.

75559. A crimson-flowered variety.

75560. A variety with orange-red flowers.

75561. A white-flowered variety.

75562. EUCALYPTUS INCRASSATA DUMOSA Maiden.

A shrub or small tree, native to Australia, with smooth white bark. The thick smooth leaves are lanceolate to ovate-falcate, and 3 to 4 inches long, flowers in clusters of four to eight on axillary peduncles, and oblong fruits about 1 inch in length.

75563. GREVILLEA BANKSII R. Br. Proteaceae.

Variety *Forsteri*. An evergreen shrub, 6 to 8 feet high, with red flowers.

For previous introduction see No. 40042.

75564. KENNEDIA COCCINEA Vent. Fabaceae.

A handsome trailing or twining woody vine native to Australia. It has three or five ovate leaflets, and the scarlet flowers are in long-stemmed clusters of 15 to 20.

75565 to 75567. MELALEUCA spp. Myrtaceae.

75565. MELALEUCA NODOSA J. E. Smith.

A tall smooth shrub, native to Australia, with rigid awl-shaped leaves and small heads, half an inch in diameter, of pale-yellow flowers.

75566. MELALEUCA PUBESCENS Schauer.

A tall shrub or small tree native to Australia. The small linear leaves, half an inch long, are crowded on the pubescent branches, and the small white flowers are borne in loose cylindrical spikes.

75567. MELALEUCA STYPHELIOIDES J. E. Smith.

A tall Australian tree, sometimes 80 feet high, with thick spongy bark. The leaves are very small, and the small creamy white flowers are in dense spikes about 2 inches long.

75568. METROSIDEROS TOMENTOSA A. Rich. Myrtaceae. Irontree.

A handsome tree, about 40 feet high, growing chiefly near the sea. It has spreading branches, and brilliant scarlet flowers in large terminal cymes. The wood is hard and durable, and is especially useful for boat building.

For previous introduction see No. 51048.

75569. OXYLOBIUM LANCEOLATUM Druce. Fabaceae.

A tall Australian shrub with whorls of lanceolate leaves 3 to 5 inches long and yellow flowers in dense terminal racemes 6 inches long.

75570. PITTOSPORUM PHILLYRAEOIDES DC. Pittosporaceae. Willow pittosporum.

An Australian desert tree, up to 20 feet high, with evergreen willowlike leaves and gracefully weeping branches. The small yellow flowers are followed by yellow fruits half an inch long, which are quite ornamental.

75534 to 75574—Continued.

75571. SOPHORA TETRAPTERA J. Miller. Fabaceae. Fourwing sophora.

A handsome large shrub or small tree, native to New Zealand, with green pinnate leaves and large clusters of yellow flowers. The wood is hard and durable.

For previous introduction see No. 49029.

75572. SYNCARPIA GLOMULIFERA (J. E. Smith) Niedenzu. Myrtaceae.

A tree growing to a height of 200 feet, native to Australia. The wood is very durable and is resistant to dampness.

For previous introduction see No. 38731.

75573. TRISTANIA CONFERTA R. Br. Myrtaceae. Brisbane-box.

A tall tree, native to Australia, with smooth brown deciduous bark and dense foliage. The alternate leaves are 3 to 6 inches long, and the cymes contain from three to seven large flowers. The timber is very strong and is used in shipbuilding and for making wharves and bridges. The bark is used occasionally for tanning.

For previous introduction see No. 73867.

75574. TRISTANIA LAURINA R. Br. Myrtaceae.

A tall tree found in moist locations along streams in Australia. The young shoots and the under side of the alternate lanceolate leaves are silky pubescent. The small yellow flowers are in short clusters in the axils of the leaves.

75575. IRIS sp. Iridaceae.

From Spain. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 21, 1927. Numbered in December, 1927.

For description see No. 75439.

75576 to 75655.

From New South Wales, Australia. Seeds presented by Dr. G. P. Darnell-Smith, Director of the Botanic Garden at Sydney. Received November 2, 1927.

75576 to 75612. ACACIA spp. Mimosaceae.

75576. ACACIA ACCOLA Maiden and Betche.

For previous introduction and description see No. 75534.

75577. ACACIA BANCROFTI Maiden.

An Australian shrub about 6 feet high, forming stools several feet in diameter. The obovate phyllodes are 5 to 7 inches long, and the bright-yellow flowers are borne in racemes.

75578. ACACIA BETCHEI Hort.

75579. ACACIA BRACHYBOTRYA Benth.

A handsome shrub, several feet in height, which is silvery white with a close silky pubescence. It bears a small number of axillary racemes of tomentose, many-flowered heads, and has very short leaves. Native to southeastern Australia.

For previous introduction see No. 48037.

75580. ACACIA BRACHYSTACHYA Benth.

A hoary, shrubby acacia, native to New South Wales, Australia. The phyllodes are linear and awl-shaped, while the flowers are borne in very short spikes.

75581. ACACIA BUXIFOLIA A. Cunn.

An Australian shrub 4 feet high, with angular branchlets and small, rather thick phyllodia. The short racemes, scarcely longer than the phyllodia, bear globular heads of flowers.

For previous introduction see No. 49890.

75576 to 75655—Continued.

75592. ACACIA DECORA Reichenb.

A shrub with spatulate phyllodes 2 inches long and numerous racemes made up of globular heads of small flowers. Native to Queensland, Australia.

75593. ACACIA DECURRENS Willd.
Green wattle.

A handsome Australian tree with light-green foliage and axillary racemes of bright-yellow flowers.

For previous introduction see No. 74422.

75594. ACACIA DECURRENS LEICHHARDTII Benth.

This form of the green wattle differs from the common one in having smaller and narrower leaflets and spreading hairs. Native to Australia.

75585. ACACIA DECURRENS PAUCIGLANDULOSA F. Muell.

A form of the green wattle with fewer glands on the petioles and with softer pubescence than the usual form.

75586. ACACIA DIFFORMIS R. T. Baker.

A glabrous tree up to 30 feet high, native to New South Wales, Australia. The phyllodes are oblanceolate, coriaceous, and 3 to 8 inches long, and the small globular heads of flowers are in racemes.

75587. ACACIA DISCOLOR Willd.

For previous introduction and description see No. 75537.

75588. ACACIA DORATOXYLON A. Cunn.

A tree up to 20 feet high, native to New South Wales, Australia. The phyllodes are linear-lanceolate and falcate, and the flowers are in axillary cylindrical spikes.

75589. ACACIA FALCATA Willd.

A tree, 20 to 30 feet high, with few slender branches and small, yellow flowers in dainty spherical clusters on racemes borne in the axils of dark glossy green falcate leaves. The timber is hard, heavy, and tough.

For previous introduction see No. 48044.

75590. ACACIA FLEXIFOLIA A. Cunn.

A shrubby acacia, native to New South Wales, Australia, with terete branches, numerous linear phyllodes slightly bent near the base, and small globular heads of flowers on short stems.

75591. ACACIA GLAUCESCENS Willd.

An Australian tree up to 50 feet high, with flowers in axillary spikes 1 to 2 inches long. The branchlets and phyllodes are covered with a gray pubescence, giving an ashy hue.

75592. ACACIA HAKEOIDES A. Cunn.

A tall glabrous shrub, native to New South Wales, Australia, with narrow oblong phyllodes 5 inches long and short racemes of globular flower heads.

75593. ACACIA HOMALOPHYLLA A. Cunn.

A small Australian tree which grows on the saltbush flats and in the bleakest and most arid localities wherever frost is not severe. The hard heavy wood is used in the manufacture of tobacco pipes, in cabinet-making, and for many other articles.

For previous introduction see No. 48045.

75576 to 75655—Continued.

75594. ACACIA JUNIPERINA Willd.
Prickly wattle.

An Australian shrub, 8 to 12 feet high, with numerous gracefully drooping branches covered with short hairs, and beautiful clusters of flowers. The wood is white and tough.

For previous introduction see No. 48047.

75595. ACACIA KOA HAWAIIENSIS Rock.

A valuable timber tree up to 60 feet high, native to the Hawaiian Islands. The falcate phyllodes are 5 inches long, and the flowers are borne in short racemes. The wood takes a high polish.

75596. ACACIA LEPTOCLADA A. Cunn.

A glabrous shrub with compound leaves made up of oblong coriaceous leaflets one-twelfth of an inch long and small flower heads in racemes longer than the leaves. Native to New South Wales, Australia.

75597. ACACIA LINEARIS Sims.

A straggly Australian shrub, sometimes 20 feet high, with phyllodes, slender as pine needles, 4 to 8 inches long, and loose interrupted spikes of flowers. The wood is used for furniture.

75598. ACACIA LINEATA A. Cunn.

A bushy shrub with pubescent terete branches, native to Australia. The linear phyllodes are less than an inch long, and the flowers are solitary.

75599. ACACIA MCNUTTIANA Hort.

75600. ACACIA MICROCARPA F. Muell.

A low Australian shrub, 2 to 5 feet high, the young shoots of which are covered with a golden pubescence. The linear-lanceolate, coriaceous phyllodes are falcate and less than 2 inches long. The flowers are borne in small heads in pairs on short stems.

75601. ACACIA OBTUSATA Sieb.

A tall glabrous shrub native to New South Wales. The oblong-linear phyllodes are 2 to 3 inches long, and the small flower heads are borne in dense racemes.

75602. ACACIA PENNINERVIS Sieb.

A tall Australian shrub or small tree which endures comparatively low temperatures. The phyllodes are narrow and sickle shaped, and the pale-yellow flowers are in short racemes. The bark is said to contain 18 per cent of tannic acid.

For previous introduction see No. 65718.

75603. ACACIA POLYBOTRYA FOLIOLOSA Benth.

A tall shrub, native to New South Wales, which has softly pubescent compound leaves and numerous small flower heads in racemes longer than the leaves, the terminal ones forming a panicle.

75604. ACACIA PULCHELLA R. Br.

A handsome shrub with slender branches armed with spines and feathery compound leaves. The flowers are in small heads on axillary peduncles. Native to Western Australia.

75605. ACACIA RUBIDA A. Cunn.

A tall glabrous shrub with angular branchlets, native to New South Wales. The falcate-lanceolate phyllodes are 3 inches long, and the small heads of flowers are in racemes shorter than the phyllodes.

75576 to 75655—Continued.

75606. ACACIA SALICINA Lindl.

A tall Australian shrub or small tree with pendulous branches and willowlike phyllodes up to 5 inches long. The flowers are in short racemes of two or three globular heads.

75607. ACACIA SPECTABILIS A. Cunn.

A tall shrub, native to Australia, with feathery compound leaves and golden-yellow flower heads in axillary racemes longer than the leaves, the terminal racemes forming large panicles.

75608. ACACIA SPECTABILIS STUARTII Benth.

A variety of this beautiful golden-flowered shrub with narrower leaflets than the usual form.

75609. ACACIA SUAVEOLENS (J. E. Smith) Willd.

An Australian shrub up to 6 feet high, with only a few slender branches. The linear leaves are four times the length of the small axillary spikes which bear clusters of yellow flowers and red bracts.

For previous introduction see No. 48066.

75610. ACACIA UNDULAEFOLIA A. Cunn.

A shrub, native to New South Wales, which has numerous ovate phyllodes an inch in length and long pendulous flowering branches.

75611. ACACIA VESTITA Edwards.

A tall bushy shrub up to 20 feet high, native to New South Wales. The whole plant is softly pubescent, the phyllodes are obliquely elliptical and recurved falcate, while the small globular flower heads are in racemes longer than the phyllodes and form a terminal leafy panicle.

75612. ACACIA VISCIDULA Benth.

A tall shrub up to 15 feet high, native to New South Wales. The terete branches are covered with a glossy viscid gum, the phyllodes are linear and about 3 inches long, and the flower heads are solitary or in pairs in the axils.

75613 to 75655. EUCALYPTUS spp. Myrtaceae.

75613. EUCALYPTUS AFFINIS Deane and Maiden.

A tall tree up to 80 feet in height, native to New South Wales. The lanceolate-falcate leaves are 3 inches long, the flowers are in axillary clusters, and the fruits are ovate-truncate. The timber is valuable for ties and wheels.

75614. EUCALYPTUS ANDREWSI Maiden.

This New South Wales eucalypt is a tall tree often 3 feet in diameter, with broadly lanceolate leaves 6 inches long and hemispheric fruits. The timber is used for fencing.

75615. EUCALYPTUS BAILEYANA F. Muell.

A tall tree, native to Queensland, with narrowly lanceolate-falcate, dull-green leaves. The flowers are in small axillary umbels and the fruits are semiovate. The wood is light gray, very tough, and suitable for tool handles.

75616. EUCALYPTUS BEHRIANA F. Muell.

A tall shrub or small tree, native to Australia, with thick smooth ovate to lanceolate leaves less than 3 inches long. The flowers are borne in umbels which are gathered into axillary or terminal panicles and are followed by ovoid-truncate fruits.

75576 to 75655—Continued.

75617. EUCALYPTUS BICOLOR A. Cunn.

A large shrub or tree up to 40 feet in height, with drooping branches, native to Australia. The persistent bark is rough and hard, and the lanceolate leaves are about 5 inches long, The timber is hard, tough, durable, and easily worked; suited for ties, piles, etc.

75618. EUCALYPTUS BUPRESTIUM F. Muell.

A shrub up to 10 feet high, native to Western Australia. The narrowly lanceolate leaves are less than 3 inches long, and the umbels of 6 to 10 flowers are attractive to bees.

75619. EUCALYPTUS CAMPHORA R. T. Baker.

A small tree up to 30 feet in height, native to New South Wales. The ovate to lanceolate leaves are 4 to 6 inches long and the flowers, in axillary clusters, are followed by small turbinate fruits. A valuable essential oil is produced by this variety.

75620. EUCALYPTUS CONSIDENEANA Maiden.

A medium-sized tree, native to New South Wales, with lanceolate-falcate leaves 9 inches long by 2 inches wide and pyriform fruits.

75621. EUCALYPTUS CORYMBOSA J. E. Smith.

A medium-sized Australian tree with leathery lanceolate leaves and large corymbs of yellowish white fragrant flowers.

75622. EUCALYPTUS DAWSONI R. T. Baker.

A tall tree native to New South Wales, with smooth bark, oblong-lanceolate leaves 6 inches long and 3 inches wide, and flowers in large terminal corymbs. The timber is hard and coarse grained.

75623. EUCALYPTUS DEANEI Maiden.

A tall tree with smooth silvery bark, native to New South Wales. It closely resembles *Eucalyptus saligna*, from which it differs mostly in the broad leaves borne on the suckers.

75624. EUCALYPTUS DIVES Schauer.

A small tree up to 12 feet in height, native to New South Wales. The large cordate leaves are opposite, but tend to become alternate toward the tips of the branches. The flowers are borne in dense axillary umbels.

75625. EUCALYPTUS GONIOCALYX F. Muell.

A rough-barked tree which attains a good size, in some situations in Australia reaching a height of 300 feet and a diameter of 6 to 10 feet. The leaves of the adult tree are long and quite slender, the two sides being similarly colored, and the flowers, nearly stemless, are borne in small clusters on flattened stalks. This species grows well in the coast regions of California, but, so far as known, it has not been tested in the dry, hot valleys of the interior, or other similar situations. In Australia it is found at altitudes of 4,000 feet and is therefore a promising species on the mountains of the southwestern United States. The hard tough wood is used for general building purposes, and because of its durability in the ground it is useful for railroad ties, posts, and other underground situations.

For previous introduction see No. 38716.

75626. EUCALYPTUS EUGENIOIDES Sieber.

A tall tree, native to New South Wales, with fibrous bark, thick oblique leaves 2 to 6 inches long, flowers in axillary clusters of 6 to 12, and ovoid fruits one-fourth of an inch in diameter.

75576 to 75655—Continued.

75627. EUCALYPTUS EXIMIA Schauer.
Mountain bloodwood.

A large tree, native to New South Wales, with scaly bark, falcate-lanceolate leaves, and urn-shaped fruits. The wood is soft and used only for fuel. It is a stately tree and very beautiful when in full bloom.

75628. EUCALYPTUS HAEMASTOMA J. E. Smith.

A large tree with a smooth mottled trunk, coriaceous, lanceolate-falcate leaves, small flowers in axillary clusters of small terminal panicles, and small globular or pear-shaped fruits less than half an inch in diameter.

75629. EUCALYPTUS INCRASSATA DUMOSA Maiden.

For previous introduction and description see No. 75562.

75630. EUCALYPTUS LAEVOPINEA R. T. Baker.

A tall tree, native to New South Wales, with ovate leaves 3 inches long and axillary umbels of five to six flowers followed by hemispherical fruits. The timber is hard, close-grained, durable under ground and suitable for posts, rails, or general building purposes.

75631. EUCALYPTUS LEUCOXYLON MACROCARPA J. E. Brown.

A tall tree, native to South Australia, with rough bark on the trunk but soft and white on the branches. The thick coriaceous leaves are lanceolate-falcate, and 3 to 6 inches long. The white or pink flowers are in long-stalked clusters of two to five, and the obovoid fruits are truncate.

75632. EUCALYPTUS LUEHMANNIANA F. Muell.

An Australian tree up to 20 feet high, with falcate-lanceolate, coriaceous leaves 3 to 6 inches long and 1 to 2 inches wide.

75633. EUCALYPTUS MACRORHYNCHA F. Muell.

A tall Australian tree with fibrous bark and narrow falcate leaves 3 to 5 inches long, the lower ones broader and more coriaceous. The axillary peduncles bear six to eight flowers, and the flattened globose fruits have a broad prominent rim.

75634. EUCALYPTUS MACULOSA R. T. Baker.

An Australian tree, 40 to 60 feet high, with smooth bark, falcate narrowly lanceolate leaves 2 to 3 inches long, flowers in axillary clusters of 4 to 16, and turbinate fruits.

75635. EUCALYPTUS MAIDENI F. Muell.

A tall tree up to 200 feet high, native to New South Wales, with bluish gray bark and broadly lanceolate leaves chalk white underneath. The timber is used for posts and fencing and for rough lumber.

75636. EUCALYPTUS MARGINATA J. E. Smith.

An Australian shrub or small tree often clear of branches for two-thirds of its height. The hard, durable wood is used for timber, piles, and railway ties. The tree will grow in a great variety of soils, but prefers moist, well-drained situations.

For previous introduction see No. 48991.

75637. EUCALYPTUS MEGACARPA F. Muell.

A Western Australian tree up to 100 feet high, with grayish white bark, thick lanceolate smooth leaves up to 6 inches in length, and thick hard depressed-globular fruits about an inch in diameter.

For previous introduction see No. 48992.

75576 to 75655—Continued.

75638. EUCALYPTUS MICROTHECA F. Muell.

A tree up to 80 feet high, found in the most arid extratropical as well as tropical inland regions of Australia. It grows best in ferruginous-gravelly soil, perfectly drained, and withstands unscorched a frequent heat of 156° F. in central Australia, yet it was not affected by exceptionally severe frosts, 18°, in the south of France when many other species of Eucalyptus suffered. It is said to be one of the best trees for desert tracts. The wood is brown, sometimes very dark, hard, heavy, and elastic, and is used for piles, bridges, and railway sleepers. Because of its attractive markings it is also used for cabinetwork.

75639. EUCALYPTUS MORRISH R. T. Baker.

A shrub up to 15 feet high, native to New South Wales. The lanceolate leaves are 6 inches long and an inch wide; the flowers are in axillary clusters of three to seven; and the fruits are hemispherical with a pyramidal top.

75640. EUCALYPTUS OBLIQUA L'Her.
Messmate gum.

An immense tree up to 200 feet high, native to Australia, which grows on poor stony ranges or on barren sandy soils if not subjected to prolonged drought. The wood is useful for railway sleepers, and, being practically noninflammable, it is especially suitable for underground railways. It is also used in harbor construction.

For previous introduction see No. 54506.

75641. EUCALYPTUS OCCIDENTALIS Endl.

A spreading shrub or small tree, native to Western Australia, with lanceolate leaves up to 5 inches long, yellowish or orange flowers, and bell-shaped fruits with a spreading rim. The timber is hard, strong, durable, and is much used for posts, fence rails, etc.

For previous introduction see No. 48993.

75642. EUCALYPTUS PANICULATA J. E. Smith.

A tall or medium-sized Australian tree with deeply furrowed gray-brown bark. The lanceolate-acuminate leaves are 3 to 5 inches long, and the flowers are borne in panicles or in axillary clusters. The wood is pale and very hard; it is valuable for ties, fencing, and building purposes.

75643. EUCALYPTUS PARVIFOLIA Cambage.

A small tree up to 30 feet high, native to New South Wales, with leaves 3 inches long, and flowers in umbels of five to six, followed by truncate globular fruits. The wood is pale pink, but it is soft and brittle.

75644. EUCALYPTUS PAUCIFLORA Sieber.
White gum.

An Australian tree 100 feet in height and about 4 feet in diameter. It grows well in swampy lowlands, and the timber is used for general building purposes.

For previous introduction see No. 61833.

75645. EUCALYPTUS PLATYPHYLLA F. Muell.

A handsome Australian tree with smooth white bark and light-green ovate leaves sometimes 10 inches long and broad but usually smaller. The flowers are in small axillary clusters, and the small obconical fruits have a thick prominent rim.

75646. EUCALYPTUS POPULIFOLIA Desf.
Poplar box.

A compact straight-growing Australian tree up to 50 feet high, with lustrous intensely green ovate leaves 4 inches long and panicles of small white flowers followed by very small fruits.

75576 to 75655—Continued.

75647. EUCALYPTUS PROPINQUA Deane and Maiden.

A large tree 120 feet high and 5 feet in diameter, native to New South Wales. The lanceolate leaves are 5 inches long, and the timber is durable either in or out of the ground.

75648. EUCALYPTUS REDUNCA Schauer.

A shrub or tree which reaches a height of 120 feet in Western Australia where it is native. It furnishes a pale hard particularly tough and durable timber, much prized for building purposes, various implements, etc. The seasoned wood weighs about 70 pounds per cubic foot.

For previous introduction see No. 48998.

75649. EUCALYPTUS REGNANS F. Muell. **Giant gum.**

An Australian tree up to 325 feet high. The trunk is very straight and whitish, and the narrow leaves, shining on both sides, are of rather thin texture. The wood is well adapted for shingles, planking, and general construction.

For previous introduction see No. 56567.

75650. EUCALYPTUS SALIGNA J. E. Smith.

A tall tree with silvery gray bark, native to New South Wales. The narrowly lanceolate leaves are 4 to 6 inches long, and the clusters of four to eight flowers are on short peduncles.

75651. EUCALYPTUS SANTALIFOLIA F. Muell.

A large shrub or small tree, native to South Australia. The thick rigid nearly straight leaves are less than 3 inches long, and the large flowers are in axillary clusters. The fruit is nearly globular, about half an inch broad, and has a prominent convex rim.

75652. EUCALYPTUS SCOPARIA Maiden.

A slender tree up to 40 feet high, native to New South Wales. The bark is smooth and white, and the lanceolate leaves are 6 inches long and half an inch wide.

75653. EUCALYPTUS SMITHII R. T. Baker.

A tall tree up to 150 feet high and 2 to 5 feet in diameter, native to New South Wales. The bark on old trees is deeply furrowed and is dark gray to blackish up to the branches.

75654. EUCALYPTUS TRACHYPHLOIA F. Muell.

A medium-sized tree, native to Queensland, with dark-gray rugged bark, falcate-lanceolate leaves 4 to 6 inches long, and terminal panicles of small flowers.

75655. EUCALYPTUS VIRGATA Sieber.

A large Australian tree which is straight stemmed, 150 feet in height, and has a diameter of 5 feet. It has done well in the cool climate of southern New Zealand. The wood is of excellent quality, strong and elastic, and is used for shipbuilding, fencing, and general building purposes. It burns well even when freshly cut.

For previous introduction see No. 56574.

75656. TRIFOLIUM REPENS RUBESCENS Seringe. Fabaceae.

From Scotland. Plants obtained from T. A. Anderson, Director of the Midlothian Seed-Testing and Plant-Registration Station, Scotland Board of Agriculture, at East Craigs, Corstorphine, through A. J. Pieters, Bureau of Plant Industry. Received October 28, 1927.

A form of white clover which has rosy flowers.

75657. GLADIOLUS sp. Iridaceae.

From Vicosa, Minas Geraes, Brazil. Bulbs presented by Prof. P. H. Rolfs, Director of the Escola Superior de Agricultura e Veterinaria. Received January 17, 1927. Numbered in December, 1927.

From near the Pico das Bandeiras, one of the peaks of the Serra de Caparao, at an altitude of about 2,000 meters. The flower is deep rose, with a darker throat, and though not so large as most ordinarily cultivated varieties, the fact of there being 10 flowers open at the same time on the one stalk seems rather unusual. In cultivation every spike had three spikelets, with a varying number of blooms on a main spike and on the spikelets, a feature which should seem to make it good for breeding purposes. The first flowers on the side spikes were opening when the earliest ones on the main spike were past.

For previous introduction see No. 69898.

75658 to 75662.

From Richmond, Victoria, Australia. Seeds presented by F. H. Baker, through Harlan P. Kelsey, Salem, Mass. Received November 25, 1927.

75658. ACACIA CARDIOPHYLLA A. Cunn. Mimosaceae.

A small weeping Australian tree, said to be one of the most beautiful of the acacias.

For previous introduction see No. 56868.

75659. ACACIA DIFFUSA Lindl. Mimosaceae.

A yellow-flowered shrub native to Australia, with loosely scattered, sessile, linear phyllodia (leaflike stems) about an inch long.

For previous introduction see No. 46355.

75660. ACACIA VERNICIFLUA A. Cunn. Mimosaceae.

A slender, much-branched shrub, native to New South Wales, with leathery, very narrow phyllodia (leaflike stems) about 2 inches long, and deep-yellow flowers in small heads which are generally in pairs.

For previous introduction see No. 64806.

75661. CANDOLLEA GRAMINIFOLIA (Swartz) F. Muell. (*Stylidium graminifolium* Swartz). Candolleaceae.

A herbaceous perennial Australian plant with stiff grasslike leaves sometimes 6 inches long, growing in a tuft from the end of a very short stem, and scapes 6 to 18 inches long bearing simple racemes of pink flowers.

For previous introduction see No. 64807.

75662. STERCULIA DIVERSIFOLIA Don. Sterculiaceae. **Black kurrajong.**

A tall evergreen Australian tree with shining green leaves 2 to 6 inches long, which are variable in shape, being both deeply lobed and entire. The nearly ovoid fruits are up to 3 inches long, each containing about 20 seeds which, when ground, make an excellent substitute for coffee. The taproots of the young trees and the young roots of the old ones are used as food, and when boiled they have a flavor similar to that of turnips, but sweeter. Cattle and sheep are fond of the leaves and branches and have existed during long dry periods on scarcely anything else. A strong fiber, obtained from the bark, is used for making fishing nets.

For previous introduction see No. 70747.

75663 to 75695.

From Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received November, 1927.

Nos. 75663 to 75671 were presented by the botanic garden, Hokkaido Imperial University, Sapporo, Hokkaido.

75663 to 75695—Continued.

75663. ACANTHOPANAX DIVARICATUM (Sieb. and Zucc.) Seem. Araliaceae.

A large deciduous spreading shrub of vigorous habit, up to 10 feet high. It is native to the mountains of Kiuschiu, Japan, and is very closely related to *Acanthopanax sessiliflorum*, cultivated in European gardens for its handsome, dark-green leaves and spherical heads of inky black fruits. Unlike the latter, this species has downy young shoots, and the lower surfaces of the leaves are also quite downy. It may prove hardy in all but the coldest parts of the United States.

For previous introduction see No. 58612.

75664 to 75667. ACER spp. Aceraceae. **Maple.**

75664. ACER GINNALA Maxim. **Amur maple.**

A small tree or large shrub, of bushy habit, with 3-lobed slightly heart-shaped leaves, and very fragrant white flowers in short panicles, appearing in May. This maple is closely allied to *Acer tataricum*, but differs markedly in shape of leaf. The foliage turns a beautiful red before falling, the species being one of the best for autumnal coloring. It is native to Manchuria and Japan.

For previous introduction see No. 69878.

75665. ACER MIYABEI Maxim.

A deciduous Japanese tree, 30 to 40 feet high, with a trunk 1½ feet in diameter, deeply 3-lobed leaves, yellow downy flowers in corymbs 2 to 3 inches long, and keys up to an inch long.

For previous introduction see No. 43811.

75666. ACER PICTUM MONO (Maxim.) Pax

A deciduous Chinese tree up to 60 feet high, with leaves somewhat heart-shaped.

For previous introduction see No. 72402.

75667. ACER PSEUDO-SIEBOLDIANUM Komar.

A small Manchurian tree with cordate leaves divided into 9 to 11 lanceolate-serrate lobes and bearing purple flowers.

75668. ADONIS AMURENSIS Regel and Radde. Ranunculaceae.

Variety *yezoensis*. A beautiful herbaceous perennial with broad yellow flowers and finely divided leaves. Native to Japan.

75669. ALNUS FRUTICOSA Rupr. Betulaceae. **Alder.**

A shrub or small tree up to 30 feet high, native to northeastern Asia. The leaves are ovate with a cuneate base and are glabrous on the under side.

75670. ARALIA ELATA (Miquel) Seem. Araliaceae.

A small hardy Manchurian tree, resembling *Aralia spinosa* (Hercules-club) but more treelike, with few spines. It does not form many branches, but the large bipinnate leaves cast a good shade. The greenish white flowers are borne in large panicles, and the berries are dark red when ripe, producing a pleasing effect.

For previous introduction see No. 65486.

75671. BETULA JAPONICA Sieb. Betulaceae. **Japanese white birch.**

A hardy ornamental Japanese tree up to 75 feet high, with broadly oval leaves, which is closely related to *Betula pendula*.

For previous introduction see No. 72407.

75663 to 75695—Continued.

75672. CELASTRUS ARTICULATUS Thunb. Celastraceae. **Oriental bittersweet.**

No. 21. Collected near Ishiyama, south of Sapporo, Hokkaido, October 12, 1927. A woody Japanese vine with obovate-serrate leaves 2 to 4 inches long. The orange-yellow fruits open to show the scarlet arils surrounding the seeds.

For previous introduction see No. 40568.

Nos. 75673 to 75695 were presented by the botanic garden, Hokkaido Imperial University, Sapporo, Hokkaido.

75673. EUONYMUS OXYPHYLLUS Miquel. Celastraceae.

A Japanese shrub or small tree with ovate pointed leaves and many-flowered cymes of dark-red ribbed fruits and bright red seeds.

75674. FRAGARIA HNUMAE Makino. Rosaceae. **Strawberry.**

A wild strawberry native to the alpine slopes of Japan. It resembles *Fragaria vesca*, but has the flower stalks usually shorter than the leaves, the flowers with seven petals, and the achenes embedded in the receptacle.

75675. GERANIUM ERIANTHUM DC. Geraniaceae.

A herbaceous perennial plant with five to seven palmately lobed leaves and rose-purple flowers 1 to 2 inches across. Native to Kamchatka and northwestern North America.

75676. JUGLANS SIEBOLDIANA CORDIFORMIS (Maxim.) Mak. Juglandaceae. **Flat walnut.**

A form of the Japanese walnut which has heart-shaped, thin-shelled fruits with sharp edges and a groove in the middle of each flat side. The tree is often 70 feet tall.

75677. LILIUM CORDIFOLIUM Thunb. Liliaceae. **Lily.**

A Japanese lily, 3 to 4 feet high, with pendulous leaves 12 to 18 inches long and wide, and a raceme of 4 to 10 fragrant white flowers often 6 inches long. These seeds were received as *Lilium glehni*, which is said to differ very slightly from typical *L. cordifolium*.

75678. LILIUM DAURICUM Ker. Liliaceae. **Candlestick lily.**

A plant about 3 feet in height, with a smooth or slightly furrowed stem which is green or tinged with brown or purple. The 20 to 50 horizontal leaves are 3 to 5 inches long, and the flowers, one to four in a cluster and 3 to 5 inches across, are orange-red, slightly spotted with purplish black, and tinged with yellow in the center; the anthers are red.

For previous introduction see No. 69021.

75679. MAGNOLIA KOBUS BOREALIS Sargent. Magnoliaceae.

A pyramidal Japanese tree often 80 feet high. The obovate leaves are 6 inches long, and the pure creamy white flowers are 7 inches across. This is one of the hardiest of the Asiatic magnolias.

75680. PINUS KORAIENSIS Sieb. and Zucc. Pinaceae. **Korean pine.**

A 5-needle pine, up to 100 feet high, native to Korea and Japan. It produces valuable lumber and edible seeds and is also of ornamental value, being slow in growth and forming a dense broad pyramidal head with handsome foliage.

For previous introduction see No. 71125.

75663 to 75695—Continued.

75681. PINUS PARVIFLORA Sieb. and Zucc. Pinaceae. **Japanese white pine.**

A dense pyramidal Japanese 5-needle pine often 100 feet high, with slender horizontal branches. The leaves are stiff and twisted, forming dense brushlike tufts at the ends of the branchlets. The cones are reddish brown and very decorative.

75682. PRIMULA JAPONICA A. Gray. Primulaceae. **Japanese primrose.**

A herbaceous perennial with radical leaves and flower stalks up to 2 feet high, bearing several whorls of purple flowers. Native to Japan.

75683. PRIMULA SIEBOLDI E. Morr. Primulaceae. **Primrose.**

A Japanese primrose which is pubescent everywhere except the corolla and which has petioled, ovate leaves with numerous dentate lobes. The flower stem is longer than the leaves and bears a many-flowered umbel of white, rosy, or purple flowers nearly 2 inches across.

75684. PRUNUS MUME Sieb. and Zucc. Amygdalaceae. **Japanese apricot.**

The Japanese apricot is found throughout Japan, where it is both wild and cultivated. It ranges in height from 10 to 25 feet. Before the leaves appear in the spring the tree is covered with a profusion of attractive blossoms which are white in the wild forms, while in the cultivated varieties the color varies from white to pink, with occasional tinges of green or yellow. The fruits ripen in June; they are exceeding sour and are eaten only in the form of pickles.

75685. PRUNUS SERRULATA SACHALINENSIS (Schmidt) Makino (*P. sargenti* Rehder). Amygdalaceae. **Sargent cherry.**

A hardy vigorous Japanese wild cherry with single pink flowers. The tree is tall and very attractive.

For previous introduction see No. 73881.

75686. PTEROCARYA SORBIFOLIA Sieb. and Zucc. Juglandaceae. **Wingnut.**

A Japanese tree nearly 100 feet high, with large compound leaves and long racemes of winged fruits.

75687. QUERCUS MONGOLICA GROSSESERRATA (Blume) Rehd. and Wils. Fagaceae. **Oak.**

The principal timber oak of Japan, often 100 feet high, with large handsome leaves clustered at the ends of the branches.

75688. QUERCUS SERRATA Thunb. (*Q. glandulifera* Blume). Fagaceae. **Oak.**

A white oak up to 70 feet high, native to Japan, Chosen, and China. The oblong-ovate leaves are lustrous bright green and hold their color until late in autumn. It is usually shrubby under cultivation.

75689. RHAMNUS JAPONICA Maxim. Rhamnaceae. **Buckthorn.**

A Japanese shrub up to 9 feet high, with glossy pale-green leaves 1 to 3 inches long, an abundance of greenish brown flowers produced during May in dense clusters at the ends of the short branches, and round fruits one-fourth of an inch in diameter.

For previous introduction see No. 43874.

75690. RHODODENDRON DAURICUM L. Ericaceae. **Dahurian rhododendron.**

An upright, deciduous shrub about 6 feet high, native to Japan and Chosen. The dark-green ovate leaves are aromatic, and the large rosy purple flowers appear from buds at the ends of the branchlets, usually before the leaves develop.

For previous introduction see No. 65503.

75663 to 75695—Continued.

75691. ROSA MULTIFLORA Thunb. Rosaceae. **Japanese rose.**

A vigorous climbing Japanese rose with small white flowers in pyramidal corymbs, also small red fruits.

For previous introduction see No. 65477.

75692. SORBUS PSEUDOGRACILIS (C. Schneid.) Koehne. Malaceae.

A Japanese shrub which has compound leaves of 9 to 11 ovate-lanceolate, dark-green leaflets, clusters of small white flowers, and red fruits.

75693. STEWARTIA PSEUDO-CAMELLIA Maxim. Theaceae.

A handsome Japanese tree, 50 feet high, with erect branches and red bark. The thickish obovate-lanceolate leaves are bright green, and the large white flowers are borne in summer.

75694. TILIA MAXIMOWICZIANA Shiras. Tiliaceae. **Linden.**

A tall tree, up to 100 feet high, native to Japan. The broadly ovate, sharp-pointed leaves are 6 inches long, and the small flowers are borne in clusters of 10 to 18.

75695. TRIGONOTIS GUILIELMI A. Gray. Boraginaceae.

An erect herbaceous perennial with ovate leaves and lax racemes of white flowers less than an inch across. Native to Japan.

75696. BOUGAINVILLEA sp. Nyctaginaceae.

From Hope, Kingston, Jamaica, British West Indies. Plants presented by H. H. Cousins, Director of the Department of Agriculture. Received July 14, 1926. Numbered in December, 1927.

A variety with pink bracts which are not such a clear color as those of the Rose of Catalina.

75697. ASTREBLA TRITICOIDES (Lindl.) F. Muell. Poaceae. **Curly Mitchell grass.**

From Sydney, New South Wales, Australia. Seeds presented by Arthur Yates & Co. Received December 1, 1927.

According to the Agricultural Gazette of New South Wales for March, 1922, curly Mitchell grass is characterized by wheatlike husks surrounding the seeds. The leaves are wide and succulent and the plants quickly respond to rain, a second growth of leaves being produced almost immediately. The best growth is made in summer and autumn, the period of growth from sowing until flowering being only a few weeks. This species is considered one of the best pasture grasses of Australia.

75698. CEIBA ACUMINATA (S. Wats.) Rose. Bombacaceae. **Pochote.**

From Alamos, Sonora, Mexico. Seeds obtained through L. H. Dewey, Bureau of Plant Industry. Received December 6, 1927.

This close relative of the kapok tree (*Ceiba pentandra*) is described by P. C. Standley (contributions from the United States National Herbarium, vol. 23, pt. 3) as a large or medium-sized tree with a greenish spiny trunk, compound leaves, and hard oblong fruits about 7 inches long which contain whitish down used for insulation, for stuffing pillows, mattresses, and life preservers, and for making candlewicks. It is native to western and southern Mexico.

For previous introduction see No. 73079.

75699 to 75717.

From Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received in December, 1927.

75699. ALNUS PENDULA Matsumura. Betulaceae. **Alder.**

Nos. 161 and 183. Collected on Otaniyama, Shino Mura, Minamikuwata Gun, Tamba, November 2, 1927. *Hage shibari.* A graceful Japanese shrub or small tree up to 25 feet high. The sharply serrate, dark-green leaves are oblong with long points, and the small, conelike fruits are on slender pedicels in pendulous racemes.

75700 to 75711. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

Locally grown varieties from Shino Mura, Minamikuwata Gun, Tamba, near Kyoto, November, 1927.

75700 to 75706. Cultivated varieties.

75700. Nos. 147, 148, 170. *Ganne.*

75701. Nos. 149, 150, 171. *Ginyori, ginyose.*

75702. Nos. 151, 152, 175. *Shikanotsume.*

75703. Nos. 153, 154, 169. *Imakita.*

75704. Nos. 155, 156, 172. *Higan-guri.*

75705. Nos. 157, 158, 174, 179. *Chokoji.*

75706. Nos. 159, 160, 173. *Shimokatsugi.*

75707. No. 163. A wild variety, used as a stock, from the chestnut orchard at Oji, Shino Mura.

75708. No. 165. *Shiba-guri.* A wild variety collected on Otani Yama, Shino Mura.

75709. No. 166. *Shiba-guri.* From the orchard at Oji, Shino Mura.

75710. No. 167. *Shiba-guri.* A wild variety collected on Otani Yama, Shino Mura, at an altitude of about 600 feet.

75711. No. 168. A wild variety from the orchard at Oji, Shino Mura. Tree about 4 feet high, and stem half an inch in diameter.

Nos. 75712 to 75715 are seeds collected on Otani Yama, Shino Mura, Minamikuwata Gun, Tamba, November 2, 1927.

75712. EUONYMUS sp. Celastraceae.

No. 180. A wild variety, with showy red fruits, which will perhaps be useful in an arboretum.

75713. ILEX sp. Aquifoliaceae. **Holly.**

No. 181. *Soyogo, sayago.* A small evergreen tree.

75714. JUNIPERUS RIGIDA Sieb. and Zucc. Pinaceae. **Needle juniper.**

No. 162. *Nezumisashi, muro.* A Japanese juniper about 20 feet high, of elegant habit with the branches pendulous at the ends. The needlelike leaves are very slender and triangular in section. This tree thrives very well in southern England.

For previous introduction see No. 57298.

75715. RHODODENDRON sp. Ericaceae. **Azalea.**

No. 182. A wild ornamental shrub.

75716. ILEX SERRATA Thunb. Aquifoliaceae. **Fine-tooth holly.**

No. 184. November 12, 1927. *Umemodoki.* A red-berried Japanese shrub up to 15 feet high, growing in the wonderful old garden at Golden Pavilion, Kyoto. It is said to be rare.

75717. LILIUM sp. Liliaceae. **Lily.**

No. 164. A wild lily growing on Izuta Yama, Kochi Ken, Shikoku, November 10, 1927.

75718 to 75720.

From Santa Monica, Calif. Seeds presented by Hugh Evans, through Peter Bisset, Federal Horticultural Board. Received December 9, 1927.

75718. CERATOSTIGMA WILLMOTTIANUM Stapf. Plumbaginaceae.

A half-woody perennial, 1 to 3 feet high, with angled purplish stems, bristly leaves, and cobalt-blue flowers, an inch wide, borne successively in a large head. Native to western China.

For previous introduction see No. 72983.

75719. HIBISCUS DIVERSIFOLIUS Jacq. Malvaceae.

A tall, hairy, rigidly upright shrubby perennial with prickly stems, variable foliage, and yellow flowers which have dark-red centers. Native to tropical Africa and the Pacific Islands.

For previous introduction see No. 66506.

75720. HIBISCUS HETEROPHYLLUS Vent. Malvaceae.

A tall Australian shrub with leaves varying from linear to elliptic and from entire to three lobed, which are 5 to 6 inches long and white beneath. The large axillary flowers, 3 to 4 inches long, are white with a crimson eye. This shrub blooms freely and is very showy.

75721 and 75722. LILIUM spp. Liliaceae. **Lily.**

From Japan. Bulbs and seeds collected by R. K. Beattie, Bureau of Plant Industry. Received December 16, 1927.

Wild lilies growing among Sasa on a hillside in pine woods at Hirota, Shino Mura, Minamikuwata Gun, Tamba, November 15, 1927.

75721. LILIUM sp.

No. 185. Bulbs.

75722. LILIUM sp.

No. 186. Seeds.

75723. DIOSCOREA sp. Dioscoreaceae. **Yam.**

From Ceylon. Tuber collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received March 26, 1926. Numbered in December, 1927.

No. 404. Agricultural Experiment Station, Jaffna, February 6, 1926. A variety said to be of good quality, which grows in sandy calcareous soil. It is called saddikarangi or elephant's foot because it produces only one large flat tuber with a few small ones attached to the side, the whole being about the size and shape of an elephant's foot.

75724. PSIDIUM GUAJAVA L. Myrtaceae. **Guava.**

From New Smyrna, Fla. Cuttings presented by John Y. Detwiler, through R. A. Young, Bureau of Plant Industry. Received December 4, 1927.

A guava with thick flesh which is sweet with a air amount of acid and comparatively small seeds. The specimen of fruit received, said to be one-third to one-half the size as compared with the average, was 3½ by 2¾ inches, yellow skinned and white fleshed, the flesh being nearly three-fourths of an inch thick.

75725 to 75733. LILIUM spp. Liliaceae. **Lily.**

From Tunbridge Wells, England. Bulbs purchased from R. Wallace & Co. Received in December, 1927.

75725 to 75733—Continued.

75725. LILIUM BURBANKII Hort.

A free-flowering hybrid lily said to be derived from *Lilium pardalinum* and *L. paryii*. It produces from 25 to 30 deliciously fragrant flowers on a very graceful spike. The flowers are spotted with chocolate and flushed with crimson on the tips of the petals.

75726. LILIUM DAVIDI Duch.

A strong-growing Chinese lily about 5 feet high, with graceful narrow foliage and deep cinnabar-red tiger lilylike flowers.

75727. LILIUM FARRERI Turrill.

A beautiful species found in Yunnan, China, by the well-known botanical explorer, Reginald Farrer, and frequently referred to in his writings as "the marble Martagon lily." It is a slender and graceful lily, 2 to 3 feet high, bearing, on long pedicels, up to five recurved white flowers which are slightly spotted with purple on the interior. This lily possesses a strong constitution and increases fast by means of numerous small bulbs forming at the base of the stem.

For previous introduction see No. 61747.

75728. LILIUM MARTAGON L. **Martagon lily.**

Variety *album*. A rare lily producing spikes 4 to 5 feet high, and 20 to 30 pure white flowers.

75729. LILIUM OCHRACEUM Franch.

A rare and beautiful lily from Upper Burma, not hardy except in the most favored districts; it is an admirable cool greenhouse plant. This is a very variable species, producing flowers which range in color from deep golden to pale yellow, stained in varying degrees with a deep wine purple. The petals recurve as in *Lilium martagon*, but this feature is also inconstant.

75730. LILIUM POMPONIUM L.

A graceful Martagon lily from northern Italy, 3 feet high, with slender grassy foliage and up to 10 turban-shaped, brilliant-scarlet flowers. This is a rare lily in cultivation.

75731. LILIUM PYRENAICUM Gouan.

Yellow Turkscap. A very early variety with enormous bulbs. The strongly scented yellow flowers are heavily spotted with black.

For previous introduction see No. 69926.

75732 and 75733. LILIUM DAURICUM Ker. **Candlestick lily.**

75732. *Golden fleece*. A strong-growing variety 2½ feet high, producing large umbellate heads of clear golden-yellow flowers with a touch of scarlet at the tips of the petals.

75733. *Splendidum*. A new variety, 2 to 2½ feet high, producing large umbellate heads of brilliant vermilion flowers shading to a rich coppery crimson. The flowers are unspotted or nearly so, and the points of the petals are slightly reflexed.

75734. LILIUM MONADELPHUM Bieb. Liliaceae. **Great Caucasian lily.**

From the Caucasus, Russia. Bulbs purchased from J. W. Pincus, of the Amtorg Trading Corporation, New York, N. Y. Received December 14, 1927.

Variety *szovitzianum*. A variety with reddish brown anthers and lemon-yellow flowers which are larger and more thickly dotted than the typical species.

For previous introduction see No. 72611.

75735 to 75749.

From Leningrad, Russia. Seeds presented by Prof. V. V. Talanoff, vice director of the Institute of Applied Botany, through H. N. Vinall, Bureau of Plant Industry. Received December 10, 1927.

Locally grown varieties from the Western Siberian Experiment Station at Omsk.

75735. AGROPYRON SIBIRICUM (Willd.) Beauv. Poaceae. **Grass.**

No. 1342. An upright cespitose perennial grass, up to 16 inches high, with linear leaves. Native to southern Russia and the Caucasus.

For previous introduction see No. 63802.

75736 to 75738. ELYMUS spp. Poaceae. **Grass.**

75736. ELYMUS DAHURICUS Turcz.

No. 1767. A tall perennial ryegrass, with stout erect stems, native to dry stony places in Russia and Siberia.

For previous introduction see No. 64625.

75737. ELYMUS JUNCEUS Fisch.

No. 1800. An erect perennial grass, with terminal spikes resembling rye; native to Russia.

75738. ELYMUS SIBIRICUS L.

No. 1310. A tall grass with heavy overhanging heads.

For previous introduction see No. 57685.

75739. FESTUCA ELATIOR L. Poaceae.

No. 1582. **Meadow fescue.**

75740 to 75747. MEDICAGO FALCATA L. Fabaceae. **Yellow-flowered alfalfa.**

75740. No. 5198.
75741. No. 4022.
75742. No. 4020.
75743. No. 1694/46.
75744. No. 5038.
75745. No. 1694/18.
75746. No. 40/27.
75747. No. 63/82.

75748. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

No. 1450. From Bokhara.

75749. ONOBRYCHIS VULGARIS Hill (*O. viciaefolia* Scop.) Fabaceae. **Sainfoin.**

No. 1517.

75750 and 75751.

From Chicago, Ill. Plants presented by August Koch, superintendent of Union Park. Received December 30, 1927.

75750. CARYOTA PLUMOSA Hort. Phoenicaceae. **Fishtail palm.**

From seeds collected in Brazil. A horticultural name applied to a form of fishtail palm which is now about a foot high, with leaves resembling those of *Caryota mitis* and *C. urens*.

75751. FICUS PLATYPHYLLA Delile. Moraceae.

From seeds collected on the Gold Coast, West Africa. A handsome shade tree, 80 feet in height and 8 feet in diameter, with dark-green stiff leathery leaves, about 10 inches long, arranged in picturesque groupings on the branches. This tree is said to be the source of Kano rubber. The latex is used as birdlime, and tannin is obtained from the bark. A fabric is made from the bast by some of the natives of central Africa.

For previous introduction see No. 73118.

75752. CRYPTOSTEGIA sp. Asclepiadaceae.

From Madagascar. Seeds presented through Paul Dean Thompson, American vice consul at Tananarive. Received December 21, 1927.

A wild cryptostegia which may be of value as a rubber plant.

75753. PAUROTIS sp. Phoenicaceae. **Palm.**

From Georgetown, British Guiana. Seeds presented by the British Guiana Botanic Gardens, through Dr. B. E. Dahlgren, of the Field Museum of Natural History, Chicago, Ill. Received January 18, 1923. Numbered in December, 1927.

A small palm suitable for growing as a house plant.

75754. CASTANEA MOLLISSIMA Blume. Fagaceae. **Hairy chestnut.**

From Nanking, China. Seeds purchased from Prof J. H. Reisner, College of Agriculture and Forestry of the University of Nanking. Received December 31, 1927.

In the endeavor to relieve the situation caused by the rapid disappearance of our native chestnut, due to the ravages of the blight fungus, the Chinese hairy chestnut is being introduced into this country in a considerable quantity. The size and quality of the nuts compare rather favorably with that of our native chestnut, although neither the size of the tree nor the tannin content measure up to those of our native species.

For previous introduction see No. 74157.

75755 and 75756.

From Lisbon, Portugal. Cuttings presented by Dr. Ruy Palhinha, of the University of Lisbon. Received December 23, 1927.

75755. ROSA ODORATA GIGANTEA × sp.

Belle Portugaise. A large and beautiful rose of very delicate coloring, rosy pearl tinted with salmon. The very long buds are at times 10 centimeters in length, especially when produced at the ends of vigorous shoots. The fully opened flower measures 15 to 16 centimeters in diameter. When grown in a mild climate, Belle Portugaise reaches a great size and is literally covered with its huge flowers. It seems to have inherited in its characters the great floriferousness of its mother, *Souvenir de Leoine Viennot;* and furthermore, it is capable of producing fertile seeds, and therefore, may be used in hybridization.

For previous introduction see No. 29729.

75756. ROSA ODORATA GIGANTEA × sp.

Etoile du Portugal. A hybrid of *Rosa odorata gigantea* and *Reine Marie Henriette.*

For previous introduction see No. 29730.

75757 to 75765. ZEA MAYS L. Poaceae. **Corn.**

From India and Java. Seeds collected by F. G. Krauss, of the University of Hawaii. Received November 30, 1927.

75757 to 75759. From the experiment station at Pusa, India, August, 1927.

75757. No. 1. An early maturing variety.

75758. No. 2. A midseason variety.

75759. No. 3. A late-maturing variety.

75760 and 75761. From Buitenzorg, Java.

75760. *Gele oost.*

75761. *Gele menado.*

75757 to 75765—Continued.

75762. A Himalayan variety collected in Darjiling, India, at an altitude of 7,000 feet. August, 1927.

75763 to 75765. From Buitenzorg, Java.

75763. *Saipancorn.*

75764. *Witte midden.*

75765. *Witte St. Croix.*

75766. XANTHOSOMA sp. Araceae. **Yautia.**

From Akkra, Gold Coast, West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 19, 1927. Numbered in December, 1927.

No. 1217. *Coco yam.* Obtained in the market, February 27, 1927. A dasheen relative with unusually large tubers.

75767 to 75774. LILIUM spp. Liliaceae.

From Tunbridge Wells, England. Bulbs purchased from R. Wallace & Co. Received in December, 1927.

75767. LILIUM BURBANKII Hort.

For previous introduction and description see No. 75725.

75768. LILIUM CHALCEDONICUM L. **Chalcedonian lily.**

Variety *maculatum.* A strong-growing, rare form superior to the ordinary type. The large broad-petaled flowers are dark scarlet, spotted with black at the base of the petals.

75769 to 75772. LILIUM DAURICUM Ker. **Candlestick lily.**

75769. *Golden fleece.* For previous introduction and description see No. 75732.

75770. *Mahogany.* A very fine distinct new hybrid with large flowers of deep crimson lake.

75771. *Splendidum.* For previous introduction and description see No. 75733.

75772. *Vermilion brilliant.* A very showy hybrid producing large heads of the most intense vermilion-scarlet flowers of fine form and substance, with broad massive petals.

75773. LILIUM PARDALINUM Kellogg. **Leopard lily.**

Variety *Johnsoni.* A tall lily from British Columbia, producing bright-orange flowers spotted with dark crimson.

75774. LILIUM POMPONIUM L. **Lily.**

For previous introduction and description see No. 75731.

75775 to 75779.

From Buenos Aires, Argentina. Seeds presented by Prof. Lorenzo R. Parodi, of the University of Buenos Aires. Received December 13, 1927.

75775. CHLORIS BEYRICHIANA Kunth. Poaceae. **Grass.**

A low perennial grass with short leaves and erect flower stems a foot high. Native to Brazil and Argentina.

75776. CHLORIS POLYDACTYLA (L.) Swartz. Poaceae. **Grass.**

A grass which grows about 1½ feet high with seed stalks running up to 3 feet. It seeds profusely and is said to be good as a pasture grass when young and appears to be suitable for hay.

75775 to 75779—Continued.

75777. GOUINIA LATIFOLIA Vasey. Poaceae. **Grass.**

A tall perennial grass up to 6 feet high, with leaves an inch wide and a foot long, and loosely branching panicles. Native to Argentina.

75778. PHALARIS ANGUSTA Nees. Poaceae. **Grass.**

A coarse annual grass 4 feet high with narrow leaves and timothylike spikes. Native to Argentina.

75779. TRICHLORIS PLURIFLORA Fourn. Poaceae. **Grass.**

A perennial grass 2 to 4 feet high with leaves half an inch wide and a foot long. Native to Mexico.

75780. CITRUS GRANDIS (L.) Osbeck (*C. decumana* Murr.). Rutaceae. **Grapefruit.**

From Manila, Philippine Islands. Bud wood presented by S. Youngberg, Director of the Bureau of Agriculture. Received November 4, 1927.

A local variety.

75781. RUBUS sp. Rosaceae.

From Manila, Philippine Islands. Seeds presented by S. Youngberg, Director of the Bureau of Agriculture. Received December 14, 1927.

A variety grown at Baguis, Mount Province, Luzon, Philippine Islands.

75782. SYRINGA OBLATA DILATATA (Nakai) Rehder. Oleaceae. **Lilac.**

From Chosen, Japan. Seeds presented by Dr. M. Tozawa, Director of the Forestry Experiment Station at Keijyo. Received January 4, 1927. Numbered in December, 1927.

A hardy compact shrub, native to northeastern Asia, about 12 feet high, with heart-shaped, bright-green leaves and dense panicles of pale-lilac flowers.

For previous introduction see No. 66259.

75783 to 75787.

From northern Nigeria, West Africa. Seeds presented by A. G. Beattie, London, Ontario, Canada. Received December 12, 1927.

Locally grown varieties.

75783. PENNISETUM GLAUCUM (L.) R. Br. (*P. typhoideum* Rich.). Poaceae. **Pearl millet.**

Bulrush millet. The local name is coero.

75784 to 75787. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

75784. *Massakwa.*

75785. *A chi duka.*

75786. *Bai fillata.*

75787. *Giwar kumba.*

75788 to 75843.

From Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received December, 1927.

75788 to 75825. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

75788. No. 193. A wild variety growing on Abura Yama, at Otani, Shino Mura, Minamikuwata Gun, Tamba. The tree is a 15-year-old sprout and is 15 feet high.

75788 to 75843—Continued.

75789 to 75802. Wild trees growing on Otani Yama, Shino Mura, Minamikuwata Gun, Tamba.

75802. No. 207.

75803. Nos. 208–210, 236, 244, 245, 262, 264–266. Wild trees or rather bushes growing on Izuta Yama, Kochi Ken, Shikoku Island. They are said to produce three crops a year. These nuts are from the first crop which ripens in July.

75804. Nos. 211–213. Wild trees, 20 to 30 years old, growing in the university forest in Ashidani, Kamiyugawa, Yakata Mura, Arita Gun, Wakayama Ken.

75805. No. 214. *Shibaguri.* A wild tree said to be large, growing in the Kamikamo Experimental Forest, Kyoto Imperial University.

75806 to 75808. Cultivated trees growing at Ineyama, Ayabe-cho.

75806. No. 216. *Ichiemon.*

75807. No. 217. *Toyotama-wase.*

75808. No. 218. An unknown variety.

75809. No. 219. A wild tree growing at Ushigakubi, Kurama Yama, Kyoto Prefecture.

75810 to 75812. Wild trees growing at Kurama Yama, Kyoto Prefecture.

75810. No. 220.
75811. No. 221.
75812. No. 222.

75813. No. 223. A wild tree growing at Kurama Mura, Kurama, Momoiware.

75814 to 75816. Wild trees growing at Kurama Yama, Kyoto Prefecture.

75814. No. 224.
75815. No. 225.
75816. No. 226.

75817. No. 227. A wild tree growing at Otani Yama, Shino Mura, Minamikuwata Gun, Tamba.

75818. Nos. 228, 229. Wild trees growing at Ishikari, Ishiyama Province.

75819. Nos. 230 and 239. An unnamed cultivated variety at Imai, Kagami Mura, Tosa Gun, Kochi Ken, Shikuko Island.

75820. Nos. 231 and 240. *Chobe.* Cultivated trees growing at Hirota, Shino Mura, Minamikuwata Gun, Tamba. This variety was exhibited at a fair in Kyoto and received third prize.

75821 to 75824. Cultivated trees growing at Ori, Kagami Mura, Tosa Gun, Kochi Ken, Shikoku Island.

75821. Nos. 232 and 242. A native variety.

75822. Nos. 233 and 243. *Naro-guri.* This variety is native to Shikoku.

75823. Nos. 234, 241, 261. *Nakayama-guri.* The burs fall from the tree before opening.

75824. No. 235. *Togenashi-guri.* The burs are spineless.

75788 to 75843—Continued.

75825. Nos. 237, 238. These seeds are from the same source as No. 208 [No. 75803], but the nuts are smaller and are said to come from smaller trees.

75826. LILIUM sp. Liliaceae. **Lily.**

No. 263. From Shizuoka Ken, Tagata Gun, Kitakano Mura, Kashiwakubo, November 25, 1927. A wild variety bearing white flowers spotted with brown.

75827 to 75843. RHODODENDRON spp. Ericaceae. **Azalea.**

Locally grown varieties collected in November, 1927.

75827. RHODODENDRON sp.

No. 188. A wild variety growing near the Buddhist Temple, Hirota, Shino Mura, Minamikuwata Gun, Tamba.

75828. RHODODENDRON sp.

No. 189. A cultivated yellow-flowered variety from the garden at the Buddhist Temple, Hirota, Shino Mura, Minamikuwata Gun, Tamba. It is said to be rare.

75829. RHODODENDRON sp.

No. 190. A cultivated variety growing at Hachiman Shrine, Mori, Shino Mura, Minamikuwata Gun, Tamba. It is said to have red flowers.

75830. RHODODENDRON sp.

No. 191. A cultivated variety growing in the garden at the Buddhist Temple, Hirota, Shino Mura, Minamikuwata Gun, Tamba. It is said to have red flowers.

75831. RHODODENDRON sp.

No. 192. A wild, pink-flowered variety, said to be rare, growing near the Buddhist Temple, Hirota, Shino Mura, Minamikuwata Gun, Tamba.

75832. RHODODENDRON sp.

No. 248. A wild variety growing near the Buddhist Temple, Hirota, Shino Mura, Minamikuwata Gun, Tamba. It is said to have white flowers.

Nos. 75833 to 75843 are cultivated varieties from the garden of the San-O-ji Buddhist Temple, Sogabe Mura, near Kameoka.

75833. RHODODENDRON sp.

No. 249. A variety said to have red flowers.

No. 253. A variety said to have pink flowers with white spots.

75838. RHODODENDRON sp.

No. 254. A variety said to have red flowers.

75839. RHODODENDRON sp.

No. 255. A variety said to have pink flowers.

75840. RHODODENDRON sp.

No. 256. A variety said to have large pink and white flowers.

75841. RHODODENDRON sp.

No. 257. A variety said to have very large pink flowers and to be the finest in the collection at this garden.

75842. RHODODENDRON sp.

No. 258. An azalea said to be an early variety with red flowers.

75843. RHODODENDRON sp.

No. 259. An azalea said to be a wild variety with very large flowers. It has been cultivated in this garden.

75844. THEA SASANQUA (Thunb.) Nois. (*Camellia sasanqua* Thunb.). **Theaceae.**

Nos. 246 and 247. Collected near Hachiman Shrine, Hirota, Shino Mura, Minamikuwata Gun, Tamba, November 15, 1927. A large, wide-spreading ornamental shrub or small tree common throughout the warmer parts of Japan. It is said to be a relative of the white camellia. The branches are very slender, and in the wild plant the flowers are always white. It is a popular garden shrub, and, under cultivation, the forms with pink and rose-colored flowers are common. The seeds contain an inferior sort of oil used by the Japanese women for dressing their hair.

For previous introduction see No. 57088.

Introductory statement	1
Inventory	3
Index of common and scientific names	31

INTRODUCTORY STATEMENT

This inventory, which records the materials passing through the Office of Foreign Plant Introduction from January 1 to March 31, 1928, is of interest to the reader as a promise of a great variety of ornamental plants that have been brought in for testing and eventual distribution. And here, even at the risk of tiresome repetition, it must be noted that the inventory is not a catalogue from which plants may be ordered. It is a historical document, a matter of record, and no more.

This particular inventory records another attempt to establish ornamental species of onions, which are said to be valuable for rock-garden planting. As their seeds are of short viability, their introduction in this way is always problematical.

The barberries were collected for specific use in studies conducted in the department and are not to be available for distribution.

Several oriental cherries are included in the general effort to make as complete a collection as possible of all the flowering varieties, which have been a special study of the office ever since their first introduction in 1903.

The various clematis species are more of botanical interest than horticultural value except *Clematis armandi* (No. 76013), a beautiful tender species which is not yet established in this country, and the hybrid (*C. montana rubens* × *vedrariensis rosea*, No. 76341) which should prove valuable if it in any way resembles its seed parent.

No genus of shrubs has called forth more comment in recent years than the cotoneasters, of which there are 16 in this list. The species are by no means of equal value and must be carefully compared to choose those of greatest garden merit. Among those mentioned here, *C. apiculata* (No. 76231) is of striking beauty with low spreading growth and large rosy red fruits, and *C. hupehensis* (No. 76234) is a fine red-fruited shrub of considerable vigor.

57537—29——1

The crotalarias (Nos. 75876 to 75882, 75970) are interesting legumes which seem promising for use in the South. Some of them are of striking appearance, but even so are more valuable as green-manure plants.

Cytisus species (Nos. 76035, 76241 to 76247) are being assembled for study to determine whether other species may not be of merit in portions of our country where those already established are useful. They may prove to be of peculiar value from the Middle Atlantic States southward.

No inventory is complete without mention of grasses, and this list gives proper attention to this huge plant family.

A large collection of honeysuckles is included in this list. These were assembled for study, for many, though distinct botanically, are of little ornamental value, and while several of the species here are far from new, they are so little grown that it was easiest to reintroduce them for the present study.

Wherever rhododendrons appear, interest is quickened. *Rhododendron campanulatum* (No. 75966) is one of the relatively newer oriental species which may prove of value in this country. The species (Nos. 76191 to 76195) were collected by Capt. F. Kingdon Ward and presented by Maj. Lionel de Rothschild. They represent some of the more recent fruits of the Ward collecting.

Final attention may be called to *Styrax wilsonii* (No. 76275), which seems to be a rather delicate plant somewhat like the familiar and very beautiful *S. japonica*, which, though old, has never been adequately appreciated. This, with two lilac species, *Syringa tomentella* (No. 76276) and *S. yunnanensis* (No. 76277), must suffice for the present comment and will show the efforts of the office to keep the interests of the ornamental horticulturists in mind.

The botanical determinations of these introductions have been made and the nomenclature determined by H. C. Skeels, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

OFFICE OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., June 17, 1929.

INVENTORY[1]

75845. PRUNUS SERRULATA SACHALINENSIS (Schmidt) Makino (*P. sargentii* Rehder). Amygdalaceae. **Sargent cherry.**

From Benenden, Kent, England. Cuttings presented by Capt. Collingwood Ingram. Received March 1, 1928.

Yamazakura (northern form). The mountain cherry of northern Japan, which under favorable conditions becomes a large tree 70 feet tall, with a spreading crown. It is hardy and long lived and is said to be one of the most handsome of the wild cherries of eastern Asia. The young foliage is bronze green, and the mature leaves assume brilliant colors in autumn, changing to shades of yellow, orange, and crimson. The numerous single flowers, pink or at times nearly white, are up to 4 centimeters across, and the black fruits are about the size of peas. An important feature of this wild cherry is the possibility of its use as a stock for cultivated forms, for which purpose it appears to be well suited.

For previous introduction see No. 73381.

75846. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

From Tanganyika Territory, Africa. Seeds presented by A. H. Kirby, Director of the Department of Agriculture, Dar es Salaam. Received March 1, 1928.

Bonganhilo. A medium-early, semidwarf variety which gives a good yield.

75847. PHALARIS sp. Poaceae. **Grass.**

From San Remo, Italy. Roots presented by Dr. Mario Calvino. Received July 6, 1927. Numbered March, 1928.

From the western part of San Remo. A native perennial flat-bladed grass, said to be drought resistant.

75848. RADICULA ARMORACIA (L.) Robinson. Brassicaceae. **Horseradish.**

From Erfurt, Germany. Roots purchased from Haage & Schmidt. Received March 6, 1928.

A variety grown locally.

75849. RADICULA ARMORACIA (L.) Robinson. Brassicaceae. **Horseradish.**

From Erfurt, Germany. Roots purchased from Otto Putz. Received March 6, 1928.

A variety grown locally.

75850. LILIUM sp. Liliaceae. **Lily.**

From Japan. Bulbs collected by R. K. Beattie, Bureau of Plant Industry. Received December, 1927. Numbered January, 1928.

No. 262. From Shizuoka Ken, Tagata Gun, Kitakano Mura, Kashiwakubo. November 25, 1927. A wild variety bearing white flowers spotted with brown. Seeds of this lily were sent in under No. 263 [No. 75826].

75851. SALIX MATSUDANA Koidz. Salicaceae. **Willow.**

From Verrieres le Buisson, Seine et Oise, France. Plants purchased from Vilmorin-Andrieux & Co. Received February 2, 1928.

Variety *tortuosa*. The stem-growing points of this variety appear to have gone crazy, losing all sense of direction of gravity and light. The tree is striking in appearance and may have limited use as an ornamental, but it may prove to be especially useful in a physiological study on geotropism.

75852. ONOBRYCHIS VULGARIS Hill (*O. viciaefolia* Scop.). Fabaceae. **Sanfoin.**

From Edinburgh, Scotland. Seeds purchased from John Donaldson & Co. Received February 2, 1928.

A pink-flowered herbaceous perennial, 1 to 2 feet high, native to Europe.

For previous introduction see No. 72977.

75853. MESEMBRYANTHEMUM ANGULATUM Thunb. Aizoaceae.

From Paris, France. Seeds presented by Prof. D. Bois, of the Paris Museum of Natural History. Received January 27, 1928.

A herbaceous, procumbent South African plant with angular stems and branches. The leaves, which are opposite on the stem and alternate on the branches, are covered with minute white papillae.

---

[1] It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

75854. MACADAMIA INTEGRIFOLIA Maiden and Betche. Proteaceae. **Everbearing macadamia.**

From Upper Dungay, via Murwillumbah, New South Wales, Australia. Seeds presented by S. M. Greer. Received January 30, 1928.

A beautiful and vigorous tree with smooth, dark-green leaves somewhat similar to those of a mango. According to Mr. Greer, the nuts are of medium size and resemble *Macadamia ternifolia* in appearance, but have tougher shells, a different flavor, and contain more oil. The variety is referred to as ever-bearing.

For previous introduction see No. 66061.

75855. FRAGARIA sp. Rosaceae. **Strawberry.**

From St. Michael, Azores. Plants presented through Stuart K. Lupton, American consul. Received February 2, 1928.

A variety grown locally.

75856. LILIUM TIGRINUM Ker. Liliaceae. **Tiger lily.**

From Seoul, Chosen. Bulbs obtained through C. H. Stephan, American vice consul in charge. Received January 30, 1928.

Oni yuri. Collected by the Dendrological Experimental Station.

For previous introduction see No. 74221.

75857. SHANTZIA sp. Malvaceae.

From east Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received January 31, 1928.

No. 486. Near Camp Kifaru, Tanganyika, September 18, 1927. A small tree common in the thorny tree and grass areas between Mbulu and Ngorongoro Crater.

75858. CANNA EDULIS Ker. Cannaceae. **Edible canna.**

From Pointe a Pitre, Guadeloupe, French West Indies. Tubers presented by A. Kopp, acting director, Station Agronomique de la Guadeloupe. Received June 4, 1927. Numbered February, 1928.

A close relative of the ornamental cannas, cultivated for its edible tubers.

For previous introduction see No. 66339.

75859. COLOCASIA ESCULENTA Schott. Araceae. **Dasheen.**

From Dominica, British West Indies. Tubers presented by F. G. Harcourt, curator and agricultural superintendent of the botanic gardens. Received June 28, 1927. Numbered February, 1928.

Sulphur dasheen. A variety with handsome red leafstalks. The tubers are sometimes used as food, but are inferior to those of the common dasheen. The name probably refers to the color of the interior of the tubers.

For previous introduction see No. 59289.

75860. COLOCASIA ESCULENTA Schott. Araceae. **Taro.**

From Southern Rhodesia, South Africa. Tubers presented by Dr. W. L. Thompson, of the American Board mission at Mount Silinda. Received July 30, 1927. Numbered February, 1928.

Amadumbe. The plants of this Rhodesian taro are much like those of the Trinidad variety except that the petioles of the former are shaded the entire length with maroon.

75861. LILIUM sp. Liliaceae. **Lily.**

From Hong Kong, China. Bulbs obtained from Andrew Tse, through David Griffiths, Bureau of Plant Industry. Received February 6, 1928.

A wild Chinese lily.

75862. DIPELTA FLORIBUNDA Maxim. Caprifoliaceae.

From Jamaica Plain, Mass. Cuttings presented by E. H. Wilson, Arnold Arboretum, Harvard University. Received February 7, 1928.

An ornamental deciduous Chinese shrub up to 15 feet high, somewhat resembling Kolkwitzia, with ovate entire opposite leaves about 4 inches long. The racemes contain from one to six handsome, fragrant, rose-colored abelialike flowers with yellow stripes in the throat, each flower having two large shield-shaped bracts.

75863. CASTANOPSIS sp. Fagaceae. **Evergreen chinquapin.**

From Hanoi, Indo-China. Seeds obtained from P. Ducamp, Inspecteur Adjoint des Eaux et Forêts. Received February 7, 1928.

An evergreen chinquapin, native to Indo-China, with oblong-ovate coriaceous leaves 4 to 6 inches long, smooth and shining above and covered with tawny pubescence beneath. The chestnut-brown ovate-cylindrical nuts, one-fourth to three-fourths of an inch long and one-fourth of an inch in diameter, are borne in small burs covered with long straight spines.

75864. CASTANOPSIS CUSPIDATA (Thunb.) Schottky. Fagaceae. **Japanese chinquapin.**

From Kochi, Shikoku, Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received February 7, 1928.

No. 417. January 17, 1928. In Japan this tree is common from Tokyo southward and is commonly cultivated. It grows from 30 to 75 feet high, with massive widespreading branches. The leaves are variable in size and shape and vary in color on the underside from brownish to nearly white. The acorns are small but sweet and are baked, boiled, or roasted and regularly sold on the Japanese markets. This tree is hardy only in the southernmost United States.

For previous introduction see No. 34642.

75865 to 75959.

From east Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received January, 1928.

75865. AIRA sp. Poaceae. **Grass.**

No. 323. August 31, 1927. A fairly soft bunch grass which seeds sparingly. It is found occasionally in the grasslands on Kilimanjaro Mountain, Tanganyika.

75866. BRACHIARIA sp. Poaceae. **Grass.**

No. 410. August 24, 1927. A variety infrequent in depressions along the Kibosho Road, Moshi, Tanganyika.

75867. BRACHYPODIUM sp. Poaceae. **Grass.**

No. 326. August 31, 1927. Seeds of two grasses accidently mixed in gathering from the grassland just above the forest on Kilimanjaro Mountain, Tanganyika. These two, with No. 325 [No. 75870], are the only grasses of soft texture in the high grasslands on Kilimanjaro Mountain. The other grasses are as harsh and stiff as Carex, and there is no evidence that animals eat them. The soft grasses usually show signs of having been grazed. The seed heads are very seldom seen during this season.

75865 to 75959—Continued.

75868. BROMUS sp. Poaceae. **Grass.**

No. 353. October 13, 1927. Next to No. 351 [No. 75869], this is the most important forage grass at high altitudes on Mount Kenya, Kenya Colony. It is much less abundant than No. 351 except possibly at Soames Camp, at an altitude of 12,000 feet.

75869. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

No. 351. October 17, 1927. A local variety growing between Nairobi and Fort Hall, Kenya Colony.

75870. CALAMAGROSTIS sp. Poaceae. **Grass.**

No. 325. August 28, 1927. Seeds somewhat mixed with those of No. 326 [No. 75867]. These are the only grasses of soft texture in the high grasslands on Kilimanjaro Mountain, Tanganyika.

75871. CENTAUREA sp. Asteraceae.

No. 517. Near Camp Kifuru, Tanganyika. September 27, 1927. Perennial composite on burned grassland, which forms masses of heads near the ground. Most flowers pink, rarely pure white or deep red.

75872. CHLORIS sp. Poaceae. **Grass.**

No. 311. September 22, 1927. An unknown grass, which, with Bermuda grass, makes up the bulk of the herbaceous vegetation in the Ngorongoro Crater, Tanganyika. It is apparently much relished by game animals.

75873. CHLORIS sp. Poaceae. **Grass.**

No. 352. *Iringa, isana.* The grass which, with giant Bermuda grass, is considered to be the best potential forage grass in east Africa by Raymond Hook, of Nanyuki, who has a trial garden of grasses. These seeds were obtained by him in Nyasaland.

75874. COIX LACRYMA-JOBI L. Poaceae. **Jobs-tears.**

No. 626. October 7, 1927. An unusually large variety growing along a small creek with sugarcane, maize, and bananas, between Fort Hall and Nyeri, Kenya Colony.

75875. CROSSANDRA NILOTICA Oliver. Acanthaceae.

No. 362. From the garden of Lady Muriel Jex-Blake, Nairobi, Kenya Colony, October 25, 1927. A herbaceous plant 2 feet high from a woody base, originally from the Solai Valley. The bright-green, ovate-lanceolate leaves 4 inches long are in whorls, and the dense spikes of pink or red flowers are on peduncles longer than the leaves. Native to east Africa.

75876 to 75882. CROTALARIA spp. Fabaceae.

75876. CROTALARIA sp.

No. 300. Seeds collected near the river in the region of Camp Kifuru, Tanganyika, between Mbulu and Ngorongoro Tanganyika, September 18, 1927. This species is possibly the same as No. 307 [No. 75878].

75877. CROTALARIA sp.

No. 306. September 20, 1927. A species found on the southern slope of Ngorongoro, Tanganyika, in dense brush and weeds. The leaves and blossoms were gone, but there were many pods which had been entered by insects. This may be the same species as No. 317 [No. 75880].

75878. CROTALARIA sp.

No. 307. August 20, 1927. A large-podded species found infrequently throughout northern Tanganyika. The pods are always badly infested with insects which destroy the seeds, and for this reason they are not as desirable as the smaller podded sorts. This species was growing on the southern outside slope of Ngorongoro, Tanganyika. It is possibly the same as No. 300 [No. 75875].

75879. CROTALARIA sp.

No. 308. September 22, 1927. A species of rather fragile appearance found near the old Siedentopf farm in the Ngorongoro Crater, Tanganyika.

75880. CROTALARIA sp.

No. 317. September 25, 1927. A species found rarely among tall weeds and brush near Camp Nyoka, Ngorongoro, Tanganyika. It may be the same as No. 306 [No. 75877].

75881. CROTALARIA sp.

No. 318. September 20, 1927. An unusual species found in brush land near Camp Nyoka, Ngorongoro, Tanganyika.

75882. CROTALARIA sp.

No. 412. August 4, 1927. Kibosho Road, near Moshi, Tanganyika. This species is scarce and not a strong grower.

75883. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

No. 360. October 27, 1927. A variety, said to have come originally from South Africa, presented by H. E. A. Durham, postmaster of Nairobi, Kenya Colony. It is superior to any of the dozens of varieties, including American ones, which Mr. Durham has tried.

75884. CYNODON DACTYLON (L.) Pers. Poaceae. **Bermuda grass.**

No. 312. September 22, 1927. The type of Bermuda grass found in the Ngorongoro Crater, Tanganyika. Here it must endure severe droughts, excessive grazing, and periodical or semiannual burning. It produces seeds freely. Many forms of *Cynodon dactylon* occur in east Africa, this being one of the most common.

For previous introduction see No. 62037.

75885. DOLICHOS LABLAB L. Fabaceae. **Hyacinth bean.**

No. 313. Old Siedentopf farm, Ngorongoro, Tanganyika. September 22, 1927. A common rather weedy species, with purple flowers, widely distributed throughout Kenya Colony and Tanganyika. It is cultivated to some extent by the natives.

75886. ELICHRYSUM sp. Asteraceae. **Everlasting.**

No. 592. Mount Kenya, Kenya Colony. October 13, 1927. A large white everlasting that is frequent in open places in forests and in moors.

75887. ERAGROSTIS sp. Poaceae. **Grass.**

No. 330. September 25, 1927. The predominating species on the black waxy sun-cracked soil between Camp Mukungani and Ngorongoro, Tanganyika. This grass has been seen occasionally elsewhere in east Africa, but never in such abundance.

75888. ERAGROSTIS sp. Poaceae. **Grass.**

No. 411. August 24, 1927. A common grass found in clearings on bush land near Moshi, Tanganyika.

75889 to 75891. FESTUCA spp. Poaceae. **Grass.**

75889. FESTUCA sp.

No. 310. Camp Nyoka, Ngorongoro, Tanganyika. September 19, 1927. An unknown grass, one of the chief species aside from *Themeda triandra*, in the thorn-bush and grass plains between Mbulu and Ngorongoro.

75865 to 75959—Continued.

75890. FESTUCA sp.

No. 322. August 31, 1927. *Kibo* grass. These seeds were gathered from the small bunches of grass growing in the gravel on the saddle toward Kibo for about a mile, then found as widely scattered plants in moist sheltered places as far as Hans Meyer's cave or a little beyond. This species and a Gynaphaliumlike plant are the ultimate vegetation on the Kibo Peak. The extreme altitude is about 17,000 feet.

75891. FESTUCA sp.

No. 351. Camp Mitchell and vicinity. October, 1927. The most abundant grass of forage quality at high altitudes on Mount Kenya, Kenya Colony. It occurs in forest glades and among bamboos at an altitude of 6,000 feet to the limit of the forest and for perhaps another 2,000 feet up on to the high moors. The highest altitude is about 12,000 feet.

75892. GOMPHOCARPUS sp. Asclepiadaceae.

No. 500. September 22, 1927. A milkweed of possible ornamental value infrequent near marshy lands in Ngorongoro Crater, Tanganyika.

75893. GREVILLEA BANKSII R. Br. Proteaceae.

No. 361. October 25, 1927. An ornamental Australian red-flowered shrub or small tree, 8 to 10 feet high, growing in the garden of Lady Muriel Jex-Blake, Nairobi, Kenya Colony.

For previous introduction see No. 74680.

75894 and 75895. HIBISCUS spp. Malvaceae.

October 25, 1927. From the garden of Lady Muriel Jex-Blake, Nairobi, Kenya Colony.

75894. HIBISCUS sp.

No. 364. An ornamental shrub, 6 to 8 feet high, with yellow flowers.

75895. HIBISCUS sp.

No. 365. An ornamental shrub with purple flowers.

75896 and 75897. HYPARRHENIA HIRTA (L.) Stapf. (*Andropogon hirtus* L.). Poaceae. **Grass.**

75896. No. 346a. October 12, 1927. One of the less common grasses in the forest meadows on Mount Kenya, Kenya Colony.

75897. No. 346b. October 14, 1927. Seeds collected on a gravelly ridge beside the road leading to Capt. A. E. Miller's farm at Kalabu, Nanyuki, Kenya Colony.

75898 to 75901. HYPARRHENIA spp. Poaceae. **Grass.**

75898. HYPARRHENIA sp.

No. 293. August 22, 1927. *Red* oatgrass. A tall coarse grass, 6 to 10 feet tall, very common along the road leading to the Kibosho mission, near Moshi, Tanganyika. The heads are similar to the red oatgrass from Kitui and Kinangop Plateau, but the plants are larger and coarser than the latter. This is a very handsome species when ripening, because of the red glumes.

75899. HYPARRHENIA sp.

No. 327. Kilimanjaro Mountain, Tanganyika. August 31, 1927. A rare grass obviously not very aggressive here.

75900. HYPARRHENIA sp.

No. 349. October 14, 1927. A thatching grass used by Capt. A. E. Miller, Kalabu, Nanyuki, Kenya Colony. It is a very abundant grass in the plains around the northwest side of Mount Kenya, Kenya Colony.

75865 to 75959—Continued.

75901. HYPARRHENIA sp.

No. 406. August 24, 1927. A frequent species along the old Moshi and Kibosho Roads and clearings north of Moshi, Tanganyika.

75902. HYPHAENE sp. Phoenicaceae. **Palm.**

No. 623. September 13, 1927. A species growing in the palm belt on the low flat land south of Lake Manyara, Tanganyika.

75903. INDIGOFERA sp. Fabaceae.

No. 305. Ngorongoro, Tanganyika. September 20, 1927. A common species in the dense brush which occupies the burned-over areas on the outside of the smooth side of Ngorongoro. It is an excellent seed producer, partly because the pods are not as subject to insect invasion as the larger podded species.

75904. IPOMOEA sp. Convolvulaceae.

No. 624. September 27, 1927. A shrub common in the grass and Acacia area between Ngorongoro and Mbulu, Tanganyika. The tops are killed with each grass fire and new shoots are sent out.

75905. KALANCHOE sp. Crassulaceae.

No. 363. October 25, 1927. An ornamental shrub with panicles of large flowers, growing in the garden of Lady Muriel Jex-Blake, Nairobi, Kenya Colony.

75906. KOELERIA CONVOLUTA Hochst. Poaceae. **Grass.**

No. 354. Camp Soames, Mount Kenya, Kenya Colony. October 13, 1927. A rather rare grass, found at altitudes of 10,000 to 12,000 feet in the upper grasslands next to the moors.

75907. LEPTOCHLOA sp. Poaceae. **Grass.**

No. 405. August 24, 1927. A common leafy grass 6 to 7 feet tall and of excellent seed habit, growing on clearings north of Moshi, near Kilimanjaro Mountain, and along the old Moshi and Kibosho Roads, Tanganyika. It is found up to an altitude of 5,000 feet.

75908 and 75909. LOBELIA spp. Campanulaceae.

75908. LOBELIA sp.

No. 602. A giant species with large broad bracts, scattered throughout the moors above the forests on Mount Kenya, Kenya Colony. October 13, 1927.

75909. LOBELIA sp.

No. 603. A giant species with long linear bracts, scattered throughout the moors above the forests on Mount Kenya, Kenya Colony. October 13, 1927.

75910. LOTUS sp. Fabaceae.

No. 315. Camp 1 (in the green-barked Mimosas), Ngorongoro, Tanganyika. September 21, 1927. The only legume of any possible forage value found on the plains on the floor of Ngorongoro Crater. It occurs in occasional small areas among the Bermuda grass and blossoms rather sparingly.

75911 to 75915. LUPINUS spp. Fabaceae.

Presented by W. L. Watt, Superintendent, Scott Agricultural Laboratories, Nairobi, Kenya Colony. October 6, 1927.

75911. LUPINUS ALBUS L. **White lupine.**

No. 335. An ovate-leaved, white-flowered legume used for fodder.

For previous introduction see No. 52752.

75865 to 75959—Continued.

75912 and 75913. LUPINUS ANGUSTIFOLIUS L. **Lupine.**

A pinnate-leaved, blue-flowered lupine of European origin.

75912. No. 336. 75913. No. 338.

75914. LUPINUS HIRSUTUS L. **European blue lupine.**

No. 337. An ovate-leaved, blue-flowered lupine of European origin, used for forage and green manure.

75915. LUPINUS LUTEUS L. **European yellow lupine.**

No. 339. A yellow-flowered lupine, 2 feet high, used for fodder.

For previous introduction see No. 52753.

75916 to 75919. MORAEA spp. Iridaceae.

Ornamental bulbous irislike plants.

75916. MORAEA sp.

No. 299. A species growing near Moshi, Tanganyika, August 22, 1927.

75917. MORAEA sp.

No. 329. September 26, 1927. A small, light-blue plant growing in the burned grassland in a little valley to the left of Camp Kifuru, Tanganyika. The bulbs are 5 to 8 inches under ground in soil as dry and hard as an adobe brick.

75918. MORAEA sp.

No. 342. A species growing in a small meadow between Camp Kangeta and Camp Mitchell, Mount Kenya, Kenya Colony, October 11, 1927. This species and No. 343 [No. 75919] are the only ones seen at a higher altitude than 6,000 feet.

75919. MORAEA sp.

No. 343. A small purple-flowered plant growing in a small meadow between 8,000 and 9,000 feet altitude, on Mount Kenya, between Camp Kangeta and Camp Mitchell, October 11, 1927.

75920. PENNISETUM CLANDESTINUM Hochst. Poaceae. **Kikuyu grass.**

No. 332. Nairobi, Kenya Colony. September 30, 1927. A rapid-growing perennial stoloniferous grass, native to South Africa, where it is considered a valuable drought-resistant summer pasture grass.

For previous introduction see No. 74240.

75921. PENNISETUM sp. Poaceae. **Grass.**

Mixed seeds.

No. 95. Collected near Nairobi, Kenya Colony, July 10, 1927.

No. 475. Collected near Arusha, toward Mbugwe, Tanganyika, September 12, 1927.

75922. PENTASCHISTIS sp. Poaceae. **Grass.**

No. 324. August 31, 1927. Next to No. 322 [No. 75890], this is the most abundant grass growing at a high altitude on Kilimanjaro Mountain, Tanganyika, and the only other one of any consequence. These seeds were gathered on the gravel plain of the saddle between Mwanza and Kibo, at an altitude of about 15,000 feet.

75923. PHALARIS sp. Poaceae. **Grass.**

No. 355. October 14, 1927. *Toowomba canary* grass. From the grass garden of Raymond Hook, Nanyuki, Kenya Colony. Mr. Hook collected the original seeds in southern Tanganyika.

75865 to 75959—Continued.

75924. PHASEOLUS LUNATUS L. Fabaceae. **Lima bean.**

No. 334. October 22, 1927. Presented by W. L. Watt, Superintendent, Scott Agricultural Laboratories, Nairobi, Kenya Colony. A very strong-growing bean which makes excellent snap or shelled beans and would probably be a good soil-improving legume.

75925. PROTEA sp. Proteaceae.

No. 437. August 28, 1927. A frequent species in grassland near the heath above the forests on Kilimanjaro Mountain, Tanganyika. The flowers resemble those of a magnolia.

75926. RICINUS COMMUNIS L. Euphorbiaceae. **Castor-bean.**

No. 344. October 11, 1927. A variety grown by Raymond Hook, Nanyuki, Kenya Colony, from seed selected by him in northern Nyasaland. It is the best castor-bean that he has been able to obtain, and yields 40 per cent oil.

75927. SENECIO sp. Asteraceae.

No. 435. Peter's hut, Kilimanjaro Mountain, Tanganyika, August 28, 1927. A giant species with the trunk 7 feet or more high. Leaves about 1 to 1½ feet long. It is found scattered along creeks and slopes.

75928. SENECIO sp. Asteraceae.

No. 605. October 13, 1927. An ornamental composite shrub, with purple flowers, growing in the moors above the forests on Mount Kenya, Kenya Colony.

75929. SETARIA sp. Poaceae. **Grass.**

No. 321. Near Bismarck's hut, Kilimanjaro Mountain, Tanganyika, August 21, 1927. A grass resembling No. 208 [No. 75304], but more compact and leafy.

75930. TELFAIRIA PEDATA (J. E. Smith) Hook. Cucurbitaceae.

No. 358. Embu, Kenya Colony, October 26, 1927. A shrubby vine with pale-purple flowers and oblong fruits, 2 to 3 feet long, containing an abundance of seeds which yield an oil said to be equal in quality to olive oil. The seeds are also boiled and eaten by the natives.

For previous introduction see No. 61504.

75931. TRICHOPTERYX sp. Poaceae. **Grass.**

No. 309. September 15, 1927. An unknown species of good forage appearance found infrequently along the road between Geheri and Mbulu, Tanganyika.

75932. TRICHOPTERYX sp. Poaceae. **Grass.**

No. 345. October 12, 1927. A rather common grass in the meadows in the forest on the northern and western slopes of Mount Kenya, Kenya Colony.

75933 to 75949. TRIFOLIUM spp. Fabaceae. **Clover.**

75933. TRIFOLIUM sp.

No. 228. Uplands, Kenya Colony, September 26, 1927. *Uplands creeping* red clover. A fairly common species in the Kenya highlands between altitudes of 7,000 and 9,500 feet. It occurs higher in the mountains than *Trifolium johnstonii*, but is not so abundant. The foliage is rather stiff and hard, and claimed by some to be neither palatable nor nutritious. Several forms and colors of blossoms were seen but are believed to be variations of the same species. The flowers are wine-colored or lighter, turning blue in herbarium specimens. It is not a profuse bloomer and is usually a shy seeder.

For previous introduction see No. 75386.

75865 to 75959—Continued.

75934. TRIFOLIUM sp.

No. 290. August 22, 1927. A small purple-flowered clover common along the road up to the Kibosho mission, from Moshi, on Kilimanjaro Mountain, Tanganyika. These seeds were collected in the mission grounds along the side of a ravine. They are similar to No. 291 [No. 75935], except that the flowers are purplish magenta instead of deep purple. No. 291 is usually the smaller plant of the two.

75935. TRIFOLIUM sp.

No. 291. Collected along a ravine at the Kibosho mission, above Moshi, on Kilimanjaro Mountain, Tanganyika, at an altitude of 4,500 feet, August 22, 1927. A species similar to No. 290 [No. 75934], except it is somewhat smaller and the flowers are a deep purple instead of light purplish magenta. It is not as common as No. 290 and ripens a little earlier.

75936. TRIFOLIUM sp.

No. 294. Madschame mission, Moshi, Tanganyika, August 22, 1927. A very scarce clover in the closely grazed Kikuyu grass "downs," just above the mission, at an altitude of about 5,000 feet. It is not nearly as abundant as Nos. 290 and 291 [Nos. 75934 and 75935]. It may be a form of *Trifolium johnstonii*, but the florets are mostly clear white.

75937 and 75938. TRIFOLIUM spp.

A small red-flowered clover very abundant on Kilimanjaro Mountain and Mount Meru, Tanganyika. It occurs abundantly in the Kikuyu grass "downs," just below the forest, at altitudes between 3,000 and 6,000 feet. It stands very close grazing, but where not grazed it grows a foot or more high.

75937. TRIFOLIUM sp.

No. 295a. Collected near the first waterfall above Marangu on the way to Nanga, Moshi, Tanganyika, August 26, 1927.

75938. TRIFOLIUM sp.

No. 295b. Collected along the bank of a stream on Mount Meru, Arusha, Tanganyika, September 30, 1927.

75939. TRIFOLIUM sp.

No. 296. August 23, 1927. A dwarf white-flowered clover growing at the Madschame mission, Moshi, Tanganyika. It may be the same as No. 294 [No. 75936], but is much smaller and apparently noncreeping. It is similar in appearance to No. 295 [Nos. 75937, 75938, 75968], but has white flowers. It is not common.

75940. TRIFOLIUM sp.

No. 297. Madschame mission, Moshi, Tanganyika, August 23, 1927. A very scarce violet-flowered clover which may be the same as No. 290 [No. 75934], but is quite distinct from Nos. 291 and 295 [Nos. 75935, 75937, 75938, and 75968]. It ripens several weeks later than No. 295. On ungrazed land it becomes a foot or more tall and somewhat resembles *Trifolium hybridum* in habit.

75941. TRIFOLIUM sp.

No. 301. September 19, 1927. A red-flowered clover resembling No. 290 [No. 75934], growing at the edge of the water of a little stream which comes down from the rim of Ngorongoro, at Camp Nyoka, Tanganyika. The branches were actually trailing in and under the water with roots from the nodes striking down through the water. The main taproot, however, was always in the drier soil at the edge of the stream.

75865 to 75959—Continued.

75942. TRIFOLIUM sp.

No. 302a. September 22, 1927. A large pink-flowered clover, similar in appearance and habit to alsike clover, growing among grass and as a weed in an adjacent cornfield on the old Siedentopf farm, inside the Ngorongoro Crater, Tanganyika. This is the only clover found in any luxuriance in Ngorongoro, and it is probably the one referred to by Mr. Barnes in his book, Through the Great Crater Land to the Congo. At this season (late September) there is not a trace of this or any other clover on the vast plains that form the floor of the great crater. It seems doubtful if any clover exists on the actual floor, since the surface is covered with typical oatgrass and Bermuda grass flora which is obviously subject to severe drought and which, elsewhere, never contains clover. No. 302a apparently has many forms, some of them closely resembling *Trifolium johnstonii*.

75943. TRIFOLIUM sp.

No. 302b. September 25, 1927. This species is probably the same as No. 302a [No. 75942], but it was growing in the wet meadow, about half a mile from Camp Nyoka, on the outside of Ngorongoro, Tanganyika.

75944. TRIFOLIUM sp.

No. 314. September 25, 1927. A single plant, probably of No. 302a [No. 75942], growing in the wet meadow about half a mile from Camp Nyoka, on the outside of Ngorongoro, Tanganyika. It is conspicuous because of the distinct pink spots in the centers of the leaflets and the distinct red margins of the young leaflets.

75945. TRIFOLIUM sp.

No. 316. September 25, 1927. A single plant, probably of No. 302a [No. 75942], growing in the wet meadow about half a mile from Camp Nyoka, on the outside of Ngorongoro, Tanganyika. It is conspicuous because of the distinct white midribs. This species closely resembles *Trifolium johnstonii*.

75946. TRIFOLIUM sp.

No. 319. August 31, 1927. A relatively large creeping pink-flowered clover growing in the path between Bismarck's and Peter's huts, Kilimanjaro Mountain, Tanganyika, at altitudes between 10,000 and 11,000 feet. It forms a dense mat in open places between the bunch grass, but produces very few blossoms at this season. It is undoubtedly a good grazing clover, but its apparent poor seeding habit is a disadvantage.

75947. TRIFOLIUM sp.

No. 347. A fine clover, abundant on Mount Kenya, Kenya Colony, between 6,000 and 13,000 feet altitude. It grows only in locations with plenty of soil moisture. In places the paths and meadows are a solid mass of this clover, which ranges in height between 2 and 16 inches, depending upon conditions. It blooms profusely, seeds freely, and ripens in late November or December. It stands trampling and close grazing, but also grows large enough for hay. This species is one of the best in east Africa.

75948. TRIFOLIUM sp.

No. 348. October 14, 1927. A white clover, which may be a form of *Trifolium johnstonii*, found occasionally in paths and meadows on Mount Kenya, Kenya Colony, at altitudes between 5,000 and 8,000 feet. It is very abundant in the prairies at the foot of the mountain on the way to Capt. A. W. Miller's farm at Kalabu, Nanyuki, Kenya Colony, from Soames Camp. It is not nearly as abundant on Mount Kenya as No. 347 [No. 75947], and ceases altogether at altitudes of 8,000 or 9,000 feet.

75865 to 75959—Continued.

75949. TRIFOLIUM sp.

No. 350. October 11, 1927. A lavender-flowered clover found in the path between Camp Kanget and Camp Mitchell, Mount Kenya, Kenya Colony. It may be merely a mixture of Nos. 347 and 348 [Nos. 75947 and 75948], but there seems to be a lavender-flowered clover at this point not entirely like either of these.

75950. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

No. 367. *Kenya Governor.* This variety is now being planted on large acreages in the highlands of Kenya. Wheat production was at a standstill because of rust until this variety was brought out by the Scott Agricultural Laboratories, Nairobi, Kenya Colony. While not entirely rustproof this variety is more resistant than any wheat obtained from America, Argentina, or Australia.

75951. VICIA sp. Fabaceae. **Vetch.**

No. 298. August 23, 1927. A single plant found along one of the native irrigation ditches on the Fau Plateau, above the Madschame mission, Kilimanjaro Mountain, Tanganyika. This species was not seen in any other section of east Africa.

75952. (Undetermined.)

No. 340. October 1, 1927. Presented by A. E. Harrar, agricultural officer, Moshi, Tanganyika. A fine-appearing pink-flowered leafy plant 2 feet 6 inches high, of possible value as green manure.

75953. (Undetermined.)

No. 366. October 12, 1927. An unknown flowering shrub growing near Camp Mitchell, Mount Kenya, Kenya Colony.

75954. (Undetermined.)

No. 422. August 27, 1927. An undetermined species growing in grassland near Bismarck's hut, Kilimanjaro Mountain, Tanganyika.

75955. (Undetermined.)

No. 471. August 31, 1927. A tall ranunculaceous plant growing at the edge of the forest above Bismarck's hut, Kilimanjaro Mountain, Tanganyika.

75956. (Undetermined.)

No. 522. October 7, 1927. A shrub 2 to 3 feet high found along the road near Fort Hall, Kenya Colony. The bark is used by the natives for tying, etc.

75957. (Undetermined.)

No. 611. October 14, 1927. A shrub growing in open grassy areas in cedar and olive forests on Mount Kenya, Kenya Colony. The berries are used as vermifuge by the natives.

75958. (Undetermined.)

No. 625. September, 1927. A shrub or small tree growing in grassland between Ngorongoro and Mbulu, Tanganyika.

75959. (Undetermined.)

No. 628. October 25, 1927. A tuliplike leaf growth on shallow soil in grassland near Thika River, Ol Donyo Sabuk.

75960. BRACHIARIA DISTACHYA (L.) A. Camus. Poaceae. Grass.

From Suva, Fiji Islands. Seeds presented by J. D. Tothill, of the Department of Agriculture. Received February 11, 1928.

A leafy variety, 2½ feet high, which makes an excellent pasture and hay grass.

For previous introduction see No. 41746.

75961 to 75966.

From Darjiling, India. Seeds presented by J. E. Leslie, Curator of the Lloyd Botanic Garden. Received February 6, 1928.

75961. INDIGOFERA DOSUA Buch.-Ham. Fabaceae. **Indigo.**

A low shrub with woody branches, clothed with a gray or brownish short pubescence. The leaves, 1 to 3 inches long, bear leaflets one-fourth to one-half inch long which are dull green above and glaucous below. The racemes of bright-red flowers are 1 to 3 inches long with lanceolate-cuspidate silky bracts.

For previous introduction see No. 50368.

75962. KADSURA ROXBURGHIANA Arnott. Magnoliaceae.

A subtropical woody climber native to India. The ovate-acuminate leathery leaves are 6 inches long; the axillary white flowers are half an inch across, and the heads of ripe berries are 2 inches in diameter.

75963. LUCULIA GRATISSIMA (Wall.) Sweet. Rubiaceae.

A tree or spreading shrub, native to the temperate Himalayas, where it attains a height of 10 to 16 feet. It is a very attractive ornamental because of the gorgeous rounded masses of pink or rose-colored flowers. It is said to make an excellent table plant when grown in a pot and treated somewhat similarly to a gardenia.

For previous introduction see No. 68339.

75964. PITTOSPORUM FLORIBUNDUM Wight and Arnott. Pittosporaceae.

A handsome subtropical tree with a short straight trunk, spreading branches, and numerous yellowish flowers in terminal panicles. The tree has light-colored, strong, tough wood and yields an aromatic yellow resin or oleoresin having very adhesive properties. This tree is native to the outer Himalayas, ascending to 3,500 feet.

For previous introduction see No. 73153.

75965. POTERIUM DIANDRUM Hook. f. Rosaceae.

A herbaceous perennial with erect branching stems 2 to 3 feet high, native to India. The leaves are pinnately compound, and the small heads of dark-purple flowers are on erect slender axillary stems.

75966. RHODODENDRON CAMPANULATUM Don. Ericaceae.

A large evergreen shrub of stiff, spreading habit, sometimes 12 feet high, with oval leaves which are densely covered beneath with a red-brown felt. The flowers, of various rosy purple shades and about 2 inches across, are produced during April in rather loose clusters about 4 inches in diameter.

75967. GOSSYPIUM sp. Malvaceae. **Cotton.**

From Corinto, Nicaragua. Seeds presented by Christian T. Steger, American consul. Received February 13, 1928.

A variety grown locally which is said to be immune from attack by the boll weevil.

75968. TRIFOLIUM sp. Fabaceae. **Clover.**

From east Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received in January, 1928.

No. 295. August 23, 1927. A small red-flowered clover very abundant in the kikuyu grass "downs," on Kilimanjaro Mountain, just above the Madschame mission, Tanganyika, at an altitude of 5,000 feet. The "downs" are generally very closely grazed, but where not grazed this species grows a foot or more tall.

75969. SEVERINIA BUXIFOLIA (Poir.) Ten. (*Atalantia buxifolia* Oliver). Rutaceae.

A variety of unknown origin obtained through W. T. Swingle, Bureau of Plant Industry. Received February 16, 1928.

A subtropical thorny shrub resistant to alkali and salt. It has shiny green leaves, clusters of small white flowers, and dark-red berrylike fruits.

For previous introduction see No. 74188.

75970. CROTALARIA INCANA L. Fabaceae.

From Trujillo, Honduras. Seeds collected by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour 1928 expedition. Received February 16, 1928.

No. 1–a. January 23, 1928. A yellow and bronze-colored flowering plant 18 to 24 inches high. The plants from which these seeds were collected were growing in almost pure beach sand on the coast of the Bay of Trujillo.

75971 and 75972. SOLANUM MACROCARPON L. Solanaceae.

From Luchenza, Nyasaland Protectorate, Africa. Seeds presented by L. S. Norman. Received February 17, 1928.

75971. A stout undershrub with a much-branched smooth stem and ovate sinuate-margined leaves 8 inches long. The racemose cymes, opposite the leaves, bear blue-purple flowers, 1 to 2 inches broad, which are followed by globose yellow fruits the size of an apple.

For previous introduction see No. 46330.

75972. A variety grown locally.

75973 to 75979.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director, Buitenzorg Botanic Gardens. Received February 17, 1928.

75973 to 75975. ALBIZZIA spp. Mimosaceae.

75973. ALBIZZIA FALCATA (L.) Backer (*A. moluccana* Miquel).

A rapid-growing tropical tree with large feathery leaves and small globular flower heads. It is used for shade in coffee plantations.

For previous introduction see No. 68838.

75973 to 75979—Continued.

75974. ALBIZZIA LUCIDA (Roxb.) Benth.

A handsome spreading leguminous tree with attractive feathery leaves, native to the East Indies.

For previous introduction see No. 73223.

75975. ALBIZZIA SAPONARIA (Lour.) Blume.

A small tree, native to the East Indies, with gray bark and alternate double compound leaves. The bark contains saponin and is used by the natives of the Philippines as soap for washing their hair.

For previous introduction see No. 68840.

75976 to 75978. CASSIA spp. Caesalpiniaceae.

75976. CASSIA ABSUS L.

An erect annual tropical legume, about 2 feet high, with small reddish yellow flowers. It is a native to India and Egypt.

For previous introduction see No. 67899.

75977. CASSIA MARGINATA Roxb.

A small tropical tree with rose-colored flowers and drooping branches. It is native to the East Indies.

For previous introduction see No. 68846.

75978. CASSIA QUINQUANGULATA L. Rich.

A yellow-flowered tropical evergreen shrub 3 feet high.

For previous introduction see No. 72432.

75979. CROTALARIA ALBIDA Heyne. Fabaceae.

A tropical Indian shrub, 1 to 2 feet high, with numerous slender silky pubescent branches, firm narrow leaves, short racemes of pale-yellow flowers, and oblong pods about half an inch long.

For previous introduction see No. 65698.

75980. LYCOPERSICON ESCULENTUM Mill. Solanaceae. **Tomato.**

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received February 17, 1928.

King Humbert. A medium-early, tall, vigorous variety with long clusters of 8 or 10 very fleshy, bright-scarlet fruits which resemble a hen's egg in size and shape.

75981. HICORIA CATHAYENSIS (Sargent) Chun. Juglandaceae. **Hickory.**

From Nanking, China. Seeds purchased from Prof. J. H. Reisner, of the University of Nanking. Received February 21, 1928.

A Chinese tree up to 75 feet high, with a gray-barked trunk 1 to 2 feet in diameter and compound leaves about a foot long, composed of five to seven pairs of narrowly oval leaflets which are pale green above and rusty brown beneath. The thick-shelled nuts, about an inch long, are eaten as a sweetmeat, and a clear yellow oil is extracted from them for use in fancy pastry. The strong tough wood is used for tool handles.

For previous introduction see No. 65708.

75982 to 75990.

From Ottawa, Canada. Seeds presented by J. Adams, botanist, Central Experimental Farm. Received February 21, 1928.

75982. COTONEASTER sp. Malaceae.

No. 932. Originally from Turkestan.

75982 to 75990—Continued.

75983. INCARVILLEA SINENSIS Lam. Bignoniaceae.

No. 80. A biennial ornamental with long spikes of rosy red or yellow flowers. Native to China.

75984 to 75990. LONICERA spp. Caprifoliaceae. **Honeysuckle.**

75984. LONICERA ALPIGENA L.

No. 125. An ornamental shrub up to 10 feet high, native to central Europe. The greenish yellow flowers, tinged with dull red, are borne in the axils of the elliptic leaves, on stalks 2 inches long, and are followed by cherrylike scarlet fruits.

For previous introduction see No. 74686.

75985. LONICERA CONFUSA DC.

No. 137. A half-evergreen twining shrub, native to eastern China, with dark-green, ovate leaves and black fruits. The flowers, in dense panicles, are white, changing to yellow, and are delightfully fragrant.

75986. LONICERA NERVOSA Maxim.

No. 139. A hardy graceful Chinese shrub, about 10 feet high, with slender, dark-purple branchlets, oval, purple-veined leaves, small pink flowers, and black berries.

For previous introduction see No. 66811.

75987. LONICERA ORIENTALIS Lam.

No. 143. An ornamental shrub about 10 feet high, native to Asia Minor. The ovate-lanceolate leaves are 2 to 4 inches long, and the small, dull pink to violet flowers are followed by black fruits.

75988. LONICERA PYRENAICA L.

No. 145. A small upright shrub 3 to 4 feet high, native to southern Europe. The leaves are ovate to oblong, bluish green above and whitish below, and the nodding flowers, on slender stalks, are pinkish white and nearly an inch long. The subglobose berries are red.

75989. LONICERA TATARICA PARVIFOLIA Jaeger.

No. 144. A form of the Tatarian honeysuckle native to Turkestan, which has ovate-elliptic bluish green leaves 2 inches long, small white flowers, and orange-red fruits.

75990. LONICERA XYLOSTEOIDES Tausch (*L. micrantha* Zabel).

No. 135. An ornamental shrub, considered to be a hybrid between *Lonicera tatarica* and *L. xylosteum*, with rhombic-ovate, bluish green leaves and small pinkish flowers.

75991 to 75994.

From Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received February 24, 1928.

75991. INDIGOFERA sp. Fabaceae. **Indigo.**

No. 397. From the Kalalu farm, north of Nanyuki, Kenya Colony, October, 1927. Apparently a native species on the plains northwest of Mount Kenya, Kenya Colony. It is one of the few legumes that appears to be indigenous to the thorn-bush plains.

75992. PANICUM TRICHOCLADUM Hack. Poaceae. **Grass.**

No. 395. December 21, 1927. Presented by Dr. I. B. Pole Evans, botanist, Department of Agriculture, Pretoria, Union of South Africa. One of the promising grasses for the high dry veldt in the Transvaal. It is a perennial grass

75991 to 75994—Continued.

with woody stems climbing to 8 feet, native to east Africa. The narrowly lanceolate softly pubescent leaves are 6 inches long, and the flowers are in ovate panicles 2 to 6 inches long.

75993. QUAMOCLIT LOBATA (Cerv.) House (*Ipomoea versicolor* Meissn.). Convolvulaceae. **Crimson starglory.**

No. 394. Presented by W. L. Watt, Superintendent, Scott Agricultural Laboratories, Nairobi, Kenya Colony, November 20, 1927. A vine with brilliant red and yellow flowers, believed to be from tropical America, growing as a volunteer among blue-flowered lupines in a flower border on the grounds of the Scott laboratories. It is a vigorous perennial climber 15 to 20 feet high, the 3-lobed leaves have a cordate base, and the bag-shaped corolla opens crimson and fades to pale yellow.

75994. TRIFOLIUM BURCHELLIANUM Seringe. Fabaceae.

No. 396. December 21, 1927. Growing at the Department of Agriculture, Pretoria, Union of South Africa. Dr. I. B. Pole Evans states that this is the most cold-resistant of the indigenous clovers. It is a perennial South African clover with prostrate rooting stems 1 to 2 feet long. The three broadly obcordate leaflets are on petioles 3 inches long, and the flower heads closely resemble those of white clover, *Trifolium repens*, but the teeth of the calyx lobes are longer than the tube while in white clover they are shorter than the tube.

75995. LAVANDULA SPICA L. Menthaceae. **Lavender.**

From Cannes, France. Seeds presented by F. Chauvet & Co. Received February 24, 1928.

Variety *Delphinensis*. A Mediterranean subshrub up to 3 feet high, with white tomentose young leaves and interrupted spikes of lavender flowers. It is a source of lavender oil which is used in perfumery, medicine, and the manufacture of varnish.

75996 and 75997. LILIUM spp. Liliaceae.

From Tunbridge Wells, England. Bulbs purchased from R. Wallace & Co. Received March 1, 1928.

75996. LILIUM CONCOLOR Salisb. **Morningstar lily.**

Variety *coridon*. A handsome form from Mongolia, with beautiful citron yellow flowers more or less spotted with purplish brown.

75997. LILIUM SPECIOSUM Thunb.

Variety *album novum*. A form distinct from the variety *Kraetzeri*, with pure white flowers which have beautiful golden-yellow anthers.

75998 and 75999.

From Summit, Canal Zone. Bulbs presented by J. E. Higgins, Plant Introduction Garden. Received September 8, 1927. Numbered in March, 1928.

75998. (Undetermined.)

A bulbous plant with large white flowers, growing in the mountains of Ecuador at an altitude of 6,000 feet.

75999. (Undetermined.)

A bulbous plant growing in the mountains of Bolivia at an altitude of 9,000 feet. The pale-yellow flowers are campanulate, deeply segmented, about 2 inches in diameter, and arranged in large spikes a foot long. The bulbs are 3 to 4 inches in diameter. This plant covers large areas on steep hillsides and blooms early in the spring before the leaves appear.

76000 to 76007. PRUNUS spp. Amygdalaceae.

From Saonara, Padova, Italy. Plants purchased from Fratelli Sgaravatti. Received January 4, 1928.

76000. PRUNUS AVIUM L. **Sweet cherry.**

Napoleone (*Imbrian*). A variety which produces large, brilliant rose-colored fruits, with very agreeable, white pulp, ripening during June and July.

76001 to 76007. PRUNUS CERASUS L. **Sour cherry.**

76001. *Del Nord*. A variety producing medium-sized juicy and somewhat acid fruits which are rose red passing to purple. They ripen during June.

76002. *Imperiale*. A variety producing large bright-red fruits which are tender, sweet, and slightly acid. They ripen during June and July.

76003. *Lodgiana*. A variety with medium-sized red subacid fruits which ripen during June and July.

76004. *Marasca di Ostheim*. A variety with medium-sized deep-red fruits which ripen during June.

76005. *Marasca moscata*. A large-fruited variety with especially fine flavor.

76006. *Marasca olandense*. A large black-fruited variety.

76007. *Ministro Podbielski*. A variety producing very large deep-red fruits with subacid flesh and colored juice. They ripen during July.

76008. MELIOSMA DILLENIAEFOLIA Wall. Sabiaceae.

From Dehra Dun, United Provinces, India. Seeds presented by R. N. Parker, forest botanist of the Forest Research Institute and College. Received January 6, 1928.

A small tree up to 20 feet high, native to the temperate slopes of the Himalayas in India. The branchlets, petioles, and panicles are covered with a soft rusty pubescence. The obovate, coarsely toothed leaves are a foot long, and the small white flowers are borne in lax panicles.

76009. PANAX QUINQUEFOLIUM L. Araliaceae. **Ginseng.**

From Tokyo, Japan. Seeds presented by Dr. T. Kariyone, of the Imperial Hygienic Laboratory. Received January 6, 1928.

A Japanese ginseng which is cultivated in Japan for export to China, where it is highly regarded for medicinal purposes.

For previous introduction see No. 36282.

76010. CASTANEA MOLLISSIMA Blume. Fagaceae. **Hairy chestnut.**

From Fa Hua Ssu Temple, Chihli, China. Seeds obtained through Peter Liu, Peking. Received January 10, 1928.

Tiger-paw chestnut.

For previous introduction see No. 62257.

76011. DIOSPYROS VIRGINIANA L. Diospyraceae. **Common persimmon.**

From Glenn Dale, Md. Seeds presented by Albert Hassall, Bureau of Animal Industry. Received January 10, 1928.

A variety with unusually sweet and aromatic flesh from which the seeds separate very easily.

76012. DANTHONIA PILOSA R. Br. Poaceae. **Grass.**

From Wellington, New Zealand. Seeds presented by Wright, Stephenson & Co. Received January 10, 1928.

A grass native to New Zealand, which is gradually gaining popularity there as a pasture grass and also in several other countries where it has been tried. It is a perennial and is said to thrive in districts too dry to support almost any other grass. It does well on dry clay hills or stony flats and is considered especially good for sheep.

For previous introduction see No. 64527.

76013. CLEMATIS ARMANDI Franch. Ranunculaceae. **Armand clematis.**

From Paris, France. Plants purchased from Vilmorin-Andrieux & Co. Received January 12, 1928.

A tender ornamental Chinese vine with fragrant starry white flowers. It is characterized by the abundance and the persistence of its foliage.

For previous introduction see No. 63392.

76014. CEIBA ACUMINATA (S. Wats.) Rose. Bombacaceae. **Pochote.**

From Mexico. Cuttings obtained through L. H. Dewey, Bureau of Plant Industry. Received January 10, 1928.

A close relative of the kapok tree (*Ceiba pentandra*), said to form a large or medium-sized tree with a greenish spiny trunk, compound leaves, and hard oblong fruits about 7 inches long which contain whitish down used for stuffing pillows, life preservers, and for making candlewicks. It is native to western and southern Mexico.

For previous introduction see No. 75698.

76015. PSIDIUM GUAJAVA L. Myrtaceae. **Guava.**

From New Smyrna, Fla. Seeds presented by John Y. Detwiler, through R. A. Young, Bureau of Plant Industry. Received January 11, 1928.

A guava with thick flesh which is sweet with a fair amount of acid and comparatively small seeds. The specimen of fruit received, said to be one-third to one-half average size, was 3⅛ by 2¾ inches, yellow skinned and white fleshed, the flesh being nearly three-fourths of an inch thick.

For previous introduction see No. 75724.

76016. ACANTHORHIZA WARSZEWICZII Wendl. Phoenicaceae. **Palm.**

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received January 12, 1928.

A handsome palm with fan-shaped leaves which with age become divided at the base. The lower part of the slender trunk is armed with spinelike roots. Native to Panama.

76017. CITRUS sp. Rutaceae.

From Wellington, New Zealand. Seeds presented by Mrs. Frieda Cobb Blanchard. Received January 14, 1928.

The *Pitcairn Island* orange is a variety grown locally.

76018. PRUNUS sp. Amygdalaceae. **Cherry.**

From Mienchow, Szechwan, China. Seeds of unknown origin. Received January 10, 1928.

Wild cherry fruits.

76019. QUERCUS SUBER L. Fagaceae. **Cork oak.**

From Santa Barbara, Calif. Plants presented by E. O. Orpet, superintendent of parks. Received January 16, 1928.

Seedlings grown by Mr. Orpet from seed produced in California.

76020. LILIUM GIGANTEUM Wall. Liliaceae. **Giant lily.**

From Hong Kong, China. Seeds obtained from A. Tse, through David Griffiths, Bureau of Plant Industry. Received January 19, 1928.

A variety native to the damp thick forests of the Himalayas at altitudes of 7,500 to 9,000 feet, which are covered with snow from November to April. The bulb grows close to the surface in rich black mold. The hollow stems are often from 6 to 9 feet high and are reported to be used for musical pipes. The handsome cordate leaves, shining dark green above and paler beneath, are 10 to 12 inches long on petioles of equal length; both become smaller near the apex. In the large fragrant white flowers, as many as 12 to a raceme, the perianth tube is slightly greenish and the inner surfaces of the segments are tinged with deep purple.

For previous introduction see No. 72610.

76021 to 76024.

From Teheran, Persia. Seeds presented by E. S. Haskell, Director General of Agriculture. Received January 15, 1928.

76021 to 76023. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

These varieties were obtained in the market at Teheran.

76021. No. 1. **76023.** No. 3.

76022. No. 2.

76024. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

A variety from the financial agent of Bojnoord, Khorossan Province. The Persian name for this type of melon is *kharbooseh*. It is an elongated oval melon, 4 to 7 inches by 10 to 20 inches, with a light yellow to nearly white surface, and is rather smooth. The flesh is white, 1½ to 2 inches thick, and free from fiber.

76025 to 76027. LENS ESCULENTA Moench. Fabaceae. **Lentil.**

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received January 18, 1928.

76025. *Lentillon de Mars.* Seeds very small, very thin skinned, with a delicate flavor.

76026. *Large blond.* Seeds very broad, flat, of excellent quality. A variety largely cultivated.

76027. *Verte du Puy.* Seeds small, thick, pale green speckled with dark green.

76028. ANDROPOGON ISCHAEMUM L. Poaceae. **Grass.**

From Brignoles, France. Seeds presented by R. Salgues, Director of the Brignoles Botanic Station. Received January 17, 1928.

A local leafy variety 3 to 4 feet high, producing a large quantity of coarse feed.

For previous introduction see No. 62162.

76029 to 76032.

From La Fosse, Loir et Cher, France. Seeds presented by A. Gérard. Received January, 1928.

76029. CUPRESSUS CASHMERIANA Royle. Pinaceae. **Cypress.**

A tree up to 60 feet high, with a glaucous white trunk and flat pendulous branches. It is considered to be a native of Kashmir.

76030. DAVIDIA INVOLUCRATA Baill. Cornaceae. **Dovetree.**

An ornamental tree up to 75 feet high, closely related to the dogwoods, with large white flower bracts. Native to western China.

For previous introduction see No. 71043.

76031. MAGNOLIA OBOVATA Thunb. Magnoliaceae.

A scarlet-fruited, handsome pyramidal tree, 90 feet high, native to Japan. The obovate leaves, 16 inches long, are abruptly contracted at the base, and the fragrant white flowers, 6 inches in diameter, have bright-crimson anthers and pistils.

76032. SOLANUM AVICULARE Forst. f. Solanaceae.

A beautiful blue-flowered, yellow-fruited shrub with laciniate leaves. Native to New Zealand.

For previous introduction see No. 64984.

76033 to 76044.

From St. Jean le Blanc, Loiret, France. Plants presented by Edmond Versin. Received January 14, 1928.

76033. CORIARIA HIMALAYENSIS Hort. Coriariaceae.

A subtropical shrub said to resemble *Coriaria nepalensis* and to have persistent leaves and edible fruits.

76034. CYNOGLOSSUM FURCATUM Wall. Boraginaceae.

A herbaceous perennial native to India. The plants have several stems from a rosette of lanceolate, soft-haired entire leaves. The small blue flowers are borne in long slender clusters similar to those of the forget-me-not.

76035. CYTISUS SESSILIFOLIUS L. Fabaceae. **Sessile broom.**

A shrub, 2 to 4 feet high, native to southern Europe. The yellow flowers are produced in short racemes.

For previous introduction see No. 73544.

76036. ISATIS GLAUCA Auch. Brassicaceae.

A herbaceous perennial plant 2 to 4 feet high, native to Asia Minor and Persia. The stout glaucous stem bears small leaves and a large panicle of small yellow flowers.

76037. LIGUSTRUM ACUMINATUM Koehne. Oleaceae. **Privet.**

Variety *macrostachyum*. A Japanese upright shrub with spreading branches, sometimes 8 feet tall. The ovate leaves are acuminate, and the small white flowers, borne in large panicles, are followed by lustrous black fruits.

76038. MICROGLOSSA ALBESCENS (DC.) Benth. Asteraceae.

An ornamental subtropical shrub with narrow, sharp-pointed leaves and heads of light-lilac flowers. Native to India.

For previous introduction see No. 72644.

76033 to 76044—Continued.

76039. PAULOWNIA SPECIOSA Hort. Scrophulariaceae.

A Chinese ornamental tree with purple flowers.

For previous introduction see No. 72645.

76040 to 76042. ROSA spp. Rosaceae. **Rose.**

76040. ROSA CANINA LEUCANTHA Boiss.

A form of the dog rose which differs in having glandular petioles and larger leaflets which, on the underside, have glands on the veins. Native to the Caucasus region.

76041. ROSA DIVARICATA Hort.

An ornamental shrub.

76042. ROSA NOISETTIANA Thory. **Noisette rose.**

Variety *faroncana*. A vigorous shrub 10 feet high.

76043. SALIX MAGNIFICA Hemsl. Salicaceae. **Willow.**

A shrub or small tree with purple buds and young shoots, native to China. It is remarkable for the large elliptic leaves resembling those of a poplar and for the long fruiting catkins which sometimes reach a length of 12 inches.

76044. SYRINGA VILLOSA Vahl. Oleaceae. **Late lilac.**

A bushy lilac about 8 feet high, with stout, upright branches, broadly oval, bright-green leaves, and pinkish lilac flowers in panicles of 3 to 7 inches long. Native to China and the Himalayas.

For previous introduction see No. 66947.

76045 and 76046. GOSSYPIUM spp. Malvaceae. Cotton.

From the Galapagos Islands. Seeds obtained through T. H. Kearney, Bureau of Plant Industry. Received January 19, 1928.

Wild cotton collected by J. R. Slevin, of the California Academy of Sciences, San Francisco, Calif.

76045. GOSSYPIUM sp.

A. Seeds of a fuzzy-seeded form.

76046. GOSSYPIUM sp.

B. [Received without notes.]

76047. PIROCYDONIA sp. Malaceae.

From Paris, France. Cuttings obtained by Charles F. Swingle, Bureau of Plant Industry. Received January 21, 1928.

A hybrid between Pyrus and Cydonia obtained at the Luxembourg Gardens in Paris.

76048. CORYPHA UMBRACULIFERA L. Phoenicaceae. Talipot palm.

From Peradeniya, Ceylon. Seeds presented by T. H. Parsons, Curator of the Royal Botanic Gardens, Department of Agriculture. Received January 23, 1928.

A large palm up to 80 feet high, native to Ceylon, with leaves 12 feet long and 16 feet broad, made up of lobed segments. The creamy white flowers are in huge terminal panicles 20 feet long, and the palm dies after fruiting.

For previous introduction see No. 52802.

76049 to 76059.

From Orleans, France. Plants presented by Léon Chenault. Received January 25, 1928.

76049. ACER HERSII Rehder. Aceraceae. **Maple.**

A medium-sized maple tree, native to northern China, with cordate, broadly ovate, long-pointed, 3-lobed leaves and winged nutlets about an inch long.

76050. ALNUS HIRSUTA SIBIRICA C. Schneid. Betulaceae. **Alder.**

A handsome Siberian tree, 60 feet high, of broad-pyramidal habit and vigorous growth, with broadly ovate leaves about 5 inches long which are dark green above and glaucous beneath.

76051. BERCHEMIA GIRALDIANA C. Schneid. Rhamnaceae.

A low-climbing woody Chinese shrub with ovate leaves 3 inches long, grayish white beneath, and attractive red fruits.

76052. BETULA SCHMIDTII Regel. Betulaceae. **Birch.**

A Japanese tree, 65 feet high, with a trunk 3½ to 7½ feet in diameter and black bark which falls off in thick, rather small plates. The finely serrate leaves are short stemmed, and the catkins are narrow, stiff, and erect.

For previous introduction see No. 64234.

76053. CARYOPTERIS MONGHOLICA Bunge. Verbenaceae.

An ornamental woody plant producing, during the autumn, lavender-blue flowers in densely clustered axillary cymes. In this species the flowers are less numerous, but larger than those of *Caryopteris incana*.

For previous introduction see No. 42776.

76054. CLADRASTIS SINENSIS Hemsl. Fabaceae.

A Chinese tree up to 80 feet high, with large panicles of white or pinkish flowers.

76055. COTONEASTER SEROTINA Hutchinson. Malaceae.

A small Chinese tree with elliptic papery leaves, small white flowers borne in many-flowered corymblike clusters, and attractive, bright-red berries which persist throughout most of the winter.

For previous introduction see No. 62321.

76056. EVODIA DANIELLII (Benn.) Hemsl. Rutaceae.

A bushy tree, 10 to 20 feet high, with unequally pinnate leaves up to 3 inches long, numerous corymbose panicles of whitish flowers which appear in June and July, and oblong or elongated fruit capsules which have a peculiar aromatic odor and a pungent bitter flavor. Native to northern China.

For previous introduction see No. 49131.

76057. LESPEDEZA CYRTOBOTRYA Miquel. Fabaceae.

A low shrubby Japanese plant with racemes of rosy purple, pea-shaped flowers.

For previous introduction see No. 73439.

76058. STAPHYLEA HOLOCARPA ROSEA Rehd. and Wils. Staphyleaceae. **Bladdernut.**

A Chinese shrub or small tree up to 30 feet high, with trifoliolate leaves, slender panicles of pink flowers, and pear-shaped bladdery fruits about 2 inches long.

76059. ULMUS sp. Ulmaceae. **Elm.**

A tree native to central Asia.

76060. ORYZA BARTHII Cheval. Poaceae. **Rice.**

From Freetown, Sierra Leone, West Africa. Seeds presented by Douglas W. Scotland, Acting Commissioner of Lands and Forests. Received January 26, 1928.

A perennial rice growing on the banks of the Bum Kittam River, Nongoba Bullom Chiefdom, Bonthe District, Sierra Leone. This rice is known to the Sherbro tribe as Teteki (devil rice), to the Sherbro Mendi tribe as Ngafambei (devil rice), to the Mendis as Ngewombei (God's rice), and to the Bulloms and natives of the Scarcies River area as Antecheki (devil rice). The grains are collected and hulled for food by the natives inhabiting the flooded areas on the Bum Kittam River. To harvest the rice the people paddle their canoes in among the rice and shake the ears over the canoe, and, as the grains are easily shed, a canoe full of grains can be obtained in a very short time. The height of the rice depends on the flood level of the water. Stalks sometimes reach a height of 16 feet. The inflorescence and ears always keep above the water level. When the swamps dry out during the dry season the rice invariably is burned by the natives, but this does not destroy the plant as it ratoons freely with the rise of flood waters during the following rains.

76061 and 76062.

From Tananarive, Madagascar. Seeds presented by the chief of the agricultural service. Received January 25, 1928.

76061. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

A variety grown locally.

76062. CROTALARIA sp. Fabaceae.

A tropical American shrubby leguminous plant, up to 6 feet high, used as a cover plant in the East Indies.

For previous introduction see No. 72434.

76063. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Eala, Belgian Congo, Africa. Seeds presented by A. Corbisier-Baland, of the Eala Botanic Garden. Received January 24, 1928.

A local variety.

76064 to 76085. PRUNUS spp. Amygdalaceae.

Japanese flowering cherries growing at the United States Plant Field Station, Glenn Dale, Md. Numbered March, 1928.

76064 to 76079. PRUNUS SERRULATA Lindl. **Japanese flowering cherry.**

76064. Tree 73. *Amanogawa* (milky way). Tree up to 25 feet high; bark dark gray; young foliage bronze green; flowers pale pink, semidouble, fragrant, about 1¾ inches across, in erect clusters of three, blooming about midseason. The upright habit of this form, comparable to that of the Lombardy poplar, makes it of special value for certain garden effects.

For previous introduction see No. 69079.

76065. Tree 79. *Benitoranowo.* The young foliage brownish; flowers pink, slightly double, about 1½ inches across, deeper pink at center and around edges, in clusters of three to five, blooming comparatively late. The Japanese name means "large pink flower clusters."

76064 to 76085—Continued.

76066. Tree 82. *Botanzakura.* Tree of spreading habit; bark brownish; young foliage orange bronze; flowers semidouble, pale pink with darker centers, about 1¾ inches across, in clusters of three to five, blooming about midseason. The Japanese name means "peony-flowered cherry."

76067. Tree 105. *Fugenzo.* Tree large, spreading and up to 25 feet high; probably the most vigorous of the double-flowered forms; young foliage bronze colored; buds deep pink; flowers double, pink, nearly 2 inches across, in 2-flowered to 4-flowered clusters, blooming rather late. A variety cultivated by the Japanese since ancient times; the name refers to a Japanese divinity.

76068. Tree 51. *Gyoiko* (imperial). A vigorous erect tree, 12 to 14 feet high, bearing flowers in great profusion. The semidouble, greenish white flowers, the petals of which are striped darker green with occasional tinges of pink, are about 1½ inches in diameter and are produced in clusters of three to five.

For previous introduction see No. 67959.

76069. Trees 52, 64. *Hitoyezakura* (single-petal cherry). Tree up to 40 feet high; bark pale gray and smooth; young foliage brownish; flowers pink, single, less than 1½ inches wide, blooming midseason. A variety of but little ornamental merit but of possible value as a stock.

76070. Trees 46, 48. *Horinji.* Tree of upright spreading habit; bark dark gray; young foliage bronze green; buds deep pink; flowers semidouble, pink with lighter centers, about 1⅝ inches across, in few-flowered clusters, blooming rather early. Named for an ancient temple in Kyoto, Japan.

76071. Tree 84. *Kunrinjoshirotae* (best pure white). Tree of spreading habit; young foliage coppery green; flowers white or pinkish, single or slightly double, about 2 inches across, in clusters of three or four, blooming about midseason.

76072. Trees 65, 71. *Kwanzan.* Tree upright-spreading in habit, becoming about 25 feet high; bark dark brownish gray; young foliage bronze green; buds rose red; flowers deep pink, double, nearly 2 inches across, in clusters of two to five, blooming late. This is considered by some horticulturists to be the finest of the double-flowering cherries, because of the deep color of the flowers. The name refers to a Japanese mountain.

For previous introduction see No. 69363.

76073. Tree 101. *Miyako* (beauty or prosperity). Tree upright-spreading; young foliage brown; buds pink; flowers light pink, semidouble, about 1¾ inches across, in few-flowered clusters, blooming rather late.

76074. Tree 83. *Ohnanden* (snowslide or avalanche). Tree upright-spreading; young foliage brown; buds deep pink; flowers double, about 2 inches wide, pink with deeper-colored edges, in pendent clusters of twos and threes. An attractive variety, resembling *Kwanzan* [No. 76072], but with lighter-colored flowers and not as free blooming.

76064 to 76085—Continued.

76075. Tree 49. *Ojochin* (big lantern). Tree upright-spreading; bark brownish gray; flowers semidouble, light pink, nearly 2 inches across, in clusters of three to five, blooming midseason. An attractive variety, resembling *Ariake* in general, but the flowers are pinker and the petals more wrinkled.

76076. Trees 60, 87, 94. *Oshimazakura.* A quick-growing and comparatively short-lived tree up to 30 feet high, with pale-gray bark and thick, spreading branches. The numerous single, white or pinkish flowers are fragrant, and the small ovoid fruits are shining black. Native to central and southern Japan. The name refers to Oshima, an island of Japan, where this cherry is native.

76077. Tree 77. *Senriko* (fragrance for 2,000 miles). Tree upright ascending in habit, about 20 feet high; bark brownish gray; young foliage coppery green; flowers single or nearly so, white with a pink blush, fragrant, about 1¾ inches across, usually three or four in a cluster, blooming about midseason.

For previous introduction see No. 69085.

76078. Trees 54, 59, 88, 99. *Shirofugen* (white goddess). A variety closely resembling *Fugenzo* [No. 76067], from which it differs in having lighter-colored flowers.

For previous introduction see No. 69087.

76079. Tree 57. *Shogetsu* (early delight). Tree of medium size with a spreading, rather flat crown; buds deep pink, flowers double, with nearly white centers, tinged with pink on the edges, up to 2¼ inches across, in clusters of two to four. An excellent double-pink variety.

For previous introduction see No. 72893.

76080. PRUNUS YEDOENSIS Mats.
Yoshino cherry.

Tree 76. *Taizanfukun* (mountain snowcap). Tree erect, about 15 feet high, with dark-brown bark; flowers semidouble, pink, about an inch in diameter, often borne near the ends of the branches.

For previous introduction see No. 67962.

76081 to 76083. PRUNUS SERRULATA Lindl.
Japanese flowering cherry.

76081. Tree 68. *Takinioi* (fragrant white cascade). Tree rather small and spreading, about 15 feet high; bark brownish gray; flowers pure white, single, very fragrant, about 1½ inches across, in clusters of three or four; blooming midseason.

For previous introduction see No. 69088.

76082. Tree 98. *Temari* (small ball). Bark gray; young foliage brownish green; buds deep pink; flowers semidouble, light pink, about 1¾ inches across, in numerous rather compact clusters of three and four, blooming midseason. A variety of special merit because of its floriferousness.

76083. Tree 104. *Yayeakebono* (double daybreak). Tree upright in habit; young foliage brownish green; buds pink, flowers semidouble, light pink at margins, nearly white in center, opening rather late, about 1¾ inches across. A very attractive variety.

76064 to 76085—Continued.

76084. PRUNUS SIEBOLDII (Carr.) Wittmack.

Tree 56. *Naden* (snowslide). Tree upright-spreading in habit, about 18 feet high; bark dark gray; flowers pink, semidouble, usually in clusters of three or four, about 1¾ inches across, blooming midseason. The hairy leaves of this variety distinguish it from the other double-flowering forms.

For previous introduction see No. 69090.

76085. PRUNUS SUBHIRTELLA PENDULA (Sieb.) Tanaka.

Trees 72, 75, 81. *Shidarehigan.* Trees usually not more than 30 feet in height, with slender, pendulous branches, narrowly oval leaves up to 3 inches long, and single flowers up to an inch across, appearing before the leaves and varying in color from deep pink to almost white. The black fruits are about three-eighths of an inch in diameter.

For previous introduction see No. 70787.

76086. ORMOSIA sp. Fabaceae.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received March 2, 1928.

A large spreading tree with smooth clean bark, long pinnate light-green leaves, and long racemes of light-lavender flowers. It is native to Panama and is apparently a good shade tree for roadside planting.

76087 and 76088.

From Fa Hua Ssu Temple, Chihli, China. Scions obtained through Peter Liu, Peking. Received February 21, 1928.

76087. CASTANEA MOLLISSIMA Blume. Fagaceae. **Hairy chestnut.**

Tiger paw chestnut.

For previous introduction see No. 76010.

76088. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

Mottled fragrant apricot. A freestone variety said to be the best in the Fa Hua Ssu region. The fruits are white with a pink blush, and are about 2 inches in diameter.

76089. CROTALARIA INCANA L. Fabaceae.

Seeds obtained from plants growing at the Barbour Lathrop Plant Introduction Garden, near Savannah, Ga. Received February 16, 1928.

A somewhat shrubby tropical American legume covered with soft gray pubescence and bearing elongated racemes of yellow flowers.

For previous introduction see No. 64059.

76090. DIOSPYROS GUAYPARIME Hort. Diospyraceae. **Persimmon.**

From Culiacan, Sinaloa, Mexico. Seeds presented by C. J. Stafford, through W. T. Swingle, Bureau of Plant Industry. Received March 8, 1928.

A variety grown locally.

76091. CITRUS SINENSIS (L.) Osbeck. Rutaceae. **Orange.**

From Avery Island, La. Trees presented by E. A. McIlhenny, president, Jungle Gardens. Received March 10, 1928.

This orange is the result of hand-pollination of the Louisiana sweet on the Washington Navel and the selection of bud wood from trees which showed special merit. The fruits are of excellent quality.

76092. CUCURBITA FICIFOLIA Bouche. Cucurbitaceae.

From Paris, France. Seeds presented by Vilmorin-Andrieux & Co., at the request of Dr. J. Dufrenoy. Received February 29, 1928.

Courge de Siam. A subtropical vine, becoming 10 to 15 feet long, with edible and ornamental fruits.

76093 and 76094. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From St. Lucia, West Indies. Seeds presented by E. A. Walters, agricultural superintendent of the St. Lucia Botanic Station. Received March 9, 1928.

Varieties grown locally.

76093. A red variety.

76094. A white variety.

76095 to 76104.

From Peradeniya, Ceylon. Seeds presented by the manager of the publication depot and central seed store of the Department of Agriculture. Received March 5, 1928.

76095. CALOPOGONIUM MUCUNOIDES Desv. Fabaceae.

A tropical American creeping herb which forms a mat of foliage about 1½ feet in thickness. The stems, 3 to 10 feet long, form roots at each node. The pale-blue flowers are in racemes 1 to 4 inches long.

For previous introduction see No. 74576.

76096 to 76098. CRACCA spp. Fabaceae.

76096. CRACCA CANDIDA (DC.) Kuntze (*Tephrosia candida* DC.).

A low Himalayan shrub with slender branches and large clusters of reddish or white flowers.

For previous introduction see No. 67840.

76097. CRACCA VILLOSA HIRTA (Buch.-Ham.) Kuntze (*Tephrosia hookeriana* W. and A.).

A woody perennial with reddish flowers, native to the East Indies.

For previous introduction see No. 62908.

76098. CRACCA VOGELII (Hook. f.) Kuntze (*Tephrosia vogelii* Hook. f.).

A shrubby legume native to tropical Africa. The leaves are macerated and thrown into the water to kill fish.

For previous introduction see No. 73236.

76099 to 76101. CROTALARIA spp. Fabaceae.

76099. CROTALARIA ANAGYROIDES H. B. K.

A tropical American shrubby leguminous plant, up to 6 feet high, used as a cover plant in the East Indies.

For previous introduction see No. 76062.

76100. CROTALARIA JUNCEA L.

A variety grown locally.

For previous introduction see No. 74408.

76101. CROTALARIA USARAMOENSIS Baker f.

A variety grown locally.

For previous introduction see No. 69120.

76095 to 76104—Continued.

76102. DOLICHOS HOSEI Craib (*Vigna oligosperma* Hort.). Fabaceae.

A yellow-flowered leguminous vine used for a cover crop and for green manure.

For previous introduction see No. 39335.

76103. SESBANIA CANNABINA (Retz.) Poir. Fabaceae.

A variety grown locally.

For previous introduction see No. 30880.

76104. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

A variety grown locally.

76105 to 76118.

From Nogent sur Vernisson. Loiret, France. Seeds presented by L. Pardé, Directeur, Arboretum des Barres et Fruticetum Vilmorinianum. Received March 1, 1928.

76105. ACANTHOPANAX SESSILIFLORUM (Rupr. and Maxim.) Seem. Araliaceae.

A vigorous deciduous shrub which forms a large spreading bush 10 feet high, with 3-lobed or 5-lobed, irregularly toothed leaves. The flowers, brownish purple with yellow protruding stamens, are packed closely in a spherical, almost stalkless cluster about an inch in diameter and appear in July. The inky black berries are in round clusters about an inch thick. This is one of the hardiest shrubs introduced from northern China, where it is native.

For previous introduction see No. 72781.

76106. BUDDLEIA STENOSTACHYA Rehd. and Wils. Loganiaceae.

A western Chinese shrub up to 10 feet high, with lanceolate leaves 2 to 6 inches long and slender panicles of very small fragrant lavender flowers with orange eyes.

For previous introduction see No. 72822.

76107. CEANOTHUS DELILIANUS Spach. Rhamnaceae.

A late-flowering hybrid shrub of garden origin with dark-green leaves and pale to deep-blue flowers in lateral and terminal panicles.

For previous introduction see No. 73414.

76108. CLADRASTIS SINENSIS Hemsl. Fabaceae.

A western Chinese tree up to 75 feet high with compound leaves made up of 9 to 13 oblong leaflets. The white or pinkish pealike flowers are in branching panicles a foot long.

76109 to 76111. CLEMATIS spp. Ranunculaceae.

76109. CLEMATIS GLAUCA AKEBIOIDES (Maxim.) Rehd. and Wils.

A slender climber up to 10 feet high, native to western China. The pinnate to bipinnate leaves have 2-lobed to 3-lobed ovate leaflets and the flowers are bronze yellow.

For previous introduction see No. 53652.

76110. CLEMATIS GLOBULOSA Hort.

A European hybrid between two western American species, *Clematis douglasii scottii* and *C. texensis*. It has deep-purple, pitcher-shaped flowers.

For previous introduction see No. 73422.

76105 to 76118—Continued.

76111. CLEMATIS SERRATIFOLIA Rehder.

A woody climber 10 feet long, native to Chosen. The biternate leaves are made up of ovate-lanceolate serrate leaflets and the large yellow flowers with purple filaments are 2 inches across and appear in the autumn.

76112. COTONEASTER LINDLEYI Steud. Malaceae.

A Himalayan shrub or small tree with semideciduous dark-green leaves, corymbs of white flowers, and subglobose black fruits.

For previous introduction see No. 72871.

76113. HYPERICUM PATULUM Thunb. Hypericaceae. **Japanese hypericum.**

No. 6498 M. V. Variety *grandiflorum*. A large-flowered form of the Japanese hypericum which is a half-evergreen spreading shrub with golden-yellow flowers.

76114. LONICERA SYRINGANTHA Maxim. Caprifoliaceae. **Lilac honeysuckle.**

An upright, slender-branched shrub, 10 feet high, with pinkish white to rosy purple fragrant flowers and red fruits. It is native to northwestern China.

For previous introduction see No. 73442.

76115. LONICERA SYRINGANTHA WOLFII Rehder. Caprifoliaceae.

A variety that differs from the usual form in having partly prostrate branches, narrower leaves, and carmine flowers.

76116. SKIMMIA JAPONICA VEITCHII (Carr.) Rehder. Rutaceae.

A Japanese shrub up to 5 feet or more, with yellowish green leaves crowded at the ends of the branchlets, and coral-red or bright-scarlet fruits about one-third of an inch in diameter. It is said to be one of the best smoke-enduring evergreen shrubs, but is too tender to withstand the winters of the northern United States.

For previous introduction see No. 63381.

76117. SORBARIA ASSURGENS Vilm. and Bois. Rosaceae.

A tall handsome Chinese shrub up to 10 feet high, with pinnate leaves bearing falcate lanceolate-serrate leaflets and large panicles of small white flowers.

76118. SYCOPSIS SINENSIS Oliver. Hamamelidaceae.

An evergreen shrub or small tree 25 feet high, native to central and western China. The elliptic-ovate leaves are lustrous above and pale green beneath, and the small heads of flowers are conspicuous because of the red anthers.

76119 to 76170.

From Japan. Seeds and cuttings collected by R. K. Beattie, Bureau of Plant Industry. Received February and March, 1928.

76119. ILEX sp. Aquifoliaceae. **Holly.**

No. 666. Mountain side of Higashi-yama, near the Miyako Hotel, Kyoto, February, 1928. Seeds of an ornamental shrub or small tree, native to Japan, with red fruits which remain on the tree during the winter.

76120. RAPHANUS SATIVUS L. Brassicaceae. **Radish.**

No. 665. Kyotofu, Kadono Gun, Kyogoku Mura, Kori, February, 1928. These seeds were obtained through Professor Morishita, of the Kyoto Agricultural Experiment Station. *Koridiakon*. A white radish grown only by the gardeners of the imperial household. It is very slender, almost like a lead pencil, and in deep soil it grows 16 to 18 inches long.

76119 to 76170—Continued.

76121 to 76170. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

Nos. 76121 to 76156 are cuttings of cultivated varieties from Tateno farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken.

76121. Nos. 267 to 269. *Osaya*. A variety producing an abundance of small nuts early in September. A varietal characteristic is the very slender twigs.

76122. Nos. 270 to 272. *Ichiemon*. A variety producing medium-sized nuts the latter part of September to the first part of October. The nuts are of a better flavor than those of the Kenaga, Nos. 345 to 347 [No. 76147], which this variety resembles. The burs do not fall to the ground but crack and spill the nuts.

76123. Nos. 273 to 275. *Wazo*. A variety producing medium-sized to large nuts the middle of October.

76124. Nos. 276 to 278. Mr. Tateno found an unnamed tree in a shipment and thought it was a seedling. He presented it to the Emperor after it had been propagated, and it was named Banseki by Mr. Kumagaya, a chestnut expert, about seven years ago. It is a fast grower, and produces rather large nuts from the latter part of October to the first part of November.

76125. Nos. 279 to 281. *Kanotsume*. A variety producing medium-sized nuts from the latter part of September to the first part of October. The nuts are said to be of good quality and the sweetest in Japan.

76126. Nos. 282 to 284. *Deno*. A variety producing medium-sized nuts the first part of October, and is said to give the biggest yield in Japan. After the first four or five years from the graft, it is a fast grower.

76127. Nos. 285 to 287. *Ginyose*. A variety fruiting the latter part of September.

76128. Nos. 288 to 290. *Chobei*. A variety originated by Mr. Deno at Wachi, near Kyoto. The rather large nuts are produced the middle of October.

76129. Nos. 291 to 293. *Shogatsu*. A rapid grower producing an abundance of medium-sized nuts the middle of October.

76130. Nos. 294 to 296. *Bon-guri* (local name). A variety improved from a wild chestnut. It is a rapid grower producing medium-sized nuts the first part of September.

76131. Nos. 297 to 299. *Kinseki*. A rapid grower producing an abundance of small to medium-sized nuts the latter part of September.

76132. Nos. 300 to 302. *Imakita*. A variety producing an abundance of small to medium-sized nuts the latter part of September.

76133. Nos. 303 to 305. The varietal name is unknown. A rapid and strong grower producing an abundance of medium-sized nuts from the first to the middle of October. This tree was selected from the trees grown from 1,000 nuts of mixed varieties.

76134. Nos. 306 to 308. *Taisho-wase*. A variety fruiting the latter part of August. The nuts are large for an early variety, this being one of the earliest.

76135. Nos. 309 to 311. *Chokogi* (synonyms *O-tamba, Bansei-tamba*). A tall strong tree producing nuts from the first to the middle of October. The kernel often splits into two or three parts, and the skin of the kernel (tannin part) is often quite thick.

76119 to 76170—Continued.

76136. Nos. 312 to 314. *Chusei-tamba.* A midseason variety of Tamba which fruits from the middle to the latter part of September. It is probably a seedling of Ginyose, according to Mr. Kumagaya (the chestnut expert). The nuts are quite large and of good quality. This is the best variety for marron material.

76137. Nos. 315 to 317. *Ganne.* A variety, with drooping branches when young, which fruits the first part of October. A very characteristic gall is abundant on this variety and seemingly on this only. It looks like insect work but insects may be secondary.

76138. Nos. 318 to 320. An unnamed seedling from Kinseki. A very rapid grower fruiting the middle of October. The nuts are very large, even larger than Chokoji.

76139. Nos. 321 to 323. *Toyotama.* A very early variety, fruiting from the 15th to the 25th of August. The nuts are small, but because they are so early they sell at a high price.

76140. Nos. 324 to 326. Varietal name unknown. *Butsake* (local name). A rapid grower producing a large crop the latter part of September. The nuts are quite large like those of Chusei-tamba, Nos. 312 to 314 [No. 76136].

76141. Nos. 327 to 329. An unnamed seedling. A rapid grower producing medium-sized nuts of good quality from the last of September to the early part of October.

76142. Nos. 330 to 332. *Sakamoto.* A medium-strong grower fruiting from the first to the middle of September. Though the crop is not large the nuts are very good.

76143. Nos. 333 to 335. *Mino.* A rare variety which was exhibited in London 20 years ago and awarded a gold medal. The nuts are produced the first part of October. This variety resembles Bansei-tamba, but the nuts are produced a little earlier.

76144. Nos. 336 to 338. *Shimokatsugi.* A fast-growing variety fruiting the middle of October. The crops are produced in alternate years. The nuts are covered with white hairs, whence the varietal name. The tannin is easy to remove when the nuts are cooked.

76145. Nos. 339 to 341. *Inukoroshi.* A medium grower producing large nuts the first part of October. This is not a good quality.

76146. Nos. 342 to 344. *Ashigara-wase.* An early variety fruiting the first part of September. It is not a strong grower.

76147. Nos. 345 to 347. *Kenga.* A rapid grower producing a good crop of medium-sized nuts the latter part of September to the first part of October. The burs crack early and drop the nuts.

76148. Nos. 348 to 350. *Oda-wase.* A medium grower producing a large crop of small to medium-sized nuts the first part of September.

76149. Nos. 351 to 353. *Kinyoshi.* A very good variety producing sweet rich nuts.

76150. Nos. 354 to 356. An unknown variety originally from Kanagawa. A rapid grower producing a medium crop of medium-sized nuts from the latter part of September to early October. The quality of the nuts is not very good. The trees grow too high.

76119 to 76170—Continued.

76151. Nos. 357 to 359. *Hassaku.* A rapid grower producing a good crop of medium-sized nuts in early September.

76152. Nos. 360 to 362. An unknown variety originally from Ayabe. A rapid grower producing a good crop of small to medium-sized nuts the first part of September.

76153. Nos. 363 to 365. *Tatsu-no-suke.* A very rapid grower producing medium-sized nuts the latter part of September. The tree is good but the nuts are not of very good quality.

76154. Nos. 366 to 368. *Wase-tamba.* A rapid grower producing medium to large nuts the first part of September.

76155. Nos. 369 to 371. An unknown variety originally from Angyo. A very strong rapidly growing tree producing large nuts of very good quality the first part of October. A good crop is produced the first five or six years, then poor ones.

76156. Nos. 372 to 374. *Tateno* No. 1. A seedling of Chusei-tamba, Nos. 312 to 314 [No. 76136]. A tall strong rapidly growing tree producing a medium crop of large nuts. The brown leaves remain on the tree through the winter.

Nos. 76157 to 76164 are cuttings of varieties from Wakahayashi, Nogi Mura, Shimotsuga Gun, Tochigi Ken.

76157. Nos. 375 to 377. *Shiba-guri, Motokichi* No. 1. A wild variety growing in a dense stand. The tree is a strong grower, producing a good crop of large nuts the first part of October.

76158. Nos. 378 to 380. *Shiba-guri, Motokichi* No. 2. A wild variety producing a good crop of small nuts the middle of October.

76159. Nos. 381 to 383. *Otamba* No. 1, *Iwase.* A cultivated seedling variety producing large nuts the middle of September. The tree is a rapid grower.

76160. Nos. 384 to 386. *Otamba* No. 2, *Iwase.* A rapidly growing cultivated seedling tree producing a good crop of nuts the middle of October.

76161. Nos. 387 to 389. *Otamba* No. 3, *Iwase.* A cultivated seedling tree which is a strong rapid grower. The nuts, produced the first part of October, are not very large.

76162. Nos. 390 to 392. *Otamba, Uehara.* A cultivated seedling tree which is a strong rapid grower. A medium crop of large nuts is produced the first part of October.

76163. Nos. 393 to 395. *Shiba-guri* No. 1, *Kobayashi.* A rapidly growing wild variety producing a good crop of medium-sized nuts the middle of September. The mother tree was the largest chestnut in this region.

76164. Nos. 396 to 398. *Shiba-guri* No. 2, *Kobayashi.* A rapidly growing wild variety producing medium to large-sized nuts.

Nos. 76165 to 76170 are cuttings of cultivated varieties from Fukuchi farm, Mamada-cho, Nishi-kuroda, Shimotsuga Gun, Tochigi Ken.

76165. Nos. 399 to 401. *Fukuchi, Kinseki.* A variety producing a good crop of medium-sized light golden-red nuts.

76166. Nos. 402 to 404. *Fukuchi, Kamasuguri.* A wide-spreading rapidly growing tree producing medium-sized nuts. A good crop is produced every year, but the skin of the nut cracks.

76119 to 76170—Continued.

76167. Nos. 405 to 407. *Yoro.* A rapidly growing variety producing large sweet nuts the first part of October. This is the best and strongest variety in the Fukuchi orchard.

76168. Nos. 408 to 410. *Teteuchi.* A rapidly growing strong tree producing medium-sized nuts of good color the first part of September.

76169. Nos. 411 to 413. *Fukuchi Bon-guri.* A seedling originally from *Bon-guri,* Nos. 294 to 296 [No. 76130]. A rapidly growing tall strong tree producing medium-sized very sweet nuts, brown with white hairs, the first part of September. A good crop is produced every year.

76170. Nos. 414 to 416. *Toyotama-wase.* A rapidly growing seedling tree producing a good crop of small dark nuts the first part of September.

76171. Colocasia sp. Araceae.

From the Azores. Tubers presented by B. L. Feinstein, of the Tropical Fruit & Produce Co., New Bedford, Mass., through R. A. Young, Bureau of Plant Industry. Received March 17, 1928.

The corms of this variety are acrid and require longer cooking than the dasheen. The flesh is moist, rather soft when cooked, and of inferior flavor. The quality is similar to that of the "blue tanyah" of the South Atlantic States.

76172 to 76182. Cajanus indicus Spreng. Fabaceae. Pigeon pea.

From San Juan, Porto Rico. Seeds presented by O. W. Barrett, Agricultural Director of the Department of Agriculture and Labor. Received March 14, 1928.

Varieties grown locally.

76172. *Americanos.*
76173. *Chinos.*
76174. *Colmenos.*
76175. *Cubanos.*
76176. *Indios.*
76177. No. 1758. *Manchados.*
76178. *New Era.*
76179. *Parranetos.*
76180. *Pepino.*
76181. *San Salvador.*
76182. No. 12.

76183 to 76190.

From Brooklyn, N. Y. Seeds presented by the Brooklyn Botanic Garden. Received March 10, 1928.

76183. Callicarpa giraldiana Hesse. Verbenaceae.

A Chinese shrub 10 feet high, with membranous, light-green leaves, cymes of pink flowers, and dense clusters of round berrylike violet fruits.

For previous introduction see No. 63678.

76184. Citrus taitensis Risso. Rutaceae. **Otaheite orange.**

A dwarf shrub, probably of hybrid origin, with lemonlike flowers and orange-colored fruits shaped like a lemon, but having a mawkish taste. It is used rarely as a dwarfing stock for other citrus fruits.

76185. Deutzia schneideriana laxiflora Rehder. Hydrangeaceae.

A handsome free-flowering central Chinese shrub 6 feet high, with oblong-ovate leaves and broad loose panicles of white flowers.

For previous introduction see No. 55087.

76183 to 76190—Continued.

76186. Deutzia wilsoni Duthie. Hydrangeaceae.

A red-barked shrub, native to central China, with stellate pubescent leaves and loose broad corymbs of white flowers, each nearly an inch in diameter.

For previous introduction see No. 73435.

76187. Enkianthus deflexus (Griffith) C. Schneid. Ericaceae.

A western Chinese shrub or small tree with red branchlets, obovate leaves 1 to 3 inches long, and many-flowered racemes of yellowish red flowers with darker veins.

For previous introduction see No. 58906.

76188. Schizandra chinensis (Turcz.) Baill. Magnoliaceae.

A woody Chinese climber, up to 25 feet high, with broadly obovate leaves, creamy white or pinkish fragrant flowers, and scarlet fruits.

For previous introduction see No. 73058.

76189. Viburnum hupehense Rehder. Caprifoliaceae. **Hupeh viburnum.**

A central Chinese shrub about 6 feet high, with coarsely dentate pubescent ovate leaves, small cymes of white flowers and red berries.

For previous introduction see No. 71255.

76190. Viburnum taoueth Leveille. Caprifoliaceae.

A shrub with smooth gray twigs, lanceolate dentate leaves 2 inches long, corymbs of small white flowers, and yellow fruits. Native to Chosen.

76191 to 76195. Rhododendron spp. Ericaceae.

From London, England. Seeds collected by Capt. F. Kingdon Ward and presented by Maj. Lionel de Rothschild. Received March 14, 1928.

A collection of rhododendrons from western China.

76191. Rhododendron macabeanum Watt.

No. 7724. A tree 50 feet high, with twigs and leaves covered with brown scales. The leathery oblong leaves, 10 to 12 inches long, are in rosettes at the ends of the branches, and the yellowish white flowers, in compact umbels, are 2 inches long.

76192. Rhododendron manipurense Balf. and Watt.

No. 7723. A shrub 10 feet high, with shining oblong leaves 3 to 5 inches long and clusters of large, white flowers 3 to 4 inches in diameter.

76193. Rhododendron sp.

No. 7717.

76194. Rhododendron sp.

No. 7725.

76195. Rhododendron sp.

No. 7731.

76196 to 76198. Ananas sativus Schult. f. Bromeliaceae. Pineapple.

From the Philippine Islands. Suckers presented by S. Youngberg, Director of the Bureau of Agriculture, Manila. Received March 14, 1928.

Suckers grown at the Lamao Experiment Station, Lamao, Bataan.

76196. *Black Prince.*

76197. *Orion.*

76198. *Los Banos.*

76199. BROMELIA PINGUIN L. Bromeliaceae. **Pinguin.**

From San Juan, Porto Rico. Offshoots presented by O. W. Barrett, Agricultural Director of the Department of Agriculture and Labor. Received February 21, 1928.

A West Indian succulent plant, 3 to 4 feet high, with spiny margined leaves which turn red with age. The reddish flowers are in dense panicles, and the acid fruits, the size of plums, furnish a cooling juice.

For previous introduction see No. 54798.

76200 to 76202. PRUNUS spp. Amygdalaceae.

From Auckland, New Zealand. Bud wood obtained from George A. Green, of the New Zealand Association of Nurserymen. Received at the United States Plant Introduction Garden, Chico, Calif., in May, 1925. Numbered in January, 1928.

76200 and 76201. PRUNUS ARMENIACA L. **Apricot.**

76200. *Bolton.* An excellent canning apricot which is a good shipper and very popular. It comes in just after the midseason variety, *Moorpark.*

76201. *Newcastle.* An early, upright-growing variety producing an abundance of medium-sized, freestone fruits which are yellow with a red cheek and are rich in flavor.

76202. PRUNUS SALICINA Lindl. **Japanese plum.**

Purple king. A handsome, nearly spherical fruit of a deep-wine or cherry-red color. The quality is said to be good with regard to flavor and texture of flesh, and it is reported as being an excellent shipper.

76203 to 76279.

From Kew, England. Seeds presented by Dr. A. W. Hill, Director of the Royal Botanic Gardens. Received March 9, 1928.

76203. ACANTHOPANAX SESSILIFLORUM (Rupr. and Maxim.) Seem. Araliaceae.

For previous introduction and description see No. 76105.

76204 to 76209. ALLIUM spp. Liliaceae. **Onion.**

76204. ALLIUM BEESIANUM W. W. Smith.

An ornamental western Chinese onion, 9 to 18 inches high, with pendulous blue flowers.

For previous introduction see No. 69900.

76205. ALLIUM KANSUENSE Regel.

An ornamental blue-flowered onion native to northwestern China.

For previous introduction see No. 69902.

76206. ALLIUM KARATAVIENSE Regel.

A broad-leaved onion, native to Turkestan, with dense umbels of pink flowers.

For previous introduction see No. 73600.

76207. ALLIUM NARCISSIFLORUM Vill.

An Italian onion, about 9 inches high, with rose-colored flowers in nodding heads,

For previous introduction see No. 73524.

76208. ALLIUM OSTROWSKIANUM Regel.

A Turkestan onion with rose-colored flowers produced freely in many-flowered umbels on scapes 6 inches high.

For previous introduction see No. 73527.

76203 to 76279—Continued.

76209. ALLIUM ROSENBACHIANUM Regel.

A bulbous perennial, native to Turkestan, with oblong-lanceolate leaves 8 inches high and a large globular umbel of purple flowers on a scape 2 feet high.

76210. ALNUS HIRSUTA Turcz. Betulaceae. **Manchurian alder.**

A rather handsome, medium-sized tree, native to Japan and Manchuria, with rounded elliptic, slightly lobed leaves which are hairy beneath.

For previous introduction see No. 73403.

76211. ARBUTUS UNEDO L. Ericaceae. **Strawberry tree.**

An Irish evergreen tree up to 40 feet high, with smooth dark-green leaves 2 to 4 inches long, flowers produced from October to December in drooping panicles 2 inches long and wide, and globose, strawberrylike fruits, three-fourths of an inch across, which are orange-red and rough on the surface. They ripen during the autumn following the production of the flowers, at the same time as the succeeding crop of blossoms.

For previous introduction see No. 41502.

76212 to 76218. BERBERIS spp. Berberidaceae. **Barberry.**

76212. BERBERIS ATROCARPA C. Schneid.

An ornamental Chinese shrub, 3 to 5 feet high, with leathery evergreen leaves, shining rich green above and yellowish green beneath, and almost globose jet-black fruits.

For previous introduction see No. 65224.

76213. BERBERIS BEANIANA C. Schneid.

A semievergreen Chinese shrub with long yellow spines, yellow flowers, and purple ellipsoidal fruits.

For previous introduction see No. 65225.

76214. BERBERIS DARWINII Hook. **Darwin barberry.**

A tender evergreen shrub, 6 feet or more high, native to southern Chile. The spectacular orange flowers are succeeded by oval plum-colored berries.

For previous introduction see No. 73531.

76215. BERBERIS LYCIUM Royle.

A half-evergreen shrub, 10 feet high, with narrow, bright-green leaves and pale-yellow flowers followed by ovoid violet berries. It is native to northern India.

For previous introduction see No. 58139.

76216. BERBERIS THIBETICA C. Schneid.

A semideciduous shrub, 3 to 4 feet tall, with purplish glaucous branches, entire leaves which are whitish beneath, and yellow flowers followed by dull reddish berries. It is native to western China.

For previous introduction see No. 58133.

76217. BERBERIS VIRESCENS Hook. f.

A deciduous Himalayan shrub, 6 to 9 feet high, with smooth reddish shining branches, slender spines sometimes three-fourths of an inch long, bright-green leaves, pale sulphur-yellow flowers, and slender reddish berries.

For previous introduction see No. 58803.

76218. BERBERIS YUNNANENSIS Franch.

A deciduous shrub, 3 to 6 feet high, with dense rounded spines, nearly circular leaves, pale-yellow flowers, and bright-red berries. It is native to western China.

For previous introduction see No. 66544.

76203 to 76279—Continued.

76219. BUDDLEIA STENOSTACHYA Rehd. and Wils. Loganiaceae.

An ornamental shrub up to 10 feet high, with lanceolate leaves 2 to 6 inches long and slender panicles of fragrant lavender flowers with orange eyes. It is native to western China.

For previous introduction see No. 76106.

76220. CARMICHAELIA ARBOREA (Forst. f.) Druce (*C. australis* R. Br.). Fabaceae.

A New Zealand shrub up to 9 feet high, leafless after the seedling stage. The very flat branches have alternate notches from which appear the fascicles of 3 to 12 fragrant flowers which are delicate lilac striped with darker lines. The sides of the small black pods fall away, leaving the scarlet seeds suspended in the thickened edges.

For previous introduction see No. 72787.

76221. CASSINIA FULVIDA Hook. f. Asteraceae.

A New Zealand shrub, 3 to 5 feet high, with very small leaves covered, especially on the under surfaces, with yellow tomentum, and small heads of white flowers.

For previous introduction see No. 73408.

76222. CASSINIA VAUVILLIERSII (Homb. and Jacq.) Hook. f. Asteraceae.

An erect compact shrub, 6 to 10 feet high, with small narrow leathery leaves half an inch long and terminal corymbs of white flowers. It is native to New Zealand.

For previous introduction see No. 73410.

76223. CISTUS CORBARIENSIS Pourr. Cistaceae.

An ornamental Spanish shrub up to 5 feet high, with white flowers about an inch in diameter.

For previous introduction see No. 73263.

76224. CLEMATIS CHRYSOCOMA SERICEA (Franch.) C. Schneid. (*C. spooneri* Rehd. and Wils.). Ranunculaceae.

An ornamental Chinese vine up to 20 feet long, with silky hairy rounded leaves and solitary or paired pinkish flowers 3 to 4 inches in diameter.

For previous introduction see No. 72793.

76225. COLCHICUM BIVONAE Guss. Melanthiaceae. **Autumn crocus.**

An autumn-flowering bulbous perennial native to the Mediterranean region. The six to nine flat linear leaves a foot long appear in the spring, dying off by midsummer. The one to six rosy purple flowers 4 to 6 inches long appear from the naked earth.

76226. COLCHICUM BYZANTINUM Ker. Melanthiaceae. **Autumn crocus.**

An autumn-flowering bulbous perennial native to Rumania. The five or six oblong leaves, a foot long and 4 inches wide, appear in the spring and die away by midsummer. The lilac-purple flowers which are borne in clusters of 12 to 20 are 3 to 4 inches in diameter and spring from the bare soil.

76227 to 76240. COTONEASTER spp. Malaceae.

76227. COTONEASTER AFFINIS Lindl.

A tall Himalayan shrub with large cymes of white flowers and reddish brown fruits.

For previous introduction see No. 53667.

76228. COTONEASTER AFFINIS BACILLARIS (Wall.) C. Schneid.

A form of *Cotoneaster affinis* which has smoother leaves and is usually a larger plant, sometimes becoming a tree, the wood of which is used for walking sticks and spear shafts.

For previous introduction see No. 66924.

76203 to 76279—Continued.

76229. COTONEASTER AMBIGUA Rehd. and Wils.

A western Chinese shrub, 6 to 8 feet high, with clusters of pinkish flowers and black fruits.

For previous introduction see No. 44077.

76230. COTONEASTER AMOENA Wilson.

A branching shrub, 3 to 5 feet high, native to Yunnan, China. The oval leaves are glossy green above and thickly coated with gray wool underneath. The small cymes of white flowers are followed by bright-red fruits.

For previous introduction see No. 53670.

76231. COTONEASTER APICULATA Rehd. and Wils.

A semideciduous Chinese shrub, up to 8 feet high, but usually low growing in cultivation, with round leaves, pinkish white flowers, and relatively large bright-red fruits which sit upon the upper side of the twigs.

For previous introduction see No. 53671.

76232. COTONEASTER HEBEPHYLLA Diels.

A Chinese shrub up to 18 feet high, with spreading branches, white flowers, and dark-red fruits.

For previous introduction see No. 58147.

76233. COTONEASTER HENRYANA (C. Schneid.) Rehd. and Wils.

An ornamental shrub, native to central China, 10 to 15 feet high, with clusters of white flowers bearing purple anthers and followed by dark-crimson fruits.

For previous introduction see No. 53681.

76234. COTONEASTER HUPEHENSIS Rehd. and Wils.

A handsome Chinese shrub, about 6 to 8 feet high, with long arching branches studded with clusters of white flowers which are followed by bright-red fruits in the autumn when the leaves turn yellow.

For previous introduction see No. 58148.

76235. COTONEASTER LINDLEYI Steud.

A large shrub or small tree with corymbs of white flowers and bluish black fruits. Native to the northwestern Himalayan region.

For previous introduction see No. 76112.

76236. COTONEASTER MELANOCARPA Lodd.

A spreading shrub, about 6 feet high, native to Europe and Asia. The ovate leaves are dark green above and white tomentose beneath, and the pinkish flowers and black fruits are in nodding clusters.

For previous introduction see No. 36740.

76237. COTONEASTER MELANOCARPA LAXIFLORA (Jacq.) C. Schneid.

An Asiatic form of *Cotoneaster melanocarpa* which has larger leaves and larger pendulous clusters of flowers and fruits.

For previous introduction see No. 72796.

76238. COTONEASTER OBSCURA Rehd. and Wils.

A western Chinese shrub, about 10 feet high, with ovate dull-green leaves, short dense cymes of pinkish flowers, and dark-red pear-shaped fruits.

For previous introduction see No. 44081.

76239. COTONEASTER RUBENS W. W. Smith.

A nearly prostrate Chinese shrub, 2 to 4 feet high, with small orbicular leaves and small axillary red flowers.

76203 to 76279—Continued.

76240. COTONEASTER TURBINATA Craib.

A Chinese shrub, 6 feet high, with ovate-lanceolate leaves 1 to 2 inches long, dense corymbs of small white flowers appearing six to eight weeks later than any other Cotoneaster, and followed by bright-red turbinate fruits.

76241 to 76247. CYTISUS spp. Fabaceae. **Broom.**

76241. CYTISUS AUSTRIACUS L.

A shrub about 3 feet high, native to southeastern Europe. The trifoliolate leaves are silky pubescent, and the bright-yellow flowers are in headlike clusters.

76242. CYTISUS AUSTRIACUS HEUFFELII (Wirzb.) C. Schneid.

A Hungarian form of *Cytisus austriacus* which is more slender and has narrower leaves and more silky pods.

76243. CYTISUS GRANDIFLORUS (Brot.) DC.

A spineless Spanish shrub with trifoliolate leaves and large yellow flowers on long rodlike branches.

For previous introduction see No. 66556.

76244. CYTISUS NIGRICANS L.

An upright shrub about 6 feet high, native to southern Europe. The obovate leaflets are an inch long, and the yellow flowers are borne in terminal racemes a foot long.

For previous introduction see No. 73540.

76245. CYTISUS PURPUREUS Scop.

A procumbent shrub with erect branchlets 1 or 2 feet high, dark-green obovate leaflets, and purple flowers; native to Austria and Italy.

For previous introduction see No. 73543.

76246. CYTISUS SPACHIANUS (Webb.) Kuntze.

A Canary Island shrub, 6 to 8 feet high, with elongated racemes of fragrant bright-yellow flowers.

For previous introduction see No. 31905.

76247. CYTISUS SUPINUS L. **Bigflower broom.**

An erect or procumbent shrub about 3 feet high, native to central and southern Europe. It has elliptic leaflets and long terminal heads of yellow flowers, besides bearing axillary flowers in the spring.

For previous introduction see No. 66926.

76248. DEUTZIA LONGIFOLIA VEITCHII (Veitch) Rehder.

A rather tender Chinese shrub 6 feet high, with lanceolate leaves 3 to 6 inches long and dense corymbs of bright rose-purple flowers.

For previous introduction see No. 73431.

76249. GENISTA PILOSA L. Fabaceae. **Silkyleaf broom.**

A procumbent European shrub with ascending branchlets, simple oblong leaves, and short axillary racemes of yellow flowers.

For previous introduction see No. 66570.

76250. GENISTA TINCTORIA VIRGATA Koch. Fabaceae.

A larger and more branching form of *Genista tinctoria*, which is an upright shrub 3 feet high, with many-flowered terminal racemes of yellow flowers. It is native to Europe.

76203 to 76279—Continued.

76251. IRIS CLARKEI Baker. Iridaceae. **Clarke iris.**

A curiously local Himalayan iris native to a circumscribed area in the Sikkim and Bhutan region at altitudes between 6,000 and 11,000 feet, in ground that is swampy half the year and frozen hard under snow during most of the remaining months. The narrow leaves, 2 feet long, droop at the tops; the upper surface is polished and shiny, the under side being glaucescent. The solid stem is 2 feet long and bears one or two lateral heads. The falls are blue-purple, blotched with white, and are reflexed laterally. The upper part of the haft is marked with yellow. The reddish purple, lanceolate standards are poised almost horizontally. The styles form the highest point of the flowers; they are keeled, very convex, and 1½ inches long.

For previous introduction see No. 67034.

76252. IRIS WILSONI Wright. Iridaceae. **Wilson iris.**

A western Chinese swamp iris, a foot high, with yellow flowers having the falls faintly veined with purple.

For previous introduction see No. 73547.

76253. LIGUSTRUM COMPACTUM Hook f. and Thoms. (*L. yunnanese* L. Henry). Oleaceae. **Privet.**

A shrub or small tree, sometimes 30 feet high, native to the Himalayan region and to southwestern China. The half-evergreen leaves are 3 to 6 inches long, and the small white flowers in large panicles are followed by bluish black fruits.

For previous introduction see No. 66962.

76254. LIGUSTRUM INSULENSE Decaisne (*L. insulare* Decaisne). Oleaceae. **Privet.**

A shrub, closely related to the common privet, *Ligustrum vulgare*, becoming 6 feet high, with yellowish green, often pendulous leaves, and rather large flower panicles. It is of unknown origin.

For previous introduction see No. 66580.

76255. LILIUM PYRENAICUM Gouan. Liliaceae. **Lily.**

A lily, 2 to 4 feet high, with lemon-yellow flowers dotted purplish black. It is native to the Pyrenees Mountains.

For previous introduction see No. 69926.

76256 to 76266. LONICERA spp. Caprifoliaceae. **Honeysuckle.**

76256. LONICERA ALPIGENA L.

For previous introduction and description see No. 75984.

76257. LONICERA CHRYSANTHA Turcz. **Coralline honeysuckle.**

An upright eastern Asiatic shrub, 12 feet high, with dark-green ovate leaves, creamy white flowers changing to yellow, and handsome coral-red berries.

For previous introduction see No. 67367.

76258. LONICERA CHRYSANTHA LATIFOLIA Korsh. (*L. chrysantha turkestanica* Rehder).

A form of *Lonicera chrysantha* with broadly elliptic thickish leaves.

76259. LONICERA DEFLEXICALYX Batal.

A western Chinese upright shrub, 8 to 10 feet high, with arching branches, bright-green lanceolate leaves, creamy flowers changing to yellow, and brick-red fruits.

For previous introduction see No. 53708.

76203 to 76279—Continued.

76260. LONICERA HISPIDA Pall.

A western Chinese shrub, 3 to 5 feet high, with oblong leaves, yellowish flowers over an inch long subtended with whitish bracts nearly an inch long and followed by oblong bright-red berries.

For previous introduction see No. 42316.

76261. LONICERA LANCEOLATA Wall.

A Himalayan shrub, 10 to 15 feet high, with ovate leaves, pale violet flowers, and black fruits.

For previous introduction see No. 53710.

76262. LONICERA MINUTIFLORA Zabel.

A hybrid between *Lonicera morrowii* and *L. zylosteoides*, with rather small oblong leaves and small flowers.

76263. LONICERA MUSCAVIENSIS Rehder.

A hybrid between *Lonicera morrowii* and *L. ruprechtiana*, differing from the former in having acuminate leaves and from the latter in having longer pubescent bracts.

76264. LONICERA OBOVATA Royle.

A Himalayan shrub, about 6 feet high, with obovate leaves, nodding whitish flowers, and blue-black fruits.

For previous introduction see No. 53713.

76265. LONICERA SEGREZIENSIS Lavall.

An upright shrub, about 10 feet high, with dark bluish green leaves, yellowish flowers, and dark-red fruits. It is supposed to be a hybrid between *Lonicera xylosteum* and *L. quinquelocularis*.

76266. LONICERA TATARICA L. **Tartarian honeysuckle.**

Variety *Finzleyi*. A variety of the common Tartarian honeysuckle for which a description has not been found.

76267. NARCISSUS BULBOCODIUM L. Amaryllidaceae. **Petticoat daffodil.**

A long-trumpet yellow daffodil with a thin flaring corona 2 inches long. It is native to the Mediterranean region.

For previous introduction see No. 66590.

76268. NARCISSUS CYCLAMINEUS Baker. Amaryllidaceae. **Daffodil.**

A drooping long-trumpet daffodil with the lemon-yellow perianth segments reflexed and the crenate crown orange-yellow. It is native to Portugal.

76269. PAEONIA WOODWARDII Hort. Ranunculaceae. **Peony.**

A description or place of publication for this form has not been found.

76270. PENTSTEMON SCOULERI Lindl. Scrophulariaceae.

A herbaceous perennial, native to Oregon, with narrowly lanceolate leaves and terminal racemes of violet-purple flowers.

76271. PERNETTYA MUCRONATA (L. f.) Gaud. Ericaceae. **Broadleaf pernettya.**

A Magellan evergreen shrub, 2 feet high, with small ovate spiny pointed leaves, nodding pink-tinged flowers, and white to dark-purple fruits, half an inch long, which stay on the branches all winter.

For previous introduction see No. 73444.

76203 to 76279—Continued.

76272. ROMULEA CRUCIATA Eckl. Iridaceae.

A South African small bulbous perennial with narrowly lanceolate leaves 8 inches long and scapes 6 inches high with pink flowers 2 inches in diameter.

76273. ROSA SPINULIFOLIA Dematra. Rosaceae. **Rose.**

A European shrub, 3 to 4 feet high, with reddish brown stems and red thorns, five ovate-serrate leaflets, small single pale pink flowers, and obovate fruits at first purple but finally turning black.

76274. STAPHYLEA COLCHICA COULOMBIERI (Andre) Zabel. Staphyleaceae. **Bladdernut.**

A vigorous form with larger acuminate leaflets of *Staphylea colchica* which is an upright shrub with five leaflets, 6-inch panicles of white flowers, and obovoid 2-lobed to 3-lobed bladdery fruits. Native to the Caucasus region.

76275. STYRAX WILSONII Rehder. Styracaceae. **Chinese snowbell.**

A handsome free-flowering western Chinese shrub which begins flowering when only a few inches high. It becomes 12 feet high and has ovate leaves, clusters of white flowers, and small grayish fruits.

For previous introduction see No. 66608.

76276. SYRINGA TOMENTELLA Bur. and Franch (*S. wilsonii* C. Schneid.). Oleaceae. **Wilson lilac.**

A slender Chinese shrub about 10 feet high, with oblong-lanceolate leaves and loose panicles of white to lilac flowers.

For previous introduction see No. 73284.

76277. SYRINGA YUNNANENSIS Franch. Oleaceae. **Yunnan lilac.**

An upright shrub, 8 to 10 feet high, native to Yunnan, China, with slender panicles of pink flowers.

For previous introduction see No. 73450.

76278. VIBURNUM VEITCHI C. H. Wright. Caprifoliaceae. **Veitch viburnum.**

A central Chinese shrub, 5 to 7 feet high, with branchlets, leaves, and flower stalks stellate-pubescent. The white flowers are in dense cymes 6 inches across, and the fruits are red at first, finally changing to black.

For previous introduction see No. 62589.

76279. VITIS KAEMPFERI Koch (*V. coignetiae* Pulliat). Vitaceae. **Grape.**

A handsome ornamental Japanese vine with orbicular-ovate leaves a foot across which turn crimson in the autumn. The black fruits, with a purple bloom, are not edible.

For previous introduction see No. 63388.

76280 to 76297. HORDEUM spp. Poaceae.

From Baghdad, Iraq. Seeds presented by J. F. Webster, Inspector General of Agriculture. Received March 8, 1928.

Iraqi barley grown at Rustam.

76280 to 76283. HORDEUM DISTICHON NIGRICANS Seringe. **Two-rowed barley.**

76280. No. B–112.
76281. No. B–113.
76282. No. B–114.
76283. No. B–127.

76280 to 76297—Continued.

76284 to 76286. HORDEUM VULGARE NIGRUM (Willd.) Beaven. Six-rowed barley.

76284. No. B-87.
76285. No. B-94.
76286. No. B-97.

76287 to 76297. HORDEUM VULGARE PALLIDUM Seringe. Six-rowed barley.

76287. No. B-22.
76288. No. B-23.
76289. No. B-33.
76290. No. B-53.
76291. No. B-57.
76292. No. B-65.
76293. No. B-75.
76294. No. B-76.
76295. No. B-85.
76296. No. B-90.
76297. No. B-135.

76298 to 76307.

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received March 8, 1928.

76298 to 76303. CAPSICUM ANNUUM L. Solanaceae. Red pepper.

76298. *Chameleon.* A dwarf variety with numerous erect, conical fruits which are at first yellow, changing to violet and scarlet.

76299. *Early dwarf red squash.* An early dwarf variety with flat, pendent, tomato-shaped, more or less ribbed fruits about 2 inches in diameter and an inch in depth, which are bright red and of a rather mild taste.

76300. *Golden dawn.* A dwarf, branching, productive variety with pendent fruits, about 1½ inches in length and thickness, which are a beautiful bright yellow.

76301. *Long red.* A variety with slender, conical, often curved and twisted pendent fruits, about 4 inches long and an inch in diameter at the base, which are a brilliant red when ripe and usually rather pungent.

76302. *Sweet Genua.* An early variety with distinct, conical or heart-shaped pendent fruits which are bright red, thick fleshed, and of a very mild flavor.

76303. *Yellow half-long Antibes.* An early variety, about 16 inches high, bearing numerous rather sweet pendent fruits of which the shape is approximately that of a triangular prism with rounded angles, and which are about 5½ inches long and an inch at the top. The fruits are a fine orange-yellow when ripe.

76304 to 76307. CUCURBITA spp. Cucurbitaceae.

76304. CUCURBITA MAXIMA Duchesne. Squash.

Large green Spanish. A variety producing medium-sized or even small, very much flattened fruits which are green-skinned and often finely netted, giving them a gray tint. The flesh is bright yellow, very thick, and keeps well.

76305 and 76306. CUCURBITA MOSCHATA Duchesne. Cushaw.

76305. *Brazilian sugar warted.* A medium early variety with long, slender, running stems. The oblong fruits, which keep well, are about 8 inches long and 6 inches in diameter, with five faintly marked ribs and sometimes slightly warted. The flesh is yellow, thick, and very sweet.

76306. *Small China turkscap.* A rather early variety which keeps admirably. The fruits are small, usually not exceeding 2 or 3 pounds in weight, bright red marked with yellow and dark green. The flesh is yellow, firm, floury, and sweet. The crown is not very prominent.

76298 to 76307—Continued.

76307. CUCURBITA PEPO L. Pumpkin.

Long bush Nizza Cougourdon. A long-fruited form of the Nizza Cougourdon S., which in shape is not unlike the Long vegetable marrow.

76308. TILIA OLIVERI Szyszyl. Tiliaceae. Linden.

From Brooklyn, N. Y. Seeds presented by the Brooklyn Botanic Garden. Received March 10, 1928.

A tree 50 feet high, with dark-green orbicular ovate leaves white tomentose beneath, and small globose fruits. The pendulous cymes contain 7 to 20 small white flowers. Native to central China.

76309 and 76310. TRIFOLIUM spp. Fabaceae. Clover.

From east Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received March 20, 1928.

76309. TRIFOLIUM sp.

No. 227. *Kenya* clover. Uplands, Kenya Colony, November 15, 1927. A white-flowered creeping clover, almost indistinguishable from *Trifolium repens*, widely and abundantly distributed in the Kenya highlands at altitudes between 5,000 and 9,000 feet. It rarely occurs in pure stands, but always as a mixture or undergrowth with Kikuyu grass, Bermuda grass, or bush. Although acknowledged to be highly palatable and nutritious, it is never cultivated in any way so far as known. It is a much stronger grower in east Africa than *T. repens* which it will usually crowd out, and it withstands frost, but not freezing.

76310. TRIFOLIUM sp.

No. 228. *Creeping red* clover. Uplands, Kenya Colony, November 15, 1927.

For previous introduction and description see No. 75933.

76311 to 76319. AVENA spp. Poaceae. Oats.

From Cowra, New South Wales, Australia. Seeds presented by J. T. Pridham, of the Cowra Experimental Farm, through T. R. Stanton, Bureau of Plant Industry. Received March 20, 1928.

A collection of hybrid oats.

76311. AVENA sp. *Belar.*
76312. AVENA sp. *Bombo.*
76313. AVENA sp. *Buddah.*
76314. AVENA sp. *Budgery.*
76315. AVENA sp. *Kareda.*
76316. AVENA sp. *Kelvin.*
76317. AVENA sp. *Kendall.*
76318. AVENA sp. *Kiah.*
76319. AVENA sp. *Mulga.*

76320. PHASEOLUS COCCINEUS L. Fabaceae. Scarlet Runner bean.

From Algiers, Algeria, North Africa. Seeds presented by Dr. L. Trabut, Government botanist. Received February 24, 1928.

Haricot gieruman.

76321. PHYLLOSTACHYS NEVINII Hance. Poaceae. **Bamboo.**

From McNeill, Miss. Plants and rhizomes presented by H. R. Reed, Bureau of Plant Industry, at the request of R. A. Young, Bureau of Plant Industry. Received March 24, 1928.

A small hardy spreading bamboo up to 7 or 8 feet in height with a culm diameter of five-eighths of an inch. The record of its origin is at present unknown, but it is believed that probably the plant was introduced by the United States Department of Agriculture. The leaves, usually four on a branchlet, are 2 to 3 inches long by five-sixteenths to one-half inch wide, with tessellated venation. The culm sheaths are narrowly but distinctly striped and bear at the base of the pseudophyll a pair of prominent auricles conspicuously fringed with hairs.

76322 to 76326.

From Brignoles, France. Seeds presented by R. Salgues, Director of the Brignoles Botanic Station. Received March 23, 1928.

76322 to 76325. AMYGDALUS COMMUNIS L. (*Prunus amygdalus* Stokes). Amygdalaceae. **Almond.**

76322. B. 116. Forma *Microcarpa*.

76323. B. 117. Forma *Macrocarpa*.

76324. B. 118. *Matheronne de Provence;* a variety of fair quality.

76325. B. 119.

76326. CLEMATIS VITALBA L. Ranunculaceae. **Travelers-joy.**

A handsome strong-growing vine with pinnate-ovate leaflets and axillary and terminal panicles of slightly fragrant white flowers. Native to the Mediterranean region.

76327 to 76329.

From Cali, Colombia. Seeds presented by Rene Hauzeur, Secretaria de Industrias. Received March 16, 1928.

76327. CYPHOMANDRA BETACEA (Cav.) Sendt. Solanaceae. **Tree-tomato.**

A variety grown locally.

76328. RUBUS QUINDEENSIS Hort. Rosaceae.

A variety grown locally.

76329. RUBUS sp. Rosaceae.

A species with reddish fruits, 4 to 5 centimeters long and about 2 centimeters wide, excellent for preserves.

76330. DIOSPYROS KAKI L. f. Diospyraceae. **Kaki.**

From Antibes, Alpes Maritimes, France. Seeds presented by Prof. Georges Poirault, director, Villa Thuret. Received March 16, 1928.

A variety grown locally.

76331. RADICULA ARMORACIA (L.) Robinson. Brassicaceae. **Horseradish.**

From Paris, France. Roots purchased from Cayeux & Le Clerc. Received March 27, 1928.

A variety grown locally.

76332. RADICULA ARMORACIA (L.) Robinson. Brassicaceae. **Horseradish.**

From Lyon, France. Roots purchased from Rivoire Père et Fils. Received March 27, 1928.

A variety grown locally.

76333 to 76353.

From Paris, France. Seeds presented by Vilmorin-Andrieux & Co. Received March 22, 1928.

76333. AGAPANTHUS AFRICANUS (L.) Hoffmannsegg (*Abumon africanum* Britton). Liliaceae. **African lily.**

Variety *Mooreanus*. A reputedly hardy dwarf variety of the African lily with short upright leaves and a scape 18 inches high, bearing an umbel of dark-blue flowers as large as those of the usual form. The leaves seem to be deciduous.

76334 to 76337. ALLIUM spp. Liliaceae. **Onion.**

76334. ALLIUM DECIPIENS Fisch.

An Asiatic bulbous perennial with linear leaves and a long scape bearing a hemispherical umbel of small, white flowers.

76335. ALLIUM KARATAVIENSE Regel.

For previous introduction and description see No. 76206.

76336. ALLIUM ODORUM L.

An onion, native to Europe, cultivated in Japan for its leaves, which are produced abundantly in the spring and eaten as greens.

For previous introduction see No. 73526.

76337. ALLIUM SUBHIRSUTUM L.

A bulbous perennial, native to the Mediterranean region, with hairy-margined narrow leaves a foot high and white flowers.

For previous introduction see No. 59341.

76338 to 76340. BERBERIS spp. Berberidaceae. **Barberry.**

76338. BERBERIS ACUMINATA Franch.

A shrubby evergreen Chinese barberry with yellow branches, lanceolate spiny-margined leaves 4 to 7 inches long, small clusters of brownish yellow flowers, and black fruits.

For previous introduction see No. 65591.

76339. BERBERIS LEVIS Franch.

An evergreen shrub about 5 feet high, native to Yunnan, China. The narrowly linear leaves are closely serrated, and the purplish black fruits have a slight bloom which distinguishes this species from *Berberis atrocarpa*.

For previous introduction see No. 65600.

76340. BERBERIS RUBROSTILLA Chittenden.

A hybrid shrub of garden origin with ovate-spatulate spiny leaves and pendulous clusters of coral-red fruits.

For previous introduction see No. 65602.

76341. CLEMATIS MONTANA RUBENS × VEDRARIENSIS ROSEA. Ranunculaceae.

A hybrid between two climbing Chinese species of clematis, the former a purplish leaved and rosy flowered form of *Clematis montana*, and the latter a rosy flowered form of a hybrid between *C. montana* and *C. chrysocoma*, both of which are normally white flowered.

76342. COTONEASTER FROEBELII Hort. Malaceae.

A hardy shrub of graceful habit with pale-green leaves and scarlet berries.

For previous introduction see No. 73429.

76333 to 76353—Continued.

76343. CYTISUS DALLIMOREI Rolfe. Fabaceae. **Broom.**

This slender shrub, which is a garden hybrid, is 6 to 8 feet high, with trifoliolate leaves. The axillary and terminal clusters of yellow flowers are suffused with pink and have crimson wing petals.

For previous introduction see No. 42552.

76344. DEUTZIA LONGIFOLIA VEITCHII (Veitch) Rehder. Hydrangeaceae.

For previous introduction and description see No. 76248.

76345. HYMENANTHERA CRASSIFOLIA Hook. f. Violaceae.

A dense, half-evergreen New Zealand shrub about 6 feet high, with crowded obovate leaves, small yellowish white or brownish flowers, and small berrylike white fruits.

76346. IRIS HALOPHILA Pall. Iridaceae.

An Asiatic iris of the Spuria group with pale-green leaves a foot long and a stem 2 feet high bearing one or two clusters of yellow flowers with violet veins.

For previous introduction see No. 67036.

76347. LABURNUM ANAGYROIDES ALSCHINGERI (Vis.) C. Schneid. Fabaceae. **Goldenchain.**

A form of the goldenchain with more silky and bluer gray leaves and nearly erect racemes of golden-yellow flowers. Native to southern Europe.

For previous introduction see No. 66961.

76348 to 76350. LONICERA spp. Caprifoliaceae. **Honeysuckle.**

76348. LONICERA ALSEUOSMOIDES Graebn.

A western Chinese half-evergreen twining shrub with narrowly lanceolate leaves and axilliary or terminal panicles of yellowish red flowers and black fruits.

76349. LONICERA DEFLEXICALYX Batal.

For previous introduction and description see No. 76259.

76350. LONICERA sp.

No. 2004 Hers.

76351. MUSCARI HELDREICHII Boiss. Liliaceae. **Grape hyacinth.**

An early flowering bulbous perennial, native to Greece, with linear leaves and elongated heads of amethyst flowers on scapes 4 to 6 inches long.

For previous introduction see No. 67043.

76352. ORNITHOGALUM NARBONENSE L. Liliaceae.

A southern European bulbous perennial with linear leaves and scapes 18 inches high bearing racemes of 20 to 50 erect white flowers striped with green.

76353. SPIRAEA ROSTHORNII Pritz. Rosaceae. **Spirea.**

A graceful western Chinese shrub about 6 feet high, with bright-green incisely serrate leaves and loose corymbs of small white flowers.

76354. CROTALARIA STRIATA DC. Fabaceae.

From Dar es Salaam, Tanganyika, east Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received March 27, 1928.

Obtained at the Tanganyika Department of Agriculture, December 8, 1927. This is the most ommon Crotalaria in Tanganyika.

76355. VOANDZEIA SUBTERRANEA (L.) Thouars. Fabaceae.

From Zanzibar, east Africa. Seeds presented by A. C. Barnes, Assistant Director of the Zanzibar Department of Agriculture, through H. F. Roberts, of the University of Manitoba, Winnipeg, Canada. Received March 26, 1928.

Njugu mawe. A creeping annual leguminous plant extensively grown for its edible seeds.

For previous introduction see No. 68972.

76356 to 76362. AMYGDALUS PERSICA L. (*Prunus persica* Stokes). Amygdalaceae. **Peach.**

From Granada, Spain. Plants presented by Juan Leyva, through Austin C. Brady, American consul at Malaga. Received March 31, 1928.

Varieties grown locally.

76356. *Admirable Jaune.*

76357. *Grosse Mignonne.*

76358. *Madeleine de Courson.*

76359. *Malta.*

76360. *Old Newington.*

76361. *Red Magdalen.*

76362. *Yellow Alberge.*

76363 to 76397. CORYLUS spp. Betulaceae.

From Berlin, Germany. Plants purchased from L. Späth. Received March 31, 1928.

76363 to 76396. CORYLUS AVELLANA L. **Filbert.**

76363. *Bandnuss.*

76364. *Barcelonaer Zellernuss.*

76365. *Barrs Zellernuss.*

76366. *Bethes Zellernuss.*

76367. *Eckige Barcelonaer.*

76368. *Einzeln tragende Kegelförmige.*

76369. *Grosse Kugelnuss.*

76370. *Heynicks Zellernuss.*

76371. *Jeeves' Zellernuss.*

76372. *Kadetten Zellernuss.*

76373. *Kunzemüllers Zellernuss.*

76374. *Lange Landsberger.*

76375. *Lange von Downton.*

76376. *Liegels Zellernuss.*

76377. *Ludolphs Zellernuss.*

76378. *Luisens Zellernuss.*

76379. *Mogulnuss.*

76380. *Multiflora.*

76381. *Neue Riesennuss.*

76382. *Prolifique à coque serrée.*

76383. *Römische Nuss.*

76384. *Rote Lambertnuss.*

76385. *Schlesierin.*

76386. *Sicklers Zellernuss.*

76387. *Truchsess Zellernuss.*

76388. *Volkugel.*

76389. *Volle Zellernuss.*

76390. *Webbs Preisnuss.*

76363 to 76397—Continued.

76391. *Weisse Lambertnuss.*

76392. *Wunder von Bollweiler.*

Nos. 76393 to 76396 are varieties cultivated for their ornamental foliage.

76393. *Atripurpurea.*

76394. *Aurea.*

76395. *Laciniata.*

76396. *Urticifolia.*

76397. CORYLUS MAXIMA Mill. **Giant filbert.**

Maxima atropurpurea is a variety cultivated for its ornamental purple leaves.

76398. COUSSAPOA REKOI Standl. Moraceae.

From Concordia, Oaxaca, Mexico. Seeds presented by Emiliu Makrinus. Received March 24, 1928.

A large Mexican tree with a spreading crown and prickly branchlets. The ovate entire leaves are 1 to 2 feet long, and the flowers, in globose pedunculate heads, are followed by succulent edible fruits an inch in diameter.

76399. ANANAS SATIVUS Schult. f. Bromeliaceae. **Pineapple.**

From Burma, India. Suckers collected by F. G. Krauss, of the University of Hawaii. Received November 18, 1927. Numbered in March, 1928.

A variety grown locally.

76400. PHILADELPHUS sp. Hydrangeaceae. **Mockorange.**

From Mississippi. Cuttings presented by R. N. Lobdell, A. and M. College, through R. A. Young, Bureau of Plant Industry. Received March 27, 1928.

A shrub, originally from the mountains of Tennessee, with an abundance of fragrant flowers. The individual flowers are about the size of a half dollar. This species is said to be superior to *Philadelphus coronaria* and others in the trade.

76401. ECHEVERIA sp. Crassulaceae.

From Caracas, Venezuela. Plant presented by Dr. H. Pittier, Ministerio de Relaciones Exteriores. Received March 21, 1928.

A variety growing locally in the Andes.

76402 and 76403.

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received March 26, 1928.

76402. BELOTIA MEXICANA Schum. Tiliaceae.

A handsome Mexican tree up to 75 feet high, with fibrous bark. The serrulate, ovate-oblong leaves are green above and grayish tomentose beneath, the flattened-orbicular fruits small and greenish, and the flowers, appearing in the autumn, are purple.

76403. YUCCA ELEPHANTIPES Regel. Liliaceae.

A Central American tree up to 30 feet high, with several trunks from a swollen base and compactly branched above. The rigidly spreading lanceolate leaves are 3 feet long, and the creamy white flowers are in large panicles. The flowers are cooked and eaten as a vegetable, being fried with eggs. They taste a little like asparagus.

76404 to 76410.

From Echo, Manchuria, China. Seeds presented by A. D. Woeikoff, director of the experimental farm. Received March 29, 1928.

76404 and 76405. PANICUM MILIACEUM L. Poaceae. **Proso.**

Originally from the Cem. Agricultural Experiment Station, Kungchuling, South Manchurian Railway, Mukden Province.

76404. No. 310. A nonglutinous variety.

76405. No. 311. A glutinous variety.

76406 to 76410. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

Nos. 76406 to 76408 were originally from the Commissioner of Industries for Suiyuan district, city of Suiyuan, southern Mongolia.

76406. No. 225. *Northwest black.*

76407. No. 226. *Northwest gold.*

76408. No. 227. *Northwest red.*

Nos. 76409 and 76410 are from Chinese farmers' fields in Ninguta district, Kirin Province.

76409. No. 234. *She-jen* (snake eye).

76410. No. 242. *Ti-chu-mi-tsa.* A broom sorghum.

76411 to 76413. PHOENIX spp. Phoenicaceae.

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received March 31, 1928.

76411. PHOENIX PUMILA Hort. **Palm.**

A slender graceful palm, 6 to 10 feet high, with recurved drooping leaves 10 to 16 feet long.

76412. PHOENIX RUPICOLA T. Anders. **Cliff date palm.**

A Himalayan palm with a solitary slender naked stem 15 to 20 feet high, bright-green leaves 10 feet long, and shining yellow oblong fruits.

For previous introduction see No. 75222.

76413. PHOENIX RECLINATA Jacq. **Senegal date palm.**

A tropical and South African palm, 20 to 30 feet high, with reclinate pinnate leaves 6 to 9 feet long, and yellowish fruits half an inch long with a sweetish pulp.

For previous introduction see No. 75223.

76414 and 76415. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

From Warsaw, Poland. Seeds presented by W. N. Mazaraki, director of the Udycz Co. Received March 31, 1928.

76414. No. 5861-B. 76415. No. 5862-B.

76416 to 76453.

From east Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received March, 1928.

76416. BIXA ORELLANA L. Bixaceae. **Anatto tree.**

No. 700. Uganda, November 11, 1927. A common plant found between Kyegegwa and Kampala, where it is often used as a hedge. The berries furnish a coloring matter for butter and cheese.

For previous introduction see No. 51910.

76416 to 76453—Continued.

76417. BRACHIARIA sp. Poaceae. **Grass.**

No. 377. Mile 134, Toto Road, Kyegegwa, Uganda, November 12, 1927. A species of Brachiaria which forms one of the important elements of grazing land and lawns in Uganda. They are excellent hay grasses and endure close grazing. When closely mowed they produce a dense but somewhat coarse turf. All of the Brachiarias are very shy seeders, or at least they produce and shed their seeds over such a long period that it is difficult to harvest them in quantity.

76418. CHAETOCHLOA AUREA (Hochst.) Hitchc. (*Setaria aurea* Hochst.). Poaceae. **Grass.**

No. 373. *Red foxtail.* November 10, 1927. A variety found about 20 miles east of Fort Portal, in the high grassland. It is a good-looking grass, one of the best in Uganda, and it is taller and more leafy than the common *Setaria aurea* of Kenya.

For previous introduction see No. 75304.

76419. CYNODON DACTYLON (L.) Pers. Poaceae. **Bermuda grass.**

No. 375. November 8, 1927. One of the many forms of Cynodon found in Uganda. This one, growing on a lawn at the Crater Lakes, 16 miles south of Fort Portal, is an especially fine-leaved form and makes an admirable turf.

76420. CYNODON DACTYLON (L.) Pers. Poaceae. **Bermuda grass.**

No. 387. Government Plantation, Kampala, Uganda, November 12, 1927. Grass No. 7. One of a series of nine grasses selected by T. D. Maitland, former botanist of Uganda, as being the most promising indigenous grasses for forage in Uganda.

76421. DIOSCOREA sp. Dioscoreaceae.

No. 704. November 15, 1927. A vine growing at the edge of the bush near Busia, Uganda.

76422. DISSOTIS sp. Melastomaceae.

Nospei.

76423. DOLICHOS LABLAB L. Fabaceae. **Hyacinth bean.**

No. 691. November 11, 1927. A common vine growing in the grassland and at the edge of the bush between Kyegegwa and Kampala, Uganda.

76424. FICUS sp. Moraceae.

No. 706. November 15, 1927. A shrub growing at the edge of the bush near Busia, Uganda.

76425. HIBISCUS sp. Malvaceae.

No. 715. November 10, 1927. Presented by Mr. Wickham, agricultural officer, Fort Portal, Uganda. The bark of this plant is used by the natives for tying purposes.

76426. HYPARRHENIA sp. Poaceae. **Grass.**

Nos. 206 and 207. November 15, 1927. Scott Agricultural Laboratories, Nairobi, Kenya Colony. A tall but rather leafy grass common in the bush country in the hills. The forage value is unknown. It is indistinguishable from *Hyparrhenia rufa.*

76427. IPOMOEA sp. Convolvulaceae.

No. 714. November 12, 1927. A red-flowered morning-glory from the top of one of the flat hills near Kampala, Uganda.

76416 to 76453—Continued.

76428. MANISURIS EXALTATA (L. f.) Kuntze (*Rottboellia exaltata* L. f.). Poaceae. **Grass.**

No. 389. Government Plantation, Kampala, Uganda, November 12, 1927. Grass No. 9. One of a series of nine grasses selected by T. D. Maitland, former botanist of Uganda, as being the most promising indigenous grasses for forage in Uganda.

For previous introduction see No. 68967.

76429. MILLETTIA sp. Fabaceae.

No. 378. From the garden of G. C. Ishmael, Kampala, Uganda, November 13, 1927. Next to Jacaranda this species is the most admired flowering shrub in Uganda. The identity appears to be uncertain, and it is unknown whether the plant is indigenous or introduced.

76430. OSBECKIA sp. Melastomaceae.

No. 641. Kenya Colony, November 3, 1927. A small ornamental shrub with large purple flowers, found along the stream about 13 miles beyond Kitale.

76431. PANICUM MAXIMUM Jacq. Poaceae. **Grass.**

No. 385. Government Plantation, Kampala, Uganda, November 12, 1927. Grass No. 5. One of a series of nine grasses selected by T. D. Maitland, former botanist of Uganda, as being the most promising indigenous grasses for forage in Uganda.

For previous introduction see No. 74464.

76432. PASPALUM CONJUGATUM Berg. Poaceae. **Grass.**

No. 381. *Omudo.* Government Plantation, Kampala, Uganda, November 12, 1927. Grass No. 1. One of a series of nine grasses selected by T. D. Maitland, former botanist of Uganda, as being the most promising indigenous grasses for forage in Uganda.

For previous introduction see No. 67722.

76433. PASPALUM NOTATUM Fluegge. Poaceae. **Grass.**

No. 380. Near Kampala, Uganda, November 12, 1927. A locally grown variety considered the best grass for lowland pasture in Uganda. It is the only grass in Uganda that appears to be cultivated for grazing by the natives.

For previous introduction see No. 67979.

76434 to 76436. PASPALUM spp. Poaceae. **Grass.**

Government Plantation, Kampala, Uganda, November 12, 1927. Grasses selected by T. D. Maitland, former botanist of Uganda, as being the most promising indigenous grasses for forage in Uganda.

76434. PASPALUM sp.

No. 382. Grass No. 2.

76435. PASPALUM SCROBICULATUM L.

No. 383. Grass No. 3.

76436. PASPALUM SCROBICULATUM L.

No. 384. Grass No. 4.

76437 to 76440. PENNISETUM spp. Poaceae. **Grass.**

76437. PENNISETUM sp.

No. 370. *Little Tororo* grass. November 4, 1927. A grass of good forage appearance growing along the road east of Tororo, Uganda. This species is not believed to have been seen elsewhere.

76416 to 76453—Continued.

76438. PENNISETUM sp.

No. 371. *Big Tororo* grass. November 4, 1927. A grass similar to No. 370 [No. 76437], but with much larger heads. It was found along the road east and west of Tororo, Uganda.

76439. PENNISETUM sp.

No. 374. November 10, 1927. A tall bunch grass, 5 to 7 feet high, growing among elephant grass along the road near the Crater Lakes, south of Fort Portal, Uganda. It is one of the few grasses which appear to hold their own in the rank elephant grass covering the lower slopes and foothills of Ruwenzori.

76440. PENNISETUM sp.

No. 391. November 19, 1927. Presented by W. L. Watt, superintendent, Scott Agricultural Laboratories, Nairobi, Kenya Colony. It appears to be the "Pennisetum with witch-broom tufts," common in moist places all over the East African plains.

76441. PHASEOLUS SEMIERECTUS L. Fabaceae.

No. 600. November 8, 1927. A common legume growing in the grassland at Kyegegwa, Uganda. The flowers are large and purple, and the brown hairy pods are long and slender.

For previous introduction see No. 61008.

76442. PISUM SATIVUM L. Fabaceae. **Pea.**

No. 379. November 12, 1927. Presented by G. O. Ishmael, Kampala. An edible pink-flowered pea said to be indigenous in southwestern Uganda, and the only good-flowered pea that does well in Uganda. When cooked the peas are darker colored than English garden peas, but they are quite as palatable.

76443. RUBUS sp. Rosaceae.

No. 661. November 9, 1927. A variety growing locally in the forest and at the edge of the bamboo zone on Ruwenzori Range, near Buwanda Pass.

76444. TRICHOLAENA ROSEA Nees. Poaceae. **Natal grass.**

No. 388. Government Plantation, Kampala, Uganda, November 12, 1927. Grass No. 8. One of the series of nine grasses selected by T. D. Maitland, former botanist of Uganda, as being the most promising indigenous grasses for forage in Uganda.

For previous introduction see No. 73262.

76445 to 76447. TRIFOLIUM spp. Fabaceae. **Clover.**

76416 to 76453—Continued.

76445. TRIFOLIUM sp.

No. 368. November, 1927. Near Timboroa, Kenya Colony, at an altitude of 9,000 feet on the Eldoret Road, en route to Uganda. A pointed-leaved, white-flowered creeping clover growing in natural sward in deep-red "coffee" soil. It is believed that this species had not been collected elsewhere, though the identity is uncertain.

76446. TRIFOLIUM sp.

No. 369. November, 1927. Near Timboroa, Kenya Colony, at an altitude of 9,000 feet, on the Eldoret Road, en route to Uganda. A fine grazing type of clover with large violet, magenta, or deep-red flowers growing in natural sod. It is a promising clover for cool moist regions.

76447. TRIFOLIUM sp.

No. 372. November 9, 1927. A clover with small red flowers, found at the foot of Buwanda Pass, Ruwenzori Range, Uganda. This is the only clover found on Ruwenzori Range or known to occur there.

76448. VIGNA sp. Fabaceae.

No. 392. November, 1927. A not-uncommon vine in Kenya Colony, said to be of potential usefulness for forage or green manure. It grew voluntarily at the Scott Agricultural Laboratories, Nairobi, Kenya Colony. The plant from which these seeds were taken was very leafy and luxuriant.

76449. LEONOTIS NEPETAEFOLIA (L.) Ait. Menthaceae.

No. 393. Nakuru, Kenya Colony. November 1, 1927. A herbaceous orange-flowered perennial resembling monarda, found throughout east Africa and at an altitude of 10,000 feet on Mount Kenya where it becomes 12 feet high. It has been introduced into England as an ornamental. Several forms occur with flowers varying from light pink through rather deep red to bright orange. The latter color predominates.

76450. (Undetermined.)

No. 633. November 1, 1927. A tree growing near a small stream between Gilgil and Nakuru, Kenya Colony.

76451. (Undetermined.)

No. 692. November 11, 1927. A legume common on grassland and hills between Kyegegwa and Kampala, Uganda.

76452. (Undetermined.)

No. 696. November 11, 1927. A shrublike honeysuckle found between Kyegegwa and Kampala, Uganda.

76453. (Undetermined.)

No. 702. November 13, 1927. A low tree growing in a garden at Kampala, Uganda.

Index of common and scientific names	37

INTRODUCTORY STATEMENT

The period covered by Inventory 95—April, May, and June, 1928—was the busy time for planting in our Northern Hemisphere. But the material received is a reminder that the Southern Hemisphere is just as busy harvesting crops. Two collections of Tasmanian and Australian plants obtained by Mrs. Frieda Cobb Blanchard (Nos. 76701 to 76724, 76931 to 76967) will be of interest to plant growers in the Southwestern States, as will the collection from New Zealand (Nos. 77173 to 77214). Thirty varieties of common wheat (*Triticum aestivum*, Nos. 76968 to 76997) from New South Wales, Australia, will be of interest to cerealists, and a collection, mostly succulents (Nos. 77217 to 77252) from Kirstenbosch, Cape Province, Africa, will add to the possibilities for rock gardens in the warmer parts of the country. Eight kinds of grasses from Argentina (Nos. 76878 to 76885), of possible value as forage crops, increase the receipts from the antipodes.

In line with the policy of adding to the ornamental plants already in cultivation in this country, new or little known species and varieties of Abelia, Berberis, Buxus, Deutzia, Lonicera, Syringa, and other genera have been obtained from Hon. Vicary Gibbs, of England (Nos. 76550 to 76602). A collection of Japanese azaleas, mostly horticultural forms (*Rhododendron* spp., Nos. 77064 to 77146), collected by R. K. Beattie, will add to this list of ornamentals as well as supply materials for breeding new varieties suited to American conditions.

Mr. Beattie also sent in some Japanese chestnuts (*Castanea crenata*, Nos. 76473 and 76474), several Japanese oaks (*Quercus* spp., Nos. 76478 to 76481), and a new strawberry (*Fragaria hayatai*, No. 76499) which may possess some new characteristics of value to breeders.

To the already large collection of bamboos being cultivated at the Barbour Lathrop Plant-Introduction Garden at Savannah, Ga., this inventory adds 15 varieties (Nos. 77000 to 77014) collected by F. A. McClure in China and 8 varieties (Nos. 77253 to 77260) from France.

Thirty-two varieties of filberts (*Corylus avellana*, Nos. 76821 to 76852) from Germany; a collection of new varieties of apples (*Malus* spp., Nos. 76454 to 76462) and pears (*Pyrus* spp., Nos. 76463 to 76465), and 23 varieties of red clover (*Trifolium pratense*, Nos. 76650 to 76672) from Russia; 39 cereals and forage crops from the Caucasus (Nos. 76500 to 76538); sugarcane varieties and closely related species (*Saccharum* spp., Nos. 76539 to 76549) from India; and 20 varieties of oats (*Avena sativa*, Nos. 76800 to 76819) from Manchuria, show that the Northern Hemisphere was not entirely dormant during this period.

86851—30——1

It should be noted again that this inventory does not represent material now in the Office of Foreign Plant Introduction. Much of it has been turned over to other offices, and some of it, at least, will be removed from propagation until it has been tested to determine its value in this country.

The botanical determinations have been made and the nomenclature determined by H. C. Skeels, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

OFFICE OF FOREIGN PLANT INTRODUCTION
Washington, D. C., June 24, 1929.

INVENTORY[1]

76454 to 76465.

From Leningrad, Russia. Scions presented by A. Kol, chief of the bureau of introduction, Institute of Applied Botany. Received May 25, 1928.

New varieties originated by I. V. Mitchurin, Kozlov, Tambov Government.

76454 to 76462. MALUS spp. Malaceae. **Apple.**

76454. MALUS sp.

No. 82147. *Anton Shapau.* A good-keeping winter variety. The bright-red fruits, 6 to 7 centimeters in diameter, are of good flavor.

76455. MALUS sp.

No. 82144. *Bellefleure Kitaika.* (*American Bellefleure* × *Malus prunifolia.*) 1914. A fall variety. The fruits, bright red on a yellow ground, are 8 to 9 centimeters in diameter and of excellent flavor.

76456. MALUS sp.

No. 82146. *Bessemianka Mitchurina.* (*Skrizhapel* × *Komsinskaia.*) 1921. A good-keeping, unusually hardy winter variety. The fruits, 8 centimeters in diameter, are yellow with a red blush.

76457. MALUS sp.

No. 82149. *Bergamot Renet.* Seedling of *Antonovka* grafted on a pear. 1898. A good-keeping winter variety. The greenish yellow fruits are 8 centimeters in diameter and of good flavor.

76458. MALUS sp.

No. 82145. *Shampan-ren-Kitaika.* (*Malus prunifolia* × *White Winter Calville.*) 1920. A good-keeping winter variety. The yellow fruits are 7 centimeters in diameter and have a pleasant flavor.

76459. MALUS sp.

No. 82148. *Pepin Shafrannyj.* (*Renet d'Orleans English Pepin* × *Malus prunifolia.*) 1915. A good-keeping winter variety. The bright-colored fruits are 6 to 7 centimeters in diameter and of good flavor.

76454 to 76465—Continued.

76460. MALUS sp.

No. 82143. *Krasnyj Shtandart.* (*Renet d'Orleans* × *English Pepin* × *Pyrus prunifolia* × *Pyrus nedzwetskiana* ×.) 1922. A good-keeping winter variety, not entirely hardy in the Moscow Government. The fruits are bright red and of good flavor. This variety is of ornamental value because of its dark-red foliage.

76461. MALUS sp.

No. 82150. *Slavianka.* (*Antonovka* × *Renet ananasnyj.*) 1896. A good-keeping winter variety. The yellow fruits are 7 centimeters in diameter and of excellent flavor.

76462. MALUS sp.

No. 82152. *Bergamotte Surrogat Sakhara.* (*Tzarskaia* × *Aydego.*) 1915. A summer variety. The fruits, yellow with a red blush, are 6 to 7 centimeters in diameter and of good flavor.

76463 to 76465. PYRUS spp. Malaceae. **Pear.**

76463. PYRUS sp.

No. 82151. *Kitaika Zolotaia.* (*Belyj Naliv* × *Pyrus prunifolia.*) 1907. An unusually hardy summer variety. The fruits are 6 centimeters in diameter and of good flavor.

76464. PYRUS sp.

No. 82154. *Winter Ber.* (*Pyrus ussuriensis* × *Ber d'Ill.*) 1898. A good-keeping winter variety. The yellow fruits are 8 centimeters in diameter. The flavor is exceedingly changeable, depending on the stock used.

76465. PYRUS sp.

No. 82153. *Ber Pobeda.* (*Tzarskaia* × *Sen Germaine.*) 1916. A good-keeping winter variety. The fruits, yellow with a red blush, are 6 to 7 centimeters in diameter and of good flavor.

76466. PHLEUM PRATENSE L. Poaceae. **Timothy.**

From Svalof, Sweden. Seeds presented by Allmanna Svenska, through Morgan W. Evans, Bureau of Plant Industry. Received June 5, 1928.

Svalof Original Gloria.

[1] It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction, and further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in, so that definite identification can be made.

76467 and 76468. INGA spp. Mimosaceae.

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received August 17, 1927. Numbered June, 1928.

76467. INGA JINICUIL Schlecht.

An unarmed tropical leguminous tree, sometimes becoming large, with pinnate bright-green leaves, white flowers, and rather large pods containing edible pulp. Native to southeastern Mexico.

76468. INGA sp.

Some of the plants grown from seeds received as *Inga jinicuil* have developed leaves with winged petioles, which is not characteristic of that species. They have been sorted out to be grown for further identification.

76469. ULMUS JAPONICA Sarg. Ulmaceae. **Japanese elm.**

From the Arnold Arboretum, Jamaica Plain, Mass. Seeds collected by C. C. Thomas, Bureau of Plant Industry. Received June 5, 1928.

A handsome, hardy Japanese elm, occasionally 90 feet high.

For previous introduction see No. 64467.

76470. ULMUS PUMILA L. Ulmaceae. **Chinese elm.**

From Chosen. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received June 7, 1928.

No. 684. Arboretum at the Suigen Agricultural Experiment Station. May 15, 1928.

For previous introduction see No. 74203.

76471. DENDROCALAMUS sp. Poaceae. **Bamboo.**

From Oneco, Fla. Plants purchased from Reasoner Bros., Royal Palm Nurseries, through R. A. Young, Bureau of Plant Industry. Received March 12, 1928. Numbered June, 1928.

An unidentified bamboo which was found growing with *Dendrocalamus strictus* and which somewhat resembles that species.

76472. LITCHI CHINENSIS Sonner (*Nephelium litchi* Cambess.). Sapindaceae. **Lychee.**

From Manila, Philippine Islands. Plants presented by Arthur F. Fischer, Director of the Bureau of Forestry, through W. T. Swingle, Bureau of Plant Industry. Received May 7, 1928.

A tropical Chinese tree 30 to 40 feet high with a broad round-topped crown, usually three pairs of glossy green leaflets 5 inches long, and small clusters of pink fruits which turn brown in ripening. The edible portion is the fleshy arillus surrounding the seed.

For previous introduction see No. 74220.

76473 and 76474. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

From Sakauwe Mura, Kuga Gun, Yamaguchi Ken, Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received March 28, 1928. Numbered June, 1928.

Cultivated varieties obtained from Mr. Shigeo Hayashi.

76473. No. 676. *Yokobai.*

76474. No. 677. *Ganne.*

76475 to 76481.

From Japan. Seeds and plants collected by R. K. Beattie, Bureau of Plant Industry. Received December, 1927, and February, 1928. Numbered June, 1928.

76475 to 76477. CHRYSANTHEMUM MORIFOLIUM (Ramat.) Hemsl. Asteraceae.

Plants from the Botanic Garden, Kyoto, January 28, 1928.

76475. No. 609. *Yu bae.* Hosokuda type (slender pipe).

A light reddish purple chrysanthemum.

76476. No. 610. *Ryukan.* Kankuda type (intermediate pipe).

A light brownish purple.

76477. No. 611. *Itozakura.* Harikuda type (needle pipe).

A cherry-colored chrysanthemum.

76478 to 76481. QUERCUS spp. Fagaceae. **Oak.**

76478. QUERCUS MONGOLICA GROSSESERRATA (Blume) Rehd. and Wils.

No. 14. Seeds. Makomanai Experimental Farm, near Sapporo, Hokkaido. October 10, 1927. *Mizunara.* This oak is said to be the most important forest tree in Japan, attaining a height of 100 feet and a girth of 12 feet. The wood is durable and for a hardwood is easily worked, approximating for furniture the best European and American oaks.

76479. QUERCUS sp.

No. 177. Seeds. A wild species growing in the garden of the Hachiman Shrine, at Oji, Shino Mura, Minamikuwata Gun, Tamba, November 2, 1927.

76480. QUERCUS sp.

No. 178. Seeds. *Kunugi.* A wild species growing at Oji, Shino Mura, Minamikuwata Gun, Tamba, November 2, 1927.

76481. QUERCUS sp.

No. 260. Seeds. A cultivated species growing at Mori, Shino Mura, Minamikuwata Gun, Tamba, November 15, 1927.

76482 and 76483. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Giza, Egypt. Seeds presented by the director of the horticultural section of the Ministry of Agriculture. Received June 8, 1928.

76482. A long white variety.

76483. A long black variety.

76484 and 76485.

From Chile. Seeds presented by E. O. Orpet, Superintendent of Parks, Santa Barbara, Calif. Received June 11, 1928.

76484. GEVUINA AVELLANA Molina. Proteaceae. **Chilean nut.**

An evergreen Chilean tree up to 40 feet high, with dark-green pinnate leaves, white flowers in axillary racemes, and edible red fruits.

For previous introduction see No. 44409.

76485. PUYA ALPESTRIS (Poepp. and Endl.) Gay. Bromeliaceae.

A Chilean herbaceous perennial with pineapplelike leaves and a flower stalk 3 to 4 feet high bearing a much branched panicle of large showy metallic blue flowers. It is said to stand considerable frost.

76486 and 76487. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

From Tihama Desert, Yemen, Arabia. Seeds obtained through K. S. Twitchell. Received June 14, 1928.

76486. A white variety.

76487. A red variety.

76488. BIGNONIA MAGNIFICA Bull. Bignoniaceae.

From Peradeniya, Ceylon. Plants collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received July 19, 1926. Numbered June, 1928.

No. 883. Botanic gardens, June 9, 1926. A vigorous climbing vine with attractive deep-green foliage which is not attacked by fungi or other pests to any extent. The large trumpet-shaped flowers are deep lake pink inclined toward magenta. A large bush of this variety is growing in the Peradeniya Botanic Gardens.

76489 and 76490.

From Sao Paulo, Brazil. Seeds presented by Amadeu Barbiellini. Received June 9, 1928.

76489. CACARA EROSA (L.) Kuntze (*Pachyrhizus angulatus* Rich.). Fabaceae. **Yam bean.**

Jacatupe. A twining wiry-stemmed plant occasionally grown in the West Indies. The large tuberous roots contain much starch.

For previous introduction see No. 51364.

76490. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

Guandu. A Brazilian variety.

76491 and 76492.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received June 11, 1928.

76491. PHYLLANTHUS ACIDUS (L.) Skeels (*P. distichus* Muell. Arg.). Euphorbiaceae. **Iba.**

A variety with sweet white fruits almost an inch in diameter.

For previous introduction see No. 48179.

76492. VIBURNUM sp. Caprifoliaceae.

Idog.

76493 to 76495. CARICA PAPAYA L. Papayaceae. **Papaya.**

From Honolulu, Hawaii. Seeds presented by W. T. Pope, horticulturist of the Hawaii Agricultural Experiment Station. Received June 12, 1928.

Hawaiian varieties.

76493. A long variety.

76494. A round variety.

76495. *Solo.*

For previous introduction see No. 52620.

76496. DENDROCALAMUS LATIFLORUS Munro. Poaceae. **Bamboo.**

From Oneco, Fla. Plants purchased from Reasoner Bros., Royal Palm Nurseries, through R. A. Young, Bureau of Plant Industry. Received March 12, 1928. Numbered May, 1928.

A native of the warmer portions of China, said to have been found near Hong Kong and vicinity. Grows to a height of 60 to 75 feet; has strong culms often 5 inches in diameter; leaves are often 7 to 10 inches long and from one-half inch to 3 inches broad. A very handsome ornamental species worthy of planting in the southern half of Florida.

76497. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Ventimiglia, Italy. Seeds presented by S. McLeod Braggins, superintendent, La Mortola. Received June 18, 1928.

An Italian variety.

76498. ZEPHYRANTHES sp. Amaryllidaceae. **Zephyrlily.**

From Piste, Yucatan, Mexico. Bulbs collected by E. L. Crandall, Bureau of Plant Industry. Received June 28, 1927. Numbered June, 1928.

A tender bulbous white-flowered plant.

76499. FRAGARIA HAYATAI Makino. Rosaceae. **Strawberry.**

From Mount Arisan, Taiwan. Plants collected by R. K. Beattie, Bureau of Plant Industry. Received May 1, 1928.

No. 681. Growing on loose soil at the foot of a cliff near Hiranonuma station, March 26, 1928. A Japanese stoloniferous perennial with long-petioled radicle leaves of three rhombic-ovate leaflets serrate with the terminal tooth smaller than the others. The flowers have a light-green calyx and obovate emarginate or cuspidate white petals, and the delicious globose red fruits are one-fourth of an inch in diameter.

76500 to 76538.

From Daghestan, Caucasus. Seeds presented by A. Weissmann, Director of the Daghestan Agricultural Plant-Breeding Station at Derbent. Received April 21, 1928.

76500. CICER ARIETINUM L. Fabaceae. **Chickpea.**

No. 171. Originally from Derbent.

76501 to 76504. HORDEUM VULGARE NIGRUM (Willd.) Beaven. **Six-rowed barley.**

76501. No. 3741.

76502. No. 3953. Originally from Bereekey village, Derbent district, Daghestan.

76503. No. 3955. Originally from Derbent district, Daghestan.

76504. No. 4141. Originally from Transcaucasia, Nakhichevan district.

76505 to 76514. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. **Six-rowed barley.**

76505. No. 2565. Originally from Kizliar district, Daghestan.

76506. No. 2677. Originally from Petroff's farm, Ingooshetia, Northern Caucasus.

76507. No. 2679. Originally from Chechnia, Terek region, Low Naur village, Northern Caucasus.

76508. No. 2689. Originally from Terek district, Northern Caucasus.

76509. No. 2691. Originally from Little Kabarda, Tambovsky farm.

76510. No. 3759. Originally from Kasoom, Kent village, Kiurinsk district, Daghestan.

76511. No. 3817. Originally from Kaytago, Tabassaran district, Daghestan.

76512. No. 3973. Originally from Derbent district, Daghestan.

76513. No. 4119. Originally from Transcaucasia, Nakhichevan district.

76514. No. 4133.

76515. LENS ESCULENTA Moench. Fabaceae. **Lentil.**

No. 267.

76500 to 76538—Continued.

76516 and 76517. PISUM SATIVUM L. Fabaceae. **Pea.**

76516. No. 39. Darghin district.

76517. No. 52. Laki district.

76518. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.) Fabaceae. **Soybean.**

No. 308. Originally from Khassar Yook.

76519 to 76529. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

76519 to 76525. Variety *erythrospermum*.

76519. No. 1682. Originally from Andi district, Daghestan.

76520. No. 1879. Originally from Kaytago, Tabassaran district, Daghestan.

76521. No. 2033. Originally from Makach Kala district, Dahgestan.

76522. No. 2121. Originally from Samoor district, Daghestan.

76523. No. 2126. Originally from Samoor district, Daghestan.

76524. No. 2250. Originally from Avary district, Daghestan.

76525. No. 2438. Originally from Ossetia district, Daghestan.

76526. No. 3250. Originally from Kaytago Tabassaran district, Daghestan. Variety *ferrugineum*.

76527. No. 3552. Originally from Buynaksky district, Daghestan. Variety *ferrugineum*.

76528. No. 3609. Originally from Avary district, Daghestan. Variety *ferrugineum*.

76529. No. 5962. Originally from Laksky district, Daghestan. Variety *fuliginosum*.

76530 to 76535. TRITICUM DURUM Desf. Poaceae. **Durum wheat.**

76530. No. 3085. Originally from Kaytago Tabassaran district, Daghestan. Variety *hordeiforme*.

76531. No. 3484. Originally from Kaytago Tabassaran district, Daghestan. Variety *hordeiforme*.

76532. No. 3913. Originally from Derbent district, Daghestan. Variety *hordeiforme*.

76533. No. 3937. Originally from Derbent district, Daghestan. Variety *murciense*.

76534. No. 4182. Originally from Kaytago Tabassaran district, Daghestan. Variety *coerulescens*.

76535. No. 4353. Originally from Kaytago Tabassaran district, Daghestan. Variety *coerulescens*.

76536 to 76538. VICIA spp. Fabaceae.

76536. VICIA ERVILIA (L.) Willd. **Vetch.**

No. 235. A wild variety originally from Samoor district, Daghestan.

76537. VICIA FABA L. **Broadbean.**

No. 180. Originally from Avary district.

76538. VICIA SATIVA L. **Common vetch.**

No. 229.

76539 to 76549. SACCHARUM spp. Poaceae.

From Coimbatore, India. Cuttings presented by T. S. Venkatraman, Government sugarcane expert of the Imperial Sugarcane Station at Coimbatore. Received April 23, 1928.

76539 to 76549—Continued.

76539. SACCHARUM ARUNDINACEUM Retz. **Grass.**

A tall grass, native to India and China, closely related to sugarcane.

For previous introduction see No. 55667.

76540. SACCHARUM MUNJA Roxb. **Grass.**

Sarhandar. An Indian perennial grass with stems 20 feet high, lanceolate leaves 5 feet long, and ovoid panicles 1 to 2 feet long.

76541. SACCHARUM NARENGA (Nees) Wall. **Grass.**

A perennial Indian grass with slender stems 8 feet high, linear leaves a foot long, and narrow panicles a foot long.

76542 to 76546. SACCHARUM OFFICINARUM L. **Sugarcane.**

Indian varieties.

76542. *Chunnee*. A variety of the *Saretha* group.

76543. *Hemja*.

76544. A variety of the *Nagori* group.

76545. *Dhaulu*. A variety of the *Sunnabile* group.

76546. *Uba*. A variety of the *Pansahi* group.

76547 to 76549. SACCHARUM SPONTANEUM L. **Grass.**

For previous introduction see No. 73997.

76547. *Dacca*.

76548. *Gehra Bon*.

76549. A local variety.

76550 to 76602.

From Elstree, Herts, England. Plants presented by Hon. Vicary Gibbs, Aldenham House Gardens. Received April 13, 1928.

76550 to 76552. ABELIA spp. Caprifoliaceae.

76550. ABELIA CHINENSIS R. Br.

A spreading Chinese shrub 4 to 5 feet high, with reddish branchlets, ovate serrate leaves 2 to 3 inches long, and fragrant white flowers in dense axillary and terminal cymes.

76551. ABELIA SERRATA Sieb. and Zucc.

A Japanese shrub about 5 feet high, with rhombic-ovate leaves an inch long and axillary pairs of rosy pink flowers.

For previous introduction see No. 73401.

76552. ABELIA TRIFLORA R. Br.

A Himalayan shrub up to 15 feet high, with corrugated bark, ovate-lanceolate leaves 2 to 3 inches long, and terminal clusters of fragrant rosy white flowers.

For previous introduction see No. 73402.

76553. ARTEMISIA INCANA (L.) Druce. Asteraceae.

A shrubby perennial, native to Armenia and Persia, with intensely gray orbicular leaves palmately divided into linear lobes and small gray flower heads.

For previous introduction see No. 73404.

76554 to 76556. BERBERIS spp. Berberidaceae. **Barberry.**

76554. BERBERIS ACTINACANTHA Mart.

An evergreen Chilean shrub 3 to 4 feet high, with 3-parted to 5-parted often leaflike spines, broadly ovate spiny margined leaves, fascicles of three to six fragrant deep-yellow flowers, and dark fruits.

For previous introduction see No. 65222.

76550 to 76602—Continued.

76555. BERBERIS ANGULOSA Wall.

A handsome Himalayan shrub 4 to 5 feet high, with 1-parted to 5-parted spines, obovate spiny leaves whitish beneath, large solitary globose orange-yellow flowers half an inch wide, and ellipsoid red fruits.

For previous introduction see No. 65223.

76556. BERBERIS BREVIPANICULATA C. Schneid. **Shortcluster barberry.**

A tawny branched shrub, native to western China, with golden-yellow spines, glaucous oblong leaves, and small flowers in graceful panicles an inch long.

For previous introduction see No. 52336.

76557 to 76560. BUXUS spp. Buxaceae.

76557. BUXUS BALEARICA Willd. **Balearian box.**

An evergreen shrub, 10 to 15 feet high, native to the Balearic Islands, with oblong light-green leaves 1 to 2 inches long and more than half an inch wide.

76558. BUXUS HARLANDII Hance.

A compact evergreen Chinese shrub about 3 feet high, with obovate-oblong leaves gradually narrowed toward the base, less than an inch long and a fourth of an inch broad.

For previous introduction see No. 40566.

76559. BUXUS SEMPERVIRENS L. **Box.**

Variety *myosotifolia*. A form of the common box which probably has oblanceolate leaves like the forget-me-not.

76560. BUXUS SEMPERVIRENS MYRTIFOLIA Sweet. **Box.**

A form of the common box which is usually low and has small elliptic-oblong leaves.

76561. CARMICHAELIA ARBOREA (Forst. f.) Druce (*C. australis* R. Br.). Fabaceae.

A leafless New Zealand shrub 6 to 9 feet high, with flat green branches and thick clusters of fragrant delicate lilac flowers with darker stripes. The valves of the black pods fall away, exposing the bright-scarlet seeds.

For previous introduction see No. 76220.

76562. CARMICHAELIA FLAGELLIFORMIS Colenso. Fabaceae.

A New Zealand shrub about 4 feet high, with stiff slender flat green branches, which take the place of leaves, and short dense axillary fascicles of purplish flowers borne in great profusion.

For previous introduction see No. 40159.

76563. CASSINIA FULVIDA Hook. f. Asteraceae.

A New Zealand shrub 4 to 5 feet high, covered with slightly viscid yellow down and producing corymbs of small white flowers.

For previous introduction see No. 73408.

76564. CASSINIA VAUVILLIERSII (Homb. and Jacq.) Hook. f. Asteraceae.

A compact New Zealand shrub 2 to 8 feet high covered with yellow tomentum and having small leathery leaves half an inch long. The heads of small white flowers are in dense terminal corymbs.

For previous introduction see No. 73410.

76565. CEANOTHUS DELILIANUS Spach (*C. azureus* Hort.). Rhamnaceae.

Georges Simon. A hybrid shrub with dark-green leaves and lilac-rose flowers.

For previous introduction see No. 73412.

76550 to 76602—Continued.

76566. CERATOSTIGMA GRIFFITHII C. B. Clarke. Plumbaginaceae.

A low densely branched Himalayan shrub with alternate lanceolate red-margined leaves and heads of handsome blue flowers.

For previous introduction see No. 73415.

76567. CISTUS PURPUREUS Lam. Cistaceae. **Rockrose.**

A hybrid shrub 3 to 4 feet high, with villous branchlets, oblong-lanceolate leaves, and terminal cymes of large reddish purple flowers with a red blotch on a yellow ground at the base of each petal.

For previous introduction see No. 73419.

76568. CLEMATIS GLOBULOSA Hort. Ranunculaceae.

A hybrid of *Clematis douglasii scottii* and *C. texensis* with deep-purple inverted pitcher-shaped flowers. Both of the parents of this European hybrid are native to the western United States.

For previous introduction see No. 76110.

76569. COPROSMA ACEROSA A. Cunn. Rubiaceae.

An evergreen prostrate New Zealand shrub with very small linear leaves, greenish white flowers, and pale-blue berries.

For previous introduction see No. 73425.

76570. CORIARIA TERMINALIS XANTHOCARPA Rehd. and Wils. Coriariaceae.

A semishrubby Himalayan perennial with sessile ovate leaves and terminal racemes of greenish flowers followed by long, very ornamental clusters of translucent yellow berries.

For previous introduction see No. 73534.

76571. COTONEASTER ACUMINATA Lindl. Malaceae.

Forrest No. 5567. A variety of *Cotoneaster acuminata*, which is a Himalayan shrub 12 to 15 feet high with ovate leaves, pinkish flowers, and bright-red fruits.

For previous introduction see No. 49627.

76572. COTONEASTER FRIGIDA Wall. Malaceae.

Variety *Vicarii*. Said to be a magnificent form of this Himalayan tree with large masses of bright-red berries.

76573. DAVIDIA INVOLUCRATA VILMORINIANA (Dode) Hemsl. (*D. laeta* Dode). Cornaceae. **Dovetree.**

A Chinese pyramidal tree with cordate serrate yellowish green leaves and small flower heads each with two large unequal creamy white bracts, the longer one pendulous and 6 inches long. The pear-shaped fruits, 1 to 2 inches long, are green with a purple bloom.

For previous introduction see No. 72797.

76574 to 76576. DEUTZIA spp. Hydrangeaceae.

76574. DEUTZIA LONGIFOLIA VEITCHII (Veitch) Rehder.

A Chinese shrub 6 feet high, with lanceolate leaves which are stellate pubescent beneath and dense corymbs of brightly colored purplish flowers an inch across.

For previous introduction see No. 76248.

76575. DEUTZIA SCABRA Thunb. **Fuzzy deutzia.**

Variety *latiflora*. A form of this commonly cultivated Chinese shrub which is said to have large panicles of large white flowers with pink-tinted outside petals.

76550 to 76602—Continued.

76576. DEUTZIA SETCHUENENSIS Franch. **Szechwan deutzia.**

A Chinese shrub 6 feet high with lanceolate long-pointed leaves and loose corymbs of white flowers.

For previous introduction see No. 73434.

76577. EUONYMUS sp. Celastraceae.

Vilmorin No. 5521. A tall pyramidal free-flowering evergreen Chinese shrub probably related to *Euonymus japonicus*.

76578. FAGELIA VIOLACEA (Cav.) Kuntze (*Calceolaria violacea* Cav.). Scrophulariaceae.

An evergreen Chilean shrub with small heart-shaped deeply toothed leaves and yellow-salmon flowers spotted with purple.

For previous introduction see No. 73407.

76579. FORSYTHIA INTERMEDIA DENSIFLORA Koehne. Oleaceae. **Goldenbell.**

A form of this garden hybrid forsythia which has the pale yellow flowers densely crowded on the pendulous shoots.

76580. HYPERICUM KOUYTCHENSE Leveille. Hypericaceae.

Wilson No. 256. A Chinese shrub which forms a rounded hummock profusely covered with golden-yellow flowers.

76581. JASMINUM HETEROPHYLLUM Roxb. Oleaceae. **Jasmine.**

Variety *glabricymosum*. A smooth-flowered form of this Himalayan shrub which is said to be native to China and is a strong-growing bush with a profusion of golden-yellow flowers.

76582 to 76588. LONICERA spp. Caprifoliaceae. **Honeysuckle.**

76582. LONICERA CHAETOCARPA Rehder.

An upright shrub about 6 feet high, native to western China, with oblong leaves, nodding yellowish flowers, and red fruits.

76583. LONICERA KOEHNEANA Rehder.

A Chinese shrub up to 12 feet high, with rhombic-ovate leaves softly pubescent beneath, yellow flowers, and dark-red fruits.

For previous introduction see No. 65772.

76584. LONICERA PILEATA YUNNANENSIS (Franch.) Rehder.

A prostrate half-evergreen shrub, native to Yunnan, China, with ovate leaves, yellow flowers, and violet fruits.

For previous introduction see No. 73441.

76585. LONICERA SPINOSA Jacquemont.

A low Himalayan shrub with spinescent branchlets, linear oblong leaves an inch long, purplish flowers, and bluish red fruits.

76586. LONICERA TRAGOPHYLLA Hemsl.

A high climbing woody vine, native to western China, with oblong leaves 4 to 5 inches long, terminal clusters of large bright-yellow flowers 3 inches long, and bright-red fruits.

76587 and 76588. LONICERA spp.

New and excellent bush honeysuckles of good fruiting habits.

76587. LONICERA sp.

Hers No. 2037.

76588. LONICERA sp.

Cooper No. 5626.

76550 to 76602—Continued.

76589. MALUS MAGDEBURGENSIS Zimmerm. Malaceae. **Apple.**

A German hybrid apple forming a small tree with ovate leaves pubescent beneath, semidouble pinkish flowers, and yellow fruits an inch in diameter.

For previous introduction see No. 56522.

76590. MALUS SYLVESTRIS Mill. (*Pyrus malus* L.). Malaceae.

Variety *Aldenham purple*. A new and vigorous hybrid apple with dark purplish red fruits of good size.

76591. ONONIS ROTUNDIFOLIA L. Fabaceae.

A low shrubby plant 1 to 2 feet high, native to southern Europe. The trifoliolate leaves are slightly viscid, and the bright-rose flowers, an inch long, are in terminal leafy panicles.

For previous introduction see No. 66302.

76592. PRUNUS SERRULA TIBETICA (Batal.) Koehne. Amygdalaceae. **Cherry.**

A Chinese tree up to 30 feet high, with flaky brown bark, long pointed lanceolate leaves, clusters of one to three white flowers, and oval red fruits.

76593. PYRACANTHA CRENULATA RODGERSIANA A. B. Jacks. Malaceae. **Firethorn.**

An orange-fruited form of this Chinese shrub which has oblanceolate unequally serrulate leaves, 1 to 3 inches long, and rather loose corymbs of white flowers followed by clusters of orange fruits which persist throughout the winter and form a marked contrast to the evergreen leaves.

For previous introduction see No. 73446.

76594. RHAMNUS UTILIS Decaisne. Rhamnaceae. **Buckthorn.**

A slender-branched Chinese shrub up to 10 feet high, with narrowly elliptic yellowish green leaves 3 to 5 inches long, yellowish green flowers, and small black fruits.

For previous introduction see No. 63366.

76595. SARCOCOCCA RUSCIFOLIA Stapf. Buxaceae.

An evergreen Chinese shrub about 6 feet high, with ovate leaves 1 to 2 inches long, racemes of fragrant white flowers, and dark-scarlet berries.

76596. SARCOCOCCA RUSCIFOLIA CHINENSIS. (Franch.) Rehd. and Wils. Buxaceae.

A Chinese variety of *Sarcococca ruscifolia* with narrower leaves, but having similar white fragrant flowers and scarlet berries.

76597. SCHIZANDRA RUBRIFLORA (Franch.) Rehd. and Wils. Magnoliaceae.

A Chinese evergreen climbing shrub ovate denticulate leathery leaves 3 to 5 inches long, axillary clusters of dark-red flowers, and persistent bright-red berries.

For previous introduction see No. 63402.

76598. SIMMONDSIA CHINENSIS (Link.) C. Schneid. (*Buxus chinensis* Link.). Buxaceae.

An evergreen shrub 10 to 15 feet high, with small narrowly oblong leaves, native to southwestern California and western Mexico.

For previous introduction see No. 66282.

76599. SYRINGA KOMAROWI C. Schneid. Oleaceae. **Lilac.**

A Chinese shrub up to 15 feet high, with ovate leaves 5 to 7 inches long and nodding compact panicles of purple-pink flowers.

76550 to 76602—Continued.

76600. SYRINGA PALIBINIANA Nakai. Oleaceae. **Lilac.**

A shrub, native to Chosen, about 10 feet high, with slender upright branches, elliptic leaves 1 to 3 inches long, and loose panicles of pale-lilac or whitish flowers.

For previous introduction see No. 66314.

76601. VERONICA GAUNTLETTII Hort. Scrophulariaceae.

A hybrid with spikes 6 inches long of beautiful salmon-pink flowers.

For previous introduction see No. 66317.

76602. VIBURNUM HUPEHENSE Rehder. Caprifoliaceae. **Hupeh viburnum.**

A Chinese shrub about 6 feet high, with broadly ovate densely pubescent dentate leaves 2 to 3 inches long, cymes of small white flowers, and clusters of ovoid red fruits.

For previous introduction see No. 76189.

76603. ORYZA SATIVA L. Poaceae. Rice.

From India. Seeds obtained through the Federal Horticultural Board, New Orleans, La. Received April 28, 1928.

Patna paddy.

76604. ASTREBLA PECTINATA F. Muell. Poaceae. Mitchell grass.

From Sydney, New South Wales, Australia. Seeds purchased from Arthur Yates & Co. Received April 26, 1928.

An Australian grass which is said to be very valuable for its drought-enduring qualities as well as being valuable forage.

76605 to 76608.

From Tasmania, Australia. Presented by Mrs. Freida Cobb Blanchard, University of Michigan, Ann Arbor, Mich. Received April 27, 1928.

These seeds were collected in Cradle Valley, at an altitude of 3,000 feet.

76605. ATHROTAXIS CUPRESSOIDES Don. Pinaceae.

An evergreen Tasmanian tree about 40 feet high, somewhat resembling Cryptomeria, with ascending branches covered with closely appressed broad obtuse leaves one-sixth of an inch long and small woody spherical cones half an inch in diameter.

76606. ATHROTAXIS SELAGINOIDES Don. Pinaceae.

An evergreen Tasmanian tree about 50 feet high, somewhat resembling Cunninghamia, with spreading branches, loosely imbricated lanceolate leaves one-fourth of an inch long, and broadly ovate woody cones nearly an inch in diameter.

76607. LEPTOSPERMUM PUBESCENS Lam. Myrtaceae.

Variety *montanum.*—A subalpine form which is often a tree 60 to 70 feet high, with oblong leaves three-fourths of an inch long and white flowers an inch across.

76608. NOTHOFAGUS GUNNII (Hook. f.) Oerst. Fagaceae.

A dense bushy evergreen Tasmanian shrub 5 to 8 feet high, which is related to the northern beeches, with broadly oval leaves half an inch long and fruits resembling small beechnuts.

For previous introduction see No. 67825.

76609. ORYZA SATIVA L. Poaceae. Rice.

From Dacca, Bengal, India. Seeds presented by G. P. Hector, economic botanist. Received April 26, 1928.

Patnai. One of the chief varieties which go to make up the so-called "Patna" rice of trade. "Patna" is a trade name for a certain quality of rice exported from Calcutta, and consists of several botanical varieties.

76610 to 76634.

From Sumatra. Plants obtained through Prof. H. H. Bartlett, Director, Botanic Gardens and Arboretum, University of Michigan, Ann Arbor. Received October 5, 1927. Numbered May, 1928.

Nos. 76610 to 76614. June, 1924. Growing at Bandar Poeloe, Asahan, at an altitude of 600 feet.

No. 299. July, 1925. Growing at Bandar Poeloe, Asahan, at an altitude of 400 feet.

76635. ADANSONIA DIGITATA L. Bombacaceae. Baobab.

From St. Croix, Virgin Islands. Seeds presented by J. B. Thompson, Director of the Agricultural Experiment Station at St. Croix. Received April 24, 1928.

Guinea Tamarind tree. An African tree about 60 feet high and sometimes 30 feet in diameter, with palmate leaves divided into five to seven lanceolate leaflets, large white flowers 6 inches across, and large gourdlike fruits the pulp of which is edible. The tree from which these seeds were taken measures 40 feet in circumference.

For previous introduction see No. 70895.

76636 to 76642.

From Blackwood, South Australia. Seeds presented by Edwin Ashby. Received April 27, 1928.

76636. BANKSIA COCCINEA R. Br. Proteaceae.

An erect shrub, 12 to 15 feet high, native to Western Australia, with broadly ovate leaves 2 to 3 inches long, and globular spikes, 2 inches in diameter, of brilliant red flowers.

76637. BEAUFORTIA PURPUREA R. Br. Myrtaceae.

A Western Australian evergreen shrub with wandlike branches, opposite lanceolate leaves one-fourth of an inch long, and small purple flowers in dense heads.

76638. CASSIA sp. Caesalpiniaceae.

A shrub or small tree native to Western Australia, with very graceful pinnate leaves.

76639. GREVILLEA BANKSII R. Br. Proteaceae.

Variety *Fosteri*. An Australian evergreen shrub, 6 to 8 feet high, with red flowers.

For previous introduction see No. 75563.

76640. GREVILLEA PRITZELII Diels. Proteaceae.

An Australian evergreen shrub with brownish pubescent branchlets, linear falcate leaves 3 to 5 inches long, and racemes, 2 to 3 inches long, of white flowers covered with dense white tomentum.

76636 to 76642—Continued.

76641. HOVEA PUNGENS Benth. Fabaceae.

A rigidly erect evergreen shrub 1 to 2 feet high, native to Western Australia, with linear-lanceolate coriaceous sharp-pointed leaves less than an inch long, and axillary clusters of small purplish flowers.

76642. HOVEA TRISPERMA Benth. Fabaceae.

A Western Australian evergreen undershrub, 1 to 2 feet high, with ovate to linear leaves 1 to 3 inches long and axillary clusters of rather large bluish flowers.

76643 to 76645.

From Mafeteng, Basutoland, South Africa. Presented by Sister Mary Prisca Oswald, Mount Olivet Mission. Received May 4, 1928.

76643. IRIS sp. Iridaceae.

Roots of an African variety.

76644. (Undetermined.)

Bulbs.

76645. (Undetermined.)

Roots.

76646 and 76647. SACCHARUM OFFICINARUM L. Poaceae. Sugarcane.

From Cheribon, Java. Cuttings presented by Dr. G. Wilbrink. Received May 7, 1928.

76646. [Received without notes.]

76647. *Glagah.*

76648 and 76649.

From China. Rhizomes collected by F. A. McClure, agricultural explorer, Bureau of Plant Industry. Received January 26, 1926. Numbered May, 1928.

76648. ARUNDINARIA sp. Poaceae. **Bamboo.**

No. 243. November 20, 1925. *Man lei chuk.* Rhizomes (some with plants attached) obtained about 3 miles southwest of Yunghui, Kwangsi, where the bamboo was found growing half cultivated on a steep, somewhat eroded hillside. This is a very straight, rather smooth jointed bamboo with stiff, upright branches in fascicles at the nodes and with thick leaves. In good soil it grows 5 or 6 meters high and 1.5 to 2.5 centimeters in diameter. The young stems have pith, and in the mature stems remnants of the pith diaphrams persist. The walls of the culms are medium in thickness. The smallest culms, 2 to 3 meters long, are used to make Chinese pens, and the larger ones are used as clothes-drying poles and mosquito-net poles. The shoots are edible. The rhizomes were found to be growing in a granular, yellow-brown residual soil. This bamboo is said to thrive best in a loose, rich, well-drained soil where there is a plentiful supply of moisture. Unlike those of most of the bamboos of the monopodial type, the rhizomes of this bamboo do not seem to have a bud at every node, but only at infrequent intervals. Also this bamboo has a tendency to sprout up from the base of the plant, after the fashion of bamboos of the sympodial type. It may be, therefore, that this bamboo may best be propagated by means of sections of rhizomes to which a young plant is attached.

76649. PHYLLOSTACHYS sp. Poaceae. **Bamboo.**

No. 248. November 22, 1925. *Kan chuk.* A small monopodial bamboo growing wild along the banks of the West River, near Wuchow, Kwangsi. The culms are 1 to 1.5 meters high and 1 to 1.5 centimeters in diameter. The young shoots, which begin to appear in April, are edible and are considered very delicious by the Chinese; it is not necessary to parboil them.

76648 and 76649—Continued.

The Chinese say that this bamboo is distinguished from No. 247 [No. 67398] by having culm sheaths pubescent and flowered with irregular dark spots.

76650 to 76677.

From Leningrad, Russia. Seeds presented by A. Kol, chief of the bureau of introduction of the Institute of Applied Botany. Received April 20, 1928.

76650 to 76672. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

Nos. 76650 to 76666 are from the Shatilovo Experiment Station.

76650. No. 25. Viatka Government.

76651. No. 97. Malmysh district, Viatka Government.

76652. No. 50. Nolin district, Viatka Government.

76653. No. 107. Malmysh district, Viatka Government.

76654. No. 113. Tchernigov Government.

76655. No. 123. Kiev Government.

76656. No. 125. Volyn Government, Ukraine.

76657. No. 152. Eniseysk Government. *Pyrorsky.*

76658. No. 167. Adygaysky district, Kuban Province.

76659. No. 192. Tchernigov Government.

76660. No. 219. Kungur district, Ural Province.

76661. No. 220. Kungur district, Ural Province.

76662. No. 221. Kungur district, Ural Province.

76663. No. 222. Kursk Government.

76664. No. 226. Fateyssky district, Kursk Government.

76665. No. 227. Lgov district, Kursk Government.

76666. No. 255. Minusinsk district, Altai Province.

Nos. 76667 to 76671 are from the Bekassovo Plant-Breeding Station of Forage Crops.

76667. No. 3168. *Altaysky.*

76668. No. 3262. *Nosovsky.*

76669. No. 3265. *Permsky.*

76670. No. 3266. *Podolsky.*

76671. No. 3270. *Palashkinsky.*

76672. A central Russian red clover (one cut clover), 1927, growing at the Shatilovo Experiment Station. Originally from the Orel Government.

76673 to 76677. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

Winter wheat varieties.

76673. *Kostianum* 0237. Saratov Experiment Station.

76674. *Lutescens* 0329. Saratov Experiment Station.

76675. *Cooperatorka.* Odessa Experiment Station.

76676. *Ukrainka.* Nironovsk Experiment Station.

76677. *Stepniatschka.* Odessa Experiment Station.

76678 to 76687.

From Kzyl Orda, Syr Daria, Russia. Seeds presented by Jules W. Rewiakin. Received April 19, 1928.

76678. ACER GINNALA SEMENOVII (Regel and Herd.) Pax. Aceraceae. **Maple.**

A shrubby Turkestan maple with leaves deeply cut into three or five narrow lobes and long-stemmed panicles of yellowish white fragrant flowers. The fruits turn red in ripening in the summer, and the leaves turn red in autumn.

For previous introduction see No. 42435.

76679. CARAGANA TURKESTANICA Komarow. Fabaceae.

A spiny shrub or small tree, native to Turkestan, with compound leaves of 6 to 12 ovate leaflets and a profusion of bright-yellow pea-shaped flowers an inch long.

76680. MALUS SYLVESTRIS Mill. (*Pyrus malus* L.). Malaceae. **Apple.**

A mixture of various wild forms of the common cultivated apple.

76681. PERILLA FRUTESCENS (L.) Britton (*P. ocymoides* L.). Menthaceae. **Perilla.**

Sou tze. An annual Chinese herb the seeds of which are used as bird feed and also to produce an oil used for waterproofing paper.

For previous introduction see No. 65874.

76682 to 76684. PRUNUS spp. Amygdalaceae.

76682. PRUNUS CERASUS L. **Sour cherry.**

Variety *montana.* The wild form of the generally cultivated sour cherry.

76683. PRUNUS DOMESTICA L. **Garden plum.**

Variety *montana.* Said to be the wild form of the common garden plum.

76684. PRUNUS MANDSHURICA (Maxim.) Koehne. **Manchurian apricot.**

A small wild tree up to 15 feet high, native to Manchuria, with spreading branches. The ovate-acuminate leaves are sharply doubly serrate, the pinkish solitary flowers are an inch across, and the yellow subglobose fruits are an inch in diameter.

For previous introduction see No. 65649.

76685. PYRUS HETEROPHYLLA Regel and Schmalh. Malaceae. **Pear.**

A wild Turkestan shrub or small tree up to 30 feet high, with ovate leaves varying from nearly undivided to deeply pinnately cut into slender lobes, clusters of white flowers an inch across, and pear-shaped or globose fruits an inch in diameter.

For previous introduction see No. 73617.

76686. TILIA MONTANA Hort. Tiliaceae. **Lime tree.**

76687. ZEA MAYS L. Poaceae. **Corn.**

Tetysou pearl. A variety of pop corn.

76688. SOLANUM MACROCARPON L. Solanaceae.

From Luchenza, Nyasaland, Africa. Seeds presented by L. S. Norman. Received April 21, 1928.

A stout undershrub with a much-branched smooth stem and ovate sinuate-margined leaves 8 inches long. The racemose cymes, opposite the leaves, bear blue-purple flowers 1 to 2 inches broad, which are followed by globose yellow fruits the size of an apple.

For previous introduction see No. 75971.

76689. GLADIOLUS TRISTIS L. Iridaceae. **Gladiolus.**

From Kirstenbosch, Newlands, Cape Province, Africa. Seeds presented by R. H. Compton, Director of the National Botanic Gardens. Received April 20, 1928.

A South African bulbous perennial with flat linear leaves 1 to 2 feet long and lax spikes of yellow flowers streaked with purple, which have a strong lemon fragrance at night, but are scentless during the day.

For previous introduction see No. 62860.

76690 and 76691. ZEA MAYS L. Poaceae. **Corn.**

From Leningrad, Russia. Seeds presented by A. Kol, chief of the bureau of introduction of the Institute of Applied Botany. Received April 20, 1928.

76690. No. 271 vi–24. *Hordeiforme* 05.

76691. *Perbenetz.* From Altai Province.

76692 to 76694. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Yokohama, Japan. Seeds purchased from the Yokohama Nursery Co. Received April 20, 1928.

Japanese varieties.

76692. *Chinese giant* eggplant.

76693. *Japanese long* eggplant.

76694. *Japanese round purple* eggplant.

76695. ZEA MAYS L. Poaceae. **Corn.**

From Algiers, Algeria. Seeds presented by the Directeur, Institut Agricole d'Algérie, Station de Semences de Maison-Carrée. Received April 28, 1928.

An Algerian variety.

76696. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Silay, Negros Occidental, Philippine Islands. Cuttings presented by R. C. Pitcairn, Hawaiian-Philippine Co., through E. W. Brandes, Bureau of Plant Industry. Received May 1, 1928.

A Philippine variety.

76697. VOANDZEIA SUBTERRANEA (L.) Thouars. Fabaceae.

From Macequeco, Mozambique. Seeds presented by R. G. Garvin. Received May 3, 1928.

Juga Nymo. An African variety grown by the natives along the eastern coast of Africa as far south as Natal. It is an underground bean with the true bean flavor and has the same habits of growth as the peanut, doing best in sandy loam. The yield here is at least 25 per cent greater than the peanut.

For previous introduction see No. 68972.

76698. BAMBUSA sp. Poaceae. **Bamboo.**

From Oneco, Fla. Cuttings presented by Reasoner Bros., Royal Palm Nurseries, through R. A. Young, Bureau of Plant Industry. Received May 11, 1928.

A medium-sized, semihardy, clump bamboo which much resembles *Bambusa thouarsii* but is thought to be different from it. It is believed to be an early introduction by the United States Department of Agriculture, but the record of it has been lost.

76699. CARICA PAPAYA L. Papayaceae. **Papaya.**

From Port au Prince, Haiti. Seeds presented by H. D. Barker, Service Technic. Received May 11, 1928.

Madame Russell.

76700. MUSSAENDA ERYTHROPHYLLA Schum. and Thonn. Rubiaceae.

From West Africa. Cuttings collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 29, 1927. Numbered April, 1928.

No. 1179. Collected between Buea and Victoria, Cameroon, February 13, 1927. A climbing shrub often reaching a great height. One sepal in each flower cluster expands into a beautiful bright-red floral bract about 3 inches long. The style is remarkably beautiful, and the fact that it flowers in winter should make it worthy of a very wide distribution throughout the Tropics.

76701 to 76724.

From Australia. Seeds presented by Mrs. Frieda Cobb Blanchard, University of Michigan, Ann Arbor, Mich. Received April, 1928.

Unless otherwise stated these seeds were obtained in National Park, Tasmania.

76701. ACACIA RICEANA Henslow. Mimosaceae. **Rice acacia.**

No. 66. Botanic Garden, Hobart, Tasmania. An erect much-branched Tasmanian shrub 6 to 10 feet high, with spreading and drooping branches, filiform to lanceolate leaves 1 to 2 inches long, and globular heads of pale citron flowers in long loose spikes.

For previous introduction see No. 48061.

76702. ANOPTERUS GLANDULOSUS Labill. Escalloniaceae.

No. 32. A tall evergreen Tasmanian shrub with spreading branches, oblong dentate leaves 4 to 6 inches long clustered at the ends of the branches, and axillary racemes of white flowers.

For previous introduction see No. 67805.

76703. ASTELIA ALPINA R. Br. Liliaceae.

No. 1. A densely tufted alpine Tasmanian plant forming compact mats covered with loose silky white hairs. The leaves are 6 to 12 inches long, and the panicles of small flowers on slender short stems are followed by bright-red berries.

76704. ATHEROSPERMA MOSCHATUM Labill. Monimiaceae.

No. 48. An erect Tasmanian tree with opposite ovate leaves 1 to 3 inches long, white tomentose beneath, and small axillary flowers clustered at the ends of the branches, followed by white villous carpels resembling short clematis fruits.

76705. BILLARDIERA LONGIFLORA Labill. Pittosporaceae.

No. 36. A Tasmanian climbing shrub with linear to elliptical leaves, solitary pendulous dull-yellow or blue flowers an inch long, and red, white, or blue berries half an inch in diameter.

For previous introduction see No. 64597.

76706. BILLARDIERA SCANDENS J. E. Smith. Pittosporaceae.

No. 68. From the garden of L. Rodway, Government botanist, Hobart, Tasmania. Similar to *Billardiera longiflora*, but with larger leaves and berries which are usually yellow.

76701 to 76724—Continued.

76707. CLEMATIS ARISTATA R. Br. Ranunculaceae.

No. 33. A Tasmanian evergreen vine with 3-foliolate leaves which are often variegated and corymbs of fragrant white flowers 2 inches across.

76708. COPROSMA HIRTELLA Labill. Rubiaceae.

A shrub, 3 to 5 feet high, growing on a cliff. It is also native to Australia, has nearly orbicular leaves 2 inches long, and axillary and terminal clusters of small flowers followed by red to black berries one-fourth of an inch across.

76709. CYATHODES DIVARICATA Hook. f. Epacridaceae.

A shrub about 2 feet high found in rocky places. It is a much-branched juniperlike shrub, native to Tasmania, with rigid narrow leaves half an inch long, small white flowers on recurved peduncles, and fleshy pink berries one-fourth inch in diameter.

For previous introduction see No. 67812.

76710. CYATHODES GLAUCA Labill. Epacridaceae.

A shrub about 2 feet high, found in rocky places. It is a Tasmanian shrub sometimes 30 feet high, with clusters of linear leaves white beneath, small white flowers on bracted stems in axillary or terminal clusters, and flattened fleshy purplish berries.

76711. DIANELLA TASMANICA Hook. f. Liliaceae.

A Tasmanian herbaceous perennial 4 to 5 feet high, with sword-shaped serrate leaves 2 to 4 feet long, a lax panicle of nodding pale-blue flowers, and bright-blue fruits on slender pedicels.

76712. DILLWYNIA ERICIFOLIA J. E. Smith. Fabaceae.

No. 45. An erect heathlike Australian shrub 2 to 3 feet high, with linear leaves less than an inch long and terminal leafy clusters of small yellow flowers.

76713. DIPLARRHENA MORAEA Labill. Iridaceae.

No. 31. An Australian herbaceous perennial with a short creeping rootstock, numerous thick flat pale-green leaves an inch wide and 1 to 2 feet long. The flower stem is 2 feet high with a terminal spike of a few flowers opening one at a time, the outer segments white and spreading and the inner erect and yellow.

76714. DRYMOPHILA CYANOCARPA R. Br. Convallariaceae.

No. 42. A tuberous herbaceous Tasmanian perennial with slender erect stems 2 feet high, alternate lanceolate leaves in two rows near the top of the stem, and small white axillary flowers followed by bright-blue berries.

76715. LEPTOMERIA BILLARDIERI R. Br. Santalaceae.

No. 38. An erect much-branched Tasmanian shrub 4 to 5 feet high, with slender green branches, the leaves falling while minute, and small racemes of pinkish white flowers.

76716. NOTELAEA LIGUSTRINA Vent. Oleaceae.

No. 65. Port Arthur, Tasmania. A diffusely branched tall shrub or small tree, native to Tasmania and Australia. The opposite entire-lanceolate leaves are 1 to 3 inches long, the small flowers are in slender axillary racemes near the ends of the branches, and the succulent globular fruits, half an inch in diameter, vary from white through pink to dark purple.

76701 to 76724—Continued.

76717. OLEARIA PERSOONIOIDES (DC.) Benth. Asteraceae. **Daisytree.**

No. 20. An evergreen Tasmanian shrub 3 to 5 feet high, with obovate leaves 1 to 2 inches long, silvery white beneath, and leafy panicles of white asterlike flowers.

For previous introduction see No. 67827.

76718. PENTACHONDRA PUMILA (Forst.) R. Br. Epacridaceae.

A mosslike plant about half an inch high with very small ovate leaves, short-stalked tubular flowers, and bright-red berries about the size of a pea.

76719. PHYLLOCLADUS RHOMBOIDALIS L. Rich. Taxaceae.

No. 67. Botanic Gardens, Hobart, Tasmania. A Tasmanian tree up to 60 feet high, with spreading or depressed branches and branchlets developed into rhomboidal leaflike organs.

For previous introduction see No. 74506.

76720. PIMELEA DRUPACEA Labill. Thymelaeaceae.

A Tasmanian shrub 4 to 6 feet high, with opposite-oblong leaves 2 inches long, pinkish white flowers in small terminal heads, and black fleshy fruits.

76721. PROSTANTHERA LASIANTHOS Labill. Menthaceae.

No. 34. A tall erect Tasmanian shrub up to 12 feet high, with lanceolate serrate leaves 3 inches long and terminal compound racemes of purple-marked white flowers.

76722. RUBUS GUNNIANUS Hook. Rosaceae.

No. 25. A small creeping Tasmanian perennial with trifoliolate leaves, yellowish white solitary flowers nearly an inch across, and scarlet berries made up of a few carpels each a third of an inch in diameter.

76723. TROCHOCARPA THYMIFOLIA (R. Br.) Spreng. Epacridaceae.

A small spreading Tasmanian shrub with thick ovate leaves on recurved petioles, dense terminal nodding spikes of red flowers, and purple fleshy fruits half an inch in diameter.

76724. VIOLA HEDERACEA Labill. Violaceae. **Violet.**

No. 26. A small tufted creeping violet, native to Tasmania and Australia, with reniform leaves and white to blue flowers with short spurs.

76725. LITTONIA MODESTA Hook. f. Melanthiaceae.

From east Africa. Seeds presented by Oscar Thompson, United States vice consul, Nairobi, through L. W. Kephart, Bureau of Plant Industry. Received April 10, 1928.

No. 697. A brilliant red or reddish orange lilylike plant climbing by tendrils at the tips of the leaves. It is found in moist areas in western Kenya Colony and western Uganda, and at Koru, Kenya Colony, where these seeds were gathered, it makes a vigorous ornamental. In this region, at an altitude of 8,000 feet, it is occasionally subjected to frost.

For previous introduction see No. 31849.

76726. COCCOTHRINAX sp. Phoenicaceae. **Silver palm.**

From St. Croix, Virgin Islands. Seeds presented by J. B. Thompson, director of the agricultural experiment station. Received April 11, 1928.

A form of the silver palm which is native to the island of St. Thomas.

76727. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

From Rae Bareilly, United Provinces, India. Seeds presented by Dr. S. S. Nehru, deputy commissioner, through C. R. Ball, Bureau of Plant Industry. Received April 14, 1928.

A variety grown locally.

76728 to 76731.

From Elstree, Herts, England. Seeds presented by Hon. Vicary Gibbs, Aldenham House Gardens. Received April 16, 1928.

76728. CARMICHAELIA FLAGELLIFORMIS Colenso. Fabaceae.

For previous introduction and description see No. 76562.

76729. COTONEASTER ACUMINATA Lindl. Malaceae.

For previous introduction and description see No. 76571.

76730. COTONEASTER ALDENHAMENSIS Hort. Malaceae.

76731. PYRACANTHA CRENULATA RODGERSIANA A. B. Jacks. Malaceae. **Firethorn.**

For previous introduction and description see No. 76593.

76732. CHAETOSPERMUM GLUTINOSA (Blanco) Swingle. Rutaceae. **Tabog.**

From Santiago de las Vegas, Cuba. Seeds presented by Dr. Gonzalo M. Fortun, director, agricultural experiment station. Received April 18, 1928.

A small spiny Philippine tree with trifoliolate leaves, small clusters of rather large white flowers, and oblong hard-shelled fruits. This tree is being tested as a stock for commercial citrus fruits.

For previous introduction see No. 40550.

76733. VITIS AMURENSIS Rupr. Vitaceae. **Amur grape.**

From Mefun, Manchuria. Cuttings collected by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received December 23, 1925. Numbered April, 1928.

No. 4733. November 12, 1925. A wild grape with large bunches of purple, acid berries about the size of a marrowfat pea. They are eaten fresh and also made into wine. This variety is hardy in the mountains of this region.

For previous introduction see No. 69895.

76734. SALVIA sp. Menthaceae. **Sage.**

From Huautla de Jimenez, Oaxaca, Mexico. Seeds presented by C. M. Holmes. Received April 19, 1928.

A local variety growing at an altitude above 4,000 feet, with very attractive gentian or even darker blue flowers of good size.

76735 to 76745.

From Harbin, Manchuria. Seeds presented by A. A. Rachkowsky, Manchurian Research Society. Received April 17, 1928.

76735. BETULA JAPONICA MANDSHURICA (Regel) Winkl. Betulaceae. **Birch.**

A white-barked Manchurian tree up to 80 feet high, with the leaves often broadly wedge-shaped at the base.

For previous introduction see No. 44382.

76735 to 76745—Continued.

76736. JUGLANS MANDSHURICA Maxim. Juglandaceae. **Walnut.**

A variety grown locally.

For previous introduction see No. 71257.

76737. LILIUM DAURICUM Ker. Liliaceae. **Candlestick lily.**

A Manchurian species with a stem about 3 feet high bearing horizontal leaves 3 to 5 inches long and terminal clusters of one to five cup-shaped flowers 5 inches across, which are orange-red spotted with purplish black and tinged with yellow inside.

For previous introduction see No. 75678.

76738. LILIUM TENUIFOLIUM Fisch. Liliaceae. **Coral lily.**

A Siberian species with a slender stem 1 to 2 feet high, 40 to 60 linear light-yellow green leaves 1 to 2 inches long, and terminal clusters of 1 to 15 small nodding turkscap lilies, of the most brilliant sealing-wax red.

For previous introduction see No. 64773.

76739 to 76744. PRUNUS spp. Amygdalaceae.

76739. PRUNUS GLANDULOSA Thunb. **Flowering almond.**

A Chinese shrub 3 to 5 feet high, with lanceolate to ovate leaves, pink or white flowers, and red fruits which make excellent preserves.

For previous introduction see No. 69098.

76740 to 76743. PRUNUS MANDSHURICA (Maxim.) Koehne. **Manchurian apricot.**

For previous introduction and description see No. 76684.

76740. Mixed seeds.

76741. The best wild variety.

76742. Variety *subcordata*.

76743. [No data.]

76744. PRUNUS SIBIRICA L. **Siberian apricot.**

A bushy shrub or sometimes a small tree up to 15 feet high, native to Siberia. The long acuminate-ovate leaves are 2 to 3 inches long and reddish when young, turning bright green; the solitary white or pink flowers are an inch across, and the fruits are yellow with a red cheek but have very little flesh and are hardly edible.

For previous introduction see No. 68819.

76745. VIBURNUM BUREJAETICUM Regel and Herd. Caprifoliaceae.

A Manchurian shrub up to 15 feet high, with stellate-pubescent branchlets, sinuately toothed ovate leaves 4 to 5 inches long, dense cymes of white flowers, and ellipsoid bluish black fruits.

For previous introduction see No. 69820.

76746. ACACIA sp. Mimosaceae.

From Mandelieu, Alpes Maritimes, France. Plants presented by A. Richon. Received February 19, 1926. Numbered April, 1928.

Bon Accueil. This is a chance hybrid, perhaps between *Acacia decurrens* and *A. dealbata*. It is considered one of the most beautiful acacias grown on the Riviera. The flower clusters have up to 40 heads, larger than the best varieties of *A. dealbata;* they are beautifully grouped at the ends of the branches. The leaves are bright green with long, very fine leaflets. The tree is vigorous and about 20 feet high, but a little less hardy than *A. dealbata*.

For previous introduction see No. 61798.

76747. ACTINIDIA ARGUTA (Sieb. and Zucc.). Planch. Dilleniaceae. **Bower actinidia.**

From Manchuria. Cuttings collected by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received December 23, 1925. Numbered April, 1928.

No. 4736. Mefun, November 12, 1925. These cuttings are from the vine from which seeds were sent under No. 4156 [No. 65484]. This vine bears edible fruits of good size and is an attractive ornamental.

76748 and 76749. THUNBERGIA spp. Acanthaceae.

From Gladwyne, Pa. Plants presented by Mrs. J. Norman Henry. Received May 11, 1928.

76748. THUNBERGIA GIBSONI S. Moore. **Clockvine.**

A climbing vine, native to tropical east Africa, with triangular hairy leaves and large solitary orange-red flowers.

For previous introduction see No. 51240.

76749. THUNBERGIA sp.

A thunbergia said to be native to the Himalayas.

76750. FRAGARIA VIRIDIS Duchesne (*F. collina* Ehrh.). Rosaceae. **Strawberry.**

From Paris, France. Plants presented by Vilmorin-Andrieux & Co. Received March 29, 1928. Numbered June, 1928.

A European strawberry which closely resembles *Fragaria vesca*, but the fruits have a musky odor.

For previous introduction see No. 37691.

76751. MALUS SYLVESTRIS Mill. (*Pyrus malus* L.). Malaceae. **Apple.**

From Paris, France. Scions presented by A. Pasquier des Mazis, Ancien Directeur de l'Union Agricole de France. Received April 2, 1928.

Bonne hoture. A delicious apple grown chiefly near Bauge, Maine et Loire. It makes a very good jelly.

76752 to 76754. QUERCUS spp. Fagaceae.

From Yokohama, Japan. Seeds presented by R. C. B. Gardner, Northwood, Middlesex, England. Received April 9, 1928.

76752. QUERCUS ACUTISSIMA Caruthers (*Q. serrata* S. and Z., not Thunb.). **Bristletooth oak.**

A handsome eastern Asiatic tree up to 50 feet high, with half-evergreen obovate to oblong sharp-pointed leaves 5 to 7 inches long having serrate bristle-pointed margins. The cup which covers about two-thirds of the acorn has long spreading recurved scales.

For previous introduction see No. 54433.

76753. QUERCUS DENTATA Thunb. **Daimyo oak.**

A large tree 75 to 80 feet tall, native to Chosen and northern and western China. The obovate-sinuate lobed leaves, dark green above and grayish tomentose beneath, are 10 to 12 inches long and 9 inches wide, and the ovoid acorns, an inch wide, are about half covered by the cup which has lanceolate spreading scales.

For previous introduction see No. 72162.

76752 to 76754—Continued.

76754. QUERCUS GLAUCA Thunb. **Oak.**

A handsome evergreen Japanese tree 45 feet high, with ovatedentate leaves 3 to 5 inches long, lustrous above and glaucous beneath, and ellipsoid acorns nearly an inch long with saucer-shaped cups having five to seven concentric silky pubescent rings.

76755. FICUS ROXBURGHII Wall. Moraceae. **Fig.**

From Calcutta, India. Fruits presented by C. C. Calder, Superintendent of the Royal Botanic Garden. Received April 5, 1928.

A low-spreading Indian tree 20 to 30 feet high, with broadly ovate-cordate entire or toothed leaves and russet-brown or purple fruits 2 inches in diameter.

76756. HAEMATOXYLUM CAMPECHIANUM L. Caesalpiniaceae. **Logwood.**

From St. Croix, Virgin Islands. Seeds presented by J. B. Thompson, director of the agricultural experiment station. Received April 7, 1928.

A tropical American tree up to 40 feet high, which yields the logwood of commerce used for dyes and inks.

For previous introduction see No. 43775.

76757. TRACHYLOBIUM HORNEMANNIANUM Hayne. Caesalpiniaceae.

From Dar es Salaam, Tanganyika Territory, Africa. Seeds presented by A. H. Kirby, Director of the Department of Agriculture. Received April 3, 1928.

A large tropical South African tree with compound leaves, panicles of small flowers, and ovoid resinous warted pods 2 inches long. This tree produces most of the copal gum of commerce.

76758. CORYPHA UMBRACULIFERA L. Phoenicaceae. **Talipot palm.**

From Peradeniya, Ceylon. Seeds presented by T. H. Parsons, Curator of the Royal Botanic Gardens of the Department of Agriculture. Received April 10, 1928.

A large palm up to 80 feet high, which dies after fruiting. The leaves, 12 feet long and 16 feet broad, are made up of lobed segments, and the creamy white flowers are in terminal panicles 20 feet long. It is native to Ceylon.

For previous introduction see No. 76048.

76759 to 76768.

From Brignoles, France. Seeds presented by R. Salgues, Director of the Brignoles Botanic Station. Received April 2, 1928.

76759. BRACHYPODIUM PHOENICOIDES (L.) Roem. and Schult. Poaceae. **Grass.**

A perennial European grass 1 to 2 feet high, with narrowly linear leaves, slender stems, and narrow flower clusters having oblong spikelets sessile on the axis.

For previous introduction see No. 75529.

76760. CISTUS SALVIFOLIUS L. Cistaceae. **Salvia rockrose.**

A shrub native to the Mediterranean region, procumbent or up to 2 feet high, with rigid rugose oblong leaves and solitary or clustered white flowers 1 to 2 inches across.

76761. ELICHRYSUM STOECHAS DC. Asteraceae. **Everlasting.**

A yellow-flowered evergreen shrub about 2 feet high, native to the Mediterranean region.

For previous introduction see No. 68143.

76759 to 76768—Continued.

76762. HIPPOCREPIS COMOSA L. Fabaceae.

A European herbaceous perennial legume prostrate or up to 2 feet high, with 7 to 11 obovate leaflets, umbels of yellow flowers, and pods made up of segments shaped like a horseshoe.

76763. HIPPOCREPIS MULTISILIQUOSA L. Fabaceae.

A southern European annual legume 1 to 2 feet high, with pinnate leaves, yellow flowers, and flat curved pods made up of horseshoe-shaped segments.

For previous introduction see No. 67266.

76764. INULA VISCOSA Ait. Asteraceae.

A southern European shrubby perennial 1 to 2 feet high, with yellow flowers.

For previous introduction see No. 67167.

76765. PSORALEA BITUMINOSA L. Fabaceae.
Scurf-pea.

A herbaceous perennial legume about 3 feet high, native to the Mediterranean region, thriving in dry calcareous soil. The leaves are trifoliolate and the small bluish flowers are in heads. The plant has a strong bituminous odor but is said to make good hay.

For previous introduction see No. 67169.

76766. SCILLA AUTUMNALIS L. Liliaceae.
Autumn squill.

An autumn-flowering North African bulbous perennial with slender leaves and loose racemes of rosy pink flowers half an inch wide appearing before the leaves.

For previous introduction see No. 66967.

76767. SCORPIURUS SUBVILLOSA L. Fabaceae.

A low annual legume, native to the Mediterranean region, with narrow simple leaves, small yellow flowers, and curled papillose pods resembling caterpillars.

For previous introduction see No. 68149.

76768. TAMUS COMMUNIS L. Dioscoreaceae.

A Mediterranean herbaceous twining vine with a tuberous root, ovate-cordate obscurely lobed leaves about 3 inches long, and loose clusters of small yellowish green flowers followed by bright-red berries.

For previous introduction see No. 69861.

76769 and 76770.

From Hailar, Manchuria. Seeds presented by N. Glowkhoff, superintendent of the Manchurian Agricultural Society, through G. C. Hanson, United States consul, Harbin. Received April 3, 1928.

76769. IRIS sp. Iridaceae.

A yellow iris.

76770. PRUNUS SIBIRICA L. Amygdalaceae.
Siberian apricot.

A spreading shrub or small tree up to 15 feet high, growing on the southern and southeastern slopes of stony mountains in northeastern Asia, where the soil is not very thick. It has long-pointed serrate-ovate leaves, solitary white or pinkish flowers an inch across, and an abundance of yellow fruits, with reddish cheeks, which have very little flesh and are hardly edible.

For previous introduction see No. 68819.

76771 to 76774.

From Peradeniya, Ceylon. Seeds presented by the manager of the publication depot and central seed store of the Department of Agriculture. Received April 6, 1928.

76771. BRADBURYA PUBESCENS (Benth.) Kuntze (*Centrosema pubescens* Benth.). Fabaceae.

A creeping tropical vine used as a cover crop in the East Indies.

For previous introduction see No. 72430.

76772. CROTALARIA STRIATA DC. Fabaceae.

A native leguminous plant of possible use as a cover plant.

For previous introduction see No. 71807.

76773. DEGUELIA ROBUSTA (Roxb.) Kuntze (*Derris robusta* Benth.). Fabaceae.

A tree 30 to 40 feet high, native to the lower Himalayas, with grayish branchlets, compound leaves of 7 to 19 leaflets 2 inches long and gray beneath, and whitish flowers in loose racemes about 6 inches long.

76774. MEIBOMIA GYROIDES (DC.) Kuntze (*Desmodium gyroides* DC.). Fabaceae.

A shrubby leguminous plant 8 to 10 feet high, native to the warmer parts of the central and eastern Himalayas. It has hairy leaves and terminal clusters of red flowers.

For previous introduction see No. 68860.

76775 and 76776.

From Pretoria, Transvaal, Union of South Africa. Seeds presented by E. Percy Phillips, Division of Botany. Received April 9, 1928.

76775. BAUHINIA GALPINI N. E. Brown. Caesalpiniaceae.

A South African climbing shrub 5 to 10 feet high. The leaves, two lobed at the apex, are 1 to 3 inches long, and the brick-red flowers are borne continuously from spring to late autumn.

For previous introduction see No. 66148.

76776. BOLUSANTHUS SPECIOSUS (Bolus) Harms. (*Lonchocarpus speciosus* Bolus). Fabaceae.

A small ornamental South African tree with compound leaves and long racemes of violet flowers. The hard white durable timber is used for wheel spokes.

For previous introduction see No. 55555.

76777 to 76779.

From Ceylon and Straits Settlements. Plants collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received July 19, 1926. Numbered April, 1928.

76777. COUROUPITA GUIANENSIS Aubl. Lecythidaceae.

No. 890. Royal Botanic Garden, Peradeniya, June 9, 1926. The cannon-ball tree, native to Guiana, is one of the strangest freaks of the vegetable kingdom. It is a large handsome tree producing pink fleshy flowers of curious shape on special crooked branches rising from the trunk. These flowers are followed by cannon-ball-shaped fruits 4 to 5 inches in diameter.

For previous introduction see No. 67994.

76778. IXORA BANDHUCA Roxb. Rubiaceae.

No. 834. Botanic Garden, Singapore, May 31, 1926. A stout-branched shrub, native to India, with coriaceous cordate-oblong leaves 2 to 4 inches long, cymes of scarlet or yellow flowers, and fleshy fruits the size of a pea.

76777 to 76779—Continued.

76779. IXORA COCCINEA L. Rubiaceae.
Scarlet ixora.

No. 836. Botanic Garden, Singapore, May 31, 1926. A hybrid, with salmon-pink flowers, which is a vigorous grower.

76780 to 76785.

From Hailar, Manchuria. Seeds presented by N. Glowkhoff, superintendent of the Manchurian Agricultural Society, through G. C. Hanson, United States consul, Harbin. Received April 3, 1928.

76780. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. **Six-rowed barley.**

No. 5. This variety was found by Mr. Glowkhoff in his field as an admixture. Barley is seldom sown in this section.

76781 to 76785. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

76781 and 76782. A soft awnless wheat, growing well in bushes, with large spikes and seeds.

76781. No. 1. 1926 wheat.

76782. No. 1. 1927 wheat.

76783. No. 0. 1926 wheat. A hard variety, with a large tetrahedral awned spike of a blue-black color, which grows well in bushes, and endures droughts and frosts very well. It ripens about three or four days later than No. 1 and does not fall down. It is very difficult to thresh.

76784. No. 2. An awned wheat with reddish straw, red spikes, and reddish seeds, which grows well in bushes. The spike is big, but the seeds are somewhat smaller than those of No. 1. It ripens about 10 or 12 days earlier than No. 1, does not fall down so quickly, and threshes well. It is found now as an admixture, sometimes reaching 30 per cent.

76785. No. 3. An awned wheat, with silvery white straw and spike. It does not fall down, and ripens about the same time as No. 1. It is found as an admixture from 10 to 15 per cent.

76786 and 76787.

From Mafeteng, Basutoland, South Africa. Seeds presented by Sister Mary Prisca Oswald, Mount Olivet Mission. Received May 4, 1928.

76786. CAESALPINIA GILLIESII (Hook.) Wall. Caesalpiniaceae.

Tree of Paradise. A tall shrub or small tree, native to Argentina, with pinnately compound leaves and terminal racemes of light-yellow flowers from which the brilliant red stamens protrude 3 to 5 inches.

For previous introduction see No. 43770.

76787. RICINUS COMMUNIS L. Euphorbiaceae.
Castor-bean.

An African variety. It is one of the small-seeded varieties valuable for oil.

76788. STRELITZIA REGINAE Banks. Musaceae. Bird-of-paradise-flower.

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received May 4, 1928.

A South African plant with a creeping rhizome from which grow the bananalike leaves with petioles 4 feet long and lanceolate blades 2 feet long. The flowers are borne on a stem 3 to 4 feet high and grow out from the margin of a purple-edged bright-green bract 8 inches long. The orange-yellow lanceolate sepals are 3 to 4 inches long, and the dark-blue arrow-shaped petals are 2 inches long.

76789. SOLANUM TUBEROSUM L. Solanaceae. Potato.

From Lima, Peru. Tubers presented by Prof. Julio Gaudron, Estacion Central Agronómica. Received May 10, 1928.

Papa amarilla. A yellow-fleshed Peruvian variety.

76790. ROYSTONEA REGIA (H. B. K.) O. F. Cook (*Oreodoxa regia* H. B. K.). Phoenicaceae. Cuban royal palm.

From Cuba. Seeds obtained through G. S. Jamieson, Bureau of Chemistry. Received May 9, 1928.

A Cuban palm up to 80 feet high and 2 feet in diameter, with pinnately divided leaves 10 feet long.

For previous introduction see No. 51139.

76791. VIBURNUM SARGENTI CALVESCENS Rehder. Caprifoliaceae.

From Jamaica Plain, Mass. Seeds collected by Paul Russell, Bureau of Plant Industry. Received May 12, 1928.

Arnold Arboretum No. 4677–3. Originally collected in Chosen in 1904. A form, with leaves smooth beneath, of *Viburnum sargenti* which is a shrub up to 12 feet high native to northeastern Asia, having 3-lobed leaves with the middle lobe much elongated, cymes of white flowers, and scarlet fruits.

76792 to 76795. LINUM spp. Linaceae. Flax.

From Groningen, Netherlands. Seeds presented by Dr. T. Tammes, of the University of Groningen, through A. C. Dillman, Bureau of Plant Industry. Received May 18, 1928.

76792. LINUM ANGUSTIFOLIUM Huds.

An annual or perennial herbaceous plant native to Europe and western Asia, with decumbent stems, small linear leaves, and small blue flowers. It is considered by some authorities to have been the original species from which the cultivated flax was developed.

76793 to 76795. LINUM USITATISSIMUM L.

76793. Variety *crepitans.*

76794. Variety *winter flax.*

76795. Variety *Egyptian.*

76796. ROSA sp. Rosaceae. Rose.

From Port au Prince, Haiti. Cuttings presented by H. D. Barker, Service Technique. Received May 23, 1928.

Eglantine. A rose used in Haiti as a stock.

76797 and 76798.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received May 23, 1928.

76797. RUBUS COPELANDII Merr. Rosaceae.
Bramble.

Copela. A robust Philippine bramble with ascending arching spiny canes 10 feet long. The leaves are trifoliolate, and the orange-red berries are juicy and edible, but lacking in flavor.

76798. VACCINIUM MYRTOIDES Miquel. Vacciniaceae.

Alimani. A small upright Philippine shrub 3 to 4 feet high, with small leathery leaves and clusters of small black berries which are juicy, sweet, subacid, and of excellent flavor.

76799. SOLANUM TUBEROSUM L. Solanaceae. **Potato.**

From Sayapullo, Trujillo, Peru. Tubers presented by A. Martin Lynch. Received May 24, 1928.

A yellow-fleshed Peruvian variety.

76800 to 76819. AVENA SATIVA L. Poaceae. **Oats.**

From Tiehlingho post office, Kirin Province, Manchuria. Seeds presented by A. D. Woeikoff, director of the experimental farm, Echo. Received March 29, 1928. Numbered April, 1928.

76800. No. 344–2228 Bb. Originally from the agricultural experiment station, Prerov.

76801. No. 345–2229 Bi. Originally from the agricultural experiment station, Prerov.

76802. No. 346–2230 Bk. Originally from the agricultural experiment station, Prerov.

76803. No. 353–2233 C–5. Originally from the agricultural experiment station, Prerov.

76804. No. 354–2237. *Doupovsay.* Originally from the agricultural experiment station, Prerov.

76805. No. 355–744. *Dreger's white No. 59.* Originally from the Department of Agriculture, Praha, Czechoslovakia.

76806. No. 356–745. *Dreger's yellow No. 60.* Originally from the Department of Agriculture, Praha, Czechoslovakia.

76807. No. 362–2238. *Horsky Zelenae.* Originally from the agricultural experiment station, Prerov.

76808. No. 369–2239. *Jesenicky.* Originally from the agricultural experiment station, Prerov.

76809. No. 375 2226. *Kherson.* Originally from the Department of Agriculture, Southern Rhodesia, Africa.

76810. No. 376–2227. *Kinvarra.* Originally from the Department of Agriculture, Southern Rhodesia, Africa.

76811. No. 377–2234. *Krajový 6–a.* Originally from the agricultural experiment station, Prerov.

76812. No. 378–2245. *Krajovy 5–c.* Originally from the agricultural experiment station, Prerov.

76813. No. 379–2236. *Krajovy 14–c.* Originally from the agricultural experiment station, Prerov.

76814. No. 383–706. *Ling tang mai.* From the Chinese farmers' fields of Ninguta district, Kirin Province, Manchuria.

76815. No. 384–222. *Ling tang mai.* From the Chinese farmers' fields of Ninguta district, Kirin Province, Manchuria.

76816. No. 388–2231 M. 2. Originally from the agricultural experiment station, Prerov.

76817. No. 389–2232 N–12. Originally from the agricultural experiment station, Prerov.

76818. No. 399–746. *Shrube N–61.* Originally from the Department of Agriculture, Praha, Czechoslovakia.

76819. No. 403–2240. *Studnicky.* Originally from the agricultural experiment station, Prerov.

76820. MEIBOMIA ADSCENDENS (Swartz) Kuntze. Fabaceae.

From Guantanu, Gold Coast, West Africa. Cuttings collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 29, 1927. Numbered May, 1928.

No. 1219. February 27, 1927. A tropical leguminous plant which forms a ground cover.

76821 to 76852. CORYLUS AVELLANA L. Betulaceae. **Filbert.**

From Weener, Hanover, Germany. Plants purchased from Herm. A. Hesse. Received May 4, 1928.

76821. *Badem Fundeck.*

76822. *Barcelloner Grosse.*

76823. *Barrs Spanishe.*

76824. *Bergers Zellernuss.*

76825. *Braunschweigische.*

76826. *Cosford Verbesserte.*

76827. *Einzeltragende Kegelformige.*

76828. *Englische Zellernuss.*

76829. *Fruchtbare.*

76830. *Frühe lange Zellernuss.*

76831. *Frühe von Frauendorf.*

76832. *Gekräuselte Nuss.*

76833. *Grandis.*

76834. *Grosse bunte Zellernuss.*

76835. *Lucas Zellernuss.*

76836. *Jeves Samling.*

76837. *Kaiserliche.*

76838. *Königlische Prinzessin.*

76839. *Lambert Kols.*

76840. *Längliche Riesennuss Zar schallige.*

76841. *Louisens Zellernuss.*

76842. *Messmers Zellernuss.*

76843. *Rotblättrige Lambertnuss.*

76844. *Rudolphs.*

76845. *Schlesierin.*

76846. *Sicilische.*

76847. *Spanische Lambertnuss.*

76848. *Sterms breite Zellernuss.*

76849. *Trapezunter Kaiser Hazel.*

76850. *Von Mehl.*

76851. *Wallys grosse Zellernuss.*

76852. *Waterloo.*

76853 to 76870.

From Melbourne, Victoria, Australia. Seeds presented by F. J. Rae, Director of the Melbourne Botanic Gardens. Received April 26, 1928.

76853 to 76858. ACACIA spp. Mimosaceae.

76853. ACACIA ACCOLA Maiden and Betche.

An erect bushy Australian shrub 6 to 8 feet high, with linear, slightly curved phyllodes 3 to 5 inches long and small heads of flowers in racemes 2 inches long.

For previous introduction see No. 75576.

76854. ACACIA DECURRENS Willd.

Variety *normalis.* A variety of the green wattle with sepals as long as the petals. The typical form is a handsome tree with light-green feathery foliage and bright-yellow flowers.

For previous introduction see No 75536.

76855. ACACIA LINFOLIA PROMINENS Moore (*A. fimbriata* A. Cunn.).

An unarmed Australian shrub 12 to 18 feet high, with narrow phyllodes and small globular heads of yellow flowers in rameces.

For previous introduction see No. 75540.

76853 to 76870—Continued.

76856. ACACIA MYRTIFOLIA Willd.

A tall Australian shrub with angular branchlets and ovate phyllodes edged with pink, and heads of rather large yellow flowers in racemes.

For previous introduction see No. 56573.

76857. ACACIA NERIIFOLIA A. Cunn. (*A iteaphylla* F. Muell.). **Bald acacia.**

A handsome eastern Australian tree up to 50 feet high, with linear phyllodes and simple racemes of small globular heads of yellow flowers.

For previous introduction see No. 75541.

76858. ACACIA TERMINALIS (Salisb.) Macbride (*A. elata* A. Cunn.).

An Australian tree up to 60 feet high, with golden pubescent branchlets, pinnately compound leaves, and globular heads of yellow flowers in clusters 6 inches long.

For previous introduction see No. 56559.

76859. BACKHOUSIA MYRTIFOLIA Hook. and Harv. Myrtaceae.

A tall shrub or small tree, native to Australia, with opposite ovate acuminate leaves 2 inches long and small cymes of white flowers forming terminal panicles.

76860. BOLUSANTHUS SPECIOSUS (Bolus) Harms (*Lonchocarpus speciosus* Bolus). Fabaceae.

For previous introduction and description see No. 76776.

76861. CALLISTEMON PHOENICEUS Lindl. Myrtaceae.

A tall Australian shrub with narrowly lanceolate leaves 2 to 4 inches long and spikes of large flowers with rich-red stamens.

76862. CHORIZEMA CORDATUM Lindl. Fabaceae.

An Australian shrub with weak slender branches, cordate leaves 1 to 2 inches long, and axillary and terminal racemes of orange-red flowers. It is propagated from cuttings and may be grown in the open in southern California and southern Florida, being excellent for training on pillars and trellises. In colder regions it is an attractive plant for the cool greenhouse.

For previous introduction see No. 75552.

76863. CLIANTHUS DAMPIERI A. Cunn. (*C. speciosus* Don). Fabaceae. **Glory pea.**

An Australian semishrubby perennial 2 to 4 feet high, with ascending or procumbent branches covered with long soft hairs. The compound leaves are made up of 15 to 21 obovate leaflets an inch long; and the flowers, four to six in pendent racemes, are 3 inches long and crimson or scarlet with a handsome purple-black spot at the center.

76864. DORYANTHES PALMERI W. Hill. Amaryllidaceae. **Giant spearlily.**

An agavelike Australian plant with sword-shaped leaves 8 feet long and a tall flower stem, the upper 3 feet developing into a panicle of bright-red flowers which are whitish inside.

For previous introduction see No. 51063.

76865. ERYTHROPHLOEUM CHLOROSTACHYS Baill. (*E. laboucherii* F. Muell.). Caesalpiniaceae.

An unarmed Australian tree with pinnately compound leaves of two or three pairs of obliquely obovate leaflets 2 inches long, dense spikes of small greenish flowers, and broad flat pods 6 inches long and 1 to 2 inches broad.

76853 to 76870—Continued.

76866 to 76868. EUCALYPTUS spp. Myrtaceae.

76866. EUCALYPTUS BEHRIANA F. Muell.

A tall shrub or small tree, native to Australia, with smooth thick ovate leaves 3 inches long, axillary and terminal panicles of small flowers, and very small flat-topped ovoid fruits.

For previous introduction see No. 75616.

76867. EUCALYPTUS GRANDIS W. Hill. **Flooded gum.**

An Australian tree 90 to 140 feet high, with narrowly lanceolate leaves 4 to 6 inches long, small clusters of flowers, and conical fruits. The timber is excellent for shipbuilding and general carpenter work.

76868. EUCALYPTUS PATENS Benth.

An Australian tree attaining a height of 100 feet and a diameter of 6 feet, with lanceolate falcate leaves 3 to 6 inches long, short panicles of small flowers, and globular flat-topped fruits. The tough durable timber is used by wheelwrights.

For previous introduction see No. 48995.

76869. TRISTANIA CONFERTA R. Br. Myrtaceae. **Brisbane-box.**

An Australian tree with lanceolate evergreen leaves 3 to 6 inches long, clustered at the ends of the branches, and cymes of rather large white flowers. The strong durable timber is used for building bridges, wharves, and ships.

For previous introduction see No. 75573.

76870. TRISTANIA LAURINA (J. E. Smith) R. Br. Myrtaceae.

A tall tree, native to Australia, with elliptical leaves 2 to 4 inches long and axillary clusters of small yellow flowers.

For previous introduction see No. 75574.

76871. CERATONIA SILIQUA L. Caesalpiniaceae. **Carob.**

From Bari, Italy. Plants presented by Dr. E. Pantanelli, Director of the Stazione Agraria Sperimentale, through Homer M. Byington, American consul general, Naples. Received May 13, 1926. Numbered May, 1928.

Amele. This is considered the best variety of carob cultivated in Bari Province. It may be the kind with large sweet pods which have been reported from this region.

For previous introduction see No. 55727.

76872. CERATONIA SILIQUA L. Caesalpiniaceae. **Carob.**

From the island of Cyprus. Plants presented by the director of agriculture. Received September 22, 1926. Numbered May, 1928.

Variety *Tylliria.*

76873. LANSIUM DOMESTICUM Jack. Meliaceae. **Langsat.**

From Karangpandan, Java. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received June 18, 1926. Numbered May, 1928.

No. 771. May 8, 1926. *Makoe Negoro.* A sweet thick-skinned variety growing in the garden of a Javanese prince.

76874. (Undetermined.)

From China. Roots collected by F. A. McClure, agricultural explorer, Bureau of Plant Industry. Received April 2, 1926. Numbered May, 1928.

No. 390. January 17, 1926. A liliaceous herb whose spreading panicles of dry seed pods promise an attractive ornamental. The flowers, about an inch long, are borne in clusters several inches long. This variety was found on the grass-covered mountain side of Kongshan.

76875 to 76877.

From Ceylon and Singapore, Straits Settlements. Collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received February and July, 1926. Numbered May, 1928.

76875. UVARIA PURPUREA Blume. Annonaceae.

No. 825. Botanic Gardens, Singapore, May 31, 1926. Plants of an ornamental tropical climber with very handsome purple-red flowers.

76876. VATERIA ACUMINATA Hayne. Dipterocarpaceae.

No. 321. Seeds obtained from a native en route to Kurunegala, Ceylon. The *Hal* tree of Ceylon, according to Trimen's Flora of Ceylon, is often planted for ornament. It is a large tree with a spreading crown and bears cream-colored sweet-scented flowers, an inch in diameter, during April and May. The stem yields a clear yellowish resin which is equal to the best dammar, and the seeds are ground into meal and eaten. Many trees are killed by being stripped for the bark, which is used to check the fermentation of palm wine or toddy.

76877. ARTOCARPUS LAKOOCHA Roxb. Moraceae.

No. 284. Peradeniya Garden, Ceylon, January 4, 1926. *Kana-gona* or *Tampang-manis*. Seeds of a handsome tropical Asiatic tree with deep-green leaves and yellowish green, very sour fruits 2 inches in diameter. The fruits are edible and are good for stewing.

For previous introduction see No. 47833.

76878 to 76885.

From Buenos Aires, Argentina. Seeds presented by Prof. Lorenzo R. Parodi, of the University of Buenos Aires, through H. N. Vinall, Bureau of Plant Industry. Received May 4, 1928.

76878. AVENA SCABRIVALVIS Trin. Poaceae. **Grass.**

A bulbiferous plant, with cleistogamous flowers, growing in humid places.

76879. BROMUS BREVIS Steud. Poaceae. **Bromegrass.**

A perennial from La Plata, Buenos Aires Province; collected in January, 1928.

76880 and 76881. BROMUS UNIOLOIDES (Willd.) H. B. K. Poaceae. **Bromegrass.**

An annual or biennial grass, 1 to 2 feet high, native to South America; it has been cultivated occasionally in the southern United States for winter forage.

For previous introduction see No. 62064.

76880. No. 1. A common form cultivated on pampas.

76881. No. 2. A perennial from Rio Negro, Patagonia.

76882. MELICA SARMENTOSA Ness. Poaceae. **Grass.**

A perennial somewhat climbing grass.

76878 to 76885—Continued.

76883. ORYZA SUBULATA Nees. Poaceae. **Grass.**

From Chaco, Argentina. A perennial cultivated in the botanic garden of the university.

76884. PHALARIS COERULESCENS Desf. Poaceae. **Grass.**

A cespitose perennial cultivated in the botanic garden of the university. It seeds poorly in Buenos Aires.

For previous introduction see No. 46955.

76885. POA BONARIENSIS (Lam.) Kunth. Poaceae. **Grass.**

From Avellaneda, Province of Buenos Aires. A rhizomatous perennial.

76886 to 76891.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, of the Plant Introduction Garden. Received May 7, 1928.

76886. APHELANDRA SINCLAIRIANA Nees. Acanthaceae.

A shrub 6 to 15 feet high, native to Panama, with obovate entire leaves, vivid orange-red bracts, and pale or purplish red tubular flowers.

76887. ARRABIDAEA ROTUNDATA Bur. Bignoniaceae.

A large woody vine native to the Pacific slope in Panama, with two or three elliptic leaflets and axillary and terminal panicles of very showy pink or purple flowers.

76888. CALLICHLAMYS LATIFOLIA Schum. Bignoniaceae.

A large woody vine, native to Panama, with large compound leaves having three elliptic leaflets, and short racemes of bright-yellow flowers.

76889. ODONTADENIA SPECIOSA Benth. Apocynaceae.

A large woody tropical American vine with opposite elliptic leaves 5 to 10 inches long, and large cymes of yellow flowers.

76890. POGONOPUS SPECIOSUS (Jacq.) Schum. Rubiaceae.

A tropical American shrub or small tree up to 20 feet high, with broadly lanceolate leaves, and broad cymes of scarlet flowers with brilliant red bracts.

For previous introduction see No. 45360.

76891. POSOQUERIA LATIFOLIA Roem. and Schult. Rubiaceae.

A tall Brazilian shrub up to 25 feet high, with large opposite ovate coriaceous leaves, terminal corymbs of white tubular flowers 4 inches long, and succulent edible fruits used for jellies and marmalades.

For previous introduction see No. 69373.

76892 to 76914.

From Gangtok, Sikkim, India. Seeds presented by the forest manager of Sikkim. Received May 15, 1928.

76892. ABELMOSCHUS MANIHOT (L.) Medic. (*Hibiscus manihot* L.). Malvaceae.

A Chinese perennial herb up to 9 feet high, naturalized in India and also in the Southern United States. It has palmately divided leaves and pale yellow flowers 4 to 9 inches across.

For previous introduction see No. 40030.

76892 to 76914—Continued.

76893. ALLAMANDA CATHARTICA L. Apocynaceae.

A tropical American climbing shrub with whorls of three or four obovate leaves 8 inches long and clusters of bright-yellow trumpet-shaped flowers expanding to 4 inches across.

76894. ARGYREIA sp. Convolvulaceae. **Silver weed.**

A silvery leaved climber native to India. The flowers resemble those of the morning-glory.

76895. ARTEMISIA VULGARIS L. Asteraceae. **Mugwort.**

An aromatic shrublike herb 6 to 8 feet high, with pinnately divided leaves and large panicles of small flower heads. Native throughout the mountainous parts of India.

For previous introduction see No. 67634.

76896. ASPARAGUS RACEMOSUS Willd. Convallariaceae.

A tall spiny climbing woody asparagus with many branches, falcate channeled cladodes, and racemes 1 to 2 inches long followed by berries one-fourth of an inch in diameter. It is native to the slopes of the Himalayas up to 4,000 feet altitude.

76897. BERBERIS sp. Berberidaceae. **Barberry.**

A Himalayan shrub with yellow flowers, growing at an altitude of 9,000 to 10,000 feet.

76898. BUCKLANDIA POPULNEA R. Br. Hamamelidaceae.

A large evergreen tree, native to the eastern Himalayas, which grows to a height of 80 feet. The dark-green leaves are broadly triangular, and the yellow flowers are in globose heads.

For previous introduction see No. 61598.

76899. COSTUS SPECIOSUS (Koen.) J. E. Smith. Zinziberaceae.

An East Indian perennial herb from a tuberous rootstock with a stem 4 to 10 feet high, bearing oblanceolate leaves a foot long, red bracts, and large flowers with a flowering white limb and a yellow center in a long dense spike.

For previous introduction see No. 47877.

76900. CUPRESSUS FUNEBRIS Endl. Pinaceae. **Mourning cypress.**

A very graceful evergreen tree native to China, growing at altitudes of 5,000 to 7,000 feet.

For previous introduction see No. 70974.

76901. HEDYCHIUM sp. Zinziberaceae. **Gingerlily.**

These are strong-growing tropical herbaceous perennials with ornamental leaves and white, red, or yellow flowers. The shipment is a mixture of different species.

76902. LILIUM GIGANTEUM Wall. Liliaceae. **Giant lily.**

A Himalayan lily with bulbs which grow close to the surface, in rich black mold, at altitudes of 7,500 to 9,000 feet, where it is covered with snow from November to April. The plants are 6 to 9 feet high, and the smooth hollow stems are used for musical pipes. The handsome cordate leaves, shining dark green above and paler beneath, are 10 to 12 inches long on petioles of equal length; both become smaller near the apex. In the large fragrant white flowers, 12 to a raceme, the perianth tube is slightly greenish, and the inner surfaces of the segments are tinged with deep purple.

For previous introduction see No. 76020.

76892 to 76914—Continued.

76903. LUCULIA GRATISSIMA (Wall.) Sweet. Rubiaceae.

A Himalayan shrub up to 15 feet high, growing at altitudes of 4,000 to 5,000 feet, with opposite ovate leaves 6 inches long and gorgeous rounded panicles of pink or rose flowers.

For previous introduction see No. 75963.

76904 and 76905. MECONOPSIS spp. Papaveraceae.

Poppylike herbaceous plants with large flowers borne singly or in panicles.

76904. MECONOPSIS sp.

A blue-flowered variety.

76905. MECONOPSIS sp.

A yellow-flowered variety.

76906. MIMOSA RUBICAULIS Lam. Mimosaceae.

A spiny Indian shrub or small tree growing up to 5,000 feet altitude. The thin finely pinnate leaves and reddish yellow flower heads make the shrub of possible value as an ornamental in the warmest parts of the United States. It is also said to make a good hedge.

For previous introduction see No. 68340.

76907. OXYSPORA PANICULATA (D. Don) DC. Melastomaceae.

A large spreading Himalayan shrub with opposite ovate leaves 5 inches long, and large loose panicles of rose-purple flowers.

For previous introduction see No. 47748.

76908. PRUNUS CERASOIDES D. Don (*P. puddum* Roxb.). Amygdalaceae. **Sikkim cherry.**

A Himalayan tree of medium size, growing at altitudes of 4,000 to 7,000 feet, with rosy or nearly white flowers and small oblong fruits with scanty flesh. The handsomely mottled wood is used for making canes and furniture.

For previous introduction see No. 65264.

76909 to 76913. RHODODENDRON spp. Ericaceae.

76909. RHODODENDRON ARBOREUM J. E. Smith.

A tall Himalayan shrub or small tree up to 40 feet high, growing at altitudes of 5,000 to 10,000 feet. It is variable both in its foliage and in the color of its flowers. In one form the leaves are silvery on the lower surface, while in another they are covered with a brownish red down. The bell-shaped flowers, borne in dense trusses, vary from deep crimson to pure white.

For previous introduction see No. 67938.

76910. RHODODENDRON CAMPANULATUM WALLICHII Hook. f.

A Himalayan shrub 15 feet high, growing at an altitude of 10,000 feet. The elliptic leaves, 4 to 6 inches long, are on red petioles, and the bright rosy purple unspotted flowers, 2 inches across, are in clusters.

76911. RHODODENDRON THOMSONII Hook. f.

A Himalayan shrub up to 15 feet high, growing at altitudes of 10,000 to 11,000 feet, with glabrous obovate leaves 3 inches long and clusters of six to eight deep blood-red flowers 2 inches across.

For previous introduction see No. 58929.

76912. RHODODENDRON WIGHTII Hook. f.

A Himalayan shrub 14 feet high, growing at altitudes of 10,000 to 11,000 feet, with oblong leaves 6 to 8 inches long, brown tomentose beneath, and large clusters of red-spotted yellow flowers 2 to 3 inches across.

For previous introduction see No. 58930.

76892 to 76914—Continued.

76913. RHODODENDRON sp.

A rhododendron growing at altitudes of 10,000 to 11,000 feet.

76914. RUBUS ELLIPTICUS J. E. Smith. Rosaceae. **Raspberry.**

A very sweet Himalayan raspberry which grows at from 5,000 to 6,000 feet altitude.

For previous introduction see No. 67939.

76915 to 76918.

From Sinaloa, Mexico. Seeds presented by F. W. Smith, through Paul C. Standley, of the Field Museum of Natural History, Chicago, Ill. Received May 18, 1928.

76915. CANAVALIA GLADIATA (Jacq.) DC. Fabaceae. **Sword bean.**

A Mexican variety.

76916. CANAVALIA MARITIMA (Aubl.) Thouars. Fabaceae.

A Mexican variety.

For previous introduction see No. 65466.

76917. MAXIMILIANEA VITIFOLIA (Willd.) Krug and Urb. (*Cochlospermum hibiscoides* Kunth). Cochlospermaceae.

A Central American deciduous tree 35 feet high, but flowering when only 6 feet high. The alternate leaves have five to seven serrate lobes, and the handsome bright-yellow flowers, 4 inches across, are in terminal clusters.

For previous introduction see No. 52412.

76918. TABEBUIA sp. Bignoniaceae.

A tropical American tree with opposite palmately divided leaves and clusters of large showy flowers.

76919 and 76920.

From Richmond, Victoria, Australia. Seeds presented by F. H. Baker. Received May 19, 1928.

76919. HAKEA LAURINA R. Br. Proteaceae. **Sea-urchin hakea.**

An Australian shrub up to 30 feet high, with lanceolate leaves 6 inches long and globular heads of crimson flowers from which protrude the golden-yellow styles an inch long.

For previous introduction see No. 70908.

76920. KENNEDIA MONOPHYLLA Vent. (*Hardenbergia monophylla* Benth.). Fabaceae.

An Australian vine with single lanceolate leaflets, and terminal panicles and axillary racemes of flowers ranging from white through rose to purple.

For previous introduction see No. 55601.

76921 to 76927.

From Bussaco, Portugal. Seeds presented by José de Mello de Figueiredo, Chief Forester of the Bussaco National Forest. Received May 23, 1928.

76921. ACACIA MELANOXYLON R. Br. Mimosaceae. **Blackwood acacia.**

An Australian evergreen tree up to 100 feet high, with lanceolate leathery phyllodes 4 inches long, heads of creamy flowers in short racemes, and reddish brown twisted pods. The dark wood is very similar to black walnut and is used for the same purposes. The tree makes rapid growth while young.

For previous introduction see No. 48051.

76921 to 76927—Continued.

76922. CALLITRIS CUPRESSIFORMIS Vent. (*Frenela australis* Endl.). Pinaceae.

An Australian evergreen reaching a height of 50 feet, with slender drooping branches and globular cones.

For previous introduction see No. 73834.

76923. CALLITRIS ORLONGA L. Rich. (*Frenela gunnii* Endl.). Pinaceae.

An evergreen Tasmanian shrub or small tree 25 feet high, with erect dense branches and ovoid or oblong cones.

76924. CUPRESSUS LUSITANICA Mill. Pinaceae. **Portuguese cypress.**

An ornamental evergreen tree, native to Mexico, which is cultivated as a forest tree in Portugal. The soft aromatic straight-grained wood is considered very valuable.

For previous introduction see No. 73844.

76925. LAUROCERASUS LUSITANICA (L.) Roemer (*Prunus lusitanica* L.). Amygdalaceae. **Portugal-laurel.**

An evergreen Portuguese tree 20 feet high, with thick leathery serrate-lanceolate leaves, racemes of small white flowers, and inconspicuous black fruits.

For previous introduction see No. 62726.

76926. MYRICA FAYA Ait. Myricaceae.

An evergreen shrub or small tree up to 25 feet high, native to the Canary Islands, with lanceolate leaves 4 inches long, and elongated spikes of wine-red edible fruits one-fourth of an inch across.

For previous introduction see No. 71861.

76927. PHILLYREA LATIFOLIA L. Oleaceae.

An evergreen shrub or small tree up to 30 feet high, native to the Mediterranean region. The shining dark-green ovate leaves are 2 inches long, and the racemes of small flowers are followed by black fruits one-fourth of an inch in diameter.

76928. ZEPHYRANTHES sp. Amaryllidaceae. **Zephyrlily.**

From Piste, Yucatan, Mexico. Bulbs collected by E. L. Crandall, Bureau of Plant Industry. Received June 28, 1927. Numbered June, 1928. A yellow-flowered tender bulbous plant.

76929. RHEUM RHAPONTICUM L. Polygonaceae. **Rhubarb.**

From Ottawa, Canada. Roots presented by T. F. Ritchie, Division of Horticulture, Central Experimental Farm. Received May 25, 1928.

Ruby. A Canadian variety.

76930. CLERODENDRUM FOETIDUM Bunge. Verbenaceae. **Rose glorybower.**

From Nikita, Yalta, Crimea, Russia. Plants presented by George V. Heintz, librarian, Government Botanic Garden. Received May 24, 1928.

A semihardy evergreen Chinese shrub 6 feet high, with cordate leaves 8 inches long, and dense capitate cymes of fragrant rosy red flowers. When killed to the ground the young shoots bloom in the autumn of the same season.

For previous introduction see No. 73424.

76931 to 76967.

From Melbourne, Australia, and Tasmania. Seeds presented by Mrs. Frieda Cobb Blanchard, University of Michigan, Ann Arbor, Mich. Received May 24, 1928.

Nos. 76931 to 76949 were received from Melbourne, Australia.

76931. ANIGOZANTHOS FLAVIDA Red. Amaryllidaceae.

A herbaceous perennial, native to Western Australia, with a thick underground stem, linear radical leaves 1 to 2 feet long, and a 4-foot stalk bearing a much-branched panicle of tubular flowers. The flowers and stems of the panicle are covered with a greenish red wool.

76932. BACKHOUSIA MYRTIFOLIA Hook. and Harv. Myrtaceae.

For previous introduction and description see No. 76859.

76933. CALLICOMA SERRATIFOLIA Andrews. Cunoniaceae.

A tall Australian shrub or tree up to 40 feet high, with opposite coarsely serrate-ovate leaves 4 inches long, white or rusty underneath, and dense globular heads of small flowers in terminal panicles.

76934. CALLISTEMON PHOENICEUS Lindl. Myrtaceae.

For previous introduction and description see No. 76861.

76935. CALLISTEMON RIGIDUS R. Br. (*C. rugulosus* DC.). Myrtaceae.

A tall shrub, sometimes 30 feet high, native to New South Wales. The leaves, 2 to 5 inches long, are narrowly linear, and the red flowers, with dark-red stamens an inch long, are borne in large dense spikes.

For previous introduction see No. 75549.

76936. CORREA BAUERLENII F. Muell. Rutaceae.

An Australian shrub which has branchlets covered with dark-brown hairs, opposite lanceolate thin leaves, pale beneath, and yellowish green tubular flowers in the axils.

For previous introduction see No. 75553.

76937. DRACOPHYLLUM SECUNDUM R. Br. Epacridaceae.

An Australian shrub resembling a monocot with the branching stems covered by the sheathing bases of the linear striated leaves 2 to 4 inches long. The branches are terminated by long compound 1-sided racemes of pure white tubular flowers.

76938. EUGENIA AUSTRALIS Wendl. (*E. myrtifolia* Sims). Myrtaceae.

Australian brush-cherry.

An Australian tree up to 80 feet high, with ovate-evergreen leaves 3 inches long, branching panicles of white flowers an inch across, and ovoid reddish edible fruits an inch long.

For previous introduction see No. 48670.

76939. LASIOPETALUM DASYPHYLLUM Sieber. Sterculiaceae.

A tall Tasmanian shrub with rusty tomentose branches, coriaceous cordate to lanceolate leaves 4 inches long, and dense axillary clusters of small brownish flowers.

76940. MELALEUCA STYPHELIOIDES J. E. Smith. Myrtaceae.

A tall Australian tree, sometimes 80 feet high, with thick spongy bark. The leaves are very small, and the small creamy white flowers are in dense spikes about 2 inches long.

For previous introduction see No. 75567.

76931 to 76967—Continued.

76941. OXYLOBIUM LANCEOLATUM (Vent.) Druce (*Callistachys lanceolata* Vent.). Fabaceae.

A tall Australian shrub with whorls of lanceolate leaves 3 to 5 inches long and yellow flowers in dense terminal racemes 6 inches long.

For previous introduction see No. 75569.

76942. PITTOSPORUM UNDULATUM Vent. Pittosporaceae. **Orange pittosporum.**

An Australian evergreen shrub or tree up to 40 feet high, often used as a hedge. The lanceolate leaves, 3 to 6 inches long, are undulate on the margins, and the very fragrant white flowers are in terminal clusters.

76943. PROSTANTHERA NIVEA A. Cunn. Menthaceae.

A beautiful Australian shrub 6 feet high, with linear terete leaves an inch long and snow-white or pale-blue axillary flowers, the terminal ones forming leafy racemes.

76944. STENOCARPUS SALIGNUS R. Br. Proteaceae.

A moderate-sized Australian tree with leaves varying from ovate to pinnatifid, 2 to 4 inches long, and axillary and terminal umbels of small yellow flowers.

76945. SWAINSONA GALEGIFOLIA (Andrews) R. Br. (*S. coronillaefolia* Salisb.). Fabaceae. **Darling pea.**

An Australian subshrub climbing to a height of several feet with 11 to 21 small oblong leaflets and large deep-red, pink or white flowers. *Swainsona coronillaefolia* probably represents the horticultural variety *violacea*, which has rose-violet flowers. This species is said to be poisonous to stock.

76946. TRICONDYLUS FRASERI (R. Br.) Kuntze (*Lomatia fraseri* R. Br.). Proteaceae.

An Australian shrub or small tree with lanceolate irregularly lobed leaves and loose cymes of white or yellow flowers. The light hard wood has beautiful markings and is easily worked.

For previous introduction see No. 51068.

76947. TRISTANIA CONFERTA R. Br. Myrtaceae. **Brisbane-box.**

For previous introduction and description see No. 76869.

76948. TRISTANIA LAURINA (J. E. Smith) R. Br. Myrtaceae.

For previous introduction and description see No. 76870.

76949. VIMINARIA DENUDATA J. E. Smith. Fabaceae.

An Australian shrub with rushlike stems up to 20 feet high, long wiry pendulous branches, leaves reduced to filiform petioles 6 to 9 inches long, and long terminal racemes of orange-yellow flowers.

Nos. 76950 to 76967 were received from Tasmania.

76950. ASTELIA ALPINA R. Br. Liliaceae.

No. 138. From Cradle Valley.

For previous introduction and description see No. 76703.

76951 to 76953. BELLENDENA MONTANA R. Br. Proteaceae.

No. 145. From Middlesex. A small Tasmanian shrub growing at an altitude of 2,000 feet. It is about a foot high with obovate leaves an inch long, 3-lobed at the tip, and small white or pink flowers in dense terminal racemes,

76931 to 76967—Continued.

followed by flat membranous fruits half an inch long.

For previous introduction see No. 67806.

76951. An orange-fruited variety.

76952. A red-fruited variety.

76953. A yellow-fruited variety.

76954. BILLARDIERA LONGIFLORA Labill. Pittosporaceae.

No. 146. From Middlesex. A Tasmanian twining shrub with oval to linear leaves an inch long, solitary pendulous dull-yellow or blue flowers as long as the leaves, and pendent, bright-purple berries nearly an inch in diameter. The shrub is very dainty and slender, with sparse foliage. It grows in sunshine or in partial shade at an altitude of 2,000 feet.

For previous introduction see No. 64597.

76955 to 76957. COPROSMA BILLARDIERI (A. Rich.) Hook. f. Rubiaceae.

An erect slender-branching Tasmanian shrub several feet high with the branchlets often reduced to spines. The lanceolate leaves are less than half an inch long, and the small solitary tubular flowers are followed by broadly oblong berries.

76955. No. 133. From Cradle Valley. A variety growing at an altitude of 3,000 feet.

76956. No. 143. From Middlesex. An orange-berried variety growing at an altitude of 3,000 feet.

76957. No. 144. From Middlesex. A red-berried variety growing at an altitude of 2,000 feet.

76958. COPROSMA MOOREI Rodway. Rubiaceae.

No. 129. From Cradle Valley. A small prostrate creeping perennial, native to Tasmania, found at an altitude of 3,000 feet. It has thick shining ovate leaves, small solitary flowers, and broadly ovoid blue berries less than half an inch long.

76959. DIANELLA TASMANICA Hook. f. Liliaceae.

No. 51. From National Park.

For previous introduction and description see No. 76711.

76960 and 76961. DRIMYS LANCEOLATA (Poir.) Baill. (*D. aromatica* F. Muell.). Magnoliaceae.

A bushy Australian shrub or small tree up to 30 feet high, with alternate oblong leaves 1 to 3 inches long, clusters of small flowers, and strongly aromatic black fruits the size of a pea.

For previous introduction see No. 67813.

76960. No. 130. From Cradle Valley. A variety growing at an altitude of 3,000 feet.

76961. No. 147. From Middlesex. A variety growing at an altitude of 2,000 feet.

76962. GAULTHERIA HISPIDA R. Br. Ericaceae.

No. 148. From Middlesex. A Tasmanian shrub, 2 to 6 feet high, growing at an altitude of 2,000 feet. The branches are covered with coarse brown hairs, the obscurely toothed lanceolate leaves are 2 inches long, and the dense terminal racemes of small flowers are followed by white berries.

For previous introduction see No. 67818.

76963. PENTACHONDRA PUMILA (Forst.) R. Br. Epacridaceae.

No. 131. From Cradle Valley.

For previous introduction and description see No. 76718.

76931 to 76967—Continued.

76964. PERNETTYA TASMANICA Hook. f. Ericaceae.

No. 142. Near Cradle Valley. A densely matted creeping Tasmanian shrub with concave lanceolate leaves one-fourth inch long, small urn-shaped flowers in the upper axils, and red or yellow berries one-fourth inch in diameter.

76965. PIMELEA DRUPACEA Labill. Thymelaeaceae.

No. 149. From Middlesex.

For previous introduction and description see No. 76720.

76966. TROCHOCARPA GUNNII (Hook. f.) Benth. Epacridaceae.

No. 132. From Cradle Valley. A tall, densely branched Tasmanian shrub, 10 to 12 feet high, growing at an altitude of 3,000 feet. It has small oblong leaves, clusters of white flowers, and globular purple, violet, or orange fruits one-fourth inch in diameter.

76967. (Undetermined.)

No. 161. From Middlesex. A shrub growing at an altitude of about 2,000 feet.

76968 to 76997. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae.

Common wheat.

From Sydney, New South Wales, Australia. Seeds obtained from the Lindley-Walker Wheat Co., through J. W. T. Duvel, Grain Futures Administration, United States Department of Agriculture. Received June 18, 1927. Numbered June, 1928.

76998 and 76999. FRAGARIA spp. Rosaceae. **Strawberry.**

From Milan, Italy. Plants presented by Dr. Piero Scotti Foglieni. Received April 20, 1928.

76998. FRAGARIA sp.

No. 63. *White pineapple.* In Italy this variety gave origin to the everbearing strawberries with large fruits. The plant is vigorous, and the flesh-colored berry is the most savory one of its type; not everbearing, but with some flowers also during the summer.

76999. FRAGARIA sp.

No. 135 or 107. Of unique characteristic shape, resembling an ornamental pumpkin or a flask. Exquisite, large fruit.

77000 to 77014. Poaceae **Bamboo.**

From China. Plants collected by F. A. McClure, agricultural explorer, Bureau of Plant Industry. Received June 24, 1927. Numbered June, 1928.

77000. PHYLLOSTACHYS sp.

No. 705. Kwangtung Province.

77001. PHYLLOSTACHYS sp.

No. 706. Taaihohhan, Anhwei Province, October 22, 1926. *Wongtun chuk.* A small bamboo, possibly a Phyllostachys, used in weaving baskets. The culms are flattened above the branches which are borne in pairs. The young shoots are eaten.

77002. (Undetermined.)

No. 708. Shuching, Anhwei Province, October 14, 1926. *Fa taan chuk.* A small bamboo with thin, tough walls, characterized by their very dark green color. It is used in weaving and is considered good for this purpose, especially on account of the low percentage of waste material. The young shoots are eaten with great relish.

77003. PHYLLOSTACHYS sp.

No. 716. Rhizomes, with small plants attached to them, obtained at Chiuhwashaan, Anhwei Province, November 4, 1926. *Kwai chuk.* A medium-sized bamboo of the monopodial type cultivated, or rather half cultivated, for the edible young shoots, and the culms which are used in weaving baskets, trays, etc.

77004. ARUNDINARIA sp.

No. 718. November 3, 1926. *Koo chuk.* Rhizomes, with young plants attached to them, obtained at Chiuhwashaan, Anhwei Province, where this occurs spontaneously. It is a medium-sized monopodial bamboo 4 or 5 meters high and 2 centimeters in diamater. The culms, purplish green, especially when young, are thick-walled; the pith is chambered, the diaphram occurring about every 3 centimeters. The nodes are prominent, the branches three to usually five, acutely ascending, the middle the largest. The medium-sized drooping leaves are long and slender. The rhizomes are cylindrical, and the nodes not prominent, in which characteristic they resemble the rhizomes of Arundinarias. This bamboo is common, but not used to any great extent, and the shoots are not edible.

77005. PHYLLOSTACHYS NIDULARIA Munro.

No. 720. November 4, 1926. *Shui chuk.* Rhizomes, with small plants attached, obtained at Chiuhwashaan, Anhwei Province. A small wild bamboo of monopodial type, apparently of wide distribution, and very commonly seen in flower. The culms, 1.5 to 3 meters high and 1 to 1.5 centimeters in diameter, are somewhat flattened and are used in weaving. There are two branches, and the leaves are small. The young shoots are edible.

77000 to 77014—Continued.

77006. PHYLLOSTACHYS sp.

No. 721.

77007. PHYLLOSTACHYS sp.

No. 722. November 3, 1926. *Lo chuk.* Rhizomes, with small plants attached to them, obtained at Chiuhwashaan, Anhwei Province. A medium-sized bamboo found both cultivated and wild. It is 4 to 6 meters high and 2 to 2.5 centimeters in diameter, with rather prominent nodes and medium-short internodes. The young shoots are edible, and the culms are used in weaving and making native lanterns.

77008. ARUNDINARIA sp.

No. 725. November 3, 1926. *Shat sam chuk, mah chuk.* Rhizomes, with small plants attached to them, obtained at Chiuhwashaan, Anhwei Province. A medium-sized wild bamboo 4 to 4.5 meters high and 1.5 to 2 centimeters in diameter, with edible shoots. The culms are nearly solid with very small central chambers; they are used for walking sticks, whipsticks, etc., but not for weaving. The nodes are prominent, the branches, two at each node, are unequal, and the leaves are small to medium sized.

77009. PHYLLOSTACHYS sp.

No. 726. November 3, 1926. *Liu kin chuk.* Rhizomes, with small plants attached to them, obtained at Chiuhwashaan, Anhwei Province. A small, monopodial bamboo found wild in this region. It is characterized by large drooping leaves, few branches, nearly equal, rising at a sharp angle with the stiff cylindrical culm. Nodes not prominent, buds very flat, and indentation slight. Culms thick-walled, with small central cavity containing very little pith. Culm sheaths thin, tips ephemeral, but the bases cling rather tenaciously. Rhizomes hard, brittle, shiny, light brown when mature. Roots few and very stiff. There are many nodes of the rhizomes without buds.

77010. ARUNDINARIA sp.

No. 729. October 23, 1926. *Liu chuk.* Rhizomes, with small plants attached to them, obtained at Taaihohhan, Anhwei Province. A small, monopodial bamboo with stiff, cylindrical, upright thick-walled culms, large drooping leaves, and numerous small branches which are acutely ascending. The culms are used as the source of sticks for hanging up noodles. Their smoothness and stiffness fits them for this purpose. The young shoots are not eaten.

77011. PHYLLOSTACHYS sp.

No. 885. Nanking. November 22, 1926. *Fa chua, ting chaa chow.* Sweet edible shoots which appear in May. Culms used for weaving baskets, etc., cut when 1 or 2 years old; yellow when mature. Rhizomes dark in color.

77012. BAMBUSA ANGULATA Munro.

No. 1052. Yunghui, Kwangsai. November, 1926. *Szfong chuk* (square bamboo). A rare monopodial bamboo cultivated in pots. It is distinguished from other Chinese bamboos by the following characteristics: Stems squarish in cross section; lower nodes of the culms bear short spines, other nodes unarmed; nodes of the branches prominent because they are rather conspicuously larger than those of other bamboos; leaves more or less distinguishable by their long, narrow, straight-sided, slender-tapered tips. This bamboo is the center of more curious interest than commercial value. The culms may reach a height of 4 meters and a diameter of 1.5 to 2 centimeters. The walls are not very thick, and the culms are not strong, seeming to lack the proper amount of tough fiber. This bamboo is used in making walking-sticks.

77000 to 77014—Continued.

77013. BAMBUSA sp.

No. 1053. *Fat t'o chuk* (Buddha's belly bamboo). A small bamboo of the sympodial type obtained at a Chinese nursery at Canton. It is cultivated in pots for ornamental purposes only. This supposed ornamental value is derived from the globular internodes which make up a zigzag culm. It does not appear to exceed 1 meter in height and is, as a rule, only about two-thirds this high. The largest internodes are usually about 1.5 centimeters in diameter and quite short, usually about 3 centimeters long. The culm tapers rather abruptly from the base to the tip. The walls are greatly thickened, the inner cavity of the internodes being flat in shape, barely wide enough to accommodate a small knife blade. The branching is of the type in which there is one large central branch and two smaller ones on either side of it. There may also be other smaller branches between these. The apparently abnormal growth of the internodes may be due to the presence of fungal threads in the young shoots, a circumstance which may lend credence to the theory that the black spore masses of some smut sometimes appear at the bases of the branches; that is, at the nodes of the culms.

77014. (Undetermined.)

No. 1054. Lingnan University, Canton, May 20, 1927. *Koon yam chuk* (goddess-of-mercy bamboo). A small bamboo of the sympodial type which grows in very dense clumps. The culms will reach a length of 2 or 3 meters if allowed to grow unmolested and a diameter of about 1 centimeter. Typically the leaves are extremely small, 2 to 3 centimeters in length, and the tips of the branchlets which bear the leaves curl downward in a very characteristic manner. This bamboo is usually used as a hedge plant, though it is sometimes grown in pots. It responds admirably to trimming, and makes very dense and beautiful hedges. It keeps its limits almost indefinitely while spreading imperceptibly.

77015 to 77019. RHODODENDRON spp. Ericaceae.

From Leicester, England. Seeds purchased from Rev. J. Farnworth Anderson. Received June 16, 1928.

77015. RHODODENDRON AMBIGUUM Hemsl.

A low Chinese shrub with lanceolate leaves 2 to 3 inches long; the flowers, pale-yellow spotted with greenish yellow, are 2 inches across.

77016. RHODODENDRON LUTESCENS Franch.

A Chinese shrub 6 feet high, with long pointed lanceolate leaves 3 to 4 inches long, densely scaly and light green beneath. The pale-yellow wheel-shaped flowers are an inch across.

77017. RHODODENDRON MAXWELLII L. S. Gibbs.

A large shrub or small tree native to North Borneo at an altitude of 6,000 feet. The medium-sized thick rugose leaves resemble those of *Rhododendron acuminatum;* the tubular yellow flowers, 2 inches in diameter, are produced abundantly in racemes.

77018. RHODODENDRON RACEMOSUM Franch.

An upright Chinese shrub about 6 feet high, with scaly branchlets, elliptic to obovate leaves which are glabrous above and glaucous beneath, and numerous few-flowered clusters of pink flowers.

77019. RHODODENDRON sp.

Forrest's No. 17827. An ornamental shrub.

77020 to 77022.

From St. Peters, South Australia. Seeds presented by J. Howard Johnson. Received June 8, 1928.

77020. ERYTHRINA CRISTA-GALLI L. Fabaceae.

An ornamental Brazilian shrub or small tree with large spikes of dark-red flowers 12 to 18 inches long.

For previous introduction see No. 73849.

77021. MIDA ACUMINATA (R. Br.) Kuntze (*Fusanus acuminatus* R. Br.). Santalaceae. **Quandong.**

An Australian evergreen tree up to 30 feet high, with long narrow leaves which are eaten by sheep and cattle in times of drought. The inconspicuous flowers are in terminal clusters and are followed by red fruits 1 to 2 inches in diameter. The fleshy part of the fruit is used for jelly, and the kernel of the nut, besides being edible, contains an oil which may be used for light.

For previous introduction see No. 50325.

77022. XANTHOCERAS SORBIFOLIA Bunge. Sapindaceae.

A Chinese shrub or small tree with ashlike leaves and large drooping racemes of white flowers with yellow stamens. The kernels of the large fruits are eaten by the Chinese.

For previous introduction see No. 62590.

77023. LILIUM sp. Liliaceae. Lily.

From Chosen, Japan. Bulbs collected by R. K. Beattie, Bureau of Plant Industry. Received June 16, 1928.

No. 685. May 16, 1928. Koryo Forest Experiment Station, about 25 miles northeast of Keijo. A species said to have pinkish flowers. The plants were about 7 inches high when these bulbs were dug. The winters in this region go below 0 F., but there is little snow.

77024 and 77025.

From Soledad, Cienfuegos, Cuba. Seeds presented by R. M. Grey, biological laboratory and botanical garden, Harvard University. Received June 12, 1928.

77024. CLUSIA ROSEA Jacq. Clusiaceae.

A Central American shrub or tree up to 30 feet high, usually epiphytic when young and eventually killing the host plant. The opposite entire broadly ovate leaves are very thick and leathery, and the large white flowers are often tinged with pink.

77025. TROPHIS RACEMOSA (L.) Urban (*T. americana* L.). Moraceae.

A Mexican tree up to 50 feet high, with ovate coriaceous leaves 4 to 7 inches long, greenish flowers, and small globose fruits which have a very thin edible flesh. The young branches are used for fodder, and the bark contains tannin.

77026. OPIZIA STOLONIFERA Presl. Poaceae. Acapulco grass.

From Habana, Cuba. Plants obtained from Brother Leon, La Salle College, through P. L. Ricker, Bureau of Plant Industry. Received February 6, 1928. Numbered June, 1928.

This perennial creeping grass was discovered 100 years ago at Acapulco, Mexico. It is now known to grow over a wide area in the western part of southern Mexico, a region with a long period of drought each year. It makes very dense turf and grows even on the surface of practically bare limestone rock. It is doubtless very drought resistant, as the dry season of southwest Mexico is a prolonged one.

77027. OPIZIA STOLONIFERA Presl. Poaceae. **Acapulco grass.**

From Cuba. Sod obtained by P. H. Dorsett, agricultural explorer, Bureau of Plant Industry. Received February 15, 1928. Numbered June, 1928.

No. 3. February 1, 1928. A local variety obtained near Habana.

For previous introduction and description see No. 77026.

77028 to 77044. PRUNUS SERRULATA Lindl. Amygdalaceae. **Oriental cherry.**

Japanese flowering cherry trees growing at the Plant Introduction Garden, Chico, Calif. Numbered April, 1928.

77028. Row 133, tree 4, O. T. O. Single, white-flowered form.

77029. Row 135, tree 5, O. T. O. Single, white-flowered form.

77030. Rows 144 and 145, tree 5, O. T. O. Single, white-flowered form.

77031. Rows 143 to 145, tree 4, O. T. O. *Ariake* (dawn). Tree spreading in habit, about 18 feet high; bark gray; flowers very pale pink, nearly single, 2 inches or more across, long stemmed, in clusters of two to four, blooming about midseason. The varietal name probably refers to the delicate pink tints of the flowers.

For previous introduction see No. 69080.

77032. Row 129, tree 4, O. T. O. *Gosiozakura* (palace cherry). A small spreading tree with light-brown rough bark. The semidouble flowers, produced in clusters of five, are about 1¾ inches across, white, faintly overspread with pink.

For previous introduction see No. 67951.

77033. Row 133, tree 6, O. T. O. *Gyoiko* (Imperial). A vigorous, erect tree, 12 to 14 feet high. The semidouble, greenish white flowers, the petals of which are striped darker green with occasional tinges of pink, are about 1½ inches in diameter and are produced in clusters of three to five.

For previous introduction see No. 76068.

77034. Row 150, tree 6, O. T. O. *Jonioi* (supreme fragrance). An upright tree about 17 feet high, with gray bark and bronze-colored young foliage. The single, white, fragrant flowers, about 1½ inches across, are in upright clusters of three or four.

77035 and 77036. *Kwanzan* (name refers to a Japanese mountain). Tree upright spreading in habit, becoming about 25 feet high; bark dark reddish brown; young foliage bronze green; buds rose red; flowers deep pink, double, nearly 2 inches across, in clusters of two to five, blooming late. This is considered by some horticulturists to be the finest of the double-flowering cherries, because of the deep color of the flowers.

For previous introduction see No. 76072.

77035. Row 136, tree 5, O. T. O.

77036. Rows 144 and 145, tree 6, O. T. O.

77037. Row 146, tree 6, O. T. O. *Miyako* (beauty or prosperity). Tree upright spreading, young foliage brown; buds pink; flowers light pink, semidouble, opening rather flat, pinker toward the margin with fimbriate petals in few-flowered clusters, blooming rather late.

77038. Row 147, tree 1, O. T. O. *Shiratamazakura* (white gems). Branches pale brown; young foliage brownish red; flowers single, white tinged with pale pink, 1¼ inches across, in clusters of three and four, borne in great abundance.

77028 to 77044—Continued.

77039 to 77041. *Shirofugen* (white goddess). A large spreading tree, up to 25 feet in height and spread, with brownish gray bark. The young leaves, which are dark bronze green, make a striking contrast with the pendulous clusters of large, double, light-pink flowers which become almost white before falling. This variety closely resembles *Fugenzo*, but has lighter flowers.

For previous introduction see No. 76078.

77039. Rows 138 and 139, tree 5, O. T. O.

77040. Rows 143 and 144, tree 2, O. T. O.

77041. Row 146, tree 2, O. T. O.

77042. Row 137, tree 5, O. T. O. *Takinioi* (fragrant white cascade). Tree rather small and spreading, about 15 feet high; bark brownish gray; flowers pure white, single, very fragrant, about 1½ inches across, in clusters of three or four; blooming midseason.

For previous introduction see No. 76081.

77043 and 77044. *Wasinowo* (eagle's tail). An upright tree about 20 feet high, with smooth gray bark, brownish green young foliage, and numerous single white flowers nearly 2 inches in diameter. The size and quantity of the flowers make this a very attractive form.

77043. Row 126, tree 4, O. T. O.

77044. Rows 144 and 145, tree 6, O. T. O.

77045 to 77048. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Peking, China. Seeds presented by T. T Wang, Chief of the Bureau of Agriculture and Forestry of the Ministry of Agriculture and Labor. Received June 25, 1928.

Chinese varieties which are planted the last of March in the vicinity of Peking.

77045. No. 1. 77047. No. 3.

77048. No. 2. 77048. No. 4.

77049. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Manila, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture. Received June 25, 1928.

A long purple variety grown at the Singalong propagating station.

77050 and 77051.

From Munich, Bavaria, Germany. Plants presented by Dr. Karl Goebel, Director of the Munich Botanic Gardens. Received June 23, 1928.

77050. FICUS ROXBURGHII Wall. Moraceae.

For previous introduction and description see No. 76755.

77051. THUNIA ALBA (Lindl.) Reichenb. Orchidaceae.

A tropical Himalayan terrestrial orchid, 1 to 2 feet high, with bamboolike stems and leaves and four to eight flowered racemes of white to purple Cattleyalike flowers.

77052. MORAEA sp. Iridaceae.

From Kenya Colony, East Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received January 31, 1928. Numbered June, 1928.

No. 357. October 14, 1927. A blue-flowered irislike plant found in the grassland at the northern base of Mount Kenya, between Nanyuki and Meru.

77053 to 77060.

From Munich, Bavaria, Germany. Plants presented by Dr. Karl Goebel, Director of the Munich Botanic Gardens. Received June 23, 1928.

77053. CISSUS GONGYLODES (Baker) Planch. (*Vitis pterophora* Baker). Vitaceae.

A vigorous tendril-bearing Brazilian vine with 4-angled branches sending down long bright-red aerial roots. The large leaves are trifoliolate, the reddish brown flowers are in cymes opposite the leaves, and at the end of each branch is borne a tuber often 6 inches long.

77054 to 77057. DATURA spp. Solanaceae.

77054. DATURA ARBOREA L. **Floripondio.**

A small tree, native to Peru and Chile, with ovate-lanceolate leaves and large trumpet-shaped greenish white flowers.

77055. DATURA SANGUINEA Ruiz and Pav. **Red floripondio.**

A Peruvian shrub up to 12 feet high, with pubescent ovate-acuminate leaves and brilliant orange-red pendulous flowers 8 inches long.

For previous introduction see No. 52735.

77056. DATURA SANGUINOLENTA Hort.

77057. DATURA sp.

An ornamental shrub with large trumpet-shaped flowers.

77058. GUNNERA MANICATA Linden. Haloragidaceae.

A southern Brazilian herbaceous perennial, grown for the immense leaves which have stalks several feet long and blades 5 to 10 feet across, orbicular in outline with variously lobed and crenate margins.

77059. HOMALOCENCHRUS HEXANDRUS (Swartz) Kuntze (*Leersia hexandra* Swartz). Poaceae. **Rice grass.**

A very leafy Brazilian grass about 3 feet high, readily eaten by cattle.

For previous introduction see No. 47025.

77060. VITIS VOINERIANA Baltet. Vitaceae. **Grape.**

A climber with evergreen leathery leaves.

77061. DENDROCALAMUS STRICTUS (Roxb.) Nees. Poaceae. **Bamboo.**

From Dehra Dun, India. Seeds presented by R. N. Parker, forest botanist of the Forest Research Institute. Received June 29, 1928.

A strikingly beautiful and useful bamboo already grown to a considerable extent in the warmer parts of Florida, but worthy of further planting. The culms under good conditions may grow to a height of 80 to 100 feet. This bamboo will stand considerable drought and cold. It is especially suited for clump planting.

For previous introduction see No. 67508.

77062. CITRUS sp. Rutaceae.

From the island of Malta. Seeds presented by A. S. Kenerson, of the W. Atlee Burpee Co. Received June 29, 1928.

A wild orange used as a stock in Malta.

77063. DATISCA CANNABINA L. Datiscaceae.

From India. Seeds and roots presented by the curator of the industrial section of the India Museum at Calcutta. Received June 28, 1928.

A hardy herbaceous perennial up to 7 feet high, native to eastern Europe and western Asia. The odd-pinnate leaves have three pairs of deeply serrate narrowly lanceolate leaflets, and the small yellow flowers are borne in open racemes. The roots are used as a source of yellow dye.

For previous introduction see No. 74699.

77064 to 77146. RHODODENDRON spp. Ericaceae. **Azalea.**

From Japan. Cuttings collected by R. K. Beattie, Bureau of Plant Industry. Received February 20, 1928. Numbered June, 1928.

Collected at the Agricultural College, Imperial University Komaba, Tokyo, February 1, 1928.

77064. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 518. *Kirin.* A pinkish lilac Kurume.

77065. RHODODENDRON sp.

No. 519. *Hana no seki.*

77066. RHODODENDRON sp.

No. 521. *Misu no uchi.*

77067. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 522. *Shoshobeni.* Kurume; hose-in-hose; alizarine pink (Ridgway).[2]

77068. RHODODENDRON sp.

No. 523. *Man yoki.*

77069. RHODODENDRON sp.

No. 524. *Benifude.*

77070. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 525. *Miyako shibori.* A Kurume, single white, not of first quality.

77071. RHODODENDRON sp.

No. 526a. *Akebono ryukyu.*

77072. RHODODENDRON sp.

No. 527. *Mikawa murasaki.* Probably of hybrid origin; mallow purple (Ridgway) flowers about 1½ inches across.

77073. RHODODENDRON sp.

No. 528. *Shikizaki tsutsugi.*

77074. RHODODENDRON MUCRONATUM G. Don.
No. 529. *Ryukyu.* A white variety.

77075. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 530. *Hatsunami.* A rose-colored Kurume, upper lobe blotched, but not conspicuously.

77076. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 531. *Azuma shibori.* A pure white hose-in-hose Kurume.

77077. RHODODENDRON sp.

No. 532. *Kacho no kawa.* Probably a garden hybrid; slightly darker than Spinel pink (Ridgway), with flowers 1½ inches across.

77078. RHODODENDRON sp.

No. 535. *Kan tsutsugi.*

77079. RHODODENDRON sp.

No. 536. *Fuji murasaki.* A large-flowered variety.

77080. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 537. *Wasegiri.* Kurume strawberry pink (Ridgway).

77081. RHODODENDRON sp.

No. 538a. *Ao-umi.*

No. 559. *Kagaribi.* Probably a garden hybrid; growth somewhat stronger than a Kurume; the dragons-blood red (Ridgway) flowers are 2 inches in diameter.

77103. RHODODENDRON sp.

No. 560. *Shirataki.*

77104. RHODODENDRON INDICUM (L.) Sweet.

No. 561. *Satsuki.* The flowers are deep rose pink or rose color (Ridgway).

77105. RHODODENDRON sp.

No. 562. *Satsuki.*

77106. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 562. *Hana-asobi.* Small, rose-colored Kurume.

77107. RHODODENDRON sp.

No. 564. *Tama-no-ito.* Light rosolane purple (Ridgway); possibly a garden hybrid; foliage very dark green. The growth somewhat suggests *R. indicum* Sweet.

77108. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 565. *Momo zono.* Hose-in-hose Kurume. Rosolane pink to cameo pink (Ridgway).

77109. RHODODENDRON sp.

No. 566. *Ran ayoku.*

77110. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 567. *Tsutamomiji.* Strawberry pink (Ridgway). Hose-in-hose Kurume.

77111. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 568. *Ima shojo.* Hose-in-hose Kurume. Rose red (Ridgway).

77112. RHODODENDRON sp.

No. 569. *Ho-oden.* Probably a garden hybrid. Hose-in-hose; flowers about 1½ inches in diameter. Thulite pink (Ridgway) irregularly edged with pure white.

77113. RHODODENDRON INDICUM (L.) Sweet.

No. 570. *Beni kirishima.* A semidouble form; the flowers are old rose to Eugenia pink (Ridgway).

77114. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 571. *Kyu miyagimo.* Hose-in-hose; Kurume; deep rose-pink (Ridgway).

77115. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 572. *Sakura kagami.* Kurume; flowers pure white, flushed rose on the tips.

77116. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 573. *Kogasane.* Hose-in-hose Kurume; flowers deep rose-pink to rose (Ridgway).

77117. RHODODENDRON sp.

No. 574. *Shiro satsuki.*

77118. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 575. *Kyo no tsumibana.* Kurume; much like *Honodegiri;* rose to rose red (Ridgway).

77064 to 77146—Continued.

77119. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 576. *Yatsu hashi.* Rose pink to rose (Ridgway) Kurume.

77120. RHODODENDRON sp.

No. 577. *Kumogiri.*

77121. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 578. *Aya no kamuri.* Deep rose-pink (Ridgway) Kurume.

77122. RHODODENDRON sp.

No. 579. *Usuyo.* Probably a garden hybrid; flowers 1½ inches in diameter, mauvette to lilac mauvette (Ridgway).

77123. RHODODENDRON sp.

No. 580. *Kumono ue.*

77124. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 581. *Momiji gasane.* Hose-in-hose Kurume; flowers geranium pink (Ridgway).

77125. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 582. *Hokorobi.* Kurume; flowers white, faintly touched with rose.

77126. RHODODENDRON sp.

No. 583. *Hinohakama.*

77127. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 584. *Komurasaki.* Kurume; flowers light rosolane purple (Ridgway).

77128. RHODODENDRON sp.

No. 585. *Beni kirishima.*

77129. RHODODENDRON sp.

No. 586. *Sakura tsukasa.*

77130. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 587. *Warai gao.* Hose-in-hose Kurume; flowers deep rose-pink (Ridgway).

77131. RHODODENDRON MUCRONATUM G. Don.

No. 589. *Suishoren.* Flowers almost double.

77132. RHODODENDRON sp.

No. 590. *Warai gishi.* Of the general type of *R. indicum*, but the growth is free and erect. The flowers are deep rose-pink (Ridgway).

77133. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 591. *Kotsubo.* Small Kurume; rose (Ridgway).

77134. RHODODENDRON sp.

No. 592. *Futami akebono.* Probably a garden hybrid; the deep rose-pink (Ridgway) flowers are 1½ inches in diameter.

77135. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 593. *Oi no mezame.* Deep rose-pink to rose color (Ridgway) Kurume.

77136. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 594. *Kocho no mai.* Kurume; flowers light phlox purple (Ridgway); lighter in the throat.

77064 to 77146—Continued.

77137. RHODODENDRON sp.

No. 595. *Koraini.* Possibly a garden hybrid (eight stamens), flowers rose blotched with dark red (Ridgway).

77138. RHODODENDRON sp.

No. 596. *Hatsushimo.* Large flowers, 1½ inches in diameter, Hermosa pink (Ridgway). The growth is like a garden hybrid.

77139. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 597. *Koshikibu.* Kurume; flowers have white throat; lips and margins are pale pink.

77140. RHODODENDRON sp.

No. 598. *Higashi yama.*

77141. RHODODENDRON sp.

No. 599. *Shishu.*

77142. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 600. *Koromo shikibu.* Kurume; flowers white with corolla tipped purple.

77143. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 601. *Surisumi.* Kurume; flowers light phlox purple (Ridgway), similar to No. 77136, but color more self.

77144. RHODODENDRON OBTUSUM JAPONICUM Wilson.

No. 602. *Miyagino.* Hose-in-hose, Kurume; flowers are deep rose-pink to Tyrian pink (Ridgway).

77145. RHODODENDRON sp.

No. 605. *Satsuki.*

77146. RHODODENDRON sp.

No. 607. A wild species with large flowers, 1½ inches in diameter, of a deep rose-pink (Ridgway).

77147 to 77154.

From Leningrad, Russia. Seeds presented by A. Kol, chief of the bureau of introduction, Institute of Applied Botany. Received June 22, 1928.

77147 to 77152. BUTIA spp. Phoenicaceae. **Palm.**

77147 to 77149. BUTIA CAPITATA (Mart.) Becc.

Three different forms of this hardy palm native to Argentina which has a spineless trunk, pinnate leaves, and large bunches of small fruits.

77147. No. 93093. 77149. No. 93105.

77148. No. 93101.

77150. BUTIA CAPITATA ODORATA (Barb.-Rodr.) Becc.

No. 93097. A Brazilian palm about 15 feet high, much like the date palm, bearing large bunches of edible fragrant fruits about an inch in diameter.

For previous introduction see No. 54666.

77151 and 77152. BUTIA CAPITATA PULPOSA (Barb.-Rodr.) Becc.

A southern Brazilian palm about 12 feet high, with arched leaves 9 feet long and large clusters of edible yellow fruits 1 to 2 inches in diameter.

For previous introduction see No. 75284.

77151. No. 93102. 77152. No. 93100.

77147 to 77154—Continued.

77153. ERYTHEA EDULIS (Wendl.) S. Wats. Phoenicaceae. **Guadaloupe palm.**

No. 93122. A Guadaloupe Island palm, 50 feet high, with orbicular lacerated leaves 3 feet across and shining black fruits.

77154. JUBAEA CHILENSIS (Molina) Baill. (*J. spectabilis* H. B. K.). Phoenicaceae. **Palm.**

No. 93117. A Chilean palm, 40 feet high, which thrives on very dry soil. The pinnate leaves are 6 to 12 feet long, and the coconutlike fruits are 2 inches in diameter. It is an ornamental palm, but a slow grower.

For previous introduction see No. 47578.

77155. GOSSYPIUM sp. Malvaceae. Cotton.

From Moca, Dominican Republic. Seeds presented by Dr. R. Ciferri, Director, Estación Nacional Agronómica y Colegio de Agricultura, through O. F. Cook, Bureau of Plant Industry. Received June 29, 1928.

Granbolla.

77156 to 77171.

From Soledad, Cienfuegos, Cuba. Seeds presented by R. M. Grey, biological laboratory and botanical garden, Harvard University. Received June 22, 1928.

77156. BAUHINIA VARIEGATA L. Caesalpiniaceae.

Variety *alba*. A form with white flowers beautifully veined with green. It is an Indian tree up to 20 feet high with broadly ovate leaves, 2-lobed at the tip, and small clusters of large flowers.

77157. CARYOTA URENS L. Phoenicaceae. **Toddy palm.**

A Malayan palm up to 80 feet high and 18 inches in diameter, with twice pinnately divided leaves 20 feet long by 12 feet wide; the segments are curved and drooping.

77158. CHRYSALIDOCARPUS MADAGASCARIENSIS Beccari. Phoenicaceae. **Palm.**

A graceful Madagascar palm about 15 feet high, with pinnate leaves 10 feet long, having segments arranged in fascicles and appearing to be in threes, giving a triangular effect.

For previous introduction see No. 68113.

77159. CLERODENDRUM ANAFENSE Britt. and P. Wils. Verbenaceae.

A Cuban tree 30 feet high, with obovate cariaceous leaves 2 to 4 inches long and clusters of white flowers an inch long.

77160. CLUSIA MINOR L. Clusiaceae.

A tropical American tree 25 feet high, often starting as an epiphyte, with thick obovate leaves 4 to 6 inches long and axillary solitary showy pink flowers.

77161. CUPANIA AMERICANA L. Sapindaceae.

A Mexican shrub or tree up to 30 feet high, with compound leaves of oblong crenate-serrate pubescent leaflets and panicles of greenish white flowers.

77162. DICTYOSPERMA GRANDIFORMIS Hort. Phoenicaceae. **Palm.**

A spineless palm with pinnately divided leaves of linear-lanceolate segments and rather large white or yellowish flowers.

77163. ERYTHRINA GLAUCA Willd. Fabaceae.

A stately tropical American tree with compound leaves of three rounded coriaceous leaflets and racemes of showy orange flowers each 2 inches across.

For previous introduction see No. 73011.

77156 to 77171—Continued.

77164. EUGENIA LIGUSTRINA (Swartz) Willd. Myrtaceae.

A low tropical American shrub with chartaceous lanceolate leaves shining above and pale beneath, solitary white flowers half an inch across, and globose smooth berries one-fourth inch in diameter.

77165. ILEX GENICULATA Maxim. Aquifoliaceae. **Holly.**

A slender-branched ornamental Japanese shrub with deciduous ovate leaves which turn yellow in autumn and bright-red berries on slender pendulous stalks.

77166. INODES CAUSIARUM O. F. Cook (*Sabal causiarum* Beccari). Phoenicaceae. **Porto Rico hat palm.**

A Porto Rican palm 50 feet high, with a white trunk 2 feet thick and palmately divided leaves about 12 feet in diameter. Most of the palm-leaf hats made in Porto Rico are from the leaves of this tree.

77167. LYSIDICE RHODOSTEGIA Hance. Caesalpiniaceae.

A large handsome tree, native to southern China, with pinnate leaves, loose erect panicles of rosy purple flowers, and pale-pink bracts which persist for several weeks.

For previous introduction see No. 66227.

77168. MAXIMILIANEA VITIFOLIA (Willd.) Krug and Urb. (*Cochlospermum hibiscoides* Kunth). Cochlospermaceae.

For previous introduction and description see No. 76917.

77169. MISANTECA TRIANDRA (Swartz) Mez (*Acrodiclidium jamaicense* Nees). Lauraceae.

A West Indian tree up to 70 feet high, with alternate oblong shining leaves 4 inches long and panicles of white flowers which turn purple with age.

For previous introduction see No. 40849.

77170. STERCULIA FOETIDA L. Sterculiaceae. **Hazel bottletree.**

A tall handsome tropical Asiatic tree with large compound leaves and spreading panicles of dull-red flowers.

For previous introduction see No. 73076.

77171. TILMIA CARYOTAEFOLIA (H. B. K.) O. F. Cook (*Martinezia caryotaefolia* H. B. K.). Phoenicaceae. **Palm.**

A graceful tropical American palm up to 30 feet high, with a ringed stem armed with slender black spines and bright-green spreading and drooping pinnate leaves 4 to 5 feet long.

For previous introduction see No. 73822.

77172. GOSSYPIUM ANOMALUM Wawra. Malvaceae. Cotton.

From Loanda, Angola, Africa. Seeds presented by John Gossweiler. Received June 30, 1928.

A tropical African shrub up to 10 feet high, with tough branches, reddish flowers, and oval capsules about an inch long.

For previous introduction see No. 67974.

77173 to 77214.

From Wanganui, New Zealand. Seeds presented by the Town Clerk, Wanganui City Council. Received June 22, 1928.

77173. ARTHROPODIUM CIRRHATUM (Forst. f.) R. Br. Liliaceae.

A handsome Tasmanian herbaceous perennial 2 to 3 feet high, with shining grasslike leaves and

77173 to 77214—Continued.

showy panicles of white flowers, an inch across, having the stamens covered with pink bristles.

77174. BEILSCHMIEDIA TAWA (A. Cunn.) T. Kirk. Lauraceae.

A tall New Zealand forest tree up to 80 feet high and 4 feet in diameter, with alternate lanceolate leaves 2 to 4 inches long and slender panicles of minute flowers followed by dark-purple ovoid fruits an inch long. The wood is white, straight grained, and easily worked, being used for buckets, tubs, casks, etc. The pulp of the plumlike fruit is eaten raw, and the kernels are steamed.

77175. BRACHYGLOTTIS REPANDA Forst. Asteraceae.

A treelike composite up to 20 feet high, with wavy-margined leaves 6 inches long, covered with milk-white tomentum beneath. The small heads of whitish flowers are borne in drooping panicles. This variety is said to be poisonous to stock.

77176. CARMICHAELIA ARBOREA (Forst. f.) Druce (*C. australis* R. Br.). Fabaceae.

A New Zealand shrub up to 9 feet high, somewhat resembling Scotch broom, with thin flat green branches taking the place of leaves. The clusters of small pealike lilac-striped flowers are followed by small black pods the sides of which drop off and expose the bright-red seeds surrounded by the dark margin of the pod.

77177. CARMICHAELIA ODORATA Colenso.

A much-branched New Zealand shrub, 3 to 10 feet high, leafy in the spring and summer. The slender erect racemes of purple flowers are borne on pendulous branches.

77178. CHORDOSPARTIUM STEVENSONI Cheeseman. Fabaceae.

A leafless New Zealand shrub or small tree up to 20 feet high with long slender pendulous branches and dense racemes of small pea-shaped purple flowers.

77179 and 77180. CLIANTHUS PUNICEUS (Don) Solander. Fabaceae. **Red parrotbeak.**

A drooping undershrub, native to New Zealand, with dark-green pinnate leaves and long pendulous racemes of bright scarlet flowers.

77179. A form with white flowers.

77180. A rosy-flowered form.

77181 to 77183. CORDYLINE spp. Liliaceae.

77181. CORDYLINE AUSTRALIS (Forst. f.) Hook. **Green dracena.**

A tall yuccalike New Zealand plant with clusters of narrowly lanceolate leaves 3 feet long and large loose erect panicles of small palmlike flowers followed by white berries.

77182. CORDYLINE BANKSII Hook. f.

A yuccalike New Zealand tree much like *Cordyline australis*, but the leaves are 6 feet long, and the panicles are drooping.

77183. CORDYLINE INDIVISA (Forst. f.) Steud. **Blue dracena.**

A New Zealand yuccalike plant about 10 feet high, with thick leathery leaves glaucous beneath, large drooping panicles of white flowers and blue berries; it is usually grown in pots while young as a decorative foliage plant.

77184. CORYNOCARPUS LAEVIGATA Forst. Corynocarpaceae. **Karaka.**

A large handsome New Zealand tree with oblong evergreen leaves 5 to 7 inches long, erect

77173 to 77214—Continued.

panicles of small white flowers, and orange fruits an inch long. The pulp of the fruit is poisonous, but the kernels are edible.

For previous introduction see No. 67890.

77185. DRACOPHYLLUM STRICTUM Hook. f. Epacridaceae.

A freely branching New Zealand shrub with erect coriaceous leaves from a sheathing base and tapering to a rigid point, and small terminal panicles of numerous white flowers.

77186. DRACOPHYLLUM SUBULATUM Hook. f. Epacridaceae.

An erect New Zealand shrub 2 to 6 feet high, with long slender twiggy branches leafy at the tips; leaves an inch long, subulate with an auricled sheathing base and a sharp point; flowers in small lateral racemes crowded along the branches.

77187. ELAEOCARPUS HOOKERIANUS Raoul. Elaeocarpaceae.

A round-headed New Zealand tree with serrate lanceolate leaves, racemes of greenish white flowers, and small blue fruits half an inch long.

77188. FAGELIA SINCLAIRII (Hook.) Kuntze (*Calceolaria sinclairii* Hook.). Scrophulariaceae.

An erect slender New Zealand herbaceous plant with coarsely toothed leaves and branching panicles of small white flowers spotted with purple and having two saclike lips.

77189. HYMENANTHERA DENTATA ANGUSTIFOLIA (R. Br.) Benth. Violaceae.

A rigid much-branched Tasmanian shrub with linear-oblong entire leaves an inch long, small nearly sessile axillary flowers, and small berrylike fruits.

77190. LIBERTIA GRANDIFLORA (B. Rr.) Sweet. Iridaceae.

A bulbous New Zealand perennial herb somewhat resembling the iris in habit with linear leaves 1 to 2 feet long, and large panicles of small white sisyrinchiumlike flowers borne on a stalk 3 feet long.

For previous introduction see No. 67002.

77191. LIBERTIA IXIOIDES (Forst. f.) Spreng. Iridaceae.

A New Zealand herbaceous perennial with a short creeping rhizome, forming compact clumps like a beardless iris, rigid coriaceous linear leaves a foot long, and large panicles of small white flowers on a stem 2 feet high.

77192. MELICOPE TERNATA Forst. Rutaceae.

A small New Zealand tree with opposite trifoliolate shining yellowish green leaves and axillary cymes of greenish flowers.

77193. MELICYTUS LANCEOLATUS Hook. f. Violaceae.

A slender New Zealand shrub up to 15 feet high, with narrowly lanceolate finely and sharply serrate leaves 6 inches long, fascicles of small flowers, and globose blue-black berries one-fourth inch in diameter.

77194. MYRTUS OBCORDATA (Raoul) Hook. f. Myrtaceae.

A New Zealand shrub 5 to 15 feet high, with slender spreading branches, fascicled obcordate coriaceous leaves half an inch long, small solitary axillary white flowers, and broadly ovoid dark-red or violet fruits one-fourth inch in diameter.

77173 to 77214—Continued.

77195. NAGEIA EXCELSA (D. Don) Kuntze (*Podocarpus dacrydioides* A. Rich.). Taxaceae.

A large New Zealand conifer over 80 feet high and 6 feet in diameter, with green scalelike leaves and black seeds partly inclosed in edible red berries. The white odorless wood is used for making butterboxes and is suitable for paper pulp.

For previous introduction see No. 44850.

77196. OLEARIA FURFURACEA (A. Rich.) Hook. f. Asteraceae.

A twiggy New Zealand shrub or small tree up to 20 feet high, with alternate broadly ovate coriaceous leaves silvery tomentose beneath and large branching corymbs of small heads of white daisylike flowers.

For previous introduction see No. 47958.

77197. OLEARIA ILICIFOLIA Hook. f. Asteraceae.

A New Zealand shrub or small tree, up to 20 feet high, with a strong musky odor. The alternate lanceolate coriaceous leaves, 2 to 4 inches long, have wavy margins with sharply pointed teeth. The small daisylike flower heads are in large rounded corymbs.

77198. PACHYSTEGIA INSIGNIS (Hook. f.) Cheeseman (*Olearia insignis* Hook. f.). Asteraceae.

A low robust spreading New Zealand shrub 1 to 6 feet high, with stout densely tomentose branches. The entire oblong-ovate leaves, 7 inches long, are excessively thick and coriaceous, glabrous and shining above and thickly clothed with white appressed tomentum beneath. The large hemispherical white flower heads, 3 inches in diameter, are on tomentose peduncles a foot long at the ends of the branches.

77199. OLEARIA sp. Asteraceae.

The New Zealand olearias are shrubs or trees with leathery leaves either white or buff beneath and asterlike heads of white, blue, or purple flowers.

77200. PENNANTIA CORYMBOSA Forst. Icacinaceae.

An ornamental New Zealand tree up to 40 feet high, with broadly oblong glossy leaves 2 inches long, and a profusion of small waxy white fragrant flowers.

77201. POMADERRIS ELLIPTICA Labill. Rhamnaceae.

A New Zealand shrub up to 10 feet high, conspicuous for the stellate pubescence which covers the entire plant. The ovate leaves are 3 inches long, and the greenish white fragrant flowers are in branching clusters.

For previous introduction see No. 45892.

77202. RHIPOGONUM SCANDENS Forst. Smilacaceae.

A New Zealand vine with black snakelike twining stems, thick leathery oval leaves, long racemes of greenish flowers, and oval-pointed brilliant scarlet berries, borne only at the tips of the branches.

77203. RHOPALOSTYLIS SAPIDA (Soland.) Wendl. and Drude. Phoenicaceae. **Nikau palm.**

A New Zealand palm 30 feet high, with a green-ringed stem, pinnate leaves 14 feet long, and large clusters of pale-pink flowers.

For previous introduction see No. 55619.

77173 to 77214—Continued.

77204. RYMANDRA EXCELSA Salish. (*Knightia excelsa* R. Br.). Proteaceae.

A New Zealand tree up to 100 feet high, resembling a Lombardy poplar in appearance. The stiff, linear-oblong serrate leaves are 4 to 8 inches long, and the velvety red flowers are borne in racemes 2 to 3 inches long.

For previous introduction see No. 44956.

77205. SENECIO CRUSTII Hort. Asteraceae.

77206. SENECIO sp. Asteraceae.

The Senecios include some of the most beautiful of the New Zealand shrubs, their yellow daisylike flowers contrasting with the prevailing white of other plants.

77207. SOLANUM AVICULARE Forst. f. Solanaceae.

A branching Australian shrub with laciniate leaves 10 inches long, cymes of 3 to 10 large dark-purple flowers, and drooping yellowish fruits an inch in diameter.

For previous introduction see No. 76032.

77208 and 77209. SOPHORA TETRAPTERA J. Mill. Fabaceae.

A handsome New Zealand tree up to 40 feet high, with pinnate leaves and large golden-yellow flowers.

77208. The typical form.

77209. Variety *grandiflora*. A form with larger and deeper colored flowers.

77210. PASSIFLORA TETRANDRA Banks and Soland. Passifloraceae.

A slender New Zealand climber with glossy lanceolate leaves 3 to 4 inches long, cymes of delicate green flowers, an inch across, with a crown of white stamens, and handsome bright-orange fruits 1 to 2 inches in diameter.

77211 to 77213. VERONICA spp. Scrophulariaceae.

The veronicas, with more than 80 species, constitute the largest genus of New Zealand plants and vary from shrubs with normally expanded entire leaves through shrubs with minute imbricating scalelike leaves, shrubs with toothed fleshy leaves, to slender creeping herbaceous plants.

77211. VERONICA sp.

77212. VERONICA sp.

77213. VERONICA sp.

77214. VITEX LUCENS Kirk. Verbenaceae. **Puriri.**

A handsome New Zealand tree up to 60 feet high, with evergreen 3-foliolate to 5-foliolate leaves and axillary and terminal clusters of pink or red 2-lipped flowers. The timber is strong and durable, not injured by dampness, and is valuable in shipbuilding.

For previous introduction see No. 64198.

77215. GOSSYPIUM STOCKSII Masters. Malvaceae. **Cotton.**

From Trinidad, British West Indies. Seeds presented by Dr. S. C. Harland, of the Empire Cotton-Growing Corporation. Received June 27, 1928.

A tropical Indian shrub with small yellow flowers.

For previous introduction see No. 69374.

77216. Trichilia emetica Vahl. Meliaceae.

From Lourenco Marquez, Mozambique. Seeds obtained through Eugene M. Hinkle, United States vice consul in charge. Received June 30, 1928.

A tropical African tree with pinnately compound leaves of 7 to 11 oblong leaflets 3 to 6 inches long, clusters of greenish flowers, and globose fruits an inch in diameter. An oil, used in cooking and for soap making, is obtained from the seeds.

For previous introduction see No. 58128.

77217 to 77252.

From Kirstenbosch, Newlands, Cape Province, Africa. Seeds presented by R. H. Compton, Director of the National Botanic Gardens. Received June, 1928.

77217 to 77220. Aloe spp. Liliaceae.

77217. Aloe ferox Mill.

A South African perennial with a thick stem 10 to 15 feet high and a rosette of curved glaucous lanceolate leaves 2 feet long by 5 inches wide and half an inch thick. The upper and lower surfaces are prickly, and the purple margins are armed with large red-brown teeth. The flowering stem is 4 feet high, and the greenish yellow flowers with smoky tipped segments are 1 to 2 inches long

77218. Aloe longistyla Baker.

A stemless South African perennial with a dense rosette of about 30 lanceolate green leaves 6 inches long tapering to a horny point and having a pale-brown prickly margin. The bright-red tubular flowers are borne in a dense raceme 3 to 5 inches long.

77219. Aloe variegata L.

A South African perennial with a leafy stem 6 to 9 inches high. The triangular ascending leaves, 2 to 5 inches long, in three close oblique ranks, are green crossed by bands of elongated white blotches and have white, scarcely serrate margins. The flowering stem is about a foot high, bearing a raceme of red tubular flowers 1 to 2 inches long.

77220. Aloe sp.

A succulent-leaved perennial with red or yellow tubular flowers.

77221. Crotalaria capensis Jacq. Fabaceae.

A stout much-branched South African shrub 4 to 5 feet high, with digitately 3-foliolate to 5-foliolate leaves of broadly ovate leaflets an inch long and axillary or terminal racemes of bright-yellow flowers an inch long.

For previous introduction see No. 64058.

77222. Gerbera jamesoni Bolus. Asteraceae.

A hairy South African herbaceous perennial with petioled laciniate radical leaves a foot long and heads of showy orange-colored ray flowers on stalks 1 to 2 feet high.

For previous introduction see No. 66837.

77223. Gladiolus callistus Bolus f. Iridaceae.

An ornamental bulbous South African perennial with four to seven narrowly sword-shaped leaves 1 to 2 feet long and a 1-branched to 3-branched stalk 3 feet high, bearing white flowers with suffused pink.

For previous introduction see No. 64653.

77224. Gladiolus tristis L. Iridaceae.

For previous introduction and description see No. 76689.

77217 to 77252—Continued.

77225. Leucadendron repens L. (*Protea mellifera* Thunb.). Proteaceae.

A large South African shrub up to 8 feet high, with linear-oblanceolate leaves 4 inches long and large heads of whitish flowers surrounded by dark-red to whitish bracts having rosy pink margins and tips.

For previous introduction see No. 36062.

77226 to 77239. Mesembryanthemum spp. Aizoaceae.

77226. Mesembryanthemum caroli L. Bolus.

A decumbent South African perennial with connate triangular glaucous green leaves 2 to 5 inches long and cymes of rosy purple flowers an inch in diameter.

77227. Mesembryanthemum cinctum L. Bolus.

A South African perennial with decumbent branches, erect triangular leaves an inch long with recurved tips, and solitary flowers an inch across with rosy petals having purplish dotted margins.

77228. Mesembryanthemum cordifolium L. f.

A diffuse-stemmed South African perennial 1 to 2 feet long, with opposite cordate leaves somewhat papillose and solitary purple daisylike flowers.

77229. Mesembryanthemum criniflorum L. f.

A South African nearly stemless perennial with flat obovate leaves and peduncles 3 inches long, bearing pale rose-colored, red, or whitish flowers.

77230. Mesembryanthemum diversifolium Haw.

A South African herbaceous perennial with a short stem, semicylindrical leaves 1 to 3 inches long gathered into a head, and daisy-like yellow flowers.

77231. Mesembryanthemum laxum Willd.

A slender diffuse South African shrub with creeping branches, connate flatly 3-angled leaves, and reddish flowers.

77232. Mesembryanthemum ligue N. E. Brown.

An erect South African perennial a foot high, with spreading branches, distant opposite cylindrical leaves half an inch long, one erect and the other deflexed in each pair. The purplish red flowers an inch across are solitary on short peduncles.

77233. Mesembryanthemum maximum Haw.

An erect shrubby South African perennial with large crowded triangularly half-moon shaped glaucous leaves and small reddish flowers.

77234. Mesembryanthemum pugioniforme L.

An upright South African succulent with linear-falcate leaves 6 to 8 inches long in thick tufted rosettes from which arise the flower stems bearing one to three malodorous yellow flowers 3 inches across, opening in the afternoon.

For previous introduction see No. 42447.

77235. Mesembryanthemum putterillii Hort.

A South African succulent.

77217 to 77252—Continued.

77236. MESEMBRYANTHEMUM RUBRICAULE Haw.

A South African perennial with erect reddish stems and branches, flat triangular incurved leaves 1 to 2 inches long, and purplish flowers with lanceolate petals.

77237. MESEMBRYANTHEMUM SPECTABILE Haw.

A prostrate South African succulent with ascending branches, thick 3-sided linear leaves 2 to 3 inches long, and daisylike purplish flowers 2 inches broad.

For previous introduction see No. 42448.

77238. MESEMBRYANTHEMUM STRUBENIAE L. Bolus.

A subshrubby South African perennial 3 to 4 feet high, with purple branches, connate triangular leaves 2 to 3 inches long, and cymes of rosy flowers 1 to 2 inches across.

77239. FAUCARIA TIGRINA (Haw.) Schwantes. (*Mesembryanthemum tigrinum* Haw..)

An almost stemless South African perennial with ovate-cordate white-marbled glaucous green leaves having upturning edges with long soft ciliated teeth. The large yellow flowers are nearly sessile.

77240. PENTZIA sp. Asteraceae.

The pentzias are small rigid much-branched shrubby composites, native to South Africa, with alternate variously cut leaves and yellow flower heads.

77241. PETROPHILA PULCHELLA (Schrad.) R. Br. (*Protea pulchella* Schrad.). Proteaceae.

An Australian shrub 6 to 8 feet high, with compound leaves divided into threadlike segments and conical heads of small white flowers.

For previous introduction see No. 44836.

77242 to 77251. PROTEA spp. Proteaceae.

77242. PROTEA COMPACTA R. Br.

A South African shrub with strongly imbricated ovate-lanceolate coriaceous leaves 3 to 5 inches long and sessile flower heads 4 inches long and 2 inches broad. The outer bracts have a dense fringe of woolly hairs, the inner are flesh colored to carmine, and the flowers are tawny to purplish tomentose with the stamens densely covered with long light-golden hairs.

77243. PROTEA LACTICOLOR Salisb.

A small South African tree up to 10 feet high with lanceolate leaves 3 to 4 inches long and sessile flower heads 3 inches long with yellowish white bracts.

77244. PROTEA LANCEOLATA E. Mey.

A South African shrub up to 6 feet high, with linear-oblanceolate leaves less than 3 inches long and light-yellow solitary terminal flower heads 2 inches long and nearly as wide.

For previous introduction see No. 57264.

77245. PROTEA LATIFOLIA R. Br.

A South African shrub 5 to 8 feet high, with cordate elliptic leaves 4 inches long and large flesh-colored to carmine flower heads nearly 6 inches long and 3 inches broad.

For previous introduction see No. 57265.

77246. PROTEA MARGINATA Thunb.

A South African shrub with thick-margined leaves 3 to 6 inches long and sessile flower heads 5 inches long and nearly as broad, having the tips of the inner bracts covered with a blackish purple beard mixed with white.

77247. PROTEA MUNDI Klotzsch.

A South African shrub with elliptically lanceolate leaves 2 to 5 inches long and sessile flower heads having ciliate green outer bracts and the inner ones whitish pubescent and fringed with white hairs.

77248. PROTEA NERIIFOLIA R. Br.

An erect South African shrub 3 to 5 feet high, with linear leaves 3 to 6 inches long and sessile flower heads 5 inches long having recurved densely silky pubescent outer bracts, inner bracts with a long purplish black beard, and the flowers tipped with purple or brown hairs.

77249. PROTEA OBTUSIFOLIA Buek.

An erect South African shrub with rigid oblong obtuse leaves 4 inches long and flower heads as long as the leaves with white ciliated bracts.

77250. PROTEA SCOLYMOCEPHALA (L.) Reichard.

A small South African shrub 2 to 3 feet high, with narrowly linear-oblanceolate leaves 1 to 3 inches long and somewhat flattened sessile flower heads an inch long, having pale-green ciliolate bracts.

77251. PROTEA SUSANNAE Phillips.

A South African shrub with lanceolate leaves 1 to 5 inches long and flower heads 4 inches long, having purple-tipped bracts.

For previous introduction see No. 48185.

77252. SERRURIA FLORIDA (Thunb.) Knight. Proteaceae.

A South African shrub with erect purplish branches, pinnately divided leaves 1 to 3 inches long, and axillary and terminal clusters of flower heads having white to pinkish yellow bracts.

77253 to 77260.

From Generargues, France. Plants purchased from Gaston Negre. Received January 28, 1928. Numbered June, 1928.

77253. ARUNDINARIA VARIABILIS Makino. Poaceae. **Bamboo.**

A stoloniferous Japanese bamboo, 3 to 4 feet high, with slender stems and few branches. In the typical form the leaves are green, but there are many varieties with variegated leaves.

77254. BAMBUSA ANGULATA Munro. Poaceae. **Bamboo.**

A square-stemmed Chinese bamboo up to 30 feet high, with rich green leaves 4 to 8 inches long.

For previous introduction see No. 42657.

77255 to 77259. PHYLLOSTACHYS spp. Poaceae. **Bamboo.**

77255. PHYLLOSTACHYS BAMBUSOIDES Sieb. and Zucc. (*P. quilioi* Riv.). Poaceae.

This Chinese bamboo is one of the hardiest and has bright-green stems up to 40 feet high and 6 inches thick. The stem sheaths are mottled with purple, and the leaves are often 6 inches long.

For previous introduction see No. 75154.

77253 to 77260—Continued.

77256. PHYLLOSTACHYS BAMBUSOIDES MARLIACEA (Mitf.) H. de Lehaie.

A Japanese bamboo up to 10 feet high, with the base of the stems wrinkled with longitudinal grooves and ridges.

For previous introduction see No. 42665.

77257. PHYLLOSTACHYS MITIS Riv.
Moso bamboo.

A Chinese bamboo up to 30 feet high, with yellow stems and brown-spotted sheaths.

For previous introduction see No. 49357.

77258. PHYLLOSTACHYS PUBERULA BORVANA (Mitf.) H. de Lehaie.

A form of the black-joint bamboo of China, with stems at first green, but changing to dull yellow with purplish brown blotches.

77253 to 77260—Continued.

77259. PHYLLOSTACHYS PUBERULA NIGRA (Lodd.) H. de Lehaie.

Variety *Muchisasa*. One of the most elegant of bamboos with black stems up to 20 feet high and plumelike masses of dark-green leaves. Native to China and Japan.

For previous introduction see No. 75159.

77260. SASA HUMILIS (Mitf.) E. G. Camus (*Arundinaria gracilis* Hort.). Poaceae.
Bamboo.

A very slender dwarf bamboo, native to Japan, with green stems 3 feet high bearing two or three long branches at each node.

For previous introduction see No. 75164.

INDEX OF COMMON AND SCIENTIFIC NAMES

Abelia chinensis, 76550.
serrata, 76551.

UNITED STATES DEPARTMENT OF AGRICULTURE

INVENTORY No. 96

Washington, D. C. ▼ Issued February, 1930

PLANT MATERIAL INTRODUCED BY THE OFFICE OF FOREIGN PLANT INTRODUCTION, BUREAU OF PLANT INDUSTRY, JULY 1 TO SEPTEMBER 30, 1928 (NOS. 77261 TO 77595)

CONTENTS

	Page
Introductory statement	1
Inventory	3
Index of common and scientific names	19

INTRODUCTORY STATEMENT

The most outstanding plant material contained in this inventory, No. 96, covering the period from July 1 to September 30, 1928, is the collection of 51 sugarcane varieties (*Saccarum officinarum*, Nos. 77334 to 77384) procured by E. W. Brandes in New Guinea for use in his official investigations. Part of the interest in this shipment is due to the fact that Doctor Brandes is the first agricultural explorer to use an airplane for his collecting tour. Doctor Brandes not only collected sugarcanes in person but also obtained the cooperation of P. H. Goldfinch, Sydney, Australia, who sent in a collection of 44 varieties (Nos. 77496 to 77539). Another lot of five varieties (Nos. 77298 to 77302) was received from Argentina.

As in the previous inventory, the bulk of the plant material received in this period comes from the Southern Hemisphere. Through the activities of Mrs. Frieda Cobb Blanchard two collections of Australian plants (Nos. 77273 to 77292 and Nos. 77441 to 77447), as well as a collection from New Zealand (Nos. 77540 to 77582), were received.

Through O. F. Cook there was received a collection of rubber-producing plants (Nos. 77387 to 77394) from Haiti. Five kinds of cover crops (Nos. 77293 to 77297) from Ceylon may be of value for the southern United States. Another interesting shipment consists of apricot varieties (*Prunus armeniaca*, Nos. 77466 to 77472) from Palestine. A bamboo native to Japan (*Sasa tesselata*, No. 77333) was received from France to be added to the growing bamboo collection at the Barbour Lathrop Plant Introduction Garden at Savannah, Ga.

The growing interest in flowering cherries warrants a note of the collections presented by the Arnold Arboretum (*Prunus* spp., Nos. 77261 to 77266 and Nos. 77404 to 77411). Along this same line is a shipment of six varieties (*Prunus* spp., Nos. 77313 to 77318) from Capt. Collingwood Ingram, of England.

Various plants have been obtained for study as ornamentals, some of them quite unknown as yet and others not commonly grown in this country. As compared to other inventories their number here is relatively small and none

call for special mention, save perhaps the several Lycoris species (Nos. 77586 to 77588) and the Nerines (Nos. 77590 to 77592), all of them species long known to cultivation but not sufficiently used even in parts of our country where they are known to be hardy.

The botanical determinations have been made and the nomenclature determined by H. C. Skeels, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

OFFICE OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., August 14, 1929.

INVENTORY[1]

77261 to 77267.

From Jamaica Plain, Mass. Scions presented by E. H. Wilson, Arnold Arboretum. Received August 8, 1928.

77261 to 77266. PRUNUS spp. Amygdalaceae.

77261. PRUNUS INCISA Thunb.
Mame cherry.

An ornamental Japanese shrub or small tree about 25 feet high. The flowers, which appear in drooping clusters before the deeply cut leaves, are white or rosy, with bright-red calyxes, and the anthers are bright yellow. The petals fall early, but the calyxes, which gradually grow brighter, remain on the young fruits for some time and are very showy.

For previous introduction see No. 74428.

77262. PRUNUS MAACKII Rupr.
Amur cherry.

A Manchurian bird cherry, 40 feet or more in height, with very smooth brownish yellow bark which peels off like that of a birch. The leaves are pointed and very finely toothed, and the white flowers are in short racemes borne on the previous season's wood.

For previous introduction see No. 64239.

77263 to 77265. PRUNUS SERRULATA Lindl. **Oriental cherry.**

77263. Variety *Chosiuhizakura* [red cherry from Chosen]. Tree of spreading habit; young foliage reddish brown; flowers uniformly pink, up to 1½ inches in diameter, single or semidouble, in clusters of two to four, produced in great abundance.

For previous introduction see No. 47133.

77261 to 77267—Continued.

77264. Variety *Masuyama* [probably named for some Japanese person]. Tree spreading, up to 15 feet high; bark reddish brown; young foliage brownish green; buds deep pink, truncate; flowers up to 1½ inches in diameter, double, light pink shading deeper toward the margins and opening flat, similar to *Horinji* but a little less double and presenting a more clean-cut appearance. A very attractive variety.

77265. Variety *Miyako* [beauty or prosperity]. Tree of upright habit; bark dark brown; young foliage light brown; buds deep pink, truncate; flowers semidouble opening rather flat, up to 1½ inches in diameter, almost white in center, becoming pink toward the fimbriate petal tips and on back, in drooping clusters. A very attractive variety.

77266. PRUNUS SUBHIRTELLA Miquel. **Higan cherry.**

Higanzakura [Higan signifies equinox in Japanese]. Tree very spreading, up to 40 feet high; bark gray, smooth. Flowers single, light pink, appearing before the leaves. This is perhaps superior to *Yoshino* for mass effect, because of the compact habit of growth and the great numbers of flowers produced.

77267. SYRINGA PINNATIFOLIA Hemsl. Oleaceae. **Pinnate lilac.**

A western Chinese shrub up to 10 feet high, with pinnate leaves 2 to 4 inches long made up of 7 to 11 ovate to lanceolate leaflets. The lilac-tinged white flowers are in short panicles 2 to 3 inches long.

[1] It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identification, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

77268. GARCINIA BINUCAO (Blanco) Choisy. Clusiaceae. **Binukao.**

From Manila, Philippine Islands. Seeds presented by José S. Camus, Acting Director of the Bureau of Agriculture. Received September 5, 1928.

A large tropical tree, native to the Philippines, up to 100 feet high, with clusters of small red flowers and globular yellow fruits 2 inches in diameter. It is a possible stock for the mangosteen.

For previous introduction see No. 63853.

77269. WASHINGTONIA SONORAE S. Wats. Phoenicaceae. **Palm.**

From Soledad, Cienfuegos, Cuba. Seeds presented by R. M. Grey, Superintendent of the Biological Laboratory and Botanical Garden. Received August 14, 1928.

A palm up to 25 feet high, native to Sonora, Mexico, with fan-shaped leaves, about 3 feet broad, copiously divided into drooping fibers on the margin and the petioles armed with stout curved spines. The flower cluster is 5 to 8 feet long, and the small black fruits are said to be edible.

77270. ACER sp. Aceraceae. **Maple.**

From Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received August 20, 1928.

No. 701. July 26, 1928. A very attractive maple growing on the trail between Hajikano and Tenmokuzan, in the mountains of the northeastern part of Yamanashi Ken.

77271. ADANSONIA DIGITATA L. Bombacaceae. **Baobab.**

From Dar es Salaam, Tanganyika Territory, Africa. Seeds presented by A. H. Kirby, Director, Department of Agriculture. Received August 20, 1928.

An African tree about 60 feet high and sometimes 30 feet in diameter, with palmate leaves divided into five to seven leaflets, large white flowers 6 inches across, and large gourdlike fruits with pulp which is edible.

For previous introduction see No. 76635.

77272. ROSA ODORATA GIGANTEA (Collett) Rehd. and Wils. Rosaceae. **Giant tea rose.**

From Melbourne, Australia. Seeds presented by Alister Clark, through Mrs. Frieda Cobb Blanchard, University of Michigan, Ann Arbor, Mich. Received August 10, 1928.

A strong climbing evergreen rose, native to Burma, with creamy white single flowers 4 to 6 inches across. It resembles somewhat the Cherokee rose, but is hardy only in the far South.

77273 to 77292.

From Sydney, Australia. Seeds presented by Mrs. Frieda Cobb Blanchard, University of Michigan, Ann Arbor, Mich. Received August 13, 1928.

77273 to 77275. ACACIA spp. Mimosaceae.

77273. ACACIA ACUMINATA Benth.

A tree 30 to 40 feet high, native to Western Australia, with falcate-linear phyllodes 3 to 10 inches long and small flower spikes an inch long. The wood, which has an odor resembling raspberry jam, is dark reddish brown, close-grained, and hard, and is suitable for ornamental woodwork and for fence posts.

For previous introduction see No. 48982.

77274. ACACIA MICROBOTRYA Benth.

A tall Western Australian shrub with falcate-lanceolate phyllodes 3 to 5 inches long and short racemes of small globular flower heads.

For previous introduction see No. 48053.

77275. ACACIA ROSSEI F. Muell.

A tall heathlike shrub, native to Western Australia, with short linear-falcate phyllodes and corymbs of small flower heads.

77276. BRUNONIA AUSTRALIS J. E. Smith. Goodeniaceae.

A silky hairy tufted perennial, native to Australia, with a rosette of linear-obovate entire leaves 2 to 4 inches long and scapes 6 to 12 inches high bearing globular blue flower heads less than an inch in diameter.

77277. CALOTHAMNUS GILESII F. Muell. Myrtaceae.

An Australian shrub with linear-terete leaves and loose clusters of reddish flowers.

For previous introduction see No. 67070.

77278. CASSIA EREMOPHILA A. Cunn. Caesalpiniaceae.

A handsome Australian shrub 5 feet high, with leaves made up of two pairs of narrow leaflets and yellow flowers. The leaves and pods are said to be eaten by stock.

For previous introduction see No. 52353.

77279. CYANOSTEGIA LANCEOLATA Turcz. Verbenaceae.

An erect glutinous shrub, native to western Australia, with lanceolate leaves 1 to 2 inches long and loose terminal pyramidal panicles of purple flowers followed by small 1-seeded fruits covered with long branching hairs.

77280. DAMPIERA WELLSIANA F. Muell. Goodeniaceae.

A tufted perennial, native to Western Australia, with thick glabrous radical leaves and erect wooly tomentose stems bearing bracted globular heads of small blue flowers.

77281 to 77283. EUCALYPTUS spp. Myrtaceae.

77281. EUCALYPTUS BURRACOPPINENSIS Maiden and Blakely.

A Western Australian shrub or small tree 8 to 15 feet high, with thick light-green lanceolate leaves 4 to 6 inches long, small axillary clusters of rather large yellowish white flowers, and flattened top-shaped fruits.

77282. EUCALYPTUS ERYTHRONEMA Turcz.

A small Australian tree with reddish bark, thick shining lanceolate leaves 3 inches long, and recurved umbels of red flowers.

77273 to 77292—Continued.

77283. EUCALYPTUS MACROCARPA Hook.

A stout Australian shrub or small tree up to 15 feet high with thick rigid cordate glaucous leaves 6 inches long and large solitary brilliant orange to crimson flowers.

For previous introduction see No. 48990.

77284. GOODENIA CAERULEA R. Br. Goodeniaceae.

A tufted herbaceous perennial, native to Western Australia, with several angled stems a foot high, rigid linear leaves, and axillary blue flowers nearly an inch long.

77285 to 77287. ISOPOGON spp. Proteaceae.

77285. ISOPOGON DIVERGENS R. Br.

A bushy glabrous shrub 2 to 4 feet high, native to Western Australia, with leaves 2 to 5 inches long pinnately divided into rigid slender terete segments. The conspicuous purple flowers an inch long are borne in conelike clusters.

77286. ISOPOGON SCABRIUSCULUS Meissn.

A much-branched rigid Western Australian shrub with linear nearly terete leaves 3 to 6 inches long and small globular conelike clusters of flowers covered with dense white hairs.

77287. ISOPOGON SPHAEROCEPHALUS Lindl.

An erect shrub several feet high, native to Western Australia, with the branches sprinkled with long spreading hairs. The linear to lanceolate leaves are 2 to 4 inches long, and the flowers in the conelike clusters are densely covered with yellow hairs.

77288. KENNEDIA COMPTONIANA (Andrews) Link (*Hardenbergia comptoniana* Benth.). Fabaceae.

A twining herbaceous or subshrubby Australian vine with three to five cordate linear to ovate leaflets and long sprays of deep violet-blue flowers.

For previous introduction see No. 47191.

77289. KENNEDIA PROSTRATA R. Br. Fabaceae.

A prostrate pubescent Australian vine with leaves composed of three cordate broadly obovate leaflets an inch long and axillary peduncles bearing two to four scarlet flowers.

For previous introduction see No. 56576.

77290. PIMELEA SYLVESTRIS R. Br. Thymelaeaceae.

A Western Australian shrub, 2 to 3 feet high, with opposite concave-lanceolate leaves less than an inch long and small yellowish or pinkish flower heads surrounded by four to six broad persistent bracts.

77291. PITYRODIA RACEMOSA (Turcz.) Benth. Verbenaceae.

An erect shrub about 2 feet high, native to Western Australia, densely covered with loose floccose white wool. The thick soft oblong clasping leaves are opposite and nearly an inch long, and the blue sagelike flowers are in racemose clusters.

77273 to 77292—Continued.

77292. STACHYSTEMON VERMICULARIS Planch. Euphorbiaceae.

An erect glabrous shrub, native to Western Australia, with wiry stems a foot high, linear leaves less than an inch long, and inconspicuous flowers clustered at the ends of the branches.

77293 to 77297.

From Peradeniya, Ceylon. Seeds purchased from the manager of the publication depot and central seed store of the Department of Agriculture. Received August 14, 1928.

77293. BRADBURYA PUBESCENS (Benth.) Kuntze (*Centrosema pubescens* Benth.).

A tropical American leguminous vine with trifoliolate leaves and small yellowish flowers, which is used as a cover crop.

For previous introduction see No. 76771.

77294. CALOPOGONIUM MUCUNOIDES Desv. Fabaceae.

A tropical American legume with stems 3 to 10 feet long which form roots at each node, and racemes 1 to 4 inches long of pale-blue flowers. It forms a mat of foliage 1 to 2 feet thick and is used as a cover crop.

For previous introduction see No. 76095.

77295. DOLICHOS HOSEI Craib. Fabaceae.

A creeping leguminous vine, native to the Malay States, with rich light-green leaves and yellow flowers. It is used as a cover crop in rubber plantations, also for green manure.

For previous introduction see No. 76102.

77296. INDIGOFERA ENDECAPHYLLA Jacq. Fabaceae.

Annual or biennial tropical African prostrate legume, 2 to 3 feet long, with seven to nine oblong leaflets and dense racemes of violet-purple flowers. It is used as a cover crop.

For previous introduction see No. 67844.

77297. MEIBOMIA GYROIDES (DC.) Kuntze (*Desmodium gyroides* DC.) Fabaceae.

A shrubby leguminous plant 8 to 10 feet high, native to the warmer parts of the central and eastern Himalayas. It has pubescent leaves and terminal racemes of reddish purple flowers.

For previous introduction see No. 76774.

77298 to 77302. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Tucuman, Argentina. Cuttings presented by Dr. William E. Cross, Director, Estación Experimental Agricola, through E. W. Brandes, Bureau of Plant Industry. Received August 25, 1928.

Promising mosaic resistant or immune varieties which have given good results in Argentina.

77298. No. 362.
77299. No. 407.
77300. No. 450.
77301. No. 454.
77302. No. 472.

77303. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Tiflis, Georgia, Russia. Seeds presented by the director of the Botanic Garden. Received August 20, 1928.

Locally grown seeds.

77304 and 77305. LACTUCA SATIVA L. Cichoriaceae. **Lettuce.**

From Yungsui, Hunan, China. Seeds presented by Father Theophane Maguire, C. P., Catholic Mission, Passionist Fathers. Received August 30, 1928.

Awh swen. A vegetable planted in this region during the early months of the year. When it has sprouted the sprouts are transplanted about a foot apart. The sturdy stem when developed is peeled and sliced into thin pieces. It may be prepared uncooked, eaten like cucumbers with vinegar, etc., or it may be cooked with meat juices until soft.

77304. A foreign variety.

77305. A native variety.

77306. CITRUS sp. Rutaceae. **Cuban shaddock.**

From Holguin, Cuba. Seeds presented by Thomas R. Towns. Received August 17, 1928.

A shaddock used as a stock for citrus varieties in Cuba; especially good for navel orange, but not for grapefruit or the kumquat.

For previous introduction see No. 68978.

77307. ERIOBOTRYA JAPONICA (Thunb.) Lindl. Malaceae. **Loquat.**

From Yungsui, Hunan, China. Seeds presented by Father Theophane Maguire, C. P., Catholic Mission, Passionist Fathers. Received August 30, 1928.

The fruits are not large, and they are gathered in clusters because the seeds leave little meat. This variety makes delicious jam.

77308 to 77312. GOSSYPIUM spp. Malvaceae. **Cotton.**

From Peru. Seeds obtained through O. F. Cook, Bureau of Plant Industry. Received July 26, 1928.

77308. GOSSYPIUM sp.

No. 1. *Tanguis.* From Huacho Valley, Pisco.

77309. GOSSYPIUM sp.

No. 2. *Tanguis.* From Huacho Valley. Pisco.

77310. GOSSYPIUM sp.

No. 3. *Algodon tanguis.* From Unanue hacienda, Canete Valley.

77311. GOSSYPIUM sp.

No. 4. *Algodon tanguis.* From Unanue hacienda, Canete Valley.

77312. GOSSYPIUM sp.

No. 5. *Algodon tanguis.* From Hualcura hacienda, Canete Valley.

77313 to 77318. PRUNUS spp. Amygdalaceae.

From Benenden, Kent, England. Bud sticks presented by Capt. Collingwood Ingram. Received August 7, 1928.

77313. PRUNUS INCISA × SERRULATA.

Umineko.

77314. PRUNUS INCISA × SUBHIRTELLA.

77315 to 77317. PRUNUS SERRULATA Lindl. **Oriental cherry.**

77315. *Daikoku* [the god of prosperity]. A variety introduced into England about 1905, with large purplish pink double flowers up to 2 inches wide. The thick purplish red buds are truncate at the end, and the young foliage is yellowish green.

For previous introduction see No. 72008.

77316. *Hokusai* [named by Captain Ingram after the famous Japanese artist]. Tree spreading, up to 20 feet high; young leaves bronze colored; flowers semidouble up to 2 inches in diameter, light pink, borne in loose clusters.

77317. *Cheal's Weeping cherry.* Tree of medium size, with pendulous branches and a profusion of rather small but double deep-pink flowers resembling carnations.

77318. PRUNUS SERRULATA SACHALINENSIS (Schmidt) Makino (*P. sargenti* Rehder). **Sargent cherry.**

A tall handsome tree, native to northern Japan, up to 80 feet high, with smooth dark-brown bark and ovate or ovate-lanceolate, sharply serrate leaves up to 5 inches long. The single pink flowers, 1 to 1½ inches wide, are in few-flowered clusters, and the black fruits are about the size of peas. This wild Japanese cherry is considered by E. H. Wilson, of the Arnold Arboretum, Jamaica Plain, Mass., to be the parent of several of the finest double-flowered varieties of flowering cherries and also to be the most satisfactory stock on which to work these varieties.

For previous introduction see No. 73881.

77319. ANTHEMIS SANCTI-JOHANNIS Stoy., Steff., and Turrill. Asteraceae.

From Victoria, British Columbia, Canada. Seeds presented by J. C. Bennett. Received August 31, 1928.

An ornamental herbaceous perennial, 3 to 4 feet high, native to the mountain slopes of Bulgaria at an altitude of 4,000 feet. The woolly stems, with few branches, have two to three times partly pinnate basal leaves, 5 to 7 inches long, the tips of which are armed with hard white acuminate points. The stem leaves are similar but gradually smaller, leaving bare stems 3 to 7 inches below the flower heads, which are solitary, 1 to 2 inches broad, and the ray flowers and disk are an intense orange, making a brilliant showing in contrast to the woolly leaves.

77320. PTYCHOSPERMA MACARTHURI Wendl. Phoenicaceae. **Palm.**

From Little River, Fla. Seeds presented by Charles F. Simpson. Received August 30, 1928.

77320—Continued.

An Australian cluster palm now 14 feet high and having about a dozen stems. It bears pinnate leaves eroded at the ends of the leaflets. It may seed at almost any time of the year. This palm was blown down and badly broken by the big hurricane, but it is beginning to regain something of its former beauty. (*Letter of August 22, 1928, from Mr. Simpson.*)

77321 to 77326.

From Madagascar. Seeds collected by Charles F. Swingle, Bureau of Plant Industry. Received August 21, 1928.

77321. BAPHIA CAPPARIDIFOLIA Baker. Fabaceae.

No. 4426. From Mananika, Valley of Betsiboka, July 6, 1928. A shrub or tree, native to Madagascar, with slender branchlets, simple lanceolate leaves 2 to 3 inches long, and cymes of yellow flowers half an inch across.

77322. CITRUS GRANDIS (L.) Osbeck (*C. decumana* Murr.). Rutaceae. **Grapefruit.**

July 3, 1928. Pink-fleshed grapefruit obtained in the market at Majunga. Several of the fruits obtained at this time were entirely seedless.

77323. GOSSYPIUM OBTUSIFOLIUM AFRICANUM Watt. Malvaceae. **Cotton.**

No. 4429. From Mananika, Valley of Betsiboka, July 6, 1928. A half-woody African shrub, 6 feet high, which differs from the Indian form in having more copious and finer wool. The flowers are yellow, changing to reddish.

For previous introduction see No. 63728.

77324. HIBISCUS SABDARIFFA L. Malvaceae. **Roselle.**

No. 4412. From Mananika, Valley of Betsiboka, July 6, 1928. A half-woody tropical shrub with a stem 3 to 6 feet high and 2 inches in diameter; horizontal branches; calyx succulent, acid, edible; flowers used for marmalade.

77325. URENA LOBATA L. Malvaceae.

No. 4383. From Madriovala, Valley of Betsiboka, July 5, 1928. An erect undershrub with cordate entire or lobed leaves 2 to 3 inches long, flowers an inch across, rose red at the base and small fruits armed with hooked bristles. The stems furnish a fiber used for bags and twine.

For previous introduction see No. 52228.

77326. (Undetermined.)

No. 4427. A large tree growing at Mananika, Valley of Betsiboka, July 6, 1928.

77327 to 77330. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Calcutta, India. Seeds presented by the curator of the industrial section of the Indian Museum. Received September 5, 1928.

77327. *Elokeshi.*

77328. *Kuli.*

77329. *Makre.*

77330. *Muktaveshi.*

77331. CAPSICUM VIOLACEUM H. B. K. Solanaceae.

From Santa Cruz, Calif. Seeds presented by C. A. Reed. Received September 7, 1928.

The seeds of this variety were originally obtained in Peru in 1918 and planted in the hills near Santa Cruz in 1919. Two of the original plants are producing fruits, and the seeds received are from one of these plants which is now 9 feet high.

77332. CITRUS sp. Rutaceae. **Pison.**

From Sorsogon, Luzon, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received September 12, 1928.

Obtained in the market. A juicy fruit of subacid and very pleasant taste, something like a grapefruit but sweeter. Judging from the samples obtained, it is too fibrous and seedy for eating, but it might be that in cultivation much of the fiber would disappear. The trees are said to be 40 feet high and very vigorous, so this variety may prove a promising new citrus stock.

77333. SASA TESSELATA (Munro) Mak. and Shib. (*Arundinaria ragumowski* Pfitzer). Poaceae. **Bamboo.**

From Generargues, France. Plant purchased from Gaston Negre. Received January 28, 1928. Numbered July, 1928.

A Japanese bamboo, 3 to 6 feet high, with arching stems and broad rounded masses of large leaves.

For previous introduction see No. 75167.

77334 to 77384. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Port Moresby, New Guinea. Cuttings collected by E. W. Brandes, Bureau of Plant Industry. Received September 12, 1928.

77382. No. 286.

77383. No. 287.

77384. No. 288.

77385 and 77386.

From Richmond, Australia. Seeds presented by F. H. Baker. Received September 7, 1928.

77385. CALLISTEMON CITRINUS (Curtis) Skeels (*C. lanceolatus* DC.). Myrtaceae. **Lemon bottlebrush.**

An Australian shrub up to 12 feet high, with lanceolate leaves 1 to 3 inches long, reddish when young, and spikes, 2 to 4 inches long, of small flowers with long bright-red stamens.

For previous introduction see No. 74424.

77386. HAKEA ACICULARIS (Vent.) Knight (*H. sericea* Schrad.). Proteaceae.

A tall evergreen Australian shrub or small tree with awl-shaped leaves 1 to 3 inches long and axillary clusters of small white flowers.

For previous introduction see No. 73855.

77387 to 77394.

From Haiti. Seeds obtained through O. F. Cook, Bureau of Plant Industry. Received September 11, 1928.

77385 and 77386—Continued.

77387 to 77391. CASTILLA spp. Moraceae.

Tropical trees from which rubber is obtained.

77387. CASTILLA ELASTICA Cerv. **Rubbertree.**

A large deciduous tropical American forest tree from which rubber is obtained.

For previous introduction see No. 61483.

77388. CASTILLA PANAMENSIS O. F. Cook.

A large tree, native to Panama, with oblong leaves about a foot long which are very rough above and hairy beneath. The fruiting receptacles, produced in great profusion, are orange-red and are very showy. This tree is commonly planted in Central America as a shade tree.

For previous introduction see No. 30514.

77389. CASTILLA sp.

77390. CASTILLA sp.

X–1.

77391. CASTILLA sp.

X–2.

77392. CRYPTOSTEGIA GRANDIFLORA R. Br. Asclepiadaceae. **Palay rubbervine.**

An erect woody climber of unknown nativity, but now cultivated in many places in the Tropics of both hemispheres as an ornamental, and occasionally growing as an escape from cultivation. The flowers, reddish purple becoming pale pink, are about 2 inches in diameter, resembling those of our common milkweed, and are produced in short spreading cymes. In India the plant is called *palay* and is cultivated for the rubber obtained from the juice.

For previous introduction see No. 75218.

77393. FUNTUMIA ELASTICA (Preuss) Stapf. Apocynaceae. **Lagos rubbertree.**

A large forest tree which is very widely distributed throughout central Africa and is the source of Lagos rubber, which is of excellent quality.

For previous introduction see No. 73991.

77394. HEVEA BRASILIENSIS (H. B. K.) Muell. Arg. Euphorbiaceae. **Para rubbertree.**

From Bayeux, Haiti. A tropical Brazilian tree now extensively cultivated for rubber.

For previous introduction see No. 72980.

77395 and 77396. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

From Kashan, Persia. Seeds obtained from Aquai Hassan Agha Assady. Received September 18, 1928.

77395. No. 1. 77396. No. 2.

77397 and 77398. CANNABIS SATIVA L. Moraceae. **Hemp.**

From Valdivia, Chile. Seeds presented by J. A. Momberg, through L. H. Dewey, Bureau of Plant Industry. Received September 20, 1928.

77397. A variety grown at the city of Valdivia.

77398. A variety grown at Lanco.

77399. NICOTIANA TABACUM L. Solanaceae. **Tobacco.**

From Port Moresby, New Guinea. Plants collected by E. W. Brandes, Bureau of Plant Industry. Received September 13, 1928.

A variety grown by the natives in New Guinea.

77400 and 77401. LILIUM spp. Liliaceae. **Lily.**

From Chosen. Bulbs collected by R. K. Beattie, Bureau of Plant Industry. Received July 10, 1928.

77400. LILIUM sp.

No. 686. June 1, 1928. Plants growing in the shade of trees by the trail at Makaen, about 6 miles northeast of Choanji, in the Inner Kongosan or Diamond Mountains.

77401. LILIUM sp.

No. 706. June 12, 1928. A red-flowered lily, with dark spots inside the flower, growing in dry rocky places on the hills west of Shinchido, which is located on the railroad between Heijo and Chinnampo. The plants were in bud when gathered.

77402. PASSIFLORA LIGULARIS Juss. Passifloraceae. **Sweet granadilla.**

From Peru. Seeds presented by Gale H. Carter, Grace Line, New York City, N. Y. Received September 1, 1928.

These granadilla seeds are especially selected from the common variety which grows in the district of Lima.

For previous introduction see No. 54035.

77403. ANANAS MAGDALENAE (Andre) Standl. Bromeliaceae.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received July 7, 1928.

Pita de Colombia. A wild tropical American pineapple with bright-red subglobose fruits 6 inches in diameter on long stalks. The long leaves contain a fiber used for rope and twine, and the acid fruits are eaten either raw or cooked.

77404 to 77411. PRUNUS spp. Amygdalaceae.

From Jamaica Plain, Mass. Seeds presented by E. H. Wilson, Arnold Arboretum. Received July 11, 1928.

77404. PRUNUS CONCINNA Koehne.

A small upright shrub, native to the mountains of central China. The single light-pink flowers with deeper pink calyxes, about an inch across, are produced in great abundance and form a pleasing combination with the deep-green young foliage and gray bark.

77404 to 77411—Continued.

77405. PRUNUS INCISA Thunb. **Mame cherry.**

For previous introduction and description see No. 77261.

77406. PRUNUS INCISA SERRATA Koidz.

Differs from the typical form chiefly in having leaves with almost simple serrations and long aristate teeth.

77407. PRUNUS NIPPONICA Mats.

A bushy tree, up to 20 feet high, with oval, long-pointed doubly serrate leaves 1 to 3 inches long and single, light-pink flowers an inch across, solitary or in twos or threes. It is a handsome cherry when in full bloom.

77408. PRUNUS SERRULATA SACHALINENSIS (Schmidt) Makino (*P. sargenti* Rehder). **Sargent cherry.**

For previous introduction and description see No. 77318.

77409. PRUNUS SERRULATA SPONTANEA (Maxim.) Wilson.

This is the *Yamazakura* [mountain cherry] of southern Japan. It is a rather common wild tree in thickets from the extreme south to about the central portion in the vicinity of Nikko. Under favorable conditions it becomes a spreading tree 60 feet or more in height, and differs from *Prunus serrulata sachalinensis* in having smaller flowers. Its chief value appears to be as an understock for the cultivated varieties of flowering cherries.

For previous introduction see No. 55717.

77410. PRUNUS SUBHIRTELLA Miquel. **Higan cherry.**

For previous introduction and description see No. 77266.

77411. PRUNUS SUBHIRTELLA AUTUMNALIS Makino.

Jugatsuzakura [October cherry; literally tenth-month cherry]. Tree spreading, with a rounded crown, about 20 feet high; flowers rosy pink, semidouble, about half an inch in diameter, abundantly produced early in October, with a smaller crop of flowers in the spring; sometimes the heavier crop of flowers is borne in the spring.

For previous introduction see No. 69091.

77412. CITRUS AURANTIFOLIA (Christm.) Swingle. Rutaceae. **Lime.**

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, through W. T. Swingle, Bureau of Plant Industry. Received July 7, 1928.

Mindoro. A Philippine variety with juicy thin-skinned fruits which are the size and shape of a small lemon and very precocious.

77413. MERREMIA PELTATA (L.) Merr. Convolvulaceae. **Morning-glory.**

From Los Banos, Laguna Province, Philippine Islands. Seeds collected by O. W. Pflueger, Los Banos School of Forestry, and presented by P. J. Wester, Bureau of Agriculture, Manila. Received July 9, 1928.

77413—Continued.

Tampinita. A Philippine morning-glory with large dark-green leaves and large clusters of very showy yellow flowers.

77414. CYCAS sp. Cycadaceae.

From Kobe, Japan. Plants obtained by Prof. H. H. Bartlett, Director, Botanic Gardens and Arboretum, University of Michigan, Ann Arbor. Received August 25, 1927. Numbered July, 1928.

Dwarf cycads put on the S. S. *President Van Buren* for decorating the ship. They are a specialty of the nurserymen at Kobe and seem to be different from the ones common in greenhouses in the United States. They are ornamental palmlike woody plants, with glossy green pinnate leaves, and are native to tropical Asia.

77415 to 77420. SACCHARUM OFFICINARUM L. Poaceae. Sugarcane.

From Australia. Cuttings obtained through E. W. Brandes, Bureau of Plant Industry. Received July 12, 1928.

These varieties were collected in northern New South Wales.

77415. *H. Q. 5.*
77416. *N. G. 14.*
77417. *N. G. 16.*
77418. *Bogela.*
77419. *Mahona.*
77420. *Q. 813.*

77421. BRASSICA sp. Brassicaceae.

From Peking, China. Seeds presented by J. E. Ferguson, through W. T. Swingle, Bureau of Plant Industry. Received July 12, 1928.

P'iao ts'ai. A bitter Chinese cabbage.

77422. CITRUS SINENSIS (L.) Osbeck. Rutaceae. Orange.

From Rehoboth, Palestine. Bud wood presented by Albert Kaufmann, through A. Friedman, Palestine Jewish Colonization Association, Jaffa. Received July 14, 1928.

The Jaffa or Shamouti orange of Jaffa, Palestine, is a large oval bright-orange fruit of excellent quality, maturing from October to April. The fruit is practically seedless, the skin usually thick, and the flesh of excellent quality. This variety is the basis of the rapidly developing Palestine orange industry. Ninety-five per cent of the fruit is marketed in England.

For previous introduction see No. 75226.

77423 to 77432.

From Chosen. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received July 3, 1928.

77423. ACER sp. Aceraceae.

No. 696. Trail southwest of Onseiri, toward Shinkeiji, Outer Kongosan or Diamond Mountains, June 6, 1928. A small attractive maple with good dark-green leaves.

77424. AQUILEGIA sp. Ranunculaceae. Columbine.

No. 692. A Japanese columbine with red and yellow flowers, growing among rocks and coarse decomposed granite on the banks of a river at Choanji, Inner Kongosan or Diamond Mountains, May 31, 1928.

77423 to 77432—Continued.

77425. BERBERIS AMURENSIS Rupr. Berberidaceae. Amur barberry.

No. 697. A wild barberry growing near the river at Choanji, Inner Kongosan or Diamond Mountains, June 1, 1928. An eastern Asiatic shrub up to 10 feet high, with yellowish gray branchlets, 3-parted spines an inch long, elliptic leaves 2 to 3 inches long, 10-flowered to 25-flowered pendulous racemes, and bright-red fruits.

For previous introduction see No. 72406.

77426. (Undetermined.)

No. 688. Makaen, near Choanji, Inner Kongosan or Diamond Mountains, June 1, 1928.

77427. RODGERSIA sp. Saxifragaceae.

No. 691. A Japanese herbaceous perennial growing among rocks along the river at Choanji, Inner Kongosan or Diamond Mountains, June 1, 1928.

77428. ROSA sp. Rosaceae. Rose.

No. 699. A wild rose growing by the roadside at Atami, Shizuoka Ken, May 6, 1928.

77429 to 77432. SALIX spp. Salicaceae. Willow.

77429. SALIX sp.

No. 689. A small silky-leaved willow growing among rocks on the bank of the river at Choanji, Inner Kongosan or Diamond Mountains, June 1, 1928.

77430. SALIX sp.

No. 690. A slender willow, about 25 feet high, growing at Shimpori, Inner Kongosan or Diamond Mountains, June 1, 1928.

77431. SALIX sp.

No. 694. A willow tree, about 30 feet high, growing above Fire Dragon Falls, on the trail to Makaen, near Choanji, Inner Kongosan or Diamond Mountains, June 1, 1928.

77432. SALIX sp.

No. 695. A willow growing near Fire Dragon Falls, on the trail to Makaen, near Choanji, Inner Kongosan or Diamond Mountains, June 1, 1928.

77433. PRUNUS CAPULI Cav. Amygdalaceae. Capulin.

From Orizaba, Mexico. Seeds presented by Dr. C. A. Purpus, Zacuapam, Vera Cruz, Mexico. Received July 19, 1928.

A tropical American tree up to 40 feet high, with lanceolate long-pointed coriaceous leaves 6 to 8 inches long, stout racemes 4 to 6 inches long of small white flowers followed by nearly black globose edible fruits half an inch in diameter.

For previous introduction see No. 62688.

77434. SOLANUM MACROCARPON L. Solanaceae.

From Luchenza, Nyasaland Protectorate, Africa. Seeds presented by L. S. Norman. Received July 13, 1928.

77434—Continued.

A stout undershrub with a much-branched smooth stem and ovate-sinuate margined leaves 8 inches long. The racemose cymes, opposite the leaves, bear blue-purple flowers, 1 to 2 inches broad, which are followed by globose yellow fruits the size of an apple.

For previous introduction see No. 76688.

77435. FRAGARIA sp. Rosaceae.
Strawberry.

From Juneau, Alaska. Plants presented by the district forester, through G. M. Darrow, Bureau of Plant Industry. Received July 14, 1928.

A strawberry from the coast region of Alaska which differs from the usual form in having thinner leaves and in having the seeds more deeply embedded in the receptacle.

77436. EHRHARTA CALYCINA J. E. Smith. Poaceae.
Perennial veldt grass.

From Perth, Western Australia. Seeds presented by Elder, Smith & Co. Received July 14, 1928.

A grass 4 feet high which is popular as forage in Western Australia where it was introduced accidentally by the camel owners in fodder imported from South Africa. It is said to be very nutritious.

For previous introduction see No. 75200.

77437. EPHEDRA ALATA Decaisne. Gnetaceae.

From Algiers, Algeria, Africa. Seeds presented by Dr. L. Trabut, Government botanist, through W. T. Swingle, Bureau of Plant Industry. Received July 10, 1928.

A tall freely branching shrub with rough, green equisetumlike branches, small scalelike leaves, and inconspicuous flowers, native to northern Africa and Arabia. Of possible value as a source of ephedrine.

77438. EPHEDRA ALATA Decaisne. Gnetaceae.

From Algiers, Algeria, Africa. Seeds presented by Dr. René Maire, University of Algiers, through W. T. Swingle, Bureau of Plant Industry. Received July 17, 1928.

For previous introduction and description see No. 77437.

77439 and 77440. SOLANUM spp. Solanaceae.

From Bangkok, Siam. Seeds presented by Dr. E. D. Merrill, Dean of the College of Agriculture of the University of California, Berkeley, through W. T. Swingle, Bureau of Plant Industry. Received July 17, 1928.

77439. SOLANUM sp.

Mawangton. A tropical bush.

77440. SOLANUM sp.

A tropical vine.

77441 to 77447.

From Australia. Seeds presented by Mrs. Frieda Cobb Blanchard, University of Michigan, Ann Arbor. Received July 14, 1928.

77441 to 77447—Continued.

77441. INDIGOFERA AUSTRALIS Willd. Fabaceae. **Indigo.**

An erect Australian shrub, 2 to 4 feet high, with pinnately compound leaves and dense racemes of showy red flowers. It may be suitable for growing as an ornamental in the warmer parts of the United States.

For previous introduction see No. 61059.

77442. LINOSPADIX MONOSTACHYA (Mart.) Wendl. (*Bacularia monostachya* F. Muell.). Phoenicaceae.
Walkingstick palm.

From National Park, Macpherson Range, Queensland, at an altitude of 3,500 feet. An Australian shrub 6 to 12 feet high with stems an inch in diameter, pinnate leaves 2 to 4 feet long, flower clusters often longer than the leaves, and ovoid green fruits half an inch in diameter.

77443. MACROZAMIA sp. Cycadaceae.

From Broken Bay, north of Sydney. An Australian cycaslike plant with pinnate leaves, of value as an ornamental.

77444. OLEARIA TERETIFOLIA (Sond.) F. Muell. (*Aster teretifolius* F. Muell.). Asteraceae. **Daisytree.**

From National Park, Macpherson Range, Queensland, at an altitude of 4,000 feet. A broomlike Australian shrub up to 5 feet high, which stands clipping and might be used as a hedge plant. It is covered with masses of small white flowers which give the bush a snowlike appearance.

For previous introduction see No. 47192.

77445. PITTOSPORUM sp. Pittosporaceae.

From National Park, Macpherson Range, Queensland, at an altitude of 4,000 feet. A very pretty shrub, especially when in fruit.

77446. POTHOS LONGIPES Schott. Araceae.

From National Park, Macpherson Range, Queensland, at an altitude of 3,500 feet. A tall-climbing Australian shrub clinging by aerial roots, leaves with a winged petiole 5 or 6 inches long, and a blade usually not as long as the petiole, decurved and lanceolate. The flowers resemble those of the Indian turnip, and the ripe fruit is a cluster of red berries.

77447. SWAINSONA GALEGIFOLIA (Andrews) R. Br. (*S. coronillaefolia* Salisb.). Fabaceae. **Goatsrue senna-pea.**

From the Botanic Garden, Melbourne, Victoria. A low shrubby Australian plant with compound vetchlike leaves and scarlet-orange flowers borne on long axillary stems.

For previous introduction see No. 76945.

77448. CHAENOMELES LAGENARIA WILSONII Rehder. Malaceae.

From Elstree, Herts, England. Seeds presented by the Hon. Vicary Gibbs, Aldenham House Gardens. Received July 17, 1928.

A western Chinese shrub up to 20 feet high, with long persisting lustrous dark-green leaves and bright early-appearing salmon-pink flowers 1 to 2 inches across.

For previous introduction see No. 58605.

77449. PRUNUS MAJESTICA Koehne. Amygdalaceae.

From Benenden, Kent, England. Seeds presented by Capt. Collingwood Ingram. Received July 17, 1928.

A large handsome tree up to 70 feet tall, growing in southwestern China at an altitude of 4,000 feet. It has large broadly lanceolate-serrate leaves, small umbels of rosy to white flowers, and ovoid dark-red fruits.

For previous introduction see No. 58013.

77450. EPHEDRA DISTACHYA L. (E. *vulgaris* Rich.) Gnetaceae. **Common jointfir.**

From Peshawar, Northwest Frontier Province, India. Seeds presented by Nawazieh Ali, Professor of Botany, through John R. Ives, American vice consul, Karachi, India. Received July 23, 1928.

A low procumbent shrub, native to southern Europe and Asia, with erect dark-green branches, scalelike leaves, inconspicuous flowers, and globose red berries. A possible source of ephedrin.

For previous introduction see No. 61418.

77451. CYTISUS PALMENSIS (Christ) Hutchinson. Fabaceae. **Tagasaste.**

From Rabat, Morocco. Seeds presented by Dr. E. Miege, Station de Sélection et d'Essai de Semences. Received July 23, 1928.

A shrubby Canary Island legume with silvery gray leaves, which is valuable as a forage crop.

For previous introduction see No. 65584.

77452 and 77453. HEDYSARUM spp. Fabaceae.

From Oran, Algeria. Seeds presented by Prof. A. Faure. Received July 20, 1928.

77452. HEDYSARUM CAPITATUM Desf.

An annual Algerian legume with purple flowers, of possible value for forage or green manure.

For previous introduction see No. 66143.

77453. HEDYSARUM PALLIDUM Desf.

A decumbent perennial legume, native to northern Africa, with compound pubescent leaves, clusters of purple-streaked white flowers, and spiny articulated pods. It has been recommended for green manure in olive orchards.

For previous introduction see No. 66146.

77454. INGA SPECTABILIS Willd. Mimosaceae.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Gardens. Received May 7, 1928. Numbered July, 1928.

A large handsome tropical American tree with leaves composed of two pairs of wide coriaceous leaflets, spikes of greenish white flowers, and enormous thick pods containing an edible whitish pulp.

77455 and 77456. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director of the Botanic Gardens. Received July 26, 1928.

77455. Variety *breviviolaceum*.

77456. Variety *viride*.

77457. FLACOURTIA INDICA (Burm. f.) Merr. (*F. ramontchi* L'Herit.). Flacourtiaceae. **Ramontchi.**

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received July 24, 1928.

A spiny arborescent Philippine shrub 20 feet high, with crenate leaves, small white flowers, and smooth dark-purple fruits containing a sweet juicy pulp.

For previous introduction see No. 61648.

77458. GOSSYPIUM PERUVIANUM Cav. Malvaceae. **Peruvian cotton.**

From Chira Valley, Peru. Seeds obtained through O. F. Cook, Bureau of Plant Industry. Received July 26, 1928.

A cotton which grows to a height of 12 feet.

For previous introduction see No. 73132.

77459. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Herradura, Cuba. Cuttings presented by F. S. Earle. Received July 2, 1928.

Creole.

77460. CITRUS AURANTIFOLIA (Christm.) Swingle. Rutaceae. **Lime.**

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received July 28, 1928.

For previous introduction and description see No. 77412.

77461 to 77465.

From Omsk, Russia. Seeds presented by S. Maskovsky, Director of the West Siberian Agricultural Experiment Station, through H. N. Vinall, Bureau of Plant Industry. Received July 27, 1928.

Siberian varieties.

77461. BROMUS INERMIS Leyss. Poaceae. **Bromegrass.**

No. 4040.

77462. MEDICAGO FALCATA L. Fabaceae. **Yellow-flowered alfalfa.**

No. 1694.

77463. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

No. 1450.

77464. MELILOTUS ALBA Desr. Fabaceae. **White sweetclover.**

No. 8079.

77465. VICIA CRACCA L. Fabaceae. **Cow vetch.**

No. 8081.

77466 to 77472. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

From Jerusalem, Palestine. Seeds presented by A. Grasovsky, southern inspectorate of agriculture. Received July 30, 1928.

77466. *Frangi.*

77467. *Klabi.*

77468. *Lozi.* A variety with sweet kernels.

77469. *Mawi.*

77470. *Mustekawi.* A variety with bitter kernels.

77471. *Mustekawi.* A variety with sweet kernels.

77472. *Wardi.*

77473. BRACHIARIA BRIZANTHA (Hochst.) Stapf. Poaceae. **Grass.**

From Luchenza, Nyasaland Protectorate, Africa. Seeds presented by L. S. Norman. Received July 18, 1927. Numbered August, 1928.

A tall tropical African perennial grass, up to 6 feet high, with a short stout rhizome, erect stems, and very narrow leaves up to 15 inches long. It is one of a series of nine grasses selected by T. D. Maitland, former botanist of Uganda, as being the most promising indigenous grasses for forage there.

For previous introduction see No. 75293.

77474. BRACHIARIA BRIZANTHA (Hochst.) Stapf. Poaceae. **Grass.**

From east Africa. Seeds collected by L. W. Kephart and R. L. Piemeisel, agricultural explorers, Bureau of Plant Industry. Received March 17, 1928. Numbered August, 1928.

No. 386. Government plantation, Kampala, Uganda.

For previous introduction and description see No. 77473.

77475. LYCOPERSICON ESCULENTUM Mill. Solanaceae. **Tomato.**

From Tucuman, Argentina. Seeds presented by Dr. W. E. Cross, Director, Estación Experimental Agrícola. Received August 1, 1928.

Paraná. A variety from Argentina.

77476 and 77477.

From Jerusalem, Palestine. Bulbs and seeds presented by E. R. Sawer, Department of Agriculture, Forests, and Fisheries. Received August 2, 1928.

77476. COLCHICUM DECAISNEI Boiss. Melanthiaceae.

Seeds and bulbs. This variety, native to Syra, differs very little from *Colchicum laetum*, which in turn is much like *C. autumnale*. The rosy lilac flowers appear without the leaves in late October.

77477. CROCUS HYEMALIS Boiss. and Blanche. Iridaceae.

Seeds of a late autumn or winter-flowering crocus common around Jerusalem. The flowers are white, deep orange in the throat, with varying feathers of deep purple on the backs of the outer segments.

77478 to 77480. FICUS CARICA L. Moraceae. **Fig.**

From Grande Kabylie, Algeria, Africa. Scions presented by E. Rolland, Comice Agricole de Tizi Ouzou. Received February 4, 1926. Numbered August, 1928.

77478. *Carma adjar.*

77479. *Sultane.*

77480. *Sultane du Marabout.*

77481. FICUS CARICA L. Moraceae. **Fig.**

From Italy. Bud sticks presented by Dr. Mario Calvino, San Remo. Received August 24, 1926. Numbered August, 1928.

Pissalutto. Bud sticks from the best plant of this variety growing in the Hanbury Botanical Garden of La Mortola, Ventimiglia. It is an old Italian variety cultivated in Ventimiglia and San Remo and is the best variety for fresh and dried fruit.

77482. FICUS CARICA L. Moraceae. **Fig.**

From Palestine. Cuttings presented by Amram Khazanoff, the Palestine Jewish Colonization Association, Haifa. Received May 13, 1927. Numbered August, 1928.

Kharrobbi. From the Ram Allah Mountains of Judea.

77483. PHALARIS TRUNCATA GUSS. Poaceae. **Grass.**

From Algiers, Algeria, Africa. Seeds presented by Dr. L. Trabut, Government botanist. Received August 6, 1928.

A perennial grass, about 2 feet high, native to the Mediterranean region. The flowers are borne in a dense spike like timothy.

For previous introduction see No. 46952.

77484. EXACUM ZEYLANICUM Roxb. Gentianaceae.

From Peradeniya, Ceylon. Seeds presented by F. A. Stockdale, Director, Department of Agriculture. Received August 7, 1928.

An erect East Indian annual a foot high, with leaves at the base and a terminal cluster of large deep-purple flowers having bright-orange stamens.

For previous introduction see No. 66835.

77485 and 77486. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Zanzibar, Africa. Seeds presented by V. H. Kirkham, Director, Agricultural Department. Received August 7, 1928.

77485. A wild variety.

77486. A cultivated variety.

77487. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Eala, Belgian Congo, Africa. Seeds presented by E. Wirion, Director, Botanic Garden. Received August 6, 1928.

A violet-fruited Congo variety.

77488. MACARANGA GRANDIFOLIA (Blanco) Merr. Euphorbiaceae.

77488—Continued.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, through Peter Bisset, Bureau of Plant Industry. Received July 12, 1928.

A Philippine ornamental, with large leaves like an Anthurium which may become a very showy conservatory plant.

77489. POLYTRIAS AMAURA (Buehse) Kuntze (*P. praemorsa* Hack.). Poaceae. **Java grass.**

From Port of Spain, Trinidad, British West Indies. Plants presented by W. G. Freeman, Director of the Trinidad Department of Agriculture. Received June 6, 1928. Numbered September, 1928.

A common lawn and pasture grass native to low altitudes in Java.

For previous introduction see No. 32111.

77490 and 77491. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Honolulu, Hawaii. Seeds presented by Prof. F. G. Krauss, University of Hawaii. Received September 19, 1928.

77490. *Variety New Era strain D.*

77491. *Variety New Era strain X.*

77492. SOLANUM sp. Solanaceae.

From Java. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila, Philippine Islands. Received September 24, 1928.

Kubiu. A Brazilian plant said to be used as a vegetable in Java. It is probably very tender and does not endure frost.

77493 to 77495. CUCURBITA MAXIMA Duchesne. Cucurbitaceae. **Squash.**

From Sydney, New South Wales, Australia. Seeds presented by G. D. Ross, Undersecretary, Department of Agriculture. Received September 21, 1928.

77493. *Cowra crown.*

77494. *Hawkesbury.*

77495. *Triangle.*

77496 to 77539. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Sydney, New South Wales, Australia. Cuttings presented by P. H. Goldfinch, acting general manager of the Colonial Sugar Refining Co., at the request of E. W. Brandes, Bureau of Plant Industry. Received September 21, 1928.

Mr. Goldfinch says that these cuttings belong to the *21 N. G.* series, a designation which indicates that they were collected in New Guinea in 1921.

77540 to 77582.

From Nelson, New Zealand. Seeds presented by A. Wilkinson, Hon. Secretary and Treasurer of the New Zealand (Nelson) Alpine and Rock Garden Society. Received September 13, 1928.

77540. ACAENA sp. Rosaceae.

A herbaceous perennial, native to New Zealand, with alternate, pinnate leaves having incised leaflets and small flowers in terminal or interrupted spikes.

77541. ALECTRYON EXCELSUM Gaertn. Sapindaceae. **Titoki.**

A handsome New Zealand tree up to 60 feet high and 2 feet in diameter, with pinnately compound leaves having four to six pairs of obliquely lanceolate leaflets 4 inches long, brownish silky beneath, and panicles a foot long of small flowers without petals but having large dark-red anthers. The tough elastic wood is used for ax handles, etc.

For previous introduction see No. 73992.

77540 to 77582—Continued.

77542. ARISTOTELIA FRUTICOSA Hook. f. Elaeocarpaceae.

An erect or decumbent much-branched shrub, 3 to 8 feet high, native to New Zealand. The coriaceous leaves vary from linear to obovate and are entire, crenate, serrate, or lobed. The small flowers are solitary or in small racemes and are followed by small yellowish berries.

77543. ARTHROPODIUM CIRRHATUM (Forst. f.) R. Br. Liliaceae.

A herbaceous perennial up to 3 feet high, with shining grasslike leaves and showy panicles of white flowers an inch across, having the stamens covered with pink bristles.

For previous introduction see No. 77173.

77544 to 77546. ASTELIA spp. Liliaceae.

77544. ASTELIA CUNNINGHAMII Hook. f.

A densely tufted epiphytic or terrestrial herb, native to New Zealand. The linear leaves are about 5 feet long, and the small reddish yellow to maroon flowers are borne in large panicles on scapes 1 to 3 feet high and covered with white silky hairs. The fruits are small red globose berries.

77545. ASTELIA NERVOSA Banks and Soland.

A stout densely tufted New Zealand perennial often forming extensive masses in moist forests on swampy ground. The spreading lanceolate leaves are 3 to 8 feet long with the midrib and several other nerves colored red. The fragrant greenish black flowers are borne in large panicles on scapes 1 to 2 feet high and are followed by bright orange-yellow berries.

77546. ASTELIA PETRIEI Cockayne.

An attractive densely tufted perennial native to New Zealand, where it forms large patches in alpine meadows. The long-pointed sword-shaped leaves are 1 to 3 feet long, smooth and shining above and silvery white beneath. The inconspicuous flowers are in short panicles hidden among the leaves.

77547. BULBINELLA HOOKERI (Colenso) Cheeseman. Liliaceae.

A New Zealand herbaceous perennial varying in size from 3 to 4 inches up to 3 feet. The numerous glaucous green leaves are linear, and the loose racemes of bright-yellow flowers are on slender scapes up to 10 inches high.

77548. CASSINIA VAUVILLIERSII (Homb. and Jacq.) Hook. f. Asteraceae.

An erect closely branched New Zealand shrub up to 8 feet high, with narrowly oblong leathery leaves half an inch long, densely white tomentose beneath, and dense terminal corymbs of white flowers.

For previous introduction see No. 76564.

77549 to 77551. CELMISIA spp. Asteraceae.

77540 to 77582—Continued.

77549. CELMISIA ARMSTRONGII Petrie.

A herbaceous perennial, native to New Zealand, with short stout stems crowned by radiating sword-shaped leaves, 18 inches long, having an orange midrib and covered with satiny tomentum. The heads of white flowers, 1 to 2 inches broad, are borne on white cottony scapes about the length of the leaves.

77550. CELMISIA CORIACEA (Forst. f.) Hook. f.

A herbaceous perennial, native to New Zealand, with a short stout stem crowned with lanceolate leaves 1 to 2 feet long from which arise several stout woolly scapes 3 feet high bearing heads of white flowers more than 3 inches broad.

77551. CELMISIA SPECTABILIS Hook. f.

A New Zealand herbaceous perennial, often forming large patches, with short stout stems and numerous linear-oblong thick leaves, 6 inches long, covered with silvery hairs above and densely matted pale buff wool beneath. The several stout cottony scapes are longer than the leaves and bear white flower heads 1 to 2 inches broad.

77552. CHORDOSPARTIUM STEVENSONI Cheeseman. Fabaceae.

A leafless shrub or small tree up to 20 feet high, native to New Zealand, with long slender pendulous branches and racemes, 1 to 2 inches long, of small purple flowers.

77553. COPROSMA RUGOSA Cheeseman. Rubiaceae.

A densely branched New Zealand shrub, 4 to 10 feet high, with yellowish brown branchlets, opposite or fascicled linear leaves less than half an inch long, small axillary flowers, and broadly oblong translucent pale-blue berries half an inch long.

77554 to 77556. DIANELLA INTERMEDIA Endl. Liliaceae.

A herbaceous perennial, native to New Zealand, with numerous sword-shaped leaves, 3 feet long, crowded at the base of a scape 2 feet high, which bears a spreading panicle of small purplish flowers having bright-orange anthers, and followed by broadly oblong blue berries.

77554. [No data.]

77555. A pale blue-berried variety.

77556. A dark blue-berried variety.

77557. DRACOPHYLLUM TRAVERSII Hook. f. Epacridaceae.

A New Zealand tree up to 30 feet high and 2 feet in diameter, with leathery lanceolate leaves 2 feet long and terminal spikelike panicles, 1 to 2 feet long, of reddish flowers.

77558. DRACOPHYLLUM URVILLEANUM A. Rich. Epacridaceae.

A shrub 4 to 8 feet high, native to New Zealand, with slender erect branches, very narrowly linear leathery leaves 5 inches long, and small white or red flowers in racemes on short lateral branchlets.

77559. GAULTHERIA OPPOSITIFOLIA Hook. f. Ericaceae.

77540 to 77582—Continued.

A New Zealand shrub, 2 to 8 feet high, with leathery cordate leaves 1 to 3 inches long and compound axillary and terminal racemes of small white flowers.

For previous introduction see No. 48166.

77560. GAYA LYALLII (Hook. f.) Baker f. Malvaceae.

One of the most beautiful of the New Zealand trees, up to 30 feet high, graceful and spreading, with the growing parts covered with stellate hairs. The cordate-crenate leaves are 2 to 4 inches long on slender petioles, and the large white flowers, an inch across, are borne in axillary clusters.

For previous introduction see No. 48167.

77561. HYMENANTHERA CRASSIFOLIA Hook. f. Violaceae.

A low rigid prostrate or erect densely branched shrub, native to New Zealand, with grayish white shiny branches, thick leathery spatulate leaves with entire, sinuate, or lobed margins, small flowers, and broadly oblong purplish berries.

77562. HYMENANTHERA DENTATA ALPINA Kirk. Violaceae.

A New Zealand shrub 1 to 2 feet high forming a densely compact mass of spiny branches, with very small thick leathery leaves, minute flowers, and globose berries.

77563. LIBERTIA GRANDIFLORA (R. Br.) Sweet. Iridaceae.

A densely tufted herbaceous perennial, native to New Zealand, with stiff leathery linear leaves up to 3 feet long, and a flowering stem as tall as the leaves bearing a branching panicle of white flowers each an inch broad.

For previous introduction see No. 77190.

77564. LIBERTIA IXIOIDES (Forst. f.) Spreng. Iridaceae.

A New Zealand herbaceous perennial very similar to *Libertia grandiflora*, but with the leaves 1 to 2 feet long and the flowers one-half to 1 inch broad.

77565. LINUM MONOGYNUM Forst. f. Linaceae. Flax.

A smooth perennial herb 1 to 2 feet high, native to New Zealand, with scattered linear-lanceolate leaves an inch long and large white flowers an inch across in terminal corymbs.

For previous introduction see No. 52371.

77566. METROSIDEROS PERFORATA (Forst.) A. Rich. Myrtaceae.

A tall woody climber, native to New Zealand, with sessile leathery ovate to orbicular leaves half an inch long and leafy terminal panicles of small white flowers.

77567. MYRTUS OBCORDATA (Raoul) Hook. f. Myrtaceae.

A New Zealand shrub up to 15 feet high, with slender spreading branches, opposite leathery obcordate leaves half an inch long, solitary axillary white flowers, and broadly ovoid dark-red or violet berries a quarter of an inch long.

77568. NOTHOPANAX ARBOREUM (Forst.) Seem. Araliaceae.

77540 to 77582—Continued.

A round-headed New Zealand tree up to 25 feet high, with stout brittle branches. The five to seven palmately foliolate leathery leaves are made up of serrate-oblong leaflets 4 to 7 inches long. The flowers are in broad terminal compound umbels and are followed by purplish black fruits broader than long and more than a quarter of an inch in diameter.

For previous introduction see No. 43599.

77569 to 77571. OLEARIA spp. Asteraceae. Daisytree.

77569. OLEARIA AVICENNIAEFOLIA (Raoul) Hook. f.

A small branching New Zealand tree up to 20 feet high, with white tomentose branchlets, alternate entire lanceolate leaves 2 to 4 inches long, and large much-branched corymbs of small cylindrical flower heads.

77570. OLEARIA ILICIFOLIA Hook. f.

A shrub or small tree, 5 to 20 feet high, with a strong musky odor, native to New Zealand. The alternate rigid leathery linear-lanceolate leaves are 2 to 4 inches long and clothed beneath with thin yellowish white tomentum. The numerous campanulate flower heads are in large rounded much-branched corymbs.

77571. OLEARIA NUMMULARIFOLIA Hook. f.

A closely branched New Zealand shrub with stout viscid branchlets, alternate coriaceous orbicular leaves half an inch long, and small solitary flower heads.

77572. OURISIA CROSBYI Cockayne. Scrophulariaceae.

A slender herbaceous perennial a foot high, native to New Zealand, with radical leaves having petioles 2 inches long and thin oblong blades 1 to 2 inches long. The clusters of three to five small white flowers with yellow throats are borne on slender stems.

77573. PACHYSTEGIA INSIGNIS (Hook. f.) Cheeseman (*Olearia insignis* Hook. f.). Asteraceae.

A robust spreading New Zealand shrub, 6 to 9 feet high, with stout densely tomentose branches, thick leathery oblong entire leaves, 3 to 7 inches long, white tomentose beneath, and large hemispherical heads, 3 inches in diameter, of white flowers on penduncles a foot long.

77574. PARSONSIA HETEROPHYLLA A. Cunn. Apocynaceae.

A tall slender branching New Zealand vine, woody at the base, with coriaceous leaves varying from linear to obovate 2 to 4 inches long, and terminal and axillary many-flowered cymes of small fragrant white flowers, followed by cylindrical pods 6 inches long.

77575. PITTOSPORUM CORNIFOLIUM A. Cunn. Pittosporaceae.

A slender sparingly branched epiphytic New Zealand shrub 2 to 5 feet high, with entire coriaceous lanceolate to obovate leaves 2 to 3 inches long and 1-flowered to 3-flowered umbels of small flowers followed by ovoid capsules which in ripening open and display the orange-colored interior and the black seeds.

77540 to 77582—Continued.

77576. PITTOSPORUM DALLII Cheeseman. Pittosporaceae.

A round-topped tree up to 18 feet high, native to New Zealand, with sharply toothed oblong leathery leaves 2 to 4 inches long and dense terminal compound clusters of fragrant white flowers half an inch broad.

77577. POMADERRIS APETALA Labill. Rhamnaceae.

A shrub or small tree up to 15 feet high, native to New Zealand and Australia, with oblong-ovate crenulate leaves 4 inches long, having gray or whitish stellate pubescence beneath and axillary and terminal panicles 3 to 7 inches long of small flowers without petals. The foliage is said to be eaten readily by stock.

For previous introduction see No. 57935.

77578. RHIPOGONUM SCANDENS Forst. Smilacaceae.

A tall climbing New Zealand shrub with oblong coriaceous leaves 3 to 5 inches long, small greenish flowers in axillary and terminal clusters, followed by bright-red globose berries. The long tough elastic stems have been used to make baskets.

77579. SENECIO ELAEAGNIFOLIUS Hook. f. Asteraceae.

A spreading shrub 4 to 10 feet high, native to New Zealand, with ovate leathery leaves, 2 to 5 inches long, pale buff tomentose beneath, and stout branched terminal panicles of small flower heads.

77580. SENECIO PERDICIOIDES Hook. f. Asteraceae.

A round-topped New Zealand shrub 2 to 6 feet high, with toothed oblong leaves 2 inches long and leafy corymbs of top-shaped yellow flower heads.

77581. VERONICA TRAVERSII Hook. f. Scrophulariaceae.

A small compact New Zealand shrub 2 to 5 feet in diameter, with spreading leathery oblong leaves an inch long and racemes of small white flowers at the tips of the branches.

77582. VERONICA sp. Scrophulariaceae.

A subalpine veronica of which there are more than 100 species native to New Zealand, varying from creeping vines to small trees, with flowers in axillary or terminal racemes, spikes, or panicles.

77583. ILEX CORNUTA Lindl. and Paxt. Aquifoliaceae. **Chinese holly.**

From Washington, D. C. Plants grown from cuttings collected by Paul Russell, Bureau of Plant Industry. Received September 5, 1928.

A form of the Chinese holly with nearly spineless leaves. These cuttings were taken from a pistillate shrub about 9 feet high, growing in the National Botanic Garden.

77584 to 77594.

From Rhenock, Sikkim State, India. Seeds and bulbs presented by R. B. and D. S. Pradhans, the Chandra nursery. Received September, 1928.

77584 to 77594—Continued.

77584. CINCHONA SUCCIRUBRA Pavon. Rubiaceae.

Seeds of a Peruvian tree up to 40 feet high, with broad leaves. It is suitable for cultivation on hillsides in frost-free regions. The bark is used in the manufacture of quinine.

For previous introduction see No. 60293.

77585. LILIUM GIGANTEUM Wall. Liliaceae. **Giant lily.**

Seeds of a Himalayan lily which grows at altitudes between 7,500 and 9,000 feet, close to the surface in rich black mold, where it is covered with snow from November to April. The smooth hollow stems, 6 to 9 feet high, are sometimes used for musical pipes. The handsome cordate leaves, shining dark green above and paler beneath, are 10 to 12 inches long on petioles of equal length; both become smaller near the apex. In the large white fragrant flowers, often 12 to a raceme, the perianth tube is slightly greenish and the inner surfaces of the segments are tinged with deep purple.

For previous introduction see No. 76902.

77586 to 77588. LYCORIS spp. Amaryllidaceae. **Cluster-amaryllis.**

77586. LYCORIS AUREA (L'Her.) Herbert.

A Chinese bulbous perennial with sword-shaped leaves which die down before the appearance of the golden-yellow flowers, 3 to 4 inches across, borne in an umbel on a scape 1 to 3 feet tall.

77587. LYCORIS SANGUINEA Maxim.

A Japanese bulbous perennial with linear leaves dying down before the red flowers appear in an umbel on a scape 12 to 18 inches high.

77588. LYCORIS SQUAMIGERA Maxim. **Hardy cluster-amaryllis.**

A Japanese bulbous perennial with linear leaves which die down before the appearance of the rosy lilac fragrant flowers.

77589. MERENDERA SOBOLIFERA Fisch. and Mey. Melanthiaceae.

Bulbs of a small fragile perennial, native to Asia Minor and Persia, with three linear leaves and one to three lilac flowers 1 to 2 inches across.

77590 to 77592. NERINE spp. Amaryllidaceae.

77590. NERINE FLEXUOSA (Jacq.) Herbert.

Variety *alba*. A white form of this South African bulbous perennial with four to six bright-green linear leaves a foot long and a scape 2 to 3 feet high, bearing an umbel of 10 to 20 pale-pink flowers an inch long.

77591. NERINE PUDICA Hook. f.

A South African bulbous perennial with four to six glaucous-linear leaves 8 inches long and a scape 12 to 18 inches high, bearing an umbel of four to six white flowers.

77584 to 77594—Continued.

77592. NERINE SARNIENSIS (L.) Herbert. **Guernsey-lily.**

A bulbous perennial, native to South Africa, with bright-green linear leaves a foot long, appearing after the bright-crimson flowers which are borne in an umbel of 10 to 12 on a scape 12 to 18 inches high.

For previous introduction see No. 67972.

77593. PHALOCALLIS HERBERTII (Herbert) Kuntze (*Cypella herbertii* Herbert). Iridaceae.

Bulbs of a perennial, native to Argentina, with linear plaited leaves a foot long and a branching scape 2 to 3 feet high, with yellow flowers 3 inches across.

For previous introduction see No. 33997.

77594. PRUNUS CERASOIDES D. Don (*P. puddum* Roxb.). Amygdalaceae.

77584 to 77594—Continued.

Sikkim cherry. Seeds of an Indian cherry, native to the temperate slopes of the Himalayas, with sharply serrate lanceolate leaves 3 to 5 inches long, umbels of pendulous campanulate rosy red to white flowers, and red fruits, half an inch long, having a scanty red or yellowish acid flesh.

For previous introduction see No. 76908.

77595. DILLENIA MINDANAENSIS Elmer. Dilleniaceae.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received September 14, 1928.

An ornamental Philippine tree with large dark-green coarsely serrated leaves, handsome yellow flowers, and smooth green acid fruits the size of an apple. The thick fleshy sepals and the interior of the fruits are edible and are used for making preserves.

Introductory statement	1
Inventory	3
Index of common and scientific names	45

INTRODUCTORY STATEMENT

This inventory for the period from October 1 to December 31, 1928, contains a large amount of material which was brought in for experimental purposes, and will affect the final cooperative experiments very little, if at all. This is largely true of the plants obtained by the various expeditions that have been in the field for specific purposes.

From R. K. Beattie, who is still in the Orient, have been received considerable collections of Japanese persimmon varieties (*Diospyros kaki*, Nos. 78487 to 78503), *Castanopsis* spp. (Nos. 78312 to 78316), and Japanese chestnuts (*Castanea crenata*, Nos. 78003 to 78031), as well as miscellaneous ornamentals and trees.

From the Brandes collecting trip in New Guinea has been brought back a large collection of sugarcanes (*Saccharum* spp., Nos. 77710 to 77816).

From Madagascar, Charles F. Swingle has brought back not only *Euphorbia intisy* (No. 78169), a source of rubber, but a large miscellaneous collection of other species, some of them possibly also sources of rubber, and others merely of interest as ornamentals. Among the latter the most curious and interesting are the Kalanchoes (Nos. 77907 to 77917, 78423 to 78438, and possibly others), which will probably be useful out of doors in the warmest parts of the United States and as pot plants throughout the rest of the country. This is particularly true at the present time when succulents are much in vogue.

A large collection of pineapples (*Ananas sativus*, Nos. 77629 to 77639) was brought together from the Philippine Islands, Federated Malay States, East Indies, and Porto Rico for the Hawaii Agricultural Experiment Station.

In addition there are numerous collections of ornamentals obtained mostly by purchase from European sources for comparative varietal studies. Among this group might be mentioned witch-hazel, flowering quince, ceanothus, lilac, philadelphus, box, deutzia, and clematis.

Of possible interest to physicians is the Siamese *Solanum sanitwongsei* (No. 77618), said to be valuable in the treatment of diabetes, and *Ephedra gerardiana* (No. 77607), and *E. distachya* (No. 77619), possible sources of ephedrine.

The botanical determinations have been made and the nomenclature determined by H. C. Skeels, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

OFFICE OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., January 4, 1930.

94537—30——1

INVENTORY[1]

77596. RHUS TRILOBATA Nutt. Anacardiaceae.

From Indian Head, Saskatchewan, Canada. Seeds presented by Norman Ross, chief of the tree-planting division of the Forest Nursery Station, through Knowles A. Ryerson, Bureau of Plant Industry. Received October 8, 1928.

An upright shrub, 2 to 4 feet high, native to Canada and the northern United States. It has three crenately lobed leaflets, inconspicuous yellowish flowers, and short panicles of bright-red fruits. These seeds were collected on a dry exposed hillside.

77597. CLEMATIS TANGUTICA (Maxim.) Korsh. Ranunculaceae.

Golden clematis.

From Dropmore, Manitoba, Canada. Seeds presented by F. L. Skinner. Received October 9, 1928.

A woody vine, climbing to 10 feet, native to northwest China, with once or twice pinnate leaves having lanceolate-serrate, bright-green leaflets and usually solitary bright-yellow flowers 4 inches across.

For previous introduction see No. 63353.

77598. AVENA SATIVA L. Poaceae.

Oats.

From Sporen, Germany. Seeds presented by Alfred Griesing. Received October 9, 1928.

Original *Griesings Sporen Winterhafer.*

77599. CITRUS MIARAY Wester. Rutaceae.

Miaray.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received October 9, 1928.

A handsome ornamental Philippine tree suggested as a stock for cultivated citrus fruits. It has slender drooping willowy branches, dark-green leaves, and fruits resembling the lime in appearance and flavor.

For previous introduction see No. 46732.

77600 to 77606.

From New Plymouth, New Zealand. Seeds purchased from Duncan & Davies. Received October 8, 1929.

77600. CLEMATIS INDIVISA Willd. Ranunculaceae.

A large woody climber, native to New Zealand, with three coriaceous ovate leaflets 4 inches long, and axillary panicles of large white flowers 4 inches across.

77601. COROKIA CHEESEMANII H. Carse. Cornaceae.

A slender twiggy evergreen New Zealand shrub up to 12 feet high, with spreading branches, oblong leaves an inch long, silvery tomentose beneath, small clusters of yellow flowers, and broadly oblong bright-red fruits a quarter of an inch long. The whole plant is somewhat like an evergreen *Cornus mas.*

77602. COROKIA COTONEASTER Raoul. Cornaceae.

A dense shrub, 4 to 8 feet high, native to New Zealand, with rigid tortuous branches, evergreen orbicular leaves an inch across suddenly narrowed into broad flat petioles, clusters of small yellow flowers, and red fruits.

For previous introduction see No. 72251.

77603. ELAEOCARPUS DENTATUS (Forst.) Vahl. Elaeocarpaceae.

A round-headed New Zealand tree up to 60 feet high, with a straight trunk sometimes 3 feet in diameter, alternate oblong coriaceous leaves 4 inches long, silky racemes of drooping white flowers half an inch across, and small ovoid purplish-gray fruits.

77604. ENTELEA ARBORESCENS R. Br. Tiliaceae.

A New Zealand shrub or small tree 20 feet high, with the growing parts covered with soft stellate hairs. The alternate cordate leaves, nearly a foot across, are

[1] It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in, so that definite identification can be made.

77600 to 77606—Continued.

on petioles 8 inches long; the white flowers, an inch in diameter, are in erect cymes, and the globose pods are covered with long rigid bristles.

For previous introduction see No. 51047.

77605. MELICOPE TERNATA Forst. Rutaceae.

A small much-branched New Zealand tree up to 20 feet high, with opposite leaves having three oblong leaflets 4 inches long, small panicles of greenish flowers, and small wrinkled fruits which open and display the shining black seeds.

77606. METROSIDEROS VILLOSA J. E. Smith. Myrtaceae.

A freely branching tree, native to New Zealand, up to 60 feet high and 4 feet in diameter, with coriaceous broadly ovate gray-green leaves 2 inches long, white tomentose beneath, and terminal cymes of scarlet flowers, conspicuous for their long scarlet stamens as in the bottlebrushes.

77607. EPHEDRA GERARDIANA **Wall.** Gnetaceae.

From Chakrata, United Provinces, India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute and College, Dehra Dun. Received October 11, 1928.

A stiff erect leafless shrub, 2 to 4 feet high, native to India, with green branches, inconspicuous flowers, and bright-red fruits. A possible source of ephedrine.

77608 to 77612. EUCALYPTUS spp. Myrtaceae.

From Richmond, Australia. Seeds presented by F. H. Baker. Received October 6, 1928.

77608. EUCALYPTUS AMYGDALINA Labill. **Messmate gum.**

A variety of the almond eucalypt, which is a tall Australian tree up to 300 feet high, with lanceolate leaves 4 inches long, crowded umbels of small flowers, and hemispheric fruits a quarter of an inch broad. The leaves have a strong odor of peppermint and are rich in oil.

For previous introduction see No. 38723.

77609. EUCALYPTUS BOTRYOIDES J. E. Smith. **Bangalay.**

A tall handsome tree, native to Australia, with beautiful dark-green horizontal lanceolate leaves, umbels of small sessile flowers, and obovoid fruits. Used as a windbreak and as a shade tree. The wood is hard, tough, and durable.

77610. EUCALYPTUS LONGIROSTRIS F. Muell. (*E. rostrata* Schlecht., not Cav.). **Creek gum.**

A tall Australian tree up to 200 feet high, with smooth dark-gray bark, narrowly lanceolate leaves 6 inches or more long, stalked umbels of small flowers attractive to bees, and globular fruits with conical tops. The heavy red wood is durable both above and below the ground and is used for railroad ties, piles, and fence posts.

For previous introduction see No. 38725.

77608 to 77612—Continued.

77611. EUCALYPTUS PATENS Benth.

An Australian tree up to 100 feet high, with falcate-lanceolate leaves 6 inches long, short panicles of small flowers, and flat-topped globular fruits. The tough durable wood is used by wheelwrights.

For previous introduction see No. 76868.

77612. EUCALYPTUS VIMINALIS Labill. **Manna gum.**

A graceful Australian tree up to 300 feet high, with rough bark from which exudes the honeylike substance which gives the tree its name of manna gum. The leaves are lanceolate and falcate; the flowers are in threes and are attractive to bees; and the fruits are flattened globose with sharp-pointed tops. The wood is used only for rough building purposes.

For previous introduction see No. 38729.

77613 and 77614.

From Morden, Manitoba, Canada. Seeds and cuttings presented by W. R. Leslie, superintendent of the Experimental Station for Southern Manitoba, through Knowles A. Ryerson, Bureau of Plant Industry. Received October 15, 1928.

77613. ACER GINNALA Maxim. Aceraceae. **Amur maple.**

Seeds of a shrub or small tree up to 25 feet high, native to northeastern Asia, with lustrous dark-green 3-lobed serrate leaves, long-stalked panicles of yellowish flowers, and winged fruits, which are conspicuously red during the summer. The leaves turn bright red in autumn.

For previous introduction see No. 75664.

77614. SAMBUCUS RACEMOSA L. Caprifoliaceae. **European red elder.**

Cuttings of a variety of the red-berried elder with very finely dissected leaves.

77615. SPIRAEA FORMOSANA **Hayata.** Rosaceae. **Spirea.**

From Taiwan, Japan. Plants collected by H. H. Bartlett, director of the botanical gardens and arboretum of the University of Michigan, Ann Arbor, Mich. Received October 26, 1928.

A shrub up to 4 feet high, with ovate doubly serrate leaves and small pink flowers in compound corymbs. It is closely related to *Spiraea japonica* and may be only a form of that species. Native to Taiwan.

77616. CARPOTROCHE BRASILIENSIS (Raddi) Endl. Flacourtiaceae.

From Vicosa, Minas Geraes, Brazil. Seeds presented by P. H. Rolfs, Escola Superior de Agricultura e Veterinaria de Minas Geraes. Received January 17, 1927. Numbered in December, 1928.

A tropical tree native to central Brazil. A sirup said to cure leprosy and an ointment used for skin affections are prepared from the seeds.

For previous introduction see No. 74653.

77617. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

77617—Continued.

From Santiago de las Vegas, Cuba. Cuttings presented by Dr. Gonzalo M. Fortun, director, Estacion Experimental Agronomica. Received October 25, 1928.

A Cuban variety.

77618. SOLANUM SANITWONGSEI Craib. Solanaceae.

From Bangkok, Siam. Seeds presented by Dr. A. Kerr, director of the botanical section of the Ministry of Commerce and Communications, through Prof. E. B. Babcock, College of Agriculture, University of California, Berkeley, and G. F. Reddish, Food, Drug, and Insecticide Administration. Received October and November, 1928.

A Siamese shrub about 3 feet high, with small racemes of bluish flowers and orange-colored fruits. It is said to be of value in the treatment of diabetes.

77619. EPHEDRA DISTACHYA L. (*E. vulgaris* Rich.). Gnetaceae. **Common jointfir.**

From Taru Jabba, P. O. Peshawar, Northwest Frontier Province, India. Seeds presented by A. M. Mustafa, agricultural officer, through Renwick S. McNiece, American consul, Karachi, India. Received October 25, 1928.

A low-growing, rigid-tufted shrub, with erect green leafless branches and small red fruits. A possible source of ephedrine. Native to Europe and Asia.

For previous introduction see No. 77450.

77620. STYRAX OFFICINALIS L. Styracaceae. **Snowbell.**

From Brignoles, France. Seeds presented by Dr. R. Salgues, Director, Brignoles Botanic Station. Received October 24, 1928.

A handsome shrub or low tree, 20 feet high, with hairy, broadly oval leaves and numerous white flowers, about three-fourths of an inch long, in small clusters. It is native to Europe and Asia Minor.

For previous introduction see No. 66969.

77621. CHAMAEDOREA TEPEJILOTE Liebm. Phoenicaceae. **Palm.**

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received October 22, 1928.

A Mexican palm up to 10 feet high, with pinnate leaves about 4 feet long. The undeveloped flowers are eaten as a vegetable.

For previous introduction see No. 68975.

77622 to 77624.

From Buitenzorg, Java. Seeds purchased from L. Koch, Chief, Plant Breeding Station. Received October 26, 1928.

77622. BRADBURYA PLUMIERI (Turp.) Kuntze (*Centrosema plumieri* Turp.). Fabaceae.

A tropical Brazilian ornamental vine with white and red flowers. Of value as a green manure.

For previous introduction see No. 72429.

77623. MIMOSA INVISA Mart. Mimosaceae.

77622 to 77624—Continued.

A bushy tropical Brazilian plant about 3 feet high, with feathery leaves and rose-colored flowers. It is used as a green manure.

For previous introduction see No. 69122.

77624. SHUTERIA VESTITA Wight and Arn. Fabaceae.

A slender leguminous vine, native to India, with trifoliolate leaves and copious racemes of small reddish flowers. It is used as a green manure.

For previous introduction see No. 68039.

77625 and 77626. AMYGDALUS PERSICA NECTARINA Ait. Amygdalaceae. **Nectarine.**

From Sawbridgeworth, England. Plants purchased from Thomas Rivers & Son. Received October 22, 1928.

77625. *Early Rivers.* A variety with large fruits ripening the end of July.

77626. *John Rivers.* A seedling from Peregrine and Duke of York peaches. The fruits have very juicy flesh and a good flavor.

77627. PSORALEA BITUMINOSA L. Fabaceae. **Scurf-pea.**

From Santa Cruz, Tenerife, Canary Islands. Seeds presented by Dr. César Peraza. Received October 29, 1928.

A herbaceous perennial, native to the Mediterranean region, with trifoliolate leaves and small bluish flowers in loose heads. Of value for green manure.

For previous introduction see No. 76765.

77628. TRIFOLIUM REPENS L. Fabaceae. **White clover.**

From Brooks, Alberta, Canada. Seeds presented by Augustus Griffin, of the Canadian Pacific Railway, through Knowles A. Ryerson, Bureau of Plant Industry. Received October 10, 1928.

A pink-flowered selection from ordinary white clover, made at Brooks, Alberta, by Augustus Griffin, who reports that it is very vigorous and is said to be replacing ordinary white clover in New Zealand because of its vigor and hardiness.

77629 and 77630. ANANAS SATIVUS Schult. f. Bromeliaceae. **Pineapple.**

From the Philippine Islands. Cuttings presented by S. Youngberg, Director of the Bureau of Agriculture, Manila, at the request of F. G. Krauss, University of Hawaii, Honolulu. Received September 8, 1927. Numbered in November, 1928.

Material grown at the Lamao Experiment Station, Lamao, Bataan.

77629. *Los Banos.*

For previous introduction see No. 76198.

77630. *Orion.*

For previous introduction see No. 76197.

77631 to 77633. ANANAS SATIVUS Schult. f. Bromeliaceae. **Pineapple.**

From Kuala Lumpur, Federated Malay States. Suckers presented by B. Bunting, agriculturist of the Malay Depart-

77631 to 77633—Continued.

ment of Agriculture, at the request of F. G. Krauss, University of Hawaii, Honolulu. Received January 7, 1928. Numbered in November, 1928.

77631. *Comte de Paris.*

77632. *Montserrat.*

77633. *Singapore canning.*

77634 to 77638. ANANAS SATIVUS Schult. f. Bromeliaceae. **Pineapple.**

From Pasar Minggoe, East Indies. Offsets obtained by F. G. Krauss, University of Hawaii, Honolulu. Received October 12, 1927. Numbered in November, 1928.

77634. *Mandaloeng.*

77635. *Montserrat.*

77636. *Noenggal.*

77637. *Ripley Queen.*

77638. *Smooth Cayenne.*

77639. ANANAS SATIVUS Schult. f. Bromeliaceae. **Pineapple.**

From Mayaguez, Porto Rico. Slips presented by T. B. McClelland, horticulturist of the Porto Rico Agricultural Experiment Station. Received April 3, 1928. Numbered in November, 1928.

Cabezona. The largest variety in the world, with the possible exception of the King of Borneo. The record fruit here weighing about 14½ kilos. It is used in high-grade canning in the old Lajas district.

77640 and 77641. NOTHOFAGUS spp. Fagaceae.

From Wellington, New Zealand. Seeds presented by G. Phillips Turner, Director of Forestry, State Forest Service. Received November 2, 1928.

77640. NOTHOFAGUS FUSCA (Hook. f.) Oerst.

Collected at the head of Lake Wakatipu, South Island. A New Zealand evergreen tree over 100 feet high, with zigzag branchlets, broadly ovate coarsely dentate leaves 1 to 2 inches long, and clusters of small nutlets resembling beechnuts.

For previous introduction see No. 75202.

77641. NOTHOFAGUS MENZIESII (Hook. f.) Oerst.

An evergreen tree, native to New Zealand, up to 80 feet high and 5 feet in diameter, with silvery white bark, coriaceous doubly crenate orbicular leaves half an inch long, and small fruits resembling beechnuts.

For previous introduction see No. 46644.

77642. ALSTONIA SCHOLARIS (L.) R. Br. Apocynaceae.

From Medan, Sumatra. Seeds presented by J. A. Lörzing. Received July 7, 1928. Numbered in November, 1928.

A tropical Indian tree, 40 to 90 feet high, with whorls of four to seven obovate evergreen leaves 8 inches long, and cymes of greenish white flowers. The bitter milky sap yields an inferior quality of guttapercha, and an extract of the bark is used like quinine.

77642—Continued.

For previous introduction see No. 65247.

77643. ACTINIDIA CHINENSIS Planch. Dilleniaceae. **Yangtao.**

From Seattle, Wash. Seeds presented by David Whitcomb. Received October 31, 1928.

An ornamental, deciduous climber native to Szechwan, China, which has attracted considerable attention because of the high quality of its fruits. The leaves have a plushlike texture and an unusual dark-green color, and their large size and regular spacing add to the beauty of the vine. The flowers are buff yellow to white, fragrant, often 1½ inches across, and are produced in great abundance. The ovoid to globose, russet-brown villous fruits are about 2 inches long. The flesh is green, resembling that of a gooseberry, but tempered with a flavor peculiarly its own. It can be used fresh or made into jam.

For previous introduction see No. 56608.

77644. THRINAX WENDLANDIANA Beccari. Phoenicaceae. **Palm.**

From Little River, Fla. Seeds presented by Charles T. Simpson. Received October 18, 1928.

A Cuban palm with a slender graceful trunk, palmate leaves which are reflexed against the trunk in age, and greenish-brown fruits the size of a pea.

77645. ACER NIKOENSE (Miquel) Maxim. Aceraceae. **Nikko maple.**

From Jamaica Plain, Mass. Seeds collected by Paul Russell, Bureau of Plant Industry, at the Arnold Arboretum. Received November 5, 1928.

A tree up to 50 feet high, native to Japan and central China, with attractive foliage which becomes brilliant red or purple in autumn.

77646. POPULUS ALBA NIVEA Ait. Salicaceae. **Poplar.**

From France. Plants obtained by Ivar Tidestrom, Bureau of Plant Industry. Received November 10, 1928.

A form of the white poplar with lobed leaves which are densely silvery-white tomentose beneath.

77647. AESCULUS WILSONII Rehder. Aesculaceae.

From Jamaica Plain, Mass. Plant presented by E. H. Wilson, Arnold Arboretum, through Paul Russell, Bureau of Plant Industry. Received November 12, 1928.

An ornamental tree, 75 feet high, native to Szechwan and Hupeh, China. It is closely allied to *Aesculus chinensis*, from which it differs only in a few minor characters. The leaves are downy when young, and the white flowers are borne in racemes which sometimes become 16 inches long. The burs are rough but not spiny.

For previous introduction see No. 56390.

77648. POPULUS TREMULA L. Salicaceae. **European aspen.**

77648—Continued.

From Versailles, France. Plants obtained by Ivar Tidestrom, Bureau of Plant Industry. Received November 12, 1928.

A European tree up to 90 feet high, with a round open head and thin, gray-green suborbicular crenate leaves, tomentose when unfolding, but soon glabrous. This is the true *Populus tremula*. Most of the plants called *P. tremula* in North America are not that species.

77649. CEREUS EMORYI Engelm. Cactaceae. **Cactus.**

From Mexico. Seeds collected by Peter D. Barnhart, Los Angeles, Calif. Received November 8, 1928.

A golden-spined cactus growing on the west coast of Lower California.

77650. CASTANEA PUMILA (L.) Mill. Fagaceae. **Chinquapin.**

From Savannah, Ga. Seeds purchased by B. T. Galloway, Bureau of Plant Industry. Received October 2, 1928.

A variety of unusual size, obtained in the market, said to be abundant in the vicinity of Savannah. The tree grows to a height of 30 to 40 feet, and should prove useful as a stock.

77651. LILIUM sp. Liliaceae. **Lily.**

From Chosen. Bulbs obtained by R. K. Beattie, Bureau of Plant Industry. Received October 1, 1928.

No. 702. Collected by Rikimatsu Takagi at the Koryo Forest Experiment Station, about 25 miles northeast of Heijo.

77652 and 77653. PRUNUS spp. Amygdalaceae.

From Yokohama, Japan. Seeds purchased from Herbst Bros., agents, T. Sakata & Co. Received October 9, 1928.

77652. PRUNUS SERRULATA SACHALINENSIS (Schmidt) Mak. (*P. sargentii* Rehder). **Sargent cherry.**

Seeds said to be from the northern, more hardy form of the yamazakura (mountain cherry).

77653. PRUNUS SUBHIRTELLA Miquel. **Higan cherry.**

Seeds said to be from the pendulous variety of this species. Usually only a small percentage of such seedlings will show the pendulous habit.

77654 to 77656.

From Jerusalem, Palestine. Presented by Col. E. R. Sawer, Director, Department of Agriculture, Forests, and Fisheries. Received October 5, 1928.

77654. IRIS BISMARCKIANA Regel. Iridaceae.

Roots of a herbaceous perennial native to Palestine. The stem is 18 inches high, the lanceolate leaves 8 inches long, and the single large flower has orbicular standards veined sky blue on a creamy ground and orbicular yellowish falls densely spotted with purple brown.

77655. IRIS SISYRINCHIUM L. Iridaceae.

Bulblets of a perennial, a foot high, native to southern Europe. It has two linear leaves and several flowers with

77654 to 77656—Continued.

erect lanceolate pale-lilac standards and spatulate lilac falls with a yellow oblong spot.

77656. ORNITHOGALUM sp. Liliaceae.

Seeds of a form native to the vicinity of Jerusalem. Ornithogalums are bulbous perennials with narrow leaves and scapes bearing racemes of white, yellowish, or reddish flowers.

77657 to 77659. FICUS spp. Moraceae.

From Manila, Philippine Islands. Seeds presented by Arthur Fischer, Director, Bureau of Forestry. Received October 1, 1928.

77657. FICUS CALOPHYLLOIDES Elmer.

A large spreading tree, 70 feet high and 4 feet in diameter, native to the Philippines, with elliptic leaves 5 inches long and flattened globose yellowish-brown fruits.

77658. FICUS CONORA King.

A tree, native to New Guinea, with softly pubescent branchlets, lanceolate entire leaves 7 inches long, pubescent beneath, and turbinate fruits an inch in diameter, borne on long flexuose leafless branches arising at the base of the trunk.

77659. FICUS RIBES Reinw.

A small Malayan tree with alternate glabrous entire oblanceolate leaves 3 to 5 inches long, and small fruits, less than a quarter of an inch in diameter, borne on slender leafless branches at the base of the trunk.

For previous introduction see No. 50397.

77660. DANTHONIA PILOSA R. Br. Poaceae. **Grass.**

From Wellington, New Zealand. Seeds presented by Wright, Stephenson & Co. Received October 5, 1928.

A perennial Australian grass said to be excellent for pasture. It seeds freely and gives good fodder in early spring. This grass does well on dry clay hills or stony flats and is considered especially good for sheep.

For previous introduction see No. 76012.

77661 to 77690.

From Orleans, France. Plants purchased from Léon Chenault & Son. Received October 31, 1928.

77661. CARYOPTERIS MONGHOLICA Bunge. Verbenaceae.

A Mongolian shrub with nearly entire linear-lanceolate leaves 1 to 2 inches long and axillary cymes of violet-blue flowers in late summer. It resembles *C. incana*, but is of rather coarser habit.

For previous introduction see No. 76053.

77662. CARYOPTERIS TANGUTICA Maxim. Verbenaceae.

A spreading, deciduous shrub 3 to 5 feet high, rather similar to the preceding, native to northwestern China, with drooping branches, coarsely crenate ovate leaves an inch long, gray tomentose beneath, and axillary cymes of deeply 2-lipped small brilliant-blue flowers.

77661 to 77690—Continued.

For previous introduction see No. 62703.

77663 to 77667. CEANOTHUS spp. Rhamnaceae.

Half shrubby garden hybrids of various species of Ceanothus which are ornamental shrubs, flowering in late summer and autumn.

77663. CEANOTHUS sp.

Arnouldi. Flowers pale blue.

77664. CEANOTHUS sp.

Azureus Grandiflorus. Large azure-blue panicles.

77665. CEANOTHUS sp.

Jocelyn. Elegant dwarf panicles of bright-pink flowers.

77666. CEANOTHUS sp.

Lucie Simon. Flowers clear blue.

77667. CEANOTHUS sp.

Palmyre. A dwarf plant with globulous panicles of violaceous pink flowers.

77668 to 77672. CHAENOMELES LAGENARIA (Lois.) Koidz. (*Cydonia japonica* Pers.). Malaceae. **Japan quince.**

Ornamental shrubs with flowers varying from deep scarlet to white and opening early in the spring before the leaves.

77668. *Apricot.* A dwarf shrub with beautiful salmon-red flowers.

77669. *Grenade.* Large globular dark-crimson flowers.

77670. *Nivalis.* Flowers large and the whitest among the flowering quinces.

77671. *Orange.* Large, clear, orange-red flowers.

77672. *Vermilion.* Very large scarlet-vermilion flowers.

77673. DEUTZIA MYRIANTHA Lemoine. Hydrangeaceae.

A deciduous ornamental shrub of garden origin with ovate-lanceolate, long-pointed leaves and corymbs of white flowers nearly an inch across.

77674. DEUTZIA WILSONI Duthie. Hydrangeaceae.

A deciduous shrub, native to central China, with chestnut-brown branchlets, elliptic leaves stellate pubescent beneath, and loose broad corymbs of white flowers each nearly an inch in diameter.

For previous introduction see No. 76186.

77675. DIPELTA FLORIBUNDA Maxim. Caprifoliaceae.

A deciduous ornamental shrub somewhat resembling Kolkwitzia, but larger in all its parts, 15 to 20 feet high, native to central China, with remotely toothed ovate leaves 2 to 4 inches long, and small racemes of fragrant pale-rose tubular flowers having orange-yellow throats.

77676. DIPTERONIA SINENSIS Oliver. Aceraceae.

A Chinese tree 30 to 40 feet high, with compound leaves made up of 9 to 13 ovate-serrate or 3-foliolate leaflets 4 inches long, whitish flowers in panicles, followed by light-brown nearly orbicular winged fruits.

77661 to 77690—Continued.

For previous introduction see No. 61979.

77677. EXOCHORDA GIRALDII Hesse. Rosaceae. **Redbud pearlbush.**

A slender spreading deciduous shrub 10 to 15 feet high, native to northwestern China. The petiole and ribs of the entire or slightly serrate oblong leaves are rosy purple as well as the young growths, and the large pure white flowers in terminal racemes appear in late spring.

77678. EXOCHORDA GIRALDII WILSONII Rehder. Rosaceae. **Wilson pearlbush.**

A central Chinese form of *Exochorda giraldii* with a more upright and vigorous habit and more flowers than the type. It is a slender spreading deciduous shrub about 10 feet high, with oblong-elliptic, occasionally serrate leaves, and racemes of 6 to 10 pure-white flowers which are 2 inches across appearing in late spring.

For previous introduction see No. 65769.

77679 to 77683. HAMAMELIS spp. Hamamelidaceae. **Witch-hazel.**

77679. HAMAMELIS JAPONICA ARBOREA (Masters) Rehder.

A small deciduous Japanese tree up to 30 feet high, with nearly orbicular leaves 4 inches long and flowers having a deep vinous red reflexed calyx and golden-yellow petals. The flowers appear in winter, and the delicate petals are not injured by zero weather

77680. HAMAMELIS JAPONICA ZUCCARINIANA (Ottolander) Gumbleton.

A form of the Japanese witch-hazel with more upright branches than the type, and calyx lobes greenish yellow inside and pale-yellow petals.

77681. HAMAMELIS MOLLIS Oliver. **Chinese witch-hazel.**

A deciduous shrub or small tree, native to central China, with densely tomentose branchlets, broadly ovate leaves 4 to 7 inches long, and flowers opening in winter having sepals rusty tomentose outside and purple inside while the petals are golden yellow with a reddish base. It is said to be the handsomest of the witch-hazels.

For previous introduction see No. 72873.

77682. HAMAMELIS RUBRA Hort.

A horticultural form described as having red-orange flowers.

77683. HAMAMELIS VERNALIS Sargent.

An upright deciduous shrub 6 to 8 feet high, native to Oklahoma, with obovate leaves 5 inches long and fragrant reddish flowers appearing in the spring. Secured for comparative study only.

77684. HYMENANTHERA CRASSIFOLIA Hook. f. Violaceae.

A dense half-evergreen New Zealand shrub about 6 feet high, with rigid branches, crowded obovate leaves an inch long, small yellow axillary flowers followed by globose white berries a quarter of an inch in diameter.

77661 to 77690—Continued.

77685 to 77687. INDIGOFERA spp. Fabaceae.

77685. INDIGOFERA DECORA ALBA Sargent.

A white-flowered form of *Indigofera decora*, which is a Chinese shrub about 2 feet high, with reddish-brown branchlets, 7 to 13 elliptic leaflets, and racemes of flowers 8 to 10 inches long.

77686. INDIGOFERA HEBEPETALA Benth.

A deciduous shrub, about 3 feet high, with 5 to 11 broadly ovate leaflets 3 inches long, and dense racemes nearly a foot long of pea-shaped flowers having crimson standards and rose-colored wings and keels.

77687. INDIGOFERA POTANINII Craib.

A deciduous upright shrub, native to northwestern China, with five to nine oblong leaflets an inch long and racemes of small bright-rose flowers.

77688. OSMANTHUS ARMATUS Diels. Oleaceae.

An evergreen Chinese shrub up to 15 feet high, with opposite oblong spiny toothed leaves 4 to 6 inches long, axillary or terminal panicles of small fragrant white flowers and ovoid fruits.

77689. OSMANTHUS SERRULATUS Rehder. Oleaceae.

An evergreen Chinese shrub or small tree up to 35 feet high, with coriaceous obovate spiny serrulate leaves 3 to 5 inches long, panicles of fragrant white flowers, and black fruits. It is closely related to *Osmanthus fragrans*.

77690. RHODODENDRON MACROSTEMON Maxim. Ericaceae.

A low half-evergreen Japanese shrub with pubescent elliptic-oblong leaves half an inch long and salmon-red flowers an inch across having stamens twice as long as the corolla. It is closely related to *Rhododendron obtusum*.

77691. CARICA PAPAYA L. Papayaceae. **Papaya.**

From Honolulu, Hawaii. Seeds presented by J. M. Westgate, director, Hawaii Agricultural Experiment Station. Received November 5, 1928.

Solo. From the standpoint of the home gardener this is considered one of the best of the papayas. Although small, its qualities of texture and flavor give it first rank.

For previous introduction see No. 76495.

77692. VICIA PICTA Fisch. and Mey. Fabaceae. **Vetch.**

From Kharkof, Russia. Seeds presented by Prof. D. C. Vilensky, Ukraine Institute of Applied Botany. Received November 5, 1928.

A biennial vetch, native to Armenia, of value there as a cover crop.

77693 to 77698.

From Amani, Tanganyika Territory, Africa. Seeds presented by the superintendent of plantations, East African Agricultural Research Station. Received October 12, 1928.

77693 to 77698—Continued.

77693. ERYTHRINA TOMENTOSA R. Br. Fabaceae.

A tree native to South Africa, up to 20 feet high, with thick, rough, prickly bark. The long-stemmed, trifoliolate leaves, 10 to 14 inches long and wide, are densely hairy on both surfaces, and the bright-crimson flowers are borne in many-flowered spikelike clusters. The woody pods, velvety on the surface, are alternately swollen and contracted, which gives them a bizarre appearance.

For previous introduction see No. 56187.

77694. ERYTHRINA VELUTINA Willd. Fabaceae.

A spiny tree, native to Venezuela, up to 30 feet high, which, while leafless, bears large masses of rosy red flowers. The leaves are compound with three cordate triangular entire leaflets.

77695. GREWIA CALYMMATOSEPALA Schum. Tiliaceae.

A woody climber, native to tropical Africa, which reaches to the tops of the tallest trees. It has oblong to elliptic leaves 3 to 8 inches long and short racemes of small pinkish-white flowers.

77696. HIBISCUS SCOTTI Balf. f. Malvaceae.

A large shrub or small tree, native to the island of Socotra, with ovate leaves either entire, toothed, or lobed and flowers, 3 to 4 inches across, bright yellow with a carmine eye.

77697. LANDOLPHIA sp. Apocynaceae.

Landolphias are woody vines with opposite leaves and are a possible source of rubber.

77698. MASCARENHASIA ELASTICA Schum. Apocynaceae.

A tree, native to tropical Africa, with oblong coriaceous leaves 10 inches long, axillary and terminal cymes of pink or purple flowers, and smooth purplish-black fruits 3 to 4 inches long. This tree is a source of rubber, and the timber is also said to be excellent.

For previous introduction see No. 61498.

77699. NEOGLAZIOVIA VARIEGATA (Arruda). Mez (*Billbergia variegata* Schult.) Bromeliaceae. **Caroa.**

From Vicosa, Minas Geraes, Brazil. Plants presented by P. H. Rolfs, Escola Superior de Agricultura e Veterinaria, through L. H. Dewey, Bureau of Plant Industry. Received October 7, 1927. Numbered in December, 1928.

The caroa is a plant 4 or 5 feet high, of the same family as the pineapple, and is found wild in the caatingas, or dry regions, of eastern Brazil. The natives extract the fiber for the purpose of making baskets, ropes, and hammocks, but the amount obtained is not sufficient for export.

For previous introduction see No. 63868.

77700. PRUNUS YEDOENSIS Mats. Amygdalaceae. **Yoshino cherry.**

Trees growing at the United States Plant Introduction Garden, Chico, Calif., originally from Highland Park, Rochester, N. Y. Numbered in October, 1928.

77700—Continued.

P. I. G. No. 16826. Tree 3, rows 146 to 148, old test orchard. *Taizanfukun* (mountain snowcap). Trees erect, about 15 feet high, with dark-brown bark; flowers semidouble to double, pink, about an inch in diameter, often borne near the ends of the branches. Pedicels and calyxes more or less hairy.

For previous introduction see No. 76080.

77701 to 77707.

From Jamaica Plain, Mass. Seeds and scions collected at the Arnold Arboretum by Paul Russell, Bureau of Plant Industry. Received November, 1928.

77701 and 77702. DIPELTA FLORIBUNDA Maxim. Caprifoliaceae.

For previous introduction and description see No. 77675.

77701. Seeds.

77702. Arboretum No. 15414. Scions.

77703. LIGUSTRUM ACUTISSIMUM Koehne. Oleaceae. **Privet.**

Arboretum No. 14973–1. Seeds of a loose-growing much-branched shrub 10 feet or less high, with spreading and curving branches and very narrow sharp-pointed leaves about 2 inches long. The white flowers are borne in dense nodding panicles about an inch long. This privet is native to Japan and China.

For previous introduction see No. 72874.

77704. MALUS THEIFERA Rehder. Malaceae. **Tea crab.**

Arboretum No. 7241. Seeds of a spreading tree about 25 feet high, with smooth dark-gray bark. The fragrant white or pinkish flowers, about 2 inches across, are in clusters of three to seven, and the fruits, about half an inch in diameter, are greenish yellow with red cheeks. A floriferous and handsome crab apple.

For previous introduction see No. 61983.

77705 and 77706. PRUNUS SERRULATA Lindl. Amygdalaceae. **Oriental cherry.**

77705. Arboretum No. 20135. *Masuyama.* Scions of a small spreading tree with reddish brown bark. The young leaves, which appear before the flowers fall, are brownish green. The flowers, deep pink in the bud, are semidouble, light pink with deeper pink toward the margins, and open rather flat. Compared with Horinji, a closely related variety, the flowers are slightly less double and are flatter when fully opened.

For previous introduction see No. 77264.

77706. Arboretum No. 7608–C. *Miyako* (beauty or prosperity). Scions of a tree of upright habit; bark dark brown; young foliage light brown; buds deep pink, truncate; flowers semidouble, opening rather flat, up to about 2 inches in diameter, almost white in center, becoming pink toward the fimbriate petal tips and on back, in drooping clusters. A very attractive variety.

For previous introduction see No. 77265.

77701 to 77707—Continued.

77707. PRUNUS SUBHIRTELLA Miquel. Amygdalaceae. **Higan cherry.**

Arboretum No. 3674. Scions of the so-called typical form of the Higan cherry, which is not known in the wild state. It is a rather low, wide-spreading tree with smooth gray bark. In early spring, before the leaves appear, the tree is hidden in a dense mass of very light pink flowers, slightly larger than those of the other Higan cherries. The small black fruits follow early in the summer.

77708. ANNONA SPINESCENS Mart. Annonaceae.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received November 9, 1928.

A spiny Brazilian shrub up to 15 feet high, with small leathery leaves and orange-red, heart-shaped fruits 3 inches long which are edible but insipid. The Philippine name is alagadisso.

For previous introduction see No. 37911.

77709. CHIONANTHUS RETUSA Lindl. Oleaceae. **Chinese fringetree.**

From Rochester, N. Y. Cuttings collected at Highland Park by Paul Russell, Bureau of Plant Industry. Received November 14, 1928.

A beautiful deciduous, hardy, ornamental tree bearing, during the spring, a multitude of white, deliciously fragrant flowers, with very narrow petals, followed in the autumn by masses of blue berries resembling wild grapes. This variety is considered by some to be superior to the Virginia fringetree (*Chionanthus virginica*) because of the whiteness and fragrance of its flowers and its more graceful habit.

For previous introduction see No. 65766.

77710 to 77816. SACCHARUM spp. Poaceae.

From New Guinea. Cuttings collected by E. W. Brandes, Bureau of Plant Industry. Received October and November, 1928.

77710 to 77781. SACCHARUM OFFICINARUM L. **Sugarcane.**

77817. VIBURNUM SARGENTI FLAVUM Rehder. Caprifoliaceae.

From Rochester, N. Y. Cuttings collected by Paul Russell, Bureau of Plant Industry, at Highland Park. Received November 14, 1928.

A hardy ornamental shrub about 10 feet high, with gray bark, broadly oval coarsely dentate 3-lobed leaves, and numerous clusters of attractive yellow fruits in early autumn. A garden variety. The typical form is native to northeastern Asia.

77818. (Undetermined.)

From China. Seeds collected by J. F. Rock, National Geographic Society, Washington, D. C. Received November 19, 1928.

No. 16736. From the Litang River Valley, above Wachin monastery, Muli Territory, southwestern Szechwan, July, 1928. A curious lilylike plant 5 feet or more tall, bearing between 50 and 100 fragrant flowers about 1½ inches long and of a most delicate mauve lavender. It grows in forest clearings at an altitude of 13,000 feet. Unlike true lilies, it has not 1 bulb but bears from 10 to 15 bulblets at the ends of the short roots.

77819 to 77870.

From Jamaica Plain, Mass., and Rochester, N. Y. Collected by Paul Russell, Bureau of Plant Industry. Received in November, 1928.

Seeds have been received unless otherwise stated.

77819 to 77855. From the Arnold Arboretum, Jamaica Plain, Mass. The numbers at the beginning of some of the descriptions refer to those of the Arnold Arboretum.

77819. ACANTHOPANAX LEUCORRHIZUM (Oliver) Harms. Araliaceae.

No. 10655. An ornamental shrub up to 12 feet high with prickly branches, digitately compound sharply serrate leaves, and small round black berries in numerous large pendulous umbels. Native to central and western China.

For previous introduction see No. 40710.

77820 to 77822. ACER spp. Aceraceae. **Maple.**

77820. ACER ARGUTUM Maxim.

No. 1796–2. A small, deciduous tree with erect branches and doubly serrate leaves 2 to 4 inches long. The greenish yellow flowers are produced during April before the leaves, and the keys are borne in hanging racemes. This tree is a native of the mountain woods of Japan and makes an elegant appearance with its pale-green leaves during the summer and its purplish-brown branches in the winter.

For previous introduction see No. 43676.

77821. ACER GRISEUM (Franch.) Pax. **Paperbark maple.**

A handsome western Chinese maple which becomes 30 feet high under favorable conditions. The leaves are trifoliolate. The striking feature of this maple is the cinnamon-brown papery bark which flakes off like that of the river birch.

For previous introduction see No. 38992.

77822. ACER TSCHONOSKII Maxim.

No. 12577. A graceful shrubby tree 20 feet or less high, native to Japan. The leaves turn to bright yellow in the autumn.

77823. CALLICARPA GIRALDIANA Hesse. Verbenaceae.

No. 6712. A deciduous Chinese shrub 10 feet high, with membranous light-green leaves, cymes of pink flowers, and dense clusters of round berrylike violet fruits, which hang on after the leaves have fallen.

77819 to 77870—Continued.

For previous introduction see No. 76183.

77824. CARPINUS CORDATA Blume. Betulaceae. **Hornbeam.**

No. 12971. A handsome hardy tree 40 feet or less high, with oval-oblong, acuminate leaves 3 to 6 inches long. Native to Japan and Manchuria.

For previous introduction see No. 71141.

77825. CEPHALOTAXUS DRUPACEA SINENSIS Rehd. and Wils. Taxaceae.

An ornamental evergreen yewlike shrub up to 12 feet high, with stiff spreading branches and sharp-pointed linear leaves about an inch long.

For previous introduction see No. 40018.

77826. CORNUS KOUSA CHINENSIS Osborn. Cornaceae.

No. 13123. A Chinese dogwood which becomes about 25 feet high, with dark-green leaves nearly 5 inches long and showy white flowers which appear in June after the leaves. The fruiting heads are globose, pinkish, and about an inch across.

77827. COTONEASTER APICULATA Rehd. and Wils. Malaceae.

No. 7275–B. A low wide-spreading shrub with closely overlapping branches forming a mound 2 or 3 feet high. The small oval dark-green leaves, which persist until winter, form an excellent background for the bright-scarlet berries in autumn. Native to western China.

For previous introduction see No. 76231.

77828. DECAISNEA FARGESII Franch. Lardizabalaceae.

A handsome shrub up to 15 feet high with large pinnate leaves 3 feet long, greenish flowers in long pendulous racemes, and deep-blue fruits 3 to 4 inches long. Native to western China.

For previous introduction see No. 62922.

77829. EUONYMUS MAACKII Rupr. Celastraceae.

A large shrub or small tree with narrowly oval leaves about 3 inches long and small clusters of pink, 4-lobed fruits which have orange-red arils. Native to northeastern Asia.

For previous introduction see No. 66567.

77830. FRAXINUS BUNGEANA DC. Oleaceae. **Ash.**

No. 14626–B. A hardy shrubby Chinese ash 15 feet or less high, said to grow well in dry rocky ground.

77831. HAMAMELIS MOLLIS Oliver. Hamamelidaceae. **Chinese witchhazel.**

For previous introduction and description see No. 77681.

77819 to 77870—Continued.

77832. ILEX SERRATA Thunb. Aquifoliaceae. **Holly.**

No. 892–3. A slender ornamental deciduous shrub native to Japan, about 15 feet high, with oval, finely serrate leaves and small bright-red berries.

For previous introduction see No. 75716.

77833. LESPEDEZA CYRTOBOTRYA Miquel. Fabaceae.

No. 6000. A small deciduous bush-clover, native to Japan and Chosen, which bears racemes of rosy purple, pea-shaped flowers during midsummer.

For previous introduction see No. 76057.

77834. LONICERA VILMORINII Rehder. Caprifoliaceae. **Honeysuckle.**

No. 4801. An ornamental shrub up to 10 feet high, with arching branches, oblong leaves, and yellowish pink fruits. It is a hybrid between *Lonicera quinquelocularis* and *L. deflexicalyx*.

77835 to 77837. MAACKIA spp. Fabaceae.

77835. MAACKIA AMURENSIS Rupr.

A small tree, native to eastern Asia, with orange-brown bark, dull-green compound leaves, and short erect clusters of small yellowish-white flowers.

For previous introduction see No. 65939.

77836. MAACKIA AMURENSIS BUERGERI C. Schneid.

A variety, native to Japan, with pubescent leaflets.

77837. MAACKIA CHINENSIS Takeda.

No. 6962. A large leguminous tree up to 75 feet high, native to central China. The compound leaves consist of 11 to 13 oval leaflets 1 to 3 inches long. The white flowers, about half an inch long, are borne in racemes up to 8 inches long.

77838. MALUS KANSUENSIS (Batal.) C. Schneid. Malaceae.

No. 10096–B. A small tree, up to 25 feet high, native to northwestern China. The small flowers are white and the ellipsoid fruits, about half an inch long, are yellow or reddish.

For previous introduction see No. 72810.

77839 and 77840. MALUS TORINGOIDES (Rehder) Hughes (*M. transitoria toringoides* Rehder). Malaceae.

A shrub or small tree, up to 25 feet high, with oval 4-lobed leaves, and handsome fruits about half an inch long, yellow, usually with a red cheek. Native to western China.

For previous introduction see No. 54092.

77839. No. 7186. Seeds.

77840. No. 17475. Scions.

77841. MORUS ACIDOSA Griffith. Moraceae. **Acid mulberry.**

A usually broad shrub 3 to 16 feet high, but occasionally a tree 25 feet high, found in Hupeh and Szechwan Provinces, China. The leaves are very variable in size and shape and are not used for feeding silkworms. The edible fruits, dark red or shining black, are very palatable.

For previous introduction see No. 66299.

77842. PHELLODENDRON JAPONICUM Maxim. Rutaceae. **Corktree.**

A tree native to Japan, up to 30 feet high, with dark-brown bark, compound leaves composed of 9 to 13 ovate, dull-green leaflets, and black fruits in panicles 2 to 3 inches across.

For previous introduction see No. 66936.

77843. PSEUDOLARIX AMABILIS (Nelson) Rehder (*P. kaempferi* Gordon). Pinaceae. **Goldenlarch.**

No. 3656. A deciduous tree, native to China, sometimes as much as 130 feet high, with long spreading branches pendulous at the extremities. The light-green leathery foliage turns a clear yellow in the autumn.

For previous introduction see No. 71981.

77844. SORBUS ALNIFOLIA (Sieb. and Zucc.) Koch. Malaceae. **Mountain-ash.**

An upright tree, 60 feet high, with a dense round head, attractive bright-green foliage, and clusters of small red and yellow fruits. Native to eastern Asia.

For previous introduction see No. 65693.

77845. SORBUS COMMIXTA Hedl. Malaceae. **Japanese mountain-ash.**

No. 2077–1. A shrub or tree, native to central and northern Japan, with bright-green serrate variable leaves usually composed of five or six pairs of glabrous leaflets. The white flowers are in terminal corymbs, and the bright-red, nearly globular fruits are about one-fourth of an inch in diameter.

For previous introduction see No. 43728.

77846 to 77848. SYRINGA spp. Oleaceae. **Lilac.**

77846. SYRINGA KOMAROWI C. Schneid.

A Chinese shrub up to 15 feet high, with ovate leaves 5 to 7 inches long and nodding crowded panicles of purple-pink flowers.

For previous introduction see No. 76599.

77847. SYRINGA MEYERI C. Schneid. **Meyer lilac.**

A compact shrub up to 10 feet high, native to northern China, with small oval-elliptic leaves and dense panicles of violet flowers, which appear very early in the season.

77848. SYRINGA PINETORUM W. W. Smith.

No. 19140. A spreading shrub about 10 feet high, from southwestern China. The purplish flowers are borne in panicles about 5 inches long.

77819 to 77870—Continued.

77849. TRIPTERYGIUM REGELII Sprague and Takeda. Celastraceae.

A shrub about 5 feet high, with reddish brown warty branches, light-green broadly oval leaves, and terminal panicles of small fragrant greenish-yellow flowers.

77850 to 77852. VIBURNUM spp. Caprifoliaceae.

77850. VIBURNUM HUPEHENSE Rehder.

No. 18020. A deciduous shrub, native to China, about 6 feet high, with broadly ovate, densely pubescent, dentate leaves 2 to 3 inches long, cymes of small white flowers, and clusters of ovoid red fruits.

For previous introduction see No. 76602.

77851. VIBURNUM THEIFERUM Rehder.

An upright deciduous shrub, about 12 feet high, with dark-green, oval-oblong leaves about 4 inches long and ovoid bright-red fruits. Native to central China.

For previous introduction see No. 67064.

77852. VIBURNUM WRIGHTII Miquel.

A handsome deciduous shrub, native to Japan, about 10 feet high, with broadly oval or nearly round leaves and showy red fruits. The leaves turn crimson in early autumn.

For previous introduction see No. 43736.

77853. CYDONIA OBLONGA Mill. (*Pyrus cydonia* L.). Malaceae. **Quince.**

Scions of a large-fruited variety.

77854. MALUS THEIFERA Rehder. Malaceae. **Tea crab.**

No. 17474. Scions.

For previous introduction and description see No. 77704.

77855. PRUNUS INCISA Thunb. Amygdalaceae.

Variety *Zansetsu*. Scions of an ornamental cherry, native to Japan, which is a large shrub, or sometimes a small tree, about 25 feet high. The flowers, which appear in drooping clusters before the deeply cut leaves, are white or rosy, with bright-red calyxes, and the anthers are bright yellow. The petals fall early, but the calyxes, which gradually grow brighter, remain on the young fruits for some time and are quite showy.

For previous introduction see No. 64669.

77856 to 77870. From Highland Park, Rochester, N. Y.

77856. ACANTHOPANAX DIVARICATUM (Sieb. and Zucc.) Seem. Araliaceae.

A large deciduous spreading shrub of vigorous habit, up to 10 feet high, with handsome dark-green leaves and spherical heads of inky black fruits. It is native to Japan and is very closely related to *Acanthopanax sessiliflorum*. Unlike the latter, this species has downy young shoots, and the lower surfaces of the leaves are also quite downy. It should probably prove hardy in all but the coldest parts of the United States.

For previous introduction see No. 75663.

77857. ACANTHOPANAX LASIOGYNE Harms. Araliaceae.

A prickly stemmed shrub up to 20 feet high, with light-gray branchlets, attractive compound leaves composed of three oblong leaflets, and umbels of small black berries. Native to western China.

77858. CATALPA OVATA Don. Bignoniaceae. **Japanese catalpa.**

An ornamental tree, native to Japan, up to 20 feet high, with large, broadly heart-shaped leaves often 3-lobed to 5-lobed, and fragrant yellow flowers, striped with orange and violet within, in many-flowered panicles 4 to 7 inches long.

For previous introduction see No. 62266.

77859. COTONEASTER IGNAVA E. L. Wolf. Malaceae.

A hardy ornamental shrub about 5 feet high, native to eastern Turkestan. The oval-orbicular leaves are about an inch long, and the dark-purple fruits are in rather dense pendulous clusters.

77860. CRATAEGUS CHLOROSARCA Maxim. Malaceae.

A small hardy pyramidal tree with dark-green triangular-oval leaves and black subglobose fruits about two-fifths of an inch in diameter. Native to Manchuria.

77861. EVODIA HUPEHENSIS Dode. Rutaceae.

A very common tree in the woodlands of western Hupeh, China, where it grows to a height of 20 to 40 feet. It has smooth, gray bark, spreading branches, and white flowers in large flat corymbs.

For previous introduction see No. 63357.

77862 to 77864. LONICERA spp. Caprifoliaceae. **Honeysuckle.**

77862. LONICERA ORIENTALIS LONGIFOLIA Dipp. (*L. kesselringi* Regel.).

A large deciduous shrub about 10 feet high, with oblong or lanceolate leaves up to 2½ inches long, small reddish flowers, and black fruits. Native to Kamchatka, Siberia.

For previous introduction see No. 41946.

77863. LONICERA QUINQUELOCULARIS Hardwicke.

An erect shrub, up to 15 feet high, with spreading branches, downy purplish young twigs, and dull-green broadly oval leaves. The flowers are creamy white, changing to yellow and the berries are translucent white.

For previous introduction see No. 40187.

77819 to 77870—Continued.

77864. LONICERA WEBBIANA Wall.

A stout shrub about 10 feet high, native to southeastern Europe and Afghanistan. The yellowish flowers, tinged with red, are followed by scarlet fruits.

77865. SORBUS MATSUMURANA Koehne. Malaceae.

An ornamental shrub or small tree, native to Japan, with compound leaves composed of 9 to 13 oblong dark-green leaflets and loose clusters of globular red fruits.

77866. STEWARTIA PSEUDO-CAMELLIA Maxim. Theaceae.

A handsome tree, native to Japan, up to 50 feet high, with erect branches and red bark. The thickish obovate-lanceolate leaves are bright green, and the large white flowers which resemble single camellias are borne in summer.

For previous introduction see No. 75693.

77867. TILIA MIQUELIANA Maxim. Tiliaceae.

A tree up to 40 feet high, cultivated as a shade tree in Japan. The oval-triangular, obliquely cordate, dark-green leaves are 2 to 5 inches long.

77868. TILIA OLIVERI Szyszyl. Tiliaceae.

A trees 50 feet high, with dark-green orbicular ovate leaves, white tomentose beneath, and small globose fruits. The pendulous cymes contain 7 to 20 small white flowers. Native to central China.

77869. ZANTHOXYLUM BUNGEI Planch. Rutaceae.

An ornamental deciduous shrub or small tree up to 20 feet high, armed with stout prickles about half an inch long. The shining green compound leaves consist of 7 to 11 oblong leaflets, and the small fruits are reddish. Native to northern and central China.

77870. ZANTHOXYLUM SCHINIFOLIUM Sieb. and Zucc. Rutaceae.

A graceful shrub, native to Japan, with attractive compound leaves and rather conspicuous clusters of greenish or brownish fruits in autumn.

77871. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From La Manuelita, Palmira, Colombia. Cuttings obtained from E. L. Anderson. Received November 22, 1928.

77872. TREMA ORIENTALIS (L.) Blume. Ulmaceae.

From Taiwan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received November 9, 1928.

No. 728. Obtained from the Taihoku Forest Office, October 11, 1928. A small evergreen tree, native to southern Asia, with cordate-lanceolate crenate leaves 6 inches long, silvery pubescent beneath, and small clusters of inconspicuous flowers followed by small dry fruits. This tree is said to be of high tannin content.

77873. HORDEUM BOGDAIN Hort. Poaceae. **Grass.**

77873—Continued.

From Kharkof, Russia. Seeds presented by Prof. D. C. Vilensky, Ukraine Institute of Applied Botany. Received November 5, 1928.

Saline barley. A new species of grass related to barley, which seems to be suited to saline conditions.

77874 and 77875.

From Valki, Kharkof, Russia. Seeds presented by the agronomist in charge of alfalfa investigations, Station de l'Ukraine. Received November 14, 1928.

77874. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

Variety from Kharkof.

77875. ONOBRYCHIS VULGARIS Hill (*O. viciaefolia* Scop.). Fabaceae. **Sanfoin.**

Variety from Ukrainia.

77876 to 77878. AMYGDALUS PERSICA L. Amygdalaceae. **Peach.**

From Pistoria, Tuscany, Italy. Plants purchased from Martino Bianchi. Received November 27, 1928.

These peaches are a cross between a hardy, late free-flowering Chinese peach and a variety Teton de Venus, originated in Tuscany, which ripens about the middle of August.

The trees are vigorous and bear heavy crops of fruit 3 to 4 inches in diameter. The flesh is greenish white, sweet and juicy, colored with carmine near the pit, from which it is easily removed.

77876. *Tos-China.* No. 1. Fruits ripen the last of September and continue through the first 10 days or so of October.

77877. *Tos-China.* No. 2. Fruits ripen during October.

77878. *Tos-China.* No. 3. Fruits ripen during November.

77879 to 77883. AVENA SATIVA L. Poaceae. **Oats.**

From Svalöf, Sweden. Seeds presented by A. Akerman, Sveriges Utsädesförening. Received November 23, 1928.

77879. *Seger* (victory).

77880. *Och eko* (echo). This variety was not bred at Svalöf, but came from the firm of W. Weibull, at Landskrona.

77881. *Guldregn I* (Goldenrain I).

77882. *Stjärn* (star).

77883. *Guldregn II* (Goldenrain II).

77884 to 77951.

From Madagascar. Seeds collected by Charles F. Swingle, Bureau of Plant Industry, and Dr. Henri Humbert, University of Algiers, Algeria. Received in November, 1928.

77884. ACACIA MORONDAVENSIS Drake. Mimosaceae.

No. 5073. Upper Valley of Fiherenana, August 2, 1928. A tropical ornamental tree about 65 feet high.

77884 to 77951—Continued.

77885 to 77894. ALOE spp. Liliaceae.

77885. ALOE ANDRINGITRENSIS Perrier.

Botanic Garden, Tananarive, September 28, 1928. A stemless aloe, native to central Madagascar, with a rosette of 12 to 18 subfalcate leaves about 17 inches long. The leaves have horny margins and are armed with very small marginal spines. The dark orange-colored flowers are in dense racemes about 4 inches long.

77886. ALOE CAPITATA Baker.

Botanic Garden, Tananarive, September 28, 1928. An ornamental succulent with lanceolate leaves, less than 2 inches wide, narrowed gradually upward, and margined with spreading deltoid prickles. The yellow flowers are in headlike racemes of 30 or more flowers, on a peduncle less than a foot long. The inflorescence resembles that of *Aloe saponaria.*

77887. ALOE CAPITATA QUARTZITICOLA Perrier.

Botanic Garden, Tananarive, September 28, 1928. A stemless succulent plant with rather short thick leaves about 19 inches long, armed with stout red spines about two-fifths of an inch long. The yellow flowers are in a short dense head. This variety is native to quartzite regions in Madagascar.

77888. ALOE VAOMBE Decorse.

Botanic Garden, Tananarive, September 28, 1928. A large fleshy plant, native to sandy places in southwestern Madagascar. It becomes as much as 25 feet high, with incurved reddish spiny leaves up to 4 feet long and reddish-orange flowers in an erect head of 50 to 70 flowers.

77889. ALOE sp.

Between Betroka and Ihosy, September 19, 1928. Plant about 3 feet and inflorescence about 11 inches.

77890. ALOE sp.

La Table, Tullear, August 7, 1928.

77891. ALOE sp.

Ampanihy, September 3, 1928.

77892. ALOE sp.

Ampanihy, September 3, 1928.

77893. ALOE sp.

Diego Suarez, Montagne des Français, October 7, 1928.

77894. ALOE sp.

Mont Vatomavy, Ambositra, July 23, 1928.

77895. ARISTOLOCHIA ACUMINATA Lam. Aristolochiaceae.

La Table, Tullear, August 2, 1928. A vigorous ornamental vine native to the East Indies.

For previous introduction see No. 53612.

77896. ASSONIA sp. (*Dombeya* sp.). Sterculiaceae.

Valley of Fiherenana, August 3, 1928. An ornamental shrub or small tree native to Madagascar.

77884 to 77951—Continued.

77897. BAPHIA CAPPARIDIFOLIA Baker. Fabaceae.

No. 4026. Mananika, near Maevatanana, July 6, 1928. A shrub or tree, native to Madagascar, with slender branchlets, simple lanceolate leaves 2 to 3 inches long, and cymes of yellow flowers half an inch across.

For previous introduction see No. 77321.

77898. CITRUS GRANDIS (L.) Osbeck. Rutaceae. **Grapefruit.**

July 13, 1928. A variety with pink-fleshed fruits, about 20 inches in circumference, obtained in the market at Tananarive.

77899. CITRUS sp. Rutaceae.

Ivolena Experiment Station, Tamatave, October 2, 1928. *Vioangy.* Said to be an indigenous citrus plant.

77900. COMBRETUM sp. Combretaceae.

Diego Suarez, Montagne des Français, October 7, 1928. A climbing shrub with bright-red flowers.

77901 to 77904. CRYPTOSTEGIA MADAGASCARIENSIS Bojer. Asclepiadaceae. **Madagascar rubbervine.**

An important rubber plant occurring throughout a large portion of western Madagascar. There seems to be confusion between this and *Cryptostegia grandiflora,* which apparently is a more or less cosmopolitan species but which in Madagascar occurs only in the region south of Tullear. This plant is a shrub about 3 feet high, but occasionally it develops into a climber. The fibers of the plant are employed in making fishlines, and the Sakalavas recognize the plant as a source of an excellent cloth.

77901. Diego Suarez, Montagne des Français, October 7, 1928. *Lombira.*

77902. Andrahana village, north of Androka, August 24, 1928.

77903. Andrahana village, north of Androka, August 24, 1928.

77904. Upper Valley of Fiherenana, August 2, 1928.

77905. EUPHORBIA sp. Euphorbiaceae.

Beharahaka, between Androka and Ampanihy, August 29, 1928. *Harabaka.* A tree about 25 feet high, with a large amount of latex which contains some rubber. This was the largest Euphorbia seen in Madagascar.

77906. GONOCRYPTA sp. Asclepiadaceae.

North of Tullear. August 6, 1928. A rubber-bearing vine very different from *kompitso* of Ampanihy and Behara.

77907 to 77917. KALANCHOE spp. Crassulaceae.

77907. KALANCHOE DAIGREMONTIANA Hamet and Perrier.

Botanic Garden, Tananarive, September 28, 1928. A brownish-green succulent perennial native to Madagascar, becoming about 2 feet high. The leaves are petiolate, sometimes peltate, and the small deep-pink flowers are in lax terminal panicles.

77884 to 77951—Continued.

77908. KALANCHOE GRANDIDIERI Baill.

La Table, Tullear, August 7, 1928. An arborescent succulent plant, native to Madagascar, with a smooth stem 3 to 6 feet high. At the top of the stem a flower stalk, about 20 inches high, bears a paniclelike cluster of pendulous violet flowers.

77909. KALANCHOE LAXIFLORA Baker.

Botanic Garden, Tananarive, September 28, 1928. A fleshy perennial, native to Madagascar, with flowering stems 2 to 3 feet long and oblong crenate leaves about 3 inches long. The pale-yellow flowers two-thirds of an inch long are borne in large panicles a foot long.

77910. KALANCHOE SUAREZENSIS Perrier.

Botanic Garden, Tananarive, September 28, 1928. An erect fleshy biennial, native to Madagascar, about 2 feet high, with lanceolate leaves, up to 10 inches long, which bear bulblets at their tips. The flowers, with red calyxes and pink corollas, are in many-flowered paniclelike clusters.

77911. KALANCHOE SYNSEPALA Baker.

Botanic Garden, Tananarive, September 28, 1928. An erect succulent perennial, native to central Madagascar, with the lower leaves opposite, sessile, oblong-spatulate, and about 1½ inches long. The small reddish flowers are in dense terminal cymes.

77912. KALANCHOE sp.

Between Betroka and Ihosy, September 19, 1928. A species with brown leaves.

77913 and 77914. KALANCHOE TUBIFLORA Hamet.

An erect succulent perennial, about 2 feet high, native to Madagascar. The green cylindrical leaves, irregularly striped and blotched with reddish green, bear at the summit small oval-oblong lobes. At the approach of the wet season these lobes enlarge into pseudobulbils, by which the plant may be propagated. The red flowers are produced in a rather dense cluster terminating the stem.

77913. South of Betroka, on the highway to Antanimora, September 18, 1928.

77914. On the highway between Betroka and Ihosy, September 19, 1928.

77915. KALANCHOE sp.

South of Betroka, September 18, 1928. A species with large leaves.

77916. KALANCHOE sp.

Between Betroka and Ihosy, September 19, 1928. An ornamental succulent about a foot high. The leaves, with brownish-red margins, are about 6 inches in length.

77917. KALANCHOE sp.

Behara, September 10, 1928.

77918. KIGELIA MADAGASCARIENSIS Baker. Bignoniaceae.

77884 to 77951—Continued.

Betioky, August 23, 1928. A shrub about 15 feet high, with showy red, pink, or orange flowers about 7 inches in diameter. This plant occurs widely throughout southern Madagascar. Although the plant itself is somewhat straggly looking, because of the enormous flowers which are borne in winter while there are no leaves, it presents a striking appearance.

77919. KALANCHOE sp.

Ampanihy, September 6, 1928. A shrubby succulent with thick fleshy ovate leaves having rust-colored tomentum above and silver below, both getting dingy with age. Native to Madagascar.

77920. KALANCHOE LAXIFLORA Baker.

Mont Vatomavy (Andohahano), northwest of the village of Adena, Ambositra, at an altitude of about 6,000 feet. Similar to 77909, but the stems, petioles, and leaf margins have a decided reddish tinge.

77921. MARSDENIA VERRUCOSA (Bojer) Decaisne. Asclepiadaceae.

These seeds were obtained either at Itrobeka, Ampanihy, where the cuttings [No. 78441] were collected, or near Tongobory, where specimens were obtained.

77922 to 77928. MASCARENHASIA spp. Apocynaceae.

77922. MASCARENHASIA ARBORESCENS A. DC.

Hazondrano. Collected between Ambositra and Ihosy, July 27, 1928.

77923. MASCARENHASIA sp.

Ihosy, July 29, 1928. *Hazondrano.* A rubber-bearing shrub about 12 feet high, which is similar to No. 77928 but probably different.

77924. MASCARENHASIA sp.

Ihosy, September 20, 1928. This may be the same as No. 77923.

77925. MASCARENHASIA sp.

Majunga. This is not the true *kompitso.*

77926. MASCARENHASIA sp.

Ampanihy, September 3, 1928. *Kompitso.* This species is similar to and perhaps identical with No. 78455, cuttings from Behara. On casual examination it seems to be much like Mascarenhasia, except that the seed pods of this are only about 3 inches long. Possibly this is actually *Gonocrypta grevei,* which is supposedly the plant in this region known as *kompitso.* Considerable rubber is shipped out of Ampanihy each year, all of it being known as *kompitso,* but the natives said that this contains a mixture of rubbers from various plants.

77927. MASCARENHASIA sp.

Betioky, August 15, 1928. *Hazondrano.*

77928. MASCARENHASIA ARBORESCENS A. DC.

Majunga, July 29, 1928. *Hazondrano.* This shrub is identical with that of No. 78443.

77884 to 77951—Continued.

77929. MEGISTOSTEGIUM RETUSUM Hochr. Malvaceae.

South of Lake Tsimanampetsotsa. A tree, native to Madagascar, 12 to 15 feet high, with thick, tortuous branches, gray, wrinkled bark, clusters of broadly elliptic, whitish leaves at the ends of the branches, and axillary, solitary flowers about 2½ inches across.

77930. PACHYPODIUM sp. Apocynaceae.

Diego Suarez, Montagne des Français, October 7, 1928. A white-flowered, very thorny succulent ornamental, about 12 feet high, which is especially promising for rock gardens.

77931. RUBUS sp. Rosaceae.

Ambalavao, September 20, 1928. This, or a similar species, occurs throughout much of Madagascar.

77932. SECAMONE sp. Asclepiadaceae.

Ysalo, Ranohira, July 30, 1928. A rubber-bearing shrub.

77933. SENECIO ANTANDROI S. Elliott. Asteraceae.

Upper Valley of Fiherenana, September 19, 1928. A shrubby composite, native to Madagascar, with subcylindrical leaves nearly 2 inches long, and small flower heads in lax corymbs.

77934. SENECIO sp. Asteraceae.

Between Betroka and Ihosy, September 19, 1928. An ornamental, native to Madagascar.

77935. STEREOSPERMUM sp. Bignoniaceae.

Upper Valley of Fiherenana, August 1, 1928. An ornamental tree, about 18 feet high, native to Madagascar.

77936. STRYCHNOS sp. Loganiaceae.

Obtained in the market at Maevatanana, July 6, 1928.

77937. URENA LOBATA L. Malvaceae.

Madriovala, Valley of Betsiboka, July 5, 1928. *Tsikilenjy* (Malagasy); *pace* (French). An erect undershrub with cordate entire or lobed leaves 2 to 3 inches long, flowers an inch across, rose-red at the base, and small fruits armed with hooked bristles. The stems furnish a fiber used for bags and twine.

For previous introduction see No. 77325.

77938. VERNONIA sp. Asteraceae.

Amber Mountains, Diego Suarez, October 6, 1928. A plant about 6 feet high, with lilac flowers.

77939. (Undetermined.)

Between Betroka and Ihosy, September 19, 1928. A rubber-bearing climbing shrub.

77940. (Undetermined.)

Between Betroka and Ihosy, September 19, 1928. A rubber-bearing liane which is different from No. 77939.

77941. (Undetermined.)

Between Lake Tsimanampetsotsa and Itampolo, August 22, 1928. A rubber-bearing plant.

77884 to 77951—Continued.

77942. (Undetermined.)

Ampanihy, September 6, 1928. *Boka.* A rubber-bearing plant which furnishes a poor substitute for the good *kompitso* [No. 77926].

77943. (Undetermined.)

Ihosy, July 29, 1928. A rubber-bearing plant with large fruits. It may be the same plant as Nos. 78470 and 78472.

77944. (Undetermined.)

Amber Mountains, Diego Suarez, October 6, 1928. A yellow-flowered composite.

77945. (Undetermined.)

Amber Mountains, Diego Suarez, October 6, 1928. An ornamental blue-flowered subshrub about 3 feet high.

77946. (Undetermined.)

Diego Suarez, Montagne des Français, October 7, 1928. An ornamental shrub with orange flowers.

77947. (Undetermined.)

Ampanihy, September 7, 1928. *Alombora.* A leguminous tree about 45 feet high, the source of leety, of which a considerable quantity is shipped from Ampanihy to be used as a substitute for Japanese lac.

77948. HIBISCUS SURATTENSIS L. Malvaceae.

Anjouan, Mutsamudu, Comoro Islands. An ornamental malvaceous creeper with large orange and red flowers 4 inches in diameter.

77949. (Undetermined.)

La Table, Tullear, August 7, 1928.

77950. (Undetermined.)

Highway between Ihosy and Ambalavao, September 20, 1928. An ornamental shrub about 6 feet high, with orange-red flowers. It is very similar to No. 77951.

77951. WOODFORDIA FRUCTICOSA PUNCTATA (Buch.-Ham.) Koehne. Lythraceae.

Diego Suarez, Montagne des Français. An ornamental shrub about 6 feet high, with orange-red flowers. It is very similar to No. 77950.

77952. FICUS ROXBURGHII Wall. Moraceae. Fig.

From Orotava, Tenerife, Canary Islands. Plant presented by Juan Bolinaga, director of the Orotava Botanic Gardens, through Raleigh A. Gibson, American consul, Tenerife. Received July 14, 1928. Numbered in November, 1928.

A low spreading evergreen tree, native to India, 20 to 30 feet high, with broadly ovate-cordate entire or toothed leaves and russet-brown or purple fruits 2 inches in diameter.

For previous introduction see No. 77050.

77953 and 77954.

From Madagascar. Seeds collected by Charles F. Swingle, Bureau of Plant Industry, and Dr. Henri Humbert, University of Algiers, Algeria. Received in November, 1928.

77953 and 77954—Continued.

77953. (Undetermined.)

Upper Valley of Fiherenana. An ornamental, about 3 feet high, belonging to the mint family.

77954. (Undetermined.)

Southern Madagascar. An oil plant.

77955 to 77958.

From Manila, Philippine Islands. Bulbs presented by H. E. Stafford. Received November 27, 1928.

77955. HIPPEASTRUM sp.

Blue Nile.

77956. HIPPEASTRUM sp.

Iday. Double scarlet.

77957. HAEMANTHUS MULTIFLORUS Martyn.

Small scarlet.

77958. HIPPEASTRUM sp.

77959. MUCUNA BENNETTI F. Muell. Fabaceae.

From Urika, Port Moresby, New Guinea. Seeds presented by George Moir Smith, London Missionary Society. Received July 13, 1928. Numbered in December, 1928.

D'Albertis creeper. A climbing vine with leaves made up of three ovate-lanceolate glabrous leaflets 3 to 5 inches long, and bearing short racemes of large showy scarlet flowers. It grows in New Guinea on the banks of rivers or in swampy places.

77960 to 77973.

From Briagolong, Gippsland, Victoria, Australia. Seeds presented by R. R. Penny, through C. R. Tillotson, Forest Service. Received November 14, 1928.

77960 to 77963. ACACIA spp. Mimosaceae.

77960. ACACIA GLAUCESCENS Willd.

A tree, native to Australia, up to 50 feet high, with flowers in axillary spikes 1 to 2 inches long, and branchlets and phyllodes covered with an ashy gray pubescence.

For previous introduction see No. 75591.

77961. ACACIA LONGIFOLIA FLORIBUNDA (Vent.) F. Muell.

A shrub or small tree, native to Australia.

77962. ACACIA PRUINOSA A. Cunn.

An ornamental shrub or tree, native to Australia.

77963. ACACIA SPECTABILIS A. Cunn.

Mudgee acacia. An ornamental shrub or tree native to Australia.

77964. BANKSIA COLLINA R. Br. Proteaceae.

An evergreen shrub up to 12 feet high, native to Australia, with tomentose branchlets, linear leaves 2 to 3 inches long, white beneath, and terminal spikes of large greenish-yellow flowers.

77965. DAVIESIA LATIFOLIA R. Br. Fabaceae.

Wild hop. A glabrous shrub up to 5 feet high native to Australia, with coriaceous ovate-lanceolate entire leaves 3 inches long and short racemes of orange-yellow, pea-shaped flowers.

77966 to 77968. EUCALYPTUS spp. Myrtaceae.

77966. EUCALYPTUS CINEREA F. Muell.

Silver stringybark. A moderate-sized tree, native to Australia, with whitish-brown bark, opposite cordate leaves 2 to 4 inches long, and terminal corymbs of small flowers, followed by small subglobose fruits.

77967. EUCALYPTUS MUELLERIANA Howitt. **Yellow stringybark.**

A tree, native to Australia.

For previous introduction see No. 38730.

77968. EUCALYPTUS sp.

An ornamental tree, native to Australia, with large red flowers.

77969. GOODIA LOTIFOLIA Salisb. Fabaceae.

An ornamental shrub, native to Australia, with three ovate leaflets and loose racemes of purple-spotted yellow flowers.

For previous introduction see No. 30017.

77970. KENNEDIA MONOPHYLLA Vent. (*Hardenbergia monophylla* Benth.). Fabaceae.

Purple coral pea. A vine, native to Australia, with single lanceolate leaflets, terminal panicles, and axillary racemes of flowers ranging from white through rose to purple.

For previous introduction see No. 76920.

77971. LIVISTONA AUSTRALIS (R. Br.) Mart. Phoenicaceae. **Australian fan palm.**

Cabbage tree palm. A tall slender palm, 100 to 130 feet high and 12 to 18 inches in diameter. The moderately hard wood is light colored and is occasionally used for light construction. The leaves are used for baskets; and the unexpanded fronds, after being dipped in boiling water, are shredded and the fiber used in making hats resembling the Panama variety.

For previous introduction see No. 45092.

77972. PROSTANTHERA ROTUNDIFOLIA R. Br. Menthaceae.

Purple mint bush. A bushy shrub, native to Australia, which is 7 feet high, with orbicular leaves less than half an inch long and small purplish 2-lipped flowers in close terminal racemes.

77973. RICINOCARPUS PINIFOLIUS Desf. Euphorbiaceae.

Bedding bush. A shrub 2 to 3 feet high, with linear sharp-pointed leaves having the edges rolled into the midrib, terminal clusters of small flowers, and globular spiny capsules. Native to Australia.

77974. CORCHORUS CAPSULARIS L. Tiliaceae. **Jute.**

From Monte Christi, Dominican Republic. Seeds presented by Theodore Harris.

77974—Continued.

through L. H. Dewey, Bureau of Plant Industry. Received November 30, 1928.

Bombai. A variety which was originated at the experiment station at Decca, India.

77975 to 77977. MAGNOLIA CAMPBELLII Hook. f. and Thoms. Magnoliaceae.

From Darjiling, India. Seeds presented by J. E. Leslie, Curator, Lloyd Botanic Garden. Received November 30, 1928.

A beautiful deciduous magnolia from the Himalayas, where it ascends to 8,000 feet above sea level. It reaches a height of 80 feet, has very dark bark, large elliptical dark-green leaves, and flowers 10 inches in diameter. This magnolia has flowered freely in southern France and Italy.

For previous introduction see No. 61771.

77975. A red-flowered variety.

77976. A pink-flowered variety.

77977. A white-flowered variety.

77978. ANANAS SATIVUS (L.) Schult. f. Bromeliaceae. **Pineapple.**

From Grenada, British West Indies. Cuttings presented by W. O'Brien Donovan, agricultural officer in charge, Department of Agriculture. Received December 3, 1928.

Black Antigua.

77979. BRADBURYA PUBESCENS (Benth.) Kuntz (*Centrosema pubescens* Benth.). Fabaceae.

From Peradeniya, Ceylon. Seeds purchased from the manager of the publication depot and central seed store of the Department of Agriculture. Received December 3, 1928.

A tropical American leguminous vine with trifoliolate leaves and small yellowish flowers, which is used as a cover crop.

For previous introduction see No. 77293.

77980. MUSA GLAUCA Roxb. Musaceae. **Banana.**

From Medan, Sumatra. Seeds presented by J. A. Lörzing. Received July 7, 1928. Numbered in November, 1928.

An Indian banana with a trunk 10 to 12 feet high, short-petioled lanceolate leaves 4 to 5 feet long, and a drooping spike of small flowers and inedible fruits which are hidden by the large bracts.

For previous introduction see No. 67719.

77981. CALAMUS ORNATUS PHILIPPINENSIS Beccari. Phoenicaceae. **Palm.**

From Leyte, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received November 17, 1928.

Kalapi. A spiny climbing pinnate-leaved palm producing edible ellipsoid fruits 1½ inches long with pulp which cooks up into a sirup having a fine flavor.

77982 and 77983. CANARIUM OVATUM Engler. Balsameaceae. **Pili nut.**

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received December 3, 1928.

77982 and 77983—Continued.

A tree at times 130 feet high, with dark-green pinnate leaves over a foot long and triangular-pointed, brown, usually thick-shelled nuts inclosing a kernel which is covered with a thin shining black skin. The nuts are excellent when eaten raw or roasted, and are of high food value. Pili nuts as grown in the Philippine Islands are very variable in quality. These two varieties have such thin shells they may be cracked with a nutcracker.

For previous introduction see No. 61253.

77982. No. 1. 77983. No. 2.

77984. GOSSYPIUM OBTUSIFOLIUM AFRICANUM Watt. Malvaceae. **Cotton.**

From Madagascar. Seeds collected by Charles F. Swingle, Bureau of Plant Industry, and Dr. Henri Humbert, University of Algiers, Algeria. Received November, 1928.

No. 4429. Mananika, Valley of Betsiboka. A half-woody shrub, about 6 feet high, which differs from the Indian form in having more copious and finer wool. The flowers are yellow, changing to reddish. Native to tropical Africa.

For previous introduction see No. 77323.

77985 to 77987.

From Mount Silinda, Southern Rhodesia, Africa. Seeds presented by Dr. W. L. Thompson, American Board Mission in South Africa. Received November 15, 1928.

77985 and 77986. ELEUSINE CORACANA (L.) Gaertn. Poaceae. **Ragi.**

For previous introduction see No. 73172.

77985. *Mgoza.* This variety grows more rapidly than *Giant mgoza* [No. 77986.]

77986. *Giant mgoza.* A variety which grows 3 feet high and needs good soil, tropical weather, and a fairly long season.

77987. LOVOA SWYNNERTONII Baker f. Meliaceae.

Brown mahogany. A valuable Rhodesian timber tree, reaching a height of 200 feet and a diameter of 8 feet.

For previous introduction see No. 35459.

77988. GOSSYPIUM HERBACEUM L. Malvaceae. **Cotton.**

From Persia. Seeds obtained through the Turkestan Plant Breeding Station, Tashkent, by J. J. Thornber, College of Agriculture and Agricultural Experiment Station of the University of Arizona, Tucson. Received November 27, 1928.

Panbe.

77989 to 77992. LYCORIS spp. Amaryllidaceae.

From Yokohama, Japan. Bulbs purchased from the Yokohama Nursery Co. Received December 6, 1928.

77989. LYCORIS AUREA (L'Her.) Herbert.

A Chinese bulbous perennial with sword-shaped leaves which die down before the appearance of the golden-yellow

77989 to 77992—Continued.

flowers; the latter are 3 to 4 inches across, borne in an umbel on a scape 1 to 3 feet high.

For previous introduction see No. 77586.

77990. LYCORIS RADIATA (L'Her.) Herbert.

A Japanese bulbous perennial with bright-red flowers.

For previous introduction see No. 45527.

77991. LYCORIS SANGUINEA Maxim.

A Japanese bulbous perennial with linear leaves which die down before the red flowers appear in an umbel on a scape 12 to 18 inches high.

For previous introduction see No. 77587.

77992. LYCORIS SQUAMIGERA Maxim.

A Japanese bulbous perennial with linear leaves which die down before the appearance of the rosy lilac fragrant flowers.

For previous introduction see No. 77588.

77993 to 77995.

From China. Seeds collected by J. F. Rock, National Geographic Society, Washington, D. C. Received November 19, 1928.

77993. PRUNUS sp. Amygdalaceae.

No. 16139. A very common species on the hillsides of Muli, below Muli Monastery, southwestern Szechwan, at altitudes between 9,000 and 9,600 feet. It is a shrub 6 to 8 feet high, branching from the base, with long whiplike branches. The large white flowers, very ornamental when in full bloom, are borne during May, and the oval red fruits are produced in August.

77994. PRUNUS sp. Amygdalaceae.

No. 17227. A species found wild in Yungning Territory, east of the Yangtze River, on the slopes of Gouwua, Yunnan, at an altitude of 9,000 feet. It is a tree 15 to 20 feet high, with oblong-serrate leaves and small edible brick-red fruits which are produced during May. It may prove to be a good stock plant.

77995. RUBUS sp. Rosaceae.

No. 17278. A species found in forests of fir and larch at an altitude of 13,500 feet on the snow mountain called La Chou Chou K'ha, south of Chungtien, September, 1928. It is a shrub 3 feet high, producing fairly large orange-red to red fruits which are edible and sweet.

77996. FICUS BELLENGERI C. Moore. Moraceae. **Fig.**

From Sydney, New South Wales, Australia. Seeds presented by Dr. G. P. Darnell-Smith, Director, Botanic Gardens. Received November 23, 1928.

A tall tree, native to New South Wales, with leathery ovate leaves 6 inches long, dark green above and light green beneath, and reddish fruits 2 to 3 inches in diameter.

77997. CORYNOCARPUS LAEVIGATA Forst. Corynocarpaceae. **Karaka.**

From Lisbon, Portugal. Seeds presented by Joaquim Rasteiro, Instituto Superior de Agronomia. Received December 4, 1928.

77997—Continued.

An ornamental tree, native to New Zealand, with a round crown and oblong evergreen leaves up to 7 inches in length. The small white flowers are in erect panicles about 4 inches high, and the oblong orange fruits are about an inch long. The flesh of the fruits is extremely poisonous, but the kernel is not; it was one of the staple articles of diet of the Maoris, the original inhabitants of New Zealand.

For previous introduction see No. 77184.

77998. DIGITARIA ERIANTHA STOLONIFERA Stapf. Poaceae. **Grass.**

From Pretoria, Union of South Africa. Plants presented by Dr. I. B. Pole Evans, chief of the Division of Botany, Horticulture, and Entomology of the Department of Agriculture, through H. N. Vinall, Bureau of Plant Industry. Received October 30, 1928.

Woolly finger grass, a native of South Africa, is essentially a dry-land grass; it prefers a loose sandy soil, but is also found in the hard red soil and occasionally in black turf. It does not do well in localities that have very moist winter conditions and does not take kindly to irrigation, except in localities where the rainfall is very low. This Digitaria is very palatable to stock of all kinds, equally so in winter and summer. In the summer it makes a mass of succulent green herbage and provides sufficient moisture and nourishment for stock; in the winter it becomes dried and sun cured, but the nourishment is still there, and, with the addition of a few cactus leaves for moisture, animals will keep in good condition on it throughout the dry frosty season.

77999. AMPELOCISSUS MARTINI Planch. Vitaceae.

From Mindoro, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received December 5, 1928.

Variety *Mindorensis*. An ornamental vine, native to the Philippine Islands, which should do well in the sandy soils in southern and central Florida. It makes a large tuberous root, and the vines, which are covered with stiff hairs, die annually after fruiting. The grapelike fruits make excellent jelly.

78000 to 78002. AVENA SATIVA L. Poaceae. **Oats.**

From Cambridge, England. Seeds presented by F. C. Hawkes, assistant director, National Institute of Agricultural Botany. Received December 4, 1928.

78000. No. 830. *Plentiful.*

78001. No. 1038. *Viking.*

78002. No. 1052. *Quite Content.*

78003 to 78031. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

From Japan. Seeds obtained by R. K. Beattie, Bureau of Plant Industry. Received October and November, 1928.

Wild varieties unless otherwise stated.

78003. No. 703. Collected in Shizukuishi Mura, Iwate Gun, Iwate Ken, by Saichi Tanito, and forwarded by the Morioka National District Forest Bureau.

78003 to 78031—Continued.

78004. Nos. 704 to 711. Obtained at Takizawa, Takizawa Mura, Iwate Gun, Iwate Ken, through the Iwate Ken forester at Morioka.

78005. Nos. 712 and 715. From the Agricultural Association at Yatomi Mura, Gujo Gun, Gifu Ken.

78006. No. 713. Collected by Morisaburo Sasaki at Nakui Dake, Kaminakui, Nakui Mura, Sannohe Gun, Aomori Ken.

78007. No. 714. Collected by Morisaburo Sasaki at Nakui Dake, Kaminakui, Nakui Mura, Sannohe Gun, Aomori Ken.

78008. Nos. 716 and 717. Collected by Yamazaki Eirinsho in the Akasai National Forest at Okutani Mura Hara, Soshi Gun, Hyogo Ken.

78009. No. 718. Collected at Shimohara Mura, Masuta Gun, Gifu Ken, and sent by the Agricultural Association.

78010. No. 719. Collected by Morisaburo Sasaki in the forest belonging to the Tsugaru Daimyo, Hyakuzawa Mura, Naka Tsugaru Gun, Aomori Ken.

78011. No. 720. Collected by Morisavuro Sasaki in the Iwakiyama National Forest, Takaoka, Hyakuzawa Mura, Naka Tsugaru Gun, Aomori Ken.

78012. No. 721. Sent by Nichihara Eirinsho from Nichihara, Shimaie Ken.

78013. No. 721–A. Collected by Morisaburo Sasaki in the Iwakiyama National Forest, Takaoka, Hyakuzawa Mura, Naka Tsugaru Gun, Aomori Ken.

78014. No. 721–B. Sent by Nichihara Eirinsho from Nichihara, Shimaie Ken.

78015. No. 722. Collected at Ogura Yama, Chitose Mura, Naka Tsugaru Gun, Aomori Ken, and sent by Morisaburo Sasaki.

78016. No. 723. Collected at Orikasa Mura, Shimo Hei Gun, Iwate Ken, and sent by Gisaburo Takenchi, Director of Miyako Eirinsho, Iwate Ken.

78017. No. 724. Collected at Mizu Kiyo Daki, Nango Mura, Hirashi Usuki Gun, Miyazaki Ken, and sent by Mimitru Eirinsho, Miyazaki Ken.

78018. No. 725. Collected in Toyomane, Shimo Hei Gun, Iwate Ken, and sent by Miyako Eirinsho, Iwate Ken.

78019. No. 726. Sent by Shinsaburo Suda, Ginyose, Kyoto. A cultivated variety good for stock.

78020. No. 727. Sent by Shinsaburo Suda, Shino, Shino Mura, Minami Kuwada Gun, Kyoto Fu. *Imakita.* A cultivated variety good for stock.

78021. No. 728. Collected in Nishi Yasuniwa, Gosho Mura, Iwate Gun, and sent from Morioka Eirinsho.

78022. No. 729. Collected in the University Forest, Wakayama Ken, and sent by Doctor Ichikawa, Kyoto Imperial University.

78023. No. 730. Collected at Bonju Zau, Nozato, Nagahashi Mura, Kita Tsugaru Gun, Aomori Ken, and sent by Morisaburo Sasaki.

78024. No. 731. Sent by the Funatsucho Agricultural Association, Yoshi Gun, Gifu Ken.

78003 to 78031—Continued.

78025. No. 731–B. Sent by the Funatsucho Agricultural Association, Yoshi Gun, Gifu Ken.

78026. No. 732. A purely native Hokkaido variety collected in Kamidai, Mori Machi, Kayabe Gun, Oshima Province, Hokkaido, and sent by Tetsuyo Hironaka, Hakodate, Oshima. The local name is Kayabe guri.

78027. No. 733. A purely native Hokkaido variety collected at Kamidai, Mori Machi, Kayabe Gun, Oshima Province, Hokkaido, and sent by Tetsuyo Hironaka, Kakodate, Oshima. The nuts are larger than those of No. 732 [No. 78026], otherwise there is no apparent difference.

78028. No. 734. Sent by Morisaburo Sasaki, Hiroto, Fukaura Mura, Nishi Tsugaru Gun, Aomori Ken.

78029. No. 735. Collected in the No Kami National Forest, Sannai Zai, Iwami Sannai Mura, Kawabe Gun, Akita Ken, and sent by Cho Mishima, of Akita Eirinsho.

78030. No. 736. Collected in the No Kami National Forest, Sannai Zai, Iwami Sannai Mura, Kawabe Gun, Akita Ken, and sent by Cho Mishima, of Akita Eirinsho.

78031. No. 734–A. Sent by Morisaburo Sasaki, Hiroto, Fukaura Mura, Nishi Tsugaru Gun, Aomori Ken.

78032 and 78033.

From the Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received November 27, 1928.

78032. SESBANIA CANNABINA (Retz.) Poir. Fabaceae.

Jore-tore. From Manila. A tall upright leguminous herb growing in wet lands. It may have possibilities as a green-manure crop.

78033. (Undetermined.)

From Mindoro.

78034. MALUS LEMOINEI Hort. Malaceae.

From Woodbridge, England. Plants purchased from R. C. Notcutt. Received December 10, 1928.

An attractive flowering crab with dark bronze-colored foliage and single deep crimson flowers which are freely produced.

78035. LAVANDULA SPICA L. Menthaceae. **Lavender.**

From Montbrun, Drôme, France. Seeds presented by H. Reynaud & Sons through Fritzsche Bros., New York, N. Y. Received December 7, 1928.

Genuine French lavender.

78036. MESEMBRYANTHEMUM ANGULATUM Thunb. Aizoaceae.

From Paris, France. Seeds presented by Prof. D. Bois, Paris Museum of Natural History. Received December 5, 1928.

A herbaceous procumbent succulent with angular stems and branches, which is native to South Africa. The leaves are op-

78036—Continued.

posite on the stem, alternate on the branches, and are covered with minute white papillae.

For previous introduction see No. 75853.

78037. VIBURNUM PAUCIFLORUM Raf. Caprifoliaceae.

From Alaska. Obtained from Charles H. Flory, Commissioner of Alaska, through G. M. Darrow, Bureau of Plant Industry. Received December 7, 1928.

Collected near Sea Beach, Lynn Canal, Tongass National Forest, in October, 1928. A straggling Alaskan shrub, 3 to 5 feet high, with suborbicular 3-lobed leaves, cymes of white flowers, and edible red fruits. It is closely related to the European cranberrybush, *V. opulus*, and to the American cranberrybush, *V. trilobum*.

78038. EREMOCHLOA ZEYLANICA Hack. Poaceae. **Grass.**

From Peradeniya, Ceylon. Seeds presented by the Director, Department of Agriculture. Received December 11, 1928.

A perennial grass, native to Ceylon, 12 to 18 inches high, with narrow leaves and slender spikes. Of possible value for lawns and pastures.

78039. CARICA PAPAYA L. Papayaceae. **Papaya.**

From Nairobi, Kenya Colony, Africa. Seeds presented by H. E. A. Durham, office of the chief accountant, General Post Office, through L. W. Kephart, Bureau of Plant Industry. Received December 11, 1928.

Seeds taken from a fruit weighing 5 pounds, the approximate weight of each fruit on the tree. The tree has been grown in the coldest place in this vicinity, so that the seeds would have the best chance for success in the United States.

78040 to 78111.

From Orleans, France. Plants purchased from E. Turbat & Co. Received November 17, 1928.

78040 to 78050. BUXUS spp. Buxaceae. **Box.**

78040. BUXUS BALEARICA Willd.

An evergreen shrub, 10 to 15 feet high, native to the Balearic Islands. The oblong leaves are 1 to 2 inches long and more than half an inch wide.

For previous introduction see No. 76557.

78041 and 78042. BUXUS MICROPHYLLA JAPONICA (Muell. Arg.). Rehder. **Japanese box.**

An evergreen shrub, native to Japan, up to 6 feet high with spreading branches and light-green, rounded-obovate cuneate leaves an inch or less long.

78041. Variety *aurea*.

78042. Variety *rotundifolia macrophylla*.

78043 to 78050. BUXUS SEMPERVIRENS L. **Common box.**

78043. *Angustifolia.* Lanceolate-oblong leaves.

78044. *Aurea variegata.* Leaves variegated with yellow or entirely yellow.

78040 to 78111—Continued.

78045. *Elegantissima variegata.*

78046. *Glauca.* Leaves glaucous, oval.

78047. *Handsworthii.* Shrub of upright habit with large dark-green leaves.

78048. *Navicularis.*

78049. *Pyramidalis variegata.* Upright pyramidal habit, with variegated foliage.

78050. *Salicifolia elata.* Spreading habit and narrow willowlike leaves.

78051 to 78066. CEANOTHUS spp. Rhamnaceae.

78051. CEANOTHUS sp.

Albert Pittet. Pink flowers.

78052. CEANOTHUS sp.

Albus plenus.

78053. CEANOTHUS sp.

Bijou. Clear lilac pink.

78054. CEANOTHUS sp.

Ceres. Pink flowers.

78055. CEANOTHUS sp.

Coquetterie. Brilliant rose-carmine flowers.

78056. CEANOTHUS sp.

George Simon. Lilac-rose flowers.

78057. CEANOTHUS sp.

Gladiateur.

78058. CEANOTHUS sp.

Gloire de Plantières. Azure-blue flowers.

78059. CEANOTHUS sp.

Gloire de Versailles. Deep azure-blue flowers.

78060. CEANOTHUS sp.

Ibis rose.

78061. CEANOTHUS sp.

Indigo. Indigo-blue flowers.

78062. CEANOTHUS sp.

Marie Simon. Flesh-colored flowers.

78063. CEANOTHUS sp.

Perle rose. Carmine-rose flowers.

78064. CEANOTHUS sp.

Pinguet Guindon. A vigorous sort with erect branches, large green leaves, and dense pyramidal trusses of dark carmine-lilac flowers which have deep-carmine pedicels.

78065. CEANOTHUS sp.

Richesse. Pure-rose flowers.

78066. CEANOTHUS sp.

Roseus carmineus. Carmine-pink flowers.

78067 to 78076. CHAENOMELES LAGENARIA (Lois.) Koidz. (*Cydonia japonica* Pers.). Malaceae. **Japan quince.**

78067. *Alba Plena.*

78068. *Boule de Feu.*

78040 to 78111—Continued.

78069. *Cardinalis.*

78070. *Moerlosei.*

78071. *Pyginea.*

78072. *Rosea grandiflora.*

78073. *Rubra grandiflora.*

78074. *Sanguinea.*

78075. *Simonsi.*

78076. *Umbrillicata.*

78077 to 78082. DEUTZIA spp. Hydrangeaceae.

78077. DEUTZIA VILMORINAE Lemoine.

A shrub 4 to 6 feet high, of vigorous growth, with pure-white flowers nearly an inch across in loose clusters, suggestive of some of the smaller-growing kinds of Philadelphus, a resemblance which is increased by the lateness of its flowering period. It is native to China.

For previous introduction see No. 49944.

78078. DEUTZIA sp.

Crenata magnifica. Pure-white, double flowers in short dense panicles nearly 2 inches long.

78079. DEUTZIA sp.

Discolor elegantissima. Open rosy white flowers about three-fourths of an inch across, in many-flowered loose corymbs.

78080. DEUTZIA sp.

Discolor floribunda. Flowers white, pink on the outside, in rather dense upright panicles.

78081. DEUTZIA sp.

Discolor grandiflora. Buds pink and flowers rosy white; similar to the preceding, but with looser panicles.

78082. DEUTZIA sp.

Discolor major. Large white flowers, rose tinged on the outside, about an inch across.

78083. JASMINUM STEPHANENSE Javit. Oleaceae. **Jasmine.**

A vigorous climbing shrub with terminal racemes of fragrant pink flowers. It is a hybrid between *Jasminum officinale* and *J. beesianum.*

78084. LIGUSTRUM HENRYI Hemsl. Oleaceae. **Privet.**

An ornamental evergreen shrub up to 12 feet high, with dark-green rounded-oval leaves 2 inches or less long, small white flowers in a pyramidal cluster, and blue-black berries. It is native to China.

78085 to 78106. PHILADELPHUS spp. Hydrangeaceae.

78085. PHILADELPHUS sp.

Albatre. Very floriferous; pure-white flowers on gracefully arching stems.

78086. PHILADELPHUS sp.

Argentine. An erect shrub with fragrant, very double, white flowers 2 inches or more across.

78040 to 78111—Continued.

78087. PHILADELPHUS sp.

Banniere. Semidouble, snow-white flowers 2½ inches across.

78088. PHILADELPHUS sp.

Belle Etoile. A vigorous variety bearing an abundance of large, well-expanded, sweet-scented flowers which have milk-white petals with a purple blotch. This is said to be the showiest and hardiest of the purple-eyed varieties.

78089. PHILADELPHUS sp.

Boule d'Argent. Double, fragrant flowers.

78090. PHILADELPHUS sp.

Bouquet Blanc. A tall shrub with large leaves and large dense compact clusters of double or semidouble flowers.

78091. PHILADELPHUS sp.

Dame Blanche. Numerous small panicles of creamy white, semidouble, fragrant flowers.

78092. PHILADELPHUS sp.

Enchantement. A variety bearing dense panicles of double white flowers of the most striking appearance on long erect branches.

78093. PHILADELPHUS sp.

Gerbe de Neige. Very fragrant single flowers.

78094. PHILADELPHUS sp.

Girandole. Double white flowers.

78095. PHILADELPHUS sp.

Glacier. Double white flowers in erect compact clusters, borne on stout erect stems.

78096. PHILADELPHUS sp.

Manteau d'Hermine. Double flowers.

78097. PHILADELPHUS sp.

Mont-Blanc. Single fragrant flowers, borne in great profusion.

78098. PHILADELPHUS sp.

Norma. Large semidouble flowers, almost completely covering the long slender arching branches.

78099. PHILADELPHUS sp.

Nuage rose. Flowers very large, white with rose-tinted center, sweetly fragrant.

78100. PHILADELPHUS sp.

Pavillon Blanc. Large single white flowers.

78101. PHILADELPHUS sp.

Perle Blanche.

78102. PHILADELPHUS sp.

Purpureo maculatus. A dwarf bush with large single flowers, white with a large rosy purple spot at the base of each petal.

78103. PHILADELPHUS sp.

Pyramidal. Double white flowers on erect branches.

78040 to 78111—Continued.

78104. PHILADELPHUS sp.

Rosace. An erect bush, with slender branches and double creamy white flowers, becoming pure white.

78105. PHILADELPHUS sp.

Sybille. Large cup-shaped flowers, white spotted pale pink at the base, on long curved branches.

78106. PHILADELPHUS sp.

Voie Lactée. Very large round, glossy, snow-white flowers.

78107. SARCOCOCCA HOOKERIANA (Hook.) Baill. Buxaceae.

An evergreen shrub 6 to 8 feet high, native to Afghanistan, with coriaceous lanceolate entire leaves 2 to 4 inches long, axillary racemes of small whitish fragrant flowers, and subglobose black fruits.

78108 to 78110. SKIMMIA spp. Rutaceae.

78108. SKIMMIA FOREMANII ROGERSII Rehder.

A rather small compact evergreen shrub with deep-green lanceolate leaves and small crimson berries. Of garden origin.

78109. SKIMMIA JAPONICA Thunb. (*S. oblata* C. T. Moore).

A dense evergreen shrub, 4 feet or less high, native to Japan. The leaves, crowded at the ends of the branches, are elliptic-oblong in shape, and the small yellowish and white flowers are followed by bright-red berries.

For previous introduction see No. 71985.

78110. SKIMMIA REEVESIANA RUBELLA (Carr.) Rehder (*S. rubella* Carr.).

This Chinese species is similar to *Skimmia japonica*, but is more dwarfed in habit. The dark-green leaves are narrow and acuminate, the white flowers are in oblong panicles, and the fruits are dull crimson. The variety differs from the species in having reddish peduncles, pedicels, and buds.

For previous introduction see No. 73448.

78111. SYRINGA SWEGINZOWII Koehne and Ling. Oleaceae. **Chengtu lilac.**

Variety *superba*. An attractive hardy lilac, about 10 feet high, native to western China. The dark-green, oval leaves are 2 to 4 inches long, and the fragrant, rosy lilac flowers are borne in June in terminal panicles up to 10 inches long.

For previous introduction see No. 63584.

78112 to 78160.

From Nancy, France. Plants purchased from V. Lemoine & Son. Received November 22, 1928.

78112. ABELIA GRAEBNERIANA Rehder. Caprifoliaceae.

A semideciduous shrub about 3 feet high, with oval or oval-oblong acuminate leaves 1 to 2 inches long, and bell-shaped flowers, an inch long, pink with yellow throats. Native to western China.

78113 to 78117. BERBERIS spp. Berberidaceae. **Barberry.**

78112 to 78160—Continued.

78113. BERBERIS AURICOMA Hort.

A hybrid between *Berberis vulgaris* and a choice variety of *B. thunbergii*, previously offered under the wrong name of *B. japonica flore luteo*. It is said to be a lovely shrub covered in the spring with a profusion of bright-yellow flowers.

78114. BERBERIS BREVIPANICULATA C. Schneid. **Short-cluster barberry.**

A deciduous species, native to western China, forming a dense erect bush with glaucous oblong leaves, graceful panicles, an inch long, of small pale-yellow flowers, and rosy red berries.

For previous introduction see No. 76556.

78115. BERBERIS GIRALDII Hesse.

A species with large deciduous bronze-red leaves, long drooping clusters of deep-yellow flowers, and compact bunches of scarlet berries. Native to north-central China.

For previous introduction see No. 66684.

78116. BERBERIS LEPTOCLADA Diels.

A low deciduous ornamental shrub of distinct glaucous coloring, with ellipsoid reddish berries. Native to China.

78117. BERBERIS sp.

Tengyueh. A species, as yet unidentified, collected near Tengyueh, Yunnan, China.

78118. CERCIS RACEMOSA Oliver. Caesalpiniaceae. **Redbud.**

A remarkable ornamental tree, native to China, with long pendulous racemes of silvery rose flowers.

78119 to 78121. CLEMATIS GRATA Wall. Ranunculaceae.

These hardy varieties were raised from seeds saved on *Clematis grata* (*Jouiniana*) without any artificial cross, and remind one much more of *Clematis davidiana* than of the plant from which they proceed. They have lost the character of climbers. The flowers, produced abundantly during September, are of a more or less vivid blue.

78119. *Campanile.* A handsome variety with tall panicles of hyacinth-shaped light azure-blue flowers.

78120. *Côte d'Azur.* A variety with glossy foliage, as in *Clematis tubulosa*, and panicles of deep azure-blue flowers produced in the form of small pyramids along all the branches.

78121. *Oiseau bleu.* A variety with small foliage. The upper part of the clump is covered with very light and elegant dichotomous panicles of flowers, azure lilac fading to pale pink lilac, which open in the shape of hyacinths, then take a starlike form.

78122 to 78141. DEUTZIA spp. Hydrangeaceae.

78122. DEUTZIA TAIWANENSIS (Maxim.) C. Schneid.

An attractive deciduous shrub, with slender branches, native to the moun-

78112 to 78160—Continued.

tains of Taiwan. The white or pinkish-white flowers, with conspicuous golden-yellow stamens, are in graceful racemes.

For previous introduction see No. 62707.

78123. DEUTZIA sp.

Crenata eburnea. A variety raised from *Deutzia crenata candidissima plena* crossed by *D. vilmorinae,* with graceful clusters of single white flowers.

78124. DEUTZIA sp.

Crenata eminens. A variety with tall erect branches, dark-green foliage, and large pyramidal panicles of handsome flowers with reflexed, glistening white petals.

78125. DEUTZIA sp.

Crenata erecta. A variety raised from *Deutzia crenata candidissima plena* crossed by *D. vilmorinae,* with upright branches and handsome pyramidal clusters of large single milk-white flowers.

78126. DEUTZIA sp.

Crenata formosa. A variety with large full double white flowers which have wrinkled and reflexed petals.

78127. DEUTZIA sp.

Crenata gracillima. A variety with loose panicles of large flowers which have slightly fringed white petals and pale-yellow anthers.

78128. DEUTZIA sp.

Crenata latiflora. The upright panicles contain 18 to 20 single white flowers which are 1½ inches in diameter.

78129. DEUTZIA sp.

Crenata longipetala. A hybrid of second generation from *Deutzia crenata* and *D. vilmorinae.* Its habit seems to indicate a possible consanguinity with *D. gracilis.* It forms a tuft of erect stems, with narrow leaves and crowded panicles of large flowers which have five long fringed pure-white petals.

78130. DEUTZIA sp.

Crenata magnifica. A variety with an abundance of handsome pure-white well-expanded flowers.

78131. DEUTZIA sp.

Crenata mirabilis. A hybrid of second generation from *Deutzia crenata* and *D. vilmorinae.* It is of very vigorous growth, with pure milk-white upright flowers, of the largest size, borne in enormous pyramidal panicles on long branches.

78132. DEUTZIA sp.

Crenata staphyleoides. A variety with large white flowers of unusual breadth, which remind one of the blossoms of Staphylea.

78133. DEUTZIA sp.

Crenata suspensa. The numerous white flowers, with reflexed petals, are borne on long drooping sprays and completely hide the foliage.

78112 to 78160—Continued.

78134. DEUTZIA sp.

Discolor arcuta. A hybrid between *Deutzia scabra* and *D. purpurascens.* The well-expanded pure-white flowers are borne on long arched branches.

78135. DEUTZIA sp.

Discolor candida. A cross between *Deutzia scabra* and a hybrid of *D. lemoinei,* bearing an abundance of large snow-white paniculate flowers.

78136. DEUTZIA sp.

Discolor conspicua. A hybrid between *Deutzia sieboldiana* and *D. purpurascens,* forming a clump of long arched branches with short corymbs of very pale-pink buds which change to a lustrous white when they open into well-expanded flowers.

78137. DEUTZIA sp.

Discolor fasciculata. A hybrid between *Deutzia scabra* and *D. purpurascens.* It makes a rounded bush bearing pale-pink flowers, with a crown of yellow stamens, on long arched branches.

78138. DEUTZIA sp.

Contraste. A superb variety raised from a cross of *Deutzia longifolia purpurea,* bearing beautiful panicles of large flowers with reflexed slightly fringed mauve-pink petals with a median purple streak on the outside.

78139. DEUTZIA sp.

Mont-Rose. A handsome novelty raised by crossing a pink form of *Deutzia longifolia* with *D. discolor purpurascens.* It forms a very graceful bush with large trusses of well-expanded mauve-pink flowers.

78140. DEUTZIA sp.

Magicien. A most showy variety likewise raised from a cross of *Deutzia longifolia,* with panicles of very large flowers whose waved and fringed petals are mauve pink, edged with white, and purplish underneath.

78141. DEUTZIA sp.

Longifolia purpurea. A tall form with deep-pink flowers.

78142. DIERVILLA sp. Caprifoliaceae. Weigela.

Féerie. A shrub bearing an abundance of upright trusses of large self rose-pink flowers, during the middle of May, which completely hide the foliage.

78143. DIERVILLA sp. Caprifoliaceae. Weigela.

Idéal. A beautiful shrub bearing, during May, erect or horizontal panicles of medium-sized flowers which are carmine rose with bright carmine on the outside.

78144 to 78146. ILEX spp. Aquifoliaceae. Holly.

78144. ILEX FARGESII Franch.

A shrub with black bark, dull-green, narrowly oblong spiny evergreen leaves about 5 inches long, and globose red berries in small axillary clusters.

For previous introduction see No. 62723.

78112 to 78160—Continued.

78145. ILEX PERNYI VEITCHII (Veitch) Rehder.

A large-leaved form of *Ilex pernyi*, which is an evergreen shrub or small tree native to China, with crowded oval-rhombic spiny leaves, pale-yellow flowers, and red berries in dense sessile clusters.

78146. ILEX WILSONII Loes.

An ornamental evergreen shrub with broad spiny glistening green leaves. Native to China.

78147. LONICERA PILEATA YUNNANENSIS (Franch.) Rehder. Caprifoliaceae. **Honeysuckle.**

A prostrate half-evergreen shrub with small boxlike foliage, inconspicuous yellow flowers, and clusters of dainty but not prominent violet berries. Native to southwestern China.

For previous introduction see No. 76584.

78148. LOROPETALUM CHINENSE (R. Br.) Oliver. Hamamelidaceae.

A somewhat tender, beautiful bushy evergreen shrub, native to China, about 5 feet high, with wiry hairy branches oval unsymmetrical leaves, and curious white witch-hazellike flowers during the early spring.

For previous introduction see No. 46424.

78149 to 78154. PHILADELPHUS spp. Hydrangeaceae.

78149. PHILADELPHUS PEKINENSIS BRACHYBOTRYS Koehne.

An ornamental deciduous shrub with long branches, thin elliptic pointed leaves, and fragrant flowers. Native to China.

For previous introduction see No. 53719.

78150. PHILADELPHUS sp.

Amalthée. A vigorous variety with long lustrous leaves and large flowers which are slightly blotched with pale pink.

78151. PHILADELPHUS sp.

Atlas. A handsome tall-growing sort with enormous flowers, over 2½ inches wide, which have broad milk-white petals.

78152. PHILADELPHUS sp.

Belle Etoile. For previous introduction and description see No. 78088.

78153. PHILADELPHUS sp.

Enchantement. For previous introduction and description see No. 78092.

78154. PHILADELPHUS sp.

Innocence. A variety with such an abundance of large single pure-white flowers borne on long arched branches that the bush has the appearance of snowy sheaves of blooms.

78155. STYRAX HEMSLEYANA Diels. Styracaceae.

A handsome shrub or small tree, native to China, up to 20 feet high, with sharp-pointed obliquely oval leaves, and pure-white flowers nearly half an inch long, in racemes about 6 inches long.

78112 to 78160—Continued.

78156. STYRAX JAPONICUM Sieb. and Zucc. Styracaceae. **Japanese snowbell.**

Variety *Fargesii.* A handsome variety introduced from central China by the late Maurice de Vilmorin. It differs from the well-known type by its taller branches, more ample foliage, and larger pendulous flowers of a snowy whiteness.

78157 to 78160. SYRINGA spp. Oleaceae.

78157 and 78158. SYRINGA SWEGINZOWII Koehne and Ling. **Chengtu lilac.**

78157. A hardy ornamental shrub, native to China, about 10 feet high, with dark-green oval leaves 2 to 4 inches long, and terminal panicles, up to 10 inches long, of fragrant rosy lilac flowers which are borne during June.

For previous introduction see No. 63584.

78158. Variety *superba.*

For previous introduction and description see No. 78111.

78159. SYRINGA TOMENTELLA Bur. and Franch. (*S. adamiana* Balf. and Sm.). **Felted lilac.**

A recently introduced bushy shrub, similar to *Syringa wilsonii*, about 10 feet high, with elliptic leaves which are hairy beneath and long-branched spikes of fine mauve-pink flowers. This shrub is native to western China.

For previous introduction see No. 76276.

78160. SYRINGA WOLFI C. Schneid. **Lilac.**

An ornamental shrub recently introduced from Chosen. It is remarkable for its peculiar foliage and for its much-branched panicles of dark lilac-purple flowers.

78161 and 78162.

From Burnham Thorpe, Kings Lynn, England. Plants presented by Rev. Henry Hibberd. Received November 24, 1928.

These plants are from the garden formerly owned by the father of Lord Nelson.

78161. LAVANDULA SPICA L. Menthaceae. **Lavender.**

78162. TAXUS BACCATA L. Taxaceae. **English yew.**

78163. ANANAS SATIVUS Schult. f. Bromeliaceae. **Pineapple.**

A pineapple growing at the United States Plant Introduction Garden, Chapman Field, Coconut Grove, Fla. Numbered in December, 1928.

This pineapple is considered to be a natural hybrid between Smooth Cayenne and Red Spanish. The plant has many suckers, a multiple crown, and a long stem. The fruit appears to be of fair quality.

78164 to 78168.

From Japan. Seeds obtained by R. K. Beattie, Bureau of Plant Industry. Received December 18, 1928.

78164. CASTANOPSIS CUSPIDATA (Thunb.) Schottky. Fagaceae. **Japanese chinquapin.**

Nos. 772 and 773. Collected in the National Forest, district of Miyakonojo

78164 to 78168—Continued.

Eirinsho, Miyazaki Ken, Kyushu, and sent by K. Okamura, November, 1928. *Itajii.* An evergreen chinquapin much used in Japan for hedges, for which it seems admirably suited. The acorns, although small, have a sweet taste when baked like chestnuts, and when boiled or roasted they are sold in Japan for food. This tree is not hardy in the northern United States.

For previous introduction see No. 34642.

78165 to 78168. QUERCUS spp. Fagaceae. **Oak.**

These seeds were collected in Osuzu National Forest, Kawakita, Tsuno Machi, Koyu Gun, Miyazaki Ken, and sent by Mimitsu Eirinsho, November, 1928.

78165. QUERCUS ACUTA Thunb.

No. 776. *Aka gashi* [red oak]. An evergreen oak, native to Japan.

78166. QUERCUS MYRSINAEFOLIA Blume.

No. 775. *Shira gashi* [white oak]. A handsome evergreen oak, which is native to Japan, 30 to 40 feet high, with lanceolate-serrate leaves, 3 to 5 inches long, smooth and shining above and covered with a whitish bloom underneath. The ovoid acorns, nearly an inch long and one-third covered by the smooth cup, are borne in short spikes.

For previous introduction see No. 74222.

78167. QUERCUS SESSILIFOLIA Blume.

No. 774. *Tsukubane gashi.* An oak, native to Japan, with leathery sessile lanceolate leaves 2 to 4 inches long.

78168. QUERCUS STENOPHYLLA (Blume) Makino.

No. 777. *Urajiro gashi.* An oak with narrowly lanceolate long-pointed leaves 2 to 6 inches long. It is native to Japan.

78169. EUPHORBIA INTISY Drake. Euphorbiaceae.

From Madagascar. Plants collected by Charles F. Swingle, Bureau of Plant Industry, and Dr. Henri Humbert, University of Algiers, Algeria. Received in November, 1928.

North of Behara, on the road to Tranomaro, September, 1928. An arborescent succulent, about 12 feet high, native to southern Madagascar in regions of limited rainfall, occasional frost, and varied soil conditions. At one time it was the most important rubber plant of Madagascar, but it is now practically extinct commercially because of the lack of care used in harvesting the rubber. It has gray bark, dichotomous or somewhat whorled branches, and minute scattered leaves. The small inconspicuous greenish flowers are in very short cymes borne near the tips of the branches.

78170 to 78177.

From Berlin, Germany. Plants purchased from L. Späth. Received November 24, 1928.

78170. MALUS sp. Malaceae. **Apple.**

Oekonomierat Echter-meyer. An ornamental flowering variety.

78171 to 78177. PRUNUS spp. Amygdalaceae.

78170 to 78177—Continued.

78171. PRUNUS BALDSCHUANICA Regel.

A spreading shrub, native of Turkestan, closely resembling the flowering plum (*Prunus triloba*). The oblong or obovate leaves are acuminate, with rather large teeth.

78172. PRUNUS BLIREANA MOSERI Koehne.

A garden hybrid of the cherry plum with purple leaves and small light-pink flowers.

78173. PRUNUS CERASIFERA WOODII W. Wood (*P. cerasifera spaethiana* W. Wood).

A form of the cherry plum with leaves which remain dark purple all summer.

78174. PRUNUS CERASUS SEMPERFLORENS (Ehrh.) Koch. **All Saints cherry.**

A variety of the sour cherry which bears its flowers at the end of short leafy branchlets during the summer.

78175. PRUNUS FRUTICOSA PENDULA Dipp. **Weeping bush cherry.**

A form of the European bush cherry. It is a bushy shrub about 3 feet high with slender pendulous branchlets, dark glossy green oblong-elliptic leaves an inch long, single white flowers, and dark-red fruits in small umbels.

78176. PRUNUS JACQUEMONTII Hook. f.

A handsome Himalayan flowering shrub up to 12 feet high, with sharply serrate elliptic leaves 2 to 3 inches long, rose-colored flowers two-fifths of an inch across, and juicy red fruits.

78177. PRUNUS JAPONICA THUNBERGII Koehne.

A variety of *Prunus japonica* with cordate long-acuminate leaves having longer and more pointed teeth.

78178 to 78182.

From Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received December 14, 1928.

78178. ACANTHOPANAX RICINIFOLIUM Seem. Araliaceae.

No. 779. Collected in the Teshio Second University Forest, Hokkaido Imperial University, and sent by Wasaku Ishio, Teshio Second University Forest, Hokkaido Imperial University, Toikanbetsu, Teshio Gun, Hokkaido, November, 1928. *Harigiri.* A tree up to 90 feet high, native to eastern Asia. The large round leaves, sometimes a foot across, are divided into five to seven triangular serrate lobes; the white flowers are in large terminal clusters and are followed by small black fruits.

For previous introduction see No. 39586.

78179 and 78180. PICEA GLEHNI (Schmidt) Masters. Pinaceae. **Saghalin spruce.**

A handsome evergreen tree, native to Japan, up to 120 feet high, with lustrous brown or violet cones.

For previous introduction see No. 75405.

78179. No. 781. *Aka ezomatsu.* Collected in the University Forest, near Toikanbetsu, and sent by Wasaku

78178 to 78182—Continued.

Ishio, Teshio Second University Forest, Hokkaido Imperial University, Toikanbetsu, Teshio Gun, Hokkaido, November, 1928.

78180. No. 782. *Aka ezomatsu.* Collected at Jozankei, near Sapporo, and sent by Otohiko Ito, Sapporo Hokkaido, November, 1928.

78181. PRUNUS SERRULATA SACHALINENSIS (Schmidt) Makino (*Prunus sargenti* Rehder). Amygdalaceae.

Sargent cherry.

No. 780. Collected in Maruyama, near Sapporo, Hokkaido, and sent by Otohiko Ito, November, 1928. *Ezoyamazakura.* A tall handsome tree, native to northern Japan, up to about 80 feet high, with smooth, dark-brown bark and ovate or ovate-lanceolate, sharply serrate leaves. The single pink flowers are in few-flowered clusters, and the black fruits are about the size of peas. This wild Japanese cherry is considered by E. H. Wilson, Arnold Arboretum, Jamaica Plain, Mass., to be the parent of several of the finest double-flowering varieties of flowering cherries and also to be the most satisfactory stock on which to work these varieties.

For previous introduction see No. 77652.

78182. PTEROCARYA SORBIFOLIA Sieb. and Zucc. Juglandaceae. **Wingnut.**

No. 778. Collected in the National Forest in the Hamamachi Eirinsho district, and sent by Yoshikiyo Sugita, director of the Hamamachi Eirinsho, Kyoshu, Kumamoto Ken, November, 1928. *Nobu no ki.* A tree, native to Japan, nearly 100 feet high, with large compound leaves and long racemes of winged fruits.

For previous introduction see No. 75686.

78183. PHAJUS TANKERVILLIAE (Ait.) Blume. Orchidaceae.

From Takengon, Sumatra. Rhizomes collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the Allison V. Armour expedition. Received May 14, 1926. Numbered in October, 1928.

No. 459. March 1, 1926. A vigorous orchid with rather coarse, erect leaves and stalks 30 to 36 inches high, bearing 14 to 18 flowers about 2½ inches in diameter. The petals are creamy white, more or less flushed with bronze. The lip is deeply flushed with bronze and with purple on the inner surface. The flowers are not fragrant.

78184 to 78236.

From Grahamstown, South Africa. Plants obtained from W. and C. Gowie, through Hugh Evans, Santa Monica, Calif. Received in November, 1928.

78184 to 78187. ALOE spp. Liliaceae.

78184. ALOE CILIARIS Haworth.

A fleshy plant, native to South Africa, with stems many yards long, terete branches, thick linear leaves 6 inches long, and lax racemes of bright-red flowers.

78185. ALOE MYRIACANTHA (Haw.) Roem. and Schult.

A fleshy plant with a rosette of 10 to 12 linear leaves, 6 inches long,

78184 to 78236—Continued.

mottled with white spots, and a dense cluster of curved tubular flowers on a stem a foot high. Native to South Africa.

78186. ALOE TENUIOR Haw.

A creeping succulent vine, native to South Africa, with terete branches striped with green, linear leaves 8 inches long, and racemes of pale-yellow flowers.

78187. ALOE VARIEGATA L.

A perennial, native to South Africa, with a leafy stem 6 to 9 inches high. The triangular ascending leaves, 2 to 5 inches long in three close oblique ranks, are green crossed by bands of elongated white blotches and have white, scarcely serrate margins. The flowering stem is about a foot high, bearing a raceme of red tubular flowers 1 to 2 inches long.

For previous introduction see No. 77219.

78188. ANACAMPSEROS TELEPHIASTRUM DC. Portulacaceae.

A succulent plant, native to South Africa, a few inches high, with thick orbicular leaves and panicles of reddish flowers.

78189. APICRA DELTOIDEA Baker. Liliaceae.

A succulent, a foot high, with thick deltoid leaves an inch long which are bright shining green without spots or tubercles, and lax racemes of whitish flowers. Native to South Africa.

78190. CARALLUMA LUTEA N. E. Brown. Asclepiadaceae.

A dwarf leafless succulent, native to South Africa, with crowded purple-mottled green stems 4 inches long, sharply four angled, and armed with stout horizontal teeth nearly half an inch long. The yellow flowers, in a cluster of 20 to 25, are 2 to 3 inches broad, and most of them open at the same time.

78191 to 78196. COTYLEDON spp. Crassulaceae.

78191. COTYLEDON CRISTATA Haw.

A nearly stemless succulent with petiolate cuneate leaves an inch long, and a stem, 8 inches high, about half of which bears tubular flowers. Native to South Africa.

78192. COTYLEDON GRACILIS Harvey.

A dwarf plant, 4 to 6 inches high, native to South Africa, with slender stems, spatulate leaves 1 to 2 inches long, and opposite terminal panicles of tubular flowers.

78193 and 78194. COTYLEDON ORBICULATA L.

A succulent plant up to 4 feet high, with opposite nearly circular mealy leaves which have red margins and panicles of large reddish flowers. Native to South Africa.

78193. No. 1. **78194.** No. 2.

78195. COTYLEDON sp.

A succulent plant, native to South Africa, with usually fleshy leaves and reddish or yellowish flowers.

78184 to 78236—Continued.

78196. COTYLEDON sp.

A succulent plant, native to South Africa.

78197 to 78201. CRASSULA spp. Crassulaceae.

78197. CRASSULA FALCATA Willd.

A shrubby robust densely leafy succulent native to South Africa. The thick glaucous obliquely sword-shaped leaves, 3 to 4 inches long, are united at the base. The lower ones are reflexed and decrease in size upwards. The stem and leaves are finely granulated, giving the plant a frosted appearance. The bright crimson or rarely white flowers are in a much-branched panicle.

78198. CRASSULA PERFOLIATA L.

A shrubby succulent native to South Africa with thick glaucous connate leaves and cymes of bright-crimson flowers.

78199. CRASSULA ROSULARIS Haw.

A herbaceous succulent plant with radical strap-shaped leaves 3 to 5 inches long and scapelike peduncles a foot high, with cymes of small white flowers. Native to South Africa.

78200. CRASSULA sp.

A succulent plant, native to South Africa, with more or less fleshy leaves and white or red flowers.

78201. CRASSULA sp.

A succulent, native to South Africa.

78202. CYANASTRUM CORDIFOLIUM Oliver (*Schoenlandia gabonensis* Cornu). Haemodoraceae.

A bulbous perennial, native to West Africa, with membranous cordate leaves 6 inches long, rising singly from the corymb, and blue flowers half an inch long in a bracted lax raceme.

78203. DUVALIA RECLINATA Haw. Asclepiadaceae.

A succulent leafless plant a foot long, with 4-angled to 5-angled stems, the angles being tuberculate toothed, and small clusters of chocolate-colored flowers. Native to South Africa.

78204 to 78209. GASTERIA spp. Liliaceae.

78204. GASTERIA BREVIFOLIA Haw.

A succulent herb, native to South Africa, with a very short leafy stem densely crowded with oblong glossy leaves 4 inches long and racemes of tubular red flowers an inch long.

78205. GASTERIA CROUCHERI (Hook f.) Baker (*G. natalensis* Baker).

A succulent, native to South Africa, with a short stem 1 to 2 inches long and a rosette of 12 to 18 lanceolate leaves 15 inches long, 3 inches broad, and an inch thick at the base, narrowed to a sharp point and marked with small greenish white spots.

78206. GASTERIA NITIDA (Salm-Dyck) Haw.

A succulent, native to South Africa, with a short stem, a rosette of thick fleshy lanceolate leaves 9 inches long, bright green with small white spots.

78184 to 78236—Continued.

and a peduncle a foot long bearing a lax raceme of red, white, and green flowers.

78207. GASTERIA sp.

A succulent herb, native to South Africa, with a rosette of strap-shaped leaves and lax racemes of usually red flowers.

78208. GASTERIA sp.

A succulent, native to South Africa.

78209. GASTERIA sp.

A succulent, native to South Africa.

78210 to 78217. HAWORTHIA spp. Liliaceae.

78210. HAWORTHIA ARACHNOIDES (Mill.) Haw.

A succulent, native to South Africa, with a very short stem and rosettes 3 to 4 inches across, of 30 to 40 thick lanceolate leaves, 2 inches long, having a long transparent awn and transparent teeth along the edges and keel.

78211. HAWORTHIA CYMBIFORMIS Haw.

A succulent with rosettes 3 to 4 inches broad, of 20 to 25 obovate leaves 2 inches long, pale green marked on the upper half with vertical lines of darker green. Native to South Africa.

78212. HAWORTHIA FASCIATA (Willd.) Haw.

A succulent, native to South Africa, with a short leafy stem forming a spiral rosette of ascending deltoid-lanceolate leaves having transverse bands of white tubercles. The rosy lined flowers are in a terminal raceme less than a foot high.

78213. HAWORTHIA REINWARDTI (Salm-Dyck) Haw.

A stoloniferous succulent, native to South Africa, with a leafy stem 6 inches high and 2 inches in diameter including the leaves. These are ascending, ovate-lanceolate, pale green when young, but turning reddish brown with age and having 9 to 11 vertical rows of raised white tubercles.

78214. HAWORTHIA TRANSLUCENS (Willd.) Haw.

A succulent, native to South Africa, with a rosette of ascending lanceolate pale-green leaves, 2 inches long, having a long transparent awn at the tip and margined with deltoid transparent teeth.

78215. HAWORTHIA sp.

A succulent, native to South Africa.

78216. HAWORTHIA sp.

A succulent, native to South Africa.

78217. HAWORTHIA sp.

A succulent, native to South Africa.

78218. HEURNIA sp. Asclepiadaceae.

A succulent, native to South Africa.

78219. HEURNIA sp. Asclepiadaceae.

A succulent, native to South Africa.

78220. ARGETA PETRENSIS N. E. Brown. Aizoaceae.

78184 to 78236—Continued.

A very dwarf stemless perennial which forms clumps of buttonlike growths, each one of which consists of two adpressed succulent leaves, surrounded and partly covered by the scarious vestiges of former leaves. Between them push up the solitary rosy asterlike flowers, nearly an inch in diameter. Native to South Africa.

78221. CONOPHYTUM WIGGETAE N. E. Brown. Aizoaceae.

A very small buttonlike perennial, succulent, native to South Africa, about one-third of an inch high and half an inch broad, elliptic to circular in outline, dull green, thickly marked with blackish dots, covered and surrounded by dry vestiges of leafstalks. The solitary flower pushes up through the central portion of the body.

78222. CONOPHYTUM sp. Aizoaceae.

One of the dwarf buttonlike conophytums, smaller in all dimensions than *Conophytum wiggetae* [No. 78221].

78223. GLOTTIPHYLLUM ARRECTUM N. E. Brown. Aizoaceae.

A low succulent with ascending light-green nearly cylindrical leaves 2 to 3 inches long, in pairs, the pairs set obliquely to one another. The bright-yellow flowers, 2 to 3 inches across, are nearly sessile and without odor. Native to South Africa.

78224. HERERoA TUGWELLIAE L. Bolus. Aizoaceae.

A low succulent plant, native to arid places in Cape Province, South Africa. It forms irregular rosettes about 4 inches across and nearly as high. The gray-green irregularly shaped leaves are variously molded for mutual accommodation, and the yellow asterlike flowers are about an inch wide.

78225. MENTOCALYX MUIRII N. E. Brown. Aizoaceae.

A stemless perennial succulent consisting usually of only one pair of opposite, unequal leaves. When young, these are erect and pressed together like an eagle's beak; when older they are spreading, thick and flat, and the larger is about 2 inches long. The solitary pure-white flower, 2 inches across, is borne in front of the leaves. Native to South Africa.

78226. FAUCARIA TIGRINA (Haw.) Schwantes. Aizoaceae.

A dwarf succulent forming close-tufted rosettes of short stems not over 6 inches high. The thick opposite leaves are crowded and are conspicuous for the flexible spines along the margins, giving the effect of open jaws noted in the name. The solitary yellow daisylike flowers are about 1½ inches across.

78227. RIMARIA HEATHII N. E. Brown. Aizoaceae.

A stemless succulent perennial, native to arid regions in South Africa, which forms a compressed-ovoid growth up to 2 inches in diameter and about an inch high, surrounded and partly covered by the remainder of former leaves. The solitary white daisylike flower is about 1½ inches across.

78228. SENECIO RADICANS (L. f.) Schultz Bip. (*Kleinia radicans* Haw.). Asteraceae.

78184 to 78236—Continued.

A succulent with creeping wing-angled stems 2 feet long, short erect branches, fleshy lanceolate leaves an inch long, and rayless flower heads. The leaves have a taste of turpentine and are eaten by the natives. Native to South Africa.

78229. STAPELIA sp. Asclepiadaceae.

A dwarf perennial succulent, native to South Africa.

78230. STAPELIA sp. Asclepiadaceae.

A dwarf perennial succulent, native to South Africa.

78231. STRELITZIA ALBA (L. f.) Skeels (*S. augusta* Travenf.). Musaceae.

A plant native to South Africa with woody stems up to 18 feet high, a cluster of oblong leaves 3 feet long, on petioles 6 feet long, at the summit of the stem, and pure-white flowers protruding from a purple spathe.

For previous introduction see No. 31860.

78232. STRELITZIA REGINAE Banks. Musaceae. **Bird-of-paradise flower.**

A plant, native to South Africa, with a creeping rhizome from which grow the bananalike leaves with petioles 4 feet long and lanceolate blades 2 feet long. The flowers are borne on a stalk 3 to 4 feet high and grow out from the margin of a purple-edged bright-green bract 8 inches long. The orange-yellow lanceolate sepals are 3 to 4 inches long, and the dark-blue arrow-shaped petals are 3 inches long.

For previous introduction see No. 76788.

78233. (Undetermined.)

78234. (Undetermined.)

78235. (Undetermined.)

78236. (Undetermined.)

78237 to 78239. RHODODENDRON spp. Ericaceae. **Azalea.**

From Tunbridge Wells, England. Plants purchased from R. Wallace & Co. Received December 7, 1928.

78237. RHODODENDRON sp.

Amoena pulchella.

78238. RHODODENDRON sp.

Spectabilis rosea.

78239. RHODODENDRON sp.

Sublanceolata.

78240. CITRUS NOBILIS DELICIOSA (Ten.) Swingle. Rutaceae. **Mandarin orange.**

From Johannesburg, South Africa. Cuttings presented by John Bell & Co. Received December 8, 1928.

A variety which is sweeter and contains more juice than the tangerine.

78241 to 78243. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

From Russia. Seeds presented by Prof. J. A. Mirtoff, Director of the Russian Bureau of Agricultural Information in

78241 to 78243—Continued.

America, New York, N. Y., through W. J. Morse, Bureau of Plant Industry. Received December 20, 1928.

Varieties grown at the Ekaterinoslav Experiment Station.

78241. No. 57. 78243. No. 61.

78242. No. 59.

78244. CEIBA ACUMINATA (S. Wats.) Rose. Bombacaceae. **Pochote.**

From Guaymas, Sonora, Mexico. Seeds obtained from H. S. Bursley, American consul, Guaymas, through Henry C. A. Damm, American consul, Nogales, Sonora. Received December 20, 1928.

A close relative of the kapok tree (*Ceiba pentandra*), said to be a large or medium-sized tree with a greenish spiny trunk, compound leaves, and hard oblong fruits about 7 inches long, which contain whitish down used for stuffing pillows, life preservers, and for making candlewicks. It is native to western and southern Mexico.

For previous introduction see No. 76014.

78245 to 78254.

From Ukrainia, Russia. Seeds presented by the Ekaterinoslav Experiment Station, through Prof. J. A. Mirtoff, director of the Russian Bureau of Agricultural Information, New York, N. Y. Received December 20, 1928.

78245 to 78248. HORDEUM spp. Poaceae.

78245. HORDEUM DISTICHON NUDUM L. **Two-rowed barley.**

No. 0155.

78246 and 78247. HORDEUM VULGARE PALLIDUM Seringe. **Six-rowed barley.**

78246. No. 2. *Grushevsky.*

78247. No. T–45.

78248. HORDEUM DISTICHON PALMELLA Harlan. **Two-rowed barley.**

No. 0254.

78249 to 78252. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

78249. No. 040. Winter wheat.

78250. No. 058. Spring wheat.

78251. No. 065. Winter wheat.

78252. No. 071. Spring wheat.

78253 and 78254. TRITICUM DURUM Desf. Poaceae. **Durum wheat.**

78253. No. 037. 78254. No. 05.

78255. VOANDZEIA SUBTERRANEA (L.) Thouars. Fabaceae.

From Kinda, Lulua, Katanga, Belgian Congo, Africa. Seeds presented by R. L. Smalley. Received December 21, 1928.

Nimu ya bukola. An erect variety about 9 inches high, with flowers which push into the ground, the fruits developing there close to the plant. It is planted about November and harvested during April. About 3 per cent have two seeds in a pod, and one plant yields between 30 and 40 pods. In Northern Rhodesia this variety is called "Grant's peanuts."

78256 to 78260.

From Mount Silinda, Southern Rhodesia, Africa. Seeds presented by Dr. W. L. Thompson, American Board Mission in South Africa. Received December 26, 1928.

78256. DIOSPYROS SENEGALENSIS Perr. Diospyraceae. **Persimmon.**

A shrub or small tree, native to tropical Africa, with small edible fruits up to an inch in diameter, said to be of good flavor and sometimes called "monkey guavas."

For previous introduction see No. 70941.

78257. KHAYA NYASICA Stapf. Meliaceae.

The red mahogany is one of the most valuable timber trees of Rhodesia and is widely distributed over Mozambique. It is fairly rapid in growth, though not equal to some of the eucalypts in this respect. It is found most often growing near streams, and also occurs on high ground at a distance from water. The timber is very durable and is not attacked by white ants or borers.

For previous introduction see No. 59293.

78258. LOVOA SWYNNERTONII Baker f. Meliaceae.

For previous introduction and description see No. 77987.

78259. PARINARI CURTELLAEFOLIUM Planch. Rosaceae.

Sand apple. A small or medium-sized tree with elliptic-oblong, scabrid leaves, glabrescent above and tomentose beneath, which are 2 to 5 inches long. The tomentose flower panicles are 3 to 6 inches long. The drupe, about the size of an ordinary plum, has a mealy, not unpleasant taste.

For previous introduction see No. 52808.

78260. PTEROCARPUS ANGOLENSIS DC. Fabaceae.

Bloodwood. An unarmed tree, native to the western part of central Africa, with alternate, unequally pinnate leaves, axillary or terminal racemes of flowers, and flat, 1-seeded almost round pods. The reddish wood is used in dyeing, and the bark contains a large quantity of tannin.

For previous introduction see No. 50178.

78261. FICUS VOLKENSII Warb. Moraceae. **Fig.**

From Amani, Tanganyika Territory, Africa. Seeds presented by K. E. Toms, superintendent of plantations, East African Agricultural Research Station. Received December 27, 1928.

A shrub or small tree, native to tropical Africa, with narrow papery dull-green leaves and axillary fruits half an inch long. It is reported to yield the best bark cloth known in Uganda.

78262. ARRACACIA XANTHORRHIZA Bancroft (*A. esculenta* DC.). Apiaceae. **Arracacha.**

78262—Continued.

From Mayaguez, Porto Rico. Tubers presented by T. B. McClelland, Porto Rico Agricultural Experiment Station. Received December 27, 1928.

A perennial, herbaceous plant closely related to the carrot. It grows about 3 feet high, with carrotlike foliage and small umbels of purple flowers. The large, fleshy roots are important food in parts of South America and Central America. They are eaten boiled like parsnips, or sliced raw and fried. Propagation is effected by making cuttings of the crown with a small piece of the root attached.

For previous introduction see No. 63580.

78263. ZEA MAYS L. Poaceae. **Corn.**

From Kinda, Lulua, Katanga, Belgian Congo, Africa. Seeds presented by R. L. Smalley. Received December 21, 1928.

A variety of corn with a harsh cob and grain which shells very easily. It is said to remain green a long time. There are occasionally a few black grains present. The natives recognize this as a distinct variety, but they plant it and use it as their other corn.

78264 to 78311. CLEMATIS spp. Ranunculaceae.

From Woking, Surrey, England. Plants purchased from George Jackman & Son, Woking Nurseries. Received December 27, 1928.

A collection of garden varieties of clematis.

78264. CLEMATIS sp.

Admiration. A climbing subshrubby variety bearing, between July and October, beautiful flowers which are deep salmon, edged with violet, shading off to a violet heliotrope, and white on the reverse side.

78265. CLEMATIS sp.

Ascotiensis. A climbing variety with large azure-blue flowers borne during June and July.

78266. CLEMATIS sp.

Belle of Woking. A climbing variety with fine large double silvery gray flowers borne during June.

78267. CLEMATIS sp.

Blue Gem. A very choice climbing variety with large pale sky-blue flowers borne between July and October.

78268. CLEMATIS sp.

Coerulea odorata. An evergreen climbing variety with small reddish-violet flowers borne between July and October.

78269. CLEMATIS sp.

Comtesse de Bouchaud. A climbing variety with large beautiful satiny rose flowers borne between July and October.

78270. CLEMATIS sp.

Countess of Lovelace. A climbing variety with large double bluish-lilac rosette-shaped flowers borne during June and July.

78271. CLEMATIS sp.

Countess of Onslow. A climbing subshrubby variety bearing, between July and October, bright violet-purple flowers with a broad band of scarlet down the center of each petal.

78272. CLEMATIS sp.

Crimson King. A free-growing variety bearing, between July and October, beautiful bright-red flowers, shading off paler down the center of each sepal, with chocolate-colored stamens.

78273. CLEMATIS sp.

Duchess of Albany. A climbing subshrubby variety bearing, between July and October, delicate pale blush-pink flowers with a deeper tinge down the center of each petal.

78274. CLEMATIS sp.

Duchess of Edinburgh. A climbing variety bearing large deliciously scented flowers during June and July. This is the best of the varieties bearing double pure-white flowers.

78275. CLEMATIS sp.

Duchess of Sutherland. A free-blooming variety bearing, between July and October, bright-red flowers shading off lighter down the center of the sepals.

78276. CLEMATIS sp.

Duchess of York. A climbing subshrubby variety bearing, between July and October, delicate pale blush-pink flowers with a deeper tinge down the center of each petal.

78277. CLEMATIS sp.

Duke of Edinburgh. A climbing variety bearing large violet-purple flowers between July and October.

78278. CLEMATIS sp.

Duke of Portland. A vigorous variety bearing, between July and October, lovely pale flesh-colored flowers with a crimson bar down the center of each sepal.

78279. CLEMATIS sp.

Empress of India. A variety bearing, between July and October, fine flowers which are light purple-violet with brown stamens and a deep-purple bar down the center of each sepal.

78280. CLEMATIS sp.

Fair Rosamond. A climbing variety bearing, during May and June, large blush-white flowers with an indistinct wine-red bar.

78281. CLEMATIS sp.

Fairy Queen. A climbing variety bearing, between July and October, large pale flesh-colored flowers with a striking pink bar.

78282. CLEMATIS sp.

Flammula rosea purpurea. A climbing variety bearing between July and October, an abundance of small rosy purple sweet-scented flowers.

78283. CLEMATIS sp.

Grace Darling. A climbing subshrubby variety bearing, between July and October, an abundance of medium-sized, star-shaped, bright rosy carmine flowers.

78264 to 78311—Continued.

78284. CLEMATIS sp.

Jackmanni. A climbing variety bearing, between July and October, an abundance of violet-purple flowers which are usually large.

78285. CLEMATIS sp.

Jackmanni superba. A climbing variety bearing, between July and October, many large flowers which are very dark violet purple.

78286. CLEMATIS sp.

King Edward VII. A climbing variety bearing, between July and October, large puce-violet flowers with a crimson bar down the center of each sepal.

78287. CLEMATIS sp.

King George V. A vigorous variety bearing, between July and October, beautiful light flesh-colored flowers with a bright-pink bar down the center of each sepal.

78288. CLEMATIS sp.

King of the Belgians. A climbing variety bearing, during May and June, large light-mauve flowers with a deep-mauve bar.

78289. CLEMATIS sp.

Lady Betty Balfour. A strong-growing climbing variety bearing, between August and October, an abundance of large deep velvety purple flowers.

78290. CLEMATIS sp.

Lady Caroline Neville. A climbing variety bearing, between July and October, large French-white flowers with mauve bars.

78291. CLEMATIS sp.

Lady Northcliffe. A climbing variety bearing, between July and October, large beautiful deep lavender-tinted bright-blue flowers with a purple base and white stamens.

78292. CLEMATIS sp.

Lasurstern. A climbing variety bearing large deep purplish-blue flowers between May and July.

78293. CLEMATIS sp.

Lord Neville. A climbing variety bearing large rich dark plum-colored flowers between July and October.

78294. CLEMATIS sp.

Marcel Moser. A climbing variety bearing, between July and October, large beautiful mauve-violet flowers with attractive red bars.

78295. CLEMATIS sp.

Miss Bateman. A climbing variety bearing, between May and July, large white flowers with chocolate-covered bars and red anthers.

78296. CLEMATIS sp.

Mrs. Bush. A climbing variety with large deep-lavender flowers borne between July and October.

78297. CLEMATIS sp.

Mrs. Cholmondeley. A climbing variety with large light-blue flowers borne between July and October.

78264 to 78311—Continued.

78298. CLEMATIS sp.

Mrs. George Jackman. A climbing variety bearing, during May and June, satiny white flowers with creamy bars.

78299. CLEMATIS sp.

Mrs. Hope. A climbing variety bearing, between June and October, satiny mauve flowers with darker tinted bars.

78300. CLEMATIS sp.

Mrs. Spencer Castle. A climbing variety with an abundance of beautiful pale-pinkish heliotrope, prettily veined flowers, which are borne between July and October.

78301. CLEMATIS sp.

Nellie Moser. A climbing variety bearing, between July and October, large light-mauve flowers which have bright-red bars.

78302. CLEMATIS sp.

Otto Froebel. A climbing variety bearing, between July and October, very large grayish-white flowers.

78303. CLEMATIS sp.

Queen Alexandra. A climbing variety bearing, between July and October, large pale-lavender flowers with lilac-purple base, shading off to a silvery white down the center.

78304. CLEMATIS sp.

Robert Hanbury. A climbing variety bearing, between June and October, large bluish-lilac flowers flushed at the edge with red.

78305. CLEMATIS sp.

Sir Garnet Wolseley. A climbing variety bearing, during May and June, large flowers which have a bluish ground with an effective dash of bronze, and distinct bars of plum red.

78306. CLEMATIS sp.

Star of India. A climbing variety bearing, between July and October, an abundance of large reddish plum-colored flowers with red bars.

78307. CLEMATIS sp.

The Bride. An exceptionally free-flowering variety bearing, between July and October, fine pure-white flowers with yellow stamens.

78308. CLEMATIS sp.

Velutina purpurea. A climbing variety bearing, between July and October, an abundance of large blackish-mulberry flowers.

78309. CLEMATIS sp.

Viticella alba luxurians. A climbing variety bearing, between July and September, an abundance of large white flowers.

78310. CLEMATIS sp.

W. E. Gladstone. A climbing variety bearing, between July and October, large flowers which are a beautiful lilac and a lighter shade down the center.

78311. CLEMATIS sp.

William Kennett. A climbing variety bearing, between July and October, large deep-lavender flowers.

78312 to 78321.

From Japan. Seeds obtained by R. K. Beattie, Bureau of Plant Industry. Received December 27, 1928.

78312 to 78316. CASTANOPSIS spp. Fagaceae.

78312. CASTANOPSIS CUSPIDATA (Thunb.) Schottky. **Japanese chinquapin.**

Nos. 783 and 784. Collected in the Takano National Forest, Takaiyama Mura, Kimotsuke Gun, Kagoshima Ken, and received by Kanoya Eirinsho, Kimotsuke Gun, Kagoshima Ken, November, 1928.

For previous introduction and description see No. 78164.

78313 and 78314. CASTANOPSIS KAWAKAMII Hayata.

Collected at the Rengechi Forest Experiment Station, Taichu Province, Taiwan, at an altitude between 3,000 and 4,000 feet, November, 1928. The Japanese name is Okuri kashi, and the Taiwanian (Chinese) name is Toahyokoratsu. A Japanese tree between 75 and 90 feet high.

78313. No. 789.

78314. No. 790. The same as No. 789 [No. 78313], but from a different lot of trees.

78315. CASTANOPSIS STELLATO-SPINA Hayata.

No. 791. Collected on Hiiranza, a mountain 15 miles northeast of Kochun, near the southern end of Takao Province, November, 1928. *Togekuri kashi.* A Japanese evergreen tree.

78316. CASTANOPSIS TAIWANIANA Hayata.

No. 788. Collected at the Rengechi Forest Experiment Station, Taichu Province, Taiwan, at an altitude between 3,000 and 4,000 feet, November, 1928. The Japanese name is kuri kashi, and the Taiwanian (Chinese) name is chako.

78317. FAGUS JAPONICA Maxim. Fagaceae. **Japanese beech.**

No. 792. Collected by Seisho Nakayama in the Tokyo University Chichibu Forest, Chichibu Kyokuiku, Saitama Ken, November, 1928. *Inu buna.* A Japanese tree up to 75 feet high, usually dividing at the base into several trunks. The ovate pointed leaves are 2 to 4 inches long, with slightly sinuate or entire margins, and the triangular nuts are one-fourth to three-fourths of an inch long.

78318. FAGUS SIEBOLDII Endl. Fagaceae. **Siebold's beech.**

No. 793. Collected by Seisho Nakayama in the Tokyo University Chichibu Forest, Chichibu Kyokuku, Saitama Ken, November, 1928. *Buna.* A tree, native to Japan, 90 feet high, with rhombic-ovate leaves, 2 to 4 inches long, having shallowly crenate margins.

78319 to 78321. QUERCUS spp. Fagaceae. **Oak.**

78319. QUERCUS GILVA Blume.

No. 787. Collected in the Nagao National Forest, Yamada Mura, Kitamuro Gun, Miyazaki Ken, and received from Miyakonojo Eirinsho, Kyushu, Miyazaki Ken, November, 1928. *Ichiigashi.*

78320. QUERCUS SESSILIFOLIA Blume.

No. 785. Collected in the Nagao National Forest, Yamada Mura, Kitamuro Gun, Miyazaki Ken, and received from Miyakonojo Eirinsho, Kyushu Miyazaki Ken, November, 1928. *Tsukubane gashi.*

For previous introduction and description see No. 78167.

78321. QUERCUS STENOPHYLLA (Blume) Makino.

No. 786. Collected in the Nagao National Forest, Yamada Mura, Kitamuro Gun, Miyazaki Ken, and received from Miyakonojo Eirinsho, Kyushu, Miyazaki Ken, November, 1928. *Urajirogashi.*

For previous introduction and description see No. 78168.

78322 and 78323. SPATHODEA spp. Bignoniaceae.

From Honolulu, Hawaii. Seeds presented by Harry Johnson, Johnson Water Gardens, Hynes, Calif. Received December 20, 1928.

These two varieties were collected by Otto Degener.

78322. SPATHODEA CAMPANULATA Beauv.

A tree, native to tropical Africa, up to 70 feet high, with dark-green pinnate leaves 1 to 2 feet long, and large panicles of scarlet flowers each 4 inches long. The unopened flowers contain a quantity of water, which has secured for it the name fountain tree in India, where it is cultivated as an ornamental shade tree. The whitish fluffy seeds fill a boat-shaped capsule which is 10 to 12 inches long.

For previous introduction see No. 53983.

78323. SPATHODEA NILOTICA Seem.

A shrubby tree up to 20 feet high, native to the northern part of tropical Africa. The leaves, which are opposite and composed of 9 to 15 leathery leaflets, are covered beneath with dense short hairs, and the scarlet flowers are in short terminal clusters. Both the leaves and flowers resemble those of *Spathodea campanulata.*

For previous introduction see No. 58467.

78324 to 78327. RUBUS spp. Rosaceae.

From Alnarp, Akarp, Sweden. Plants presented by Carl G. Dahl. Received December 3, 1928.

78324. RUBUS GLANDULOSUS Bellardi. **Blackberry.**

A blackberry for which a description is not available.

78325. RUBUS HORRIDUS Hartm.

A blackberry native to Sweden, with angular, very thorny stems, white flowers, and small black fruits.

78326 and 78327. RUBUS PLICATUS Weihe and Nees. **Blackberry.**

78326. From Karup, Denmark.

78327. From Sunne, Sweden.

78328 and 78329.

From Wellesley, Mass. Seeds presented by T. D. Hatfield, Hunnewell estate. Received December 28, 1928.

78328. CALLUNA VULGARIS (L.) Salisb. Ericaceae. Heather.

A low evergreen shrub, native to Europe, 1 to 2 feet high, with small ovate leaves and dense racemes, 6 to 10 inches long, of rosy pink bell-shaped flowers.

78329. RHODODENDRON DAVIDSONIANUM Rehd. and Wils. Ericaceae. Davidson rhododendron.

A shrub up to 10 feet high, native to western China, with semievergreen oblong leaves 1 to 3 inches long, glaucous beneath, and terminal and axillary clusters of pink flowers an inch across, somewhat resembling those of the nearly related *R. mucronulatum*.

78330. ALBIZZIA LEBBECK (L.) Benth. Mimosaceae. Lebbeck tree.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received December 29, 1928.

A tree, native to tropical Asia, with doubly compound leaves made up of obliquely oval leaflets, axillary globular heads of greenish-yellow flowers, and long flat pods.

For previous introduction see No. 51902.

78331. MUCUNA BENNETTI F. Muell. Fabaceae.

From Port Moresby, New Guinea. Seeds presented by L. P. B. Armit. Received December 29, 1928.

For previous introduction and description see No. 77959.

78332 to 78370.

From Chiddingford, Surrey, England. Plants purchased from V. N. Gauntlett & Co. Received November 22, 1928.

78332. BAUERA RUBIOIDES Andrews. Grossulariaceae.

An attractive evergreen heathlike shrub, native to Australia, 4 to 5 feet high, with pink flowers resembling those of Kalmia.

78333. BERBERIS PALLENS Franch. Berberidaceae. Barberry.

A strong-growing deciduous shrub, 5 to 6 feet high, with bright-red bark, arching branches, and black fruits, the foliage assuming gorgeous tints in autumn. Native to southwestern China.

78334. BERBERIS RUBROSTILLA Chittenden. Berberidaceae Barberry.

A hybrid shrub raised in the Royal Horticultural Society gardens. It has ovate spatulate spiny leaves and pendulous clusters of coral-red fruits which are produced in the autumn.

For previous introduction see No. 76340.

78335. CEANOTHUS sp. Rhamnaceae.

Carmine Gem. A new hardy variety bearing large trusses of lilac-carmine flowers. It thrives in well-drained rich soil and is often used for covering walls, buildings, etc.

78336. DESFONTAINEA SPINOSA Ruiz and Pav. Loganiaceae.

78332 to 78370—Continued.

A choice evergreen with hollylike foliage, bearing attractive trumpet-shaped, orange-scarlet, waxy flowers between July and October. It is of slow dense growth, but blooms in the young stage, and in time reaches a height of about 6 feet. It is generally hardy if given a sheltered position in half shade.

78337 to 78352. ESCALLONIA spp. Escalloniaceae.

78337. ESCALLONIA FLORIBUNDA H. B. K.

A distinct species bearing arching clusters of pure-white flowers between August and November. It is said to be hardy in seaside districts, and should be grown against a wall, where it forms a splendid evergreen covering.

78338. ESCALLONIA GLUTINOSA Phil.

A white-flowered variety of an evergreen shrub, native to Chile, with small sessile, thick, cuneate-lanceolate leaves about 7 inches long.

78339. ESCALLONIA LANGLEYENSIS Veitch.

A hardy shrub, 5 to 6 feet high, which has a graceful pendulous habit. It is covered with rich-red flowers during June and July, and is one of the finest of shrubs.

For previous introduction see No. 41962.

78340 and 78341. ESCALLONIA MACRANTHA Hook. and Arn.

78340. A shrub with deep shining green ornamental foliage and an abundance of rich-crimson trumpet-shaped flowers. It is used largely in seaside districts as a hedge plant, and also makes a fine wall plant.

78341. Variety *Ingramii*. A variety of erect habit, with an abundance of small bright-crimson flowers.

78342. ESCALLONIA ORGANENSIS Gardn.

A very rare species with glossy reddish foliage and beautiful coral-pink flowers in clusters resembling those of Bouvardia. It is suitable only for walls in mild localities.

78343. ESCALLONIA PTEROCLADON Hook.

A shrub of erect growth, 6 to 10 feet high, with white flowers borne on long spikes.

For previous introduction see No. 38759.

78344. ESCALLONIA PULVERULENTA (Ruiz and Pav.) Pers.

A shrub with silvery gray foliage and white flowers.

For previous introduction see No. 36122.

78345. ESCALLONIA PUNCTATA DC.

A very scarce shrub, 4 to 5 feet high, with neat evergreen foliage and bright-red flowers which are distinct from all others.

78346. ESCALLONIA RUBRA (Ruiz and Pav.) Pers.

A dwarf prostrate shrub, with foliage similar to that of *E. macrantha*, and large rosy red flowers.

78332 to 78370—Continued.

78347. ESCALLONIA VIRGATA (Ruiz and Pav.) Pers.

Variety *philippiana*. A hardy evergreen bush with an abundance of fragrant white flowers borne late in the summer.

78348. ESCALLONIA sp.

Donardensis. A shrub of erect growth, 5 to 6 feet high, bearing, between July and September, flowers of a pale blush color.

78349. ESCALLONIA sp.

Edinburgh. A beautiful shrub resembling *Escallonia langleyensis* in habit of growth. The rose-pink flowers are borne abundantly during July and August.

78350. ESCALLONIA sp.

Edinensis. A hybrid between variety *philippiana* (*Escallonia virgata*) and *E. punctata*. The small brilliant rose-pink flowers covering the branches are borne abundantly between July and September. This is an excellent plant for walls.

78351. ESCALLONIA sp.

Microphylla. A dense bush, 2 to 3 feet high, of dwarf habit, with bright-red flowers borne between July and September.

78352. ESCALLONIA sp.

Newryensis. A shrub, generally hardy, of erect habit, which grows 4 or 5 feet high. The flowers are a blush pink.

78353 to 78355. GAULTHERIA spp. Ericaceae.

78353. GAULTHERIA NUMMULARIOIDES Don.

A rare shrub, about 6 inches high, with deep-green hairy leaves and white or pink flowers. Native to the Himalayas.

For previous introduction see No. 39015.

78354. GAULTHERIA PYROLAEFOLIA Hook. f.

A low evergreen shrub less than a foot high, with narrow-elliptic leaves an inch and a half long, and large blue-black berries. Native to the Himalayas.

78355. GAULTHERIA VEITCHIANA Craib.

A recently introduced evergreen shrub of dwarf habit, with oval, dark-green thick leaves, axillary racemes of white flowers, and indigo-blue berries. Native to China.

78356 and 78357. GRISELINIA LITTORALIS Raoul. Cornaceae.

An evergreen shrub, particularly fine in winter, which thrives in stiff soils, also under trees, and does well by the sea. It grows 5 to 6 feet high and as much in diameter, and has soft pale-green metallic foliage which droops gracefully. Native to New Zealand.

78356. The ordinary type.

78357. Variety *macrophylla*. This variety requires more warmth than the type.

78332 to 78370—Continued.

78358. HYMENANTHERA CHATHAMICA (F. Muell.) T. Kirk. Violaceae.

An evergreen shrub, native to New Zealand, with thick pale-green lanceolate leaves 5 inches long, numerous inconspicuous axillary flowers, and small white fruits.

78359. KIRENGESHOMA PALMATA Yatabe. Hydrangeaceae.

A rare herbaceous perennial, native to Japan, 2 to 4 feet high, with dark-green papery palmate hairy leaves and few-flowered panicles of bell-shaped yellow flowers. It should be planted in moist soil in the shade.

78360. MARGYRICARPUS SETOSUS Ruiz and Pav. Rosaceae.

A dwarf heathlike creeping evergreen shrub, about a foot high, with odd-pinnate leaves, very small greenish flowers, and showy white berries which persist for some time. Native to Peru.

78361. OSMANTHUS ILICIFOLIUS (Sieb.) Masters. Oleaceae.

Variety *purpurea*. An evergreen shrub with spiny leaves which, when young, are a rich dark purple, later becoming green with a purple tinge. The small flowers are fragrant, and the ovoid berries are bluish black.

78362 to 78364. PERNETTYA spp. Ericaceae.

78362. PERNETTYA FURENS Klotzsch.

An upright evergreen shrub, native to Chile, with oval leaves 1 to 2 inches long, dense racemes of small white flowers, and ornamental brownish-red fruits.

78363. PERNETTYA MUCRONATA (L. f.) Gaud.

Variety *alba*. A rare form with large white berries.

78364. PERNETTYA sp.

Davies hybrids. Berries of various colors, mixed.

78365. PHILLYREA ANGUSTIFOLIA L. Oleaceae. Narrowleaf phillyrea.

An evergreen shrub up to 10 feet high, native to the Mediterranean region, with linear-lanceolate leaves 2 inches long, and small white flowers in short axillary racemes, followed by purplish-black ovoid fruits.

78366. PHOTINIA DAVIDSONIAE Rehd. and Wils. Malaceae.

A handsome evergreen tree, 20 to 50 feet high, with dense foliage, native to Hupeh, western China. The leathery oblong or lanceolate leaves are up to 6 inches long, and the white flowers, nearly half an inch across, are in many-flowered terminal corymbs. The globose orange-red berries are about one-third of an inch in diameter.

78367. RHODODENDRON sp. Ericaceae. Azalea.

Butheana. A shrub bearing large white flowers during May.

78368. SARCOCOCCA HOOKERIANA HUMILIS (Stapf) Rehd. and Wils. Buxaceae.

A dwarf evergreen shrub 3 to 5 feet high, native to western China, with

78332 to 78370—Continued.

lanceolate coriaceous leaves 1 to 2 inches long, axillary racemes of small whitish flowers, and round black fruits.

78369. STRANVAESIA BENTHAMIANA (Hance) Merr. (*Photinia benthamiana* Hance). Malaceae.

A Chinese evergreen shrub with leathery oblong red-tipped leaves and dense panicles of white flowers followed by orange or scarlet fruits.

78370. STRANVAESIA NUSSIA (Buch.-Ham.) Decaisne (*S. glaucescens* Lindl.). Malaceae.

A rare evergreen Himalayan tree, reaching 20 feet when fully grown, with oblanceolate-serrulate leaves about 4 inches long, terminal clusters of white flowers borne during June, and pale-red subglobose berries produced in the autumn.

78371. GOSSYPIUM NANKING Meyen. Malvaceae. Cotton.

From Bangkok, Siam. Seeds presented by the Siamese Department of Agriculture, through Phya Vijitavongs, Siamese Minister. Received December 28, 1928.

The "Chinese" cotton of commerce is a delicately branched shrub with imperfectly cordate leaves and rufous velvet-coated seeds bearing a silky floss which is usually white in the better varieties, but may be reddish or khaki colored.

78372 to 78388.

From Keston, Kent, England. Plants purchased from G. Ruethe, Foxhill Hardy Plant Farm. Received November and December, 1928.

78372. CLETHRA DELAVAYI Franch. Clethraceae.

A shrub or small tree, native to China, up to 50 feet high, with red branchlets and oblanceolate leaves which are pubescent beneath. The fragrant white flowers differ from those of the American summersweet, *Clethra alnifolia*, in having red calyxes and in being in solitary axillary racemes, while the summersweet has the racemes grouped together to form a panicle.

78373. INDIGOFERA HEBEPETALA Benth. Fabaceae.

For previous introduction and description see No. 77686.

78374. PERNETTYA MAGELLANICA Hort. Ericaceae.

A dwarf evergreen ornamental shrub from the Strait of Magellan region of South America.

78375. PILEOSTEGIA VIBURNOIDES Hook. f. and Thoms. Hydrangeaceae.

A little-known evergreen climber, native to China, with thick lanceolate-elliptic opposite dark-green leaves about 5 inches long, and dense umbels of white flowers which resemble those of *Viburnum tinus*.

78376 to 78385. RHODODENDRON spp. Ericaceae. Azalea.

A collection of horticultural varieties of azaleas of dwarf habit, which are very free-flowering and hardy. They succeed in lime-free soil to which humus has been added.

78372 to 78388—Continued.

78376. RHODODENDRON sp.

Carminata splendens. Flowers a deep pink, of the general type of the Kurume azaleas.

78377. RHODODENDRON sp.

H. O. Carre. Flowers rich rosy red, of the Kurume type, with narrow lobes, giving a starry effect.

78378. RHODODENDRON sp.

Illuminata. Flowers rosy purple. The bush somewhat resembles *Rhododendron obtusum* var. *amoena* in habit.

78379. RHODODENDRON INDICUM (L.) Sweet.

Kokin-shita. A compact low-growing bush with narrow leaves, single scarlet flowers, of the general type of the plant known in trade as *Azalea macrantha.*

78380. RHODODENDRON INDICUM (L.) Sweet.

Macrantha. Flowers deep salmon. A late-flowering azalea of very compact habit, with narrow evergreen leaves.

78381. RHODODENDRON sp.

Mrs. Carmichael. Flowers rosy purple. A hybrid with growth somewhat like the Kurume azaleas, but much larger flowers, many of which show some petaloid development in the stamens.

78382. RHODODENDRON INDICUM (L.) Sweet.

Macrantha. Flowers rich orange. Resembles No. 78380 except in the hue of the flowers.

78383. RHODODENDRON sp.

Princess Maud. Flowers rosy pink, of the Kurume type.

78384. RHODODENDRON sp.

Rosea. Flowers rose pink.

78385. RHODODENDRON sp.

Splendens. Flowers soft rose pink, of the Kurume type.

78386. SARCOCOCCA HOOKERIANA Baill. Buxaceae.

For previous introduction and description see No. 78107.

78387. SARCOCOCCA RUSCIFOLIA Stapf. Buxaceae.

An evergreen shrub up to 6 feet high, native to central and western China, with lustrous dark-green ovate leaves, small racemes of whitish flowers, and dark scarlet fruits.

For previous introduction see No. 76595.

78388. SYCOPSIS SINENSIS Oliver. Hamamelidaceae.

A hardy evergreen shrub or small tree, native to China, 25 feet high, with elliptic-ovate leaves, 4 inches long, lustrous above and pale green beneath, and small heads of flowers with conspicuous red anthers.

For previous introduction see No. 76118.

78389. QUERCUS SESSILIFLORA Salisb. Fagaceae. **Durmast oak.**

From Northwood, Middlesex, England. Seeds presented by R. C. B. Gardner, Received December 27, 1928.

These seeds were collected in Woburn Park, Bedfordshire, by permission of the Duke of Bedford. A large European tree closely related to the English oak, *Quercus robur*, with lustrous bright-green obovate leaves having five to nine pairs of rounded lobes and hemispheric cups which cover about one-third of the ovoid acorns.

78390 to 78393.

From China. Seeds collected by J. F. Rock, National Geographic Society, Washington, D. C. Received December 26, 1928.

78390 and 78391. PRIMULA spp. Primulaceae. **Primrose.**

Found in alpine meadows on Mount Lachouchou K'ha, southeast of Chungtien, northwestern Yunnan, China, September, 1928.

78390. PRIMULA sp.

No. 17273. A herbaceous perennial 1 to 2½ feet high, with large purple flowers in double and triple tiers. Collected at an altitude of 12,000 feet.

78391. PRIMULA sp.

No. 17274. A herbaceous perennial 1 to 2 feet high, with pale-blue flowers in large tiers. Collected at an altitude of 14,000 feet.

78392. VACCINIUM sp. Vacciniaceae.

No. 17313. [Received without information.]

78393. (Undetermined.)

No. 17295. [Received without information.]

78394 and 78395.

From Dehra Dun, India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute and College. Received December 28, 1928.

78394. ACER PENTAPOMICUM J. L. Stewart. Aceraceae. **Maple.**

A medium-sized tree, native to the temperate slopes of the Himalayas in northwestern India, with gray or reddish twigs, 3-lobed cordate leaves 4 to 6 inches long, pale green on both sides, the lobes ovate and obtusely serrate. The glabrous fruits, an inch long, have slightly diverging veiny wings.

78395. CARPINUS FAGINEA Lindl. Fagaceae.

A moderate-sized Himalayan tree found between 4,000 and 7,000 feet altitude. It has tomentose branches, and the ovate doubly serrate falcate leaves are 3 to 5 inches long. The pubescent fruiting bracts, an inch long, are very unequal sided, the narrow side being entire and the other coarsely toothed.

78396. OLEA EUROPAEA L. Oleaceae. **Olive.**

From Jerusalem, Palestine. Cuttings presented by A. Grasovsky, Department of Agriculture and Forestry. Received December 31, 1928.

From the Mount of Olives.

78397. THUJOPSIS DOLABRATA (L. f.) Sieb. and Zucc. Pinaceae. **Hiba arborvitae.**

From Japan. Seeds obtained by R. K. Beattie, Bureau of Plant Industry. Received December 27, 1928.

No. 794. Presented by Doctor Shirasawa, Director of the Forest Experiment Station, Meguro, Tokyo. A pyramidal Japanese conifer 50 feet high, with spreading frondlike branchlets, nodding at the ends, small glossy dark-green leaves having white patches below, and broadly ovoid cones less than an inch long. The wood is very resistant to decay and makes excellent poles and ties. This variety seeds but rarely, perhaps having only one good crop in 13 years.

78398 to 78412.

From Keijo, Chosen. Seeds presented by M. Towaza, Director of the Forestal Experiment Station. Received December 28, 1928.

78398. ABIES NEPHROLEPIS (Trautv.) Maxim. Pinaceae. **Fir.**

A conifer, native to Siberia, up to 100 feet high, resembling the Siberian fir, *Abies sibirica*, but with rough bark, pubescent branchlets, shorter leaves, and smaller cones.

78399. ACER PSEUDO-SIEBOLDIANUM Komar. Aceraceae. **Maple.**

A small maple, native to Manchuria, with cordate leaves divided into 9 to 11 lanceolate-serrate lobes, and corymbs of purple flowers.

For previous introduction see No. 75667.

78400. BETULA DAVURICA Pall. Betulaceae. **Birch.**

A tree up to 60 feet high, with widespreading branches and purplish-brown flaky bark. The broadly wedge-shaped leaves are 2 to 4 inches long and are dark green above with serrate margins.

For previous introduction see No. 57278.

78401. CORNUS COREANA Wanger. Cornaceae. **Dogwood.**

A tree native to Chosen, up to 60 feet high, with reddish-brown branchlets, dark-green elliptic leaves 3 to 6 inches long, loose clusters of small white flowers, and black fruits.

78402. JUNIPERUS RIGIDA Sieb. and Zucc. Pinaceae. **Needle juniper.**

A graceful pyramidal shrub or small tree up to 30 feet high, native to eastern Asia. The branches are ascending and the branchlets pendulous; the spreading, linear-subulate, sharp-pointed leaves are an inch long; and the globose fruits, a quarter of an inch in diameter, are brownish black and covered with bloom.

For previous introduction see No. 57298.

78403. LARIX DAHURICA Turcz. Pinaceae.

Variety *coreana*. A form of the Dahurian larch, native to Chosen, which is a tree up to 100 feet high, with long horizontal branches, reddish or yellowish branchlets, bright-green flattened leaves, and ovoid cones an inch long.

78398 to 78412—Continued.

78404. PICEA KOYAMAI Shiras. (*P. koraiensis* Nakai). Pinaceae. **Spruce.**

A narrowly pyramidal tree 60 feet high, native to Japan and Chosen, with reddish-brown bloomy branchlets, compressed leaves half an inch long, with two white bands above, and pale-brown cylindric cones 2 to 3 inches long.

For previous introduction see No. 44397.

78405. PINUS TABULAEFORMIS Carr. (*P. leucosperma* Maxim.). Pinaceae. **Chinese pine.**

A pine, native to China, up to 75 feet high, with dark-gray bark on the trunk, red on the branches, and orange or grayish-yellow branchlets. The glaucescent leaves, usually two in a cluster, are stout and 3 to 6 inches long, and the ovoid cones, 2 to 4 inches long, are pale tawny yellow, changing to dark brown and persisting for several years.

78406 to 78409. PRUNUS SERRULATA Lindl. Amygdalaceae. **Oriental cherry.**

Local strains to be grown for trial as stocks.

78406. Variety *compta.*

78407. Variety *intermedia.*

78408. Variety *Sontagia.*

78409. Variety *vercunda.*

78410. PRUNUS SERRULATA PUBESCENS Wilson. Amygdalaceae. **Kasumi cherry.**

A wild cherry from Japan; of possible use as a stock.

78411. RHODODENDRON SCHLIPPENBACHII Maxim. Ericaceae. **Royal azalea.**

A beautiful deciduous shrub 15 feet high, with large clear pink flowers appearing before the leaves in spring. The broadly obovate leaves, 2 to 4 inches long, are dark green above, paler beneath, and change to yellow, orange, and crimson in the autumn. Native to Manchuria, Chosen, and Japan.

For previous introduction see No. 71127.

78412. SYRINGA OBLATA DILATATA (Nakai) Rehder. Oleaceae. **Lilac.**

A loosely branched shrub up to 12 feet high, with ovate long-pointed leaves 6 inches long and loose clusters of pale purple-lilac flowers. Native to Chosen.

For previous introduction see No. 75782.

78413. SANGUISORBA OBTUSA Maxim. (*Poterium obtusum* Franch. and Sav.). Rosaceae.

From Woking, Surrey, England. Roots purchased from George Jackman & Sons, Woking Nurseries. Received December 29, 1928.

A herbaceous perennial about 3 feet high, with pinnately compound leaves having about six pairs of oblong serrate leaflets, and a much-branched flower stem bearing spikes, 3 inches long and an inch in diameter, of small bright rosy pink flowers. Native to Japan.

78414 to 78442.

From Madagascar. Plants, cuttings, and bulbs collected by Charles F. Swingle, Bureau of Plant Industry, and Dr. Henri Humbert, University of Algiers, Algeria. Received in November, 1928.

78414. ALOE sp. Liliaceae.

Diego Suarez, Montagne des Français, October 7, 1928. Leaves about 6 inches long, reddish to coppery red, over green.

78415 to 78417. CHRYSALIDOCARPUS spp. Phoenicaceae. **Palm.**

Botanic Garden, Tananarive, September 28, 1928.

78415. CHRYSALIDOCARPUS BARONII Beccari.

A medium-sized palm, native to central Madagascar, with a cylindrical stem about 3 inches in diameter and regularly pinnate leaves, about 4 feet long, which have very narrow pinnae 16 to 18 inches long.

For previous introduction see No. 57214.

78416. CHRYSALIDOCARPUS DECIPIENS Beccari.

A stout palm with a thick cylindrical, ringed trunk and large pinnate leaves with very numerous segments up to nearly 3 feet long. Native to central Madagascar.

78417. CHRYSALIDOCARPUS LUTESCENS (Bory) Wendl. **Yellow palm.**

A palm, native to Madagascar, about 25 feet high, with a slender cylindrical ringed trunk about 3½ inches in diameter. The pinnate leaves, about 5 feet long, are composed of about 50 linear segments.

78418. CISSUS sp. Vitaceae.

No. 5148. Upper Valley of Fiherenana, near Tullear, August 3, 1928.

78419 to 78421. CYNANCHUM spp. Asclepiadaceae.

78419. CYNANCHUM sp.

Isalo, Ranohira, July 29, 1928. A succulent shrub which may be a source of rubber. The stems are covered with irregular rows of greenish horns, and the leaves, 6 to 8 inches long, with a pinkish base and petiole, are in a terminal whorl.

78420. CYNANCHUM sp.

Isalo, Ranohira, July 29, 1928. A succulent shrub with smooth-jointed stems and small scalelike leaves; it may be a source of rubber.

78421. CYNANCHUM sp.

Diego Suarez, Montagne des Français, October 7, 1928.

For previous introduction and description see No. 78419.

78422. ISCHNOLEPES TUBEROSA Jum. and Perr. Asclepiadaceae.

No. 5011. Isalo, Ranohira, July 20, 1928. A somewhat fleshy shrub, about 4 feet high, with greenish flowers and large tubercles.

78423 to 78436. KALANCHOE spp. Crassulaceae.

78414 to 78442—Continued.

78423 to 78425. KALANCHOE sp.

For previous introduction and description see No. 77919.

78423. Botanic Garden, Tananarive, September 28, 1928.

78424. Ampanihy, September 1, 1928.

78425. No. 4904. Ihosy, Ranohira, July 29, 1928.

78426. KALANCHOE DAIGREMONTIANA Ham. and Perr.

For previous introduction and description see No. 77907.

78427. KALANCHOE FEDTSCHENKOI Ham. and Perr.

Botanic Garden, Tananarive, September 28, 1928. A rather small succulent, about 10 inches high, with crenate rounded-oval leaves an inch and a half long, bluish green overcast with purple, and small purplish flowers in a loose cluster terminating the slender stem. Native to Madagascar.

78428. KALANCHOE GASTONIS-BONNIERI Ham. and Perr.

Botanic Garden, Tananarive, September 28, 1928. During nonblooming periods this succulent, native to Madagascar, is a low plant with a very short stem and a rosette of light green crenate leaves, faintly dotted with darker green. From these crenations young plants evidently arise. When about to flower, the stem elongates to a height of nearly 2 feet, bearing at its summit a lax corymb of light-pink flowers.

78429. KALANCHOE MINIATA Hilsenb. and Boj.

Botanic Garden, Tananarive, September 28, 1928. An erect slender fleshy plant 1 to 2 feet high, native to Madagascar. The smooth green oval-obtuse leaves are up to 3 inches long with pink petioles and shallow crenate margins. The small flowers, bright red with fine brown spots, are in lax terminal panicles.

78430. KALANCHOE PILOSA Hort.

Botanic Garden, Tananarive, September 28, 1928. An ornamental fleshy perennial with very thick leaves, densely tomentose, with the hairs silvery except at serrations, where they are rusty brown.

78431. KALANCHOE SYNSEPALA Baker.

For previous introduction and descriptions see No. 77911.

78432. KALANCHOE TUBIFLORA Hamet.

Botanic Garden, Tananarive, September 28, 1928.

For previous introduction and description see No. 77913.

78433. KALANCHOE ALICIAE Hamet.

Botanic Garden, Tananarive, September 28, 1928. A succulent herbaceous ornamental with pink flowers; leaves opposite, cordate, with crenate margins, almost as downy as mullein, but the green of the leaf shows through.

78414 to 78442—Continued.

78434. KALANCHOE DAIGREMONTIANA Ham. and Perr.

For previous introduction and description see No. 78426.

78435. KALANCHOE ALICIAE Hamet.

Ambositra, July 21, 1928.

For previous introduction and description see No. 78433.

78436. KALANCHOE sp.

Amber Mountains, Diego Suarez, October 6, 1928. Epiphyte growing on trees. A lax vine with opposite fleshy leaves three-fourths of an inch long, green with a line of red on the edges, and one or two marginal dentations. It roots at the nodes.

78437. KITCHINGIA PELTATA Baker.

Forest of Ambatofinandrano, on the road between Ambositra and Fianarantsoa, September 21, 1928. A succulent herbaceous ornamental with leaves petiolate, peltate, crenate, 2 to 3 inches long, green with red margins, and petioles and stems pink.

78438. KALANCHOE ALICIAE Hamet.

Between Andina and Ambositra, July 21, 1928.

For previous introduction and description see No. 78433.

78439. LOMATOPHYLLUM OCCIDENTALIS Perrier. Liliaceae.

Botanic Garden, Tananarive, September 28, 1928. An aloelike plant, sometimes stemless but usually with a stem up to 2 feet long, native to dry, sandy regions in Madagascar. The recurved leaves, about 3 feet long, have horny margins and deltoid spiny tips. The dense conical head is composed of 50 to 80 purple flowers.

78440. LOMATOPHYLLUM ROSEUM Perrier. Liliaceae.

Botanic Garden, Tananarive, September 28, 1928. A stemless, soboliferous plant with a rosette of lanceolate leaves, long attenuate from the base to the tips, about 1½ feet long, 1½ inches wide with obtusely serrate margins. The rosy flowers are in a rather dense raceme on a scape about a foot high. Native to rocky places in Madagascar.

78441 and 78442. MARSDENIA VERRUCOSA (Bojer) Decaisne. Asclepiadaceae.

Itrobeka, Ampanihy, August 30, 1928. *Bokabay.* A rubber plant of some importance in Madagascar, and especially interesting in that the rubber is almost entirely confined to the young fruits, making it unnecessary to injure the plant in collecting the rubber. The fruits are about 4 to 6 inches long.

78441. 78442.

78443 to 78466. MASCARENHASIA spp. Apocynaceae.

From Madagascar. Plants and cuttings collected by Charles F. Swingle, Bureau of Plant Industry, and Dr. Henri Humbert, University of Algiers, Algeria. Received November 20, 1928.

78443 and 78444. MASCARENHASIA ARBORESCENS A. DC.

78443 to 78466—Continued.

78443. Northeast of Majunga, near Belobaka, October 10, 1928. *Hazondrano.* A shrub about 18 feet high, formerly one of the most important sources of rubber in Madagascar, but now little used. The native name signifies a tree that grows near the water, and those growing in this region are found usually near the swamps.

78444. From Itrobeka, August 30, 1928. Possibly *kompitso.*

78445. MASCARENHASIA sp.

Between Andina and Ambositra, July 21, 1928. Possibly *kompitso.* It is probably identical with No. 78444.

78446. PACHYPODIUM sp. Apocynaceae.

A yellow-flowered, small-fruited, succulent shrub growing on rocks along the road between Ihosy and Ambalavao, September 20, 1928.

78447. PACHYPODIUM sp. Apocynaceae.

Growing on rocks on the road between Antanimora and Betroka, southeast of Bekily, September 18, 1928. A thorny succulent shrub, about 12 feet high, with few leaves, white flowers, and large fruits.

78448. RAVENALA MADAGASCARIENSIS Sonner. Musaceae. **Traveler's-tree.**

From Nossi Be, October 8, 1928. A magnificent tropical tree about 60 feet high with a palmlike trunk and bananalike leaves of gigantic size, arranged in two rows on opposite sides of the arboreous stem, giving one the impression of an immense fan. The leaves, when cut, yield an abundance of refreshing juice, with which travelers allay their thirst. The flowers are comparatively small, aggregated in the axils of the leaves. The arillus surrounding the beanlike seeds is of a beautiful ultramarine color and yields an essential oil. A dye is extracted from the capsules. Native to Madagascar.

For previous introduction see No. 42372.

78449. BULBINELLA sp. Liliaceae.

Collected about 50 feet from the seashore at Mombasa, Kenya, British East Africa, June 26, 1928. This plant has a rough bulbous root and leaves up to 8 inches long, green with irregular cross bars of darker green. No flowers yet, but apparently a spike with 10 to 20 flowers coming.

78450. SELAGINELLA sp. Selaginellaceae.

Growing with *Pachypodium* sp. [No. 78447] on the road between Antanimora and Betroka, southeast of Bekily, September 18, 1928.

78451. SENECIO ANTITENSIS Baker. Asteraceae.

Mont Antety, Ambositra, July 22, 1928. A much-branched bushy composite, native to Madagascar, with rather dense foliage. The small yellow flower heads are in lax corymbs.

78452. SENECIO BARORUM Humbert. Asteraceae.

No. 4957. Isalo, Ranohira, July 30, 1928. A glabrous shrub up to 8 inches high, with numerous elliptic or oblanceolate obtuse leaves and numerous flower heads in compact corymbs of variable size.

78453. (Undetermined.)

Upper Valley of Fiherenana, August 2, 1928. A rubber-bearing plant, native to Madagascar.

78454. (Undetermined.)

From Betioky, August 14, 1928. A rubber-bearing plant native to Madagascar.

78455. ANTHERICUM sp. Liliaceae.

From the grounds of the American Lutheran Mission, Behara, September 11, 1928. *Kompitso.* An important rubber-bearing plant of this region, native to Madagascar, with violet flowers.

78456 to 78459. (Undetermined.)

Amber Mountains, Diego Suarez, October 6, 1928. Orchids native to Madagascar.

78456. **78458.**

78457. **78459.**

78460. (Undetermined.)

Presented by F. W. DuCommun, Tamatave, October 2, 1928. A fern native to Madagascar.

78461. (Undetermined.)

Presented by F. W. DuCommun, Tamatave, October 2, 1928. A fern native to Madagascar.

78462 to 78464. (Undetermined.)

Plants native to Madagascar.

78462. From the grounds of the American Lutheran Mission, Behara, September 11, 1928. *Holo.* An ornamental vine probably indigenous to Madagascar.

78463. Isalo, Ranohira, July 30, 1928.

78464. Isalo, Ranohira, July 30, 1928.

78465. (Undetermined.)

A species growing about 50 feet from the seashore at Mombasa, Kenya, British East Africa, June 26, 1928.

78466. (Undetermined.)

A shrub growing on the road between Antsirabe and Ambositra, July 20, 1928. Native to Madagascar.

78467. ACTINORHYTIS CALAPPARIA Wendl. and Drude. Phoenicaceae. **Palm.**

From Medan, Sumatra. Seeds presented by J. A. Lörzing. Received July 7, 1928. Numbered in December, 1928.

A robust East Indian palm 40 feet high, with a smooth stem conspicuously ringed, large pinnate leaves 9 feet long and 6 wide, and a large pendulous cluster of small flowers followed by ovoid red fruits 3 inches long.

For previous introduction see No. 67185.

78468 and 78469. BOUGAINVILLEA SPECTABILIS Willd. Nyctaginaceae.

From St. Croix, Virgin Islands. Cuttings presented by J. B. Thompson, Director of the St. Croix Experiment Station. Re-

78468 and 78469—Continued.

ceived March 27, 1928. Numbered in December, 1928.

An attractive crimson-flowered Bougainvillea.

For previous introduction see No. 64652.

78468. No. 1. **78469.** No. 2.

78470 to 78473.

From Madagascar. Roots, cuttings, and tubers collected by Charles F. Swingle, Bureau of Plant Industry, and Dr. Henri Humbert, University of Algiers, Algeria. Received September, 1928. Numbered in December, 1928.

78470. (Undetermined.)

Roots of a twining, rubber-bearing vine with opposite linear, lanceolate leaves up to 5 inches long and axillary umbels containing up to 10 milkweedlike flowers which have greenish-brown outer segments and white centers. It is probably identical with No. 78472.

78471. KALANCHOE ALICIAE Hamet. Crassulaceae.

From the Forest of Ranomena, east of Ambositra, July 25, 1928.

For previous introduction and description see No. 78438.

78472. (Undetermined.)

Cuttings of a rubber-bearing liane with triangular fruits 8 inches long. It is probably identical with No. 78470.

78473. PACHYPODIUM BREVICAULE Baker. Apocynaceae.

No. 4620. Valley of Sahatany, between Antsirabe and Ambositra, July 20, 1928. Tubers of a yellow-flowered stemless succulent shrub which is highly ornamental and especially useful for rock gardens. It has dense clusters of prickles, oblong densely pilose leaves, and terminal cymes of tubular flowers. It is usually broader than it is tall, growing about 20 inches high and 3 feet wide. This plant is very peculiar in that it seems to "flow" over the rocks. It has no value as a source of rubber.

78474 to 78482.

From Kzyl Orda, Syr Daria, Russia. Seeds presented by Jules W. Rewiakin, manager of the division of seeds. Received December 28, 1928.

78474. AMMODENDRON CONOLLYI Bunge. Fabaceae.

An evergreen shrub with silky leaves, native to Siberia, used as a sand binder.

For previous introduction see No. 42679.

78475. ANABASIS APHYLLA L. Chenopodiaceae.

An upright shrub 2 feet high, native to the Mediterranean region, with green branches, scalelike leaves, and inconspicuous flowers. It is used as a sand binder.

78476 to 78478. ARTEMISIA spp. Asteraceae. **Wormseed.**

The three following names have been received as sources from which the drug santonica is secured. They are low straggly undershrubs, native to Turkestan, and are kept separate for botanical identification.

78474 to 78482—Continued.

78476. ARTEMISIA CINA Berg.

78477. ARTEMISIA MARITIMA L.

78478. ARTEMISIA PAUCIFLORA Weber.

78479. CALLIGONUM APHYLLUM (Pall.) Guerke. Polygonaceae.

A tall nearly leafless shrub, resembling Ephedra in habit, with 4-winged fruits. Native to Turkestan.

For previous introduction see No. 28975.

78480 and 78481. HALOXYLON AMMODENDRON (Meyer) Bunge. Chenopodiaceae. **Saxaul.**

A Persian shrub or tree up to 20 feet high, with a thick gnarled trunk, light-green branchlets, and small fruits with thin papery suborbicular wings.

For previous introduction see No. 31332.

78480. Variety *acutifolium*. A variety with triangular acute scalelike leaves.

78481. Variety *aphyllum*. A variety either leafless or with merely rudimentary leaves which are not triangular.

78482. STIPA SPLENDENS Trin. Poaceae. **Grass.**

A coarse grass 6 feet high, native to the steppes of western Asia, with dense nodding panicles a foot long. The tough leaves and stalks are used to make brooms.

For previous introduction see No. 36791.

78483 to 78486.

From Madagascar. Plants and cuttings collected by Charles F. Swingle, Bureau of Plant Industry, and Dr. Henri Humbert, University of Algiers, Algeria. Received in October and November, 1928.

78483. (Undetermined.)

78484. (Undetermined.)

78485. (Undetermined.)

78486. (Undetermined.)

Presented by F. W. DuCommun, Tamatave.

78487 to 78503. DIOSPYROS KAKI L. f. Diospyraceae. **Kaki.**

From Japan. Cuttings obtained by R. K. Beattie, Bureau of Plant Industry. Received February, 1928. Numbered in December, 1928.

78487 to 78497. From the Kyoto Agricultural Experiment Station, Kyoto, January, 1928.

78487. Nos. 500 and 501. *O gosho*. A late variety producing a good crop of deep-red fruits about 4½ inches in diameter, which are nonastringent and very sweet.

78488. Nos. 502 and 503. *Hana gosho*. A medium to late variety producing a good crop of yellowish-red fruits 4 inches in diameter, which are nonastringent. This is one of the very best varieties.

78489. Nos. 504 and 505. *Nara gosho*. This variety came originally from

78487 to 78503—Continued.

Nara Ken. It is a late variety producing small to medium-sized red fruits which are nonastringent. There is a little tannin just under the skin at the outer surface of the pulp, but after the first bite the fruit is very sweet.

78490. Nos. 506 and 507. *Jiro.* A strong-growing tree producing a good crop of nonastringent yellowish-red fruits, the 4-lobing evident, with dark-red marks in the flesh. They ripen during the latter part of the early season.

78491. Nos. 508 and 509. *Fuyu.* A strong-growing tree producing a good crop of large yellowish-red fruits which are nonastringent and sweet. In a warm climate the fruits lose their astringency earlier.

78492. Nos. 510 and 511. *Tenjin gosho.* A variety producing a good crop of nonastringent fruits during the early part of the late season. They are glossy red, smaller, and not so flat as those of Fuyu, but are sweet. In some places the tannin remains in the fruits until late.

78493. Nos. 512 and 513. *Sho gwatsu.* A strong growing tree producing a good crop of reddish-yellow fruits, three-fourths of an inch in diameter, which are nonastringent and very sweet. In warm regions the fruits can be kept on the tree till February.

78494. No. 514. *Aizu mishirazu.* A variety producing reddish-yellow astringent fruits, 4 inches in diameter, during the middle of the season. It is a very strong tree, but carries such an extra heavy crop that the branches droop. The fruits are famous for eating after the tannin has been removed, and they are especially liked in Tokyo.

78495. No. 515. *Dojo hachuja.* A late variety producing a good crop of astringent fruits, yellow with a slight redness, which are 3½ inches in diameter and not flat. They are used to a great extent for drying in Gifu.

78496. No. 516. *Fuji.* A variety producing yellowish-red astringent fruits, usually seedless, which are 4 inches in diameter and not flat. There are three ways to remove the tannin from this variety. They may be dried, or allowed to stand in a cool place, or treated with alcohol fumes.

78497. No. 517. *Yokono.* A late variety producing a good crop of red astringent fruits which are slightly umbilicate. The tannin is hard to remove, but the fruits are used for drying.

78498 to 78503. Cultivated varieties from the Okitsu Agricultural Experiment Station, February, 1928.

78487 to 78503—Continued.

78498. No. 646. *Fuyu.* Nonastringent fruits produced the fifth year after grafting, during the middle of November.

78499. No. 647. *Ban gosho.* Nonastringent fruits produced the fifth year after grafting, during the first part of November.

78500. No. 649. *Tenjimaru.* Nonastringent, flat fruits, slightly indented at the apex, produced the sixth year after grafting, between the first and the middle of October.

78501. No. 650. *Shogatsu.* Nonastringent fruits produced the seventh year after grafting, during the middle of December. This variety is not a good yielder.

78502. No. 651. *Gosho.* Nonastringent fruits produced the sixth year after grafting, early in October.

78503. No. 652. *Jiro.* Nonastringent fruits produced the sixth year after grafting, during the early part of October.

78504 and 78505. CASTANEA HENRYI (Skan) Rehd. and Wils. Fagaceae. **Chestnut.**

Plants growing at the United States Plant Field Station, Glenn Dale, Md. Numbered in December, 1928.

Plants obtained from the Horticultural Field Station, Bell, Md., and grafted on *Castanea crenata.*

78504. P. I. G. No. 8649.

78505. P. I. G. No. 7824.

78506 to 78508.

From Little River, Fla. Seeds presented by Charles F. Simpson. Received December 15, 1928.

78506. SABAL sp. Phoenicaceae. **Palm.**

The palm from which these seeds came stands just south of Mr. Simpson's house at the north side of the road which runs around the place. It has a stout trunk about 12 feet high and is one of the most rapid growers known to Mr. Simpson.

78507. THRINAX MICROCARPA Sarg. Phoenicaceae. **Brittle thatch palm.**

A Florida palm up to 30 feet high, with fan-shaped leaves 4 feet broad, pale green above and silvery beneath, and small fruits.

For previous introduction see No. 39392.

78508. THRINAX MORRISII Wendl. Phoenicaceae. **Morris thatch palm.**

A dwarf palm, native to the West Indies, 2 to 3 feet high, with fan-shaped leaves, glaucescent beneath and with the segments free for about three-fourths of their length.

For previous introduction see No. 24617.

INDEX OF COMMON AND SCIENTIFIC NAMES

Abelia graebneriana, 78112.
Abies nephrolepis, 78398.
Acacia glaucescens, 77960.

INVENTORY No. 98

Washington, D. C. ▼ Issued May, 1930

PLANT MATERIAL INTRODUCED BY THE OFFICE OF FOREIGN PLANT INTRODUCTION, BUREAU OF PLANT INDUSTRY, JANUARY 1 TO MARCH 31, 1929 (NOS. 78509 TO 80018)

CONTENTS

	Page
Introductory statement	1
Inventory	3
Index of common and scientific names	61

INTRODUCTORY STATEMENT

The plant material included in this inventory (Nos. 78509 to 80018) for the period January 1 to March 31, 1929, reflects very largely testing experiments undertaken by the office with ornamental plants in several important genera. In nearly all cases the material recorded was secured by the purchase of seed, and, as is always true of such undertakings, some seed has given no germination, with the result that the experiments are not as advanced as might appear. This is particularly true of the sedums, the primulas, and the gentians, which form conspicuous parts of the inventory.

The gardener will also notice the various other ornamentals, including the houseleeks, cyclamen, and ericas for more northern gardens; aloes, agaves, and mesembryanthemums for the South and Southwest, with the possible addition of the very interesting kalanchoes and the gingerlilies. The latter represent a collection purchased from India to see if other species might not be found for general use in the Southern and Gulf States.

A preliminary and not altogether successful importation of plants of various daphnes that should be included among our ornamental shrubs shows that repeated efforts should be made to establish these charming plants.

Several collections of acacias, banksias, grevilleas, and Ficus species should prove of interest in frost-free regions, particularly on the Pacific coast.

This inventory includes also large collections of oaks, castanopsis, and chestnuts obtained by R. Kent Beattie; a collection of oat varieties, presented by the director of the Sveriges Utsädesförening, Svalöf, Sweden; and a collection of seeds presented by Maj. Lionel de Rothschild from material collected by Capt. F. Kingdon Ward in Assam.

Especially because this inventory lists so many seeds, it should be repeated that this is merely a record of material received and does not represent a catalogue of available plants.

The botanical determinations of these introductions have been made and the nomenclature determined by H. C. Skeels, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge

OFFICE OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., February 20, 1930.

99895—30——1

INVENTORY[1]

78509. ERYTHROXYLON COCA Lam. Erythroxylaceae. **Cocaine-tree.**

From Soledad, Cienfuegos, Cuba. Seeds presented by R. M. Grey, superintendent, biological laboratory and botanical garden, institute for tropical biology and medicine, Harvard University. Received June 10, 1927. Numbered in January, 1929.

A tropical shrub, native to Peru, 5 to 6 feet high, with rusty brown slender branches bearing clusters of obovate leaves at their tips. The yellowish flowers are borne in clusters of three to five in the axils of small scales which line the branchlets. It is grown commercially on a large scale throughout the warmer parts of South America, also in Java and Ceylon, for the sake of cocaine, which is extracted from the dried leaves.

For previous introduction see No. 67943.

78510. CYRTANTHUS FLAMMEUS Hort. Amaryllidaceae.

From Philadelphia, Pa. Bulbs presented by James Lambert, superintendent of the botanical laboratories of the University of Pennsylvania. Received March 8, 1929.

A South African bulbous perennial which is a rapid grower. It has linear to lanceolate leaves and umbels of red flowers.

78511. DIOSPYROS SINENSIS Hemsl. Diospyraceae. **Persimmon.**

From Nanking, China. Plants obtained through W. T. Swingle, Bureau of Plant Industry. Received March 6, 1929.

A small semievergreen Chinese tree with a short thick trunk, wide-spreading branches and spiny branchlets, thick oblong-lanceolate leaves 2 to 3 inches long, and globose or ovoid golden edible fruits nearly an inch in diameter.

78512 and 78513. AMYGDALUS PERSICA L. (*Prunus persica* Stokes). Amygdalaceae. **Peach.**

From Nikita, Yalta, Crimea, Russia. Trees presented by I. N. Riaboff, Government Botanical Garden. Received February 11, 1929.

78512. *Pahhnn.* **78513.** *Yennoh.*

78514 and 78515.

From Japan. Seeds obtained by R. K. Beattie, Bureau of Plant Industry. Received February 21, 1929.

Collected by Shimoyaku Eirinsho, at Nakama Kaikon, Shimoyaku Mura, Kumage Gun, Kagoshima Ken, in January, 1929.

78514. CASTANOPSIS CUSPIDATA (Thunb.) Schottky. Fagaceae. **Japanese chinquapin.**

No. 850. *Shihi.* In Japan this tree is commonly cultivated from Tokyo southward. It grows from 30 to 75 feet high, with massive wide-spreading branches. The leaves are variable in size and shape and vary in color on the under side from brownish to nearly white. The small, sweet acorns are baked, boiled, or roasted, and regularly sold in the Japanese markets. This tree is hardy only in the southernmost United States.

For previous introduction see No. 75864.

78515. QUERCUS sp. Fagaceae. **Oak.**

No. 849. *Ubamegashi.*

78516. GOSSYPIUM STOCKSII Masters. Malvaceae. **Cotton.**

From Nagpur, Central Provinces, India. Seeds presented by W. Youngman, economic botanist to the Government. Received March 1, 1929.

---

[1] It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

78516—Continued.

A tropical Indian shrubby cotton with small yellow flowers. It came originally from the Sind Desert, and is of the 13-haploid-chromosome group and therefore will not cross with American types. The seed is difficult to germinate. It is sown in Nagpur about June, and before sowing the coat is carefully split with a knife or the seed is rubbed upon a piece of fine sandpaper, which allows access of water and helps germination.

For previous introduction see No. 77215.

78517. DIERVILLA sp. Hydrangeaceae.

From Morden, Manitoba, Canada. Cuttings presented by W. R. Leslie, superintendent of the experimental station for southern Manitoba. Received March 7, 1929.

A hardy ornamental shrub originally from Fort William, Ontario, Canada.

78518 to 78523.

From Rome, Italy. Scions presented by Signor Pirovano, through the American consulate, Rome. Received February 1, 1929.

78518. PRUNUS CERASELLA Hort. Amygdalaceae. **Plum.**

A very early hard plum.

78519 to 78522. PRUNUS DOMESTICA × AMYGDALUS PERSICA. Amygdalaceae.

Plum-peach hybrids.

78519. A strong-growing hybrid with sterile pink flowers.

78520. An extra strong hybrid with pink flowers.

78521. A normal hybrid.

78522. A fertile hybrid with heartlike fruit that bursts.

78523. PRUNUS SALICINA × DASYCARPA. Amygdalaceae. **Hybrid plum.**

78524. SARACA INDICA L. Caesalpiniaceae. **Common saraca.**

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director, Java Botanic Gardens. Received February 4, 1929.

No. 200. A medium-sized Indian tree with pinnately compound leaves of 6 to 12 oblong leathery leaflets 6 to 9 inches long and orange-red fragrant flowers in compact panicles.

For previous introduction see No. 73260.

78525. RIBES RECLINATUM L. Grossulariaceae. **Gooseberry.**

From Alnarp, Akarp, Sweden. Plants presented by Carl G. Dahl. Received January 19, 1929.

Scania. A gooseberry resistant to gooseberry mildew. It might be classified as an improved type of Houghton, but the growth is better and the leaves remain on the bush for a longer time, as it is never attacked by *Gloeosporium ribis*. The fruit is larger and was placed on the market in 1927.

78526. ACTINIDIA sp. Dilleniaceae.

From Deli Valley, Mishmi Hills, Assam, India. Seeds collected by Capt. F. Kingdon Ward and presented by Maj. Lionel de Rothschild, London, England. Received January 19, 1929.

78526—Continued.

No. 8690. September 26, 1928. A big ornamental vine of the middle forest, growing at an altitude of 10,000 feet. Native to Assam.

78527. DIOSPYROS SINENSIS Hemsl. Diospyraceae. **Persimmon.**

From Algeria, Africa. Seeds presented by Dr. L. Trabut, Government botanist, Algiers. Received March 8, 1929.

A large-fruited variety grown at the Station Botanique, Algiers, in 1928.

78528 and 78529.

From the New Hebrides. Seeds presented by Dr. E. D. Merrill, dean, college of agriculture, University of California. Received February 18, 1929.

78528. ARECA sp. Phoenicaceae. **Palm.**

No. 547. A tall pinnate-leaved palm similar to *Areca catechu*, the betel palm.

78529. SEAFORTHIA sp. Phoenicaceae. **Palm.**

No. 639. A pinnate-leaved palm.

78530. CASTANOPSIS CONCINNA (Champ.) A. DC. Fagaceae. **Evergreen chinquapin.**

From Hong Kong, China. Seeds presented by H. Green, Superintendent, Botanical and Forestry Department. Received February 20, 1929.

A Chinese tree with oblong-lanceolate entire leathery leaves about 3 inches long, and densely spiny burs containing a solitary depressed-globular nut.

78531. GYNURA VIDALIANA Elmer. Asteraceae.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received February 20, 1929.

An interesting Philippine herb with orange-colored flowers popular with bees.

78532 and 78533.

From Richmond, Victoria, Australia. Seeds presented by F. H. Baker. Received February 20, 1929.

78532. CALLISTEMON CITRINUS (Curtis) Skeels (*C. lanceolatus* DC.). Myrtaceae. **Lemon bottlebrush.**

An evergreen shrub up to 12 feet high, with lanceolate leaves 1 to 3 inches long, reddish when young, and spikes, 2 to 4 inches long, of small flowers with long bright-red stamens. Native to southeastern Australia.

For previous introduction see No. 77385.

78533. HAKEA ACICULARIS (Vent.) Knight (*H. sericea* Schrad.). Proteaceae.

A tall evergreen Australian shrub or small tree with awl-shaped leaves 1 to 3 inches long and axillary clusters of small white flowers.

For previous introduction see No. 77386.

78534. TAMARINDUS INDICA L. Caesalpiniaceae. **Tamarind.**

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received February 21, 1929.

78534—Continued.

A variety of tamarind with pods which have flesh of very agreeable taste, tartness, and sweetness, making them very good for eating out of hand.

For previous introduction see No. 50186.

78535. FRAGARIA HAYATAI Makino. Rosaceae. **Strawberry.**

From Mount Arisan, Taiwan. Plants collected by R. K. Beattie, Bureau of Plant Industry. Received February 21, 1929.

No. 851. March 26, 1928. A stoloniferous perennial with long-petioled radicle leaves of three rhombic-ovate leaflets serrate with the terminal tooth smaller than the others. The flowers have a light-green calyx and obovate-emarginate or cuspidate white petals, and the delicious globose red fruits are one-fourth of an inch in diameter. Native to Japan.

For previous introduction see No. 76499.

78536. PHASEOLUS AUREUS Roxb. Fabaceae. **Mung bean.**

From St. Croix, Virgin Islands. Seeds presented by Maybin S. Baker, Agronomist, Agricultural Experiment Station. Received February 28, 1929.

A San Domingo bean which made a larger growth at the experiment station than any other tested there. The seed was originally sent from Porto Rico under the name "San Domingo cowpea."

78537. CITHAREXYLUM BERLANDIERI Robinson. Verbenaceae.

From Brownsville, Tex. Seeds presented by Peter H. Heinz. Received March 9, 1929.

An ornamental shrub or small tree, up to 30 feet high, with pendent branches, oblong or rhombic leaves about 4 inches long, and short axillary racemes of small black fruits. It is native to northeastern Mexico.

78538. ELAEIS GUINEENSIS Jacq. Phoenicaceae. **African oil palm.**

From Buitenzorg, Java. Seeds presented by Dr. L. Koch, chief of section for breeding annual crops of the General Experiment Station for Agriculture. Received March 9, 1929.

Dura Aijpe.

For previous introduction see No. 73956.

78539. LYCOPERSICON ESCULENTUM Mill. Solanaceae. **Tomato.**

From Charleston, S. C. Seeds presented by Dr. L. C. Critchfield. Received March 11, 1929.

An Italian tomato with most wonderful keeping properties; said to keep over a month after ripening on the vine and to be delicious to eat like an apple or orange.

78540 to 78542. RHODODENDRON spp. Ericaceae.

From Japan. Seeds presented by Prof. Bungo Miyazawa, Miyazaki College of Agriculture at Miyazaki-Shi, Japan. Received March 15, 1929.

78540. RHODODENDRON OLDHAMII Maxim.

A much-branched, partly deciduous red-hairy shrub 3 to 18 feet high, with

78540—Continued.

thinly leathery oblong-lanceolate dark-green leaves and red flowers 2 inches wide in terminal umbels. Native to Taiwan.

78541. RHODODENDRON PULCHRUM Sweet (*R. phoeniceum smithii* Wilson).

A handsome shrub with spreading hairy branches, elliptic leaves densely hairy beneath, and two to three terminal rosy purple flowers 2 inches or more across. A hybrid between *R. ledifolium* and *R. indicum.*

78542. RHODODENDRON RIPENSE Makino.

A densely branched evergreen shrub, 3 feet or more high, with whorled branches, narrow lanceolate leathery green leaves, and pale-lilac flowers about 2 inches across, solitary or in twos or threes. Native to Tosa and Iyo, Japan.

78543 to 78547. AMYGDALUS PERSICA L. (*Prunus persica* Stokes). Amygdalaceae. **Peach.**

From Portici, Italy. Scions presented by Prof. Gaetano Briganti, R. Istituto Superiore Agrario. Received March 22, 1929.

78543. *Terzarola tonda.*

78544. *Terzarola col pizzo.*

78545. *Giallona di Napoli o Terzarola Cavallara.*

78546. *Terzarola riccia.*

78547. *San Martino.*

78548. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

From Japan. Scions obtained by R. K. Beattie, Bureau of Plant Industry. Received March 13, 1929.

No. 834. From the Okitsu Agricultural Experiment Station. January, 1929. *Shidare* (weeping chestnut) variety *pendula.*

78549. PSORALEA GUEINZII Harvey. Fabaceae.

From Kirstenbosch, Union of South Africa. Seeds presented by R. H. Compton, director of the botanic garden of the University of Stellenbosch, Kirstenbosch. Received March 15, 1929.

A South Afrcan perennial 1 to 2 feet high, with a woody base, herbaceous branches, sessile leaves each consisting of a single lanceolate folded leaflet an inch long, and small axillary flowers. Of possible use as a forage crop or for green manure.

78550 to 78558.

From Orleans, France. Plants purchased from Léon Chénault & Son. Received January 2, 1929.

78550. CARAGANA GERARDIANA Royle. Fabaceae.

A compact, much-branched shrub about 3 feet high, native to northwestern India, with densely tomentose twigs, compound leaves having 8 to 12 obovate silky leaflets, and ending in a spine 2 inches long. The solitary pale-yellow flowers are an inch long.

78551. CARYOPTERIS TANGUTICA Maxim. Verbenaceae.

78550 to 78558—Continued.

A shrub native to northwestern China, with opposite ovate leaves and axillary cymes of violet-blue flowers. It is closely related to the common bluebeard (*C. incana*).

For previous introduction see No. 77662.

78552. COTONEASTER PRAECOX Hort. Malaceae.

A new prostrate dwarf species, with dark-green leaves, said to exceed in beauty all hitherto-known prostrate cotoneasters.

78553. COTONEASTER PYRENAICA Hort. Malaceae.

This species is said to be a dwarf evergreen shrub native to the Himalayas.

78554. SPIRAEA HENRYI Hemsl. Rosaceae. **Henry spirea.**

Variety *magnifica*. A spreading deciduous shrub about 7 feet high, with oblong-obovate wedge-shaped leaves usually coarsely dentate toward the apex and up to 2½ inches long, and with small white flowers in loose corymbs. Native to central and western China. This is of the same group as the well-known Anthony Waterer spirea.

78555. SYRINGA JULIANAE C. Schneid. Oleaceae.

A handsome spreading shrub, 6 to 8 feet high, with elliptic-ovate leaves 2 to 3 inches long and numerous panicles of fragrant clear violet flowers which are borne very early in the season. Closely related to *S. velutina*.

78556. SYRINGA KOMAROWI SARGENTIANA C. Schneid. Oleaceae. **Lilac.**

A shrubby lilac up to 15 feet high, native to China, with ovate-lanceolate leaves, 4 to 6 inches long, pubescent beneath, and compact nodding panicles of salmon-rose flowers. It is generally similar to *S. reflexa*.

78557. VIBURNUM BUDDLEIFORIUM C. H. Wright. Caprifoliaceae.

A hairy shrub, native to central China, closely related to *V. veitchii*. It is about 6 feet high, with oblong-lanceolate leaves 3 to 6 inches long, dense clusters, about 3 inches across, of small white flowers, and ovoid black fruits.

For previous introduction see No. 58812.

78558. VIBURNUM HARRYANUM Rehder. Caprifoliaceae.

An evergreen shrub up to 10 feet high, native to western China, with nearly orbicular leaves an inch long, small cymes of white flowers, and ovoid black fruits. The evergreen *V. davidi* is a related species.

For previous introduction see No. 66320.

78559 and 78560. LILIUM spp. Liliaceae. **Lily.**

From Japan. Bulbs obtained by R. K. Beattie, Bureau of Plant Industry. Received January 7, 1929.

78559. LILIUM sp.

No. 800. Collected in Kiraichi Mura, Kita Tsugaru Gun, Aomori Ken, by Morisaburo Sasaki.

78559 and 78560—Continued.

78560. LILIUM sp.

No. 801. December 10, 1928. A lily with light and deep-pink flowers, collected in Nakui, Nakui Mura, San Nohe Gun, Aomori Ken, by Morisaburo Sasaki.

78561 to 78565. GOSSYPIUM spp. Malvaceae. **Cotton.**

From Peru. Seeds obtained from Graham, Rowe & Co., through T. H. Kearney, Bureau of Plant Industry. Received January 3, 1929.

78561. GOSSYPIUM sp.

No. 1.

78562. GOSSYPIUM sp.

No. 2.

78563. GOSSYPIUM sp.

No. 3. The southern or *Ica* variety of the Peruvian tree cotton. Seeds picked from a tree growing in the hacienda San Jose de Ica, which came originally from Nosca, a valley farther inland and to the south.

78564. GOSSYPIUM sp.

No. 4. *Red Peruvian.*

78565. GOSSYPIUM sp.

No. 5. *Stained Peruvian.*

78566. PASPALUM NOTATUM Fluegge. Poaceae. **Bahia grass.**

From Jaguey Grande, Cuba. Seeds purchased from Eugenia Gomez. Received January 7, 1929.

A perennial tropical American grass which has shown promise as a pasture grass in the southern United States. It has very stout rootstocks, makes a firm sod, and does well on sandy as well as on loam soils. The flowering culms and ascending stems attain a height of about 1 foot.

For previous introduction see No. 76433.

78567 to 78569.

From Japan. Seeds obtained by R. K. Beattie, Bureau of Plant Industry. Received January 7, 1929.

78567. PICEA GLEHNI (Schmidt) Masters. Pinaceae. **Sakhalin spruce.**

No. 806. Collected by the Ogi Paper Co., of Tomakomai, Hokushu. A handsome Japanese evergreen tree up to 150 feet high, native to northern Japan. The cones are a lustrous brown or violet, and the seeds are said to retain their vitality for seven years.

For previous introduction see No. 78180.

78568. RHODODENDRON sp. Ericaceae. **Azalea.**

No. 795. A white-flowered azalea collected in the front garden of the Red Cross hospital, Aoyama, Tokyo, by Yasuo Kurihara. There was one bloom when the seed pods were picked on November 30, 1928. Mr. Kurihara believes this to be a wild species rather than a cultivated variety.

78569. RHODODENDRON sp. Ericaceae. **Azalea.**

No. 802. An azalea collected in Kiraichi Mura, Kita Tsugaru Gun, Aomori Ken, by Morisaburo Sasaki, November 2, 1928.

78570 to 78573. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

From Helsingfors, Finland. Seeds presented by Dr. K. Linkola, director of the botanical institute and gardens of the University of Helsingfors. Received January 5, 1929.

Wild varieties.

78570. No. 1.
78571. No. 2.
78572. No. 3.
78573. No. 4.

78574. ARTOCARPUS CHAMPEDEN (Lour.) Spreng. (*A. polyphema* Pers.). Moraceae.

From Singapore, Straits Settlements. Seeds presented by R. E. Holttum, Curator, Botanic Garden. Received January 10, 1929.

A handsome East Indian shade tree bearing small elongated fruits which are rather smooth skinned. The arillus has a peculiar sweet flavor.

For previous introduction see No. 68018.

78575 to 78577. FICUS spp. Moraceae. **Fig.**

From the island of Guam. Seeds presented by C. W. Edwards, Director, Agricultural Experiment Station. Received January 9, 1929.

78575. FICUS MARIANNENSIS Merr.

A tropical plant, native to Guam, which starts as an epiphyte and eventually becomes a tall tree. The alternate, oblong-elliptic, entire leaves are up to about 5 inches long, and the axillary fruits are about two-fifths of an inch in diameter.

For previous introduction see No. 74591.

78576. FICUS PHILIPPINENSIS Miquel.

A climbing woody epiphytic strangling fig, native to the Philippine Islands, which sends down aerial roots and eventually kills the host plant. It has triangular branches, oval-oblong, leathery, long-pointed leaves, and axillary fruits.

For previous introduction see No. 74592.

78577. FICUS sp.

78578 and 78579. QUERCUS CERRIS L. Fagaceae. **European Turkey oak.**

From near Cambridge, England. Plants presented by R. C. B. Gardner. Received January 11, 1929.

78578. An ornamental tree, native to southeastern Europe, up to 100 feet high and 6 feet in diameter, with a broad spreading top, handsome dark-green pinnately lobed leaves which turn brown in the autumn, and slender acorns, 1 to 2 inches long, about half inclosed in a cup with recurved awl-shaped scales.

78579. Variety *laciniata*. Leaves deeply pinnatifid with acute, usually dentate, lobes.

78580 to 78583.

From Paget East, Bermuda. Seeds presented by J. C. Nauen, horticulturist of the agricultural station of the Department of Agriculture. Received January 10, 1929.

78580. CATALPA LONGISSIMA (Jacq.) Sims. Bignoniaceae.

A West Indian timber tree with thin oblong-lanceolate leaves 3 to 6 inches long and terminal panicles of crisped campanulate white flowers.

78581. LEPTOSPERMUM SCOPARIUM Forst. Myrtaceae. **Manuka.**

An evergreen shrub, one of the most abundant in New Zealand, of compact bushy habit, sometimes 30 feet high. The hard, leathery, sharp-pointed leaves are very aromatic, and for this reason they have sometimes been used for making tea. The flowers, borne in great profusion, are white or pink and about three-fourths of an inch across.

For previous introduction see No. 73090.

78582. YUCCA ALOIFOLIA L. Liliaceae.

A West Indian plant with a thick stem 6 to 8 feet high, bearing a crown of daggerlike leaves, spreading above, deflexed below, and a large panicle of waxy white flowers often tinged with purple.

78583. ZEPHYRANTHES ATAMASCO (L.) Herb. Amaryllidaceae. **Atamasco lily.**

A bulbous perennial with bright-green linear leaves a foot long, and a scape, 6 to 12 inches high, bearing a flower 3 inches long, which is usually white, but may have a purplish tinge or be light purple. The flowers usually appear in the spring, but may also appear again in the fall.

78584 to 78588. AVENA SATIVA L. Poaceae. **Oats.**

From Svalöf, Sweden. Seeds presented by the director, Sveriges Utsädesförening, Svalöf. Received January 14, 1929.

78584. *Golden Rain* No. 1.

For previous introduction see No. 77881.

78585. *Golden Rain* No. 2.

For previous introduction see No. 77883.

78586. *Echo.*

For previous introduction see No. 77880.

78587. *Star.*

For previous introduction see No. 77882.

78588. *Viktory.*

For previous introduction see No. 77879.

78589 to 78593. PYRUS spp. Malaceae. **Pear.**

From Fruitland Park, Fla. Scions presented by Louis P. Bosanquet. Received January 17, 1929.

Varieties said to be blight resistant.

78589. PYRUS sp.

Carnes.

78589 to 78593—Continued.

78590. PYRUS sp.

Cincincis.

78591. PYRUS sp.

Hood.

78592. PYRUS sp.

Pineapple.

78593. PYRUS sp.

Shaw.

78594. ALLIUM RETICULATUM Fraser. Liliaceae.

From Vancouver, British Columbia, Canada. Bulblets presented by Prof. John Davidson, department of botany, University of British Columbia. Received January 17, 1929.

A perennial, native to northwestern America, with a fibrous-reticulated bulb, narrow channeled leaves, and scapes, 4 to 8 inches high bearing umbels of white or pinkish flowers.

78595 and 78596. PASSIFLORA spp. Passifloraceae.

From Brazil. Seeds presented by Prof. P. H. Rolfs, Escola Superior de Agricultura e Veterinaria de Minas Geraes. Received January 17, 1929.

78595. PASSIFLORA MACROCARPA Masters.

Collected at Rio Casca, Minas Geraes. An ornamental Brazilian vine producing strongly perfumed fruits which ripen from yellow to orange and have flesh about an inch thick.

78596. PASSIFLORA sp.

Collected on the school grounds. An ornamental Brazilian vine producing fruits about the size of a very large lemon.

78597 to 78600. FICUS spp. Moraceae. Fig.

From Brisbane, Queensland, Australia. Seeds presented by C. T. White, Government botanist, Department of Agriculture and Stock. Received January 17, 1929.

78597. FICUS GRACILIPES F. M. Bailey.

A small semideciduous Australian tree with a drooping habit, coriaceous deep-green elliptical leaves 3 to 5 inches long, and globular deep-purple fruits an inch in diameter that are suitable for preserving.

78598. FICUS HENNEANA Miquel.

An Australian shrub or small tree with coriaceous oblong leaves 3 to 5 inches long and small globular white-mottled fruits less than an inch in diameter.

78599. FICUS PLATYPODA PETIOLARIS Benth.

A small tree, native to Queensland, with thick coriaceous ovate-cordate leaves 4 to 6 inches long and small fruits less than a fourth of an inch long.

78600. FICUS WATKINSIANA F. M. Bailey.

A large glabrous tree, native to Queensland, with light-colored bark, coriaceous lanceolate leaves about 6 inches long, and oblong greenish fruits more than an inch long on thick-angled pedicels.

78601. MIMOSA sp. Mimosaceae.

From Trinidad, British West Indies. Seeds presented by H. Caracciolo. Received January 11, 1929.

Sensitive tree from Trinidad.

78602. CINCHONA LEDGERIANA Moens. Rubiaceae.

From Munsong, Kalimpong, Bengal, India. Seeds purchased from H. Thomas, manager of the Government cinchona plantation. Received January 18, 1929.

A tree, native to the Andes, yielding a bark remarkably rich in quinine which crystalizes readily as quinine sulphate. The percentage of the other alkaloids present is relatively small. The bark of this species matures in the fifth or sixth year and does not increase its quinine content after that. This tree is suitable for cultivation only on hillsides in frost-free regions.

For previous introduction see No. 60292.

78603. CITRUS SINENSIS (L.) Osbeck. Rutaceae. **Orange.**

From Viçosa, Minas Geraes, Brazil. Plants presented by Prof. P. H. Rolfs, Escola Superior de Agricultura e Veterinaria do Estado de Minas Geraes, through Dr. W. A. Orton, Director and General Manager, Tropical Plant Research Foundation, Washington, D. C. Received January 7, 1929.

Laranja hanceta doce.

78604. COLVILLEA RACEMOSA Boj. Caesalpiniaceae.

From Trinidad, British West Indies. Seeds presented by W. G. Freeman, Director, Department of Agriculture. Received January 9, 1929.

This handsome tropical tree, believed to be native to east Africa, should be tested in southern Florida along with the poinciana, to which it is related. It is said to reach 40 or 50 feet in height. The pinnate leaves are 3 feet long, and the brilliant scarlet, curiously shaped flowers are borne in drooping racemes more than a foot long. The tree was named for Sir Charles Colville, Governor of Mauritius; it was discovered in 1824 on the west coast of Madagascar, where it flowers in April or May. In all probability it will stand no more frost than the poinciana. Like most other leguminous trees, it is readily propagated from seeds.

For previous introduction see No. 66504.

78605 to 78608.

From Manchuria, China. Seeds presented by V. K. Boerich, through V. Golubzoff, Harbin, Manchuria. Received January 17, 1929.

78605. LILIUM DAURICUM Ker. Liliaceae. **Candlestick lily.**

Collected at Guliusutai, between the valleys of the Rivers Gan and Derbul.

For previous introduction see No. 75772.

78606. LILIUM sp. Liliaceae. **Lily.**

Collected in the Hukunbuir district in the valleys of the Gan and Derbul Rivers. The bulbs are eaten raw or boiled; Russian peasants of Transbaikalia mix these bulbs with millet and cook the whole into a gruel.

78605 to 78608—Continued.

78607. PAEONIA ALBIFLORA Pall. Ranunculaceae. **Chinese peony.**

An ornamental herbaceous perennial 2 to 3 feet high with white flowers. Native to China.

For previous introduction see No. 73195.

78608. TRIFOLIUM LUPINASTER L. Fabaceae. **Clover.**

A Siberian clover with five leaflets like a lupine leaf.

78609. SARACA CAULIFLORA Baker. Caesalpiniaceae.

From Bangalore, India. Seeds presented by the Superintendent of the Government Botanic Gardens. Received January 31, 1929.

A shrubby Indian tree with abruptly pinnate leaves of 10 to 12 thick rigid oblong to oblanceolate leaflets 6 inches to a foot long, and corymbs, 4 to 6 inches broad, of scarlet flowers.

78610 to 78615.

From Japan. Seeds obtained by R. K. Beattie, Bureau of Plant Industry. Received January 23, 1929.

78610. CASTANOPSIS sp. Fagaceae. **Evergreen chinquapin.**

No. 807. From the Tanushimaru Nursery Association, Ukiha Gun, Fukuoka Ken, originally collected at Mininoyama. The Japanese local name is Ichishihi.

78611. CASTANOPSIS sp. Fagaceae. **Evergreen chinquapin.**

No. 808. From the Rengechi Forest Experiment Station, Taichu Province, Taiwan.

78612 to 78615. QUERCUS spp. Fagaceae. **Oak.**

78612. QUERCUS CASTANOPSIFOLIA Hayata.

No. 812. From the Rengechi Forest Experiment Station, Taichu Province, Taiwan. A subtropical oak, related to *Quercus lepidocarpa,* native to Taiwan. The rather thin oblong-lanceolate leaves, dull green above, paler beneath, are about 10 inches long, and the acorns are globose depressed.

78613. QUERCUS KONISHII Hayata.

No. 809. From the Rengechi Forest Experiment Station, Taichu Province, Taiwan. An oak from the mountainous regions of Taiwan, with elliptic-oblong acuminate leaves 3 inches long and small hemispherical acorns half an inch across. It is said to be a distinct species with no closely related forms.

78614. QUERCUS MIYAGII Koidz.

Nos. 811 and 813. From the Okinawa Eirinsho, Luchu Islands, and originally collected at Yasunami, Kokuzu Mura, Kokuzu Gun, Okinawa Ken. A large erect tree, 40 feet high, with dense foliage. The leathery ovate-lanceolate leaves are 4 to 5 inches long, and the globose-ovoid acorns are about an inch in diameter. It is native to the Luchu Islands.

78615. QUERCUS TOMENTOSICUPULA Hayata.

No. 810. From the Rengechi Forest Experiment Station, Taichu Province, Taiwan. An oak, native to Taiwan, with stiff leathery oblong-lanceolate leaves 4 inches long, somewhat serrate, and broadly campanulate cups 1½ inches across. It is related to *Quercus edithae,* but has much smaller acorns.

78616. BORASSUS FLABELLIFER L. Phoenicaceae. **Palmyra palm.**

From Jaffna, Ceylon. Seeds presented by W. P. A. Cooke, Division Agricultural Officer, Department of Agriculture. Received January 24, 1929.

The famous Palmyra palm of India and Ceylon which in the northern part of this island takes the place of the cocoanut palm. Though a slower grower, it is a very handsome palm when old. Inasmuch as it grows in the dry coastal regions of Ceylon, is apparently able to withstand any amount of lime, and is said to have been used successfully as a binder for sand dunes, it should prove of real value in the calcareous soils of southern Florida. In the number of uses to which it is put here it rivals the coconut. A delicate sugar is made from the sap which flows in abundance from its inflorescence when cut. The seeds are germinated and the young subterranean hypocotyl is used as a vegetable. The leaves are used in many different ways. The fruit, half the size of a coconut, is very attractive in appearance and when ripe exhales a delicate fragrance. The hull is eaten by the Tamils of Ceylon.

For previous introduction see No. 74590.

78617 to 78663.

From Japan. Seeds obtained by R. K. Beattie, Bureau of Plant Industry. Received January 2, 1929.

78617 to 78649. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

Unless otherwise stated, these are selections from wild trees.

78617. No. 737. Collected in the Oshika Mago National Forest.

78618. No. 738. Collected in the Juni Sho Saruma Tozawa National Forest, Akita Gun, Akita Ken.

78619. No. 739. Presented by Morisaburo Sasaki, from Taizen, Akaishi Mura, Niski Tsugaru Gun, Aomori Ken.

78620. No. 740. Collected in Takizawa, Takizawa Mura, Iwate Gun, Iwate Ken.

78621. No. 741. Collected in the Etsunagi Public Forest, Kokuni Mura, Shimo Hei Gun, Iwate Ken.

78622. No. 742. Collected in the Yamaura Kwonita National Forest, Iwato Mura, Nishi Usuki Gun, Miyazaka Ken.

78623. No. 744. Obtained from Shon Shimyung, at Kal Huyngri, north of Giseifu, east of Keijo, Chosen. The nuts are large and of the orchard rather than the forest type.

78624. No. 745. Obtained from the Shunrin Co., Giseifu, east of Keijo, Chosen.

78625. No. 746. Obtained at Dukehung, east of Giseifu, near Keijo, Chosen.

78617 to 78663—Continued.

78626. No. 748. Collected at Oguriyama, Chitose Mura, Naka Tsugaru Gun, Aomori Ken.

78627. No. 749. Collected in the Hisashi Hoden Osawayama National Forest, Hisashi Oguni Mura, Mogami Gun, Yamagata Ken.

78628. No. 750. Collected at Ota Public Genya (prairie), Hachimau Mura, Kusu Gun, Oita Ken. It is called locally Sasa guri, and Mr. Ikebe, Director of the Bureau of Utilization of Forest Products, states that it probably never grows very large, and usually grows on prairies where fire often sweeps through the scattered stands.

78629. No. 751. Collected in the Oshika Mago National Forest.

78630. No. 752. Collected in the Tamba Ashio University Forest.

78631. No. 753. Collected in the Yakunai National Forest, Akinomiya Mura, Okatsu Gun, Akita Ken.

78632. No. 754. From the forest of reforestation project 19 Rin Pan.

78633. No. 755. Collected at Noboribetsu Horobetsu Gun, Hokushu, by Bunsaburo Ishida, Botanic Garden, Hokushu University, Sapporo.

78634. No. 756. Collected at Makoma Nai, near Sapporo, Hokushu.

78635. No. 757. Collected at Atsubetsu, Hokushu.

78636. No. 758. Presented by Shintaro Kondo, Kamiteine, Teine Mura, Sapporo Gun, Hokushu.

78637. No. 760. Collected at Nakiu Dake, Kaminakui, Nakui Mura, Sannohe Gun, Aomori Ken.

78638. No. 761. Collected in the Ushioku Yama Provincial Forest, Okunodamura Ushioku, Higashi Yaminashi Gun, Yamanashi Ken.

78639. No. 763. Collected at the Poroto Forest Reserve, Shiraoi Mura, Shiraoi Gun, Iburi, Hokushu.

78640. No. 764. Presented by the Hamamachi Eirinsho, Kuma Moto Ken.

78641. No. 766½. Collected in the Kyoto University Forest, Wakayama Ken.

78642. No. 766½ B. Collected in the Kyoto University Forest, Wakayama Ken.

78643. No. 767½. Collected at Shikifu, near Shiraoi station, Shiraoi Mura, Shiraoi Gun, Iburi Province, Hokushu.

78644. No. 768. From the largest chestnut trees in Chosen at the Koryo Forest Experiment Station, east of Keijo.

78645. No. 768½. Collected northeast of Shiraoi, Shiraoi Mura, Shiraoi Gun, Iburi Province, Hokushu.

78646. No. 769. Collected at Chidoko, northeast of Shiraoi, Shiraoi Mura, Shiraoi Gun, Iburi Province, Hokushu.

78647. No. 770. Collected in the Ushioku Yama Provincial Forest, Okunodamura Ushioku, Higashi Yaminashi Gun, Yaminashi Ken.

78617 to 78663—Continued.

78648. No. 771. Collected in Ukiha Gun, Fukuoka Ken.

78649. No. 772. Collected at Ukiha Gun, Fukuoka Ken.

78650 to 78653. CASTANEA MOLLISSIMA Blume. Fagaceae. **Hairy chestnut.**

78650. No. 762. From Hamjong, Chosen. Trees of orchard type and of various ages, up to 15 inches in diameter and not more than 25 feet high, but held back by crude pruning.

78651. No. 765. *Song chung.* A cultivated variety obtained in the market at Heijo, Chosen, and said to have come from An Taik Ri, northeast of Heijo, October 20, 1928.

78652. No. 766. *Duk chung.* A cultivated variety obtained in the market at Heijo, Chosen, October 20, 1928.

78653. No. 767. *Sarinjo.* A cultivated variety obtained in the market at Heijo, Chosen, October 20, 1928, and said to have come from Sunchung, north of Heijo.

78654. CASTANOPSIS CUSPIDATA (Thunb.) Schottky. Fagaceae. **Japanese chinquapin.**

No. 804. *Shihi.* Obtained at Yoshida, Tajima Mura, Munnehata Gun, Fukuoka Ken, from Gengoro Ono, of the Fukuoka Eirinsho, November, 1928.

For previous introduction and description see No. 78514.

78655. LITHOCARPUS EDULIS (Makino) Rehder. Fagaceae.

No. 803. *Matebashihi.* Obtained at Shinokura Machi, Kasuya Gun, Fukuoka Ken, from Gengoro Ono, of the Fukuoka Eirinsho, November, 1928. An evergreen tree, native to Japan, with ovate-oblong short-pointed entire leaves 3 to 7 inches long and oblong-ovoid acorns an inch long in very shallow cups.

78656. LITHOCARPUS sp.

No. 805. *Komeji.* Obtained at Tanushi Maru, Ukiha Gun, Fukuoka Ken, from the Ukiha Gun Nursery Association, November, 1928.

78657 to 78663. QUERCUS spp. Fagaceae. **Oak.**

78657. QUERCUS ACUTA Thunb. **Japanese evergreen oak.**

No. 797. December, 1928. *Aka gashi.* From the Tokyo University Chiba Ken Forest. A small evergreen tree, native to Japan, with oblong undulate-margined leaves 3 to 6 inches long and pubescent acorn cups with the scales arranged in concentric rings.

For previous introduction see No. 78165.

78658. QUERCUS ACUTISSIMA Carruthers. **Bristletooth oak.**

No. 747. October, 1928. Obtained at Duk Chung, east of Keijo, Chosen. A handsome hardy tree up to 50 feet high, with half-evergreen obovate to oblong sharp-pointed leaves, 5 to 7 inches long, having serrate bristle-pointed margins. The cup, which covers about two-thirds of the acorn, has long-spreading recurved scales. Native to northeastern Asia.

For previous introduction see No. 76752.

78617 to 78663—Continued.

78659. QUERCUS DENTATA Thunb.
Daimyo oak.

No. 759. *Kashiwa.* Collected at Shimo Teine, Teine Mura, Sapporo Gun, Hokushu. A large tree, native to Chosen and northern and western China, 75 to 80 feet tall. The obovate-sinuate lobed leaves, dark green above and grayish tomentose beneath, are 10 to 12 inches long and 9 inches wide, and the ovoid acorns, an inch wide, are about half covered by the cup which has lanceolate spreading scales.

For previous introduction see No. 76753.

78660. QUERCUS GLAUCA Thunb.
Blue Japanese oak.

No. 799. *Ara gashi.* December, 1928. From the Tokyo University Chiba Ken Forest. A handsome evergreen tree, native to Japan, 45 feet high, with ovate-dentate leaves 3 to 5 inches long, lustrous above and glaucous beneath. The ellipsoid acorns, nearly an inch long with saucer-shaped cups, have five to seven concentric silky pubscent rings.

For previous introduction see No. 76754.

78661. QUERCUS MONGOLICA GROSSESERRATA (Blume) Rehd. and Wils.

No. 743. *Nara, mizunara.* Collected in the Yamaura Kwonita National Forest, Iwato Mura, Nishi Usuki Gun, Miyazaki Ken. This oak is said to be the most important forest tree of Japan, attaining a height of 100 feet and a girth of 12 feet. The wood is durable and for a hardwood easily worked, approximating for furniture the best European and American oaks.

For previous introduction see No. 76478.

78662. QUERCUS MYRSINAEFOLIA Blume.

No. 798. *Shira gashi.* December, 1928. From the Tokyo University Chiba Ken Forest. A handsome evergreen oak, native to Japan, 30 to 40 feet high, with lanceolate-serrate leaves, 3 to 5 inches long, smooth and shining above and covered with a whitish bloom underneath. The ovoid acorns, nearly an inch long and one-third covered by the smooth cup, are borne in short spikes.

For previous introduction see No. 78166.

78663. QUERCUS STENOPHYLLA (Blume) Makino.

No. 796. *Urajiro gashi.* December, 1928. From the Tokyo University Chiba Ken Forest. An oak, native to Japan, with narrowly lanceloate long-pointed leaves 2 to 6 inches long.

For previous introduction see No. 78321.

78664 to 78671. ACACIA spp. Mimosaceae.

From Dundas, New South Wales, Australia. Seeds presented by Herbert J. Rumsey, through John McLaren, Superintendent of the Golden Gate Park, San Francisco, Calif. Received January 15, 1929.

78664. ACACIA ASPARAGOIDES A. Cunn.

78664 to 78671—Continued.

A glabrous rigid Australian shrub with nearly terete branches, thick rigid spreading linear sharp-pointed phyllodes nearly an inch long, and solitary globular heads of small flowers.

78665. ACACIA BAKERI Maiden.

A large forest tree of New South Wales, up to 160 feet high, with sessile, broadly lanceolate phyllodes about 4 inches long and pale-yellow flowers in loose panicles.

78666. ACACIA DECURRENS PAUCIGLANDULOSA F. Muell.

A form of the green wattle with fewer glands on the petioles and with softer pubescence than the usual form.

For previous introduction see No. 75585.

78667. ACACIA ELONGATA Sieber.

A tall handsome shrub with drooping angular branchlets, linear falcate 3-nerved phyllodes 4 to 6 inches long, and globose heads of yellow flowers. Native to Australia.

For previous introduction see No. 48042.

78668. ACACIA HETEROCLITA Meissn.

A small erect shrub 3 to 4 feet high, native to Western Australia, with the young shoots minutely pubescent, linear to lanceolate sharp-pointed phyllodes 2 to 3 inches long, and globular heads of small flowers.

78669. ACACIA PUBESCENS R. Br.
Hairy wattle.

The branches and leaf stems of this Australian shrub are covered with spreading hairs. The compound leaves are made up of 3 to 10 pairs of branches each bearing 6 to 20 pairs of small linear leaflets. The small flower heads are in slender racemes gathered into large panicles at the ends of the branches.

78670. ACACIA SUAVEOLENS (J. E. Smith) Willd.

An Australian shrub up to 6 feet high, with linear to lanceolate phyllodes and small heads of yellow flowers in axillary racemes.

For previous introduction see No. 75609.

78671. ACACIA TRINERVATA Sieber.

A tall shrub, native to New South Wales, with angular branches, thick rigid spreading linear phyllodes an inch long, and solitary heads of numerous small flowers.

78672. PSIDIUM GUAJAVA L. Myrtaceae.
Guava.

From Papeite, Tahiti, Society Islands. Seeds obtained from Marcel Frogier, through Gerrit P. Wilder, Honolulu, Hawaii. Received January 23, 1929.

A variety which is considered the finest of the cultivated guavas. The fruits vary in size from 2 to 3½ inches in diameter, with pale yellowish white skin dotted with fine red spots and solid white flesh with small seeds.

For previous introduction see No. 76015.

78673 and 78674.

From Boloven Plateau, Laos, French Indo-China. Fruits presented by G. Ricau, Botanic Garden. Received January 25, 1929.

78673. MALUS sp. Malaceae. **Apple.**

An apple tree about 25 feet high, growing in red soil in forests at an altitude of about 1,300 feet.

78674. PYRUS sp. Malaceae. **Pear.**

A semiaquatic pear which is said to grow in shallow water part of the year, at an altitude between 2,500 and 4,000 feet.

78675. VITIS sp. Vitaceae. **Grape.**

From Tsinan, Shantung, China. Cuttings presented by Dr. Philip S. Evans, jr., Shantung Christian University. Received January 29, 1929.

A grape which fruits through the late summer and autumn. The first bunches ripen in August when only about half the bunches are half grown and there are many blossoms as well. It resembles the Niagara, although it often has an elongated shape. This grape, which is not unusual in quality, has a rather thick skin and a slight spicy flavor.

78676 to 78685.

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received January 19, 1929.

78676. CALLITRIS QUADRIVALVIS Vent. Pinaceae. **Arar-tree.**

An evergreen shrub or small tree somewhat like Cupressus in habit, native to the mountains in northern Africa, with hard durable fragrant wood, spreading jointed branches, very small flattened leaves, and 4-sided cones.

78677. DANAE RACEMOSA (L.) Moench. (*Ruscus racemosus* L.). Convallariaceae. **Alexandrian laurel.**

A much-branched evergreen Persian shrub 3 to 4 feet high, with alternate lanceolate leaflike cladodes 4 inches long, terminal racemes of small white flowers, and globose red berries.

78678. DAPHNE GNIDIUM L. Thymelaeaceae.

An evergreen shrub 2 feet high, native to southern Europe, with linear-lanceolate glabrous leaves and terminal clusters of yellowish-white fragrant flowers.

78679 to 78682. ERICA spp. Ericaceae. **Heath.**

78679. ERICA ARBOREA L.

An evergreen shrub or small tree up to 20 feet high, native to the Mediterranean region, with small glabrous leaves and large pyramidal panicles of fragrant nearly white flowers.

78680. ERICA CINEREA L. **Twisted heath.**

An evergreen European shrub 1 to 2 feet high, with very small lustrous linear leaves and umbels or terminal racemes of bell-shaped rosy purple flowers.

78681. ERICA SCOPARIA L. **Besom heath.**

An evergreen southern European shrub 10 feet high, with upright

78676 to 78685—Continued.

branches, small lustrous dark-green linear leaves in whorls of three or four, and long cylindrical spikes of greenish-white flowers.

78682. ERICA sp.

A mixture of various species of Erica from southern Africa, which are shrubs with small leaves and racemes of white, rosy, or yellow flowers.

78683. MERATIA PRAECOX GRANDIFLORA (Lindl.) Rehd. and Wils. Calycanthaceae. **Wintersweet.**

A variety with much larger and brighter colored flowers than the usual form, which is a Chinese shrub up to 10 feet high with ovate leaves 6 to 10 inches long and producing yellow flowers an inch across striped with purplish brown and opening in mild seasons throughout the winter.

78684. RUSCUS ACULEATUS L. Convallariaceae. **Butchersbroom.**

A rigid evergreen European shrub 2 to 4 feet high, with grooved branching stems and dark-green ovate leaflike cladodes over an inch long bearing one or two small white flowers in the middle of the upper surface, which are followed by globose or ovoid bright-red berries nearly half an inch in diameter.

78685. SKIMMIA JAPONICA Thunb. (*S. oblata* T. Moore). Rutaceae. **Japanese skimmia.**

A dense evergreen Japanese shrub 3 to 5 feet high, with yellowish-green leaves 6 inches long crowded at the ends of the branchlets, panicles of small yellowish-white flowers, and bright-red berries a quarter of an inch through.

78686 to 78696.

From Vancouver, British Columbia, Canada. Seeds presented by Prof. John Davidson, department of botany, University of British Columbia. Received January 17, 1929.

78686. ALLIUM WATSONI Howell. Liliaceae. **Onion.**

A low bulbous plant, native to northwestern North America, with a slender narrowly margined scape 3 inches high, linear leaves 6 inches long, and a dense umbel of rose-colored flowers.

78687 to 78689. ERYTHRONIUM spp. Liliaceae.

78687. ERYTHRONIUM GRANDIFLORUM Pursh. **Glacierlily.**

A herbaceous perennial, native to northwestern North America, with an erect bulb, two broadly lanceolate plain green leaves 6 inches long, and a scape 1 to 2 feet high bearing three to five bright-yellow flowers with recurved segments and purple anthers.

78688. ERYTHRONIUM GRANDIFLORUM ALBIFLORUM Hook. **Troutlily.**

A herbaceous perennial, native to northwestern North America, with the two leaves mottled in white and brown; the recurved segments of the flower are creamy white.

78689. ERYTHRONIUM GRANDIFLORUM PARVIFLORUM S. Wats.

A herbaceous perennial, native to northwestern North America, with

78686 to 78696—Continued.

broadly lanceolate plain leaves and bright-yellow flowers with white anthers.

78690. LILIUM PARVIFLORUM (Hook.) Holzinger. Liliaceae. **Panther lily.**

This lily, native to northwestern North America, closely resembles the leopard lily, *L. pardalinum*, but the flowers, of the same bright yellow with purplish spots, are smaller and are usually solitary or only two or three together.

78691 to 78695. PENTSTEMON spp. Scrophulariaceae. **Beardtongue.**

78691. PENTSTEMON CONFERTUS Douglas.

A herbaceous perennial, 2 feet high, native to Oregon and northern California, with nearly entire lanceolate to linear leaves and a narrow interrupted spike of cream-white to sulphur-yellow flowers.

78692. PENTSTEMON CONFERTUS CAERULEO-PURPUREUS A. Gray.

A variety of the preceding with flowers blue-purple to violet.

78693. PENTSTEMON DIFFUSUS Douglas.

A herbaceous perennial, native to northwestern North America, with diffuse stems 2 feet high, lanceolate to cordate-ovate deeply serrate leaves, and a leafy cluster of light-purple 2-lipped flowers.

78694. PENTSTEMON MENZIESII Hook.

A herbaceous perennial with a woody base, native to Washington and British Columbia. The stems are less than a foot high, the thick leaves are obovate, and the violet-blue to purple flowers, an inch long, are borne in a spreading raceme.

78695. PENTSTEMON OVATUS Douglas.

A herbaceous perennial, native to northwestern North America, with a slender but erect stem 4 feet high, ovate thin serrate bright-green leaves, and lax clusters of 2-lipped blue flowers changing to purple.

78696. SISYRINCHIUM CALIFORNICUM Ait. Iridaceae.

A herbaceous perennial with linear leaves a foot long, a leafless broadly winged stem, 1½ feet high, with a cluster of three to six brown-lined yellow flowers half an inch long. Native to California.

78697 to 78743.

From Deli Valley, Mishmi Hills, Assam, India. Seeds collected by Capt. F. Kingdon Ward and presented by Maj. Lionel de Rothschild, London, England. Received January 19, 1929.

78697. ABELIA sp. Caprifoliaceae.

No. 8180. May 8, 1928. *Golden Abelia.* A small shrub with long, drooping racemes of bright-yellow flowers. Only one plant was found in the dense thickets on sheltered cliffs at an altitude of 6,000 feet.

78698. ACONITUM sp. Ranunculaceae. **Aconite.**

No. 8724. October 1, 1928. An ornamental herbaceous perennial, 2 to 4 feet high, growing on alpine meadow slopes at an altitude of 12,000 feet.

78697 to 78743—Continued.

78699. ANDROSACE sp. Primulaceae.

No. 8565. August 23, 1928. A small herbaceous perennial resembling *Androsace henryi*, 6 inches high, bearing large many-flowered heads. It grows in dense undergrowth on the banks of gullies in the middle of the rain forest, above an altitude of 10,000 feet.

78700. ARISAEMA sp. Araceae.

No. 8085. April 12, 1928. A large herbaceous perennial closely related to the Indian turnip, with papery, colorless spathes which are striped with purple. It grows in the temperate rain forest at an altitude of 7,000 feet.

78701. BUDDLEIA sp. Loganaceae.

No. 8559. August 23, 1928. A floppy undershrub, 2 to 3 feet high, growing on steep, well-shaded slopes, among bamboos or in gullies among subalpine flowers, at an altitude of 11,000 feet. The leaves are very large, and the fragrant flowers are cream white with orange centers.

78702. CALTHA sp. Ranunculaceae.

No. 8616. August 28, 1928. A herbaceous perennial about a foot high, with an abundance of magenta flowers. It grows in alpine gullies and on alpine meadow slopes at an altitude between 11,000 and 12,000 feet.

78703. BRYOCARPUM HIMALAICUM Hook. f. and Thoms. Primulaceae.

No. 8236. May 23, 1928. A herbaceous perennial about 2 feet high, with solitary nodding yellow flowers which appear before the large leaves. It grows under bamboos or in an Abies forest, on steep slopes, at altitudes between 10,000 and 11,000 feet.

For previous introduction see No. 41417.

78704. DICENTRA sp. Papaveraceae.

No. 8649. September 17, 1928. An annual climbing vine with sea-green leaves and bunches of yellow flowers, borne in the autumn, which are followed by red, pear-shaped fruits. It grows in the forest at an altitude between 8,000 and 9,000 feet.

78705. GAULTHERIA sp. Eriaceae.

No. 8725. October 26, 1928. A shrub 3 to 6 feet high, with crowded spikes of white flowers and an abundance of black berries which have a white bloom. It grows on open, grass-clad slopes along the edge of the forest at altitudes between 6,000 and 7,000 feet.

78706. HEDYCHIUM sp. Zinziberaceae.

No. 8483. July 24, 1928. A strong-growing herbaceous perennial, 2 feet high, with purplish leaves and white flowers from a creeping rhizome. It grows at an altitude of 6,000 feet.

78707. HYPERICUM sp. Hypericaceae.

No. 8444. July 12, 1928. An ornamental shrub, with an abundance of small bright-yellow flowers, growing in open stony pastures near cultivated land at an altitude of 5,000 feet.

78708. LYSIMACHIA sp. (*Nummularia* sp.). Primulaceae.

No. 8574. August 23, 1928. A semi-erect herbaceous perennial nearly a foot high, bearing an abundance of yellow

78697 to 78743—Continued.

flowers up the leafy stems. It is a good rock-garden plant, with a prolonged flowering period, and is found on rocks and banks in deep gullies, keeping as much as possible in the open, but not intolerant of shade.

78709. NOMOCHARIS sp. Liliaceae.

No. 8370. June 26, 1928. A lily-like perennial about a foot high, bearing, during June, solitary nodding dull-red flowers. It is found on alpine meadow slopes, in tenacious loam, and also under bamboos, at an altitude of 12,000 feet.

78710 to 78713. PRIMULA spp. Primulaceae. **Primrose.**

78710. PRIMULA PRENANTHA Balf. and Smith.

No. 8262. May 21, 1928. A herbaceous perennial, with small light-yellow flowers, growing on subalpine grass slopes where bamboos give shelter, at an altitude of 11,000 feet.

78711. PRIMULA sp.

No. 8282. June 4, 1928. A bright yellow-flowered herbaceous perennial, about a foot high, with leaves covered with cream-colored meal. It is found from the upper Abies forest to the alpine region, between 12,000 and 13,000 feet altitude, where it grows in black loam among bowlders or scrub rhododendrons.

78712. PRIMULA sp.

No. 8295. June 5, 1928. A herbaceous perennial with leaves often turning scarlet in the autumn and large compact heads of faintly fragrant, bright purplish-rose flowers which have a yellow or crimson eye. It is a rather massive perennial bearing an abundance of foliage from which rise as many as half a dozen scapes. It grows in steep rocky gullies in the Tsuga and Rhododendron forest, at an altitude of 10,000 feet, and requires deep shade and an abundance of water.

78713. PRIMULA sp.

No. 8406. July 2, 1928. A herbaceous perennial, 6 inches high, which is a hairy and not very mealy alpine species scattered widely over the turf slopes at an altitude of 12,000 feet. It bears small heads of fragrant violet flowers.

78714 to 78737. RHODODENDRON spp. Ericaceae.

78714. RHODODENDRON sp.

No. 8045. April 11, 1928. A small smooth-barked forest tree with very large leaves and pink-flushed buds which become large white fragrant flowers. It grows at altitudes between 6,000 and 7,000 feet.

78715. RHODODENDRON sp.

No. 8052. April 11, 1928. A species found at an altitude between 7,000 and 8,000 feet, bearing white fragrant flowers, banded with rose-purple on the reverse side, during March and April. It is like *Rhododendron bullatum*.

78716. RHODODENDRON sp.

No. 8069. April 11, 1928. A large tree of the rain forest, growing at an altitude between 8,000 and 9,000 feet, with leaves which are silvery beneath.

78697 to 78743—Continued.

78717. RHODODENDRON sp.

No. 8101. April 20, 1928. A small evergreen bushy shrub with masses of butter-yellow flowers. It grows in thickets, but enjoys full exposure. The flowers are paler than those of *Rhododendron aureum*, but it is a much better-looking shrub.

78718. RHODODENDRON sp.

No. 8113. April 22, 1928. A small rather lanky or scraggy shrub growing on rock outcrops and cliffs, or epiphytically, and in shady places it is more compact. The flowers, in trusses of four to six, are fairly large and brilliant crocus yellow. This shrub is found at an altitude between 7,000 and 8,000 feet.

78719. RHODODENDRON sp.

No. 8130. April 24, 1928. A fine gnarled tree with huge leaves characterized by a bright-yellow midrib and immense trusses of cream flowers. It is found at an altitude between 8,000 and 9,000 feet.

78720. RHODODENDRON sp.

No. 8163. May 5, 1928. A spreading gnarled medium-sized tree with leaves which are cinnamon-colored felt beneath and silver white above when young and big trusses of cream flowers. It is found at an altitude of 9,000 feet.

78721. RHODODENDRON sp.

No. 8165. May 5, 1928. A small shrub abundant on open rock ridges and in thickets, with bright-purple flowers in loose trusses of six to nine. It recalls *Rhododendron tephropeplum*, but has more and larger flowers in the truss. It grows at an altitude between 8,000 and 9,000 feet.

78722. RHODODENDRON sp.

No. 8203. May 19, 1928. A small gnarled smooth-barked tree growing at an altitude between 9,000 and 10,000 feet. The small purple flowers with dark spots are in large trusses.

78723. RHODODENDRON sp.

No. 8206. May 19, 1928. A small shrub, usually high up on Tsuga or Abies trees, and sometimes found on rocks, at altitudes between 9,000 and 10,000 feet. The large flowers are solitary or more usually in two's, and rarely in three's. They are white, flushed rose-purple on the reverse, and very fragrant. It is one of the most beautiful species and is probably fairly hardy. The highest specimens do not flower until June.

78724. RHODODENDRON sp.

No. 8208. May 19, 1928. A small or large bush bearing during June and July flame-colored, narrow tubular flowers in large aggregate bunches of axillary trusses.

78725. RHODODENDRON sp.

No. 8225. May 22, 1928. An epiphyte growing in the Abies forest at an altitude between 10,000 and 12,000 feet. The leaves are bright silver beneath, and the bright-yellow flowers are in pairs.

78697 to 78743—Continued.

78726. RHODODENDRON sp.

No. 8250. May 30, 1928. A bushy shrub with handsome young foliage and persistent leaf bud scales which are cherry red. The leaves are large, and the bright brick-red flowers are in large compact trusses. It is scattered in thickets at an altitude of 11,000 feet.

78727. RHODODENDRON sp.

No. 8251. May 30, 1928. A fair-sized tree with leaves woolly white beneath and large trusses of rose-purple flowers. It grows in the Abies forest and in thickets at an altitude of 11,000 feet.

78728. RHODODENDRON sp.

No. 8256. June 4, 1928. A species with glaucous leaves and pale-yellow flowers with a crimson flush at the base. It grows in dense thickets in the alpine region at an altitude between 12,000 and 13,000 feet.

78729. RHODODENDRON sp.

No. 8257. June 10, 1928. A small, aromatic bushy shrub growing in thickets on the edge of the alpine region, at altitudes between 11,000 and 12,000 feet. The leaves are whitened beneath, and the dull plum-purple flowers are in loose umbels.

78730. RHODODENDRON sp.

No. 8258. May 30, 1928. A bush with an ascending trunk and loose umbels of bright crimson-scarlet flowers which have coal-black glands at the base. It grows in the Abies forest, along the ridge, at an altitude of 12,000 feet.

78731. RHODODENDRON sp.

No. 8259. May 30, 1928. A small bush with yellowish flowers which appear before the leaves. It is found on alpine meadow slopes at an altitude of 12,000 feet.

78732. RHODODENDRON sp.

No. 8288. June 4, 1928. A shrub, 3 to 5 feet high, forming much of the scrub on the northern slopes in this alpine region at altitudes between 12,000 and 13,000 feet. The small leaves are dark green above and rust red beneath, and the cream-colored flowers, sometimes flushed with pink, are heavily speckled rose purple.

78733. RHODODENDRON sp.

No. 8300. June 6, 1928. A small tree growing in the Tsuga and Rhododendron forest at an altitude of 10,000 feet. The leaves have a very thin closely woven rust-red felt, and the fairly large trusses of flowers are probably purple.

78734. RHODODENDRON sp.

No. 8326. June 14, 1928. A small epiphytic undershrub with tiny sickly yellow flowers. The previous year's leaves probably turn bright scarlet in the autumn, as also do the fruits. It grows in the rain forest at altitudes between 10,000 and 11,000 feet.

78735. RHODODENDRON sp.

No. 8522. August 15, 1928. A lanky shrub 6 to 8 feet high in the shade, but it is more common in the open, on gneiss rocks, where it is a compact shrublet 1 to 2 feet high. It grows at altitudes between 7,000 and 8,000 feet.

78736. RHODODENDRON sp.

No. 8545. August 20, 1928. A rather late-flowering species growing on exposed ridges facing south, where it is a small shrub. It is found at an altitude of 8,000 feet.

78737. RHODODENDRON sp.

No. 8546. August 20, 1928. A small slim shrub, sometimes 10 to 12 feet high, growing in thickets and among scrub on the southern slope, at an altitude of 9,000 feet.

78738. ROSA sp. Rosaceae. **Rose.**

No. 8626. September 2, 1928. A small shrub with smooth scarlet fruits, scattered in the Abies and Rhododendron forest at an altitude of 11,000 feet.

78739. ROSA sp. Rosaceae. **Rose.**

No. 8681. October 1, 1928. A dwarf very spiny undershrub growing on alpine slopes at an altitude of 12,000 feet. The smooth, red, flask-shaped fruits are smaller than those of No. 8626 (No. 78738).

78740. SCHEFFLERA sp. (*Heptapleurum* sp.). Araliaceae.

No. 8652. September 19, 1928. A moderate-sized palmlike tree, 20 feet high, usually much branched at the top, with large shining green, digitate leaves, long spikes of fragrant cream-colored flowers, and black fruits. It grows in the lower rain forest at an altitude of 7,000 feet.

78741. SCHIZANDRA sp. Magnoliaceae.

No. 8665. September 22, 1928. A large woody climber with scarlet fruits on pedicels 6 inches long. It grows in the forest at an altitude of 10,000 feet.

78742. VIOLA sp. Violaceae. **Violet.**

No. 8563. August 23, 1928. A species, with unusual foliage growing on earth banks in the middle forest, where there is no sun, at altitudes between 9,000 and 10,000 feet.

78743. (Undetermined.)

No. 8096. April 17, 1928. A small tree with masses of intensely fragrant yellowish flowers. It is scattered in the lower rain forest at altitudes between 4,000 and 5,000 feet.

78744. CASTANEA MOLLISSIMA Blume. Fagaceae. **Hairy chestnut.**

From Fa Hua Ssu Temple, near Peiping, Hopei, China. Seeds obtained through Peter Liu, Peiping. Received January 29, 1929.

Tiger paw chestnut.

For previous introduction see No. 76087.

78745. HIBISCUS SABDARIFFA L. Malvaceae. **Roselle.**

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received January 30, 1929.

Rizal. A distinctive and attractive variety, with waxy pink calyxes, which originated at Novaliches, Rizal, and is apparently a spontaneous hybrid between the Victor, a red, and Archer, a white variety.

78746. EULALIA FULVA (R. Br.) Kuntze (*Pollinia fulva* Benth.). Poaceae. **Sugar grass.**

From Sydney, New South Wales, Australia. Seeds presented by G. D. Ross, Undersecretary, Department of Agriculture. Received January 28, 1929.

A fine-stemmed leafy grass, 3 feet high, native to Australia. It is said to be drought resistant and of good seeding habit. Because of its flavor it is called "sugar grass" in parts of Australia, and cattle are very fond of it.

For previous introduction see No. 41754.

78474 and 78748. GOSSYPIUM spp. Malvaceae. **Cotton.**

From Bangkok, Siam. Seeds presented by Dr. A. Kerr, director of the botanical section of the Ministry of Commerce and Communications. Received January 30, 1929.

78747. GOSSYPIUM sp.

A perennial cotton cultivated about Bangkok. It is not grown as a regular crop, and the floss is used only for making string.

78748. GOSSYPIUM sp.

A perennial cotton grown from seeds collected on Kaw Samui, one of the islands in the Gulf of Siam.

78749 to 78816.

From Tiflis, Caucasus, Russia. Seeds presented by the director, Botanic Garden. Received February 4, 1929.

78749 to 78752. AEGILOPS spp. Poaceae. **Grass.**

78749. AEGILOPS CYLINDRICA Host.

78750. AEGILOPS CYLINDRICA Host.

78751. AEGILOPS TAUSCHII Coss.

78752. AEGILOPS TRIUNCIALIS L.

A thickly branched annual grass with ascending stems and flat rough leaves. It is native to dry places in the Mediterranean region.

78753 to 78755. AGROPYRON spp. Poaceae. **Grass.**

78753. AGROPYRON DAGNAE Hort.

No place of publication for this name has been found.

The seeds closely resemble those of *Agropyron cristatum*.

78754. AGROPYRON ORIENTALE (L.) Roem. and Schult.

An annual, much-branched grass, prostrate-ascending in habit, native to sandy places in Asia Minor and Turkestan.

For previous introduction see No. 64091.

78755. AGROPYRON REPENS GLAUCESCENS Peterm.

Said to be a glaucescent form of the well-known quack grass. The seeds are more like those of *Agropyron cristatum*.

78756. AMYGDALUS GEORGICA Desf. (*Prunus nana georgica* DC.). Amygdalaceae.

78749 to 78816—Continued.

A hardy bush, native to southern Russia, which closely resembles *Amygdalus nana*, differing in its darker-colored flowers and smaller leaves.

For previous introduction see No. 67905.

78757. AMYGDALUS FENZLIANA × COMMUNIS. Amygdalaceae.

A cross between the almond (*Amygdalus communis*) and a closely related species from the Caucasus. The latter is a low, sometimes spiny tree, with narrow, grayish green leaves, small whitish flowers, and fruits with scarcely any flesh.

78758. ANDROPOGON INTERMEDIUS CAUCASICUS (Trin.) Hack. Poaceae. **Grass.**

78759. ANDROPOGON ISCHAEMUM L. Poaceae. **Grass.**

78760. ARTHRAXON HISPIDUS CRYPTATHERUS (Hack.) Honda. Poaceae. **Grass.**

78761 to 78770. ASTRAGALUS spp. Fabaceae.

78761. ASTRAGALUS AMMOPHILUS Kar. and Kir.

A leguminous annual with branched prostrate stems, small pinnate leaves, and minute flowers in small heads. It is native to the mountains of Persia and Turkestan.

78762. ASTRAGALUS BRACHYCARPUS Bieb.

A leguminous perennial, a foot or more high, with purple flowers, nearly an inch long, in lax ovoid racemes. It is native to the Caucasus Mountains.

78763. ASTRAGALUS FALCATUS Lam.

An upright perennial, nearly 2 feet high, with yellowish flowers in an elongated cluster. It is native to southern Russia and Asia Minor.

For previous introduction see No. 66517.

78764. ASTRAGALUS GLYCYPHYLLOS L.

A prostrate, spreading herbaceous perennial, native to Asia Minor.

78765. ASTRAGALUS HAMOSUS L.

An annual gray-green hairy plant, with prostrate or ascending stems 8 inches to a foot long. It is native to sunny places in the Mediterranean countries.

For previous introduction see No. 66540.

78766. ASTRAGALUS KADSHORENSIS Bunge.

A leguminous perennial, native to the Caucasus, with short ascending stems 2 to 3 inches high, pinnate leaves, and rather large light bluish-violet flowers.

78767. ASTRAGALUS MOLLIS Bieb.

A nearly stemless perennial with hairy pinnate leaves and yellow flowers in cylindrical racemes. It is native to the arid deserts of Armenia and Caucasus.

78749 to 78816—Continued.

78768. ASTRAGALUS MONSPESSULANUS L.

A leguminous perennial with a woody rootstock, a very short stem, and a rosette composed of bright-green compound leaves intermingled with the remains of the previous year's leaves. The small flowers are purplish violet. Native to southern Europe.

78769. ASTRAGALUS PSEUDONOBRYCHIS Hort.

A legume of possible value as a green manure.

78770. ASTRAGALUS SANGUINOLENTUS Bieb.

A perennial leguminous plant with small pinnate leaves and small white flowers, with red keels, in headlike racemes. It is native to the Caucasus Mountains.

78771. BRACHYPODIUM SYLVATICUM (Huds.) Beauv. Poaceae. **Grass.**

A grass native to the woods and thickets throughout Europe and eastward through northern Asia to the Provinces of Sinkiang and Hupeh, China.

For previous introduction see No. 53134.

78772. BROMUS ALBIDUS Bieb. Poaceae. **Grass.**

78773. BROMUS RUBENS L. Poaceae. **Grass.**

78774 to 78776. CORONILLA spp. Fabaceae.

78774. CORONILLA CAPPADOCICA Willd.

A yellow-flowered leguminous perennial with ascending stems and pinnate leaves. Native to rocky places in Asia Minor.

78775. CORONILLA SCORPIOIDES (L.) Koch.

An erect yellow-flowered herbaceous perennial, about 8 inches high, native to the Mediterranean countries.

For previous introduction see No. 69850.

78776. CORONILLA VARIA L. **Crownvetch.**

A prostrate or ascending leguminous perennial, about 4 feet high, with a thick rootstock, compound leaves, and pinkish flowers in dense umbels. It is native to central Europe.

For previous introduction see No. 53607.

78777. CYNODON DACTYLON (L.) Pers. Poaceae. **Bermuda grass.**

78778. ECHINARIA CAPITATA (L.) Desf. Poaceae. **Grass.**

78779. ERIANTHUS RAVENNAE (L.) Beauv. Poaceae. **Grass.**

78780. FESTUCA OVINA SULCATA Hack. Poaceae. **Grass.**

78781 to 78786. HORDEUM spp. Poaceae.

78781. HORDEUM BULBOSUM L. **Grass.**

78782. HORDEUM DISTICHON PALMELLA Harlan. **Two-rowed barley.**

78783. HORDEUM MURINUM L. (*H. leporinum* Link). **Grass.**

78749 to 78816—Continued.

78784. HORDEUM MURINUM L. (*H. leporinum* Link). **Grass.**

Forma *nigracans*.

78785. HORDEUM VULGARE NIGRUM (Willd.) Beaven. **Six-rowed barley.**

78786. HORDEUM VULGARE PALLIDUM Seringe. **Six-rowed barley.**

78787. KOELERIA GRACILIS Pers. Poaceae. **Grass.**

78788. TULIPA SCHMIDTII Fomin. Liliaceae. **Tulip.**

A wild tulip, native to the Caucasus, with a bulb about 2 inches in diameter, oblong-lanceolate obtuse leaves, and red flowers 3 inches long.

78789. LATHYRUS ROSEUS Stev. Fabaceae.

An erect much-branched perennial, 2 or 3 feet high, with ovate leaflets and rose-colored flowers. Native to Asia Minor.

78790. MEDICAGO SATIVA GLUTINOSA (Bieb.) Urban. Fabaceae.

78791. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

78792. MELICA MICRANTHA Boiss. and Hohen. Poaceae. **Grass.**

78793. MELICA PICTA Koch. Poaceae. **Grass.**

78794 to 78796. MELILOTUS spp. Fabaceae.

78794. MELILOTUS ALBA Desr. **White sweetclover.**

78795. MELILOTUS NEAPOLITANA Ten. **Sweetclover.**

An annual, mostly upright plant, up to 15 inches high, branched from the base, with obovate to roundish hairy leaflets and small bright-yellow flowers. It is native to the Mediterranean countries.

For previous introduction see No. 43595.

78796. MELILOTUS OFFICINALIS (L.) Lam. **Sweetclover.**

78797. ORYZOPSIS HOLCIFORMIS (Bieb.) Hack. Poaceae. **Grass.**

A perennial grass with a thick, short rhizome and stems 3 feet or more high. The panicles are a foot or more long. It is native to southern and southeastern Europe.

For previous introduction see No. 64095.

78798. ORYZOPSIS PARADOXA VIRESCENS (Trin.) Richter. Poaceae. **Grass.**

A perennial, densely cespitose grass with rough stems up to 4 feet high and spreading panicles about 8 inches high. It is native to southern Europe and Asia Minor.

For previous introduction see No. 64096.

78799. PHLEUM PHLEOIDES (L.) Karst. (*P. boehmeri* Wibel). Poaceae. **Timothy.**

A perennial, gray-green, loosely cespitose grass with short, creeping rhizomes

78749 to 78816—Continued.

and stems 1 to 2 feet high. It is native to dry stony places throughout central Europe.

For previous introduction see No. 63992.

78800. PHLEUM PANICULATUM Huds. Poaceae. **Grass.**

An erect or ascending annual grass, 4 to 16 inches high, native to the Mediterranean countries.

For previous introduction see No. 74171.

78801. PISUM ELATIUS Bieb. Fabaceae. **Pea.**

A hardy annual, about 5 feet high, with leaves composed of one to three pairs of narrow leaflets and with purple flowers. It is native to the woods and thickets in the alpine regions of Europe.

For previous introduction see No. 67925.

78802 to 78805. POA spp. Poaceae. **Grass.**

78802. POA ANNUA L.

78803. POA BULBOSA VIVIPARA Koel.

78804. POA LONGIFOLIA PLANIFOLIA Somm. and Lev.

78805. POA NEMORALIS L.

Variety *latifolia*.

78806. PRUNUS CERASIFERA DIVARICATA (Ledeb.) C. Schneid. Amygdalaceae.

The wild form of the myrobalan plum. It is a small spreading tree with more slender branches than the type, smaller flowers, and yellowish fruits about an inch long. Native to Asia Minor.

For previous introduction see No. 43865.

78807. PTEROCARYA FRAXINIFOLIA (Lam.) Spach (*P. caucasica* Meyer). Juglandaceae.

A handsome spreading tree, 60 feet or less high, with attractive dark-green pinnate leaves about a foot long. It is native to the Caucasus and will probably not be hardy north of Massachusetts.

For previous introduction see No. 74596.

78808. TRIFOLIUM CAMPESTRE Schreb. Fabaceae. **Clover.**

A biennial or annual clover up to 20 inches high, prostrate or ascending, with bright-yellow flowers. It is native to central Europe.

78809 to 78814. TRITICUM spp. Poaceae.

78809. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). **Common wheat.**

78810 and 78811. TRITICUM DURUM Desf. **Durum wheat.**

78810. Variety *apulicum*.

78811. Variety *hordeiforme*.

78812 and 78813. TRITICUM PERSICUM Aitch. and Hemsl. **Persian wheat.**

78812. Variety *fuliginosum*.

78813. Variety *rubiginosum*.

78814. TRITICUM TURGIDUM L. **Poulard wheat.**

78815 and 78816. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). **Common wheat.**

78815. Variety *cinereum*.

78816. Variety *erythrospermum*.

78817. VITIS DAVIDII (Carr.) Foex. Vitaceae. **Brier grape.**

From Yokohama, Japan. Cuttings purchased from the Yokohama Nursery Co. Received February 13, 1929.

Koshiu. A variety growing in Koshiu, Yamanashi Ken, a region which is very hilly and surrounded by high mountains. The highest temperature in the summer is about 90° F. This is a very late grape and is said to be the best in Japan in both flavor and appearance. The bunches weigh up to 2¼ pounds.

For previous introduction see No. 55098.

78818. CAVANILLESIA PLATANIFOLIA H. B. K. Bombacaceae.

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received May 7, 1928. Numbered in March, 1929.

A Colombian tree up to 100 feet high, with a large thick trunk, smooth pale bark, large shallowly 5-lobed to 7-lobed leaves, and red flowers an inch long. The coarse soft pithlike wood is white or yellowish and is used for making canoes and rafts.

78819 to 78826. AVENA spp. Poaceae. **Oats.**

From Sydney, New South Wales, Australia. Seeds presented by W. Wenholz, director of plant breeding, Department of Agriculture, Sydney. Received February 12, 1929.

Varieties of oats which have shown resistance to crown rust under field conditions in New South Wales.

78819 and **78820.** AVENA BYZANTINA Koch.

78819. *Algerian* (G'28 A–18).

78820. *Algerian* (G'28 8a18).

78821. AVENA STRIGOSA Schreb.

Variety *glabrescens*. (G'28 $29a_6$ [I.28/7639].)

78822. AVENA sp.

Buddah (G'28 $17a_{17}$).

78823. AVENA sp.

Buddah (single plant No. 991).

78824. AVENA sp.

Mulga (selection 4107 [G'28 $21a_{10}$]).

78825. AVENA sp.

(*Sunrise* × *Victory*) 9 G'28.

78826. AVENA SATIVA L.

From Ruakura (G'28 $15a_{17}$).

78827. PHASEOLUS LUNATUS L. Fabaceae. **Lima bean.**

From China. Seeds presented by Dr. W. H. Dobson, Forman Memorial Hospital, Yeoungkong, Kwangtung, China. Received February 12, 1929.

A variety grown locally.

78828 and 78829. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

From Baghdad, Irak. Seeds presented by J. F. Webster, Inspector General of Agriculture. Received February 13, 1929.

78828. *Punjab B 8*.

78829. *Nyngan 3*.

78830. GOSSYPIUM sp. Malvaceae. **Cotton.**

From the Dominican Republic. Seeds presented by Dr. R. Ciferri, Director de la Estación Nacional Agronómica y Colegio de Agricultura. Received February 13, 1929.

Granbolla or *granbola* cotton labeled: "Dominican cotton collection No. 1." This was grown in the dry zone of Monte Cristi, and appraised there as a good indigenous variety. The chief characteristics are a very early maturity of the boll and the small size of the plants.

78831. CASTANEA MOLLISSIMA Blume. Fagaceae. **Hairy chestnut.**

From Keijo, Chosen. Plants grown from seeds presented by the Director of the Forestry Experiment Station, March 9, 1926. Numbered in January, 1929.

In the endeavor to relieve the situation caused by the rapid disappearance of our native chestnut, due to the ravages of the blight fungus, the Chinese hairy chestnut is being introduced into this country in considerable quantity. The size and quality of the nuts compare rather favorably with our native chestnut, although neither the size of the tree nor the tannin content measure up to those of our native species.

For previous introduction see No. 75754.

78832. ARRACACIA XANTHORRHIZA Bancroft (*Arracacha esculenta* DC.). Apiaceae. **Arracacha.**

From Kingston, Jamaica. Tubers presented by M. S. Goodman, superintendent of the Hope gardens of the Department of Science and Agriculture. Received February 21, 1929.

The arracacha is an herbaceous perennial about 3 feet high, with carrotlike foliage and small umbels of purple flowers. It is native to northern South America. The large fleshy roots are used as food in South America and Central America, being boiled like parsnips or sliced and fried.

For previous introduction see No. 78262.

78833 to 78851. VITIS VINIFERA L. Vitaceae. **European grape.**

From Sawbridgeworth, Herts, England. Cuttings purchased from Thomas Rivers & Son. Received February 28, 1929.

78833. *Alnwick seedling.*

78834. *Appley Towers.* A late black variety of good flavor and keeping qualities.

78835. *Diamond Jubilee.*

78836. *Directeur Tisserand.*

78837. *Dr. Hogg.*

78838. *Duke of Buccleuch.*

78839. *Early Auvergne Frontignan.*

78840. *Lady Downe's seedling.* A large, oval, black variety with sweet, firm flesh richly flavored with a fine aroma. It is said to be one of the best late grapes.

78841. *Lady Hastings.*

78842. *Lady Hutt.* A late, round white variety of excellent quality.

78833 to 78851—Continued.

78843. *Madresfield Court.* A very large black variety with a muscat flavor when quite ripe.

78844. *Melton Constable.*

78845. *Mill Hill Hamburgh.*

78846. *Mrs. Pearson.*

78847. *Muscat Champion.*

78848. *Muscat Hamburg.*

78849. *Prince of Wales.*

78850. *Reine Olga.* A round, reddish variety.

78851. *White Frontignan.* A medium-sized, round variety with a high muscat flavor. It is said to be a most abundant bearer.

78852. CANNA EDULIS Ker. Cannaceae. **Edible canna.**

From Honolulu, Hawaii. Rootstocks presented by J. M. Westgate, Director, Hawaii Agricultural Experiment Station. Received February 26, 1929.

A close relative of the ornamental cannas, cultivated for its edible tubers.

For previous introduction see No. 75858.

78853 and 78854. LILIUM spp. Liliaceae.

From Bengal, India. Seeds purchased from R. B. & D. S. Pradhan, the Chandra Nursery. Received March 2, 1929.

78853. LILIUM GIGANTEUM Wall. **Giant lily.**

A lily, native to the Himalayas, with bulbs which grow close to the surface in rich black mold, at altitudes between 7,500 and 9,000 feet, where it is covered with snow from November to April. The smooth hollow stems, 6 to 9 feet high, are sometimes used for musical pipes. The handsome cordate leaves, shining dark green above and paler beneath, are 10 to 12 inches long on petioles of equal length; both become smaller near the apex. In the large white fragrant flowers, often 12 to a raceme, the perianth tube is slightly greenish, and the inner surfaces of the segments are tinged with deep purple.

For previous introduction see No. 77585.

78854. LILIUM WALLICHIANUM Schult. f. **Lily.**

A lily 4 to 6 feet high, with linear leaves 6 to 9 inches long, and usually solitary creamy waxy white fragrant flowers, 9 inches long, which are golden yellow at the base inside and green outside.

78855. LEYCESTERIA FORMOSA Wall. Caprifoliaceae.

From Gresham, Oreg. Plants presented by the W. L. Crissey Alpine Gardens. Received March 5, 1929.

A handsome ornamental bush, closely allied to the honeysuckles, which is native to the cooler sections of the Himalayas. It is from 6 to 8 feet high, with broadly cordate leaves 5 to 7 inches long, terminal spikes of purplish flowers in the axils of the purplish bracts, and subglobose red-purple berries.

For previous introduction see No. 65261.

78856 to 78870.

From Stevenage, Herts, England. Seeds purchased from Clarence Elliott (Ltd.), Six Hills Nursery. Received February 25, 1929.

78856. AGAPANTHUS AFRICANUS (L.) Hoffmannsegg (*Abumon africanum* Britton). Liliaceae. **African lily.**

Variety *Mooreanus*. A robust tuberous-rooted plant reputed to be winter-hardy, 1½ feet high, with short straplike leaves and dark-blue flowers in fair-sized umbels.

78857 to 78862. GENTIANA spp. Gentianaceae. **Gentian.**

78857. GENTIANA GENTIANELLA A. T. Johnson. **Stemless gentian.**

A stemless European alpine plant which forms a dense carpet of compact tufts of glossy green leaves from which rise large tubular flowers of an amazingly deep blue.

78858. GENTIANA ASCLEPIADEA L. **Milkweed gentian.**

A comparatively robust subalpine species forming clumps of vigorous stems up to 3 feet high with opposite ovate leaves. In late summer it produces from the uper axils almost sessile trumpet-shaped flowers of sapphire blue which weigh down the arching stalks. There is some variation in color from seed, which germinates freely and produces flowering plants in about three years. The plant is said to be indifferent as to whether the soil is alkaline or not.

78859. GENTIANA BAVARICA L.

A difficult species requiring conditions similar to those of moist alpine meadows for success. It forms compact tufts of stout stems about 3 inches high with yellow-green boxlike leaves and flowers somewhat like those of *Gentiana verna*, with five large lobes, but of a velvety dark-blue color and produced much later in the summer. It is said to be indifferent to limestone or granite soils provided it has the proper moist turfy soil.

78860. GENTIANA LAGODECHIANA Hort.

A dwarf form of *Gentiana septemfida*, with deeper blue flowers and prostrate habit.

78861. GENTIANA SEPTEMFIDA Pall.

An Asiatic gentian which somewhat resembles *Gentiana asclepiadea*, requiring similar conditions. It makes spreading clumps up to 12 inches high with opposite ovate leaves and heads of wide-mouthed trumpet-shaped blue flowers in late summer. It varies considerably in habit and flower color, but all forms do well in peaty loam with ample but not stagnant water supply.

78862. GENTIANA VERNA L.

This is the gentian of the Alps, difficult in cultivation unless provided with peaty soil filled with sharp sand, a liberal supply of coarse broken stone, perfect underdrainage, and a constant supply of moisture in summer. It is a social plant and should be grown with other plants to simulate an alpine turf, where it will produce vigorous clumps of low shoots, gray-green foliage, and, in early summer, myriads of starry flowers of indescribable blue.

78856 to 78870—Continued.

78863. IRIS SINTENISII Janka. Iridaceae.

A beardless iris of the same general type as *Iris graminea* with tufted evergreen leaves about 12 inches high and flower stalks little higher than the leaves. Flowers blue purple as in *I. graminea* with red purple on the style branches and hafts. Native to southeastern Europe and Asia Minor.

78864. LILIUM RUBELLUM Baker. Liliaceae. **Rubellum lily.**

A miniature trumpet lily from Japan with slender green stems spotted with purple, rarely exceeding 2 feet in height, narrow leaves, and one to eight smallish trumpets of rosy white, flushed darker without. It is more delicate than Kramer's lily (*Lilium japonicum*), and, like it, should be grown in a low shrubby undergrowth, where its head can rise to full sun.

78865 to 78868. PRIMULA spp. Primulaceae. **Primrose.**

78865. PRIMULA sp.

Primrose blue. A blue-flowered horticultural strain of the common garden primrose.

78866. PRIMULA HELODOXA Balf.

A large Chinese primrose, with flower stalks like those of *Primula japonica*, about 3 feet high, with seven or eight tiers of soft-yellow flowers resembling in color and size those of *Jasminum primulinum*. It requires a moist but well-drained site.

78867. PRIMULA POLYANTHA Mill. **Polyanthus primrose.**

A European primrose, about a foot high, with more or less upright yellow flowers in erect umbels which stand above the long leaves.

78868. PRIMULA SIKKIMENSIS Hook.

This primrose, with flower stalks 1 or 2 feet high and with the habit of *Primula secundiflora*, grows in moist meadows and along stream beds in the Himalayas at an altitude of 13,000 feet. The lanceolate drooping leaves are dull green on both sides, and the rich-yellow flowers, which appear in June, are large and bell-shaped. It should be treated as a short-lived perennial.

78869. SISYRINCHIUM BOREALE (Bickn.) J. K. Henry. Iridaceae.

A semiaquatic plant up to a foot in height, with narrow leaves and yellow flowers on erect pedicels. Native to southwestern Canada and northwestern United States.

78870. SISYRINCHIUM FILIFOLIUM Gaud. Iridaceae.

A herbaceous perennial, 6 inches to a foot in height, native to the Falkland Islands. In cool peaty soil, with good drainage, it spreads into grassy tufts of narrow rushlike leaves, and produces from six to nine stalks with white bell-shaped flowers of exquisite delicacy.

78871 to 78914.

From Newry, Ireland. Seeds purchased from T. Smith, Daisy Hill Nursery. Received February 23, 1929.

78871 to 78874. ALSTROEMERIA spp. Amaryllidaceae.

78871 to 78914—Continued.

78871. ALSTROEMERIA AURANTIACA D. Don. **Yellow alstroemeria.**

A Chilean plant 2 to 4 feet high, with about 50 thin leaves 3 to 4 inches long and bright-yellow flowers, spotted brown within, in a compound umbel.

78872. ALSTROEMERIA CHILENSIS Lem. **Chilean alstroemeria.**

A stout tuberous-rooted plant 2 to 4 feet high, with scattered obovate or spatulate leaves and large rosy red or whitish flowers in pairs. Native to Chile.

78873 and 78874. ALSTROEMERIA AURANTIACA D. Don. **Yellow alstroemeria.**

For previous introduction and description see No. 78871.

78873. Variety *flava*.

78874. Variety *major*.

78875. RHODODENDRON LUTEUM Sweet (*Azalea pontica* L.). Ericaceae. **Pontic azalea.**

A deciduous shrub 8 to 12 feet high, native to the Caucasus region, with hairy oblong leaves and a profusion of funnelform fragrant yellow flowers 2 inches across.

78876. BERBERIS BUXIFOLIA Lam. Berberidaceae. **Magellan barberry.**

An erect bushy, partially evergreen barberry, 6 to 8 feet high, with hard leathery oblong-obovate leaves up to an inch long, small solitary amber-yellow flowers, and globular dark-purple fruits. Native to southern Chile.

For previous introduction see No. 58099.

78877. BERBERIS EMPETRIFOLIA Pers. Berberidaceae. **Crow barberry.**

A low densely branched barberry, 1 or 2 feet high, with linear, bright-green leaves, and bluish-black fruits. Native to southern South America.

For previous introduction see No. 73532.

78878. BRUCKENTHALIA SPICULIFOLIA Reichenb. Ericaceae. **Spikeheath.**

A low evergreen shrub which forms large tufts of slender shoots with small needle-shaped leaves and short terminal racemes of nodding rosy pink flowers. Requires gritty acid soil. Native to southeastern Europe and Asia Minor.

78879. BULBINELLA HOOKERI (Colenso) Cheeseman (*Chrysobactron hookeri* Colenso). Liliaceae.

A New Zealand herbaceous perennial related to the asphodels, varying in size from 2 to 4 inches up to 3 feet. The numerous glaucous-green leaves are linear, and the loose racemes of bright-yellow flowers are on slender scapes up to 10 inches high.

For previous introduction see No. 77547.

78880. CYANANTHUS LOBATUS Wall. Campanulaceae.

A herbaceous perennial with more or less prostrate shoots up to 2 feet high with ovate-oblong lobed leaves an inch long and single blue flowers somewhat like a periwinkle, sometimes an inch across, appearing in late summer. Native to the Himalayas.

For previous introduction see No. 41615.

78881 to 78892. CYTISUS SCOPARIUS ANDREANUS Dipp. Fabaceae. **Paradise broom.**

The paradise brooms are upright shrubs with slender green branches, small obovate leaflets, and flowers an inch across, of various shades of yellow and red.

78881. *Dragon fly.* Flowers crimson and old gold.

78882. *Fairy.* Flowers cream and pink.

78883. *Firefly.* Flowers scarlet and yellow.

78884. *Fulgens.* Flowers very dark crimson.

78885. A late flowering form.

78886. *Mayfly.* Flowers copper and yellow.

78887. *Moonlight.* Flowers pale cream colored.

78888. *Newry gold.*

78889. *Newry Seedling.* Flowers cream and rose colored.

78890. *Red Admiral.*

78891. *Rosy Moonlight.* Flowers cream colored, tinged with rose.

78892. *Praecox.* Flowers cream colored, appearing early.

78893 to 78899. ERICA spp. Ericaceae.

78893. ERICA ARBOREA L. **Tree heath.**

A bushy shrub or small tree, at times 20 feet high, with linear, whorled leaves and very fragrant whitish flowers borne in great profusion in early spring. Native to the Mediterranean countries.

78894. ERICA CILIARIS L. **Fringed heath.**

A straggling shrub, up to a foot high, with long prostrate stems from which the flowering branches spring erect in dense masses. The oval whorled leaves are green above and whitish beneath. The rosy flowers are in whorls of three on erect terminal racemes 2 to 5 inches long appearing in late summer. Native to southwestern Europe.

78895 to 78897. ERICA CINEREA L. **Twisted heath.**

For previous introduction and description see No. 78680.

78895. *Rose Queen.* A variety with 6-inch sprays of clear rose-colored flowers.

78896. Variety *purpurea.* A variety with purple flowers.

78897. Variety *rosea.* A variety with rose-colored flowers.

78898. ERICA STRICTA Donn. **Corsican heath.**

A woody perennial about 2 feet high, with rigid branches, whorled leaves, and rosy purple flowers. Native to Corsica.

78871 to 78914—Continued.

78899. ERICA VAGANS L.
Cornish heath.

A low European shrub a foot or more high, with its leaves in whorls of four or five, and pale purplish red flowers.

78900 and 78901. CALLUNA VULGARIS (L.) Salisb. **Heather.**

78900. A low evergreen European shrub 1 to 2 feet high, with small ovate leaves and dense racemes 6 to 10 inches long of rosy pink flowers.

78901. Variety *alba*. A white-flowered form.

78902. GENISTA MONOSPERMA (L.) Lam. Fabaceae. **Bridal-veil broom.**

An ornamental leguminous shrub, native to Spain, about 10 feet high with slender grayish branches and small, very narrow leaves. The fragrant white flowers are in short lateral racemes.

78903 to 78906. GERANIUM spp. Geraniaceae. **Cranesbill.**

78903. GERANIUM ANDRESSI J. Gay.

A European perennial 1½ feet high which has a brown hairy stem, opposite palmate leaves, and light-rose flowers with the petals fringed at the base.

78904. GERANIUM LOWII Hort.

A plant 2 feet high. The bright rose flowers have violet centers.

78905. GERANIUM SANGUINEUM L.

Variety *album*. A white-flowered form.

78906. GERANIUM SESSILIFLORUM Cav.

A low herbaceous perennial which forms compact tufts of dark-green leaves, among which nestle scores of grayish white flowers. Native to Australia and Chile.

78907 to 78909. MENZIESIA POLIFOLIA Juss. Ericaceae.

A low evergreen shrub about 2 feet high, with shining dark-green elliptic leaves half an inch long and flowers in racemes. Native to western Europe.

78907. A purple-flowered variety.

78908. Variety *alba*. A white-flowered variety.

78909. Variety *atropurpurea*. A variety with deep-purple flowers.

78910 and 78911. MORINA LONGIFOLIA Wall. Dipsacaceae.

78910. A hairy thistlelike perennial 3 to 4 feet high, with narrow leaves 6 inches long and showy crimson flowers crowded in dense whorls near the top of the stem. Native to the Himalayas at altitudes of 9,000 to 14,000 feet.

78911. Variety *gigantea*. A variety with bright-red stems 5 feet high.

78912. PRIMULA CAPITATA Hook. Primulaceae. **Primrose.**

Variety *mooreanus*. A form of the species with fine round heads of deep-violet flowers, calyxes and stems dusted with white farina, and rosettes of spreading green leaves.

78913. PRIMULA CHIONANTHA Balf. and Forr. **Primrose.**

78871 to 78914—Continued.

A stout herbaceous plant 1 to 2 feet high, with blunt narrowly oval leaves, sulphur-mealy beneath, and clusters of white flowers borne in a many-flowered umbel at the apex of a stout scape. It appears to thrive best in rich moist soil.

78914. ROSCOEA PURPUREA J. E. Smith. Zingiberaceae.

A thick-rooted perennial gingerlike Himalayan plant about a foot high with sessile lanceolate leaves and purple, rarely pale lilac or white flowers in a sessile spike.

78915 to 78974.

From Edinburgh, Scotland. Seeds presented by William Wright Smith, Regius Keeper, Royal Botanic Garden. Received February 27, 1929.

78915 to 78919. BERBERIS spp. Berberidaceae. **Barberry.**

78915. BERBERIS ANGULOSA Wall.

An ornamental shrub from the mountainous sections of northern India, which becomes about 4 feet high, with dark glossy green leaves, large solitary globose orange-yellow flowers half an inch wide, and elliptical, scarlet berries nearly an inch long. The autumnal coloring of the foliage is said to be very striking, and the fruits, less acid than most barberries, are edible.

For previous introduction see No. 65223.

78916. BERBERIS BREVIPANICULATA C. Schneid. **Shortcluster barberry.**

A shrub from western China with tawny glabrous young branches later becoming furrowed and ash-colored, and graceful golden spines. The oblong entire clustered leaves are one-third of an inch long, shining above, distinctly glaucous, and with a bloom. The small graceful flowers are in panicles which are sometimes an inch long.

For previous introduction see No. 52336.

78917. BERBERIS BUXIFOLIA Lam.
Magellan barberry.

For previous introduction and description see No. 78876.

78918. BERBERIS UMBELLATA Wall.
Barberry.

A hardy subevergreen Himalayan shrub about 3 feet high, with narrow leaves slightly glaucous beneath, and umbellate racemes of yellow flowers.

For previous introduction see No. 65755.

78919. BERBERIS WALLICHIANA DC.

Variety *compacta*. An evergreen shrubby barberry from the Himalayas. It is probably too tender for the North.

78920. CARMICHAELIA FLAGELLIFORMIS Colenso. Fabaceae.

A new Zealand shrub about 4 feet high, with stiff slender flat green branches which take the place of leaves and short dense axillary fascicles of purplish flowers borne in great profusion.

For previous introduction see No. 76562.

78915 to 78974—Continued.

78921 to 78925. ENKIANTHUS spp. Ericaceae.

78921 to 78923. ENKIANTHUS CAMPANULATUS (Miquel) Nicholson. **Redvein enkianthus.**

78921. Variety *palibinii*. A Japanese shrub with the branches often verticillate, oblanceolate green leaves, paler beneath, and bell-shaped drooping red flowers in short terminal racemes.

78922. Variety *pallidiflorus*. A shrub with its branches usually verticillate, narrow green leaves, paler beneath, up to 1½ inches long, and sessile terminal racemes of nearly white flowers. Native to Japan.

78923. Variety *recurvus*. A Japanese shrub with the branches usually verticillate, lanceolate papery leaves up to 2 inches long, and pink flowers nearly half an inch across, in terminal clusters.

78924. ENKIANTHUS CHINENSIS Franch. (*E. sinohimalaicus* Craib).

A Chinese shrub with elongated branches, lanceolate leaves up to 2 inches long, and salmon-red flowers in shortened racemes.

78925. ENKIANTHUS CAMPANULATUS (Miquel) Nicholson. **Redvein enkianthus.**

Variety *tectus*. A shrub native to Japan, with usually whorled branches, leaves of variable shape up to an inch long, and sessile racemes of pink flowers.

78926. FUCHSIA CORYMBIFLORA Ruiz and Pav. Onagraceae.

A handsome Peruvian fuchsia with large serrate, taper-pointed leaves and deep-red flowers. The plant becomes tall, but requires support in order to attain full height. It is adapted for training on pillars or pergolas in the warmest parts of the United States.

For previous introduction see No. 65174.

78927. FUCHSIA CORYMBIFLORA Ruiz and Pav. Onagraceae.

Variety *alba*. A white-flowered form from Peru.

78928 to 78940. GENTIANA spp. Gentianaceae. **Gentian.**

78928. GENTIANA ASCLEPIADEA L. **Milkweed gentian**

For previous introduction and description see No. 78858.

78929. GENTIANA ASCLEPIADEA L. **Milkweed gentian.**

Variety *alba*. A white-flowered form.

78930. GENTIANA CRASSICAULIS Duthie.

A glabrous perennial a foot or more high, native to western China, with elliptic leaves and greenish-white flowers, 20 to 30 in a head.

78931. GENTIANA CRUCIATA L. **Cross gentian.**

One of the less difficult alpine species, making foot-high clumps with handsome dark-green foliage and producing crowded heads of small, 4-lobed blue flowers in late summer and early autumn. Native to Europe and northern Asia.

78932. GENTIANA LUTEA L.

A coarse perennial species too large for the rock garden with 3 to 4 foot stems bearing handsome rugose foliage, crowned in late summer in the upper whorls of leaves with crowded clusters of slender-lobed golden-yellow flowers.

78933. GENTIANA PHLOGIFOLIA Schott and Kotschy.

A rather easy creeping alpine species, native to central Europe, about 10 inches high, with clustered dark-blue flowers, produced in early summer.

78934. GENTIANA PURPUREA L.

A European alpine, with somewhat lax stems up to 3 feet high, narrow leaves, and dull purplish-blue flowers, flushed and spotted yellowish brown within, appearing in late summer.

78935. GENTIANA SAPONARIA L.

A hardy herbaceous perennial not exceeding 2 feet in height, with an ascending stem, narrow-pointed opposite leaves and light-blue flowers. Native to eastern North America.

78936 to 78938. GENTIANA SEPTEMFIDA Pall.

78936. For previous introduction and description see No. 78861.

78937. Variety *cordifolia*. A variety with heart-shaped leaves. From Turkish Armenia.

78938. Variety *procumbens*. A variety with stems which tend to lie flat on the ground. It is smaller, more delicate than the type and has a tendency to give fewer, usually solitary flowers.

78939. GENTIANA TIBETICA King. **Himalayan gentian.**

An erect plant 1½ feet high, with oblong-ovate leaves 5 to 7 inches long and small dull yellowish-white axillary flowers an inch long. Native to Tibet; introduced only for comparative study.

78940. GENTIANA TUBULOSA Gilg.

An annual gentian from Argentina, with upright stems 6 inches high, narrowly oblong membranous leaves half an inch long, and lilac-blue flowers, usually solitary, about an inch long.

78941. HEMEROCALLIS PLICATA Hort. Liliaceae. **Daylily.**

78942. PHILADELPHUS INCANUS SARGENTIANUS Koehne. Hydrangeaceae. **Gray mockorange.**

A variety which has yellowish or brownish branches and leaves with the lower surfaces pilose.

78943. PHILADELPHUS SERICANTHUS REHDERIANUS Koehne. Hydrangeaceae. **Silk mockorange.**

A variety with broadly ovate leaves up to 4½ inches long and 2 inches wide.

78944. ROSA FOETIDA Herrmann (*R. lutea* Mill.). Rosaceae. **Austrian brier rose.**

78915 to 78974—Continued.

A hardy shrub, up to 10 feet high, with slender stems and bright yellow flowers. Native to western Asia.

For previous introduction see No. 72879.

78945. ROSA FOETIDA BICOLOR (Jacq.) Willm. Rosaceae.
Austrian copper brier rose.

Differs from the type in having coppery red flowers.

78946 to 78964. SEDUM spp. Crassulaceae. **Stonecrop.**

78946. SEDUM AIZOON L.
Aizoon stonecrop.

A glabrous fleshy perennial, native to Siberia, with several simple stems 1 to 2 feet high, alternate oblong-lanceolate distant leaves, and numerous yellow flowers in loose cymes.

78947. SEDUM ALBUM L.
White stonecrop.

A succulent perennial cespitose alpine, 4 to 6 inches high, native to the Mediterranean countries. The white flowers are in much-branched corymbose cymes.

78948. SEDUM ALBUM L.
White stonecrop.

Variety *brevifolium*. A form with shorter leaves.

78949. SEDUM ALTISSIMUM Poir.

A hardy common species from the Mediterranean region. The plants vary in height from 6 inches to 2 feet, but all forms are characterized by their decumbent stems, ascending branches crowded with sharply tipped more or less glaucous leaves, and very tall flowering branches which bear smaller leaves and dense terminal umbellate cymes of greenish-white flowers.

78950. SEDUM ANOPETALUM DC.

A hardy species native from central and southern Europe eastward, which, like the preceding, varies greatly and occurs under many names. It is related to *S. reflexum*, but seems to differ most in the more slender terete leaves and the erect carriage of the developing inflorescence. The flowers are usually greenish white, more rarely yellow.

78951. SEDUM ASIATICUM (Don) Spreng.

A Himalayan succulent up to a foot high, with opposite linear, irregularly toothed leaves and yellow flowers in compact globose cymes.

For previous introduction see No. 39075.

78952. SEDUM CRASSIPES Wall.

A low succulent Himalayan alpine with slender stems 2 to 6 inches high, linear somewhat dentate leaves one-half inch long, and straw-colored flowers in a dense cyme.

78953. SEDUM DASYPHYLLUM L.
Leafy stonecrop.

A low hardy tufted perennial, native to the Mediterranean countries, with slender stems, and crowded glaucous

78915 to 78974—Continued.

beadlike leaves which are easily broken from the stem. The flowers are white tinted pink, but are not so showy as the leaves. The plant is said to prefer a dry site.

78954. SEDUM ELLACOMBIANUM Praeger.

A Japanese succulent perennial of cespitose habit, with annual stems up to 6 inches high, obovate or spathulate leaves, and yellow flowers in a compact cymose inflorescence.

78955. SEDUM EWERSII Ledeb.
Ewers stonecrop.

A hardy succulent perennial with cespitose ascending stems, opposite glaucous elliptic or cordate leaves, and purple flowers in rather dense terminal corymbs. Native to central Asia.

78956. SEDUM KAMTSCHATICUM Fisch. and Mey. **Orange stonecrop.**

A glabrous perennial succulent with greenish or pinkish branches 10 inches long, deep-green coarsely toothed leaves, and numerous yellow flowers in terminal cymes. Native to eastern Asia.

78957. SEDUM MAXIMUM Suter.
Great stonecrop.

A stout bushy perennial up to 2 feet high, with opposite sessile leaves and whitish flowers in terminal and lateral cymes on long peducles, forming a loose panicle. Native to Europe and northwest Asia.

78958. SEDUM PILOSUM Bieb.

A fleshy perennial of round-compact habit, with small hairy leaves and rose-pink flowers in a panicle. Native to the Caucasus.

78959. SEDUM POPULIFOLIUM Pall.
Poplar stonecrop.

A shrubby glabrous succulent up to 10 inches high, with ovate-acute coarsely toothed leaves 1½ inches long and terminal cymes of pinkish flowers. Native to Siberia.

78960. SEDUM RUPESTRE L.

A succulent perennial 6 to 12 inches high, from western Europe, with glaucous stems and foliage which redden with age. The numerous yellow flowers are in umbellate cymes.

78961. SEDUM SEMENOVII Masters.

An Asiatic succulent with annual stems about a foot high, from a perennial rhizome. The sessile leaves, in six rows, are an inch long, and the whitish flowers are in compact globose terminal cymes.

78962. SEDUM SPURIUM Bieb.

Variety *splendens*. A succulent perennial, native to Asia Minor, with a rosette of cuneate-obovate pubescent leaves and a corymb of flesh-colored flowers, purple veined beneath.

78963. SEDUM TELEPHIUM L.
Liveforever.

An erect fleshy perennial a foot or more high with scattered oblong-ovate leaves and numerous pink, red-spotted flowers in dense terminal and lateral cymes. Native from central Europe to Siberia.

78915 to 78974—Continued.

78964. SEDUM TELEPHIUM BORDERI Masters.

A variety with reddish stems and flat-topped corymbs of pink flowers.

78965 to 78973. SEMPERVIVUM spp. Crassulaceae. **Houseleek.**

78965. SEMPERVIVUM ARENARIUM Koch. **Sand houseleek.**

A succulent European alpine which forms globular rosettes of 60 to 80 bright-green oblanceolate leaves. The pale-yellow flowers are in dense heads.

78966. SEMPERVIVUM BARBATUM C. Smith.

A shrubby succulent with stout stems and flat rosettes of oblong spatulate leaves. The yellow flowers are in rather open panicles. Native to the Canary Islands.

78967. SEMPERVIVUM GLAUCUM Tenore. **Fuzzy houseleek.**

A succulent alpine, native to central Europe, which forms rosettes 2 to 3 inches in diameter, with oblanceolate glaucous leaves and about a dozen pale or bright-red flowers in a short compact panicle on a densely hairy stem about a foot high.

78968. SEMPERVIVUM SANGUINEUM Jeanb.

A low compact reddish hairy succulent alpine with oval-acuminate leaves and small pink flowers in few-flowered clusters on slender stems 5 to 8 inches long. Native to the Pyrenees.

78969. SEMPERVIVUM SCHNITTSPAHNII Lagg.

A succulent alpine, native to Switzerland, with a rosette of narrowly ovate smooth leaves and pink flowers on an upright stem.

78970 to 78972. SEMPERVIVUM TECTORUM L. **Roof houseleek.**

A European herbaceous perennial with rosettes of obovate sharp-pointed thick pale-green leaves having distinct red tips, and densely pilose flowering stems a foot high, bearing branched panicles of pale-red flowers.

78970. Variety *glaucum*.

78971. Variety *pulchrum*.

78972. Variety *robustum*.

78973. SEMPERVIVUM VERLOTI Lamotte.

An alpine succulent with small rosettes of dark-green obovate leaves about an inch long, and 8 to 12 small rose-colored flowers on each peduncle of a branched panicle. Native to western Europe.

78974. VIBURNUM DASYANTHUM Rehder. Caprifoliaceae.

A hardy ornamental shrub 7 feet high from the mountains of western Hupeh, China, where it grows at altitudes of 4,000 to 9,000 feet. The narrow toothed leaves are dark metallic green above, paler beneath, and prominently veined. The flowers are in lax panicles, and the small red berries make the shrub a striking object of beauty in the fruiting season.

78975 to 79052.

From Kew, Surrey, England. Seeds and bulblets presented by Dr. A. W. Hill, Director, Royal Botanic Gardens. Received March 1, 1929.

78975 to 79001. ALLIUM spp. Liliaceae. **Onion.**

78975. ALLIUM BEESIANUM W. W. Smith.

An ornamental western Chinese onion, 9 to 18 inches high, with pendulous blue flowers.

For previous introduction see No. 76204.

78976. ALLIUM BIDWILLIAE S. Wats.

A pink-flowered onion about a foot high, native to the Sierra Madre Mountains, Calif.

For previous introduction see No. 66424.

78977. ALLIUM CARINATUM L.

Bulblets of a species with narrowly linear leaves and lilac-purple flowers, produced in a comparatively large head. It is found throughout southern Europe, especially in the Alps.

For previous introduction see No. 73522.

78978. ALLIUM CAERULEUM Pall.

A wild Russian onion, 2 feet or more high, with linear leaves and attractive light-blue flowers in erect rounded umbels.

78979. ALLIUM CYANEUM Regel.

A rather dwarf plant, less than a foot high, with small heads of pendulous bright-blue flowers. Native to northern China.

For previous introduction see No. 73523.

78980. ALLIUM FISTULOSUM L. **Welsh onion.**

Bulbs of a hardy onion, about 2 feet high, with green and yellow flowers.

For previous introduction see No. 63155.

78981. ALLIUM GIGANTEUM Regel.

One of the tallest members of the genus, becoming 4 feet high. It is native to the Himalayas. The bulbs are large, and the fleshy leaves are about 18 inches in length lying close to the ground. The bright-lilac flowers are in heads 4 inches in diameter.

For previous introduction see No. 58871.

78982. ALLIUM HYMENORRHIZUM Ledeb.

A perennial moisture-loving Russian species with linear leaves and purplish-violet flowers.

For previous introduction see No. 73598.

78983. ALLIUM KARATAVIENSE Regel.

An onion, native to Turkestan, with dense umbels of dull-pink flowers and

78975 to 79052—Continued.

very ornamental broad leaves of a striking blue-green color.

For previous introduction see No. 76335.

78984. ALLIUM MACRANTHUM Baker.

A handsome herbaceous perennial from the eastern Himalayas. The flat leaves are over a foot long, and the mauve-purple flowers are produced in clusters of 50 or more on scapes 2 feet high.

For previous introduction see No. 66429.

78985. ALLIUM NEAPOLITANUM Cirillo.

A southern European species, about 1½ feet high, with flat leaves and very ornamental white flowers, hardy in the South and requiring light perfectly drained soil.

For previous introduction see No. 58877.

78986. ALLIUM ODORUM L.

A European onion, cultivated in Japan for its leaves, which are produced abundantly in the spring and eaten as greens.

For previous introduction see No. 76336.

78987. ALLIUM OSTROWSKIANUM Regel.

A particularly striking species from Turkestan with deep rose-colored flowers produced freely in many-flowered umbels on scapes 12 inches high.

For previous introduction see No. 76208.

78988. ALLIUM OVIFLORUM Regel.

A low bulbous alpine about 2 inches high, with linear leaves up to 20 inches long and violet-purple flowers in a lax umbel. Native to the Himalayas.

78989. ALLIUM PARADOXUM (Bieb.) Don.

Bulblets of a perennial onion, a foot high, with white flowers. Native to Siberia.

For previous introduction see No. 66431.

78990. ALLIUM PENDULINUM Tenore.

An Italian alpine, with linear keeled leaves, and long-peduncled nodding whitish flowers.

78991. ALLIUM SCHOENOPRASUM L. **Chives.**

The sand leek or rocambole of Europe and Asia Minor, which resembles garlic but has smaller bulbs of milder flavor produced at the tip of the stem as well as at its base. Its flowers are dull lavender pink, and the plant is useful in the perennial border.

For previous introduction see No. 68057.

78992. ALLIUM SCORZONERAEFOLIUM DC.

Bulblets of a species of unknown origin, cultivated in European gardens. It has very narrow concave leaves and small yellow flowers in a few-flowered umbel.

For previous introduction see No. 58882.

78993. ALLIUM SENESCENS L.

A wild European onion, 1 to 2 feet high, with narrow, erect, often-twisted leaves and numerous, rather small, pink or lilac flowers in dense heads.

78994. ALLIUM STELLATUM Fraser.

A bulbous plant with 3-angled narrowly linear leaves and terminal umbels of deep-pink flowers on erect scapes. Native to the central United States.

78995. ALLIUM SUBANGULATUM Regel.

A cespitose bulbous plant with semiterete linear leaves and rosy purple flowers borne in a dense rounded umbel at the summit of an erect or ascending scape. Native to central China.

78996. ALLIUM SUBHIRSUTUM L.

A bulbous perennial native to the Mediterranean region with hairy margined narrow leaves a foot high and white flowers.

For previous introduction see No. 76337.

78997. ALLIUM TANGUTICUM Regel.

A hardy bulbous plant, up to 16 inches high, with numerous linear leaves and dense hemispherical umbels of purplish flowers. Native to western China.

78998. ALLIUM URSINUM L.

A wild European onion which grows in large masses in the open woods. When in flower it is very effective, clothing the ground with its broad green leaves, above which the numerous umbels of white flowers are borne on scapes a foot high.

For previous introduction see No. 58690.

78999. ALLIUM VINEALE L.

Bulblets of a pink-flowered wild onion, about a foot high, native to England.

79000. ALLIUM YUNNANENSE Diels.

A cespitose onion, native to southwestern China, with linear leaves about 6 inches long and pink or purplish flowers on scapes 4 to 16 inches long.

For previous introduction see No. 69906.

79001. ALLIUM ZEBDANENSE Boiss. and Noe.

A bulbous plant, 2 feet high, with linear-lanceolate leaves and three to five white flowers in an umbel. Native to Syria.

79002 to 79006. BERBERIS spp. Berberidaceae. **Barberry.**

79002. BERBERIS JULIANAE C. Schneid. **Wintergreen barberry.**

A shrubby evergreen barberry, up to 7 feet high, native to western China. It has thick, 3-cleft spines about 1½ inches long, narrowly oval leathery leaves, and small yellow flowers, followed by blue-black fruits.

78975 to 79052—Continued.

For previous introduction see No. 65599.

79003. BERBERIS LECOMTEI C. Schneid.

A shrub up to 7 feet high, with slender yellowish-brown spines one-half inch long, thin lanceolate leaves, and small yellow flowers. Native to southwestern China.

79004. BERBERIS LYCIUM Royle.

A half-evergreen shrub, 10 feet high, with narrow bright-green leaves and pale-yellow flowers followed by ovoid violet berries. It is native to northern India.

For previous introduction see No. 76215.

79005. BERBERIS ORTHOBOTRYS Bienert.

A semievergreen barberry with very large crimson berries.

For previous introduction see No. 66688.

79006. BERBERIS POLYANTHA Hemsl.

A practically evergreen shrub 6 to 10 feet high, somewhat like *B. aggregata*, with slender simple or 3-pronged thorns, obovate leaves mostly rounded at the apex, and yellow flowers which are produced during June and July in large drooping panicles. The red berries are quickly destroyed by frost. Native to China.

For previous introduction see No. 58140.

79007 to 79011. BRASSICA spp. Brassicaceae. **Mustard.**

79007. BRASSICA BALEARICA Pers.

A wild perennial mustard, native to the Balearic Islands, about 2 feet high, with a woody base.

79008. BRASSICA CAMPESTRIS L.

Rutabaga.

79009. BRASSICA ERUCASTRUM L.

A wild perennial mustard with yellow flowers, native to the mountains of southern Europe.

79010. BRASSICA LAEVIGATA Lag.

An annual mustard up to 8 inches high, with pinnatifid leaves in a basal rosette and small white flowers.

79011. BRASSICA NIGRA (L.) Koch. **Black mustard.**

For previous introduction see No. 45001.

79012. CYTISUS SPACHIANUS (Webb) Kuntze.

A Canary Island shrub, 6 to 8 feet high, with elongated racemes of fragrant bright-yellow flowers.

For previous introduction see No. 76246.

79013. DIANTHUS REQUIENII Godr. **Pink.**

A hardy herbaceous perennial up to 10 inches high, rather stiff linear leaves, and a solitary bright-red flower. Native to the Pyrenees.

79014 to 79016. DIMORPHOTHECA spp. Asteraceae.

78975 to 79052—Continued.

79014. DIMORPHOTHECA AURANTIACA DC. **Winter cape-marigold.**

A South African perennial, somewhat shrubby at times, with thickish oblong or spatulate leaves and large heads of orange-yellow flowers.

79015. DIMORPHOTHECA HYBRIDA (L.) DC. **Cape-marigold.**

A South African composite of variable size and habit. The hairy obovate leaves are 1 to 3 inches long, and the flowers, about 2 inches across, are white above and purple beneath.

79016. DIMORPHOTHECA PLUVIALIS (L.) Moench. **Cape-marigold.**

An erect or diffuse, simple or branched annual from the Cape of Good Hope. The oblong or obovate leaves are hairy, and the flowers, white above and purple beneath, are in terminal heads.

79017 to 79020. ERICA spp. Ericaceae. **Heath.**

79017. ERICA AUSTRALIS L.

An evergreen shrub 2 to 3 feet high, native to Portugal, with small rose-purple flowers.

79018. ERICA SCOPARIA L. **Besom heath.**

An evergreen southern Europe shrub, 10 feet high, with upright branches, small lustrous dark-green linear leaves in whorls of three or four, and long cylindrical spikes of greenish-white flowers.

For previous introduction see No. 78681.

79019. ERICA STRICTA Donn. **Corsican heath.**

For previous introduction and description see No. 78898.

79020. ERICA TETRALIX L. **Crossleaf heath.**

A low shrub with its leaves in whorls of four and umbellate clusters of rosy flowers. Native to western Europe.

79021 to 79028. GENTIANA spp. Gentianaceae. **Gentian.**

79021. GENTIANA ASCLEPIADEA L. **Milkweed gentian.**

For previous introduction and description see No. 78858.

79022. GENTIANA ASCLEPIADEA L. **Milkweed gentian.**

Variety *alba*. A white-flowered form.

79023. GENTIANA CRUCIATA L. **Cross gentian.**

For previous introduction and description see No. 78931.

79024. GENTIANA FETISOWII Regel and Winkler.

A hardy herbaceous perennial, native to Turkestan, about 6 inches high, with small deep-blue flowers.

79025. GENTIANA FREYNIANA Bornm.

A vigorous species rather close to *Gentiana septemfida*, requiring similar

78975 to 79052—Continued.

conditions and making a good garden plant with fine bright-blue, bell-shaped flowers in late summer.

79026. GENTIANA FRIGIDA Haenke.

An alpine perennial, native to central Europe, scarcely 3 inches high, with opposite, lanceolate, somewhat fleshy leaves about 1 inch long and terminal white flowers marked with blue.

79027. GENTIANA GROMBEZEWSKII Hort.

A place of publication or description for this name has not been found.

79028. GENTIANA TIBETICA King. **Himalayan gentian.**

For previous introduction and description see No. 78939.

79029. IRIS CHRYSOGRAPHES Dykes. Iridaceae. **Goldvein iris.**

One of the handsomest of the Siberian irises; the velvety dark-purple flowers are brightened by golden reticulations at the throat, running into a signal patch in the blade.

For previous introduction see No. 73545.

79030. IRIS MILESII Baker. Iridaeae.

A semievergreen Himalayan iris related to *Iris tectorum* with seven or eight leaves 2 to 3 feet long on the tall flower stem; the latter is branched and bears about four heads of small rosy lilac flowers, more or less spotted with darker magenta.

For previous introduction see No. 67265.

79031. KALMIA CUNEATA Michx. Ericaceae. **Kalmia.**

An erect deciduous shrub with slender straggling stems up to 3 feet long and oblong-oval leaves. The creamy white flowers, with a red band within, are in small lateral umbels. Native to the southeastern United States.

79032. KALMIA POLIFOLIA Wang. (*K. glauca* Ait.). Ericaceae. **Bog kalmia.**

A hardy evergreen shrub, native to Newfoundland, with opposite, narrow-oblong leathery leaves and a terminal corymb of purple flowers.

79033. MUSCARI ARMENIACUM Leichtl. Liliaceae. **Grape-hyacinth.**

A handsome hardy bulbous plant, native to Armenia, with many linear leaves overtopping the racemes of deep-violet flowers. One of the last of the grape-hyacinths to flower.

For previous introduction see No. 66586.

79034. MUSCARI SZOVITSIANUM Baker. Liliaceae. **Grape-hyacinth.**

A bulbous perennial, native to Persia, with leaves 6 inches long and several scapes 5 inches high, bearing clusters of slightly fragrant bright-blue flowers.

79035 to 79038. PAEONIA spp. Ranunculaceae. **Peony.**

79035. PAEONIA ANOMALA L.

A strong-growing, wild Siberian peony 1 to 2 feet high, found on well-drained hillsides. Flowers large and of a pale-rose color; foliage somewhat coarse.

For previous introduction see No. 66593.

79036. PAEONIA ARIETINA Anders.

A European herbaceous peony about 3 feet high, with 5-lobed or 6-lobed leaves and a large solitary dark-red flower.

For previous introduction see No. 67044.

79037. PAEONIA DELAVAYI Franch.

A very attractive vigorous shrub 4 feet high, growing on steep slopes among limestone bowlders and in alpine meadows at altitudes of 10,000 to 13,000 feet. The deep-crimson flowers are 3 inches in diameter. Native to southwestern China.

For previous introduction see No. 55994.

79038. PAEONIA LUTEA Delavay. **Golden peony.**

A shrubby Chinese peony with a short woody stem 1 or 2 feet high and deep-green leathery 3-parted leaves, white beneath, and about a foot in length. The golden-yellow single or slightly double flowers are 2½ inches across.

For previous introduction see No. 67048.

79039. PETTERIA RAMENTACEA (Sieber) Presl. (*Cytisus weldeni* Vis.). Fabaceae.

An upright leguminous shrub, 6 feet or less in height, with trifoliolate leaves and dense upright racemes of fragrant yellow flowers. Native to southern Europe.

For previous introduction see No. 66599.

79040. SORBUS FOLGNERI (C. Schneid.) Rehder (*Pyrus folgneri* Leveille). Malaceae. **Mountain-ash.**

A handsome Chinese tree with gracefully spreading branches and oval leaves, dark-green above and white-hairy beneath. The ovoid red berries are about one-half inch long.

For previous introduction see No. 61990.

79041 to 79043. RHODODENDRON spp. Ericaceae.

79041. RHODODENDRON DECORUM Franch.

A western Chinese shrub with glabrous leaves, glaucous beneath, and broadly bell-shaped white or pink flowers 2 inches across.

For previous introduction see No. 53729.

79042. RHODODENDRON SMIRNOWI Trautv. **Smirnow rhododendron.**

A shrub or small tree, reputed to be hardy, about 20 feet high with dark-green leaves, grayish hairy beneath, and compact heads of rosy red flowers, each about 3 inches across. Native to the Caucasus.

For previous introduction see No. 67373.

79043. RHODODENDRON TSCHONOSKII Maxim.

78975 to 79052—Continued.

A Japanese forest shrub with flaky bark, elliptic leaves one-third inch long, and heads of two to four small white flowers.

79044 to 79046. SEDUM spp. Crassulaceae. **Stonecrop.**

79044. SEDUM ELLACOMBIANUM Praeger.

For previous introduction and description see No. 78954.

79045. SEDUM EWERSII Ledeb. **Ewers stonecrop.**

For previous introduction and description see No. 78955.

79046. SEDUM MIDDENDORFFIANUM Maxim. **Middendorff stonecrop.**

A hardy succulent cespitose perennial up to 16 inches high, with narrow leaves up to 3 inches long, and small yellow flowers in dense cymes. Native to eastern Siberia.

79047. SEMPERVIVUM ASSIMILE Schott. **Houseleek.**

A Rumanian succulent with rosettes of 60 to 80 oblanceolate leaves and pale-rose flower, about three-fourths inch across in cymes on stems about 6 inches high.

79048. SEMPERVIVUM TRISTE Baker. **Houseleek.**

A small fleshy plant which forms rosettes 2 to 3 inches in diameter, composed of oblanceolate leaves, red brown above and drab green beneath. The stem leaves are red brown throughout. The bright-red flowers, an inch across, are in a panicle 6 inches long. Country of origin unknown.

79049. STRANVAESIA DAVIDIANA SALICIFOLIA (Hutchinson) Rehd. Malaceae.

A rosaceous shrub, closely related to *Stranvaesia undulata*, from which it differs in its narrower, willowlike leaves and its fruits, which are red, not orange like those of *S. undulata*. The small white flowers are in terminal clusters. It comes from western China and is hardy in southeastern England.

For previous introduction see No. 62392.

79050 to 79052. SYRINGA spp. Oleaceae. **Lilac.**

79050. SYRINGA PINETORUM W. W. Smith.

A hardy spreading ornamental shrub, 10 feet high, from western China. Somewhat like *Syringa microphylla*, with rosy lavender flowers.

79051. SYRINGA SWEGINZOWII Koehne and Ling. **Chengtu lilac.**

An attractive hardy lilac, about 10 feet high, from western China. The dark-green, oval leaves are 2 to 4 inches long, and the fragrant, rosy lilac flowers are borne in June in terminal panicles up to 10 inches in length.

For previous introduction see No. 63584.

79052. SYRINGA VILLOSA Vahl. **Late lilac.**

A bushy lilac about 8 feet high, with stout, upright branches, broadly oval, bright-green leaves, and pinkish-lilac flowers in panicles 3 to 7 inches long. Native to China and the Himalayas.

For previous introduction see No. 76044.

79053 to 79111.

From Ipswich, England. Seeds purchased from Thompson & Morgan. Received February 28, 1929.

79053 to 79055. CYCLAMEN spp. Primulaceae.

79053. CYCLAMEN EUROPAEUM L. **European cyclamen.**

A low, more or less evergreen European perennial with a tuberous root, rounded or kidney-shaped leaves white marbled above and purplish beneath, and fragrant bright-red flowers on scapes 4 or 5 inches high in autumn.

79054. CYCLAMEN MACROPHYLLUM Sieber.

A low tuberous-rooted perennial, native to southern Europe, with large cordate, crenate leaves usually mottled with white, and in autumn white flowers on scapes 6 inches high.

79055. CYCLAMEN NEAPOLITANUM Tenore. **Neapolitan cyclamen.**

A low perennial, 3 inches high, arising from a large black tuber. The deep-pink or rarely white flowers are borne in autumn. Native to Italy.

For previous introduction see No. 73535.

79056 to 79058. DAPHNE spp. Thymelaeaceae.

79056. DAPHNE ALPINA L. **Alpine daphne.**

An erect European alpine shrub 2 feet high, with narrow deciduous leaves and fragrant white or pinkish flowers in terminal clusters.

79057. DAPHNE LAUREOLA L.

A shrub, up to 4 feet high, with shining dark-green leaves about 3 inches long and yellowish-green flowers in nearly sessile racemes. Native to southern Europe and western Asia.

79058. DAPHNE STRIATA Tratt.

A dwarf evergreen alpine shrub with small, wedge-shaped narrow leaves and pink flowers in many-flowered terminal heads. Native to Switzerland.

79059. DIGITALIS ISABELLINA Hort. Scrophulariaceae. **Foxglove.**

A new hybrid of *Digitalis purpurea*, with pinkish-yellow flowers, of the hue of *Lilium testaceum*.

79060 to 79062. ERICA spp. Ericaceae. **Heath.**

79060. ERICA CINEREA COCCINEA Bean.

A very striking variety with red, almost scarlet, flowers, but less vigorous than the type.

79061. ERICA STRICTA Donn. **Corsican heath.**

For previous introduction and description see No. 78898.

79062. ERICA VAGANS L. **Cornish heath.**

79053 to 79111—Continued.

For previous introduction and description see No. 78899.

79063 to 79095. GENTIANA spp. Gentianaceae. **Gentian.**

79063. GENTIANA GENTIANELLA A. T. Johnson. **Stemless gentian.**

For previous introduction and description see No. 78857.

79064. GENTIANA ALPINA Vill.

An almost stemless alpine plant, native to central Europe, with small glistening gray-green leaves curving inward and imbricated, forming rosettes, and dark-blue flowers resembling in general style those of *G. gentianella*.

79065. GENTIANA ANGULOSA Bieb.

A tufted alpine, native to the Caucasus, with narrowly oval leaves and solitary bowl-shaped blue flowers, of the type of *G. verna*, but much larger.

79066. GENTIANA ASCLEPIADEA L. **Milkweed gentian.**

For previous introduction and description see No. 78858.

79067. GENTIANA BAVARICA L.

For previous introduction and description see No. 78859.

79068. GENTIANA BRACHYPHYLLA Vill.

A high alpine perennial, native to central Europe, forming spreading tufts with small round leaves and brilliant-blue flowers of the general type of *G. verna*, appearing in late summer.

79069. GENTIANA CALYCOSA Griseb.

A perennial about a foot high, with ovate leaves three-fourths of an inch long, and dark-blue, usually solitary, flowers. Native to northwestern North America.

79070. GENTIANA CLUSH Perr. and Song.

A low stemless perennial, possibly a form of *G. vulgaris*, with rosettes of leathery leaves and dark-blue flowers. Native to the Alps.

79071. GENTIANA CRUCIATA L. **Cross gentian.**

For previous introduction and description see No. 78931.

79072. GENTIANA DAHURICA Fisch.

A rather unattractive Siberian gentian about a foot high, with an ascending stem, linear-lanceolate leaves about 3 inches long, and sessile terminal dark-blue flowers 1½ inches long. Introduced for comparative study only.

79073. GENTIANA DETONSA Rottb.

A biennial gentian native to the cold regions of northwestern Asia, related to *G. crinita*, with a very short stem and oblong leaves arranged more or less in a basal rosette. The flowers, borne singly, are deep blue, with the corolla lobes wavy at the tips.

For previous introduction see No. 55274.

79074. GENTIANA FARRERI Balf. f.

A perennial, native to the mountains of western China, with thick roots and numerous freely rooting stolons which form wide-spreading masses. The thick opposite leaves are about half an inch long, and the solitary terminal flowers, which are so freely produced as to cover the plant, are blue with a white throat.

79075. GENTIANA FREYNIANA Borum.

For previous introduction and description see No. 79025.

79076. GENTIANA KESSELRINGI Regel.

A plant about 8 inches high, with whitish flowers dotted purple on the outside, useful for comparative study only. Native to Turkestan.

79077. GENTIANA KOCHIANA Perr. and Song.

An alpine gentian belonging to the Acaulis group, from central Europe with large flat thin light-green leaves and dark-blue flowers with five blackish-green spots on the throat. Some forms have been reported from the limestone regions.

79078. GENTIANA KURROO Royle.

A Himalayan gentian forming dense tufts from which rise lax stems up to 7 inches high with narrowly lanceolate leaves and bell-shaped blue flowers spotted with white inside. It is said to appreciate a sunny location, with ample moisture and perfect drainage, especially in spring and autumn.

79079. GENTIANA LAGODECHIANA Hort.

For previous introduction and description see No. 78860.

79080. GENTIANA MACROPHYLLA Pall.

A herbaceous perennial, native to northern Europe and Asia, with an erect or ascending stem, narrow spreading leaves, and clustered heads of dark-blue flowers. For comparative study only.

79081. GENTIANA NIVALIS L.

A slender annual about 3 inches high, native to Scotland, with small obovate leaves and solitary blue flowers appearing in late summer.

79082. GENTIANA PARRYI Engelm.

An alpine gentian up to 9 inches high, with large dark-purple flowers contrasting attractively with the broad pale-green leaves. It is said to need conditions similar to those required by *G. septemfida*.

79083. GENTIANA PHLOGIFOLIA Schott and Kotschy.

For previous introduction and description see No. 78933.

79084. GENTIANA PNEUMONANTHE L.

An erect perennial with many slender stems, dark narrow leaves, and dark-blue flowers in a cymelike raceme. Native to the mountain marshes in central Europe.

79085. GENTIANA PROLATA Balf. f.

A stoloniferous perennial with erect branches about 2 inches long, small succulent leaves, and a terminal blue flower about 2 inches long. Native to Sikkim.

79053 to 79111—Continued.

79086. GENTIANA PRZEWALSKII Maxim.

A lax-growing, free-flowering gentian from western China, rather like *G. kurroo*, with linear leaves about 6 inches long and flowers with nearly white tubes and cobalt-blue petals.

79087. GENTIANA PUNCTATA L.

A rather tall herbaceous perennial, native to central Europe, with yellow flowers spotted with brown, resembling but inferior to *G. lutea*.

79088. GENTIANA PURDOMI Hort.

A showy Asiatic gentian allied to but better than *G. przewalskii*, with rosettes of narrow glossy leaves, from which radiate prostrate stems each carrying about a dozen bright-blue flowers.

79089. GENTIANA PURPUREA L.

For previous introduction and description see No. 78934.

79090. GENTIANA SCABRA Bunge..

A hardy herbaceous perennial requiring conditions similar to those needed by *G. septemfida*. It has an erect stem a foot or less high, oval-oblong dark-green leaves, and terminal flowers an inch long. Native to Turkestan.

79091. GENTIANA SEPTEMFIDA Pall.

For previous introduction and description see No. 78861.

79092. GENTIANA SETIGERA A. Gray.

A rather stout perennial, with a thick root, 7 to 10 pairs of leaves, and blue flowers 1½ inches long. Native to California.

79093. GENTIANA STRAMINEA Maxim.

A prostrate perennial, native to western China, with attractive blue flowers.

79094. GENTIANA VERNA L.

For previous introduction and description see No. 78862.

79095. GENTIANA WALUJEWI Regel and Schmalh.

A dwarf gentian, native to Sinkiang, China, with white blue-spotted flowers.

79096. IRIS CHRYSOPHYLLA Howell. **Iris.**

An iris with low slender leafy stems 2 to 8 inches high, from slender rootstalks, linear leaves, and one to three yellow to white flowers 2 to 3 inches long. Native to southern Oregon in pine woods.

79097 to 79111. PRIMULA spp. Primulaceae. **Primrose.**

79097. PRIMULA APOCLITA Balf. and Forr.

A Tibetan primrose of the Muscarioides section, with a rosette of papery, oblong-spatulate leaves, and purplish-blue flowers borne on a scape 6 inches high.

79098. PRIMULA BURMANICA Balf. and Ward.

A stout moisture-loving primrose from western China, with oblanceolate leaves up to a foot long and reddish-purple flowers borne on a scape 2 feet high. It is a member of the Candelabra section.

79099. PRIMULA CHIONANTHA Balf. and Forr.

For previous introduction and description see No. 78913.

79100. PRIMULA CHRYSOPA Balf. and Forr.

A tufted perennial marsh-loving primrose from southwestern China, where it grows in moist stony alpine meadows. It has oblong, bright-green, somewhat fleshy, long-stemmed leaves and very attractive fragrant flowers borne in 2-flowered to 4-flowered umbels on the summit of the slender scape. The calyx is green or purplish and the oblique corolla pale lilac with a golden eye. The entire plant is more or less covered with a white mealy powder. This is a member of the Farinosae section.

For previous introduction see No. 56019.

79101. PRIMULA CONSPERSA Balf. and Purd.

A primrose from western China with linear-ovate leaves 4 to 6 inches long, and rose-pink flowers in whorls of about 12, on scapes a foot high. It is one of the Farinosae section.

79102. PRIMULA CYANANTHA Balf. and Forr.

A western Chinese primrose about a foot high, with papery oval-oblong leaves about 3 inches long in a rosette and intensely dark-blue fragrant flowers in a many-flowered terminal cluster. One of the Muscarioides section.

79103. PRIMULA FLORINDAE K. Ward.

A Tibetan primrose about 3 feet high, one of the Sikkimensis section, with cowslip-yellow fragrant flowers in an immense cluster of 60 to 80 flowers. The very large leaves resemble those of *Caltha palustris*, and the plant grows in running streams.

79104. PRIMULA GLYCOSMA Petitm.

A strong-growing primrose of the Candelabra section, native to boggy situations in western China. The deep-purple flowers have golden centers.

79105. PRIMULA HELODOXA Balf.

For previous introduction and description see No. 78866.

79106. PRIMULA LICHIANGENSIS Forrest.

A handsome primrose of the Cortusoides section, from southwestern China, where it reaches a height of 6 to 14 inches, growing on ledges and bowlders in dry shady places. The fragrant flowers vary from rose to almost crimson, with greenish-yellow eyes. The foliage is very variable.

79107. PRIMULA LITTONIANA Forrest.

A very handsome plant, 2 to 3 feet tall, growing in swampy meadows in southwestern China at altitudes between 10,000 and 11,000 feet. It is one of the Muscarioides section. The

79053 to 79111—Continued.

pendent deep indigo-blue flowers are borne in long densely packed spikes, and the rich crimson calyxes are very striking.

For previous introduction see No. 59428.

79108. PRIMULA LITTONIANA Forrest.

Variety *grandiflora*. A giant form with spikes 8 inches long.

79109. PRIMULA NUTANS Delav.

A Chinese primrose 9 to 20 inches high, of the Muscarioides section, with obovate or oblanceolate hairy leaves, and clear-blue fragrant flowers in a terminal cluster.

79110. PRIMULA SIKKIMENSIS Hook.

For previous introduction and description see No. 78868.

79111. PRIMULA SMITHIANA Craib.

A perennial alpine primrose of the Candelabra section, with tall stems and whorls of soft-yellow flowers; very similar to *P. bulleyana*. Native to the Himalayas.

79112 to 79147.

From San Francisco, Calif. Seeds presented by John McLaren, Superintendent, Golden Gate Park. Received January 15, 1929.

79112. ACTINOTUS LEUCOCEPHALUS Benth. Apiaceae.

This Western Australian flannel flower is an erect much-branched herbaceous perennial about 2 feet high, entirely clothed in soft silky hairs. The leaves are divided into three linear segments which are again three lobed, and the flowers are numerous in densely packed umbels.

79113 to 79120. BANKSIA spp. Proteaceae.

79113. BANKSIA ATTENUATA R. Br.

An evergreen tree up to 40 feet high, native to Western Australia, with serrate linear leaves 6 inches long, densely white tomentose underneath, and cylindrical spikes of small flowers united into a thick woody cone from which the silky fruits eventually protrude.

79114. BANKSIA BAXTERI R. Br.

A tall evergreen shrub 8 to 10 feet high, with the leaves 3 to 4 inches long, divided into ovate-triangular segments, and nearly globular flower spikes, 2 to 3 inches in diameter, covered with long fine hairs. Native to Western Australia.

79115. BANKSIA COCCINEA R. Br.

An erect evergreen shrub 15 feet high, native to Western Australia, with broadly ovate leaves 3 inches long and brilliant red flowers an inch long, in globose heads 2 inches in diameter.

For previous introduction see No. 76636.

79116. BANKSIA LEMANNIANA Meisn.

An evergreen shrub with tomentose branches, flat regularly toothed, obovate-oblong leaves 3 inches long, loosely tomentose underneath, and globular to oblong dense flower heads 4 inches long.

79112 to 79147—Continued.

79117. BANKSIA OCCIDENTALIS R. Br.

An erect evergreen shrub up to 8 feet high, native to Western Australia, with glabrous branches, linear leaves 2 to 4 inches long, three toothed at the end and white underneath, and red flowers in ovoid to cylindrical clusters 3 to 6 inches long.

79118. BANKSIA PRIONOTES Lindl.

A Western Australian evergreen tree up to 30 feet high, with thick tomentose branches. The leaves, 8 to 12 inches long, are divided into regular sharp-pointed lobes, and the thick golden flower spikes are 5 inches long.

79119. BANKSIA SPECIOSA R. Br.

A tall evergreen shrub, native to Western Australia, with leaves a foot long, divided into numerous rounded triangular lobes and white tomentose beneath, and thick oblong yellow flower spikes 5 inches long.

79120. BANKSIA VERTICILLATA R. Br.

A small Western Australian tree with tomentose branchlets, nearly entire oblong or broadly linear leaves in whorls of four to six, and yellow flowers in cylindrical spikes 8 inches long.

79121. CASSIA PLEUROCARPA F. Muell. Caesalpiniaceae.

A tall erect Australian shrub with four or five rather distinct pairs of thick oblong leaflets and loose racemes of yellow flowers.

For previous introduction see No. 64479.

79122. CHAMAELAUCIUM CILIATUM Desf. Myrtaceae.

An erect bushy heathlike shrub 2 feet high, native to Western Australia, with very small linear terete leaves and very small shell-pink flowers clustered in the axils of the leaves at the ends of the branches.

79123. COMESPERMA SPINOSUM F. Muell. Polygalaceae.

A rigid much-branched spiny evergreen shrub, native to Western Australia, with the leaves reduced to small scales and the small flowers scattered along the branches.

79124. CONOSTYLIS DRUMMONDII Benth. Amaryllidaceae.

A woolly densely tufted herbaceous perennial, native to Western Australia, with rigid linear-terete leaves 6 to 9 inches long and several scapes bearing heads of small yellow flowers.

79125. DAVIESIA CORDATA J. E. Smith. Fabaceae.

An erect evergreen shrub 2 to 3 feet high, with elongated angled branches, ovate coriaceous leaves 3 to 4 inches long, having deeply cordate clasping bases, and axillary umbels of yellow and purple pea-shaped flowers. Native to Western Australia.

79126. GREVILLEA ERIOSTACHYA Lindl. Proteaceae.

A stout erect evergreen shrub 3 to 6 feet high, native to Western Australia, with narrowly linear leaves 8 inches long, usually pinnately divided into three to five segments, and small orange flowers in densely tomentose 1-sided racemes 6 inches long.

79112 to 79147—Continued.

79127 to 79129. GASTROLOBIUM spp. Fabaceae.

These are all reported to be poisonous to livestock.

79127. GASTROLOBIUM CALYCINUM Benth.

An erect glabrous evergreen shrub 2 feet high, native to Western Australia, with rigid coriaceous sharp-pointed oblong to lanceolate leaves 2 inches long, and axillary and terminal racemes of rather large yellow and purple pea-shaped flowers.

79128. GASTROLOBIUM EPACRIDIOIDES Meisn.

A tall evergreen shrub with wand-like loosely villous branches, coriaceous spreading ovate leaves one-half inch long, and loose axillary clusters of yellow and purple pea-shaped flowers. Native to Western Australia.

79129. GASTROLOBIUM VILLOSUM Benth.

A softly tomentose decumbent evergreen shrub, 2 to 4 feet high, native to Western Australia, with opposite ovate leathery leaves 2 inches long and terminal racemes, 4 inches long, of orange and purple pea-shaped flowers.

79130. GREVILLEA POLYBOTRYA Meisn. Proteaceae.

An erect evergreen shrub, native to North Australia and Western Australia, with entire oblong leaves sprinkled with shining silvery hairs when young, but pale and glabrous when mature. The large dense leafless panicles are made up of tomentose cylindrical spikes of small flowers.

79131. HEMIGENIA CANESCENS (Bartl.) Benth. Menthaceae.

A Western Australian evergreen shrub, 2 feet high, clothed with long loose silky white pubescence, with thick soft spreading or recurved obovate leaves half an inch long, and small axillary 2-lipped pink or purple flowers.

79132. HEMIGENIA INCANA (Lindl.) Benth. Menthaceae.

An evergreen undershrub 2 to 3 feet high, native to Western Australia, covered with short appressed silky hairs, with oblong leaves 2 inches long and racemes of pink or purple flowers.

79133. JACKSONIA DECUMBENS Pritz. Fabaceae.

A low evergreen shrub with long decumbent branches, erect broadly linear cladodes, and rather large hairy yellow flowers borne singly or in small clusters at the tips of the branches.

79134. KUNZEA MICRANTHA Schauer. Myrtaceae.

A small erect evergreen shrub, native to Western Australia, with flat rigid linear leaves one-fourth inch long and dense terminal globular heads of small flowers.

79135. KUNZEA SERICEA (Labill.) Turcz. Myrtaceae.

A tall evergreen shrub, native to Western Australia, with rigid tortuous branches, silvery white very stiff leaves

79112 to 79147—Continued.

less than an inch long, and yellowish flowers, either solitary or in terminal clusters.

For previous introduction see No. 64488.

79136. LESCHENAULTIA BILOBA Lindl. Goodeniaceae.

An evergreen shrub 2 to 3 feet high, native to Western Australia, with slender scattered leaves one-half inch long. The flowers are either in small clusters in the upper axils or borne in large leafy terminal clusters. The corolla, about an inch long, has spreading dark-blue wings marked with parallel transverse veins, and the sepals are narrow like the leaves.

For previous introduction see No. 58674.

79137. MELALEUCA ELLIPTICA Labill. Myrtaceae.

A tall evergreen shrub, native to Western Australia, with elliptical evergreen leaves one-half inch long, and cylindrical spikes of large showy red flowers.

79138. MELALEUCA sp. Myrtaceae.

An evergreen Australian shrub with red flowers.

79139. OLEARIA PAUCIDENTATA F. Muell. Asteraceae.

An evergreen undershrub 3 feet high, native to Western Australia, with oblanceolate leaves 1 inch long and small asterlike flower heads in terminal panicles.

79140. OXYLOBIUM CAPITATUM Benth. Fabaceae.

An evergreen undershrub 3 feet high, native to Western Australia, with rigid branches, oblong to linear leaves 2 inches long, and axillary clusters or compact terminal racemes of small yellow pea-shaped flowers.

79141. PATERSONIA XANTHINA F. Muell. Iridaceae.

A herbaceous perennial, native to Western Australia, with a short stem, a rosette of linear leaves 2 feet long, and a spike of yellow irislike flowers with outer segments 1 inch long and very small inner segments.

79142. PIMELEA PREISSII Meisn. Thymelaeaceae.

An erect slender shrub 2 feet high, native to Western Australia, with opposite linear-lanceolate leaves one-half inch long and globular silky villous heads of small flowers.

79143. SCAEVOLA PLATYPHYLLA Lindl. Goodeniaceae.

An erect perennial, native to Western Australia, woody at the base with rigid herbaceous branches, ovate-sessile clasping leaves 2 inches long, and large silky winged white flowers in terminal leafy spikes.

79144. SCAEVOLA STRIATA R. Br. Goodeniaceae.

A diffuse hispid herbaceous perennial, 1 to 2 feet high, native to Western Australia, with coarsely toothed obovate

79112 to 79147—Continued.

leaves and axillary flowers 1 inch long having broad wings elegantly marked with transverse veins.

79145. SCHEFFLERA ACTINOPHYLLA (Endl.) Harms (*Brassaia actinophylla* Endl.). Araliaceae.

A handsome umbrella-shaped evergreen tree up to 40 feet high, native to Queensland, with compound leaves made up of 6 to 16 leathery oblong leaflets 1 foot long, and racemes several feet long of small heads of angled dry fruits.

79146. SOLANUM ELLIPTICUM R. Br. Solanaceae.

A densely stellate pubescent undershrub, native to Australia, either low and spreading or tall and erect, with ovate sinuate-margined leaves 3 inches long and lateral racemes of violet flowers.

79147. STENOCARPUS CUNNINGHAMII R. Br. Proteaceae.

A tall bushy evergreen shrub or small tree, native to North Australia, with oblong-lanceolate leaves 2 to 4 inches long and axillary umbels of 10 to 30 small red or yellow slightly irregular flowers less than one-half inch long.

79148 and 79149. ZELKOVA spp. Ulmaceae.

Varieties growing near the United States Department of Agriculture, Washington, D. C. Scions collected by Paul Russell, Bureau of Plant Industry. Received March 6, 1929.

79148. ZELKOVA SERRATA (Thunb.) Makino (*Z. acuminata* Planch.). **Sawleaf zelkova.**

A handsome Japanese tree up to 90 feet high, with a short trunk dividing into many upright spreading branches and forming a broad round-topped head. The sharply serrate leaves are ovate and are usually 2 to 3 inches long, or on young shoots up to 8 inches long.

For previous introduction see No. 35301.

79149. ZELKOVA CARPINIFOLIA (Pall.) Dipp. (*Z. ulmoides* C. Schneid.).

A tree up to 75 feet high, native to the Caucasus region, with crenately serrate dark-green obovate leaves 2 to 6 inches long, resembling those of the hornbeam.

79150 to 79184.

From Paris, France. Seeds presented by Prof. D. Bois, Paris Museum of Natural History. Received March 9, 1929.

79150. ALOE ANDRINGITRENSIS Perrier. Liliaceae.

A stemless aloe, native to central Madagascar, with a rosette of 12 to 18 subfalcate leaves about 17 inches long. The leaves have horny margins and are armed with very small marginal spines. The dark orange-red flowers are in dense racemes about 4 inches long.

For previous introduction see No. 77885.

79151. BERBERIS ANGULOSA Wall. Berberidaceae. **Barberry.**

For previous introduction and description see No. 78915.

79150 to 79184—Continued.

79152. BERBERIS MORRISONENSIS Hayata. Berberidaceae. **Barberry.**

A barberry closely resembling *Berberis dictyophylla*. It is an erect, densely branched shrub with 3-parted, spined, and fascicled leathery oval leaves. Unlike *B. dictyophylla*, the berries are in fascicles and are more nearly round.

For previous introduction see No. 66687.

79153. COTYLEDON UMBILICUS L. Crassulaceae. **Navelwort.**

A perennial, fleshy plant, native to western Europe, which grows about a foot high and has succulent, orbicular leaves and pendulous racemes of yellowish-green flowers.

For previous introduction see No. 65006.

79154. DIMORPHOTHECA PLUVIALIS (L.) Moench. Asteraceae. **Cape-marigold.**

For previous introduction and description see No. 79016.

79155 to 79158. ERICA spp. Ericaceae.

79155. ERICA CILIARIS L. **Fringed heath.**

For previous introduction and description see No. 78894.

79156. ERICA CINEREA L. **Twisted heath.**

For previous introduction and description see No. 78680.

79157. ERICA TETRALIX L. **Crossleaf heath.**

For previous introduction and description see No. 79020.

79158. ERICA VAGANS L. **Cornish heath.**

For previous introduction and description see No. 79062.

79159 to 79163. GENTIANA spp. Gentianaceae. **Gentian.**

79159. GENTIANA ANGUSTIFOLIA Michx.

A slender ascending mostly unbranched plant, 4 to 16 inches high, with rigid linear or oblanceolate leaves and azure-blue flowers from 1½ to 2½ inches long. Native to the southern United States.

79160. GENTIANA ASCLEPIADEA L. **Milkweed gentian.**

For previous introduction and description see No. 78858.

79161. GENTIANA CAMPESTRIS L.

A low slender annual, native to Europe, with an erect stem 2 to 6 inches high, sessile narrow-oval leaves, and clusters of dark purplish-blue flowers.

79162. GENTIANA CRUCIATA L. **Cross gentian.**

For previous introduction and description see No. 78931.

79163. GENTIANA PNEUMONANTHE L.

For previous introduction and description see No. 79084.

79164 to 79173. KALANCHOE spp. Crassulaceae. **Kalanchoe.**

79150 to 79184—Continued.

79164. KALANCHOE ALICIAE Hamet.

A stout, erect, hairy succulent with opposite roundish or oval crenate leaves and rather large flowers in branched cymes. Native to central Madagascar.

For previous introduction see No. 78433.

79165. KALANCHOE AROMATICA Perrier.

A succulent perennial, native to Madagascar, characterized by being covered throughout with viscous red glands and by having a strong aromatic odor. The leaves are triangular-lanceolate, and the small flowers, greenish yellow with red lines, are in terminal cymes.

79166. KALANCHOE CRENATA Haw.

A succulent perennial, native to tropical Africa, 2 to 6 feet high, with a thick fibrous root, oblong or roundish oval crenate leaves about 2 inches long, and bright-yellow flowers one-half inch long, in terminal and axillary cymes.

79167. KALANCHOE CRENATA × FELTHAMENSIS.

Kalanchoe felthamensis is said to be a hybrid of *K. flammea* and *K. kirkii*.

79168. KALANCHOE DAIGREMONTIANA Ham. and Perr.

A brownish-green succulent perennial, native to Madagascar, becoming about 2 feet high. The leaves are petiolate, sometimes peltate, green within, barred with brown, deeply crenate with plants from the angles. The small pink flowers are in lax terminal panicles.

For previous introduction see No. 78426.

79169. KALANCHOE GASTONIS-BONNIERI Ham. and Perr.

During the nonblooming periods this succulent, native to Madagascar, is a low plant with a very short stem and a rosette of light-green crenate leaves. When about to flower the stem elongates to a height of nearly 2 feet, bearing at its summit a lax corymb of light-pink flowers.

For previous introduction see No. 78428.

79170. KALANCHOE GLOBULIFERA COCCINEA Perrier.

A stout-branched succulent perennial up to a foot high, with elongated, thick, irregularly toothed obovate-spatulate leaves over 2 inches long, and numerous red flowers in large terminal corymblike cymes. Native to Madagascar.

79171. KALANCHOE HILDEBRANDTII Baill.

A woody succulent, native to Madagascar, with dense cymes of small yellow flowers.

79172. KALANCHOE SYNSEPALA Baker.

An erect succulent perennial, native to central Madagascar, with the lower leaves opposite, sessile, oblong-spatulate, and green with a red margin. The small reddish flowers are in dense terminal cymes.

79150 to 79184—Continued.

For previous introduction see No. 78431.

79173. KALANCHOE ORGYALIS Baker.

An erect succulent perennial with stems 6 to 7 feet long, oblong-spatulate leaves 3 to 5 inches long, and yellow flowers one-third inch long in dense terminal cymes. Native to central Madagascar.

79174. KITAIBELIA VITIFOLIA Willd. Malvaceae.

A tall hardy herbaceous perennial, up to 8 feet high, with maplelike leaves and showy white or rose-colored axillary flowers. Native to Czechoslovakia.

79175. NOTHOSCORDUM FRAGRANS (Vent.) Kunth. Liliaceae.

A bulbous plant, native to tropical America, closely related to the onion. The bulb is round and yellowish white, and the linear, obtuse leaves are 8 to 12 inches long. The fragrant flowers, white flushed with pink, have purplish stamens and anthers and are borne on a scape 20 inches high.

For previous introduction see No. 66096.

79176. ORNITHOGALUM LONGEBRACTEATUM Jacq. Liliaceae. **Star-of-Bethlehem.**

A bulbous plant, native to South Africa, with five or six fleshy, very narrow leaves 1 to 2 feet long and a dense raceme of whitish flowers on a scape about 2 feet long.

For previous introduction see No. 66964.

79177. ORNITHOGALUM PYRENAICUM L. Liliaceae. **Star-of-Bethlehem.**

A bulbous plant, about 2 feet high, with greenish flowers, native to Europe.

For previous introduction see No. 69930.

79178. PASSIFLORA CAERULEA L. Passifloraceae. **Bluecrown passionflower.**

A slender strong-growing vine, native to Brazil, with leaves divided into five to seven lanceolate segments and fragrant greenish white flowers 4 inches across. The rays of the crown are blue at the tip, white in the middle, and purple at the base, while the styles are light purple.

For previous introduction see No. 30902.

79179. PINUS BUNGEANA Zucc. Pinaceae. **Lacebark pine.**

A tree sometimes 100 feet high, native to China, with the bark exfoliating in large scales, leaving light-colored areas and on old trees becoming chalky white.

For previous introduction see No. 62470.

79180. RUSCUS ACULEATUS L. Convallariaceae. **Butchersbroom.**

A rigid evergreen shrub, native to Europe, 2 to 4 feet high, with branching grooved stems and sessile ovate cladodes replacing the leaves. The small white flowers are borne in the axil of a bract in the middle of each cladode and are followed by ovoid red berries one-half inch in diameter.

79150 to 79184—Continued.

For previous introduction see No. 68148.

79181. SEDUM DASYPHYLLUM L. Crassulaceae. **Leafy stonecrop.**

For previous introduction and description see No. 78953.

79182 to 79184. SEMPERVIVUM spp. Crassulaceae.

79182. SEMPERVIVUM ARACHNOIDEUM L. **Spiderweb houseleek.**

A fleshy perennial, native to southern Europe, with a barren rosette about three-fourths inch in diameter, composed of about 50 oblong wedge-shaped, pale-green leaves. The bright-red flowers are in a small dense panicle on a stem 3 to 4 inches high.

79183. SEMPERVIVUM ARVERNENSE Lecoq and Lamotte. **Houseleek.**

A succulent perennial, native to France, which forms barren rosettes about 2 inches in diameter and is copiously stoloniferous. The short thick leaves are pale green, and the pale-pink flowers are borne in a panicle 5 inches long and broad, on a stem about 5 inches high.

79184. SEMPERVIVUM HAWORTHII Salm-Dyck. **Houseleek.**

A succulent evergreen perennial with a woody stem and yellow flowers. Native to the Canary Islands.

79185 to 79341.

From Chêne-Bourg, Geneva, Switzerland. Seeds purchased from Henry Correvon, Floraire Nurseries. Received March 5, 1929.

79185. BERBERIS FARRERI Hort. Berberidaceae. **Barberry.**

79186 to 79198. CYCLAMEN spp. Primulaceae.

79186. CYCLAMEN AFRICANUM Boiss. and Reut.

A summer-blooming tuberous perennial with coarsely toothed kidney-shaped or heart-shaped leaves dull and pale green marbled above, and nearly white, purple-tinged flowers an inch long. It is native to Algeria.

79187. CYCLAMEN ATKINSII T. Moore.

A hybrid between *Cyclamen coum* and *C. ibericum*. The leaves are reniform and dark green, spotted white, and the pale-rose or white flowers are usually lined or spotted red.

79188. CYCLAMEN BALEARICUM Willk.

A tuberous-rooted perennial with long-stemmed oval, heartshaped leaves, dark green and white mottled above. The flowers, white and rose colored, are about three-fourths inch long. It is native to the Balearic Islands.

79189. CYCLAMEN CILICICUM Boiss. and Heldr.

A herbaceous perennial native to Sicily. It closely resembles *C. europaeum*, but the larger pale-rose flowers are stained purple at the mouth.

79190 and 79191. CYCLAMEN COUM Mill.

A spring-blooming tuberous-rooted plant, native from southeastern Europe to Persia, about 6 inches high, with rounded-reniform uniformly green leaves and small scentless purple flowers.

79185 to 79341—Continued.

79190, 79191.

79192. CYCLAMEN EUROPAEUM L. **European cyclamen.**

For previous introduction and description see No. 79053.

79193. CYCLAMEN GRAECUM Link.

An autumn-flowering perennial with obcordate irregularly dentate leaves and white or light-rose flowers with a deep-purple base. Native to southeastern Europe.

79194 and 79195. CYCLAMEN HEDERAEFOLIUM Ait.

79194. A herbaceous perennial with a large black tuber, hastate or kindey-shaped leaves with wavy edges, and pink or rarely white flowers. It is native to southwestern Europe.

79195. Variety *album*. A white-flowered form.

79196. CYCLAMEN IBERICUM Stev.

A dwarf herbaceous perennial, native to the Caucasus region, with oval-rounded leaves zoned with white above and purple flowers with darker colored throats.

79197. CYCLAMEN JOVIS Hildebrand.

A low herbaceous perennial with a large black tuber, native to Asia Minor. The leaves vary in shape from hastate to rounded-reniform, and the slender flowers are pink or rarely white.

79198. CYCLAMEN REPANDUM Sibth. and Smith.

A spring-flowering tuberous-rooted plant with cordate undulate-lobed leaves and showy purple flowers. Native to the Mediterannean countries.

79199 to 79213. DAPHNE spp. Thymelaeaceae.

79199. DAPHNE ACUTILOBA Rehder.

A shrub, native to western China, about 5 feet high, with leathery lanceolate leaves 1 to 3 inches long and fragrant white flowers one-half inch long in few-flowered heads.

79200. DAPHNE ALPINA L. **Alpine daphne.**

For previous introduction and description see No. 79056.

79201. DAPHNE MEZEREUM L. **February daphne.**

Variety *autumnalis*. A form with large purple flowers, often blooming in the fall.

79202. DAPHNE OLEOIDES Schreb. (*Daphne buxifolia* Vahl). **Olive daphne.**

An evergreen shrub, native to southeastern Europe, up to 3 feet high, with pubescent branches, hairy obovate-lanceolate leaves, and white or pale-lilac flowers in few-flowered heads.

79203. DAPHNE CAUCASICA Pall. **Caucasian daphne.**

79185 to 79341—Continued.

A hardy deciduous shrub, up to 4 feet high, with lanceolate leaves and fragrant white flowers in terminal heads of 3 to 20 flowers. Native to the Caucasus region.

For previous introduction see No. 38420.

79204. DAPHNE CNEORUM L.
Rose daphne.

A low trailing evergreen shrub, native to Europe, with crowded oblanceolate dark-green leaves and rather dense heads of small fragrant pink flowers.

79205. DAPHNE GNIDIUM L.

For previous introduction and description see No. 78678.

79206. DAPHNE HAEMATHOCARPA Hort.

An ornamental shrub with blood-red fruits.

79207. DAPHNE LAUREOLA L.

For previous introduction and description see No. 79057.

79208 and 79209. DAPHNE MEZEREUM L.
February daphne.

79208. An erect deciduous shrub, about 4 feet high, with alternate oblong leaves, fragrant, lilac-purple flowers, usually in threes, appearing long before the leaves, and ovoid-roundish scarlet fruits. It is native to southeastern Europe and the Caucasus region.

79209. Variety *album*. A white-flowered form.

79210. DAPHNE LAUREOLA PHILIPPI (Gren. and Godr.) Meisn.

A dwarf variety, native to the Pyrenees, with the stems more fully covered with smaller leaves and with smaller, fragrant flowers, often violet, outside.

79211. DAPHNE PONTICA L.

An evergreen shrub, native to southeastern Europe and western Asia, about 5 feet high, with obovate-cuneate shining-green leaves 2 to 3 inches long and fragrant greenish-yellow flowers in small clusters.

79212. DAPHNE PETRAEA Leyb. (*D. rupestris* Facch.).

A dwarf evergreen shrub with small linear-lanceolate obtuse leaves and fragrant light-pink flowers in small terminal heads. It is native to central Europe.

79213. DAPHNE STRIATA Tratt.

For previous introduction and description see No. 79058.

79214 to 79219. EPHEDRA spp. Gnetaceae.
Jointfir.

79214. EPHEDRA ALTISSIMA Desf.
Climbing jointfir.

A handsome woody climber, native to North Africa, 10 to 20 feet high, with minute green leaves, and especially striking when covered with its ovoid scarlet berries.

For previous introduction see No. 74181.

79185 to 79341—Continued.

79215. EPHEDRA AMERICANA ANDINA (Poepp.) Stapf.

A low alpine shrub with short subulate leaves and fruiting aments about an inch long. It is native to the Andes of Chile.

79216. EPHEDRA FRAGILIS Desf.

A low bushy evergreen plant, native to the Mediterranean countries, with minute leaves borne on slender pale-green branches.

For previous introduction see No. 69035.

79217. EPHEDRA FOLIATA Boiss. and Kotschy.

A low shrub, native to Persia, with gray-green cylindrical branches and inconspicuous subulate leaves less than an inch long.

79218. EPHEDRA HELVETICA Meyer.

An alpine evergreen bush, native to Switzerland, with pale-green branches and minute leaves. This is said to yield the alkaloid known as ephedrine, a powerful heart stimulant and astringent.

For previous introduction see No. 69036.

79219. EPHEDRA MAJOR PROCERA (Fisch. and Mey.) Aschers. and Graebn.

A shrub, native to the Caucasus, 4 to 5 feet high, with smooth stiff gray-green branches, minute leaves, and nearly sessile yellowish aments.

79220 to 79286. GENTIANA spp. Gentianaceae.
Gentian.

79220. GENTIANA GENTIANELLA A. T. Johnson.
Stemless gentian.

For previous introduction and description see No. 78857.

79221. GENTIANA ALPINA Vill.

For previous introduction and description see No. 79064.

79222. GENTIANA ANGULOSA Bieb.

For previous introduction and description see No. 79065.

79223. GENTIANA ANGUSTIFOLIA Michx.

For previous introduction and description see No. 79159.

79224. GENTIANA ASCLEPIADEA L.
Milkweed gentian.

For previous introduction and description see No. 79160.

79225. GENTIANA BARBATA Froel.

An erect branched annual, native to Siberia, where it grows in damp situations. It is 3 to 18 inches high, with linear or lanceolate leaves and blue flowers.

79226 and 79227. GENTIANA BAVARICA L.

79226. For previous introduction and description see No. 79067.

79227. Variety *subacaulis*.

79228. GENTIANA BIGELOVII A. Gray.

A purple-flowered gentian, native to the southwestern United States, which

79185 to 79341—Continued.

forms large clumps with 40 to 50 stems over a foot high, bearing 10 to 20 flowers.

79229. GENTIANA BRACHYPHYLLA Vill.

For previous introduction and description see No. 79068.

79230. GENTIANA BURSERI Lapeyr.

A low alpine perennial, native to the Pyrenees, with an unbranched stem, less than a foot high, oval-elliptic leaves, and yellowish flowers with the corollas mostly six cut.

79231. GENTIANA CALYCOSA Griseb.

For previous introduction and description see No. 79069.

79232. GENTIANA CLUSII Perr. and Song.

For previous introduction and description see No. 79070.

79233. GENTIANA CRUCIATA L.
Cross gentian.

For previous introduction and description see No. 79162.

79234. GENTIANA DAHURICA Fisch.

For previous introduction and description see No. 79072.

79235. GENTIANA DECUMBENS L. f.

A stout erect perennial, up to 10 inches high, with oblong or elliptic leaves, mostly radical, and blue flowers. Native to the Himalayas.

79236. GENTIANA DEPRESSA D. Don.

A low, nearly stemless alpine perennial, native to the Himalayas, with broadly elliptic leaves about three-fourths of an inch long and small solitary blue flowers.

79237. GENTIANA DETONSA Rottb.

For previous introduction and description see No. 79073.

79238. GENTIANA DINARICA Beck.

An alpine gentian, native to the Austrian Alps, with broad thick erect leaves and dark-blue flowers.

79239. GENTIANA ELEGANS A. Nels.

An annual alpine gentian, about 8 to 12 inches high, with numerous simple stems, each terminated by a single deep-blue flower 2 inches long. Each stem bears three to six pairs of obovate or oblong leaves. Native to the western United States.

79240. GENTIANA EXCISA Presl.

A stemless alpine gentian, native to the Austrian Alps, about 3 inches high, with elliptic-oblong leaves and rather large blue flowers.

79241. GENTIANA FARRERI Balf. f.

For previous introduction and description see No. 79074.

79242. GENTIANA FAVRATI Rittner.

An alpine gentian, closely allied to *G. verna,* but distinguished by its very short stem, small roundish leaves in a rosette, and by the roundish shape of its petals. Native to the French Alps.

79243. GENTIANA FETISOWII Regel and Winkler.

Variety *alba.* A white-flowered form.

79185 to 79341—Continued.

For previous introduction and description see No. 79024.

79244. GENTIANA FREYNIANA Borum.

For previous introduction and description see No. 79075.

79245 and 79246, GENTIANA FRIGIDA Haenke.

79245. For previous introduction and description see No. 79026.

79246. Variety *alba.*

79247. GENTIANA FROELICHII Jan.

A short-stemmed, nearly tufted alpine gentian with solitary blue flowers. Native to the German Alps, where it is rare.

79248. GENTIANA GENTIANELLA A. T. Johnson. **Stemless gentian.**

For previous introduction and description see No. 78857.

79249. GENTIANA GROMBEZEWSKII Hort.

For previous introduction and description see No. 79027.

79250. GENTIANA HOLOPETALA (A. Gray) Holm.

A slender erect alpine plant, 2 to 16 inches high, with very narrow leaves and sky-blue flowers 1 inch or more long. Native to the Sierra Nevada Mountains of California.

79251. GENTIANA HOOKERI Griseb.

An alpine gentian, about 4 inches high, with oblong-spatulate leaves one-half inch long and flowers three-fourths of an inch long It is native to South America.

79252. GENTIANA IMBRICATA Froel.

A low alpine perennial, native to limestone regions in the Swiss Alps, about 3 inches high, with acute leaves and blue flowers with crenate petals.

79253. GENTIANA KESSELRINGI Regel.

For previous introduction and description see No. 79076.

79254. GENTIANA KOCHIANA Perr. and Song.

For previous introduction and description see No. 79077.

79255. GENTIANA LAGODECHIANA Hort.

For previous introduction and description see No. 79079.

79256. GENTIANA MOORCROFTIANA Wall.

A stiff upright annual, native to the Himalayas, 8 to 16 inches high, with pale-blue flowers about 1½ inches across in nearly terminal clustered cymes.

79257. GENTIANA NEWBERRYI A. Gray.

A dwarf alpine gentian, native to the Sierra Nevada Mountains of California, with obovate or spatulate leaves and pale-blue flowers, white within, about an inch long.

79258. GENTIANA OLIVIERI Griseb.

A herbaceous perennial, native to mountain pastures in the Himalayas, about 9 inches high, with dark-blue flowers in umbellike cymes.

79185 to 79341—Continued.

79259. GENTIANA PANNONICA Scop.

A tall, stout perennial, native to Europe, with broadly elliptical to narrowly ovate leaves and flowers which are purple above.

79260. GENTIANA PARRYI Engelm.

For previous introduction and description see No. 79082.

79261. GENTIANA PHLOGIFOLIA Schott and Kotschy.

For previous introduction and description see No. 79083.

79262. GENTIANA PNEUMONANTHE L.

For previous introduction and description see No. 79163.

79263. GENTIANA PRZEWALSKII Maxim.

For previous introduction and description see No. 79086.

79264. GENTIANA PTEROCALYX Franch.

An annual alpine gentian, native to Yunnan, China, 1 foot or more high, with ovate-cordate leaves and intense blue flowers more than 2 inches long.

79265. GENTIANA PUMILA Jacq.

A very small alpine gentian, almost mosslike, with small clustered leaves and solitary, terminal deep-blue flowers. It is native to the Tyrolese Alps.

79266. GENTIANA PUNCTATA L.

For previous introduction and description see No. 79087.

79267. GENTIANA PURDOMI Hort.

For previous introduction and description see No. 79088.

79268 and 79269. GENTIANA PURPUREA L.

79268. For previous introduction and description see No. 79089.

79269. Variety *nana*.

79270. GENTIANA PYRENAICA L.

A tufted aline perennial, native to Europe and Asia Minor, often forming mats, with leaves having a cartilaginous margin and solitary dark-blue flowers about 1 inch long.

79271. GENTIANA ROSTANI Reut.

A low herbaceous alpine perennial, native to central Europe, about 3 inches high, with bowl-shaped, blue flowers.

79272. GENTIANA SCEPTRUM Griseb.

An erect leafy perennial, native to northwestern North America, 2 to 4 feet high, with oblong-lanceolate leaves and bell-shaped, dark-blue flowers 1 inch long.

79273. GENTIANA SCHISTOCALYX Koch.

An upright perennial, native to Asia Minor, 2 feet or more high, with oval-lanceolate, long-pointed leaves 3 inches in length and flowers 1½ inches long.

79274 to 79278. GENTIANA SEPTEMFIDA Pall.

79274. For previous introduction and description see No. 79091.

79185 to 79341—Continued.

79275. Variety *angustifolia*.

79276. Variety *cordifolia*. A variety native to Armenia, with heart-shaped leaves.

79277. Variety *latifolia*.

79278. Variety *splendida*.

79279. GENTIANA STRAMINEA Maxim.

For previous introduction and description see No. 79093.

79280. GENTIANA SIKKIMENSIS C. B. Clarke.

A perennial alpine, native to the mountains of Sikkim, with decumbent stems, elliptic or rounded leaves, and terminal heads of blue flowers.

79281. GENTIANA TIBETICA King.
Himalayan gentian.

For previous introduction and description see No. 79028.

79282 to 79285. GENTIANA VERNA L.

79282. For previous introduction and description see No. 78862.

79283. Variety *alba*.

79284. Variety *azurea*.

79285. Variety *grandiflora*.

79286. GENTIANA WALUJEWI Regel and Schmalh.

For previous introduction and description see No. 79095.

79287 to 79291. PEDICULARIS spp. Scrophulariaceae. **Woodbetony.**

79287. PEDICULARIS FOLIOSA L.

An alpine perennial, native to central Europe, with simple stems 1 to 3 feet high, with pinnatifid leaves, and a dense spike of cream-colored flowers.

79288. PEDICULARIS PALUSTRIS L.
European woodbetony.

A marsh-loving herbaceous perennial, native to Europe, about 2 feet high, with thick roots, pinnately parted leaves, and rather large purplish flowers in spikelike racemes.

79289. PEDICULARIS RACEMOSA Dougl.

A herbaceous alpine perrenial, native to western North America, a foot or more high, with narrow undivided leaves and spikes of long-beaked white flowers.

79290. PEDICULARIS TUBEROSA L.

A perennial alpine, native to Switzerland, about a foot high, with a tuberous root and yellow flowers.

79291. PEDICULARIS VERTICILLATA L.

A moisture-loving alpine perennial, native to Europe, up to a foot high, with purplish flowers arranged in whorls.

79292 to 79341. SEDUM spp. Crassulaceae. **Stonecrop.**

79292. SEDUM AIZOON L.
Aizoon stonecrop.

Variety *mandschuricum*. A glabrous perennial, 1 to 2 feet high, with erect unbranched stems, alternate oblong-lanceolate leaves, coarsely toothed, and numerous yellow flowers in loose cymes.

79185 to 79341—Continued.

79293. SEDUM AMPLEXICAULE DC.

An evergreen alpine succulent perennial, native to the Mediterranean region, with ascending branches up to 4 inches long and numerous golden-yellow flowers in 2-forked cymes.

79294. SEDUM ANACAMPSEROS L.
Shy stonecrop.

An evergreen glaucous perennial succulent, native to central Europe, with cordate auricled red-margined leaves and numerous small pale-violet flowers in dense globose cymes borne on erect reddish stems 6 to 8 inches high.

79295. SEDUM ANGLICUM Huds.

A low evergreen fleshy perennial, native to western Europe, about 3 inches high, with trailing barren shoots forming dense masses. The small white or rosy flowers are in small cymes.

79296. SEDUM ANOMALUM Britton.

A decumbent or ascending low succulent with spatulate obtuse leaves about four-fifths inch long, and bright yellow flowers in cymes 1 inch across. It is native to California.

79297. SEDUM ANOPETALUM DC.

For previous introduction and description see No. 78950.

79298. SEDUM ATHOUM DC.

An erect perennial succulent, native to the mountains of Greece, about 4 inches high, with pale rose-colored flowers.

79299. SEDUM ATROPURPUREUM Turcz.

A hardy succulent perennial, native to eastern Siberia, with obovate spatulate leaves. The short racemes of small flowers are dark purple throughout, excepting the anthers which are yellow.

79300. SEDUM BOLONIENSE Loisel.

A glabrous succulent perennial, native to Europe, 2 to 3 inches high, with linear-cylindrical leaves crowded into six or seven rows, and yellow flowers, one-half inch across, in a branched umbellate cyme.

79301. SEDUM TELEPHIUM BORDERI Masters. **Liveforever.**

For previous introduction and description see No. 78963.

79302. SEDUM BREVIFOLIUM DC.
Shortleaf stonecrop.

A fleshy perennial, native to France, about 4 inches high, of cespitose habit, with crowded ovoid, pinkish, densely mealy pubescent leaves, and whitish flowers in a 2-forked or 3-forked cyme.

79303. SEDUM CARPATICUM Reuss.

A white-flowered succulent perennial, native to the Carpathian Mountains, about 10 inches high.

79304. SEDUM CORSICUM Duby.

A low fleshy perennial, native to Corsica, about 3 inches high, with crowded, very small gray-green leaves densely pubescent, and small white flowers in lax cymes.

79185 to 79341—Continued.

79305. SEDUM DASYPHYLLUM L.
Leafy stonecrop.

For previous introduction and description see No. 79181.

79306. SEDUM DOUGLASI Hook.

An annual succulent, native to northwestern North America, with an erect stem about 8 inches high, linear subulate leaves, and small yellow flowers in a branched cyme.

79307. SEDUM EUPHORBIOIDES Schlecht.

A hardy succulent perennial, native to northern Siberia, nearly 1 foot high, with crowded linear-oblong leaves and small flowers in short terminal racemes.

79308. SEDUM FABARIA Koch.

An alpine succulent, native to Europe, with upright stems 8 to 16 inches high, flat grass-green leaves, and lilac-purple flowers in a dense terminal corymb.

79309. SEDUM GATTEFOSSEI Batt.

A low delicate annual succulent, native to Morocco, about 2 inches high, with graceful stems, alternate spatulate or oblong leaves, and small yellow flowers in terminal cymes.

79310. SEDUM GLAUCUM Lam.

A succulent perennial, native to Europe and North Africa, 2 to 4 inches high, with tufted slender stems, crowded, oblong, or roundish leaves, and small white or pinkish flowers in few-flowered cymes.

79311. SEDUM GRACILE Haensel.

A low stemless alpine succulent, native to Spain, with a tuft of terete obtuse leaves and cymes of small white flowers.

79312. SEDUM HIRSUTUM All.

A low hairy alpine succulent, native to central Europe, with reddish stems, alternate sessile leaves, and small white flowers which have purple lines.

79313. SEDUM JACCARDI Hort.

An ornamental succulent.

79314. SEDUM LAGGERI Hort.

An ornamental succulent.

79315. SEDUM LEBLANCEI Hamet.

An ornamental annual succulent, native to southwestern China, with erect graceful stems about 5 inches high, obovate-linear leaves, and dense corymbs of small flowers.

79316. SEDUM MAGELLENSE Tenore.

An alpine perennial, native to Asia Minor, of cespitose habit, with crowded flat obovate fleshy leaves and pinkish-white flowers in paniclelike racemes.

79317. SEDUM MAXIMUM Suter.
Great stonecrop.

For previous introduction and description see No. 78957.

79318. SEDUM MIDDENDORFFIANUM Maxim. **Middendorff stonecrop.**

For previous introduction and description see No. 79046.

79185 to 79341—Continued.

79319. SEDUM MURALE Hort.

A succulent said to have dark leaves and white flowers with a pink center.

79320. SEDUM NEVII A. Gray.

A cespitose succulent perennial, native to the southeastern United States, with erect flower stems 2 to 5 inches high, obovate-spatulate leaves in rosettes, and numerous white flowers, nearly one-half inch across, in forked cymes.

79321. SEDUM NICAEENSE All.

A glabrous succulent perennial, native to the Mediterranean region, with a thick woody rootstock, ascending stems 6 to 8 inches long, oval-lanceolate leaves, and greenish-yellow flowers, one-half inch across, in terminal cymes.

79322. SEDUM NUTTALLIANUM Rafin.

An annual simple or branched succulent, native to the southern United States, 2 to 4 inches high, with scattered flat or somewhat terete oblong leaves, and cymes of small yellow flowers.

79323. SEDUM OBTUSIFOLIUM Meyer.

A perennial alpine, native to the Caucasus, with erect stems, rounded-oval leaves, and small white flowers in elongated leafy cymes.

79324. SEDUM OCHROLEUCUM Vill.

A succulent alpine, native to France, with oblong-acute crowded leaves and small white flowers.

79325. SEDUM PALMERI S. Wats.

An erect perennial, about 6 inches high, with succulent flattened leaves 1 inch or more long and deep-orange flowers in a branched panicle. It is native to Mexico.

79326. SEDUM PILOSUM Bieb.

For previous introduction and description see No. 78958.

79327. SEDUM PSEUDOSPECTABILE Praeger.

A fleshy perennial, native to northeastern China, about 20 inches high, with ovate or obovate sessile leaves about 1½ inches long, and rose-colored flowers, not quite one-half inch long, in compact terminal clusters.

79328. SEDUM PURPURASCENS Koch.

An erect succulent perennial, native to central Europe, 12 to 18 inches high, with scattered oblong-ovate leaves 2 to 3 inches long and numerous pink or white flowers in dense cymes.

79329. SEDUM ROSEUM (L.) Scop. (*S. rhodiola* DC.) **Roseroot stonecrop.**

A perennial succulent, native to Europe, with a thick fleshy rootstock that exhales the odor of rose water. The stems are 4 to 8 inches high, with scattered glaucous spatulate leaves an inch long, and flat-topped cymes of greenish or reddish-purple flowers.

79330. SEDUM RUBENS L.

A low succulent, native to the Mediterranean countries, about 3 inches high, with small pinkish or white flowers.

79185 to 79341—Continued.

79331. SEDUM SELSKIANUM Regel and Maack.

A spreading hairy fleshy perennial, native to northeastern Asia, 1 foot or more high, with lanceolate-sessile leaves and numerous yellow flowers in a much-branched terminal leafy hollow-topped cyme.

79332. SEDUM SEMPERVIVUM Ledeb.

A pubescent biennial succulent, native to Asia Minor, 2 to 8 inches high, with 40 to 50 obovate leaves in a basal rosette and scarlet flowers in a dense-panicled cyme.

79333. SEDUM SPATHULIFOLIUM Hook.

A succulent glaucous perennial, native to northwestern North America, finally reddish, with the leaves of the barren shoot forming terminal rosettes 1½ inches in diameter. The numerous yellow flowers, one-half inch across, are borne in terminal forking cymes.

79334. SEDUM STAHLII Solms. **Stahl stonecrop.**

A trailing much-branched succulent perennial, native to Mexico, with green or pinkish stems 4 to 6 inches high, opposite nearly terete leaves, and yellow flowers in terminal cymes.

79335. SEDUM STELLATUM L.

A low succulent annual, native to Europe, about 3 inches high, with a rosette of flat roundish leaves and lax cymes of reddish or purplish flowers.

79336. SEDUM STENOPETALUM Pursh.

A tufted fleshy perennial, native to western North America, 3 to 6 inches high. The crowded sessile leaves are linear or lanceolate, and the bright-yellow flowers are in much-branched scorpoid cymes.

79337. SEDUM STRIBRNYI Velen.

A succulent perennial, native to Bulgaria, laxly cespitose, with ascending stems 4 to 6 inches long, oblong-terete leaves, and small yellow flowers in compound cymes.

79338. SEDUM EWERSII Ledeb. **Violet stonecrop.**

Variety *Turkestanicum*. A form said to be 4 inches high, with deep-violet flowers, and and to be hardy in Massachusetts.

79339. SEDUM VILLOSUM L.

A low fleshy annual, native to the mountains of central Europe, 3 to 4 inches high, with simple erect stems hairy above and alternate linear leaves. The dull rose or white flowers are in a small loose terminal cyme.

79340. SEDUM WOODWARDI N. E. Brown.

A perennial succulent, perhaps native to China, with simple green stems 1 foot high, alternate lax obliquely obovate flat leaves, and yellow flowers, about one-half inch across, in loose cymes.

79341. SEDUM YUNNANENSE Franch.

A succulent plant, native to southwestern China, 1 to 2 feet high, with a thick rhizome, a whitish stem, opposite sessile rounded-oval leaves, and small yellow flowers in cymes.

79342 to 79349. AVENA spp. Poaceae. **Oats.**

From Sydney, New South Wales, Australia. Seeds presented by H. Wenholz, director of plant breeding in the New South Wales Department of Agriculture. Received March 12, 1929.

New hybrids which are not entirely resistant to crown rust, but have a large measure of resistance under conditions which favor this disease in Australia.

79342. AVENA sp.

Bombo. A cross between Abruzzi and Victory, maturing late in the season.

79343. AVENA sp.

Boppy. A midseason variety which is a cross between two strains of White Ligowo and Algerian.

79344. AVENA sp.

Buddah. A selection from Sunrise, maturing very early in the season.

79345. AVENA sp.

Gidgee. A very early variety of similar breeding to Boppy [No. 79343].

79346. AVENA sp.

Kendall. A selection from Ruakura, maturing early in the season.

79347. AVENA sp.

Kurri. A selection from Ruakura, maturing early in the season.

79348. AVENA sp.

Laggan. A selection from Kelsall's, maturing very early.

79349. AVENA sp.

Lampton.

79350 to 79359. SOLANUM MELONGENA L. Solanaceae. **Eggplant.**

From Nishigahara, Japan. Seeds presented by Dr. H. Ando, Director, Imperial Agricultural Experiment Station. Received March 12, 1929.

79350. *Kintyaku.*

79351. *Okute-yamanasu.*

79352. *Otosi.*

79353. *Saitama-sinnasu.*

79354. *Siro-nasu.*

79355. *Tama-sinnasu.*

79356. *Tiba-wase.*

79357. *Turuboso-sennari.*

79358. *Wase-marunasu.*

79359. *Wase-sennari.*

79360 to 79365. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

From Portici, Italy. Scions presented by Prof. Gaetano Briganti, R. Instituto Superiore Agrario. Received March 19, 1929.

79360. *Abbate.*

79361. *Cerasiello.*

79362. *Cipolla* or *Zepolle.*

79363. *Del Prete.*

79364. *Meraviglia lunga.*

79365. *Meraviglia tonda.*

79366 to 79377.

From Nagpur, Central Provinces, India. Seeds presented by D. N. Mahta, second economic botanist. Received February 25, 1929.

79366 to 79373. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

79366. A late variety.

79367. An early variety.

79368. A late variety.

79369. *Calcutta.*

79370. Received without notes.

79371. A variety with purple flesh.

79372. A variety with red flesh.

79373. A variety with white flesh.

79374 to 79377. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

79374. Mixed melon seeds.

79375. *Jalgaon.*

79376. *Piria.*

79377. *Kharkhara.*

79378 to 79419. ORYZA SATIVA L. Poaceae. **Rice.**

From China. Seeds collected by F. A. McClure, Lingnan University, Canton. Received March 11, 1929.

Nos. 79378 to 79381 were collected in November, 1928, and are white, starchy, beardless varieties of the second crop.

79378. No. 1055. *Yau chim.* From Ngfungts'uen, Honam Island.

79379. No. 1056. *Chuk chim.* From the Agricultural College of the Lingnan University, Canton.

79380. No. 1057. *Paak hok yau chim.* From the Agricultural College of the Lingnan University, Canton.

79381. No. 1058. *Kam fung (chim).* From Sunfungwong village, Honam Island.

Nos. 79382 to 79402 were collected during November, 1928.

79382. No. 1059. *Oo tuk noh.* From Hato, Honam Island. A white, glutinous, beardless variety of the second crop. It takes its name "black tip glutinous" from the dark markings on the glumes.

79383. No. 1060. *Tin tau taai noh.* Near Lingnan University, Canton, China.

79384 and **79385.** From Ngfungts'uen, Honam Island. Two strains of white starchy rice obtained in the same field.

79384. No. 1061. *Paak hok yau chim.* A beardless variety.

79385. No. 1062. *Paak hok yau chim.* A bearded variety.

79386. No. 1063. *Taai kwat yau chim.* Near Lingnan University. A white, starchy, beardless variety of the second crop.

79387. No. 1064. *Paak hok tsai.* From Hato, Honam Island. A white, starchy, beardless variety of the second crop.

78378 to 79419—Continued.

79388. No. 1065. *Tsai (chai) mei tavi noh* (compact headed large glutinous). From Hato, Honam Island. A white, glutinous, beardless variety of the second crop.

Nos. 79389 to 79391 are white, starchy, beardless varieties of the second crop.

79389. No. 1066. *Fa hok kam fung.* From Shat'au, Honam Island.

79390. No. 1067. *Noh chaap chim.* From Ngfungts'uen, Honam Island.

79391. No. 1068. *Paak hok ham fung.* From Shat'au, Honam Island.

79392. No. 1069. *Paak hok noh.* From Honglok, Honam Island. A white, glutinous, beardless variety of the second crop.

79393. No. 1070. *Noh chaap.* From Shuipo, Honam Island. A white, starchy beardless variety of the second crop.

79394. No. 1071. *Kam fung tsai.* From Shat'au, Honam Island. A white starchy, semibearded variety of the second crop.

79395. No. 1072. *She chim.* From Ngfung, Honam Island. A white starchy, beardless variety of the second crop.

79396. No. 1073. *Uen chu noh.* From Paanchikaau, Honam Island. A white, glutinous, beardless variety of the second crop.

79397. No. 1074. *Yau chim noh.* From Paanchikaau, Honam Island. A white, glutinous, semibearded variety of the second crop.

79398. No. 1075. *T'aan t'au noh.* From Lekkau, Honam Island. A white, glutinous, beardless variety of the second crop.

79399. No. 1076. *Ma mei noh.* From Lekkau, Honam Island. A white, glutinous, beardless variety of the second crop.

79400. No. 1077. *Heung mai* (fragrant rice). From Shuipo, Honam Island. A white, starchy, beardless variety of the second crop.

79401. No. 1078. *Paak hok noh chaap.* From Lekkau, Honam Island. A white, semibearded starchy variety of the second crop.

79402. No. 1080. *Yuk shau k'au* (Hydrangea). From Lekkau, Honam Island. A white, beardless, starchy variety of the second crop.

79403. No. 1081. *Suet chim.* From Yunghui, Kwangsi Province, December 9, 1929. A red-grained, bearded, starchy variety of the second crop.

Nos. 79404 to 79408 were collected during October, 1928.

79404. No. 1082. *Paak hok yau chim.* From Poknaneung, Tsangsheng district, Kwangtung Province. A white-grained, beardless, starchy rice of the second crop.

79405. No. 1083. *Chek mai sz miu.* From Cheungkongmei, Tsangsheng district, Kwangtung Province. A red-grained, beardless, starchy variety of the second crop.

79406. No. 1084. *Wong hok yau chim.* From Sheungto, Tsangsheng district, Kwangtung Province. A white-grained, beardless, starchy variety of the second crop.

79407. No. 1085. *Wong chim.* From Pokha, Tsangsheng district, Kwangtung Province. A white-grained, starchy, beardless variety of the second crop.

79408. No. 1086. *Yau chim noh.* From Pokha, Tsangsheng district, Kwangtung Province. A white-grained, beardless, glutinous variety of the second crop.

Nos. 79409 to 79419 were collected during November, 1928.

79409. No. 1087. *Paak noh tsai.* From Pokha, Tsangsheng district, Kwangtung Province. A white-grained, glutinous beardless variety of the second crop.

79410. No. 1088. *Chaan shui chim.* From Pokha, Tsangsheng district, Kwangtung Province. A white-grained, beardless, starchy variety of the second crop.

79411. No. 1089. *Wong hok sz miu.* From Chohk'ai, Tsangsheng district, Kwantung Province. A white-grained, beardless, starchy variety of the second crop.

79412. No. 1090. *Paak hok chek.* From Pokha, Tsangsheng district, Kwangtung Province. A red-grained, semibearded, starchy variety of the second crop.

79413. No. 1091. *Wong hok noh.* From Pokha, Tsangsheng district, Kwangtung Province. A white-grained, beardless, glutinous variety of the second crop.

79414. No. 1092. *Lung moon chek.* From Pokha, Tsangsheng district, Kwangtung Province. A red (pink)-grained, beardless, starchy variety of the second crop.

79415. No. 1093. *Lo chim.* From Pokha, Tsangsheng district, Kwangtung Province. A red-grained, beardless, starchy variety of the second crop.

79416. No. 1094. *Kai chue noh.* From Cheungkongmei, Tsangsheng district, Kwangtung Province. A white-grained, beardless, glutinous variety of the second crop.

79417. No. 1095. *So tsai chek.* From l'okha, Tsangsheng district, Kwangtung Province. A red-grained, bearded, starchy variety of the second crop.

79418. No. 1096. *Shui nga chim.* From Chohk'ai, Tsangsheng district, Kwangtung Province. A white-grained, beardless, starchy variety of the second crop.

79419. No. 1097. *Taai noh tsai.* From T'ongt'auha, Tungkoon district, Kwangtung Province. A white-grained, beardless, glutinous variety of the second crop.

79420 to 79453.

From Japan. Scions obtained by R. K. Beattie, Bureau of Plant Industry. Received March 13, 1929.

79420 to 79449. CASTANEA CRENATA Sieb. and Zucc. Fagaceae.

Japanese chestnut.

79420 to 79453—Continued.

Scions collected in January, 1929, of cultivated varieties unless otherwise stated.

79420. No. 814. *Ganne.* Nuts from Sakaue Mura, Kuka Gun, Yamaguchi Ken, presented by Shigeo Hayashi.

79421 to 79429. From Tateno Farm, Nogi Mura, Shimotsuga Gun, Tochigi Ken.

79421. No. 815. *Butsake.*

79422. No. 816. *Hassaku.*

79423. No. 817. *Ichiemon.*

79424. No. 818. *Inukoroshi.*

79425. No. 819. *Mino.*

79426. No. 820. *Motokichi* No. 1.

79427. No. 821. *Odai.*

79428. No. 822. *Osaya.*

79429. No. 823. *Wase tamba.*

79430 to 79439. From the Okitsu Agricultural Experiment Station.

79430. No. 824. *Bon I.*

79431. No. 825. *Buzen.*

79432. No. 826. *Dai hachi.*

79433. No. 827. *Dengoro.*

79434. No. 828. *Kambei.*

79450 to 79453. DIOSPYROS KAKI L. f. Diospyraceae. **Kaki.**

From the Okitsu Agricultural Experiment Station.

79450. No. 835. *Sushi.* Originally from Keisho Hokudo, Chosen.

79451. No. 836. *Panshi.* Originally from Keizan.

79452. No. 837. *Shakokushi.* Originally from Shakoku.

79453. No. 838. *Kojomshi.* Originally from Hoki.

79454 to 79461.

From Viçosa, Minas Geraes, Brazil. Presented by Prof. P. H. Rolfs, Escola Superior de Agricultura e Veterinaria de Minas Geraes. Received March 16, 1928.

79454 to 79459. CITRUS spp. Rutaceae.

79454. CITRUS sp.

Cacau. Scions of an apparent sport from the Selecta. Tree upright stocky grower, very vigorous and prolific. Fruits orange when ripe, ripening about the same time as Pineapple; skin rather thick and corrugated; seeds 15 to 30; eating quality excellent. Some of the buds show reversion to Selecta type.

79455. CITRUS sp.

Civó, or willow twigged. Scions of a highly ornamental as well as useful variety of orange which has the peculiar habit of the limbs growing pendent, like a weeping willow. It must be budded high on the stock for the best effect because, if budded near the ground, it forms a low creeping bush. The fruits are disposed laterally on the branches, making, when ripe, a wreath of oranges of a deep orange-red. They are of superior flavor and ripen about midseason, which is about the time Pineapple ripens, and they remain in prime condition for a much longer time than the commercial orange. The skin is thin and smoother, and the seeds very few, running from 2 or 3 to 20.

79456. CITRUS sp.

Lancetta. Said by Doctor Caire to have originated from a bud sport found among Pera. (Oblong form Valencia type.) Fruits small, very sweet and delicious, ripening very late in the year.

79457. CITRUS sp.

Lima Paulista. Type of tree and habit of growth similar to Tanger. Fruits flattened, very sweet when ripe, thin skinned, and contain few seeds.

79458. CITRUS sp.

Limão Inherme. Habit of growth of tree similar to Lima Paulista and Tanger. Fruits more oblong than Lima Paulista, about the size and shape of some of the larger Mexican limes, and ripen continuously throughout the year. The flavor is quite distinct from that of the Mexican lime.

79459. CITRUS sp.

Tanger. A very peculiar and desirable type of orange, said to have been named after the city of Tangier. It apparently does not belong to the *Citrus sinensis* species. The leaves are small and the petioles very small, giving the tree a very peculiar appearance. The fruits, produced in clusters, are about the size and color of tangerines and are sweet and delicious, containing 20 or more seeds.

79460 and 79461. MANGIFERA INDICA L. Anacardiaceae. **Mango.**

79460. Seeds.

79461. *Sabiana.* Seeds.

79462 to 79502.

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received March 19, 1929.

79462 to 79469. AGAVE spp. Amaryllidaceae. **Agave.**

79462. AGAVE ALBICANS Jacobi.

A trunkless, cespitose agave, native to Mexico, with spreading, glaucous, thin oblanceolate leaves about a foot long, with close-set minute brown marginal prickles and a terminal needlelike small spine. The reddish green flowers, in pairs, are a little over 1 inch long and are on a spike 3 feet high.

79463. AGAVE ELLEMEETIANA Koch.

A nearly trunkless plant with spreading lanceolate unarmed leaves about 2 feet long, and paired greenish white flowers, about 1 inch long, in a spikelike inflorescence 5 to 10 feet high. Native to Mexico.

79464. AGAVE FRANZOSINI Baker.

An agave with roughish, white, recurved ascending lanceolate leaves up to 8 feet long, armed with dark-gray marginal prickles and a large terminal spine. The tall green flower stem, 30 to 40 feet high, bears flowers over 3 inches long. It is probably native to Mexico.

79465. AGAVE LOPHANTHA Schiede. **Crested agave.**

An agave, native to eastern Mexico, with spreading, glossy green lanceolate leaves a foot or more long, with small hooked marginal prickles and terminating in a brown grooved spine. The flowers, 1½ inches long, are borne on a spike 9 to 15 feet high.

79466. AGAVE POLYACANTHA Haw.

A cespitose plant, native to southern Mexico, with lanceolate, upcurving leaves sometimes 3 feet long, terminating in a stout spine and margined with close-set brown prickles. The flowers, 2 inches long, are in a spikelike inflorescence 4 to 5 feet high.

79467. AGAVE SALMIANA Otto.

An agave with gray-green very thick leaves about 3 feet long, with an elongated gray terminal spine and triangular marginal teeth. The scape is covered with long, somewhat spreading bracts. Native to Mexico.

79468. AGAVE TEQUILANA Web.

A stemless century plant with straight, rather stiff leathery gray-green leaves about 3 feet long and 3 inches wide, terminating in a short stout spine. The flower stem is about 20 feet high, with about 30 floral branches. Native to southern Mexico.

79469. AGAVE VICTORIAE-REGINAE T. Moore.

An agave, native to northeastern Mexico, with 3-angled short, stiff, triangular dark-green leaves about 7 inches long, ending in a short black spine, and a slender compact flowering spike 10 to 12 feet high.

79470 to 79473. ALOE spp. Liliaceae.

79470. ALOE ARBORESCENS Mill.

An arborescent succulent with a simple trunk 10 to 15 feet high, clothed at the top with dull-green sinuately spreading gradually narrowed leaves about 2 feet long, with prickly margins. The red flowers are in an elongated raceme. It is probably a native of the Cape of Good Hope.

79471. ALOE SAPONARIA (Ait.) Haw.

An aloe from the Cape of Good Hope which grows in cespitose clusters, with ascending, oblong-lanceolate acuminate leaves about 7 inches long, often reddish with pale blotches, and with large confluent brown marginal teeth. The red flowers are in a branched inflorescence 1 or 2 feet high.

79472. ALOE STRIATA Haw.

A low fleshy plant with a dense rosette of thick narrowly oblong leaves 1 or 2 feet long, obscurely spotted, and bright-red flowers about 1 inch long, in 20 or more heads borne on a stout, branched peduncle. Native to South Africa.

79473. ALOE STRIATA × ?.

Seeds of a hybrid aloe of which only one parent is known.

79474. DAPHNE GNIDIUM L. Thymelaeaceae.

For previous introduction see No. 79205.

79475. GASTERIA OBTUSIFOLIA (Salm-Dyck) Haw. Liliaceae.

A low fleshy South African plant with a leafy stem 2 inches high, densely crowded tongue-shaped leaves 4 to 6 inches long, and rosy flowers in a raceme over a foot long.

79476. GASTERIA VERRUCOSA Haw. Liliaceae.

A cespitose succulent, native to the Cape of Good Hope, with spreading, somewhat concavely 3-sided, dull-gray acute leaves about 4 inches long, roughened by white tubercles, and rosy flowers about an inch long in an inflorescence 2 feet high.

79477 to 79479. KALANCHOE spp. Crassulaceae.

79477. KALANCHOE CRENATA Haw.

For previous introduction and description see No. 79166.

79478. KALANCHOE GLAUCESCENS Britten.

A plant, native to tropical Africa, with a terete stem 2 feet or more high, narrowly oval irregularly crenate fleshy leaves 5 inches long, and red or dark-yellow flowers one-half inch long in a glaucous panicle.

79479. KALANCHOE SCHIMPERIANA A. Rich.

An Abyssinian succulent of cespitose habit, with obovate-spatulate crenate leaves and pale-yellow flowers, about 3 inches long, in a dense branching cyme.

79480 to 79492. MESEMBRYANTHEMUM spp. Aizoaceae. **Figmarigold.**

79480. MESEMBRYANTHEMUM ACINACIFORME L.

A fleshy plant with a jointed stem 2 to 3 feet high, opposite, scimitar-shaped leaves 2 to 3 inches long, with

79462 to 79502—Continued.

the keel dilated, and purple flowers, about 4 inches across, said to be the largest in the genus. The edible fruits about the size of a gooseberry, are eaten by the natives of South Africa.

79481. MESEMBRYANTHEMUM BLANDUM Haw.

An erect perennial succulent, 2 feet high, with numerous branches, compressed-triangular leaves 2 inches long or less, with minute dots and pale-rose or white flowers 2 inches across. It is native to the Cape of Good Hope.

79482. MESEMBRYANTHEMUM CORDIFOLIUM L. f. **Heartleaf figmarigold.**

A diffuse-stemmed perennial, native to South Africa, 1 to 2 feet high, with opposite cordate leaves somewhat papillose and solitary purple daisylike flowers.

For previous introduction see No. 77228.

79483. MESEMBRYANTHEMUM CULTRATUM Salm-Dyck.

A low stemless succulent, native to South Africa, with thick 2-ranked, tongue-shaped leaves curved like a pruning knife, with a blunt apex, and yellow flowers on a somewhat 3-angled peduncle an inch or more high.

79484. MESEMBRYANTHEMUM DEPRESSUM Haw.

A stemless prostrate succulent, native to South Africa, with narrow, tongue-shaped, recurved-depressed acute leaves and yellow flowers with the petals somewhat recurved.

79485. MESEMBRYANTHEMUM DIFFORME L.

An almost stemless fleshy plant, native to South Africa, with obliquely cross-shaped, narrow, tongue-shaped punctate leaves about 2 inches long and solitary large yellow flowers.

79486. MESEMBRYANTHEMUM EDULE L.

A low, fleshy plant with an angular prostrate stem, opposite triquetrous curved leaves 3 to 4 inches long, with the keel serrate, and large yellow or purple flowers. The small edible fruits are the "figs" of the Hottentots in South Africa, where this plant is native. In California this species is used as a ground cover.

79487. MESEMBRYANTHEMUM HETEROPETALUM Haw.

A low succulent with erect-spreading stem and branches and glaucous, subfalcate leaves. The pale-red or whitish flowers are solitary. It is native to South Africa.

79488. MESEMBRYANTHEMUM LINGUIFORME L.

A low fleshy plant, with deflexed, somewhat falcate, and unequally tongued-shaped leaves, flattish above, and yellow flowers. It is native to South Africa.

79489. MESEMBRYANTHEMUM SALMII Haw.

A nearly stemless succulent from the Cape of Good Hope, with decussate attenuate leaves, one of each pair acute and the other oblique and blunt. The yellow flowers are sessile.

79462 to 79502—Continued.

79490. MESEMBRYANTHEMUM SERRULATUM Haw.

A rather shrubby plant, erect when young, with 3-angled fleshy thick leaves and purplish asterlike flowers. It is native to the Cape of Good Hope.

79491. MESEMBRYANTHEMUM SPECTABILE Haw.

A prostrate succulent, native to South Africa, with ascending branches, thick 3-sided linear leaves 2 to 3 inches long, and daisylike purplish flowers 2 inches across.

For previous introduction see No. 77237.

79492. MESEMBRYANTHEMUM UNCATUM Salm-Dyck.

A low, nearly stemless plant with narrow tongue-shaped fleshy leaves 2½ inches long, hooked at the apex, and yellow flowers. It is native to South Africa.

79493 to 79502. STAPELIA spp. Asclepiadaceae.

Low fleshy cactuslike plants with coarsely 4-angled stems and large showy flat evil-smelling flowers.

79493. STAPELIA ATRATA Todaro.

The erect, 4-angled, fleshy stems of this plant are 2 to 6 inches high and are green and more or less mottled with purple. The one to five dark purple-brown flowers are 2 to 3 inches across, with acuminate-deltoid corolla lobes. It is native to South Africa.

79494. STAPELIA CILIOLULATA Todaro.

A robust plant with fleshy stems, up to 5 inches high, armed with short projecting lateral teeth. The flower, about 3 inches across, is bright yellow, with lighter spots, and the broadly triangular-oval lobes are marked with irregular brown spots. It is of garden origin.

79495. STAPELIA CLYPEATA Jacq.

An erect fleshy plant, with obtusely angled stems 2 to 6 inches high which are green, often mottled or tinted with purple. The flowers, single or as many as five at the bases of the young stems, are 2 or 3 inches across and are pale greenish yellow with dark purple-brown spots. It is native to South Africa.

79496. STAPELIA DISCOLOR Todaro.

A rather large carrion-flower with green, purple-tinged, sharply 4-angled stems 3 to 18 inches high, and one to three dark purple-brown flowers, about one-half inch across, marked with faint yellowish transverse lines. It is native to the Cape of Good Hope.

79497. STAPELIA DIVERGENS N. E. Brown.

A perennial succulent with 4-angled stems about 4 inches high and slightly wrinkled light-yellow flowers, 2 inches across, with thick ramified brown-crimson lines on the disk and lower two-thirds of the petals. It is a hybrid, of unknown parentage, raised in Europe.

79498. STAPELIA MUTABILIS Jacq.

A rather large carrion-flower, with green or purplish stems 3 to 18 inches

79462 to 79502—Continued.

high, acutely 4-angled and armed with stout conical teeth. The flower, about 1½ inches across, has sharply recurved petals, which are pale greenish yellow, with the upper third purple brown. It is native to South Africa.

79499. STAPELIA MUTABILIS Jacq.

Variety *picta*.

79500. STAPELIA PLANIFLORA Jacq.

A freely branching succulent with erect 4-angled stems 2 to 6 inches high, armed with acute spreading teeth. The pale greenish-yellow flower, about 3 inches across, is irregularly purple spotted and is often lined with purple-brown. It is native to the coastal regions of South Africa.

79501. STAPELIA RUGOSA Jacq.

A fleshy plant with erect stems, obtusely 4-angled and armed with conical teeth. The flower, about 2½ inches across, is greenish yellow with numerous scattered small purple spots and irregular transverse dark purple-brown lines. The outer corona lobes are acutely 3-toothed at the apex. It is native to South Africa.

79502. STAPELIA TRIFIDA Todaro.

A cespitose, fleshy plant, probably originally from South Africa, with 4-angled stems about 3 inches high. The purplish-violet flower is 3 inches across, with purple corolla tips and numerous traverse yellow lines.

79503 to 79505.

From Nancy, France. Seeds presented by Prof. Edmond Gain, director of the botanic garden of the Nancy University. Received March 18, 1929.

79503. KITAIBELIA VITIFOLIA Willd. Malvaceae.

For previous introduction and description see No. 79174.

79504. OMPHALODES LINIFOLIA (L.) Moench. Boraginaceae.

A summer-flowering annual plant a foot high, with wedge-shaped radical leaves, linear-lanceolate stem leaves, and lax racemes of white flowers. Native to dry stony hills of Spain and Portugal.

79505. PETTERIA RAMENTACEA (Sieber) Presl (*Cytisus weldeni* Vis.). Fabaceae.

For previous introduction and description see No. 79039.

79506 to 79521.

From Winchester, England. Plants purchased from Hillier & Sons, West Hill Nurseries. Received December 20, 1928. Numbered in March, 1929.

79506 to 79508. BERBERIS spp. Berberidaceae. **Barberry.**

79506. BERBERIS ATROCARPA C. Schneid.

An ornamental shrub, native to western Szechwan, China, 3 to 5 feet high, with leathery evergreen leaves, shining green above and yellowish green beneath, and almost globose jet-black fruits.

For previous introduction see No. 76212.

79506 to 79521—Continued.

79507. BERBERIS EMPETRIFOLIA Pers. **Crow barberry.**

For previous introduction and description see No. 78877.

79508. BERBERIS HOOKERI Lem.

An evergreen barberry, native to the Himalayas, where it is a dense shrub 3 to 5 feet high, with usually 3-parted spines, dark-green, leathery, spiny margined leaves, and cylindrical black-purple berries often persisting on the shrub until spring.

For previous introduction see No. 65232.

79509 to 79521. BUXUS spp. Buxaceae.

79509. BUXUS HARLANDII Hance.

A compact evergreen shrub, native to China, about 3 feet high, with obovate-oblong leaves, gradually narrowed toward the base, less than an inch long and one-fourth of an inch broad.

For previous introduction see No. 76558.

79510 to 79520. BUXUS SEMPERVIRENS L. **Common box.**

79510. Variety *aurea maculata*.

79511. Variety *aurea pendula*.

79512. Variety *handsworthii*.

79513. Variety *latifolia macrophylla*.

79514. Variety *latifolia maculata*.

79515. Variety *myosotifolia*.

79516. Variety *myrtifolia*.

79517. Variety *prostrata*.

79518. Variety *pyramidalis*.

79519. Variety *rosmarinifolia*.

79520. Variety *salicifolia*.

79521. BUXUS WALLICHIANA Baill.

An evergreen shrub, native to the Himalayas, 10 feet high, with linear-lanceolate leaves 2 to 4 inches long.

79522. AMYGDALUS COMMUNIS L. (*Prunus amygdalus* Stokes). Amygdalaceae. **Almond.**

From Granada, Spain. Plants presented by Juan Leyva, through Austin C. Brady, American consul, Malaga. Received March 19, 1929.

Marcona.

79523 and 79524. FICUS CARICA L. Moraceae. **Common fig.**

From Balaguer, Lerida, Spain. Cuttings presented by Ramon Sala Roqueta. Received March 21, 1929.

79523. *Fraga*.

79524. *Layola blanca*.

79525. ELAEODENDRON CAPENSE Eckl. and Zeyh. Celastraceae. **False olive.**

Plants grown from seeds presented by the Plant Quarantine and Control Administration. Received February 15, 1929.

79525—Continued.

An erect shrub, native to South Africa, with leathery ovate leaves 3 inches long and panicles of small white flowers followed by red drupes an inch long.

For previous introduction see No. 51144.

79526. WAHLENBERGIA BIVALVIS Merr. Campanulaceae.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received February 27, 1929.

An erect glabrous branched annual up to 16 inches high, with sessile leaves and blue, bell-shaped flowers a quarter of an inch long. Native to the Philippine Islands.

79527. VIGNA SINENSIS (Torner) Savi. Fabaceae. **Cowpea.**

From Tirana, Albania. Seeds presented by A. T. Fultz, Director, Albanian Vocational School of the American Junior Red Cross and Ministry of Education. Received March 15, 1929.

Seeds white with a black eye; from the market at Kavaji.

79528. NICOTIANA TABACUM L. Solanaceae. **Tobacco.**

From New Guinea. Seeds presented by L. P. B. Armit, Port Moresby. Received March 25, 1929.

Mixed seeds from Autemba and Biagi, Kokoda district, northern division.

79529. ORCHIDANTHA MAXILLARIOIDES (Ridley) Schum. Musaceae.

From Glasnevin, Ireland. Plants presented by J. W. Besant, Director, Botanic Gardens. Received March 16, 1929.

A gingerlike stemless Malayan plant with oblong leaves about 8 inches long and panicles 1 to 2 feet high of rather showy purple flowers, resembling those of Maxillaria.

79530. ORCHIDANTHA LONGIFLORA (Scort.) Ridley. Musaceae.

From Singapore, Straits Settlements. Plants presented by R. E. Holttum, Director, Singapore Botanic Gardens. Received March 23, 1929.

A large stemless tropical plant, related to the banana and native to the Malay Peninsula, which forms huge tufts of lanceolate leaves 3 feet long. The solitary axillary flowers, about 8 inches in length, have long purple bracts and yellowish petals.

79531. AMARANTHUS VIRIDIS L. Amaranthaceae. **Amaranth.**

From Antigua, British West Indies. Seeds presented by A. E. Collens, Government Chemist and Superintendent of Agriculture. Received March 22, 1929.

A plant cultivated in Antigua and used in the same manner as spinach.

79532. LYCOPERSICON ESCULENTUM Mill. Solanaceae. **Tomato.**

From near Trujillo, Peru. Seeds presented by Ralph T. Gray, Estación Experimental Agrícola, Lima, Peru. Received March 28, 1929.

A wild Peruvian tomato collected by G. N. Wolcott, Estación Experimental Agrícola, Lima.

79533 to 79545.

From the West Indies. Seeds collected by Allison V. Armour. Received March 25, 1929.

79533. AMERIMNON LANCEOLARIUM (L. f.) Kuntze (*Dalbergia lanceolaria* L. f.). Fabaceae.

Dominican Botanic Gardens. A tree 60 to 80 feet high, native to India, with compound leaves made up of 11 to 15 elliptical rigidly subcoriaceous leaflets 2 inches long and terminal and axillary compound panicles of small purplish flowers followed by bright-brown flexible pods.

79534. BERRIA AMMONILLA Roxb. Tiliaceae.

Dominican Botanic Gardens. A large tree, native to southeastern Asia, with long-stemmed heart-shaped leaves and dense racemes of small white flowers. The hard durable dark-red wood is used for agricultural implements and is also exported under the name of trincomali wood.

For previous introduction see No. 63761.

79535. CAPSICUM ANNUUM L. Solanaceae. **Common redpepper.**

A very fine aromatic variety obtained in the market at Port au Prince, Haiti.

79536. CARICA PAPAYA L. Papayaceae. **Papaya.**

St. Lucia Botanic Gardens. An excellent local variety.

79537 to 79545. From the Dominican Botanic Gardens.

79537. CATALPA LONGISSIMA (Jacq.) Sims. Bignoniaceae.

For previous introduction and description see No. 78580.

79538. COLVILLEA RACEMOSA Boj. Caesalpiniaceae.

For previous introduction and description see No. 78604.

79539. EUTERPE EDULIS Mart. Phoenicaceae. **Palm.**

A palm, native to Brazil, 40 feet high, with a slender inclined trunk, pinnate leaves, and fruits the size of marbles. A nutritious beverage is made by the natives from the fibrous flesh surrounding the seeds.

For previous introduction see No. 66218.

79540. GARCINIA MORELLA (Gaertn.) Desr. Clusiaceae.

A small tree, 30 to 50 feet high, which is related to the mangosteen and may be of use as a stock. It is native to India.

For previous introduction see No. 58589.

79541. KLEINHOVIA HOSPITA L. Sterculiaceae.

A fine Dombeyalike shrub up to 50 feet high, with heart-shaped leaves 4 inches long and lax clusters of small rose-colored flowers followed by inflated papery pods an inch long. It is native to the East Indies.

For previous introduction see No. 54985.

79533 to 79545—Continued.

79542. ORMOSIA MONOSPERMA (Swartz) Urban (*O. dasycarpa* Jacks). Fabaceae. **Necklace tree.**

A tree with compound leaves of five pairs of oblong leaflets, large rusty tomentose panicles of small blue flowers, and ovoid tomentose pods each containing a globose red seed with a black blotch. It is native to the West Indies.

For previous introduction see No. 66232.

79543. PONGAMIA PINNATA (L.) W. F. Wight (*P. glabra* Vent.). Fabaceae.

A tall, erect shade tree or sometimes a climbing shrub native to tropical Asia, with compound leaves composed of five to seven pairs of oblong leaflets and simple racemes of white flowers. The woody pods are about one-fourth inch thick and 1½ inches long. Because of its bright, handsome foliage this tree has been recommended as an ornamental for subtropical regions. It is said to withstand hurricanes.

For previous introduction see No. 74584.

79544. THRINAX MORRISII Wendl. Phoenicaceae. **Morris thatch palm.**

An attractive dwarf palm, native to the West Indies, up to 3 feet high, with palmate leaves which are glaucescent on the under side and have the segments free for more than half their length.

For previous introduction see No. 78508.

79545. TOUNATEA SIMPLEX (Vahl) Taub. (*Swartzia grandiflora* Willd.). Caesalpiniaceae.

An ornamental shrub with a single oblong coriaceous leaflet, or occasionally three leaflets, and corymbs of three to five flowers each having a single orbicular yellow petal an inch or more across.

79546. CINNAMOMUM MINDANAENSE Elmer. Lauraceae.

From Jolo, Sulu, Philippine Islands. Seeds presented by Gov. Carl M. Moore, through P. J. Wester, Ballston, Va. Received November 10, 1926. Numbered in March, 1929.

Kami. A small erect tropical tree, up to 30 feet high, with slender branches, smooth pale-green bark, and small pointed leathery leaves. The inconspicuous flowers are followed by numerous small shining steel-blue fruits. The bark is very similar to the cinnamon of commerce, and the tree has possibilities as a source of cinnamon.

79547. CUDRANIA TRICUSPIDATA Bureau Moraceae.

From Crescent, Ga. Cuttings obtained from James Deverger, through R. A. Young, Bureau of Plant Industry. Received March 5, 1928. Numbered in March, 1929.

A thorny shrub or small tree native to eastern Asia. The fruits, resembling clusters of red raspberries, are edible, and the plant has been recommended as a good hedge plant for the Southern States. The extremely hard wood is used for tools, and the ovate, usually entire leaves are used in some sections to feed silkworms.

For previous introduction see No. 71304.

79548. DENDROCALAMUS MACROCULMIS Hort. Poaceae. **Bamboo.**

From Algiers, Algeria, Africa. Culm presented by Dr. L. Trabut, Government botanist. Received March 29, 1928. Numbered in March, 1929.

A very distinct and valuable giant clump bamboo introduced from Cochin China by the Jardin des Plantes in Paris and sent to Algiers for trial, where there is now a splendid avenue in the Jardin d'Essais, of Algiers.

For previous introduction see No. 62251.

79549. GARCINIA sp. Clusiaceae.

From Buitenzorg, Java. Seeds presented by Dr. L. Koch, Chief, Plant Breeding Station for Annual Crops. Received October 19, 1928. Numbered in March, 1929.

An East Indian evergreen tree related to the mangosteen (*Garcinia mangostana*).

79550. ARACHIS HYPOGAEA L. Fabaceae. **Peanut.**

From Caracas, Venezuela. Seeds presented by Dr. H. Pittier, Ministerio de Relaciones Exteriores, Museo Commercial. Received March 23, 1929.

A variety cultivated only in the State of Falcon, Venezuela. It is said to be exceptionally rich in oil.

79551 to 79554. TIGRIDIA PAVONIA (L. f.) Ker. Iridaceae. **Common tigerflower.**

From Paris, France. Bulbs purchased from Vilmorin-Andrieux & Co. Received March 28, 1929.

79551. Variety *alba.* White flowers with red spots in the throat.

79552. Variety *conchiflora.* Bright-yellow flowers.

79553. Variety *lilacea.* Lilac flowers with a spotted center.

79554. Variety *speciosa rubra.* A somewhat dwarf form with deep-red flowers, the interior of the cup being the same color as the limb.

79555. PRATIA BEGONIFOLIA (Wall.) Lindl. Campanulaceae.

From Sumatra. Seeds collected by Prof. H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received July 20, 1927. Numbered in March, 1929.

No. 7525. Between Simakkoek and Simartoloe, on the trail from Asahan to Toba, north of the Asahan River, April 23, 1927. A creeping vine with small cordate denticulate leaves and purple fleshy fruits half an inch long.

79556 and 79557. QUERCUS CERRIS L. Fagaceae. **Turkey oak.**

From Northwood, Middlesex, England. Seeds presented by R. C. B. Gardner. Received November 2, 1928. Numbered in March, 1929.

79556 and 79557—Continued.

79556. *D.* Variety *laciniata.*

For previous introduction and description see No. 78679.

79557. *E.*

For previous introduction and description see No. 78678.

79558. SANDORICUM KOETJAPE (Burm. f.) Merr. (*S. indicum* Cav.). Meliaceae. **Santol.**

From Manila, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture. Received September 5, 1928. Numbered in March, 1929.

A Philippine tree which becomes 80 feet high in its native country, with trifoliolate hairy leaves and greenish yellow or straw-colored flowers. The chief value resides in its yellowish fruits which are rounded or flattened, about 2 inches in diameter, with rather large seeds inclosed in translucent, acid, edible pulp of good flavor. When peeled, quartered, and cooked in sirup the fruit makes a delicious preserve. This tree is not suited for cultivation in the United States except perhaps in the warmest parts of Florida.

For previous introduction see No. 58445.

79559. TILMIA CARYOTAEFOLIA (H. B. K.) O. F. Cook (*Martinezia caryotaefolia* H. B. K.). Phoenicaceae. **Palm.**

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Garden. Received May 31, 1927. Numbered in March, 1929.

A graceful palm up to 30 feet high, native to tropical South America. The erect stem is slightly swollen at the base and is clearly ringed; these rings are armed with stiff black slender spines 2 or 3 inches long. The bright-green pinnate fronds are 4 to 5 feet long, spreading and drooping.

For previous introduction see No. 73822.

79560 to 79565.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director, Java Botanic Gardens. Received August, 1926, and May, 1927. Numbered in March, 1929.

79560. ATTALEA SPECTABILIS Mart. Phoenicaceae. **Palm.**

An ornamental Brazilian palm which is stemless or with a very short caudex. The erect spreading pinnate leaves are 18 to 21 feet long; the lower segments are 3 to 4 feet and the upper 12 to 16 inches long.

For previous introduction see No. 43056.

79561 to 79563. BACCAUREA spp. Euphorbiaceae.

79561. BACCAUREA DULCIS Muell. Arg.

A tropical evergreen tree, 30 to 60 feet high, with smooth reddish-brown branches, alternate brownish oval-oblong leaves up to 7 inches long, reddish beneath, and round woody fruits about 1 inch in diameter in lax racemes. Native to the Malay Peninsula.

79562. BACCAUREA MOTLEYANA Muell. Arg.

79560 to 79565—Continued.

A large ornamental tropical Malayan evergreen tree with oval, entire, dark-green leaves 6 inches long and 4 inches wide and large clusters of small edible yellow berries of mildly acid flavor.

For previous introduction see No. 34495.

79563. BACCAUREA NANIHUA Merr.

A tropical Asiatic evergreen tree about 50 feet high, with brownish leathery oblong leaves up to 6 inches long.

79564. PITHECOLOBIUM LOBATUM Benth. Mimosaceae.

A small ornamental tropical tree with large curved red pods which contain bluish seeds.

For previous introduction see No. 35452.

79565. SAGUERUS LANGKAB Blume (*Arenga obtusifolia* Mart.). Phoenicaceae. **Palm.**

A Javanese palm, related to the sugar palm (*Arenga saccharifera*) of Malaya, with a spineless, thick-ringed trunk about 20 feet high and 9 to 13 pinnate leaves, about 15 feet long, which have spiny petioles.

For previous introduction see No. 67177.

79566. ARUNDINA CHINENSIS Blume. Orchidaceae.

From Singapore, Straits Settlements. Plant collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received July 19, 1926. Numbered in March, 1929.

No. 827. Singapore Botanic Gardens, May 31, 1926. A tropical terrestrial orchid with very beautiful flowers reminding one of a small cattleya. When grown in pots it becomes several feet high, and when not in flower it looks more like a bamboo than an orchid. It is grown on a large scale by nurserymen who sell the cut flowers in the markets of the Malay Archipelago.

79567. DRACAENA DRACO L. Liliaceae. **Dragontree.**

From Ajuda, near Lisbon, Portugal. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 21, 1927. Numbered in March, 1929.

No. 1296. April 4, 1927. Seeds from a remarkable specimen probably 300 years old, now growing in the Botanic Garden at Ajuda, once the Royal Quinta Cima of Queen Mary I. This tree is not over 10 or 15 feet high, but has a spread of about 40 feet. It is a curious ornamental tropical tree which becomes 60 feet high, with numerous crowded sword-shaped glaucous-green leaves, greenish flowers, and orange berries.

79568 and 79569.

From Sibolangit, Sumatra. Plant and stolons collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the Allison V. Armour expedition. Received May, 1926. Numbered in March, 1929.

79568 and 79569—Continued.

79568. GIGANTOCHLOA VERTICILLATA (Willd.) Munro. Poaceae. **Bamboo.**

No. 732. *Boeloeh Regen, Boeloeh Belangke.* Sibolangit Botanic Garden, March 28, 1926. A bamboo plant with culms over 4 inches in diameter, which is not the best of the giant clump bamboos in the mountains of Sumatra, but is largely grown in the lowlands about the kampongs because of its useful timber.

79569. GLOBBA sp. Zinziberaceae.

No. 437. Sibolangit Botanic Garden, February 24, 1926. Stolons of a herbaceous gingerlike plant with attractive pink flowers, which should be useful as a border plant in southern Florida and Panama.

79570. LIVISTONA OLIVAEFORMIS Mart. Phoenicaceae **Palm.**

From Singapore, Straits Settlements. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received July 29, 1926. Numbered in March, 1929.

No. 848. Singapore Botanic Gardens, May 30, 1926. A small handsome fan-leaved palm with olive-shaped, green to purplish-green fruits. Native to Java.

79571. MILLINGTONIA HORTENSIS L. f. Bignoniaceae.

From Peradeniya, Ceylon. Plants collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received July 19, 1926. Numbered in March, 1929.

No. 893. *Indian cork tree.* Peradeniya Botanic Garden, June 9, 1926. A tropical avenue tree of erect habit, becoming 50 feet or more high. It has finely divided leaves and pure-white fragrant long tubular flowers which are borne twice a year, during November and June.

79572. SCIRPUS SUPINUS L. Cyperaceae. **Sedge.**

From Gold Coast, Africa. Plants collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received April 29, 1927. Numbered in March, 1929.

No. 1267. *Diatamara.* A sedge native to tropical Africa, forming a solid field in a moist boggy spot, several acres in extent, north of Mamou, French Guinea, March 10, 1927. The natives say that in the dry season the cattle eat this to the exclusion of other grasses which are at that time dried up. Its succulent stems form a regular turf on which the cattle walk. It should be tried as fodder on swampy land.

79573 to 79903.

From Manchuria. Seeds presented by P. F. Constatinoff, Harbin, through E. D. Merrill, dean of the College of Agriculture of the University of California, Berkeley, Calif. Received in February, 1929.

79573 to 79576. CHAETOCHLOA ITALICA (L.) Scribn. (*Setaria italica* Beauv.). Poaceae. **Millet.**

From the Harbin Experiment Station.

79890. N 11.

79893 to 79900. TRITICUM spp. Poaceae.

79893 to 79898. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). **Common wheat.**

79893. [No data.]

79894. From the Sanchache Experiment Station.

79895. N 65. From the Harbin Experiment Station, and originally from Mukden.

79896. N 43. From the Russian Experiment Station, Harbin.

79897. N 81. From the Harbin Experiment Station.

79898. N 21. From the Harbin Experiment Station.

79573 to 79903—Continued.

79899. TRITICUM DICOCCUM Schrank. **Emmer.**

N 64. From the Harbin Experiment Station.

79900. TRITICUM DURUM Desf. **Durum wheat.**

N 85. From the Harbin Experiment Station.

79901. VICIA FABA L. Fabaceae. **Broadbean.**

79902. VIGNA SINENSIS (Torner) Savi. Fabaceae. **Cowpea.**

79903. ZEA MAYS L. Poaceae. **Corn.**

N 42.

79904 to 79929.

From Tiflis, Georgia, Russia. Seeds presented by the director, Botanic Garden. Received February 14, 1929.

79904. COLCHICUM SPECIOSUM Stev. Melanthiaceae.

A low bulbous plant with four or five shining green leaves about a foot long and showy dark-rose flowers often 6 inches in diameter which appear after the leaves have died away. It is native to the Caucasus.

For previous introduction see No. 67016.

79905 and 79906. EPHEDRA MAJOR PROCERA (Fisch. and Mey.) Aschers. and Graebn. Gnetaceae. **Jointfir.**

A leafless shrub, 4 to 5 feet high, native to the Caucasus, with stiff branches and nearly sessile flower clusters.

79905. Variety *chrysocarpa*. A golden-fruited variety.

79906. Variety *erythrocarpa*. A red-fruited variety.

79907. HYACINTHUS PARADOXUS (Boiss.) Fisch. and Mey. (*Bellevalia paradoxa* Boiss.). Liliaceae.

A wild hyacinth, native to Russia, with narrowly lanceolate leaves and spikes of intensely blue bell-shaped flowers.

79908 to 79919. IRIS spp. Iridaceae.

79908. IRIS ACUTILOBA Meyer.

A wild iris native to the Caucasus, with purple and fawn-colored flowers.

For previous introduction see No. 68158.

79909. IRIS CAUCASICA Hoffm.

A rather dwarf bulbous iris native from Asia Minor to Turkestan and ascending to 6,000 feet above sea level. It has about six bright-green, very narrow leaves 3 to 6 inches long, a short stem, and pale or bright-yellow flowers which appear in March or April.

For previous introduction see No. 67812.

79910. IRIS IBERICA Hoffm. **Iberian iris.**

A dwarf, nearly stemless iris, native to mountainous parts of Asia Minor, with narrow leaves 3 to 6 inches long and large flowers which have pale-brown outer segments blotched with purple brown, and pure white inner segments, although these colors are not constant.

For previous introduction see No. 68163.

79911. IRIS LYCOTIS Woron.

A species for which a description has not been found.

For previous introduction see No. 67916.

79912 to 79914. IRIS PUMILA L.

79912. Variety *luteis*. A form with light-yellow flowers.

79913. Variety *pallidis*.

79914. Variety *violaceis*. A form with violet flowers.

79915. IRIS RETICULATA Bieb. **Netted iris.**

A bulbous iris, native to Asia Minor, with short erect leaves about 1½ feet high, a very short stem, and fragrant bright-purple flowers which appear early in spring before the leaves develop.

For previous introduction see No. 68167.

79916. IRIS sp.

Received as *Iris sulphurea*, which is a synonym of *I. pumila*, but the seeds do not agree with that species.

79917. IRIS TALISCHI Forst.

An iris, native to Persia, of the section Pogoniris, with a large rhizome, thick wide obtuse sword-shaped leaves, and 12 to 30 yellow flowers.

79918. IRIS TASCHIA Hort.

A horticultural variety for which a place of publication has not been found.

For previous introduction see No. 68169.

79919. IRIS WINOGRADOWI Fomin.

An iris native to the Caucasus.

For previous introduction see No. 64301.

79920 to 79922. JUNIPERUS spp. Pinaceae. **Juniper.**

79920. JUNIPERUS FOETIDISSIMA Willd.

Variety *squarrosa*. A form with spreading or recurved branches. The usual type is an evergreen tree, native to southern Europe, up to 15 feet high, with upright branches. The young twigs, when rubbed, emit a disagreeable odor.

79921. JUNIPERUS ISOPHYLLOS Koch.

A shrubby oriental tree with light-brown bark and ovate leaves. It differs from *J. pseudosabina* in being smaller and having keeled leaves. Native to Asia Minor.

For previous introduction see No. 64302.

79922. JUNIPERUS OXYCEDRUS L. **Prickly juniper.**

An ornamental evergreen tree, native to Europe, about 15 feet high,

79904 to 79929—Continued.

with light-green foliage covered somewhat with a whitish bloom. It is reported to thrive in dry rocky places.

79923 to 79927. PAEONIA spp. Ranunculaceae. **Peony.**

79923. PAEONIA ABCHASICA Hort.

A horticultural variety for which a place of publication has not been found.

For previous introduction see No. 64303.

79924. PAEONIA MLOKOSEWITSCHI Lomakin.

A herbaceous perennial peony with dark bluish-green biternate leaves with red nerves and margins and yellow flowers, 4 to 5 inches in diameter, which have numerous stamens and purple stigmas. This peony, considered the handsomest of the yellow-flowered forms, is native to the central Caucasus.

For previous introduction see No. 64304.

79925. PAEONIA TENUIFOLIA L. **Fringed peony.**

A hardy herbaceous perennial a foot or more high, densely leafy, with ternate, much-divided leaves and an erect dark-crimson flower about 3 inches across. It is native to the Caucasus region.

79926. PAEONIA TRITERNATA Pall.

A herbaceous peony, native to Siberia, usually about 3 feet high, with triternate leaves and purple flowers.

For previous introduction see No. 67050.

79927. PAEONIA WITTMANNIANA Hartwiss.

A herbaceous perennial, native to the Caucasus, 2 to 3 feet high, with biternate leaves 4 to 8 inches long and flowers, about 4 inches across, which are solitary, pale yellow, greenish or nearly white.

For previous introduction see No. 64306.

79928. SCILLA ROSENI Koch. Liliaceae. **Squill.**

A bulbous plant, native to the Caucasus, with linear-oblong leaves and small white flowers.

79929. ULMUS ELLIPTICA Koch. Ulmaceae. **Elm.**

A tree, native to Armenia, with pubescent branchlets, elliptical leaves 3 to 6 inches long, and obovate fruits.

For previous introduction see No. 67926.

79930 to 79956.

From Blackwood, South Australia. Seeds presented by Edwin Ashby. Received February 16, 1929.

79930. ALYOGYNE HAKEAEFOLIA (Giordano) Alefeld (*Fugosia hakeaefolia* Hook.). Malvaceae.

An erect evergreen shrub, native to Australia, with narrow lobed or deeply cut leaves and large purple-lilac flowers. It is closely related to Gossypium.

79930 to 79956—Continued.

For previous introduction see No. 65221.

79931. BEAUFORTIA sp. Myrtaceae.

Perongorups Mountains, Western Australia. An ornamental evergreen dwarf bush native to Australia.

79932. CALLISTEMON BRACHYANDRUS Lindl. Myrtaceae. **Bottlebrush.**

A pendulous form of this large bushy evergreen shrub. It is 12 to 15 feet high, native to northern Australia, with linear-subulate rigid leaves an inch or more long and loose spikes of flowers with showy deep-red stamens.

79933. CALLITRIS DRUMMONDII (Parl.) Benth. and Hook. Pinaceae.

Kangaroo Island, South Australia. A dwarf, compact, cypresslike tree with bright-green foliage. It is native to South Australia, where it thrives under semiarid conditions.

For previous introduction see No. 51283.

79934 to 79937. CALOTHAMNUS spp. Myrtaceae.

79934. CALOTHAMNUS ASPER Turcz.

A hairy evergreen shrub, native to Western Australia, with crowded, linear, flat leaves and short, dense clusters of flowers with crimson stamens.

For previous introduction see No. 67069.

79935. CALOTHAMNUS QUADRIFIDUS Ait.

An erect evergreen shrub 7 feet high, native to Western Australia, with crowded linear leaves about an inch long, somewhat like those of Hakea, and dense spikes of flowers which are conspicuous only because of the long, rich crimson stamens.

For previous introduction see No. 67071.

79936. CALOTHAMNUS SANGUINEUS Labill.

A tall evergreen shrub, 6 to 12 feet high, with subulate terete leaves about an inch long and flowers with blood-red stamens as long as the leaves. It is native to Western Australia.

79937. CALOTHAMNUS sp.

Murchison, Western Australia. A downy dwarf evergreen shrub native to Australia.

79938. EREMAEA sp. Myrtaceae.

Geraldton, Western Australia. An orange-flowered shrub up to 4 feet high, native to Australia.

79939 to 79948. GREVILLEA spp. Proteaceae.

79939. GREVILLEA BIPINNATIFIDA R. Br.

A prostrate or diffuse evergreen shrub 3 to 4 feet high, native to Western Australia. The broadly ovate leaves, 4 inches long and 3 inches wide, are twice divided into wedge-shaped segments. The silky pubescent red flowers are in loose racemes 4 inches long or gathered together into a large terminal panicle.

79940. GREVILLEA BUXIFOLIA (J. E. Smith) R. Br.

79930 to 79956—Continued.

An evergreen shrub about 6 feet high, which stands cutting back well and produces an abundance of small pink flowers. It is native to South Australia.

For previous introduction see No. 49364.

79941. GREVILLEA ERICIFOLIA R. Br.

A low evergreen shrub of spreading habit, about 2 feet high, with sessile linear or lanceolate leaves and short terminal racemes of red and yellowish flowers. It is native to southeastern Australia.

79942. GREVILLEA ILICIFOLIA R. Br.

A large spreading evergreen shrub, native to South Australia, with prickly hollylike leaves 1 to 2 inches long and small flowers in terminal racemes.

79943. GREVILLEA LAVANDULACEA Schlecht.

Variety *malleensis*. A variety native to South Australia where it grows from a foot to a foot and a half high on a sandy or clayey subsoil, but it seems to prefer broken rock soil (quartzite). It does very well on rockeries and should be treated as a rock plant. The leaves are pungent, and the crimson flowers, at each axil all along the branches, are borne from the beginning of the winter until late spring in Australia.

79944. GREVILLEA OLEOIDES Sieber.

From The Grampians, Victoria. An erect evergreen shrub, 4 to 5 feet high, closely allied to *G. punicea*, with lanceolate leaves 2 to 4 inches long and sessile racemes of bright-red flowers. It is native to southeastern Australia.

79945. GREVILLEA OLEOIDES DIMORPHA (F. Muell.) Benth.

A variety with more rigid foliage, lanceolate in some specimens and linear in others, and usually smaller flowers.

79946. GREVILLEA PRITZELII Diels.

An evergreen shrub, native to Australia, with brown-hairy branchlets, linear sickle-shaped leaves 3 to 5 inches long, and racemes, 2 to 3 inches long, of white flowers covered with dense white tomentum.

For previous introduction see No. 76640.

79947. GREVILLEA PUNICEA R. Br.

An erect evergreen shrub, 4 to 5 feet high, with small elliptic-oblong leaves and crimson flowers in short dense terminal racemes. It is native to New South Wales.

79948. GREVILLEA ROSMARINIFOLIA A. Cunn.

An erect evergreen shrub, native to New South Wales, about 5 feet high, with hairy branches, erect crowded linear-subulate leaves, and short dense racemes of red flowers.

79949. HAKEA sp. Proteaceae.

An ornamental evergreen shrub, native to Western Australia, with long spikes of scarlet flowers.

79930 to 79956—Continued.

79950. HIBISCUS SPLENDENS Fras. Malvaceae.

From north of Cairns, Queensland. A tall handsome shrub 12 to 20 feet high, native to southern Australia, densely hairy, with prickly branches, palmately lobed heart-shaped leaves, and large, showy rose-colored flowers 6 inches or more across.

79951. HOVEA ELLIPTICA (J. E. Smith) DC. Fabaceae.

A leguminous evergreen shrub up to 10 feet high, with slender branches, small narrowly oval leaves, and short axillary clusters of small blue flowers. It is native to Western Australia.

For previous introduction see No. 64487.

79952. HOVEA PUNGENS Benth. Fabaceae.

A rigidly erect evergreen shrub, 1 to 2 feet high, with linear-lanceolate coriaceous sharp-pointed leaves less than an inch long. The branches are covered from the bottom to the top with clusters of deep-blue flowers.

For previous introduction see No. 76641.

79953. KUNZEA PARVIFLORA Hort. Myrtaceae.

A dwarf evergreen shrub with very showy crimson flowers. Native to Australia.

79954. OXYLOBIUM LANCEOLATUM (Vent.) Druce (*O. callistachys* Benth.). Fabaceae.

A tall evergreen shrub, native to Australia, with whorls of lanceolate leaves 3 to 5 inches long and yellow flowers in dense terminal racemes 6 inches long.

For previous introduction see No. 76941.

79955. SWAINSONA GALEGIFOLIA (Andrews) R. Br. (*S. coronillifolia* Salisb.). Fabaceae.

A shrubby perennial, native to Australia, climbing to a height of several feet, with 1 to 21 small oblong leaflets and large deep-red, pink, or white flowers. *Swainsona coronillifolia* probably represents the horticultural variety *violacea*, which has rose-violet flowers. This species is said to be poisonous to stock.

For previous introduction see No. 77447.

79956. THRYPTOMENE sp. Myrtaceae.

From Geraldton, Western Australia. A dwarf evergreen bush or shrub with a mass of pink flowers which were borne at Blackwood between June and September.

79957. TRACHYPHRYNIUM sp. Marantaceae.

From Cameroon, West Africa. Seeds collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour expedition. Received March 25, 1927. Numbered in January, 1929.

No. 1174. Victoria Botanic Garden. A tall branching shrub, native to west tropical Africa, with leafy stems and small inconspicuous flowers.

79958 to 79970. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From San Juan, Porto Rico. Seeds presented by O. W. Barrett, Agricultural Director, Bureau of Agricultural Development. Received March 27, 1929.

79958. *Americano.*

79959. *Areïbenos 4447.*

79960. *Chagaros.*

79961. *Cubanos 4349.*

79962. *French 1624.*

79963. *Horacios.*

79964. *Larenos 4446.*

79965. *Mites.*

79966. *Negritos.*

79967. *Pepinenos 4445.*

79968. *Pinto Moro.*

79969. *San Salvador 4258.*

79970. *Silvios.*

79971. PINUS SYLVESTRIS L. Pinaceae.

From Manchuria, China. Seeds presented by V. K. Roerich, through V. Golubzoff, Harbin, Manchuria. Received February 2, 1929.

Variety *mongolica.* A Mongolian form of the Scotch pine.

79972. ALSTONIA MACROPHYLLA Wall. Apocynaceae.

From Peradeniya, Ceylon. Seeds presented by T. H. Parsons, Curator, Royal Botanic Gardens. Received March 30, 1929.

A tall Malayan evergreen tree with milky juice, oblanceolate leaves a foot long, and terminal clusters of small white flowers.

For previous introduction see No. 58390.

79973. ORCHIDANTHA LONGIFLORA (Scort.) Ridley. Musaceae.

From Peradeniya, Ceylon. Plants presented by W. Small, Acting Director, Department of Agriculture. Received March 30, 1929.

For previous introduction and description see No. 79530.

79974. FICUS CARICA L. Moraceae. **Common fig.**

From Hereford, England. Plant and scions purchased from King's Acre Nurseries. Received March 30, 1929.

Brown Turkey fig.

79975. CRYPTOSTEGIA sp. Asclepiadaceae. **Lombiro rubber.**

From Madagascar. Seeds presented by Dr. J. O. Dyrnes, through John S. Richardson, jr., American vice consul, Tananarive, Madagascar, at the request of Charles F. Swingle, Bureau of Plant Industry. Received March 11, 1929.

These seeds were collected by Doctor Dyrnes at Manasoa (Benenitra), Tullear, Madagascar, from native vines that produce the Lombiro rubber.

79976 to 79979. AGAVE spp. Amaryllidaceae.

From Naples, Italy. Seeds purchased from M. Herb. Received March 30, 1929.

79976. AGAVE CAESPITOSA Tod.

A cespitose, nearly stemless century plant, 3 feet high, with fleshy light-green acuminate leaves which have brown prickly margins. The small greenish flowers are on a long tenuous almost-nodding scape about 10 feet high.

79977. AGAVE HORRIDA Jacobi.

A herbaceous perennial, native to central Mexico, with a rosette of oblanceolate glossy green flat spreading leaves having the large irregular prickles joined by a wide horny margin. The stalk of the inflorescence is moderately slender, and the yellowish or purplish-green flowers are 1 to 2 inches long.

79978. AGAVE MITRAEFORMIS Jacobi (*A. bonnettiana* Hort.).

A herbaceous perennial, native to southern Mexico, with a rosette of prickly margined recurved obovate leaves 2 to 3 feet long and a flower stalk, 15 to 20 feet high, bearing a loose panicle of large yellow flowers 2 to 3 inches across.

79979. AGAVE UNIVITTATA Haw.

A stemless Mexican century plant with narrow-lanceolate leaves, a foot or more long, elongated into a stout brown spine, with brown horny margins.

79980 to 79991.

From Winchester, England. Plants purchased from Hillier & Sons, West Hill Nurseries. Received March 30, 1929.

79980 to 79990. DAPHNE spp. Thymelaeaceae.

79980. DAPHNE ACUTILOBA Rehder.

For previous introduction and description see No. 79199.

79981. DAPHNE CNEORUM L. **Rose daphne.**

For previous introduction and description see No. 79204.

79982. DAPHNE COLLINA NEAPOLITANA (Lodd.) Lindl.

An evergreen shrub, native to Italy, about 3 feet high, with smooth, narrow, oblong leaves about an inch long and loose heads of rosy purple flowers.

79983. DAPHNE GNIDIUM L.

For previous introduction and description see No. 79474.

79984. DAPHNE HOUTTEANA Planch.

A handsome evergreen shrub with deep-purple lanceolate half-leathery leaves and small cymes of violet-lilac flowers. It is possibly a hybrid between *Daphne mezereum* and *D. laureola.*

79985. DAPHNE LAUREOLA L.

For previous introduction and description see No. 79057.

79986. DAPHNE LAUREOLA PHILIPPI (Gren. and Godr.) Meisn.

For previous introduction and description see No. 79210.

79980 to 79991—Continued.

79987. DAPHNE OLEOIDES Shreb. (*D. buxifolia* Vahl). **Olive daphne.**

For previous introduction and description see No. 79202.

79988 and 79989. DAPHNE PETRAEA Leyb. (*D. rupestris* Facch.).

79988. For previous introduction and description see No. 79212.

79989. Variety *grandiflora*. A large-flowered form.

79990. DAPHNE RETUSA Hemsl.

An evergreen densely branched shrub, native to western China, up to 3 feet high, with cuneate-oblong usually emarginate leaves from 1 to 3 inches long and fragrant, rosy purple flowers, white inside, about an inch across, in terminal heads.

79991. ERICA VAGANS L. Ericaceae. **Cornish heath.**

For previous introduction and description see No. 79158.

79992 to 80018.

From Bengal, India. Bulbs and roots purchased from R. B. and D. S. Pradhan, the Chandra Nursery. Received in February, 1929.

79992. AGAPANTHUS AFRICANUS (L.) Hoffmannsegg (*A. umbellatus* L'Her.). Liliaceae. **African lily.**

Variety *Minor moorianus*. A slender-leaved dwarf variety.

79993. CRINUM POWELLII Baker. Amaryllidaceae. **Powell crinum.**

A bulbous plant with about 20 spreading strap-shaped leaves 3 to 4 feet long and about 8 rose-colored flowers in large showy heads terminating a scape a foot or more high. It is considered to be a hybrid between *Crinum longifolium* and *C. moorei*.

79994 to 80008. HEDYCHIUM spp. Zingiberaceae. **Gingerlily.**

79994. HEDYCHIUM AURANTIACUM Wall.

A leafy alpine perennial about 5 feet high, with lanceolate leaves a foot or more long and 2 to 3 inches wide. The delicate orange flowers, with orange-yellow patches, are in a spike 6 inches to a foot long. It is native to the mountains of Nepal.

79995. HEDYCHIUM CHANDRABIRIANUM Hort.

A hybrid bearing fragrant white flowers with yellow patches very early in the season.

79996. HEDYCHIUM COCCINEUM Buch.-Ham.

Variety *angustifolium*. A gingerlike plant up to 5 feet high, with narrow leaves and dull brick-red flowers, shading to crimson, in a spike about 15 inches long.

79997 to 79999. HEDYCHIUM CORONARIUM Koen. **Common gingerlily.**

79997. Variety *chrysoleucum*. A variety in which the highly scented flower has a white lip with a large yellow patch in the center.

79992 to 80018—Continued.

79998. Variety *flavescens*. Flowers very fragrant and yellow with a deeper yellow patch.

79999. Variety *maximum*. A variety with a taller stem and white flowers with faint orange patches.

80000. HEDYCHIUM ELATUM R. Br.

A gingerlike plant 5 feet high, with narrow-oblong leaves a foot or more in length and white flowers marked with pink, about 2 inches long, in stout spikes nearly a foot high. It is native to the subtropical Himalayas.

80001. HEDYCHIUM GARDNERIANUM Roscoe. **India gingerlily.**

A tall tender leafy perennial, native to India, with narrow sessile leaves and a terminal spike of light-yellow flowers which are succeeded by showy red fruits.

80002. HEDYCHIUM GHALII Hort.

A hybrid with scented white flowers, marked with yellow, borne in a spike over a foot long.

80003. HEDYCHIUM GREENII W. W. Smith.

A leafy subtropical perennial, native to Bhutan, India, about 5 feet tall, with narrow-oblong leaves up to a foot long and red flowers in dense spikes about 5 inches long.

80004. HEDYCHIUM PRADHANII Hort.

A hybrid with spikes over a foot long, of mildly scented flowers which are white with a flesh-pink patch.

80005. HEDYCHIUM SAMSHERII Hort.

A hybrid with spikes about a foot long, of delicate orange flowers with a deeper patch.

80006. HEDYCHIUM SPICATUM ACUMINATUM Wall.

A leafy perennial, native to the Himalayas, up to 4 feet high, with narrow-oblong leaves a foot or more long, with pale-yellow or white flowers in a rather lax spike about a foot long.

80007. HEDYCHIUM THYRSIFORME J. E. Smith.

A tender leafy perennial, native to the Himalayas, usually about 5 feet high, with finely hairy leaves up to a foot long and 4 inches wide and mildly scented white flowers in a dense spike.

80008. HEDYCHIUM VILLOSUM Wall.

A leafy alpine perennial, native to the Himalayas, with narrow-oblong leaves, a foot or less long, pubescent above, and cream-colored flowers, about 2 inches long, in spikes 6 inches to a foot high.

80009. IRIS sp. Iridaceae.

An alpine iris from the Himalayas.

80010 to 80013. LILIUM spp. Liliaceae. **Lily.**

80010. LILIUM GIGANTEUM Wall. **Giant lily.**

For previous introduction and description see No. 78853.

79992 to 80018—Continued.

80011. LILIUM NEILGHERRENSE Wight.

A tender lily from the Neilgherry Hills, India, which resembles in a general way the hardy *L. regale* of China. It differs in its more slender, less widely open trumpet-shaped flowers which are greenish white without and pure white within.

80012. LILIUM SULPHUREUM Baker.

A handsome trumpet lily, native to northern Burma at such elevations that it is as far north as Philadelphia, with erect stems 6 to 7 feet high, and somewhat broader leaves than those of *L. neilgherrense*. It resembles more closely the northern *L. sargentiae*, and, like it, bears bulbils in the axils of the leaves. The yellowish white flowers are stained with brown on the outside and deeper yellow in the throat.

80013. LILIUM WALLICHIANUM Schult. f.

For previous introduction and description see No. 78854.

80014. NIOBE sp. (*Funkia* sp.). Liliaceae. **Plantainlily.**

The plantainlilies are herbaceous perennials, mostly native to China and Japan, with large masses of root leaves and white or bluish flowers in loose spikes.

79992 to 80018—Continued.

80015 to 80018. ZEPHYRANTHES spp. Amaryllidaceae. **Zephyrlily.**

80015. ZEPHYRANTHES CANDIDA (Lindl.) Herb. **Autumn zephyrlily.**

A subtropical bulbous plant with linear leaves a foot long, appearing with the flowers; these are white, often rose tinted on the outside, and about 2 inches long. It is native to Argentina.

80016. ZEPHYRANTHES ROBUSTA (Herb.) Baker.

A tender bulbous plant, native to Argentina, 6 to 9 inches high, with glaucous linear leaves which appear after the very large showy flowers. The latter are a delicate pink and about 2½ inches long.

80017. ZEPHYRANTHES ROSEA Lindl. **Pink zephyrlily.**

An autumn-blooming tender bulbous plant, native to Cuba, with linear bright-green leaves and rose-colored flowers an inch long, on a slender peduncle 4 to 6 inches long.

80018. ZEPHYRANTHES SULPHUREA Hort.

A tender bulbous plant with bright-yellow flowers.

Index of common and scientific names	43

INTRODUCTORY STATEMENT

The present inventory of the materials received between April 1 and June 30, 1929 (F. P. I. 80019–80810), is a record of the seeds and plants that came in through the Office of Foreign Plant Introduction by exchange, gift, and purchase. It does not in any way record the materials on hand, nor can it serve as a basis for request from experimenters.

To illustrate the point more specifically, the numerous palms may be cited. These were assembled for the specific purpose of growing plants for permanent planting at the United States Plant Introduction Garden at Chapman Field near Coconut Grove, Fla., to become a future source of seed. Plants from these seeds will not be available until they themselves produce seed, which in most cases will be a matter of many years. Other plants from which propagating material can be had more rapidly will be more rapidly available.

It is most unfortunate that these delays must occur or that this explanation should be given again and again, but inquiries for unavailable material are received too frequently to warrant its omission.

In addition to the considerable list of palms for testing in the South, there is a large group of *Ficus* spp. (80417–80421), not including the collection of fig varieties (80150–80153) from Tunis, and those (80294–80299) that came with a collection of grape cuttings (80300–80303) from Haifa, Palestine. These trees and shrubs are for careful testing in the extreme South as possible ornamentals.

This inventory records a collection of seeds (80060–80074) from South Yarra, Melbourne, Victoria, Australia, that contains several acacias, a eucalyptus, and several vines and trees not previously introduced.

Nos. 80076–80088 record a collection of seeds from the Lloyd Botanic Garden, Darjiling, India, including several barberries not yet well known in the United States, the difficult *Iris clarkei*, and several other ornamental plants not well established in this country.

Possibly more than anything else, the inventory is notable for the large collections which reflect the operations of W. F. Morse and P. H. Dorsett, now traveling in the Orient particularly to find new strains and varieties of soybeans that are expected to prove useful for American farms.

The botanical determinations have been made and the nomenclature determined by H. C. Skeels, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

OFFICE OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., May 10, 1930.

316—30——1

INVENTORY[1]

80019 to 80030. SOLANUM TUBEROSUM L. Solanaceae. **Potato.**

From Latvia. Seeds obtained through William Stuart, Bureau of Plant Industry. Received December, 1928. Numbered in May, 1929.

80019. No. 1.	80025. No. 7.
80020. No. 2.	80026. No. 8.
80021. No. 3.	80027. No. 9.
80022. No. 4.	80028. No. 10.
80023. No. 5.	80029. No. 11.
80024. No. 6.	80030. No. 12.

80031. CUCUMIS SATIVUS L. Cucurbitaceae. **Cucumber.**

From Keijo, Chosen. Seeds presented by John V. Lacy, Korea Council of Religious Education. Received May 2, 1929.

This cucumber is said to have a flavor superior to that of the ordinary varieties found in the United States. The fruit is slightly smaller, but in addition to the rich flavor it has small seeds and sometimes is almost seedless.

80032. LYCOPERSICON ESCULENTUM Mill. Solanaceae. **Tomato.**

From Tela, Honduras. Seeds presented by Alfred F. Butler, Horticulturist of the Research Department of the United Fruit Co. Received May 2, 1929.

Variety *pimpinellifolium*. From the La Fragua farm. A vigorous and comparatively hardy South American variety, sometimes called the "currant tomato," which grows wild in Peru and Brazil. The red fruits, somewhat larger than a large currant, are produced in racemes of eight or nine, and are excellent for preserving. This variety is quite common in Honduras.

For previous introduction see No. 56797.

80033. SPARTINA TOWNSENDI H. and J. Groves. Poaceae. **Grass.**

From Poole, Dorset, England. Plants purchased from Bob Cartridge, through H. N. Vinall, Bureau of Plant Industry. Received April 27, 1929.

Prof. F. W. Oliver, University College, London, regards *Spartina townsendi* as a probable hybrid between *S. stricta* and *S. alterniflora*. It appeared at Hythe, Southampton, England, about 1879, and has spread rapidly on the mud flats, reclaiming the land. It is eaten eagerly by cattle and pigs and is also promising as a paper-making material, but at present the cost of harvesting is large.

For previous introduction see No. 58986.

80034. PHYLLOSTACHYS EDULIS (Carr.) H. de Lehaie. Poaceae. **Bamboo.**

From Anderson, S. C. Rhizomes presented by Rufus Fant about April 15, 1926, and subsequently grown at the Barbour Lathrop Plant introduction Garden, Savannah, Ga. Numbered in May, 1929.

The rhizomes of this giant hairy-sheath edible bamboo were taken from the bamboo grove in the city cemetery at Anderson, one of several groves of this bamboo started by Mr. Fant from the increase from a plant he procured about 1890 or 1893 from an importer on the Pacific coast. It was understood to have come from Japan.

80035. PISTACIA INTEGERRIMA Stewart. Anacardiaceae. **Pistache.**

From Kew, England. Seeds presented by Dr. W. J. Bean, Curator, Royal Botanic Gardens. Received May 4, 1929.

A large tree up to 40 feet high, native to the warm slopes of the Himalayas in northern India. The aromatic pinnate leaves are made up of four to five pairs of lanceolate leaflets with an oblique base. The small inconspicuous flowers are in racemose clusters and are followed by the bright-green drupes which are about a fourth of an inch across. This tree yields the famous zebra wood of India.

For previous introduction see No. 36065.

---

[1] It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

80036 to 80040.

From Miyazaki, Japan. Cuttings presented by Shigeki Matsubara, Miyazaki College of Agriculture. Received May 6, 1929.

80036. PRUNUS SERRULATA Lindl. Amygdalaceae. **Oriental cherry.**

Aohada. A variety used extensively by the Japanese as a stock on which the better varieties are grafted.

80037 to 80040. VITIS VINIFERA L. Vitaceae. **European grape.**

80037. *Chikuma.* **80039.** *Kôshû.*

80038. *Enshin.* **80040.** *Zenkôji.*

80041. CASTANOPSIS sp. Fagaceae. **Evergreen chinquapin.**

From Sandakan, British North Borneo. Seeds presented by D. D. Wood, Conservator of Forests. Received April 22, 1929.

80042. BAUHINIA MALABARICA Roxb. Caesalpiniaceae.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received April 13, 1929.

A small erect bushy tree, with thick rigid deeply bifid somewhat heart-shaped leaves 2 to 3 inches long. The small white flowers are in dense sessile axillary clusters. The rather turgid, straight, firm, narrow pods are a foot long. Its native habitat is the mountainous country of northeastern India.

For previous introduction see No. 52746.

80043. SPARTINA TOWNSENDI H. and J. Groves. Poaceae. **Grass.**

From London, England. Seeds presented by Prof. F. W. Oliver, University College, through H. N. Vinall, Bureau of Plant Industry. Received May 6, 1929.

Seeds gathered from plants growing in the Netherlands which had originated in roots obtained from Poole, England, in 1925.

For previous introduction and description see No. 80033.

80044. PINUS INSULARIS Endl. Pinaceae. **Pine.**

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received April 24, 1929.

A tall 3-needle tropical pine which grows on the highlands in the Philippine Islands between altitudes of 3,000 and 8,000 feet. The flaccid slender leaves are 7 to 9 inches long, and the ovoid cones are about 3 inches long.

80045. (Undetermined.)

From West Africa. Seeds presented by G. W. Harley, Methodist Episcopal Mission, Ganta, Liberia. Received May 6, 1929.

A shrub or small tree growing in the interior of Liberia at an altitude of 1,000 feet. The fruits resemble the American cultivated black cherry in flavor, though they are much more acid, perhaps more closely approaching the flavor of the cranberry.

80046. IPOMOEA MACALUSOI Mattei. Convolvulaceae. **Morning-glory.**

From Italian Somaliland, Africa. Seeds collected by Dr. Mario Calvino, San Remo, Italy. Received May 7, 1929.

A very floriferous morning-glory, native to Italian Somaliland, with pubescent woody stems, broadly cordate villous leaves on long petioles, and axillary cymes of large campanulate orange-colored flowers margined with red.

80047. FICUS CONORA King. Moraceae. **Fig.**

From Summit, Canal Zone. Cuttings presented by J. E. Higgins, Director, Canal Zone Experiment Gardens. Received May 3, 1929.

A tree, native to New Guinea, with softly pubescent branchlets, lanceolate entire leaves 7 inches long, pubescent beneath, and turbinate fruits, an inch in diameter, borne on long flexuose leafless branches arising at the base of the trunk.

For previous introduction see No. 77658.

80048. CARICA CAULIFLORA Jacq. Papayaceae.

From Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus, Zacuapam, Huatusco, Vera Cruz. Received April 29, 1929.

This relative of the papaya is a tree 9 to 12 feet high, which is cultivated and probably native to Central America and Mexico. The trunk is crowned with large leaves that are cordate at the base and have the tip lobed about half way down into acuminate segments. The inconspicuous inodorous flowers are followed by ovoid yellow fruits 3 to 4 inches long.

80049. CYRILLA RACEMIFLORA L. Cyrillaceae. **Leatherwood.**

From Germantown, Philadelphia, Pa. Seeds purchased from Conyers B. Fleu. Received April 29, 1929.

A shrub or small tree up to 30 feet high, native from Virginia to Florida and Texas and extending to the West Indies and northern South America. The lustrous bright-green oblong leaves, 2 to 3 inches long, are evergreen in the South and turn to orange and scarlet in the northern deciduous form which is hardy as far north as New York. The small white flowers are borne in graceful racemes.

80050 and 80051. ORYZA SATIVA L. Poaceae. **Rice.**

From Pargannas District, Bengal, India. Seeds obtained through Robert Frazer, American Consul General, Calcutta, India. Received April 29, 1929.

80050. *Dakhina Patnai.* A variety grown in the saline southern tracts of Pargannas District, especially in the Sunderbuns, the delta of the Ganges.

80051. *Uttara Patnai.* A sweet variety grown in the northern tract of Pargannas District.

80052. DEGUELIA TRIFOLIATA (Lour.) Taub. (*Derris uliginosa* Benth.). Fabaceae.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director of the Java Botanic Gardens. Received April 24, 1929.

80052—Continued.

A large, handsome, leguminous woody climber native to Burma and the East Indies. The compound leaves are a foot or more long, with 9 to 13 leaflets, and the bright-red flowers, three-fourths of an inch long, are in lax racemes. The roots, which yield an effective insecticide, are used in India as a fish poison.

For previous introduction see No. 69379.

80053. BARLERIA LUPULINA Lindl. Acanthaceae.

From St. Croix, Virgin Islands. Seeds presented by J. B. Thompson, Director of the Agricultural Experiment Station of the Office of Experiment Stations of the United States Department of Agriculture. Received May 3, 1929.

A compact bush, about 2 feet high, with long narrow dark-green leaves having rose-colored midribs and yellow flowers. It seeds freely, withstands dry weather remarkably well, is easily grown from soft wood cuttings, and makes a very ornamental hedge. Because of its seeding habits it is a bad weed if allowed to spread. It might be crossed with *Barleria cristata* to get a seedless form that would withstand dry weather better and be less subject to scale than the latter.

80054. PRIMULA ANISODORA Balf. and Forr. Primulaceae. **Primrose.**

From Ipswich, England. Seeds purchased from Thompson & Morgan. Received May 3, 1929.

A primrose about a foot and a half high, native to Yunnan, China, with broadly oval membranous leaves up to 8 inches long and whorls of aromatic flowers which are rich maroon-crimson with a bright-yellow zone. This primrose belongs to the Candelabra section.

80055 to 80059.

From Enfield, Middlesex, England. Plants purchased from Perry's Hardy Plant Farm. Received April 6, 1929.

80055 to 80058. CHRYSANTHEMUM MAXIMUM Ramond. Asteraceae. **Pyrenees chrysanthemum.**

80055. *Conqueror.*

80056. *Laciniata.*

80057. *Moonlight.*

80058. *Plenum.*

80059. HELENIUM AUTUMNALE L. Asteraceae. **Sneezeweed.**

Baronne de Linden.

80060 to 80074.

From South Yarra, Melbourne, Victoria, Australia. Seeds presented by F. J. Rae, Director of the Melbourne Botanic Gardens. Received April 22, 1929.

80060 to 80064. ACACIA spp. Mimosaceae.

80060. ACACIA FALCATA Willd. **Burra.**

An evergreen tree, 20 to 30 feet high, with few slender branches and small yellow flowers in dainty spherical clusters on racemes borne in the axils of the dark glossy green falcate leaves. The timber is hard, heavy, and tough.

For previous introduction see No. 75589.

80060 to 80074—Continued.

80061. ACACIA LONGIFOLIA SOPHORAE (Labill.) F. Muell.

A yellow-flowered, rapid-growing evergreen shrub or small tree, 15 to 20 feet high, excellent for preventing the encroachments of the sea along sandy coasts. It frequents the seacoast of southeastern Australia from southern Queensland to South Australia, and also Tasmania.

For previous introduction see No. 56572.

80062. ACACIA MAIDENII F. Muell.

A tall evergreen shrub or tree up to 50 feet high, native to New South Wales, with lanceolate-falcate phyllodes 4 to 6 inches long, axillary spikes an inch long of bright-yellow flowers followed by narrow twisted pods.

80063. ACACIA RUPICOLA F. Muell.

A glabrous evergreen shrub usually about 5 feet high, native to Victoria and South Australia, with angular branchlets, rigid linear sharp-pointed phyllodes half an inch long, and yellow flowers in small globular heads.

80064. ACACIA SALICINA Lindl. (*A. ligulata* A. Cunn.).

A tall shrub or small tree, native to Australia, with pendulous branches and willowlike phyllodes up to 5 inches long. The yellow flowers are in short racemes of two or three globular heads.

For previous introduction see No. 75606.

80065. CALLICOMA SERRATIFOLIA Andrews. Cunoniaceae.

A tall evergreen shrub or tree up to 40 feet high, native to New South Wales and Queensland, with opposite coarsely serrate leaves 4 inches long, white or rusty underneath, and dense globular heads of small yellowish flowers in terminal panicles.

For previous introduction see No. 76933.

80066. EUCALYPTUS CORYMBOSA J. E. Smith (*E. gummifera* Hort.). Myrtaceae.

A medium-sized evergreen tree native to Australia, with leathery lanceolate leaves and large corymbs of fragrant yellowish white flowers.

For previous introduction see No. 75621.

80067. EUCALYPTUS SIDEROPHLOIA Benth. Myrtaceae. **Broadleaf ironbark.**

A tall evergreen tree, native to Queensland and New South Wales, with hard persistent rough bark, thick lanceolate-falcate leaves 3 to 6 inches long, and terminal corymbose panicles of small white flowers followed by ovoid fruits one-fourth of an inch long. The heavy durable wood is used for wagon work, tool handles, and building purposes.

80068. GREVILLEA HILLIANA F. Muell. Proteaceae.

A large evergreen tree 60 feet or less high, native to Australia, with leaves varying from elliptical and entire, 6 to 8 inches long, to a foot long and deeply pinnatifid with five or seven lanceolate lobes. The small red flowers are in

80060 to 80074—Continued.

dense cylindrical racemes 4 to 8 inches long.

For previous introduction see No. 40044.

80069. HALFORDIA DRUPIFERA F. Muell. Rutaceae.

A small evergreen tree, native to Australia, with angular branchlets, lanceolate leaves 3 to 5 inches long, and terminal paniculate clusters of small white flowers followed by purple ovoid drupes about half an inch long.

80070. KENNEDIA RUBICUNDA (Schneev.) Vent. Fabaceae.

A climbing evergreen leguminous shrub with dark-green leaves and large attractive dark-red flowers. Of possible value as a forage plant and for green manure.

80071. LOMATIA FRAXINIFOLIA F. Muell. Proteaceae.

A tall evergreen shrub or small tree, native to Queensland, with pinnate leaves made up of three to seven coriaceous ovate coarsely toothed leaflets 2 to 4 inches long, and small creamy white flowers in racemes 6 to 8 inches long or gathered together to form a large terminal panicle.

80072. SWAINSONA GALEGIFOLIA (Andrews) R. Br. (*S. coronillifolia* Salisb.). Fabaceae. **Darling pea.**

A low shrubby perennial, native to Australia, with compound vetchlike leaves and scarlet-orange flowers borne on long axillary stems. Reported to be poisonous to livestock.

For previous introduction see No. 77447.

80073. SYNCARPIA GLOMULIFERA (J. E. Smith) Niedenzu. Myrtaceae.

A tall slender evergreen tree, native to Australia, with broadly ovate leaves 2 to 3 inches long, appearing as if in whorls from two pairs being close together. The small white flowers are in globular clusters of 6 to 10 on short peduncles at the base of the new shoots. The wood is valuable for posts and other underground construction work.

For previous introduction see No. 75572.

80074. TRICONDYLUS MYRICOIDES (Gaertn. f.) Kuntze (*Lomatia longifolia* R. Br.). Proteaceae.

An evergreen shrub 8 to 10 feet high, native to New South Wales and Victoria, with very narrow lance-shaped leaves, and terminal or axillary racemes of creamy white flowers. The fruit is an oval-oblong follicle, and the seeds are winged. The wood is light colored and very hard, with a beautiful small figure, well suited for turnery.

For previous introduction see No. 43580.

80075. CHAYOTA EDULIS Jacq. (*Sechium edule* Swartz.). Cucurbitaceae. **Chayote.**

From Guatemala. Fruit presented by Wilson Popenoe, Research Department of the United Fruit Co., Tela, Honduras. Received November 26, 1928. Numbered in April, 1929.

No. 1. A large green variety.

80076 to 80088.

From Darjiling, India. Seeds presented by J. E. Leslie, Curator, Lloyd Botanic Garden. Received April 17, 1929.

80076 to 80078. BERBERIS spp. Berberidaceae. **Barberry.**

80076. BERBERIS INSIGNIS Hook. f. and Thoms.

A beautiful bush of erect habit, with very few spines and large, shining hollylike evergreen leaves 3 to 7 inches long. The golden-yellow flowers are borne in clusters of about 15 and are followed by ovoid black berries. It is native to the eastern Himalayas.

For previous introduction see No. 60637.

80077. BERBERIS UMBELLATA Wall.

A hardy half-evergreen shrub, native to the Himalayas, about 3 feet high, with reddish brown grooved branchlets, obovate leaves an inch long, and umbellike racemes of yellow flowers which are followed by red berries.

For previous introduction see No. 78918.

80078. BERBERIS WALLICHIANA DC.

A narrow-leaved, evergreen barberry from temperate regions in the Himalayas, where it ascends to about 10,000 feet. The shining black-purple berries are produced in dense clusters.

For previous introduction see No. 65756.

80079. ERIOBOTRYA HOOKERIANA Decaisne. Malaceae.

A small stout-branched tree native to the eastern Himalayas at altitudes of 6,500 to 8,000 feet. It has thick leathery oblong sharply toothed leaves up to a foot long, large panicles of small white flowers, and egg-shaped yellow fruits about three-fourths of an inch long.

For previous introduction see No. 65252.

80080 to 80082. FICUS spp. Moraceae. **Fig.**

80080. FICUS BENJAMINA L. **Benjamin fig.**

A large tree, up to 80 feet high, native to India, with thin coriaceous ovate leaves 3 inches long and axillary pairs of small globose blood-red fruits.

For previous introduction see No. 67701.

80081. FICUS HISPIDA L. f.

A shrub or small tree up to 30 feet high, native to southeastern Asia, with hairy branches, ovate to obovate obscurely toothed leaves 8 inches long, and turbinate green fruits, nearly an inch in diameter, produced in fascicles on the old wood.

For previous introduction see No. 54892.

80082. FICUS HOOKERI Miquel.

A subtropical tree native to the temperate Himalayas of northeastern India. The oval leaves are up to 11 inches in length.

For previous introduction see No. 68336.

80076 to 80088—Continued.

80083. ILEX INSIGNIS Hook. f. Aquifoliaceae. **Holly.**

An attractive holly native to the Sikkim Himalayas, where it grows at an altitude of 7,000 feet. It forms a small tree or shrub with thick, grooved branches which are purplish when young. The dark-green leathery leaves are pinnately lobed, with the lobes spine tipped and alternately raised and depressed, so that there appears to be a double row of spiny lobes on each side. This holly has proved hardy in Ireland and may be suited for growing in the Gulf States and southern California.

For previous introduction see No. 65256.

80084. IRIS CLARKEI Baker. Iridaceae. **Clarke iris.**

A curiously local iris native to the Himalayas in a circumscribed area in the Sikkim and Bhutan region at altitudes between 6,000 and 11,000 feet, in ground that is swampy half the year and frozen hard under snow during most of the remaining months. The narrow leaves, 2 feet long, droop at the tips; the upper surface is polished and shiny, the under side glaucescent. The solid stem is 2 feet long, and bears one or two lateral heads. The falls are blue-purple, blotched with white, and are reflexed laterally. The upper part of the haft is marked with yellow. The reddish purple, lanceolate standards are poised almost horizontally. The styles form the highest point of the flowers; they are keeled, very convex, and 1½ inches long.

For previous introduction see No. 76251.

80085. MEIBOMIA TILIAEFOLIA (D. Don) Kuntze (*Desmodium tiliaefolium* Don). Fabaceae.

A large deciduous shrub native to the Himalayas at altitudes ranging from 3,000 to 9,000 feet. It has slender terete branches, thick green trifoliolate leaves about 4 inches long, and red flowers in lax racemes often a foot long. The bark yields an excellent fiber extensively employed in rope making; the leaves are good fodder; and the roots are used medicinally as a tonic and diuretic.

For previous introduction see No. 47726.

80086. MELOTHRIA ODORATA Hook. f. and Thoms. Cucurbitaceae.

A climbing herbaceous plant, native to the northwestern Himalayas at an altitude of 7,000 feet, with more or less heart-shaped leaves, white axillary flowers, and white indehiscent fruits.

For previous introduction see No. 47729.

80087. STYRAX HOOKERI C. B. Clarke. Styracaceae. **Snowbell.**

A tree often 40 feet high, native to Sikkim and Bhutan at altitudes ranging from 6,000 to 7,000 feet. The white flowers, an inch long, are tomentose outside, and the young branches are stellately pubescent. The wood is white, close-grained, and moderately hard.

For previous introduction see No. 60656.

80076 to 80088—Continued.

80088. TSUGA DUMOSA (D. Don) Eichler (*T. brunoniana* Carr.). Pinaceae. **Hemlock.**

A tall evergreen tree, sometimes 120 feet high, native to northeastern India, but said to be not quite hardy in England. It has spreading branches and pendulous branchlets. The wood is soft and white, and the bark is used for roofing.

For previous introduction see No. 47819.

80089. AMYGDALUS PERSICA L. (*Prunus persica* Stokes). Amygdalaceae. **Peach.**

From China. Seeds obtained through Guy M. Walker, Laurel, Miss. Received May 9, 1929.

From the Imperial Peach Orchards. The fruits are pale green when ripe, with none of the blush or yellow that is peculiar to other peaches; the flavor is delicious.

80090 and 80091.

From Lavras, Minas Geraes, Brazil. Seeds presented by B. H. Hunnicutt, Instituto Gammon. Received May 10, 1929.

80090. DOLICHOLUS PHASEOLOIDES (Swartz) Kuntze (*Rhynchosia phaseoloides* DC.). Fabaceae. **Rosarybean.**

A slender climber with trifoliolate leaves, borne upon slender wiry stems, which suggest those of the common bean (Phaseolus). The plant is of interest chiefly for the small, bright-red seeds with a black eye which are strikingly similar to those of *Abrus precatorius*, the *crab's eye* of the West Indies.

For previous introduction see No. 51027.

80091. ORMOSIA MONOSPERMA (Swartz) Urban. Fabaceae. **Necklacetree.**

The necklacetree is so called because its beans are the size of large beads, three-fourths of an inch long, and of a brilliant scarlet blotched with the deepest brown. The tree comes from tropical South America and fruits during the winter months.

For previous introduction see No. 79542.

80092. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Mayaguez, Porto Rico. Cuttings presented by Robert L. Davis, Agronomist of the Porto Rico Agricultural Experiment Station. Received May 15, 1929.

Mayaguez 51.

80093. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

From Kief, Ukraine, Union of Socialistic Soviet Republics. Seeds presented by A. Kol, Chief of the Bureau of Introduction, Institute of Applied Botany, Leningrad. Received May 18, 1929.

No. 93776. An early-maturing variety from the Kief Experiment Station.

80094. CHAYOTA EDULIS Jacq. (*Sechium edule* Swartz). Cucurbitaceae. **Chayote.**

From Guatemala. Fruits presented by Wilson Popenoe, Research Department of the United Fruit Co., Tela, Honduras. Received November 26, 1928. Numbered in April, 1929.

No. 2. A medium-sized green variety.

80095. ILEX PURPUREA Hassk. Aquifoliaceae.

Plants growing at the Barbour Lathrop Plant Introduction Garden, Savannah, Ga. Numbered in June, 1929.

A handsome evergreen tree or large shrub native to Japan and central China. The leaves are dark green, glabrous, elliptic-ovate to oblong-lanceolate, crenate-serrulate, and 2 to 3 inches long. In Savannah, Ga., the new leaves appear in late March or early April and the flowers a month later. The red fruits are about one-third of an inch in diameter and are in clusters of two to five on a short peduncle.

80096. PINUS ARMANDI Franch. Pinaceae. **Armand pine.**

From China. Seeds collected by J. F. Rock, National Geographic Society, Washington, D. C. Received April 29, 1929.

A tree 70 to 90 feet high with a trunk 4 feet in diameter, which grows in western China on well-drained, moist mountain slopes at altitudes of 8,000 to 10,000 feet. The edible seeds are sold in the markets.

For previous introduction see No. 58538.

80097 to 80099. CHAYOTA EDULIS Jacq. (*Sechium edule* Swartz). Cucurbitaceae. **Chayote.**

From Guatemala. Fruits presented by Wilson Popenoe, Research Department of the United Fruit Co., Tela, Honduras. Received November 26, 1928. Numbered in April, 1929.

80097. No. 5. A medium-sized yellowish green variety which is very spiny.

80098. No. 6. A large white spiny variety.

80099. No. 7. A large yellowish green variety which is very spiny.

80100. POLYMNIA EDULIS Wedd. Asteraceae.

From Paris, France. Roots presented by Dr. M. Lemoine. Received April 2, 1929.

A sunflowerlike plant, native to the Andes near Bogota, Colombia, with tall stems, large leaves which are eaten by cattle, and yellow flowers. The edible tubers are white, almost transparent, and very sweet.

80101. ESCALLONIA sp. Escalloniaceae.

From Glasnevin, Dublin, Ireland. Plants presented by J. W. Besant, Botanic Gardens, Department of Agriculture. Received April 5, 1929.

C. F. Ball. A red-flowered hybrid made by C. F. Ball at the Botanic Gardens, Glasnevin. It is believed to be a cross between *Escallonia rubra* and *E. macrantha.*

80102. ASTRAGALUS sp. Fabaceae. **Milkvetch.**

From Germany. Seeds presented by Carl Froitzheim, Callahan, Fla. Received April 2, 1929.

A plant which grows in the woods near the Rhine River in Germany. It resembles clover when in bloom, but the leaves are more like vetch. The stems are 2 to 3 feet long, with more than 20 on a plant.

80103. PINUS MERKUSII Jungh. and De Vr. Pinaceae. **Pine.**

From Baleg, Sumatra. Seeds presented by A. Bircher, Middle Egypt Botanic Station, El Saff, Egypt. Received April 2, 1929.

A giant pine which covers a vast area of the poor volcanic soil in northern Sumatra. It grows to a height of 240 feet, is 4 feet in diameter, and yields a superior grade of turpentine and resin.

For previous introduction see No. 67588.

80104. TIGRIDIA PAVONIA (L. f.) Ker. Iridaceae. **Common tigerflower.**

From Newry, Ireland. Bulbs purchased from T. Smith, Daisy Hill Nursery. Received April 5, 1929.

Variety *alba immaculata.* A form with pure white flowers.

80105. CLEMATIS ARMANDI Franch. Ranunculaceae. **Armand clematis.**

From Exeter, England. Plants purchased from Robert Veitch & Son, The Royal Nurseries. Received April 4, 1929.

A tender woody Chinese evergreen vine with lustrous coriaceous trifoliolate leaves with entire lanceolate leaflets, panicles of white flowers 2 inches across, and fruits with long plumose styles.

For previous introduction see No. 76013.

80106. PINUS NIGRA MAURITANICA Maire and Peyer. Pinaceae. **Pine.**

From Algiers, Algeria, Africa. Seeds presented by Dr. R. Maire, Jardin Botanique, Université d'Alger. Received April 3, 1929.

A variety of the Austrian pine distinguished by its smaller size, smaller cones, and longer leaves. It is native to Morocco south of Djuradjura.

80107. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Rio Piedras, Porto Rico. Plants presented by R. Fernandez Garcia, Director of the Insular Experiment Station of the Department of Agriculture and Labor. Received April 10, 1929.

D–625.

80108 to 80116. FRAGARIA spp. Rosaceae. **Strawberry.**

From Breda, Netherlands. Plants presented by Dr. I. Rietsema. Received April 8, 1929.

80108. FRAGARIA sp.

Deutsch Evern.

80109. FRAGARIA sp.

Jucunda.

80108 to 80116—Continued.

80110. FRAGARIA sp.

Laxton Noble.

80111. FRAGARIA sp.

Madame Kooy.

80112. FRAGARIA sp.

Mandan Lefeber.

80113. FRAGARIA sp.

Oberschlesien.

80114. FRAGARIA sp.

Scarlet.

80115. FRAGARIA sp.

Sieger.

80116. FRAGARIA sp.

Sweet French.

80117. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

From Tarnab, Peshawar, Northwest Frontier Province, India. Seeds presented by A. M. Mustafa, Agricultural Officer, Northwest Frontier Province, through Renwick S. McNiece, American Consul, Karachi. Received April 10, 1929.

A variety, locally developed, of unusual merit.

80118. DIOSPYROS KAKI L. f. Diospyraceae. **Kaki persimmon.**

From Japan. Seeds obtained through W. T. Swingle, Bureau of Plant Industry. Received April 10, 1929.

The so-called *Yamagaki*, which is probably a semiwild form of the cultivated Kaki persimmon (*Diospyros kaki*). It is widely used in Japan as a stock for the cultivated varieties of the Kaki persimmon. When Doctor Swingle was in Japan he was assured repeatedly that this is the best stock for persimmons, and for some varieties it is the only one that can be used successfully.

80119 and 80120.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received April 2, 1929.

80119. CLEMATIS GOURIANA Roxb. Ranunculaceae.

Baklo. A tall-climbing Himalayan drought-resistant vine with pinnate leaves of five to seven ovate papery leaflets 4 inches long and yellowish white flowers an inch across in large panicles.

For previous introduction see No. 68332.

80120. FLACOURTIA RUKAM Zoll. and Mor. Flacourtiaceae.

A handsome unarmed Malayan drought-resistant tree with leathery leaves and edible berries about the size of cherries, which are said to make excellent preserves.

80121. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. **Six-rowed barley.**

From Leningrad, Union of Socialistic Soviet Republics. Seeds presented by A. Kol, Chief of the Bureau of Introduction, Institute of Applied Botany, through H. V. Harlan, Bureau of Plant Industry. Received April 15, 1929.

80121—Continued.

No. 1716. July 7, 1927. Variety *Dundar beyi.* This variety was collected by Doctor Zhukovsky while on an expedition to Asia Minor, 1925 to 1927.

80122. MEROPE ANGULATA (Willd.) Swingle (*Citrus angulata* Willd.) Rutaceae. **Kigerukkan.**

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director, Botanic Gardens, through W. T. Swingle, Bureau of Plant Industry. Received April 15, 1929.

A small spiny tree native to tidal swamps in southern Java. The thick leathery simple leaves are alternate, and the small white flowers are in axillary pairs. The fruits are 1 to 2 inches long and are triangular in cross section, about an inch on each side. Of possible value as a stock for citrus fruits.

For previous introduction see No. 41452.

80123 to 80125. VITIS spp. Vitaceae. **Grape.**

From Wiener Neustadt, Austria. Cuttings presented by Kober, Kohlfürst & Gesellschaft. Received April 17, 1929.

80123. VITIS BERLANDIERI × RIPARIA.

Kober 5 BB.

80124 and 80125. VITIS RUPESTRIS Scheele. **Sand grape.**

80124. *Rupestris Goethe No. 9.*

80125. *Rupestris Schwarzmann.*

80126 to 80139.

From Palmero, Sicily. Plants purchased from Cav. Santarella, Direttore Della Societa di Acclimazione. Received April 6, 1929.

80126 and 80127. AMYGDALUS COMMUNIS L. (*Prunus amygdalus* Stokes). Amygdalaceae. **Almond.**

80126. *Prof. Vita.*

80127. *Cavaliera.*

80128 to 80134. AMYGDALUS PERSICA L. (*Prunus persica* Stokes). Amygdalaceae. **Peach.**

80128. *Agostina.*

80129. *Carinese.*

80130. *Cotogna di S. Stefano.*

80131. *Fragolara.*

80132. *Sanguigna.*

80133. *Spaccarella di Sicilia.*

80134. *Do St. Anna.*

80135 to 80138. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

80135. *Di San Giulianao.*

80136. *A Mandorla dolce.*

80137. *Regina.*

80138. *Re Umberto.*

80139. PRUNUS CERASUS L. Amygdalaceae. **Sour cherry.**

Amarena comune.

80140 to 80143. FRAGARIA spp. Rosaceae. **Strawberry.**

From Histon, Cambridge, England. Plants obtained from Chivers & Sons, through G. M. Darrow, Bureau of Plant Industry. Received April 15, 1929.

80140. FRAGARIA sp.

Madame Koot.

80141. FRAGARIA sp.

Madame La Febera.

80142. FRAGARIA sp.

Paxton.

80143. FRAGARIA sp.

Royal Sovereign.

80144. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Trinidad, British West Indies. Cuttings presented by Dr. W. G. Freeman, Director of Agriculture. Received April 13, 1929.

D–625.

80145 and 80146. CYNODON DACTYLON (L.) Pers. Poaceae. **Bermuda grass.**

From Kenilworth, near Cape Town, Union of South Africa. Sod presented by Charles N. Murray. Received April 8, 1929.

80145. *Karroo.* A variety which derives its name from the district from which it comes. It is a finer variety than *Royal Cape Strain.*

80146. *Royal Cape Strain.* A coarse variety which has been the standard turf on greens since 1904 in Kenilworth. Its merits are that it is very hard, is drought resistant in a high degree, is never scorched by the hottest sun, stands unlimited wear, and gives a true putting surface which does not develop nap.

80147. CITRUS NOBILIS DELICIOSA (Ten.) Swingle. Rutaceae. **Mandarin orange.**

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received April 18, 1929.

Seeds taken by Mr. Wester from the two best mandarin oranges ever eaten by him.

80148. SESBANIA CANNABINA (Retz.) Poir. Fabaceae.

From Peradeniya, Ceylon. Seeds purchased from the Manager of the Publication Depot and Central Seed Store of the Department of Agriculture. Received April 19, 1929.

A stout annual plant, native to Ceylon, with prickly branches, compound leaves a foot long made up of 40 to 80 linear leaflets, and subsessile racemes of 3 or 4 yellow flowers about a quarter of an inch long.

For previous introduction see No. 76103.

80149. PHYLLOSTACHYS sp. Poaceae. **Bamboo.**

From Avery Island, La. Plants presented by E. A. McIlhenny, at the request of R. A. Young, Bureau of Plant Industry. Received April 22, 1929.

80149—Continued.

This is said by Mr. McIlhenny in his letter dated November 19, 1929, to be one (which one is not known) of the two Chinese bamboos sent to him under F. P. I. Nos. 23242 and 23243 from Chico, Calif., April 3, 1914, by the Department of Agriculture. In 1929 one of the tallest culms at Avery Island was 21 feet high. The plants were in poor soil and have grown without attention, according to Mr. McIlhenny. They appear to belong unmistakably to Phyllostachys, though the sheaths of the young shoots are so different as at first to suggest the possibility of some other genus.

80150 to 80153. FICUS CARICA L. Moraceae. **Common fig.**

From Ariana, Tunis, Africa. Scions presented by F. Bœuf, Chef du Service Botanique. Received April 17, 1929.

80150. *Angel Djemel.*

80151. *Bayoudi.*

80152. *Bidhel atrous.*

80153. *Bidhel Djemmal.*

80154. PYRUS sp. Malaceae. **Pear.**

From Erfurt, Germany. Trees purchased from J. C. Schmidt. Received April 19, 1929.

Krebs Birne. A variety said to ripen in October and to have red flesh.

80155 to 80167. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From San Juan, Porto Rico. Seeds presented by O. W. Barrett, Agricultural Director, Department of Agriculture, through Roland McKee, Bureau of Plant Industry. Received April 17, 1929.

80155. *Cólmenos.*

80156. *New Era.*

80157. No. 8. *Venezuela.*

80158. No. 813. *Dominica.*

80159. No. 4427.

80160. No. 4445.

80161. No. 4464. *Cadios.*

80162. No. 4651. *Yaguis.*

80163. No. 4652.

80164. No. 4656.

80165. No. 4657.

80166. No. 4659.

80167. No. 4679.

80168. SOLANUM TUBEROSUM L. Solanaceae. **Potato.**

From Lamlash, Scotland. Tubers presented by Donald MacKelvie. Received April 22, 1929.

Arran Banner.

80169. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Santiago de las Vegas, Cuba. Cuttings presented by Dr. Gonzalo Fortún, Director de la Estación Experimental Agronómica. Received April 23, 1929.

D–625.

80170 to 80193.

From the British West Indies. Seeds collected by Allison V. Armour. Received April 10, 1929.

Unless otherwise stated, the following material is from the Trinidad Botanic Gardens.

80170. ACANTHORHIZA ACULEATA (Liebm.) Wendl. Phoenicaceae. **Rootspine palm.**

A palm, native to Mexico, with a trunk 30 to 40 feet high, armed at the base with spines formed of the thickened aerial roots. The orbicular fan-shaped leaves are about 5 feet in diameter on stalks 4 feet long; the flowers are dark creamy pink.

For previous introduction see No. 45906.

80171. ARCHONTOPHOENIX ALEXANDRAE (F. Muell.) Wendl. and Drude (*Ptychosperma alexandrae* F. Muell.). Phoenicaceae. **Palm.**

A palm with a tall stout trunk up to 80 feet high and pinnately segmented leaves several feet long which are bright green above and whitish underneath. It is native to Australia.

For previous introduction see No. 40069.

80172. ARECA CATECHU L. Phoenicaceae. **Betel palm.**

A palm, native to tropical Asia, up to 100 feet high, with a large crown of pinnate leaves 4 to 6 feet long. The orange or scarlet ovoid fruits, 1 to 2 inches long, furnish the betel nuts which are so generally used in the Orient for chewing.

For previous introduction see No. 66201.

80173. ARTOCARPUS COMMUNIS Forst. Moraceae. **Breadnut.**

A tree, native to the East Indies, 30 to 40 feet high, with viscid milky juice and leathery ovate leaves 3 feet long, entire at the base but divided above into three to nine lobes. The large fruits, 4 to 6 inches in diameter, are often seedless, but in this variety the seeds are present and are much the size and flavor of chestnuts.

For previous introduction see No. 61269.

80174. ASSONIA MASTERSII (Hook.) Kuntze (*Dombeya mastersii* Hook.). Sterculiaceae.

St. Vincent Botanic Gardens. A shrub 4 to 5 feet high, with serrate heart-shaped velvety leaves and many-flowered umbels of fragrant white flowers. It is native to tropical Africa.

80175. ATTALEA SPECTABILIS Mart. Phoenicaceae. **Palm.**

A nearly stemless palm with large pinnate erect or spreading leaves up to 21 feet long. It is native to the banks of the Amazon in Brazil.

For previous introduction see No. 79560.

80176. BARRINGTONIA ASIATICA (L.) Kurz (*B. speciosa* Forst.). Lecythidaceae.

A large handsome tree, 50 feet high, with thick leathery bright-green leaves a foot long, racemes of large showy flowers having white petals, and crimson-tipped stamens resembling a brush. The smooth

80170 to 80193—Continued.

shining black fruits are shaped like a 4-sided pyramid and are 3 to 4 inches long on each side. It is native to the East Indies.

For previous introduction see No. 73226.

80177. BORASSUS FLABELLIFER L. Phoenicaceae. **Palmyra palm.**

A palm, native to tropical Africa, which is 60 to 70 feet high, with a crown of palmate leaves, 8 to 10 feet long and broader than long, divided to the middle into sword-shaped segments. The broadly ovoid orange-colored fruits are about half the size of a coconut.

For previous introduction see No. 78618.

80178. CARICA PAPAYA L. Papayaceae. **Papaya.**

From Santo Domingo. A variety producing large, round to oblong fruits with a very fine flavor.

80179. CARYOTA MITIS Lour. Phoenicaceae. **Fishtail palm.**

St. Vincent Botanic Gardens. A palm, native to the Malay Peninsula, 15 to 25 feet high, which sends out suckers from the base. The pinnate leaves, 6 to 9 feet long, are divided into wedge-shaped segments, and the globular purple fruits are about the size of a cherry.

For previous introduction see No. 68111.

80180. DIALIUM GUINEENSE Willd. Caesalpiniaceae. **Velvet tamarind.**

St. Vincent Botanic Gardens. A tall pinnate-leaved tree, native to West Africa, with small, dark-brown, velvety edible fruits which are in large clusters. The fruits are about the size of small filberts, and the thin brittle shell incloses one or two seeds surrounded by a mildly acid farinaceous pulp, used in the preparation of pickles and in other ways. The timber is a handsome dark red.

For previous introduction see No. 73846.

80181. ELAEIS GUINEENSIS Jacq. Phoenicaceae. **African oil palm.**

A stout palm, native to tropical Africa, 20 to 30 feet high, with a deeply ringed trunk and a crown of pinnate leaves 10 to 15 feet long. The seeds are a source of oil, used not only in foods but also in making soaps.

80182. HYOPHORBE VERSCHAFFELTI Wendl. Phoenicaceae. **Spindle palm.**

A palm, native to the island of Mauritius, with a trunk up to 30 feet high, having a buige about half way up. The crown is made up of short-petioled pinnate leaves which have a yellow band extending from the leaf sheath to the tip of the blade.

80183. INODES BLACKBURNIANA (Glazebr.) O. F. Cook (*Sabal umbraculifera* Mart.). Phoenicaceae. **Blackburn palmetto.**

A palm, native to the West Indies, with a spineless trunk, between 30 and 40 feet high, which is thickened in the middle, large round fan-shaped leaves, and pear-shaped fruits an inch and a half long.

80170 to 80193—Continued.

For previous introduction see No. 62105.

80184. LAGERSTROEMIA SPECIOSA (Muench.) Pers. (*L. flos-reginae* Retz.). Lythraceae. **Queen crapemyrtle.**

Tobago Gardens. An ornamental tropical shrub or tree up to 50 feet high, native to West Africa, with panicles of large pink or purple flowers.

For previous introduction see No. 73736.

80185. LATANIA COMMERSONII Gmel. Phoenicaceae.

A tall spineless palm, native to the island of Mauritius, 30 to 40 feet high, with palmate leaves 5 to 6 feet long, having a red petiole and with the veins and margins tinged with red.

For previous introduction see No. 68118.

80186. LIVISTONA AUSTRALIS (R. Br.) Mart. Phoenicaceae. **Australian fan palm.**

A tall slender palm, native to Australia, 100 to 130 feet high and 12 to 18 inches in diameter, with a dense crown of circular leaves, 3 to 4 feet in diameter, divided nearly to the base into narrow plicate segments. The moderately hard light-colored wood is occasionally used for light construction; the leaves are used for baskets; and the unexpanded fronds, after being dipped in boiling water, are dried, shredded, and the fiber used in making hats resembling Panama hats.

For previous introduction see No. 77971.

80187. LIVISTONA CHINENSIS R. Br. Phoenicaceae. **Chinese fan palm.**

A palm, native to China, with a short thick trunk up to 6 feet high and a foot thick, having a crown of many reniform palmately divided leaves 4 to 6 feet across on petioles about 5 feet long, which are armed below the middle with recurved brown spines more than an inch in length.

80188. MARTINEZIA CORALLINA Mart. Phoenicaceae. **Palm.**

A pinnate-leaved palm about 20 feet high, with a spiny stem and coral-red fruits. It is native to Martinique.

80189. PORTLANDIA GRANDIFLORA L. Rubiaceae.

A tropical shrub up to 15 feet high, native to the West Indies, with opposite elliptical leathery leaves and axillary fragrant white flowers which are funnelform and 5 inches long.

80190. PTYCHOSPERMA MACARTHURI Wendl. (*Kentia macarthuri* Hort.). Phoenicaceae. **MacArthur palm.**

A palm, native to Australia, which grows to a height of 30 feet, but is usually a dwarf in cultivation; it suckers from the base, making a bushy plant. The smooth ringed trunk is crowned by a dense cluster of pinnate leaves with arching leaflets 6 to 9 inches long.

For previous introduction see No. 77320.

80191. RHYTICOCOS AMARA (Jacq.) Beccari (*Cocos amara* Jacq.). Phoenicaceae. **Palm.**

80170 to 80193—Continued.

A palm, native to Martinique, with a ringed trunk reaching a height of 100 feet and bearing a crown of large pinnate leaves resembling those of the coconut.

For previous introduction see No. 62103.

80192. STYLOMA PACIFICA (Seem. and Wendl.) O. F. Cook. (*Pritchardia pacifica* Seem. and Wendl.). Phoenicaceae. **Fiji fan palm.**

A fan palm, native to the Fiji Islands, with a smooth straight trunk up to 30 feet high and a foot in diameter. The nearly circular leaves, 4 feet long by 3 feet wide, are on petioles 3 to 4 feet long and when young are densely covered with whitish brown tomentum, later becoming smooth and rich green.

80193. (Undetermined.)

From Tobago.

80194 to 80207.

From Leicester, England. Seeds purchased from Rev. J. Farnworth Anderson. Received April 4, 1929.

80194. CYTISUS PRAECOX Wheeler. Fabaceae. **Warminster broom.**

An ornamental shrub with silky hairy narrow leaves half an inch long and pale sulphur-yellow flowers produced in great abundance in early spring. It is a hybrid between *Cytisus purgans* and *C. multiflorus*, with the habit of the latter but more densely branching.

For previous introduction see No. 73541.

80195. GENTIANA BRACHYPHYLLA Vill. Gentianaceae. **Gentian.**

A high-alpine perennial which forms spreading tufts with small round leaves and brilliant blue flowers of the general type of *Gentiana verna;* appearing in late summer. Native to central Europe.

For previous introduction see No. 79068.

80196. NARCISSUS BULBOCODIUM CITRINUS Baker. Amaryllidaceae. **Petticoat daffodil.**

A small bulbous plant with very slender nearly terete leaves, and large pale lemon-yellow flowers, 1 to 2 inches long, with a large flaring, somewhat crenulate corona an inch across and inconspicuous perianth segments. The type is a native of the western Mediterranean countries.

80197. NARCISSUS CYCLAMINEUS Baker. Amaryllidaceae.

A dwarf daffodil with narrow drooping orange-yellow trumpet and entirely reflexed lemon-yellow perianth segments. It is native to Portugal.

For previous introduction see No. 76268.

80198. OMPHALODES VERNA Moench. Boraginaceae. **Venusbutton.**

A creeping perennial, native to Europe, with small ovate or sublanceolate leaves, acuminate and callose at the apex, and blue flowers in pairs in a raceme on an erect flower stem. It is related to the forget-me-not.

80199 to 80204. PEDICULARIS spp. Scrophulariaceae. **Woodbetony.**

80194 to 80207—Continued.

80199. PEDICULARIS GRACILIS Wall.

A herbaceous perennial alpine up to 2 feet high, with six slender opposite or whorled branches, whorled, deeply pinnatifid leaves up to 2 inches long, and rosy purple flowers in spikes or racemes 3 to 6 inches long. It is native to the temperate Himalayas.

80200. PEDICULARIS INTEGRIFOLIA Hook. f.

An alpine perennial, native to Sikkim, India, with a stout rootstock and ascending stems 4 to 6 inches high. The leaves are crowded, narrowly linear pubescent, and about 2 inches long. The dark-purple flowers are in oblong capitate spikes.

80201. PEDICULARIS MEGALANTHA Don.

A herbaceous perennial alpine, 1 to 2 feet high, with pinnately divided leaves and lax racemes of yellow or rose-purple flowers. It is native to the temperate Himalayas.

80202. PEDICULARIS ROYLEI Maxim.

A low cespitose perennial alpine, native to the Himalayas, with a thick root, small pinnately cut leaves, and purplish flowers in a small dense spike.

80203. PEDICULARIS SCHIZORRHYNCHA Prain.

A dwarf tufted alpine perennial with erect stems about 2 inches high, long-stemmed oblong-lanceolate pinnately divided leaves, and purple flowers, nearly half an inch long, in small head-like clusters. It is native to the eastern Himalayas.

80204. PEDICULARIS TRICHOGLOSSA Hook.

A stout perennial alpine up to 16 inches tall, with sessile linear-obtuse pinnatifid leaves about 2 inches long, and purple flowers in a lax spike. It is native to the Sikkim Himalayas.

80205. ROSCOEA HUMEANA W. W. Smith. Zinziberaceae.

A stout herbaceous perennial about 8 inches high, with sessile oval-lanceolate leaves 4 to 8 inches long and large hooded violet-purple flowers in compact spikes. It is native to southwestern China.

80206. SAXIFRAGA ALBERTI Regel and Schmalh. Saxifragaceae. **Saxifrage.**

A subshrubby perennial densely covered with oblong-ligulate leaves. The white flowers, with numerous red spots, are in small terminal racemes. Native to the mountains of Turkestan.

80207. TOFIELDIA CALYCULATA Wahlenb. Melanthiaceae.

An erect bulbous plant, a foot or less high, with upright, flat linear leaves terminating in a sharp point. These decrease in size up the stem, becoming nearly awnlike at the summit, and subtend the terminal spikelike raceme of yellowish-white flowers. Native to central Europe.

80208 to 80213. GOSSYPIUM spp. Malvaceae. **Cotton.**

From Trinidad, British West Indies. Seeds presented by Dr. S. C. Harland, Cotton Research Station. Received April 5, 1929.

80208 to 80213—Continued.

80208. GOSSYPIUM CERNUUM Todaro.

An erect bush, 3 feet high, cultivated in India. The flowers are pale sulphur-yellow, and the petals are marked with a purple spot.

For previous introduction see No. 73990.

80209. GOSSYPIUM JAMAICENSE Macf.

Type 35. *Selfed.* A tropical shrub 4 to 5 feet high, with hairy branches, heart-shaped, 3-lobed hairy leaves, pale-yellow flowers, and a 4-valved capsule containing white cotton. It is native to Jamaica.

80210. GOSSYPIUM KIRKII Masters.

Tanganyika. A bushy, somewhat climbing plant from eastern tropical Africa which sometimes scrambles up between and among trees to a height of 14 feet. The leaves are palmately 5-lobed with a cordate base, the flowers are light yellow, and the oblong conical capsules are about a third of an inch long.

80211. GOSSYPIUM PURPURASCENS Poir.

Type 12. *Selfed.* A tropical American shrub, native to Trinidad, 6 to 10 feet high, with purplish branches, 3-lobed leaves, and sulphur-yellow flowers.

For previous introduction see No. 67526.

80212. GOSSYPIUM SCHOTTII Watt.

Cassava. Unselfed. A wild cotton native to Yucatan, Mexico, with leaves almost completely split up into three to five long linear lobes, and medium-sized flowers, yellow tinged with purple. The nearly globose capsules contain a scant amount of reddish fiber.

80213. GOSSYPIUM sp.

Kidney cotton.

80214. TURRAEA OBTUSIFOLIA Hochst. Meliaceae.

From Los Angeles, Calif. Seeds presented by P. D. Barnhart. Received April 10, 1929.

An attractive dwarf evergreen shrub 4 to 6 feet high, bearing between October and March an abundance of white flowers which have strap-shaped petals nearly 2 inches long. Native to South Africa.

For previous introduction see No. 34178.

80215 and 80216.

From Brignoles, France. Seeds presented by R. Salgues, Director, Salgues Museum of Brignoles. Received April 10, 1929.

80215. ORNITHOGALUM PYRENAICUM L. Liliaceae. **Star-of-Bethlehem.**

A bulbous plant, about 2 feet high, with narrow onionlike leaves and flowers on a simple leafless scape. It is native to Europe.

For previous introduction see No. 79177.

80216. VICIA NARBONENSIS L. Fabaceae. **Vetch.**

An annual legume, native to southern Europe, with angled stems 2 to 4 feet tall, compound leaves of two to three pairs of fleshy elliptic leaflets 1 to 2 inches long, and racemes of blue to purple flowers.

80217 to 80245. AVENA spp. Poaceae. **Oats.**

From New South Wales, Australia. Seeds presented by H. Wenholz, Director of Plant Breeding of the Department of Agriculture, Sydney. Received April 20, 1929.

80217 to 80219. AVENA BYZANTINA Koch.

80217. *Algerian.* 1928 crop from Glen Innes.

80218. *Algerian.* 1929 crop from Glen Innes.

80219. *Burt.* 1928 crop from Glen Innes.

80220. AVENA SATIVA L.

Kherson. 1928 crop from Glen Innes.

80221 to 80245. AVENA spp.

1928 crop from Glen Innes.

80221. AVENA sp.

80245. AVENA sp.

Woodford.

80246 to 80248. TIGRIDIA PAVONIA (L. f.) Ker. Iridaceae. **Common tigerflower.**

From Sassenheim, Netherlands. Bulbs purchased from Van Zonneveld Bros. & Philippi. Received April 24, 1929.

80246. Variety *canariensis.* Pale-yellow flowers with red-spotted centers.

80247. Variety *lutea immaculata.* Pure-yellow spotless flowers.

80248. Variety *rosea.* Rose-colored flowers with yellow-variegated centers.

80249. CROTON sp. Euphorbiaceae.

From Njalá, Sierra Leone, Africa. Seeds presented by the Provincial Superintendent of Agriculture, of the Njala Experiment Farm. Received April 25, 1929.

A euphorbiaceous tree growing on the river bank at Njala.

80250. NICOTIANA TABACUM L. Solanaceae. **Common tobacco.**

From Mexico. Seeds obtained through Leonard G. Dawson, American Consul. Received April 25, 1929.

A special variety said to be from the best tobacco grown in the vicinity of San Andres Tuxtla, about 80 miles southwest of Vera Cruz.

80251. ERYTHRINA ACANTHOCARPA E. Mey. Fabaceae.

From Pretoria, Union of South Africa. Seeds presented by E. Percy Phillips, Chief of the Division of Botany, Horticulture, and Entomology of the Department of Agriculture. Received April 26, 1929.

A rigid wide-branched shrub, native to South Africa, 4 to 6 feet high, armed with sharp awl-shaped reflexed prickles. The leaves are made up of three elliptical leaflets one-half to 1 inch long and 1 to 2 inches broad; the scarlet flowers, 1 to 2 inches long, are in lateral and terminal racemes and are followed by twisted prickly pods.

80252. GRAMMATOPHYLLUM SPECIOSUM Blume. Orchidaceae. **Orchid.**

From Medan, Sumatra. Seeds presented by Dr. J. A. Lörzing. Received April 27, 1929.

A giant orchid with stout stems 6 to 10 feet long, strap-shaped leaves a foot or two in length, and flower clusters 6 feet long. The numerous flowers are 6 inches in diameter and are yellow blotched with deep purple. Native to the East Indies.

For previous introduction see No. 67181.

80253 to 80260. CITRUS NOBILIS UNSHIU Swingle. Rutaceae. **Satsuma orange.**

From Okitsu, Japan. Plants presented by Dr. K. Nagai, Imperial Experiment Station. Received April 27, 1929.

80253. *Ikeda (Unshio) wasi.*

80254. *Ishihawa wasi.*

80255. *Miyakawa wasi.*

80256. *Sato Dai wasi.*

80257. *Takahashi wasi.*

80258. *Tsuda wasi.*

80259. *Yamamota wasi.*

80260. *Yanagisawa wasi.*

80261 to 80266. PRUNUS spp. Amygdalaceae.

From Saonara, Padua, Italy. Trees purchased from Fratelli Sgaravatti. Received April 24, 1929.

80261 and 80262. PRUNUS AVIUM L. **Sweet cherry.**

80261. *Napoleone (Imbrian).* Large brilliant-red fruits, produced during June and July, with very delicious white flesh.

80262. *Regina del mercato.* Large, heart-shaped, carmine-red fruits produced during June. The flesh is juicy and very sweet.

80263 to 80266. PRUNUS CERASUS MARASCA (Host) C. Schneid. **Maraschino cherry.**

80263. *Del Nord (Marasca tedesca).* Medium-sized, juicy, somewhat acid fruits which change from red to purple. They are produced during June.

80264. *Imperiale.* Large, intense red fruits produced during June and July. The flesh is tender and sweet to subacid.

80265. *Marasca di Ostheim.* Medium-sized, pale-red fruits produced during June.

80266. *Marasca olandese.* Large black fruits.

80267. KOKIA DRYNARIOIDES (Seem.) Lewton. Malvaceae.

From Honolulu, Hawaii. Seeds presented by H. L. Lyon, in charge of the Department of Botany and Forestry of the Experiment Station of the Hawaii Sugar Planters' Association. Received April 30, 1929.

These seeds were gathered from the only known living tree, which is located on the island of Molokai. An ornamental tree with long-stemmed, heart-shaped leaves and red, silky flowers, it is native to the Hawaiian Islands, but now has become practically extinct because of the ravages of cattle, sheep, and goats that eat the bark and leaves.

For previous introduction see No. 58574.

80268 to 80292.

From Ottawa, Canada. Seeds presented by J. Adams, Botanist, Central Experimental Farm. Received April 6, 1929.

80268. ACER MYABEI Maxim. Aceraceae. **Maple.**

No. 129. A deciduous tree, native to Japan, 30 to 40 feet high, with a trunk 1½ feet in diameter, deeply 3-lobed leaves, downy yellow flowers in corymbs 2 to 3 inches long, and keys up to an inch long.

For previous introduction see No. 75665.

80269. BETULA TURKESTANICA FETISOWI Hort. Betulaceae. **Birch.**

No. 191. A hardy birch from Central Asia.

80270. CARAGANA PYGMAEA (L.) DC. Fabaceae. **Dwarf pea-tree.**

No. 717. A shrub, native to Siberia, prostrate or up to 3 feet high, with spreading branches, spiny stipules, compound leaves of four linear-lanceolate spine-tipped leaflets, and solitary yellow flowers an inch long.

For previous introduction see No. 64768.

80271 to 80286. GENTIANA spp. Gentianaceae. **Gentian.**

80271. GENTIANA ASCLEPIADEA L. **Milkweed gentian.**

No. 621. A comparatively robust subalpine species forming clumps of vigorous stems up to 3 feet high with opposite oval-pointed leaves. In late summer it produces, from the upper axils, almost sessile trumpet-shaped sapphire-blue flowers which weigh down the arching stalks. There is some variation in color from seed, which germinates freely and produces flowering plants in about three years. The plant is said to be indifferent as to whether the soil is alkaline or not.

For previous introduction see No. 79160.

80272. GENTIANA BAICALIENSIS Hort.

No. 622.

80273. GENTIANA BURSERI Lapeyr.

No. 623. A low alpine perennial native to the Pyrenees, with an unbranched stem less than a foot high, oval-elliptic leaves, and yellowish flowers with the corollas mostly 6-cut.

For previous introduction see No. 79230.

80274. GENTIANA FETISOWII Regel and Winkler.

No. 628. A small-flowered rather coarse species blooming in late summer. It is native to Siberia.

For previous introduction see No. 79024.

80275. GENTIANA FREYNIANA Borum.

No. 629. A herbaceous perennial 6 inches high, native to Asia Minor, related to *Gentiana septemfida,* with lanceolate leaves and headlike cymes of dark-blue flowers which are borne during late summer.

For previous introduction see No. 79075.

80276. GENTIANA GROMBEZEWSKII Hort.

No. 630. A place of publication or description for this name has not been found.

For previous introduction see No. 79027.

80268 to 80292—Continued.

80277. GENTIANA KURROO Royle.

No. 631. A gentian, native to the Himalayas, forming dense tufts from which rise lax stems up to 7 inches high with narrow lanceolate leaves and bell-shaped blue flowers spotted white inside. It is said to appreciate a sunny location, with ample moisture and perfect drainage, especially in spring and autumn.

For previous introduction see No. 79078.

80278. GENTIANA MACROPHYLLA Pall.

No. 632. A herbaceous perennial, native to northern Europe and Asia, with an erect or ascending stem, narrow spreading leaves, and clustered heads of dark-blue flowers.

For previous introduction see No. 79080.

80279. GENTIANA OLIVIERI Griseb.

No. 633. A herbaceous perennial, native to mountain pastures in the Himalayas, about 9 inches high, with dark-blue flowers in umbellike cymes.

For previous introduction see No. 79258.

80280. GENTIANA PANNONICA Scop.

No. 634. A tall stout perennial, native to Europe, with broadly elliptical to narrowly ovate leaves, and flowers which are purple above.

For previous introduction see No. 79259.

80281. GENTIANA PHLOGIFOLIA Schott and Kotschy.

No. 635. A creeping alpine species, native to central Europe, about 10 inches high, with clustered dark-blue flowers which are borne in early summer.

For previous introduction see No. 79083.

80282. GENTIANA PRZEWALSKII Maxim.

No. 636. A lax-growing free-flowering gentian native to western China, rather like *Gentiana kurroo*, with linear leaves about 6 inches long and flowers with nearly white tubes and cobalt-blue petals.

For previous introduction see No. 79086.

80283. GENTIANA SAPONARIA L.

No. 637. A hardy herbaceous perennial not exceeding 2 feet in height, with an ascending stem, narrow pointed opposite leaves, and light-blue flowers. It is native to eastern North America.

For previous introduction see No. 78935.

80284. GENTIANA SEPTEMFIDA Pall.

No. 639. A gentian, native to Asia, which resembles *Gentiana asclepiadea*, requiring similar conditions. It makes spreading clumps up to 12 inches high with opposite ovate leaves and heads of wide-mouthed trumpet-shaped blue flowers in late summer. It varies considerably in habit and flower color, but all forms do well in peaty loam with ample but not stagnant water supply.

For previous introduction see No. 79091.

80268 to 80292—Continued.

80285. GENTIANA TIBETICA King. **Himalayan gentian.**

No. 642. An erect plant 1½ feet high, with oblong-ovate leaves 5 to 7 inches long and small dull yellowish white axillary flowers an inch long. It is native to Tibet.

For previous introduction see No. 79028.

80286. GENTIANA WALUJEWI Regel and Schmalh.

No. 643. A dwarf gentian, native to Sinkiang, China, bearing white flowers with blue spots.

For previous introduction see No. 79095.

80287. LIGUSTRUM sp. Oleaceae. **Privet.**

No. 801. The privets are deciduous or evergreen shrubs with opposite entire leaves and terminal panicles of small white flowers.

80288 to 80291. ROSA spp. Rosaceae.

80288. ROSA RUBRIFOLIA Vill. **Redleaf rose.**

No. 1231. Variety *lívida*. A shrub 6 feet high, native to southern Europe, with five to seven oblong leaflets which are simply toothed. The bright-red flowers are borne in small clusters, and the small globose fruits are red and pulpy. The whole plant is glaucous and tinged with bluish red.

For previous introduction see No. 54228.

80289. ROSA SPINOSISSIMA L. **Scotch rose.**

No. 1234. A low shrub usually 3 to 4 feet high, with spreading or recurving branches and densely prickly branchlets. It is native to Europe. The compound leaves are made up of 5 to 11 nearly orbicular serrate leaflets about an inch long, and the pink, white, or yellow flowers 2 inches across are solitary but borne on numerous short branchlets along the stems.

For previous introduction see No. 54235.

80290. ROSA SPINOSISSIMA ALTAICA (Willd.) Rehd. **Altai rose.**

No. 1235. A more vigorous and less bristly form of the Scotch rose with large white flowers.

For previous introduction see No. 54236.

80291. ROSA SPINOSISSIMA HISPIDA (Sims) Koehne. **Bristly Scotch rose.**

No. 1236. An upright bristly form of the Scotch rose usually 6 or more feet high, with large sulphur-yellow flowers.

For previous introduction see No. 54237.

80292. SYRINGA sp. Oleaceae. **Lilac.**

No. 812. The lilacs are ornamental shrubs or small trees with opposite, usually entire leaves and large showy panicles of usually fragrant salver-shaped flowers.

80293. TRIFOLIUM RESUPINATUM L. Fabaceae. **Strawberry clover.**

From Teheran, Persia. Seeds obtained from Jalil K. Hashimzade, Ministry of Public Works, Department of Roads, through Augustin Ferrin, American Consul, Teheran. Received April 30, 1929.

Shaftal clover.

For previous introduction see No. 67863.

80294 to 80303.

From Haifa, Palestine. Cuttings presented by Amram Khazanoff, The Palestine Jewish Colonization Association. Received April 15, 1929.

80294 to 80299. FICUS CARICA L. Moraceae. **Common fig.**

80294. *Baidi.*

80295. *Kharoobi.*

80296. *Khedari.*

80297. *Khurtmani.*

80298. *Mozi.*

80299. *Sultani.*

80300 to 80303. VITIS VINIFERA L. Vitaceae. **European grape.**

80300. *Baidi.*

80301. *Helwani.*

80302. *Jemdani.*

80303. *Khedari.*

80304 to 80307. RHODODENDRON spp. Ericaceae.

From Leicester, England. Seeds purchased from Rev. J. Farnworth Anderson. Received April 13, 1929.

80304. RHODODENDRON ALBRECHTII Maxim. **Azalea.**

A deciduous shrub, native to Japan, 3 to 5 feet high, with purple-brown branchlets, obovate leaves 2 to 6 inches long in clusters of about five at the end of the twigs, and clusters of three to five rotate-campanulate magenta flowers about 2 inches across. It is a handsome shrub resembling *Rhododendron slippenbachii*, but less showy; the leaves turn yellow in the autumn.

80305. RHODODENDRON DECORUM Franch.

An evergreen shrub, native to western China, with oblong leaves 3 to 5 inches long, glaucous beneath, and racemose clusters of green-spotted white or pink flowers 2 inches across.

For previous introduction see No. 79041.

80306. RHODODENDRON MARIESII Hemsl. and Wils. **Azalea.**

A deciduous shrub up to 8 feet high, native to central China, and related to *Rhododendron rhombicum*. The ovate leaves, 2 to 3 inches long, are silky pubescent on the midrib beneath, and the one to three rose-pink broadly campanulate flowers are 1 to 2 inches across.

80307. RHODODENDRON TSCHONOSKII Maxim. **Azalea.**

A forest shrub, native to Japan, with flaky bark, elliptic leaves one-third of an inch long, and heads of one to four small white flowers.

For previous introduction see No. 79043.

80308 to 80339.

From Woodbridge, Suffolk, England. Plants purchased from R. C. Notcutt. Received April 11, 1929.

80308 to 80327. CYTISUS spp. Fabaceae. **Broom.**

80308. CYTISUS ALBUS Hacquet. **Pale broom.**

An upright shrub about 3 feet high, with villous branches, leaves of three oblong-ovate leaflets less than an inch long, and clusters of three to six yellowish white flowers. It is native to southeastern Europe.

80309. CYTISUS AUSTRIACUS L.

A dwarf shrub about 3 feet high, native to southeastern Europe, with trifoliolate silky pubescent leaves and headlike clusters of bright-yellow flowers.

For previous introduction see No. 76241.

80310 and 80311. CYTISUS BIFLORUS L'Her.

80310. A leguminous shrub 3 feet high, with slender branches, leaflets with silky lower surfaces, and yellow flowers, single or in pairs, which are borne during the spring [May].

For previous introduction see No. 73536.

80311. Variety *versicolor prostrata*. A shrub of strong spreading growth. The flowers are golden yellow in the bud, opening to fawn.

80312. CYTISUS DALLIMOREI Rolfe.

This slender shrub, which is a garden hybrid, is of moderate growth, with trifoliolate leaves and axillary and terminal clusters of reddish purple velvety flowers.

For previous introduction see No. 76343.

80313. CYTISUS DECUMBENS (Willd.) Spach.

A prostrate shrub, native to southern Europe, less than a foot high, with 5-angled branchlets, simple oblong-ovate sessile leaves, and axillary clusters of one to three small bright-yellow flowers.

80314. CYTISUS MONSPESSULANUS L. (*C. candicans* DC.).

A strong, erect-growing shrub which is evergreen in regions where the winters are mild. It becomes 10 feet or less high, with grooved branches, trifoliolate leaves having obovate leaflets less than an inch long, and fragrant bright-yellow flowers in 3-flowered to 9-flowered headlike racemes on leafy branches. It is native to the Canary Islands.

For previous introduction see No. 73539.

80315. CYTISUS MULTIFLORUS INCARNATUS Sweet.

Variety *Toome*. A slightly flushed form of the white Spanish broom which is a shrub up to 10 feet high, native to Spain and northern Africa, with upright slender branchlets bearing trifoliolate leaves below and simple ones above. The flowers, in axillary clusters of one to three, are produced very profusely.

80308 to 80339—Continued.

80316. CYTISUS NIGRICANS ELONGATUS Borkh. (*C. nigricans carlieri* Hort.).

Variety *Carlieri.* A deciduous shrub, native to Europe, 2 to 4 feet high, with erect pubescent branches, long-stemmed leaves composed of oval pubescent leaflets up to an inch long, and long slender racemes, 3 to 8 inches long, of rich-yellow flowers. This variety differs from the typical species in that it blooms a second time in the autumn at the top of the elongated fruiting racemes.

For previous introduction see No. 43838.

80317. CYTISUS PRAECOX ALBUS T. Smith. **Warminster broom.**

A smaller and more pendulous white-flowered form of *Cytisus praecox* which is a hybrid between *C. purgans* and *C. multiflorus.* The simple leaves are oblanceolate to linear spatulate and are silky pubescent.

80318. CYTISUS PURGANS (L.) Spach. **Province broom.**

A dwarf bushy deciduous shrub about 3 feet high, native to the Mediterranean region, often nearly leafless, with simple oblanceolate leaves which soon fall and fragrant deep golden-yellow flowers half an inch long produced singly or in pairs from the year-old wood.

For previous introduction see No. 73542.

80319. CYTISUS ROCHELII Wierzb.

A shrub, native to Hungary, 3 to 4 feet high, with villous terete branchlets, trifoliolate leaves of oblong-lanceolate leaflets an inch long, and terminal heads of pale-yellow flowers with brownish spots.

80320 to 80324. CYTISUS SCOPARIUS (L.) Link. **Scotch broom.**

80320. *Donard seedling.* A new variety of vigorous growth, bearing reddish-crimson flowers suffused with grayish white and yellow.

80321. *Rosy Moonlight.* A vigorous grower bearing cream-colored flowers tinged with rose.

80322. *Dorothy Walpole.* A hardy grower bearing an abundance of flowers with rich velvety crimson wings and rose standards.

80323. *Fulgens.* A variety bearing beautiful flowers with deep orange standards and rich crimson keels.

80324. *Lord Lambourne.* A variety in which the flowers have wings of vivid scarlet-crimson color and a standard of soft cream color tinted with rose on the reverse.

80325. CYTISUS sp.

Cornish Cream. A new and charming variety raised by P. D. Williams, Lanarth, St. Keverne, Cornwall. It produces an abundance of good-sized flowers with cream-colored standards and pure yellow on the keel, which gives a distinct and attractive appearance to the blooms. A vigorous grower, especially effective for mass effects.

80326. CYTISUS sp.

Moonlight. Flowers are sulphur yellow.

80308 to 80339—Continued.

80327. CYTISUS sp.

Osborni. A variety of recent introduction, raised at Kew. It is later flowering than *Cytisus praecox,* and although similar in growth, is perhaps of rather a stiffer habit, while there is no trace of the characteristic scent of that variety. The flowers are borne abundantly, and they are golden yellow in the bud, opening to a delightful pale yellow.

80328 to 80339. ERICA spp. Ericaceae. **Heath.**

80328. ERICA ARBOREA ALPINA Dieck.

An evergreen bushy heath, native to the mountainous regions of Cuenca, Spain, which has proved hardy at the Royal Botanic Gardens, Kew, England. The dull-white flowers are borne in stiff pyramidal clusters, but the chief beauty of the plant lies in the rich, cheerful green color of the foliage which, in England, lasts throughout the winter.

For previous introduction see No. 62023.

80329 to 80333. ERICA CARNEA L. **Spring heath.**

80329. *Pink Beauty.*

80330. *C. J. Backhouse.* Flowers blush white.

80331. *Praecox Rubra.* A variety with rich rose carmine flowers.

80332. *Prince of Wales.* The flowers are soft pink.

80333. *Vivelli.* A red-flowered variety.

80334. ERICA CILIARIS L. **Fringed heath.**

Variety *Watsoni.*

80335. ERICA CINEREA L. **Twisted heath.**

Variety *atropurpurea.* Flowers deep purple.

80336. ERICA MACKAII Hook. (*E. mackaiana* Bab.).

Variety *plena.* A double-flowered form of this hybrid between *Erica terralix* and *E. ciliaris,* which has ovate-oblong leaves in whorls of four and umbels of rosy flowers.

80337. ERICA MEDITERRANEA L. **Biscay heath.**

Variety *Brightness.* Flowers bright pink.

80338. ERICA TETRALIX L. **Crossleaf heath.**

Variety *rubra.* Attractive carmine flowers.

80339. ERICA WILLIAMSII Druce.

A hybrid between *Erica tetralix* and *E. vagans,* with puberulous branchlets, sparingly ciliate leaves, and rosy salmon flowers borne during the late summer.

80340 to 80348. TRITICUM spp. Poaceae.

From Perth, Western Australia. Seeds presented by G. L. Sultan, Director of the Department of Agriculture. Received May 2, 1929.

80340 to 80348—Continued.

80340 to 80347. TRITICUM AESTIVUM L. (*T. vulgare* Vill.) **Common wheat.**

80340. C 74. *D. A. C. A179 × Florence.*

80341. C 80. *Dindiloa × Labawa.*

80342. C 86. *Florence × Velvet Don.*

80343. M 11. *Comeback × Florence.*

80344. M 28. *Dindiloa × Labawa.*

80345. M 29. *Dindiloa × Labawa.*

80346. M 30. *Dindiloa × Labawa.*

80347. P 1511. *Genoa.*

80348. TRITICUM DURUM Desf. **Durum wheat.**

P 1211. *Kubanka.*

80349. SACCHARUM SPONTANEUM L. Poaceae. **Grass.**

From Coimbatore, India. Cuttings presented by the Imperial Sugar Cane Breeding Station, through E. W. Brandes, Bureau of Plant Industry. Received April 26, 1929.

A perennial tropical grass closely related to the sugarcane. It is sometimes cultivated as a hedge plant.

For previous introduction see No. 77782.

80350 to 80355.

From Cape Town, Union of South Africa. Bulbs purchased from W. S. Duke & Co. Received February and March, 1926. Numbered in April 1929.

80350. LACHENALIA RUBIDA Jacq. Liliaceae. **Cape-cowslip.**

A herbaceous perennial, native to South Africa, with a globose bulb from which arise usually two lanceolate, spotted leaves 6 inches long and a naked stalk 9 inches high, bearing a close raceme of small cylindrical, mostly drooping flowers. The outer segments are bright red tipped with green, and the inner segments are longer and yellow.

80351. LACHENALIA TRICOLOR AUREA (Lindl.) Hook. f. Liliaceae. **Cape-cowslip.**

A herbaceous perennial, native to South Africa, closely resembling *Lachenalia rubida*, but the flowers are bright orange-yellow.

80352 to 80354. ORNITHOGALUM spp. Liliaceae.

80352. ORNITHOGALUM ARABICUM L. **Arabian star-of-Bethlehem.**

A herbaceous perennial, native to the Mediterranean region, with a thick, ovoid bulb, five to eight glaucous green leaves 12 to 18 inches long, and a scape 1 to 2 feet high, bearing a 6-flowered to 12-flowered raceme of fragrant white flowers. The pistil is black and adds to the attractiveness of the flowers. This species is very popular for pot culture.

80353. ORNITHOGALUM SPECIOSUM Baker. **Star-of-Bethlehem.**

A herbaceous perennial, native to South Africa, with a globose bulb an inch in diameter, four short thick linear leaves, and a scape a foot high which bears three to five white flowers having an orange-red spot at the tip.

80350 to 80355—Continued.

80354. ORNITHOGALUM THYRSOIDES AUREUM (Curtis) Baker. **Chincherichee.**

An ornamental, native to South Africa, with a globose bulb about 2 inches thick and five or six very narrow leaves 6 inches to a foot long. The golden-yellow flowers, sometimes an inch long under cultivation, are borne in rather dense racemes on a scape about a foot high. In a dried condition these make excellent "everlasting" flowers.

For previous introduction see No. 66891.

80355. VALLOTA SPECIOSA (L. f.) Dur. and Schinz. (*V. purpurea* Herbert). Amaryllidaceae. **Scarboro-lily.**

A herbaceous perennial with an ovoid bulb, 6 to 18 lanceolate leaves 1 to 2 feet long, and a hollow stem 2 to 3 feet high, bearing an umbel of six to nine scarlet funnel-shaped flowers. Native to southern Africa.

80356. HELENIUM AUTUMNALE L. Asteraceae. **Sneezeweed.**

From Niederwalluf am Rheim, Germany. Plants purchased from Goos & Koenemann. Received April 24, 1929.

Wyndley. A plant 2½ feet high, bearing bronzy yellow flowers.

80357 to 80381.

From China. Seeds and rhizomes collected by J. F. Rock, National Geographic Society, Washington, D. C. Received April 29, 1929.

80357. ABIES sp. Pinaceae. **Fir.**

No. 17361. November, 1928. A lovely and stately tree, 60 to 80 feet high, growing in the forests of Tokesher, northwestern Yunnan, at an altitude of 12,000 feet. The needles are silvery beneath, and the very large cones are deep purplish black.

80358. ACONITUM sp. Ranunculaceae. **Monkshood.**

No. 17376–A. November, 1928. A poisonous plant growing in the alpine meadows of the Likiang Snow Range, Yunnan, at altitudes between 11,000 and 12,000 feet. It is 3 to 4 feet high and bears rich blue flowers.

80359. ANEMONE sp. Ranunculaceae.

No. 17325. October, 1928. A plant half a foot high, growing in the glacier moraine of Sabaloko, at the foot of Mount Satseto, Likiang Snow Range, Yunnan, at an altitude of 12,000 feet. The leaves are a rich glossy green on the under surface, and the large white flowers have a purplish tinge beneath.

80360. BAUHINIA sp. Caesalpiniaceae.

No. 17377. November, 1928. A shrub or small tree, which prefers dry sunny situations, growing on the islands in Lake Yungning, northwestern Yunnan, at an altitude of 9,600 feet. It is 15 feet high and bears small white flowers.

80361. COTONEASTER sp. Malaceae.

No. 17365. December, 1928. A shrub growing in the Litang River gorge at Kere, Muli, southwestern Szechwan, at an altitude of 9,500 feet. It is 6 to 10

80357 to 80381—Continued.

feet high, with small ovoid leaves, and is very ornamental with its mass of brilliant red berries.

80362. DELPHINIUM sp. Ranunculaceae. **Larkspur.**

No. 17332. October, 1928. A larkspur growing on glacier gravel and gravelly moraines at Sabaloko, foot of Mount Satseto, Likiang Snow Range, Yunnan, at an altitude of 12,000 feet. It is a beautiful species with rich glossy green leaves forming globose rosettes and large rich blue silky flowers an inch in diameter.

80363. ILEX sp. Aquifoliaceae. **Holly.**

No. 17368. January, 1929. A beautiful shrub growing in the spruce forests on the southern slope of Mount Gibbah, Muli, southwestern Szechwan, at an altitude of 11,500 feet. It is 6 to 10 feet high, with hollylike evergreen leaves and brilliant red berries.

80364. INCARVILLEA GRANDIFLORA Bur. and Franch. Bignoniaceae.

No. 17371. December, 1928. A plant growing on the alpine meadows of Shelan, between Kulu and Muli, southwestern Szechwan, at an altitude of 13,000 feet. It is 3 feet high, and bears purplish red flowers.

80365 to 80367. IRIS spp. Iridaceae.

80365. IRIS sp.

No. 17370. December, 1928. A purple-flowered species growing in forest clearings and alpine meadows of Kulu, southwestern Szechwan, at an altitude of 13,000 feet.

80366. IRIS sp.

No. 17373. November, 1928. A plant growing in the alpine meadows of Mount Yowubo, Yungning Territory, Yunnan, at an altitude of 12,500 feet. It is 1 to 2 feet high, and bears purple or yellow flowers.

80367. IRIS sp.

No. 17375. November, 1928. A medicinal plant, used for colds and stomach trouble, called *Chumbu* by the Hlihin people in Szechwan. It grows wild in grassy swamps and marshy meadows of the Chienso Tussu Territory, southwestern Szechwan.

80368. MALUS sp. Malaceae. **Apple.**

No. 17360. November, 1928. A wide-spreading tree growing in the forests and clearings of Tokesher, northwestern Yunnan, at an altitude of 10,000 feet. It is 30 to 40 feet tall, with leaves white beneath and small, yellow and red fruits half an inch in diameter.

80369. MECONOPSIS INTEGRIFOLIA (Maxim.) Franch. Papaveraceae. **Yellow Chinese-poppy.**

No. 16020. November, 1928. A plant, 1 to 2 feet high, bearing rich golden-yellow flowers. It is found in the alpine meadows of Mount Gibbah, Muli, southwestern Szechwan, at an altitude of 13,000 feet.

For previous introduction see No. 58374.

80357 to 80381—Continued.

80370. PHASEOLUS VULGARIS L. Fabaceae. **Common bean.**

No. 17374. November, 1928. This red bean is cultivated by the Hsifau tribes of southwestern Szechwan and by the Hlihin tribes of northwestern Yunnan. It is a delicious bean when well cooked and reminds one very much of the Mexican bean. It is cultivated at Gawua, Yuli Territory, at an altitude of 10,000 feet.

80371. STRANVAESIA sp. Malaceae.

No. 17363. November, 1928. A lovely tree, 15 to 20 feet high, growing in the forests of Peshui, Likiang Snow Range, Yunnan, at an altitude of 10,500 feet. The autumnal leaves are a brilliant red on the upper whorl and a deep glossy green on the lower whorl. The gorgeous red berries are in large dense corymbs and are very ornamental.

80372. PRIMULA FORRESTII Balf. f. Primulaceae. **Primrose.**

No. 17376–B. October, 1928. A lovely perennial plant with a woody rootstock, which reaches an age of 100 years or more. It grows in rocky limestone soil on sunny slopes of the Likiang Snow Range, Yunnan, at an altitude of 11,000 feet. The flowers are a deep golden yellow, and the leaves, when crushed, have the odor of fresh apples.

For previous introduction see No. 59710.

80373. PRUNUS sp. Amygdalaceae. **Cherry.**

No. 16794. August, 1928. A shrub, 10 feet high, branching from the base. It grows on dry slopes below the monastery at Muli in the Litang River Valley, Szechwan, at an altitude of 9,000 feet. The leaves are grayish tomentose, and the flowers are large, white, and ornamental.

80374 to 80381. RHODODENDRON spp. Ericaceae.

80374. RHODODENDRON CORIACEUM Franch.

No. 17354. November, 1928. A shrub, 3 to 4 feet high, growing on the alpine slopes of the rocky regions of Mount Lapo, Yunnan, at an altitude of 12,500 feet.

80375. RHODODENDRON HELIOLEPIS Franch.

No. 17357. November, 1928. A tree, 15 to 18 feet high, growing in the forests of spruce and hemlock at Gokhuko, northwestern Yunnan. The leaves are brown beneath, and the flowers are a rich purple.

For previous introduction see No. 59715.

80376. RHODODENDRON sp.

No. 16164. December, 1928. A wide-spreading tree, 15 to 20 feet high, growing in the spruce and hemlock forests of Djago, between Muli and Kulu, Szechwan, at altitudes between 11,000 and 11,500 feet. The leaves, chocolate-colored beneath, are a foot broad and 2 feet or more long, and the red flowers borne during February are in large corymbs.

80357 to 80381—Continued.

80377. RHODODENDRON sp.

No. 17352. November, 1928. A very attractive shrub, 2 feet high, growing in northwestern Yunnan on well-drained dry gravelly banks in pine forests at an altitude of 10,000 feet. It has small linear leaves and small tubular white to rich pink flowers borne in globose heads.

80378. RHODODENDRON sp.

No. 17356. November, 1928. A shrub or small tree 12 to 15 feet high, growing in spruce forests and on the edge of the alpine meadows of Gokhuko, northwestern Yunnan, at an altitude of 12,000 feet. The flowers are white to pink with purple spots.

80379. RHODODENDRON sp.

No. 17358. November, 1928. A shrub or small tree, 12 to 15 feet high, growing in spruce forests and on the edge of the alpine meadows of Gokhuko, northwestern Yunnan. The small ovate leaves are acute at both ends and pale beneath, and the flowers are yellow.

80380. RHODODENDRON sp.

No. 17359. November, 1928. A shrub, 2 to 3 feet high, growing in the swampy alpine meadows of Gokhuko, northwestern Yunnan, at an altitude of 12,000 feet. The leaves are very small, and the flowers are blue with a purplish tinge.

80381. RHODODENDRON sp.

No. 17366. December, 1928. A shrub or small tree, 10 to 15 feet high, growing in the fir forests of Kulu, eastern Muli Territory, Szechwan, at an altitude of 13,000 feet. It is very ornamental and is said to have red flowers.

80382 to 80387. CANNA EDULIS Ker. Cannaceae. **Edible canna.**

From Honolulu, Hawaii. Bulbs presented by J. M. Westgate, Director, Hawaii Agricultural Experiment Station. Received May 15, 1929.

80382. 1749.2. Seedling.

80383. 1749.5. Seedling.

80384. 1749.6. Seedling.

80385. 1749.7. Seedling.

80386. 1039.

80387. 2078. Java canna.

80388. CASTANEA MOLLISSIMA Blume. Fagaceae. **Hairy chestnut.**

From Yamaguchi Ken, Honshu, Japan. Seeds collected by R. K. Beattie, Bureau of Plant Industry. Received May 15, 1929.

No. 849. A.

80389 to 80392. ORYZA SATIVA L. Poaceae. **Rice.**

From Hooghly District, Bengal, India. Seeds obtained through R. Y. Jarvis, American Consul, Calcutta, India. Received May 15, 1929.

80389. *Balam.*

80390. *Dudkalma.*

80389 to 80392—Continued.

80391. *Jatakalma.*

80392. *Lalkalma.*

80393 to 80411.

From Paris, France. Seeds presented by Vilmorin-Andrieux & Co. Received April 5, 1929.

80393. BERBERIS SANGUINEA Franch. Berberidaceae. **Barberry.**

An evergreen shrub up to 6 feet high, with slender 3-parted spines, narrow-oblong spiny serrate leaves up to 4 inches long, golden-yellow flowers with red sepals, and bluish black fruits. It is native to western China.

80394 to 80398. COTONEASTER spp. Malaceae.

80394. COTONEASTER HARROVIANA Wilson.

An evergreen shrub, native to Yunnan, China, about 6 feet high, of a loose spreading habit, with shining dark-green silky tipped leaves, dense corymbs of white flowers, and red fruits.

For previous introduction see No. 72824.

80395. COTONEASTER sp.

Farrer No. 404.

80396. COTONEASTER sp.

M. V. No. 4524.

80397. COTONEASTER sp.

M. V. No. 4694.

80398. COTONEASTER sp.

Forrest No. 8119.

80399 to 80401. DEUTZIA spp. Hydrangeaceae.

80399. DEUTZIA SCHNEIDERIANA LAXIFLORA Rehder.

A handsome shrub, 6 feet high, with oblong-ovate leaves and white flowers borne abundantly in broad loose panicles. It is native to central China.

For previous introduction see No. 76185.

80400. DEUTZIA sp.

M. V. No. 4277. A handsome shrub closely related to *D. compacta* Craib., introduced from China by Maurice de Vilmorin. The pale-rose, semidouble flowers, larger than those of *D. compacta*, are in compact corymblike panicles.

80401. DEUTZIA sp.

M. V. No. 7264.

80402. EUONYMUS VERRUCOSUS Scop. Celastraceae.

An erect shrub, about 6 feet high, with oval-lanceolate, crenately serrulate, acuminate leaves 1 to 2½ inches long, yellowish red, deeply 4-lobed capsules, and black seeds partly exposed in the capsule. It is native to southeastern Europe and western Asia.

80403. ILEX PERNYI Franch. Aquifoliaceae. **Holly.**

A dense-growing evergreen holly of very dwarf compact habit, with small

80393 to 80411—Continued.

dark-green, spiny leaves squarish at the base and red berries. It is probably allied to *Ilex cornuta*, and was first discovered by Père Paul Perny during his travels in western China between 1850 and 1860.

For previous introduction see No. 67032.

80404. IRIS CLARKEI Baker. Iridaceae. **Clarke iris.**

For previous introduction and description see No. 80084.

80405. KITAIBELIA LINDEMUTHI Hort. Malvaceae.

Obtained by M. Lindemuth, gardener at the Botanical Garden, Berlin, by grafting *Kitaibelia vitifolia* on *Abutilon thompsoni*. It is especially attractive because of its variegated grapelike foliage and showy pink flowers.

80406. LABURNUM ANAGYROIDES ALSCHINGERI (Vis.) C. Schneid. (*Cytisus alschingeri* Hort.). Fabaceae. **Goldenchain.**

A form of the goldenchain with more silky and bluer-gray leaves and nearly erect racemes of golden-yellow flowers. Native to southern Europe.

For previous introduction see No. 76347.

80407. LONICERA sp. Caprifoliaceae. **Honeysuckle.**

Hers. No. 2004.

80408. PYRACANTHA sp. Malaceae. **Firethorn.**

M. V. No. 6257.

80409. SORBUS WILSONIANA C. Schneid. Malaceae.

A tree, up to 30 feet high, with elliptic-lanceolate yellowish green leaflets and rather small white flowers in large terminal corymbs. It is native to western China.

80410. VERONICA ROENITZERI Hort. Scrophulariaceae.

A herbaceous variety. (Has flowered only a little but suggests that it may prove somewhat like *V. spicata.*)

80411. VERONICA WALDSTEINII Hort. Scrophulariaceae.

A variety said to have spikes of blue flowers which appear very late in the summer.

80412 and 80413.

From Gambia, British West Africa. Seeds presented by Archibald Brooks, Director, Department of Agriculture. Received May 15, 1929.

80412. ADANSONIA DIGITATA L. Bombacaceae. **Baobab.**

A tree about 60 feet high and sometimes 30 feet in diameter, native to tropical Africa, with palmate leaves divided into five to seven lanceolate leaflets, white flowers 6 inches across, and large gourdlike fruits with edible pulp.

For previous introduction see No. 77271.

80412 and 80413—Continued.

80413. FICUS VOGELLI Miquel. Moraceae. **Fig.**

A beautiful shade tree of moderate size with large oblong elliptic leaves which are mostly gathered at the ends of the twigs. The small fruits are attractively grouped on the branches and produce many viable seeds. Native to tropical Africa.

For previous introduction see No. 70946.

80414 to 80416. MYOPORUM ACUMINATUM ANGUSTIFOLIUM Benth.

From South Australia. Seeds presented by W. J. Spafford, Deputy Director of the Department of Agriculture, Adelaide, South Australia. Received May 7, 1929.

An erect glabrous shrub with alternate nearly linear leaves 1 to 3 inches long, axillary clusters of two to four small campanulate white flowers, followed by slightly succulent fruits about a quarter of an inch in diameter. It is native to Queensland, Australia.

80414. Obtained from a tree about 14 feet high, growing in Rochester.

80415. Obtained from a shrub about 9 feet high, growing in Pekina.

80416. Obtained from a shrub about 9 feet high, growing in Port Germein.

80417 to 80421. FICUS spp. Moraceae. **Fig.**

From Manila, Philippine Islands. Seeds presented by W. H. Brown, Director of the Bureau of Science, Manila. Received May 16, 1929.

80417. FICUS CALOPHYLOIDES Elmer.

A large spreading tree, 70 feet high and 4 feet in diameter, native to the Philippine Islands, with elliptic leaves 5 inches long and flattened globose yellowish-brown fruits.

For previous introduction see No. 77657.

80418. FICUS INDICA L.

A tree up to 50 feet high, which resembles the banyan but does not take root from its branches. The leaves are 4 to 7 inches long, with four to six pairs of nerves, and the yellowish-red globose fruits, a third of an inch in diameter, are crowded together in sessile pairs. Native to tropical Asia and Malaya.

80419. FICUS MINAHASSAE (Teysm. and De Vr.) Miquel.

A rather small tropical tree, native to the Netherland East Indies, with a soft spongy trunk, irregularly heart-shaped acute leaves, and numerous small fruits about one-fourth of an inch long.

80420. FICUS NUDA Miquel.

A tropical woody plant, native to the Philippine Islands, which is closely related to *Ficus benjamina.* The elliptic or oblong leaves are somewhat leathery, and the small sessile fruits are globular.

80421. FICUS ODORATA (Blanco) Merr.

A tree, native to the Philippine Islands, 15 to 18 feet high. It is marked

80417 to 80421—Continued.

by its very rough, fragrant leaves which are sublanceolate with a 1-sided rounded margin at the base.

For previous introduction see No. 50698.

80422. CUCURBITA MAXIMA Duchesne. Cucurbitaceae. **Squash.**

From Doleib Hill, Nalakal, Anglo-Egyptian Sudan, Africa. Seeds presented by H. B. Gephardt, American Mission. Received May 20, 1929.

A pumpkin which requires a long growing season. It has a hard greenish rind when ripe, is of fair quality, and is a good keeper.

80423 to 80433.

From Newry, Ireland. Plants purchased from T. Smith, Daisy Hill Nursery. Received May 7, 1929.

80423 to 80431. CYTISUS spp. Fabaceae. **Broom.**

80423. CYTISUS ARDOINI Fourn.

A low decumbent shrub less than a foot high, with slightly grooved villous branchlets, trifoliolate leaves with obovate villous leaflets about half an inch long, and racemes of golden-yellow flowers. It is native to the southeastern part of France.

80424. CYTISUS BEANII Nichols.

This hybrid between *Cytisus ardoini* and *C. purgans* is a semiprostrate shrub 1 to 2 feet high, with simple linear pubescent leaves and clusters of one to three deep-golden flowers.

80425. CYTISUS PURPUREUS Scop.

Variety *incarnatus*. A form with flesh-colored flowers.

80426 to 80431. CYTISUS SCOPARIUS ANDREANUS Dipp. **Paradise broom.**

80426. *Prostratus*. A prostrate form.

80427. *Daisy Hill*. A variety bearing red and cream-colored flowers.

80428. *Dragonfly*. An upright shrub with slender green branches, small obovate leaflets, and flowers an inch across in shades of crimson and old gold.

80429. *Fairy*. An upright shrub with slender green branches, small obovate leaflets, and flowers an inch across, which are cream and pink.

80430. *Firefly*. An upright shrub with slender green branches, small obovate leaflets, and scarlet and yellow flowers an inch in diameter.

80431. *Newry Gold*. An upright shrub with slender green branches, small obovate leaflets, and flowers an inch across.

80432. DAPHNE BLAGAYANA Freyer. Thymelaeaceae. **Balkan daphne.**

A low diffusely branched shrub native to the mountains of southeastern Europe. The obovate leaves, 1 to 2 inches long, are crowded at the end of the branchlets, and the yellowish-white fragrant flowers, borne in heads, are followed by globose pinkish-white fruits.

For previous introduction see No. 40613.

80423 to 80433—Continued.

80433. DAPHNE CNEORUM L. Thymelaeaceae.

Variety *major*. A form having a more vigorous growth than the type and also larger flowers.

80434 and 80435.

From Angol, Chile. Seeds presented by D. S. Bullock, Escuela Agrícola de "El Vergel." Received May 7, 1929.

80434. LAPAGERIA ROSEA Ruiz and Pav. Liliaceae. **Red Chile-bells.**

This, the national flower of Chile, has been occasionally grown in northern greenhouses. It is an evergreen climber of slow growth, with slender, wiry stems, alternate narrowly ovate leaves, and bright-crimson, pendent tubular flowers about 3 inches long in the axils of the upper leaves or in terminal racemose clusters.

For previous introduction see No. 69168.

80435. LARDIZABALA BITERNATA Ruiz and Pav. Lardizabalaceae.

A shrubby evergreen climber with ternate or biternate dark-green leathery leaves 2 to 4 inches long which are either entire or armed with one or two spinelike teeth. The purple-brown flowers are dicecious. The staminate ones, about an inch across, are produced in a dense drooping raceme, while the pistillate flowers are larger and solitary, developing into edible oblong fleshy fruits 2 or 3 inches long. Native to southern Chile.

For previous introduction see No. 35960.

80436 to 80450.

From Kirkee, Poona, Bombay, India. Seeds presented by the Superintendent of the Ganeshkhind Botanical Gardens, through William H. Beach, American Vice Consul in Charge, Bombay. Received May 20, 1929.

80436 to 80444. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

80436. A black-seeded variety.

80437. A white-seeded variety.

80438. No. 4. The fruits are large and long, with black skin, red flesh, and brown seeds.

80439. No. 5. A variety with small, long fruits which have black skin, red flesh, and black seeds.

80440. No. 6. A variety producing long, large fruits with grayish white skin, red flesh, and black seeds.

80441. No. 7. A variety producing small, round fruits with grayish white skin, rose-colored flesh, and brown seeds.

80442. No. 8. The fruits are large and long, with black skin, red flesh, and whitish seeds.

80443. No 9. A variety with long, white fruits which have red flesh and black seeds.

80444. No. 10. The fruits are large and round, with white skin, red flesh, and black seeds.

80436 to 80450—Continued.

80445 to 80450. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

80445. Mixed seeds.

80446. *Chibud.*

80447. *Narri.*

80448. No. 1. A variety producing oblate fruits with white flesh.

80449. No. 2. A variety producing oblate fruits with red flesh.

80450. No. 3. *Jaw.* A variety producing very sweet globular fruits.

80451. VOANDZEIA SUBTERRANEA (L.) Thouars. Fabaceae.

From Bibanga, District du Lomami, Belgian Congo, Africa. Seeds presented by Walter D. Pettis, American Presbyterian Congo Mission, Luebo, Belgian Congo. Received May 17, 1929.

Nyimu. A plant which thrives best on a red sandy soil and matures in less than six months from the time it is planted. It is not of very much value as a human food, but as a stock food it may be well worth trying.

For previous introduction see No. 78255.

80452 to 80454. PISTACIA VERA L. Anacardiaceae. **Pistache.**

From Damghan, Persia. Nuts obtained from Jalil K. Hashimzade, Ministry of Public Works, Department of Roads, Teheran, through Augustin Ferrin, American Consul, Teheran. Received May 25, 1929.

80452. A variety producing large nuts. The shells are tinted pink inside.

80453. A variety producing medium-sized nuts with mostly dark-colored shells.

80454. A variety producing small nuts with mostly light-colored shells.

80455 to 80498.

From Japan. Bulbs and seeds collected by P. H. Dorsett and W. J. Morse, Agricultural Explorers, Bureau of Plant Industry. Received May 27, 1929.

80455. LILIUM sp. Liliaceae. **Lily.**

No. 111. April 23, 1929. Bulbs obtained in the market at Tokyo. A species used as a vegetable and also probably as an ornamental.

80456 and 80457. ZINZIBER OFFICINALE Roscoe. Zinziberaceae. **Ginger.**

80456. No. 115. April 23, 1929. Roots of a commercial ginger obtained in the market at Tokyo.

80457. No. 123. April 27, 1929. Roots sent from Tokyo by a nurseryman specializing in the growing of ginger.

80458. ZINZIBER sp. Zinziberaceae.

No. 114. April 23, 1929. Forcing roots obtained at Tokyo.

80459 to 80498. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

80459. No. 2. Obtained at the National Japanese Food Show held at Uyeno Park, Tokyo, April 5, 1929. A mixed sample taken from a basket of seed showing the soybeans used in the manufacture of bean curd, or tofu.

80455 to 80498—Continued.

80460. No. 13. Obtained in the suburbs of Tokyo, April 11, 1929, and originally grown in Hokushu. *Maru Kuro.* A black-seeded variety said to be used as a candied bean, as which it is called *Mimame.*

80461. No. 14. Obtained from Nishigahra, Tokyo, April 11, 1929. *Wase Eda Mame.* A greenish-yellow seeded variety originally grown in Hokushu. It is said to be used green.

80462. No. 15. Obtained in the suburbs of Tokyo, April 11, 1929. *Furisode.* A greenish-yellow seeded variety originally grown in Hokushu. It is said to be used in the manufacture of bean curd or tofu, soy sauce, and miso.

80463. No. 16. Obtained in the suburbs of Tokyo, April 11, 1929, and originally grown in Hokushu. *Tsurunoko.* A large yellow-seeded variety said to be used in making bean curd or tofu, miso, soy sauce, and natto.

80464. No. 17. Obtained in the suburbs of Tokyo, April 11, 1929, and originally grown in Hokushu. *Hira Sata Kuro Daizu.* A medium large flat black-seeded variety said to be used as a candied bean.

80465. No. 31. From the Imperial Seed Co., Takinogawa, Tokyo, April 15, 1929, and originally grown in the Tokyo district. *Chusei O Saya Eda Mame.* A large yellow-seeded variety for garden purposes, said to be used principally as a green bean, being cooked in the pod.

80466. No. 32. Obtained at Nichigahara, Tokyo, April 15, 1929. *Okuro Maru Daizu.* A round black-seeded variety grown in Hokushu. It is said to be used as a candied bean, when it is called *Mimame.*

80467. No. 33. Obtained in Takadacho, Tokyo, April 15, 1929, and originally grown in Hokushu. *Ao Daizu.* A large greenish-yellow seeded variety said to be used in making bean curd, miso, natto, and soy sauce. It is also used for forage and green manure.

80468. No. 34. Obtained in Takadacho, Tokyo, April 15, 1929, and originally from Hokushu. *Tsurunoko Daizu.* A large yellow-seeded variety said to be used in making bean curd, soy sauce, natto, and miso. It is also used for forage and green manure.

80469. No. 35. Obtained in Takadacho, Tokyo, April 15, 1929, and originally from Hokushu. *Kuro Maru Daizu.* A large black round-seeded variety said to be used principally as candied beans.

80470. No. 36. From the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929, and originally from the Tokyo district. *Souseikurome O Saya Daizu.* An early variety with large greenish-yellow black-eyed seeds and large pods. It is said to be used for oil, soy sauce, miso, natto, and bean curd.

80471. No. 37. From the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929, and originally from the Tokyo district. *Sousei Kuro Sakigake.* An early variety with large black seeds, said to be used principally as candied beans.

80455 to 80498—Continued.

80472. No. 38. From the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929. *Chusei O Saya Eda Mame.* A large yellow-seeded variety said to be the largest soybean used for garden purposes and to have a sweet flavor. It is said to be used principally as a green bean, being cooked in the pod.

80473. No. 39. From the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929, and originally from the Tokyo district. *Cha Mame.* A large brown-seeded variety said to be used as a green bean when boiled in the pod.

80474. No. 40. Obtained at Nishigahara, Tokyo, April 15, 1929, and originally from Hokushu. *Shiro Tsubu.* A yellow-seeded variety said to be used in making bean curd or tofu, natto, and soy sauce.

80475. No. 41. Obtained from the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929, and originally from the Tokyo district. *Higan Mame.* A rather late yellow-seeded variety said to have white sweet meat and to be used as a green bean, being cooked in the pod.

80476. No. 42. Obtained from the Imperial Seed Co., Takinogawa, Tokyo, April 15, 1929, and originally from the Tokyo district. *Sousei O Saya Eda Mame.* One of the earliest varieties of garden soybeans with large pods and large yellowish-green seeds. It is said to be very sweet as a green bean, being cooked in the pod.

80477. No. 43. From the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929, and originally from Hokushu. *Sousei Ao Sakigake.* An early green variety with medium, small yellowish-green seeds. It is said to be used in making soy sauce, bean curd, miso, and natto.

80478. No. 60. Obtained from the Japan Seed Co., Shibuya, Tokyo, April 19, 1929, and originally from Fukushima Ken. *Chusei O Saya Daizu.* A middle-season variety with yellow seeds. It is used as a green vegetable or as dried beans in making tofu.

80479. No. 62. From the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929, and originally from Iwate Ken, northeastern Japan. *Shikou Obbikuri Daizu.* A sweet greenish-yellow variety said to be used as a green vegetable, and also when ripe in making miso and bean curd.

80480. No. 63. From the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929, and originally from the Saitama Ken. *Gokuwase Daihosan Shinbon Daizu.* One of the earliest varieties with an abundance of pods containing yellow seeds. It is said to be used especially as a green vegetable and is the earliest of the varieties used for this purpose.

80481. No. 64. From the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929. *Roknsun Daizu.* Six-inches soybean, meaning that 10 beans equal 6 inches. A large flat yellow-seeded variety used as a green vegetable like the green Lima bean.

80482. No. 65. From the Japan Seed Co., Shibuya, Tokyo, April 19, 1929, and originally from Fukushima Ken, northeastern Japan. *Sousei O Saya Daizu.* An early large-podded soybean with large greenish-yellow seeds. It is said to be used as a green vegetable, and when dry it is used for bean curd and miso.

80483. No. 66. From the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929, and originally from Nagano Ken, central Japan. It is said to be used principally as a green vegetable. This variety is called "seaweed" because of its flavor.

80484. No. 67. From the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, and originally from Saitama Ken. *Sato Daizu.* A black seeded soybean said to be used as candy beans.

80485. No. 68. From the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929, and originally from Saitama Ken. *Chusei Hattoku Daizu.* A middle-season variety with yellow seeds. It is said to be used as a green vegetable.

80486. No. 69. From the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929, and originally from Saitama Ken. *Bansei Gokudai Tsukimi Daizu.* A large late harvest-moon soybean with large yellow seeds. It is said to be used as a green vegetable.

80487. No. 72. From the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929, and originally from Saitama Ken. *Shin Honen Daizu.* A new soybean with an abundance of pods containing yellow seeds. It is used for miso, soy sauce, and bean curd.

80488. No. 97. From T. Sakata & Co., Yokohama, April 26, 1929. *Eda Mame Uase Chaurame.* An early tea-colored variety with medium-large brown seeds. It is said to be used green like the Lima bean.

80489. No. 98. From T. Sakata & Co., Yokohama, April 26, 1929. *Eda Mame Uase Ao Sakigake.* One of the earliest of the green vegetable soybeans with medium-sized greenish-yellow seeds. It is said to be used like the Lima bean.

80490. No. 99. From T. Sakata & Co., Yokohama, April 26, 1929, and originally from Tamba Province, Kyoto Prefecture. *Tamba Otsubu Daizu.* A variety with medium-large yellow seeds used green like the Lima bean, the dried beans being used for bean curd or tofu.

80491. No. 100. From T. Sakata & Co., Yokohama, April 26, 1929. *Eda Mame Uase Kuro Sakigake.* An early variety with medium-large round black seeds, used for cooking with sirup as a candied bean.

80455 to 80498—Continued.

80492. No. 201. From T. Sakata & Co., Yokohama, April 26, 1929. *Eda Mame Uase Kurome Dzaya.* An early large-podded variety with medium-sized greenish-yellow seeds which have black seed scars. It is used green in the same way as Lima beans.

80493. No. 202. From T. Sakata & Co., Yokohama, April 26, 1929. *Daikoku Eda Mame* (Daikoku's black vegetable soybean). A medium-sized slightly compressed black-seeded variety said to be grown in Hokushu. It is used as a candied bean.

80494. No. 203. From T. Sakata & Co., Yokohama, April 26, 1929. *Tsurunoko Daizu.* A small, round, smooth-skinned variety with medium-sized yellow seeds. It is used as a green vegetable and also dried, and is especially good for making bean curd. It is said to have a high protein content.

80495. No. 204. From T. Sakata & Co., Yokohama, April 26, 1929. *Otsubu Muriname.* A medium-large seeded variety with black seed slightly compressed. It is used for cooking in sirup as a candied bean.

80496. No. 205. From T. Sakata & Co., Yokohama, April 26, 1929. *O Tsuba Uase Aoshiro Eda Mame.* An early large variety with medium-sized greenish-yellow seeds, said to be grown in Hokushu. It is used green like the Lima bean, and the dried beans are used for making soy sauce, miso, natto, and been curd.

80497. No. 206. From T. Sakata & Co., Yokohama, April 26, 1929. *Yedamame Uase Higanmame.* An early equinoctial variety with medium-large, yellow seeds with a brown hilum. It matures about the 18th of September. It is used as a green vegetable, and the dried beans are used for soy sauce, bean curd, and natto.

80498. No. 207. From T. Sakata & Co., Yokohama, April 26, 1929. *O Tsubu Aojiro Daizu.* A large greenish-yellow seeded variety said to be grown in Hokushu. It is said to be used as a green vegetable, and the dried beans are sometimes used in making white miso and natto.

80499. XIMENIA AMERICANA L. Olacaceae. **False sandalwood.**

From the Juba region, Italian Somaliland, Africa. Seeds presented by Dr. Mario Calvino, San Remo, Italy. Received May 31, 1929.

A widely distributed tropical tree with clustered oblong-obtuse leaves, small yellow flowers, and yellow, plumlike fruits inclosing a white nut. In Somaliland, where the fruit is known as "ciunducua," the natives eat the nut, the flesh being too acid.

80500. HUPELANDIA ANAY Blake. Lauraceae. **Anay.**

From Guatemala. Budwood presented by Wilson Popenoe, Research Department of the United Fruit Co., Tela, Honduras. Received May 24, 1929.

Budwood from a tree planted in the grounds of the United Fruit Co.'s hospital, Quirigua, Guatemala, in 1917. A rather

80500—Continued.

slender tree between 60 and 70 feet high, with nearly smooth, rich red-brown bark which is grayish in places. The young leaves are softly pubescent below and sparsely hairy above. It is said that the flowers are borne during May. The smooth, glossy, purplish-black fruits, 4 to 6 inches long, are slender pyriform, sometimes curved, and pointed at the apex. They ripen during August and September.

For previous introduction see No. 43432.

80501 to 80524.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, Agricultural Explorers, Bureau of Plant Industry. Received May 27, 1929.

80501 and 80502. CANAVALIA ENSIFORMIS (L.) DC. Fabaceae. **Jack bean.**

80501. No. 27. Obtained in Nishigahara, Tokyo, Aprli 11, 1929. *Tsurunashi.* A large white-seeded bean of the bush type grown in the Tokyo district. It is said to be used for cooking, pickling, and medicinal purposes.

80502. No. 208. Obtained from T. Sakata & Co., Yokohama, April 26, 1929. *Kodachi Natamame.* A white-seeded bean of the bush type which appears about the same as that now grown in the United States. The young pods are used for pickling.

80503 to 80505. CANAVALIA GLADIATA (Jacq.) DC. Fabaceae. **Sword bean.**

80503. No. 29. Obtained in Nishigahara, Tokyo, April 11, 1929. *Aka Natamame.* A red-seeded variety of the runner type grown in the Tokyo district. It is said to be used for cooking, pickling, and for medicinal purposes.

80504. No. 30. Obtained in Nishigahara, Tokyo, April 11, 1929. *Shiro Natamame.* A white-seeded variety of the runner type grown in the Tokyo district. It is said to be used for cooking, pickling, and for medicinal purposes.

80505. No. 209. From T. Sakata & Co., Yokohama, April 26, 1929. *Shiro Natamame.* A white-seeded variety of the runner sword bean. The young pods, 3 to 4 inches long, are used for pickling.

80506 to 80509. DOLICHOS LABLAB L. Fabaceae. **Hyacinth bean.**

80506. No. 28. Obtained in Nishigahara, Tokyo, April 11, 1929. *Fufimame.* A brown-seeded bean of the runner type grown in the Tokyo district. The beans are said to be used for cooking.

80507. No. 53. Obtained from the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929. *Shirobana Tsuruari Fugimame.* A brown-seeded bean of the white-flowered runner variety grown in the Tokyo district. The dried beans are said to be used for cooking.

80508. No. 54. Obtained from the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929. *Akabana Tsuruaru Fugimame.* A brown-seeded bean of the red-flowered runner variety grown in the Tokyo district. The beans are dried for use.

80501 to 80524—Continued.

80509. No. 55. Obtained from the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929. *Furnichi Fugimame.* A very dark-brown seeded variety of bush bean developed by Professor Furnichi, Tokyo Agricultural College, Tokyo. It is said to be used as green beans boiled in the pod, and the beans are also used when dried.

80510 to 80517. PHASEOLUS ANGULARIS (Willd.) W. F. Wight. Fabaceae. **Adzuki bean.**

80510. No. 18. *Azuki.* Obtained in the suburbs of Tokyo, April 11, 1929, and originally grown in Hokushu. A red-seeded variety said to be used chiefly in the manufacture of a jellylike flour for confections.

80511. No. 19. *Sarashi Au.* Obtained in Nishigahara, Tokyo, April 11, 1929, and originally grown in Hokushu. A red-seeded variety said to be used in the manufacture of a jellylike flour for confections.

80512. No. 20. *Azuki Dainagon.* Obtained in Nishigahara, Tokyo, April 11, 1929, and originally grown in Hokushu. A red-seeded variety said to be used in the manufacture of a jellylike flour for confections.

80513. No. 21. *Azuki Dainagon.* Obtained in the suburbs of Tokyo, April 11, 1929, and originally grown in Hokushu. A red-seeded variety said to be used in the manufacture of a jellylike flour for confections.

80514. No. 22. *Usukawa Azuki.* Obtained in Nishigahara, Tokyo, April 11, 1929, and originally grown in Hokushu. A red-seeded variety said to be used in the manufacture of a jellylike flour for confections.

80515. No. 61. *Shiro Azuki.* From the Tokyo Seed, Plant, & Implement Co., Konon, Tokyo, April 19, 1929, and originally from near Tokyo, Saitama Ken. It is said to be used for making confections and for flour which is cooked at once and then dried for future use.

80516. No. 70. *Dainagon Azuki.* Obtained in Shibuya, Tokyo, April 19, 1929, and originally from Hokushu. A large red-seeded variety said to be used in making many confections and as a flour.

80517. No. 210. *Dainagon Azuki.* From T. Sakata & Co., Yokohama, April 26, 1929. A large reddish-brown seeded variety used for making all kinds of confections.

80518 and 80519. PHASEOLUS AUREUS Roxb. Fabaceae. **Mung bean.**

80518. No. 26. *Yaenari* or *Ao Azuki.* Obtained in Nishigahara, Tokyo, April 11, 1929. A small green bean of the bush type grown in the Tokyo district. It is said to be used for bean sprouts and in making confections.

80519. No. 56. *Yaenari.* Obtained from the Imperial Seed Co., Takinogawa. Tokyo, April 15, 1929, and originally grown in the Tokyo district. A green mung bean said to be used chiefly for sprouts, but it is also used as flour in making confections.

80501 to 80524—Continued.

80520 to 80523. VIGNA SESQUIPEDALIS (L.) Fruwirth. Fabaceae. **Asparagus-bean.**

80520. No. 24. *Onage Sasage.* Obtained in Nishigahara, Tokyo, April 11, 1929. A light red-seeded variety of the runner type said to be used as string beans when the pods are young.

80521. No. 25. *Turoku Sasage.* Obtained in Nishigahara, Tokyo, April 11, 1929. A light red-seeded variety of the runner type grown in the Tokyo district. It is said to be used as string beans when the pods are young.

80522. No. 57. *Kuro Sanjoku Sasage.* Obtained in Nishigahara, Tokyo, April 15, 1929, and originally grown in the Tokyo district. A black-seeded variety said to be used as string beans when the pods are young, and the seeds are also dried and used as baked beans.

80523. No. 58. *Juroku Sasage.* Obtained from the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929, and originally grown in the Tokyo district. A red-seeded variety said to have pods 2 feet long, and to be used as string beans when the pods are young.

80524. VIGNA SINENSIS (Torner) Savi. Fabaceae. **Cowpea.**

No. 23. *Kintoki Sasage.* Obtained from the suburbs of Tokyo, April 11, 1929. A red-seeded variety of the bush type grown in the Bicchu district (Inland Sea). It is said to be used as a string bean when young; the beans also are used when dried.

80525 and 80526.

From Formosa, Argentina. Seeds presented by Dr. Lorenzo R. Parodi, University of Buenos Aires. Received May 25, 1929.

80525. CHLORIS CASTILLONIANA Lillo and Parodi. Poaceae. **Grass.**

A stiffly erect grass, 4 to 6 feet high, with linear leaves and a plumelike inflorescence 5 to 8 inches long. It is native to Argentina.

80526. PANICUM PAUCISPICATUM Morong. Poaceae. **Grass.**

A coarse grass, native to Argentina, which roots at the lower nodes and later ascends to 3 feet. The lanceolate leaves are 4 to 6 inches long by an inch broad, and the flowers are in a loose spike.

80527 to 80529. CHAYOTA EDULIS Jacq. (*Sechium edule* Swartz). Cucurbitaceae. **Chayote.**

From Guatemala. Fruits presented by Wilson Popenoe, Research Department of the United Fruit Co., Tela, Honduras. Received November 26, 1928. Numbered in April, 1929.

80527. No. 8. A smooth medium-sized green variety.

80528. No. 11. A large yellowish green variety which is very spiny.

80529. No. 15. A small white variety.

80530. PROSTANTHERA LASIANTHOS Labill. Menthaceae.

From Tasmania. Seeds presented by L. A. Evans, Headquarters and Technical Service of the Department of Agriculture, Hobart. Received May 31, 1929.

Seeds of the so-called Christmas or native lilac of Tasmania, collected by James Bacon, Verona, near the Huon River Estuary. It is a tall erect shrub up to 12 feet high, having lanceolate-serrate leaves 3 inches long and terminal compound racemes of white flowers marked with purple.

For previous introduction see No. 76721.

80531. EUGENIA AQUEA Burm. f. Myrtaceae.

From Medan, Sumatra. Plants presented by J. A. Lörzing. Received July 7, 1928. Numbered in June, 1929.

A medium-sized tree, 20 to 30 feet high, native to the Molukka Islands, with smooth ovate-oblong evergreen leaves about 2 inches long, large white or red flowers in terminal or axillary cymes, and crimson to white ovoid edible fruits 1 to 2 inches long.

For previous introduction see No. 68026.

80532. PERSEA AMERICANA Mill. (*P. gratissima* Gaertn. f.). Lauraceae. **Avocado.**

From Waldo, Fla. Bud sticks presented by C. C. Shooter. Received May 31, 1929.

A tree about 50 feet high with an immense trunk. It survived the freeze in January, 1928, at which time the thermometer went to 15° F. at Gainesville, and the cold lasted several days. The tree, then in full bloom, lost its leaves for the first time, and the branches were cut back about one-third. The smaller seedling trees did not even lose their leaves when orange and grapefruit trees were frozen to the ground. It starts blooming in January and continues through until March, even if frost catches it, and has had as many as 1,000 fruits.

80533 to 80539.

From Tokyo, Japan. Seeds collected by P. H. Dorsett and W. J. Morse, Agricultural Explorers, Bureau of Plant Industry. Received May 31, 1929.

80533. ASTRAGALUS SINICUS L. Fabaceae.

No. 229. From the Tokyo Seed, Plant & Implement Co., Konon, May 6, 1929. A red-flowered variety quite common in the farming area about Tokyo, where it is said to be used for forage and green manure. It is a winter crop, being planted early in the fall, and was in full bloom about the first of May.

For previous introduction see No. 70969.

80534. MEDICAGO HISPIDA DENTICULATA (Willd.) Urban. Fabaceae. **Bur clover.**

No. 215. *Mokushika.* From the Yamato Seed Co., Takadacho, May 6, 1929. A clover said to be chiefly used for green manure and to some extent as a forage. It is also said to be different from the *Medicago denticulata* grown in the United States.

For previous introduction see No. 60562.

80533 to 80539—Continued.

80535. PISUM SATIVUM L. Fabaceae. **Pea.**

No. 228. *Endo.* From the Tokyo Seed, Plant & Implement Co., Konon, May 6, 1929. A winter variety sown during the early fall in the Tokyo district. The pods are used as a green vegetable when the peas are just commencing to form, and later the peas are used.

80536 and 80537. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

80536. No. 134. From the Soy Sauce Laboratory, Imperial Experiment Station, Nishigahara, May 3, 1929. The seeds were originally grown in Manchuria. This sample is apparently mixed and may consist of several strains. It came from a lot used in the manufacture of soy sauce.

80537. No. 212. *Ryokuhi Daizu.* From the Yamato Seed Co., Takadocho, May 6, 1929. A small black-seeded variety said to be used especially as a green-manure crop.

80538 and 80539. VICIA FABA L. Fabaceae. **Broadbean.**

80538. No. 211. *Sora Mame.* From the Yamato Seed Co., Takadocho, May 6, 1929. A variety grown in the Tokyo district and southward. When full grown the beans are used after the manner of the green Lima bean. The dried beans are used in making candied beans by boiling in sirup and they are also roasted.

80539. No. 216. *Issum Sora Mame* (1-inch broad bean). From the Yamato Seed Co., Takadocho, May 6, 1929. A variety grown extensively for food in the Tokyo district and southward. It is planted during the fall. The beans are used especially in making candied beans by boiling in sirup.

80540. PERSEA SCHIEDEANA Nees. Lauraceae. **Coyo.**

From Tela, Honduras. Plants presented by Alfred F. Butler, Horticulturist, Research Department of the United Fruit Co. Received June 3, 1929.

This plant, known as *Yas* in Costa Rica and *Coyo* in Guatemala, occurs from southern Mexico to Panama. In Costa Rica it is found abundantly on the slopes of Irazu at altitudes between 4,000 and 6,000 feet. The fruits greatly resemble avocados. Up to the present the coyo has not shown much promise in Florida or California. It is somewhat slow of growth and probably will not bear until the trees are at least 8 or 10 years old. Efforts are being made to introduce the best seedling varieties from Guatemala and to propagate them by grafting. In this way it may be possible to encourage early fruiting and to have fruit of better quality than would be obtained from most seedlings.

For previous introduction see No. 52787.

80541. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Pasoroean, Java. Cuttings presented by Dr. V. J. Koningsberger, Proefstation voor der Java Suikerindustrie. Received June 6, 1929.

P. O. J. 1337.

80542 and 80543. CANNA EDULIS Ker. Cannaceae. **Edible canna.**

From Pointe à Pitre, Guadeloupe, French West Indies. Tubers presented by C. Holman B. Williams, Directeur, Station Agronomique. Received May 23, 1929.

A close relative of the ornamental cannas, cultivated for its edible tubers.

For previous introduction see No. 78852.

80542. *Jaune.* **80543.** *Rouge.*

80544 to 80549. ROSA spp. Rosaceae.

From Ottawa, Canada. Plants presented by W. T. Macoun, Dominion Horticulturist of the Central Experimental Farm. Received May 3, 1929.

80544 to 80547. ROSA HARISONII Rivers. **Harison's yellow rose.**

80544. *Antenor.* A moderate grower bearing double apricot-colored flowers which fade to cream.

80545. *Lucasia.* A moderate grower bearing large, single, cream-colored flowers.

80546. *Orinda.* A vigorous variety which keeps its foliage until late in the season and bears deep-cream semidouble flowers. Suckers are produced freely.

80547. *Silvander.* A moderate grower bearing single yellow flowers.

80548 and 80549. ROSA SPINOSISSIMA L. **Scotch rose.**

For previous introduction and description see No. 80289.

80548. A variety bearing large flowers.

80549. A strong-growing seedling of the Scotch rose which suckers freely and requires no pruning. The foliage is like a hybrid perpetual, and the flowers are very double, flat, and fragrant, but inclined to ball badly in wet weather.

80550. GREWIA OCCIDENTALIS L. Tiliaceae.

From Kirstenbosch, Newlands, near Cape Town, Union of South Africa. Seeds presented by R. H. Compton, Director of the National Botanic Gardens. Received May 24, 1929.

The younger parts of this evergreen shrub are covered with rusty tomentum. The dentate cordate leaves are 1 to 2 inches long, and the small flowers, in axillary or terminal cymes, are followed by purplish 4-lobed fruits the size of small peas. Native to Ethiopia and also the cape region.

For previous introduction see No. 51147.

80551. INODES MEXICANA (Mart.) Standl. (*Sabal mexicana* Mart.) Phoenicaceae. **Palmetto.**

From Georgetown, Demerara, British Guiana. Seeds presented by J. S. Dash, Director of the Department of Agriculture. Received June 5, 1929.

A tall palm up to 60 feet high, with palmate leaves divided into linear segments having numerous long threads on the margins. The inflorescence is short, dense, and recurved, and the fruits are flattened globose and black. It is native to Oaxaca, Mexico.

80552 and 80553. PERSEA AMERICANA Mill. (*P. gratissima* Gaertn. f.) Lauraceae. **Avocado.**

From Habana, Cuba. Bud wood obtained through Alfred F. Butler, Horticulturist, Research Department of the United Fruit Co., Tela, Honduras. Received June 6, 1929.

Large summer varieties of the Pollock type. The varieties were selected by Senator Menocal, Habana, Cuba, who named them *Wilson Popenoe* and *Raul Arango*. Unfortunately, during shipment to Tela, Honduras, the labels were lost, and it is therefore impossible to determine which is which.

80552 **80553**

80554. ULMUS JAPONICA Sarg. Ulmaceae. **Japanese elm.**

From Nikolsk-Ussuriisk, Maritime Province, Siberia, Union of Socialistic Soviet Republics. Seeds presented by the Director of the State Russian Geographical Society. Received June 6, 1929.

A large handsome hardy elm occasionally 90 feet high. Native to northeastern Asia.

For previous introduction see No. 76469.

80555. ARTOCARPUS COMMUNIS Forst. Moraceae. **Breadnut.**

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Agronomist in Charge of the Plant Introduction Gardens. Received June 10, 1929.

A form of the breadfruit in which the seeds are fully developed. These are about the size of chestnuts and are roasted and eaten.

80556 to 80565.

From Cape Town, Union of South Africa. Bulbs presented by W. S. Duke & Co. Received June 10, 1929.

80556. AGAPANTHUS sp. (*Abumon* sp.). Liliaceae.

A dwarf blue-flowered species.

80557 to 80559. ARUM spp. Araceae.

80557. ARUM sp.

A red-flowered species.

80558. ARUM sp.

A yellow-flowered species.

80559. ARUM sp.

A yellow-flowered seedling.

80560. GLADIOLUS sp. Iridaceae.

Painted Ladies.

80561. NERINE sp. Amaryllidaceae.

80562 to 80564. ORNITHOGALUM spp. Liliaceae.

80562. ORNITHOGALUM sp.

Chincherichee. A late-flowering species.

80563. ORNITHOGALUM sp.

Chincherichee. A yellow-flowered form.

80564. ORNITHOGALUM sp.

Chincherichee. A white-flowered form.

80556 to 80565—Continued.

80565. (Undetermined.)

Snowdrops.

80566. CHORDOSPARTIUM STEVENSONI Cheeseman. Fabaceae.

From South Island, New Zealand. Seeds presented by C. J. Reakes, Director General of the New Zealand Department of Agriculture, Wellington. Received June 4, 1929.

A leafless shrub or small tree up to 20 feet high, native to New Zealand, with long slender pendulous branches and racemes, 1 to 2 inches long, of small purple flowers.

For previous introduction see No. 77552.

80567 to 80570.

From the Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received in May and June, 1929.

80567. FERONIA LIMONIA (L.) Swingle (*F. elephantum* Correa). Rutaceae. **Wood apple.**

Vilatti. A very graceful small thorny tree, native to India. The round fruits, about 2 inches in diameter, contain rather dry sweetish aromatic pulp, suitable for making jelly.

For previous introduction see No. 48626.

80568. ALBIZZIA LEBBEKOIDES (DC.) Benth. Mimosaceae.

A small feathery-topped ornamental tree which is very drought resistant. It is closely related to the well-known lebbeck tree, *Albizzia lebbek*, but has smaller and more numerous leaflets, smaller flowers, and broader pods. A native of the Philippine Islands.

80569. FICUS sp. Moraceae. **Fig.**

From Ilocos Norte. A large ornamental shiny green-leaved tree of weeping habit.

80570. RADERMACHERA sp. Bignoniaceae.

Growing in coral lime formation in Ilocos Norte. A tree bearing pale-mauve flowers which have yellowish markings on the throat.

80571 to 80574. AMYGDALUS PERSICA L. (*Prunus persica* Stokes). Amygdalaceae. **Peach.**

From the island of St. Helena. Seeds presented by H. Bruins Lich, Horticultural Officer of the Agriculture and Forestry Department. Received June 7, 1929.

80571. No. 1. *Large yellow.* Fruits clingstone with yellow skin and juicy yellow flesh of good flavor.

80572. No. 2. *Carrot.* Fruits freestone with pink skin and pink flesh of good flavor.

80573. No. 3. *Red center.* Fruits freestone with rosy skin and white and red flesh of good flavor.

80574. No. 4. *White.* Fruits freestone with creamy white skin and cream-colored flesh of fair flavor.

80575. ORNITHOGALUM LACTEUM Jacq. Liliaceae.

From Rosebank, near Cape Town, Union of South Africa. Bulbs purchased from Charles Ayres. Received June 10, 1929.

Chinchérichee Darling. A variety from Darling, a district about 80 miles from Cape Town. The flowers are white with yellowish centers. They begin blooming about the first of November and usually continue until about the first of December. This variety is only at its best from larger bulbs. Anything of pigeon-egg size or larger is considered good, and under cultivation the bulbs frequently increase to the size of a large hen's egg. It does not increase very freely, however, under cultivation, but can be reproduced very successfully from seed, the seedling bulbs flowering about the third season.

80576 to 80629.

From Tokyo, Japan. Collected by P. H. Dorsett and W. J. Morse, Agricultural Explorers, Bureau of Plant Industry. Received May 27, 1929.

80576 to 80582. BRASSICA spp. Brassicaceae.

Seeds from the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19 1929.

80576. BRASSICA sp.

No. 81. *Nagina, Takana.* A variety used as greens and also pickled with salt.

80577. BRASSICA sp.

No. 87. *San tou Sai,* variety *Makino.* A variety which does not form a head. It is used as a pickle when salted, and the young leaves are used as spinach.

80578. BRASSICA sp.

No. 88. *Tai Kai Shun Paku Sai* (large spring Chinese cabbage). A variety which forms a head and is used like ordinary cabbage.

80579. BRASSICA sp.

No. 89. *Katsuona* (Japanese bigstem mustard plant). A variety said to be used as a salted pickle and a green vegetable.

80580. BRASSICA sp.

No. 90. *Seppaku Taisai, Pak Choi* (Japanese whitestem cabbage). A variety which does not form a head. It is said to be used like the Chinese cabbage, and the young leaves are used like spinach. It is also pickled with salt.

80581. BRASSICA sp.

No. 92. *Kekkyu Hakusai* (improved spring white Chinese cabbage). Said to be used like the ordinary Chinese cabbage, *Pe tsai.*

80582. BRASSICA sp.

No. 93. *Uguisa Na, Komatsu Na* (Japanese green cabbage). Said to be used like spinach.

80583. CARICA PAPAYA L. Papayaceae. **Papaya.**

No. 104. Obtained from a fruit stand in Tokyo, where it had been shipped from Taiwan. The fruit shows a star-like arrangement in cross section which has not been previously noted in a papaya.

80576 to 80629—Continued.

80584 and 80585. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

Seeds from the Tokyo Seed, Plant, & Implement Co., Konon, Tokyo, April 19, 1929.

80584. No. 82. *Ka Ho Sui Ka.* Used as the ordinary squash.

80585. No. 91. *Rokoku Ogon Mitsu Suika* (Russian golden sweet watermelon). A variety used as the ordinary watermelon.

80586. COLOCASIA sp. Araceae.

No. 112. Tubers obtained in the market at Tokyo, April 23, 1929.

80587. COLOCASIA sp. Araceae.

No. 113. Corms obtained in the market at Tokyo, April 23, 1929.

80588 to 80591. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

Seeds from the Tokyo Seed, Plant, & Implement Co., Konon, Tokyo, April 19, 1929.

80588. No. 74. *Ginmakuwa* (Japanese muskmelon). A variety used as the ordinary muskmelon.

80589. No. 77. *Tokyo o Shirouri* (Japanese vegetable melon). Said to be used in making a salted pickle.

80590. No. 83. *Narukomakuwa.* Used as the ordinary muskmelon.

80591. No. 86. *Enaga Shinuri.* Said to be used in making salted pickles.

80592 to 80596. CUCURBITA MOSCHATA Duchesne. Cucurbitaceae. **Cushaw.**

Seeds from the Tokyo Seed, Plant, & Implement Co., Konon, Tokyo, April 19, 1929.

80592. No. 75. *Kikuza Nankin, Kabocha.* Said to be used as the ordinary squash.

80593. No. 76. *Chirimeu Nankin* (large curled squash). Said to be used like the ordinary squash.

80594. No. 79. *Gokunase Godan We Sato Nankin, To Nasu* (earliest 50-pound sugar squash). Used as an ordinary cooked squash.

80595. No. 80. *Saikyo Nankin, Tonasu.* Used as an ordinary squash.

80596. No. 85. *Sousei Kurokawa Nankin* (earliest black-skinned Japanese squash). Said to be used as the ordinary squash.

80597 and 80598. CUCURBITA PEPO L. Cucurbitaceae. **Pumpkin.**

Seeds from the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929.

80597. No. 78. *Shokudo Nozyu o* (table queen). A variety said to have sweet flesh. It keeps well in the winter after harvesting.

80598. No. 84. *Namasu Nankin* (Japanese salad squash). A new variety said to be used raw for salads.

80599. LILIUM sp. Liliaceae. **Lily.**

No. 96. Bulbs of a mountain lily from the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929. *Yama Yuri.* It is commonly known as

80576 to 80629—Continued.

mountain lily, cooking lily, and *Eizan lily.* Eizan is the name of a mountain where this lily grows abundantly. The stems are 5 to 6 feet high, the leaves broad and striped, and the flowers have a very strong odor and are generally white with the inside of the petals spotted dark red.

80600. FATSIA JAPONICA (Thunb.) Decaisne and Planch. Araliaceae.

No. 116. Seeds obtained at the Botanical Garden in Tokyo, April 23, 1929. This broad-leaved evergreen undershrub is extensively used here in most of the parks so far visited.

80601. IPOMOEA BATATAS (L.) Poir. Convolvulaceae. **Sweetpotato.**

No. 110. Tubers obtained in Tokyo, April 23, 1929. A rather long variety of good size and light pink on the outside.

80602. LACTUCA sp. Cichoriaceae. **Lettuce.**

No. 73. Seeds from the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929. *Ryuzetsu Sai* (alligator's tongue). A green-leaved vegetable generally used as a garnish and for salting down.

80603 to 80623. PHASEOLUS VULGARIS L. Fabaceae. **Common bean.**

Nos. 80603 to 80608 were from Nishigahara, Tokyo, April 11, 1929.

80603. No. 3. *Sapporo Oingen.* A white-seeded variety of runner bean, originally from Hokushu, said to be used for boiling and making jam.

80604. No. 4. *Kintoki Uzura.* A red-seeded variety of runner bean said to be used for boiling and making jam.

80605. No. 5. *Ogon.* A light brown-seeded variety of bush bean, originally grown in Hokushu, said to be used for green beans.

80606. No. 6. *Goishi.* A black and white seeded variety of bush bean originally from Hokushu, said to be used as string beans.

80607. No. 7. *Usuki.* Originally grown in Kokushu. A cream-seeded variety of bush bean said to be used as green beans.

80608. No. 8. *Hoso Suzunari.* Originally grown in Hokushu. A white-seeded variety of the bush type with b'ack spots at each end of the seed scar; said to be used as string beans.

80609. No. 9. *Chunaga Uzura.* From the suburbs of Tokyo, April 11, 1929. A variety of the runner type cream colored mottled with red, said to be used as string beans. The dried beans are used baked.

80610. No. 10. *Kintoki Uzura.* From the suburbs of Tokyo, April 11, 1929. A red-seeded variety of the runner type, said to be used in making a sweet bean jam and used in confections.

80611. No. 11. From Nishigahara, Tokyo, April 11, 1929, originally grown in Hokushu. A variety of the runner type, cream colored mottled with red. This variety is

80576 to 80629—Continued.

said to be used as string beans and also dried.

80612. No. 12. *Isshaku Ingen.* From Nishigahara, Tokyo, April 11, 1929, and originally grown in Hokushu. A light brown-seeded variety of the runner type, said to be used as string beans.

80613. No. 44. *Ao o saya Shirofane, Shayaku gosum.* From the Imperial Seed Co., Takinogawa, Tokyo, April 15, 1929. A large white-seeded variety of the bush type, originally grown in the Tokyo district, and said to be used as string beans.

80614. No. 45. *Naga Kintoki Ingen.* From the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929, and originally grown in the Tokyo district. A very dark red-seeded variety of the runner type, said to be the *Canadian Wonder.* It is used as string beans, and the dried beans are used in making sweet bean jam.

80615. No. 46. *Shakugo Sun Ingen.* From the Imperial Seed Co., Takinogawa, Tokyo, April 15, 1929. A light brown-seeded variety of the bush type originally grown in the Tokyo district, said to be used as string beans.

80616. No. 47. *Nagauzura Ingen.* From the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929, and originally grown in the Tokyo district. A cream-colored variety of the bush type mottled with red, used as string beans.

80617. No. 48. *Tsuruari Goku Naga Ingen.* From the Imperial Seed Co., Takinogawa, Tokyo, April 15, 1929. A long-podded runner bean with large flat cream-colored seeds mottled with black. It is said to be used as string beans.

80618. No. 49. *Otafuku Ingen.* From Nishigahara, Tokyo, April 15, 1929, and originally grown in the Tokyo district. A large white-seeded variety of the bush type said to be used as string beans. The dried beans are used as a dessert after cooking with sirup.

80619. No. 50. *Shiro Tsuro Ingen.* From Takadacho, Tokyo, April 15, 1929, originally grown in Hokushu. A white runner bean with large flat white seeds, said to be used in making all kinds of confections, such as sweet bean jam, etc.

80620. No. 51. *Yamato's Omaru Uzura Ingen.* From the Yamato Seed Co., Takadacho, Tokyo, April 15, 1929, originally grown in the Tokyo district. Seeds selected from the *Golden Carmine* by the Yamato Seed Co. A runner type said to be used as string beans and also in making a sweet jam called kinton.

80621. No. 52. *Gokuwase Fusanari Ingen.* From the Imperial Seed Co., Takinogawa, Tokyo, April 15, 1929, and originally grown in the Tokyo district. One of the earliest of the bunch beans for forcing in the greenhouse or hotbed. A light brown-seeded variety of the bush type said to be sown late in the fall in hotbeds or greenhouses.

80576 to 80629—Continued.

80622. No. 59. *Shima Uzura* (mottled garden bean). From Shibuya, Tokyo, April 19, 1929. A cream-seeded variety of the runner type mottled with red. It is used for green beans and also for making bean jam called kinton.

80623. No. 71. *Tora Maru Ingen* (round tiger bean). From Shibuya, Tokyo, April 19, 1929, originally grown in Hokushu. A mottled white variety of the bush type, said to be used as dried beans in making a sweet jam or paste.

80624. PISUM SATIVUM L. Fabaceae.
Pea.

No. 1. *Hiroshim Akabana Endo* (earliest garden pea). Seeds from Kagawa Mura, Saiki Gun, Hiroshima Ken, April 5, 1929. Said to be used as the garden pea.

80625. SOLANUM MELONGENA L. Solanaceae.
Eggplant.

No. 95. *Shinkoko o naga Nasu* (Chinese black snake eggplant). Seeds from the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929. Used as the ordinary eggplant.

80626 to 80628. SOLANUM TUBEROSUM L. Solanaceae.
Potato.

Tubers from Tokyo, April 23, 1929.

80626. No. 106. Variety *Early White.* The tubers are oblong, small, and of uniform size.

80627. No. 107. White potatoes obtained in the market at Tokyo, said to have been imported from Hokushu.

80628. No. 108. Tubers said to be the same as those sent in under No. 107 [No. 80627], but from another region.

80629. SPINACIA OLERACEA L. Chenopodiaceae.
Common spinach.

No. 94. *Nihon Norenso.* Seeds from the Tokyo Seed, Plant & Implement Co., Konon, Tokyo, April 19, 1929. Used as ordinary spinach.

80630. CLEMATIS GOURIANA Roxb. Ranunculaceae.

From Gladwyne, Pa. Plants presented by Mrs. J. Norman Henry. Received June 5, 1929.

For previous introduction and description see No. 80119.

80631 and 80632.

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received June 5, 1929.

80631. MAXIMILIANEA VITIFOLIA (Willd.) Krug and Urb. (*Cochlospermum hibiscoides* Kunth). Cochlospermaceae.

A deciduous shrub or small tree, native to Central America, with grapelike leaves and large clusters of bright-yellow flowers sometimes 6 inches in diameter.

For previous introduction see No. 77168.

80631 and 80632—Continued.

80632. PRUNUS CAPULI Cav. Amygdalaceae. **Capulin.**

A tree, native to tropical America, up to 40 feet high, with lanceolate long-pointed coriaceous leaves 6 to 8 inches long and stout racemes 4 to 6 inches long of small white flowers which are followed by nearly black globose edible fruits half an inch in diameter.

For previous introduction see No. 77433.

80633 and 80634.

From Dampier Island, near New Guinea. Seeds presented by George J. Fritschel, Dubuque, Iowa. Received June 8, 1929.

80633. CORYPHA sp. Phoenicaceae. **Palm.**

A round-seeded, bushy, fan-leaved palm. In general this is a genus of very tall palms with stout spineless trunks.

80634. MUCUNA sp. Fabaceae.

A perennial leguminous climber.

80635. CITRUS sp. Rutaceae.

From Tres Amigos, San Carlos, Costa Rica. Seeds presented by Mrs. A. Bendus, through O. F. Cook, Bureau of Plant Industry. Received June 5, 1929.

Sweet lemon. A variety bearing almost continually very juicy, sweet fruits about the size of the Florida breakfast orange.

80636 and 80637.

From the Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received June 10, 1929.

80636. CASSIA sp. Caesalpiniaceae.

From Abea. *Bulilising.* A handsome native flowering tree.

80637. STREBLUS ASPER Lour. Moraceae.

Aludig. A drought-resistant tree with drooping branches and dark-green foliage. It produces small yellowish rather sweet fruits somewhat resembling corn kernels in appearance. Native to tropical Asia.

80638. LAPAGERIA ROSEA Ruiz and Pav. Liliaceae. **Red Chile-bells.**

From Angol, Chile. Fruits presented by E. E. Reed, Instituto Agricola Bunster, through Julius G. Lay, Counselor of the American Embassy, Santiago, Chile. Received June 12, 1929.

For previous introduction and description see No. 80434.

80639 to 80642. TRITICUM spp. Poaceae.

From La Moncloa, Madrid, Spain. Seeds presented by Antonio Garcia Romero, Estación Central de Ensayo de Semillas. Received June 11, 1929.

80639 to 80641. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). **Common wheat.**

80639. *Colorado de Alfaro.*

80640. *Portuguese No. 2048.*

80641. *Ruso No. 1.*

80642. TRITICUM DURUM Desf. **Durum wheat.**

Pinet.

80643. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

From Angol, Chile. Seeds presented by E. E. Reed, Instituto Agricola Bunster, through Julius G. Lay, Counselor of the American Embassy, Santiago, Chile. Received June 12, 1929.

A Chilean melon, 14 to 20 inches long and about half as much in diameter, with a yellow rind which is usually smooth, and yellow to orange flesh of very good flavor.

80644. SABINEA CARINALIS Griseb. Fabaceae.

From Dominica, British West Indies. Seeds presented by F. G. Harcourt, Curator and Agricultural Superintendent of the Dominican Agricultural Department. Received June 10, 1929.

A very fine flowering shrub or small tree, known locally as *Bois charibe*, which is considered one of the most showy of the native plants of Dominica. If planted on a dry, rocky hillside where it will be scorched by the sun for a period of three or four months each year it makes a marvelous display with its large scarlet flowers which are borne in clusters of three to five before the featherlike leaves appear.

80645 to 80648.

From Nogent sur Vernisson, Loiret, France. Seeds presented by L. Pardé, Directeur des Ecoles des Barres. Received June 5, 1929.

80645. BERBERIS REPLICATA W. W. Smith. Berberidaceae. **Barberry.**

An evergreen barberry, native to southwestern China, with rather small leaves which have recurved margins and are gray beneath. It is an early and profusely flowering species, bearing its blossoms all along the branches in a very attractive fashion, and the deep-crimson berries make it handsome in the fruiting stage.

For previous introduction see No. 63822.

80646. MALUS SIKKIMENSIS (Hook. f.) Koehne. Malaceae. **Sikkim crab.**

The Sikkim crab is a small tree, rather bushy in habit, which grows wild in the interior of Sikkim, India, at altitudes up to 10,000 feet. The narrowly oval leaves are very woolly beneath, and the white flowers, rosy in the bud, are about an inch across and are borne very freely in 4-flowered to 8-flowered clusters. The pear-shaped fruits are dark red with paler dots and are about half an inch wide.

For previous introduction see No. 62026.

80647. PIERIS TAIWANENSIS Hayata. Ericaceae.

An evergreen shrub or small tree, native to Taiwan, with oblong spatulate-serrulate leaves 2 to 5 inches long and small urceolate white flowers in terminal drooping panicles up to 6 inches long.

80648. ROSA FOETIDA Herrmann (*R. lutea* Mill.). Rosaceae. **Austrian brier rose.**

A hardy shrubby rose up to 10 feet high, with slender prickly stems and bright-yellow single flowers of characteristic scent. Native to western Asia.

For previous introduction see No. 78944.

80649. CITRUS VANGASAY Bojer. Rutaceae.

From near Tamatave, Madagascar. Seeds presented by the Station Agricole de l'Ivoloina, through Charles F. Swingle, Bureau of Plant Industry. Received May 31, 1929.

A shrub cultivated in the rural districts of Madagascar for the sake of its thick-skinned orangelike fruits which are flattened at both ends.

80650 to 80653.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, Agricultural Explorers, Bureau of Plant Industry. Received May 31, 1929.

80650. BRASSICA OLERACEA VIRIDIS L. Brassicaceae. **Kale.**

No. 213. *Hanahabotan* (ornamental cabbage flower). From the Yamato Seed Co., Takadacho, Tokyo, May 6, 1929. In Japan it is used as an ornamental, and is grown in pots or small dishes.

80651. CHRYSANTHEMUM CORONARIUM L. Asteraceae. **Crowndaisy.**

No. 219. *Shungiku.* From the Yamato Seed Co., Takadacho, Tokyo, May 6, 1929. This is said to be the edible chrysanthemum or vegetable chrysanthemum. The leaves are used as a garnish, flavoring, and also cooked as spinach.

80652. TAONABO JAPONICA (Thunb.) Szysz. (*Ternstroemia japonica* Thunb.). Theaceae.

No. 124. Obtained from trees in a small park on the road to the Samkaido Building, Tokyo, April 30, 1929. A small evergreen Japanese tree about 12 feet high, with a much branched head, leathery entire oblong leaves, and small yellowish-white fragrant flowers. The globose fruits, about the size of a cherry, are yellow tinged with rose on the sunny side. The smooth timber is used for cabinetwork and interior decorating, and the bark is used for dyeing. The plants are dioecious.

80653. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

No. 133. From the Soy Sauce Laboratory of the Imperial Experiment Station, Nishigahara, Tokyo, May 3, 1929. This wheat, originally grown in the Tokyo district, is roasted, ground or coarsely cracked, mixed with boiled soybeans, and then rice bacteria are added in the making of soy sauce.

80654 to 80656.

From Darjiling, India. Seeds presented by J. E. Leslie, Curator, Lloyd Botanic Garden. Received June 7, 1929.

80654. GERBERA KUNZEANA Braun and Aschers. Asteraceae.

A herbaceous perennial with a rosette of ovate entire or pinnatifid leaves, woolly beneath, and scapes a foot high with filiform bracts, and bearing daisylike flower heads. It is native to the temperate slopes of the Himalayas in India.

For previous introduction see No. 39017.

80655. MAESA RUGOSA C. B. Clarke. Myrsinaceae.

A stout shrub or small tree, native to India at an altitude of 8,000 feet, with

80654 to 80656—Continued.

narrowly lanceolate coriaceous leaves 6 to 8 inches long and small white flowers borne in racemose panicles.

80656. RHODODENDRON CAMPANULATUM Don. Ericaceae.

A large evergreen shrub of stiff, spreading habit, sometimes 12 feet high, with oval leaves which are densely covered beneath with a red-brown felt. The flowers, of various rosy purple shades and about 2 inches across, are borne during April in rather loose clusters about 4 inches in diameter. It is native to India at an altitude of 13,000 feet.

For previous introduction see No. 75966.

80657. GOSSYPIUM sp. Malvaceae. **Cotton.**

From Bamoa, Sinaloa, Mexico. Seeds obtained from Dr. A. W. Morrill, through C. E. Bellis, United States Plant Quarantine and Control Administration. Received June 13, 1929.

80658. PERSEA sp. Lauraceae.

From Chichavac, Guatemala. Seeds presented by Wilson Popenoe, Research Department of the United Fruit Co., Tela, Honduras. Received June 17, 1929.

Aguacate de Monte. A species growing at an altitude of 9,000 feet.

80659 and 80660.

From Victoriaborg, Akkra, Gold Coast, Africa. Seeds and tubers presented by L. A. King-Church, Conservator of Forests. Received June 14, 1929.

80659. FIRMIANA BARTERI (Masters) Schum. (*Sterculia barteri* Masters). Sterculiaceae.

An ornamental tree, native to tropical Africa, with rounded cordate leaves and loose panicles of small coral-pink flowers. The wood is light and used for fishnets and floats, and the fiber is used for making rope.

For previous introduction see No. 73054.

80660. LISSOCHILUS sp. Orchidaceae. **Orchid.**

A terrestrial orchid.

80661 and 80662.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received June 11, 1929.

80661. CLEMATIS GOURIANA Roxb. Ranunculaceae.

For previous introduction and description see No. 80119.

80662. CITRUS WEBBERII Wester. Rutaceae. **Alsem.**

Kalpi. A small handsome tree, 15 to 30 feet high, which is very drought resistant. It is particularly abudant in the Mountain Province, Nueva Vizcaya, and southern Luzon. The better forms have oblate, very juicy acid fruits somewhat like the mandarin in appearance and up to 2½ inches in diameter; these may be used like the lemon. The species is very variable, and appears promising as a citrus stock.

For previous introduction see No. 62658.

80663. ORYZA SATIVA L. Poaceae. Rice.

From Howrah, Bengal, India. Seeds obtained from the Deputy Director of Agriculture, Western Circle, Calcutta, through R. Y. Jarvis, American Consul in Charge, Calcutta. Received June 14, 1929.

Patnai paddy.

80664 to 80667.

From Pretoria, Union of South Africa. Seeds obtained from E. Percy Phillips, Principal Botanist, Botanical Station, Division of Plant Industry, Department of Agriculture. Received June 15, 1929.

80664. ACACIA ALBIDA Delile. Mimosaceae.

A low much-branched tree, native to tropical Africa, with whitish bark, axillary spikes of white flowers, and flat oblong pods. It yields a gum similar to gum arabic. The leaves are eaten by goats, and the bark is used in curing leather.

For previous introduction see No. 55419.

80665. ACACIA LASIOPETALA Oliver. Mimosaceae.

A shrub or small tree with the young growing parts softly tomentose. The compound leaves are divided into 14 to 22 pairs of pinnæ, each with 20 to 30 pairs of leaflets. The small flowers, with silky petals, are in small heads on axiliary penduncles 1 to 2 inches long. Native to the Mozambique district of southeastern Africa.

80666. BOLUSANTHUS SPECIOSUS (Bolus) Harms (*Lonchocarpus speciosus* Bolus). Fabaceae.

A small ornamental tree native to South Africa, with compound leaves and long racemes of violet flowers resembling those of wisteria. The tree is subtropical in its requirements, grows best in good deep soil, and is propagated only by seeds. The hard white durable timber is used for wheel spokes.

For previous introduction see No. 76860.

80667. PALLASIA CAPENSIS Christm. (*Calodendrum capensis* Thunb.). Rutaceae.

A large handsome tree with spreading branches in pairs or in threes. The ovate evergreen opposite leaves are 3 to 4 inches long. The white flowers, with linear-oblong reflexed petals 1 to 2 inches long, are in terminal panicles, and the shining black seeds the size of hazelnuts are borne in hard thick capsules. It is native to South Africa.

80668. VIROLA sp. Myristicaceae.

From Aguna, Guatemala. Seeds presented by Wilson Popenoe, Research Department of the United Fruit Co., Tela, Honduras. Received June 17, 1929.

Collected at an altitude of 1,400 feet. A large tree, 50 to 100 feet tall, native to tropical America. The seeds, resembling nutmegs, are rich in oil which is of evident value for making soap.

80669. ARGANIA SPINOSA (L.) Skeels (*A. sideroxylon* Roem. and Schult.). Sapotaceae. Argan.

From Mogador, Morocco. Seeds obtained from Mr. Besson, Inspecteur des Eaux et Forêts. Received June 17, 1929.

The argan tree of western Morocco is very limited in its range, occurring only in that part of the African Continent. It grows to a large size and bears an abundance of light-yellow fruits somewhat resembling small plums in shape. Cattle and goats are said to feed upon these fruits, which are exceedingly acrid to the taste. The seeds are very thick-walled and contain an oil which is used as food and also for illuminating purposes. Apparently the tree is not injured by considerable frost, and it may thrive wherever the hardy citrus grows.

For previous introduction see No. 65467.

80670 and 80671.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, Agricultural Explorers, Bureau of Plant Industry. Received June 15, 1929.

80670. SCOPOLINA JAPONICA (Maxim.) Kuntze. Solanaceae.

No. 175. Obtained from Dr. Eishcro Wakabayashi, Chief Officer of the Experimental Farm for Cultivation of Medicinal Plants, Kasukabecho, Saitama Ken, May 15, 1929. Doctor Wakabayashi states that the roots, branches, leaves, and flowers are used in nervous troubles.

For previous introduction see No. 32258.

80671. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. Soybean.

No. 251. *Sode Furi Daidzu.* From Tokyo, May 15, 1929. A greenish-yellow, medium-large soybean generally used for bean curd, soy sauce, and in cooking.

80672 and 80673. GUNDELIA TOURNEFORTII L. Asteraceae.

From Kurdistan, Turkey. Seeds presented by George E. Lamsa, Mission House, New York, N. Y. Received June, 1929.

A perennial herb much resembling a thistle, with milky juice and spiny many-lobed leaves and flower heads which produce seeds somewhat like those of the sunflower, *Helianthus annuus.* It is native to Kurdistan and Persia, where the young shoots are eaten as a vegetable. The seeds are also eaten.

For previous introduction see No. 51142.

80672. From northwestern Kurdistan.

80673. From southeastern Kurdistan.

80674 and 80675. BRASSICA RUGOSA (Roxb.) Prain. Brassicaceae.

From Java. Seeds collected by W. A. Wiren and presented by P. J. Wester, Bureau of Agriculture, Manila. Received June 27, 1929.

A vegetable extensively grown in India and Java. It is an early cold-weather crop in the hills of the central, eastern, and western Himalayas. The permanent radical leaves form a loose cabbagelike head a foot in diameter. Later a stout stem, 4 to 6 feet high, is formed, its

80674 and 80675—Continued.

branches ascending to make a narrow pyramidal head 6 to 10 inches across. The succulent leaves, 12 to 15 inches long and 8 to 9 inches wide, taper into thick white fleshy stalks 3 to 4 inches long and over an inch wide. The plant is cultivated in Nepal where its leaves are picked almost as fast as they are developed and are used as a vegetable. An oil is extracted from the seeds.

For previous introduction see No. 53542.

80674. *Sesawi idjo.*

80675. *Sesawi puti.*

80676. CASSIA sp. Caesalpiniaceae.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received June 27, 1929.

A small tree, about 20 feet high, which reminds one of *Sesbania grandiflora.*

80677. ANACARDIUM OCCIDENTALE L. Anacardiaceae. **Cashew.**

From Tananarive, Madagascar. Seeds obtained from Paul Dean Thompson, American Vice Consul. Received July 26, 1928. Numbered in June, 1929.

A tropical evergreen tree, 30 to 40 feet high, with large leathery leaves. It is native to the West Indies. The small kidney-shaped nuts are borne on large swollen, pear-shaped, juicy, acidulous stalks, 2 to 4 inches long, which are preserved. The edible seeds are roasted and served as a dessert and are now becoming well-known in the markets of the eastern United States, along with other salted nuts.

For previous introduction see No. 52582.

80678. EXOECARIA BICOLOR (Hassk.) Zoll. Euphorbiaceae.

From Singapore, Straits Settlements. Plants collected by David Fairchild, Agricultural Explorer, Bureau of Plant Industry, with the Allison V. Armour Expedition. Received July 19, 1926. Numbered in June, 1929.

No. 822. Botanic Gardens, May 31, 1926. A handsome shrub with leaves glossy green above and wine-red on the under surface.

80679 and 80680.

From Mountain Province, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received June 24, 1929.

80679. RUBUS COPELANDII Merr. Rosaceae.

A robust bramble with ascending arching spiny canes 10 feet long. It is native to the Philippine Islands at altitudes between 5,000 and 8,000 feet. The leaves are trifoliolate, and the orange-red berries are juicy and edible, but lacking in flavor.

For previous introduction see No. 76797.

80680. VACCINIUM BARANDANUM Vidal. Vacciniaceae.

A shrub or small tree, 12 to 30 feet high, native to the island of Luzon. It has coriaceous undulate-margined leaves 4 to 6 inches long and campanulate red flowers nearly an inch long in axillary racemes. It is found at altitudes between 4,000 and 7,000 feet.

80681 to 80709.

From Guatemala. Seeds presented by Wilson Popenoe, Research Department of the United Fruit Co., Tela, Honduras. Received June 20, 1929.

80681. ACACIA sp. Mimosaceae.

Obtained at Chichavac at an altitude of 8,300 feet.

80682. APEIBA ASPERA Aubl. Tiliaceae.

Peine de mico. Obtained at Caballo Blanco at an altitude of 250 feet. A large handsome tree 40 feet high, with grayish bark, oval smooth green leaves 5 inches long, and terminal racemes of yellow flowers. Native to tropical South America.

80683. CALOCARPUM VIRIDE Pittier. Sapotoceae. **Green sapote.**

Injerto. Obtained in the market in the city of Guatemala. A tree, native to Guatemala, which, unlike its near relative, the sapote (*Lucuma mammosa*), grows at an altitude of 5,000 to 6,000 feet. It is about 40 feet high, with long, slender leaves and commonly round to oval fruits often pointed at the tip. The fruits are 2 to 3½ inches in diameter, smooth, dull yellow-green, sometimes becoming almost dull yellow. The skin is not thick and adheres closely to the red-brown flesh, which is soft and melting with a sweet flavor. The one or two large deep-brown seeds are hard and polished and are easily removed from the pulp.

For previous introduction see No. 43788.

80684. CALOPHYLLUM INOPHYLLUM L. Clusiaceae.

A large tree with leaves like those of a magnolia and producing fruits about an inch in diameter. A bitter, aromatic greenish oil is extracted from the seeds and used for burning by the poorer classes and is also used as an application in rheumatism. The green oil, on saponification, yields a bright-yellow soap. The strong durable reddish wood is useful for the joiner and cabinetmaker, and in India it is used for masts, railway sleepers, etc.

For previous introduction see No. 52595.

80685. CEDRELA sp. Meliaceae.

Obtained in Monte Grande at an altitude of 600 feet.

80686. CHAMAEDOREA sp. Phoenicaceae. **Palm.**

Pacaya. Obtained in Aguna at an altitude of 1,400 feet.

80687. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

Sandia. Obtained in Monte Grande at an altitude of 600 feet.

80688. CRATAEGUS STIPULOSA (H. B. K.) Steud. Malaceae. **Manzanilla.**

From Chichavac, at an altitude of 8,100 feet. A large shrub or small erect slender tree about 20 feet tall, with elliptic-lanceolate serrate leaves and bearing in the spring white flowers resembling apple blossoms. The subglobose fruits, about an inch in diameter, look like small apples and are yellow with russet dots and a blushed cheek. The thin skin surrounds a rather dry, yellowish, mealy pulp and three large seeds.

80681 to 80709—Continued.

In the early fall, commencing about October, the fruits ripen, and from this month until after Christmas they are quite abundant.

For previous introduction see No. 73755.

80689. DAHLIA MAXONII Safford. Asteraceae.

Flor de Santa Catarina. From Xetzac, near Tecpam, at 6,500 feet altitude. A tree dahlia, native to Guatemala, where it becomes about 15 feet high and bears clusters of large lilac-pink flowers. A detailed description of this tree dahlia with a discussion of its horticultural possibilities is given in the Journal of Heredity, vol. 11, pp. 265 to 268, 1920.

For previous introduction see No. 73687.

80690. ENTEROLOBIUM CYCLOCARPUM (Jacq.) Griseb. Mimosaceae.

Conacaste. From Escuintla. One of the most beautiful and largest trees of the Pacific region of tropical America, where it grows at an altitude of about 2,700 feet. The trunk sometimes becomes 3 feet in diameter. The compound leaves close up during the night, and the pods are twisted into a short spiral. The leaves and pods are much relished by cattle.

For previous introduction see No. 51406.

80691. GLIRICIDIA SEPIUM (Jacq.) Kunth (*G. maculata* H. B. K.). Fabaceae.

Madre Cacao. From Monte Grande, at an altitude of about 600 feet.

80692. HONCKENYA FICIFOLIA Willd. Tiliaceae.

From Lancetilla. A very striking ornamental shrub native to western tropical Africa. The branches are purplish and covered with yellowish hairs. The hairy leaves are more or less deeply 3-lobed to 7-lobed, and the large purple flowers, 2 to 4 inches wide, are in terminal racemes.

For previous introduction see No. 73513.

80693. LUEHEA SEEMANNII Planch. and Triana. Tiliaceae.

Tapisquit. A tropical tree with alternate oblong-elliptic irregularly serrulate leaves and rather small white or pink flowers in terminal cymes. Native to Colombia.

80694. PARMENTIERA EDULIS DC. Bignoniaceae.

Guajilote. A small tree up to 30 feet high, with the branches armed with short stout recurved spines. The trifoliolate leaves have three ovate entire leaflets, the greenish yellow flowers are in clusters on the old wood, and the edible yellowish green fruits are 4 to 6 inches long and about an inch in diameter. Native to Mexico, Guatemala, and El Salvador.

80695. PHASEOLUS sp. Fabaceae.

Choreque. From Monte Grande, at an altitude of about 600 feet.

80696. PHYLLOCARPUS SEPTENTRIONALIS Donn. Smith. Caesalpiniaceae.

Flor de Mico. A handsome flowering tree native to eastern Guatemala at altitudes between 1,500 and 2,000 feet. It is

80681 to 80709—Continued.

of broad spreading habit, 40 to 50 feet high, with small light-green compound leaves and clusters of small crimson-scarlet flowers borne in great profusion during January and February.

For previous introduction see No. 59768.

80697. PINUS OOCARPA Scheide. Pinaceae. **Pine.**

A white pine from Concepción, Chiquimula, at an altitude of 1,800 feet.

For previous introduction see No. 50651.

80698. PLATYMISCIUM POLYSTACHYUM Benth. Fabaceae.

Hormigo, Palo de Marimba. From Monte Grande, at an altitude of 600 feet. A handsome tropical leguminous tree with opposite, shining-green, compound leaves made up of three to five ovate leaflets and racemes of small flowers. The wood is hard, streaked black and red, and is considered excellent for cabinetwork.

80699. SENECIO SALIGNUS DC. Asteraceae.

Chilca. From Xetzac, Tecpam, at an altitude of 6,500 feet. A glabrous shrub 4 to 8 feet high, native to Mexico and Guatemala. The narrowly lanceolate sessile leaves are 1 to 5 inches long, and the bright-yellow daisylike flowers are borne in a terminal cyme.

80700 and 80701. SICANA ODORIFERA (Vell.) Naud. Cucurbitaceae. **Casabanana.**

Melocotón. A subtropical ornamental cucurbitaceous vine producing large fruits a foot or more long, which are edible but insipid.

For previous introduction see No. 72986.

80700. From Monte Grande at an altitude of 600 feet.

80701. From the market in Sololá.

80702. SIDEROXYLON TEMPISQUE Pittier. Sapotaceae.

Tempisque. From the market in the city of Guatemala, and probably originating in Antigua. A large tree, glabrous throughout, native to El Salvador and Guatemala. The coriaceous elliptical leaves are 2 to 4 inches long on long petioles; the small greenish-yellow flowers are in dense clusters on the old wood and are followed by ovoid 1-seeded fruits 1 to 2 inches long.

80703. STERCULIA sp. Sterculiaceae.

Castano. From Santa Cruz.

80704. SYMPHONIA GLOBULIFERA L. f. Clusiaceae.

Leche Amarilla. A large tropical tree up to 80 feet high, with oblong-lanceolate short-stemmed leathery leaves and red flowers, either solitary or in many-flowered umbels. Native to tropical Africa and also tropical America.

80705 to 80707. TABEBUIA spp. Bignoniaceae.

80705. TABEBUIA DONNELL-SMITHII Rose.

Matilisguate. From Monte Grande, at an altitude of 600 feet. A tree up to 80 feet high, with a trunk often 4 feet in diameter, native to Guatemala. The palmately compound evergreen leaves are made up of five to

80681 to 80709—Continued.

seven serrate-ovate leaflets 8 to 10 inches long, and the panicles of beautiful golden-yellow tubular-campanulate flowers are borne in great profusion.

80706. TABEBUIA PENTAPHYLLA (L.) Hemsl.

Roble. From Monte Grande, at an altitude of 600 feet. A handsome tropical deciduous tree, about 35 feet high, native to Central America. During its flowering period, from January to March, the numerous large clusters of pink flowers make the tree very attractive.

For previous introduction see No. 73286.

80707. TABEBUIA sp.

Cortez. From Monte Grande, at an altitude of 600 feet.

80708. TRIBROMA BICOLOR (Humb. and Bonpl.) O. F. Cook (*Theobroma bicolor* Humb. and Bonpl.). Sterculiaceae.

Cacao pataste. From the market of Sololá.

80709. TRIPLARIS AMERICANA L. Polygonaceae.

Mulato. From Caballo Blanco, at an altitude of 265 feet. A large tropical timber tree with curious 3-angled woody fruits. Native to Central America.

For previous introduction see No. 73287.

80710 to 80712. ZEA MAYS L. Poaceae. **Corn.**

From Soochow, Kiangsu, China. Seeds presented by H. L. Reaves, American Presbyterian Mission, South. Received June 25, 1929.

80710. Changshu soft corn.

80711. No. 1. 80712. No. 2.

80713 to 80717.

From Nikolsk-Ussuriisk, Maritime Province, Siberia, Union of Socialistic Soviet Republics. Seeds presented by the Director of the State Russian Geographical Society. Received June 10, 1929.

80713. FRAGARIA ORIENTALIS A. Los. Rosaceae. **Strawberry.**

A wild strawberry, native to northern Chosen, with erect hairy stems up to 8 inches high, broad coarsely serrate hairy leaflets, and small red conical or spheroidal fruits.

80714. LONICERA MAXIMOWICZII Maxim. Caprifoliaceae. **Honeysuckle.**

An ornamental shrub up to 10 feet high, with purplish branchlets, ovate leaves 1 to 3 inches long, smooth and dark green above, lighter and pubescent below, and violet-red flowers produced in pairs, followed by red fruits. It is native to the Amur region of Siberia.

80715. SAMBUCUS LATIPINNA Nakai. Caprifoliaceae. **Elder.**

A low shrub with compound leaves made up of three to five broadly elliptic leaflets, and hemispheric clusters of small white flowers followed by scarlet or orange-red fruits. Native to Chosen.

80713 to 80717—Continued.

80716. SAMBUCUS RACEMOSA L. Caprifoliaceae.

Variety *Buergeriana.* Received as *Sambucus buergeriana* Blume, which appears to be a herbarium name that has not been published.

80717. SYRINGA WOLFI C. Schneid. (*S. robusta* Nakai). Oleaceae. **Lilac.**

An ornamental shrub remarkable for its peculiar foliage; the elliptic oblong leaves are up to 6 inches long, cuneate, and grayish green beneath. The fragrant, dark-lilac flowers are in much-branched panicles. Native to Manchuria and Chosen.

80718 to 80725. AVENA spp. Poaceae. **Oats.**

From Cowra, New South Wales, Australia. Seeds presented by J. T. Pridham, Experimental Farm, through T. R. Stanton, Bureau of Plant Industry. Received June 27, 1929.

80718. AVENA sp.

Belar.

80719. AVENA sp.

Gidgee.

80720. AVENA sp.

Guyra.

80721. AVENA sp.

Palestine.

80722. AVENA sp.

No. 4385–C. (*Red Sprig* × *Sunrise*) × *Reid.*

80723. AVENA sp.

No. 4386–C. (*Red Sprig* × *Sunrise*) × *Reid.*

80724. AVENA sp.

No. 4387–C. (*Red Sprig* × *Sunrise*) × *Reid.*

80725. AVENA sp.

No. 4865–C. (*Sunrise* × *Reid*) × *Lachlan.*

80726 to 80759. TRITICUM spp. Poaceae.

From Afghanistan. Seeds collected by Prof. N. I. Vavilov, Institute of Applied Botany and New Cultures, Leningrad. Received June 27, 1929.

80726 to 80756. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). **Common wheat.**

80726. No. 12353. A spring wheat.

80727. No. 12369. Mixture of spring and winter wheat.

80728. No. 12370. Spring wheat from nonirrigated fields.

80729. No. 12391. From the vicinity of Gherat, Shankhai, at an altitude of about 3,600 feet. Bearded pubescent spring wheat.

80730. No. 12481. From Akhalgaran, at an altitude of about 7,800 feet. Mixture of spring and winter wheat.

80731. No. 12482. From Shakharab, at an altitude of about 8,250 feet. Inflatum forms of spring wheat for irrigated fields.

80726 to 80759—Continued.

80732. No. 12483. *Triticum compactum.* From Daulet, at an altitude of about 7,800 feet. Spring wheat.

80733. No. 12486. From Piandzhau, at an altitude of about 9,000 feet. Semibearded spring wheat for irrigated fields.

80734. No. 12491. *Triticum compactum.* From Kabul District, at an altitude of about 6,000 feet. Mixture of winter and spring wheat.

80735. No. 12587. From Khadzhi-Durbar, at an altitude of about 3,300 feet. Spring wheat for nonirrigated fields.

80736. No. 12611. From Masar and Sheriff, at an altitude of about 1,500 feet. Mixture of spring and winter wheat for nonirrigated fields.

80737. No. 12621. From Sukhte-Tchinar, at an altitude of about 8,700 feet. Winter wheat for irrigated fields.

80738. No. 12629. *Triticum compactum.* From Navi, at an altitude of about 7,000 feet. Winter wheat.

80739. No. 12636. From Tcharikar, at an altitude of about 5,700 feet. Mixture of spring and winter wheat for irrigated fields.

80740. No. 12657. *Speltiforme.* From Du Ab, at an altitude of about 6,600 feet. Spring wheat for nonirrigated fields.

80741. No. 12667. From Masar and Sheriff, at an altitude of about 1,500 feet. Mixture of spring and winter wheat for nonirrigated fields.

80742. No. 12668. From Masar and Sheriff, at an altitude of about 1,500 feet. Winter wheat for nonirrigated fields.

80743. No. 12669. *Triticum compactum.* From Masar and Sheriff, at an altitude of about 1,500 feet. Spring wheat for nonirrigated fields.

80744. No. 12687. From Kabul District, at an altitude of about 5,700 feet. Winter wheat.

80745. No. 12715. *Triticum compactum.* From Sheikhabad, Kandagar Road, at an altitude of about 6,300 feet. Winter wheat.

80746. No. 12721. From Kabul District, at an altitude of about 5,700 feet.

80747. No. 12722. From Kabul District, at an altitude of about 5,700 feet.

80748. No. 12749. From Kabul District. Inflatum type of a beardless wheat, harvested in 1924, obtained from a German orchardist.

80749. No. 12768. From Kandagar, along the Argendabu River, at an altitude of about 3,000 feet. Mixture of spring and winter wheat. Winter wheat for irrigated fields.

80750. No. 12772. From Darvagi. Mixture of spring and winter wheat. Winter wheat for irrigated fields.

80751. No. 12841. From Mashet District, vicinity of Faisabad, at an altitude of about 4,200 feet. Spring wheat.

80726 to 80759—Continued.

80752. No. 12842. From Argu, at an altitude of about 5,700 feet. Spring wheat for nonirrigated fields.

80753. No. 12846. South of Faisabad, at an altitude of about 3,800 feet. Winter wheat for irrigated fields. Great admixture of rye.

80754. No. 12850. From Dzhurum, Badakhshan, at an altitude of about 4,400 feet. Spring wheat for nonirrigated fields.

80755. No. 12857. From Dan, at an altitude of about 8,400 feet. Spring wheat, liguleless, for irrigated fields.

80756. No. 12874. From Tchekhosarai, at an altitude of about 4,500 feet. Mixture of winter and spring wheat. Winter wheat for irrigated fields.

80757 to 80759. TRITICUM TURGIDUM L. **Poulard wheat.**

80757. No. 12379. From Gherat, Bazaar, at an altitude of about 2,800 feet. Mixture of spring and winter wheat.

80758. No. 12385. *Triticum compactum.* East of Gherat, at an altitude of about 3,600 feet. Admixture of black-eared forms. Mixture of spring and winter wheat.

80759. No. 12489. *Triticum compactum.* Between Seri-Tcheshme and Koti-Ashrou, at an altitude of about 8,400 feet. Winter wheat with an admixture of beardless wheat.

80760. AVENA sp. Poaceae. **Oats.**

From Cowra, New South Wales, Australia. Seeds presented by J. T. Pridham, Experimental Farm, through T. R. Stanton, Bureau of Plant Industry. Received March 21, 1929.

Kareela C. 28.

80761 to 80768.

From Georgetown, Demerara, British Guiana. Seeds presented by J. S. Dash, Director of the Department of Agriculture. Received June 5, 1929.

80761. ACROCOMIA VINIFERA Oerst. Phoenicaceae. **Palm.**

A palm 40 feet high, native to Central America, with a spiny ringed trunk, large arching pinnate leaves with numerous linear pinnae, and a spathe about 3 feet high. It is closely related to *Acrocomia lasiospatha.*

80762. ASTROCARYUM AUREUM Gris. and Wendl. Phoenicaceae. **Palm.**

A palm, closely related to Elaeis, with a prickly trunk and pinnately divided leaves of linear-lanceolate segments, shining above and greenish-golden beneath. It is native to Trinidad.

80763. EUTERPE VENTRICOSA C. H. Wright. Phoenicaceae. **Palm.**

An erect slender spineless pinnate-leaved palm, 20 to 30 feet high, with oblong-lanceolate pinnæ about 2 feet long, a much-branched spadix, small white flowers, and brown pealike fruits one-fourth of an inch in diameter. It is native to tropical South America.

80761 to 80768—Continued.

80764. LICUALA ELEGANS Blume. Phoenicaceae. Palm.

A fan palm, native to Sumatra, with a short thick trunk about 4 feet high and a crown of orbicular leaves on petioles 3 to 5 feet long, having linear-lanceolate lobes obliquely truncate at the end.

80765. LINOMA ALBA (Bory) O. F. Cook. Phoenicaceae. Palm.

Variety *aurea*.

80766. LIVISTONA OLIVAEFORMIS Mart. Phoenicaceae. Palm.

A fan palm, native to Brazil, with a medium-sized trunk, leaves on petioles spiny at the base, and the segments divided into long linear pendent lobes 12 to 15 inches long and solitary olive-shaped fruits.

For previous introduction see No. 79570.

80767. ENGLEROPHOENIX sp. (*Maximiliana* sp.). Phoenicaceae. Palm.

Tall spineless palms with pinnately divided leaves, related to the Attaleas.

80768. ROYSTONEA REGIA (H. B. K.) O. F. Cook (*Oreodoxa regia* H. B. K.). Phoenicaceae. Royal palm.

Variety *jenmani*.

80769 to 80772.

From the Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received June 27, 1929.

80769. ACACIA sp. Mimosaceae.

From Ilocos Norte. A tall shrub with long slender branches, growing on dry sandy soil in a region where the dry season is long.

80770. FLACOURTIA RUKAM Zoll. and Mor. Flacourtiaceae.

From Manila.

For previous introduction and description see No. 80120.

80771. PROSOPIS CHILENSIS (Molina) Stuntz (*P. juliflora* DC.). Mimosaceae. Algaroba.

From Laoag, Ilocos Norte. A spineless form.

For previous introduction see No. 50094.

80772. VIGNA LUTEA (Swartz) A. Gray (*V. retusa* Walp.). Fabaceae.

A tropical perennial vine or creeper, native to the Philippines, where it has been found useful as a cover crop. It has also made good forage for cattle.

For previous introduction see No. 74587.

80773. SOCRATEA EXORRHIZA (Mart.) Wendl. (*Iriartea exorrhiza* Mart.). Phoenicaceae. Palm.

From Paramaribo, Dutch Guiana. Seeds presented by S. Sahal, Director of the Agricultural Experiment Station. Received June 28, 1929.

A tall handsome spineless palm, native to tropical South America, bearing small yellow flowers and olive-green fruits. It has a swollen cylindrical trunk elevated on a pyramid of exposed roots, giving it a remarkable appearance. The trunk, 35 feet or more high, bears at its summit a crown of large, irregularly pinnate leaves.

For previous introduction see No. 59279.

80774. KENTIA sp. Phoenicaceae. Palm.

From Trinidad, British West Indies. Seeds collected by Allison V. Armour. Received April 10, 1929.

Trinidad Botanic Gardens. The kentias are ornamental spineless palms with pinnate leaves composed of linear-lanceolate leaflets. They are closely related to the betel palm, *Areca catechu*.

80775 to 80779. GOSSYPIUM spp. Malvaceae. Cotton.

From Paramaribo, Dutch Guiana. Seeds presented by S. Sahal, Director of the Agricultural Experiment Station. Received June 28, 1929.

Seeds collected on cotton trees by the Carib Indians of Torelinde and Bisri, south of Paramaribo.

80775. GOSSYPIUM sp.

Amana Ma ulu.

80776. GOSSYPIUM sp.

Ateriri Ma ulu.

80777. GOSSYPIUM sp.

Ma ulu ne, Kumbo enulu.

80778. GOSSYPIUM sp.

Parana Ma ulu.

80779. GOSSYPIUM sp.

Tapulu Ma ulu.

80780 to 80809. PHOENIX DACTYLIFERA L. Phoenicaceae. Date palm.

From Iraq. Offshoots obtained by Roy W. Nixon, Bureau of Plant Industry, United States Department of Agriculture. Received May 2, 1929.

80780. *Allona*. A medium to small, amber-colored date, resembling somewhat, both in appearance and in quality, the *Amir Haj* [No. 80781], of which it may be a seedling. It occurs only in the Oasis of Mandali, where there are probably fewer than 100 palms.

80781. *Amir Haj*. A variety perhaps the most famous in northern Iraq; known to the United States Department of Agriculture by reputation for 30 years. The fruit is medium-sized, oblong, deep amber, very translucent, with light bloom, thin skin, and rich flavor. The variety is rated by the natives as being a good producer. There is some shipment of fruit to other points in Iraq, but chiefly as gifts or special orders, for it is highly esteemed. It occurs only in the Oasis of Mandali, where there are probably several thousand palms, although any one garden seldom has more than a few specimens.

80782. *Ashrasi*. Obtained at Mandali. A medium to large, ovate, amber-colored date intermediate between the soft and the dry types, possessing many desirable qualities of both. The few specimens of this variety already growing

80780 to 80809—Continued.

in the Coachella Valley of California have attracted attention on the one hand because of the excellence of the fruit and on the other because the flower clusters have seldom set many fruits. From investigations in Iraq it appears that this handicap is diminished by planting on heavy soil and pollinating very promptly after the flowers open. The variety is well known and widely distributed in Iraq, but was not found in abundance except at Mandali.

80783. *Azrakani.* Obtained at Mandali. A medium to small-sized, amber-colored date somewhat similar to *Allona* [No. 80780], and also very likely a seedling of *Amir Haj* [No. 80781]. A rare variety found chiefly at Mandali.

80784. *Badami.* Obtained at Mandali. An inferior variety, probably a seedling of *Zaheedy,* to which the fruit has some resemblance, though oblong rather than obovate.

80785. *Bahrab.* Obtained at Mandali. A variety fairly well known north and east of Baghdad, but nowhere very abundant. It is a long, narrow, amber-colored date of good flavor, resembling the *Okt Fteemy* variety from North Africa. It cures well and is said to be one of the earliest ripening varieties in northern Iraq.

80786. *Bairukdar.* Obtained at Mandali. A medium to large-sized amber-colored date of fair quality local to Mandali.

80787. *Banawish.* Obtained at Mandali.

80788. *Barhi.* Obtained near Basra. An ovate amber date of excellent quality, already known from a few specimens growing in the Coachella Valley of California. It is found chiefly in southern Iraq, where it is rare but well known and highly esteemed. It is one of the few varieties which are sweet in the "khalal" stage—the period immediately preceding the softening which accompanies complete maturity.

80789 and 80790. *Bedraya.* Probably the best dry date in Iraq. The fruit is medium to large, oblong, straw colored, and mild flavored. The variety is well known in northern Iraq. It was not found in large numbers in any of the localities visited, but was said to be more abundant in Bedra, the oasis of its origin.

80789. Obtained at Mandali.

80790. Obtained from the Oasis of Bedra through the courtesy of J. F. Webster, Inspector General of Agriculture in Iraq.

80791. *Braim.* Obtained at Basra. A medium-sized oblong amber date common on the Shaat Al Arab. Almost the entire crop in southern Iraq is harvested in the "khalal" or prepipe stage, boiled, dried and exported to other parts of Iraq and to India, Persia, and Arabia.

80792. *Dairi.* Obtained at Basra. A common variety in southern Iraq, said to be almost on a par with *Sayer* [No. 80808] in its resistance to adverse conditions. The purplish-brown fruit is medium to large, oblong-elliptical, and of good quality. It now appears that there are a number of palms of this variety already growing in the Coachella Valley of California, although their identity was in doubt prior to the recent investigations of this department in Iraq.

80793. *Digal Iman Husain.* Obtained at Mandali. A seedling date of which only a few palms have been propagated locally. The fruit is oblong, rather large, and of the amber type, characterized by a darker color at the base than at the apex.

80794. *Digal Umad.* A local variety in Mandali. The fruit resembles somewhat the *Khadrawy* of northern Iraq.

80795. *Fursi.* Obtained in Basra. A variety occurring, though not very common, in southern Iraq. Observations on a specimen of this variety, now fruiting at the United States Experiment Date Garden, Indio, Calif., indicate that it is promising for testing in more humid date areas. The fruit is nearly black, medium sized, oblong-elliptical, and of good quality.

80796. *Gantar.* Obtained in Basra. A small subspherical amber date said to be late ripening. It is said that nearly 2 per cent of the adult female palm population of the Shaat Al Arab belong to this variety. It is also not uncommon in the date gardens of the Tigris and the lower Euphrates.

80797. *Gnami.* A male variety of southern Iraq obtained in Basra.

80798. *Jaafary.* Obtained in the Oasis of Mandali, where this variety is chiefly found. A good soft black date from northern Iraq. It is medium to large and oblong to broadly elliptical.

80799. *Karunfuli.* A local variety occurring at Mandali. The medium-sized fruit is of the black type and resembles the *Jaafary* [No. 80798] in quality, but differs in shape, being ovate rather than oblong.

80800. *Khadrawy of northern Iraq.* Obtained in Mandali. An entirely different variety from the Khadrawy of Basra, southern Iraq, which has already become established in the southwestern United States. Owing partly to the fact that they do not occur in the same localities, it was not recognized in Iraq prior to the investigations of the United States Department of Agriculture that two of their important varieties were going under the same name. The fruit of the northern variety is very similar to that of the southern variety, but is larger and later in ripening.

80801. *Khasab.* Obtained in Basra. A medium-sized black date said to be the latest-ripening variety in southern Iraq. Sometimes the dates are allowed to remain on the palms until the coming of the Christmas frosts. Although the flavor is but indifferent, yet a date which so lengthens the season for fresh fruit does not lack popularity. About 1 in 6,000 palms on the banks of the Shaat Al Arab is of this variety, and it is to be found on the banks of the Tigris as far north as Baghdad, but has not been found on the Euphrates.

80802. *Khatooni.* A local variety in Mandali. The fruit is small to medium sized, oblong, purplish black, and of fair quality.

80780 to 80809—Continued.

80803 and 80804. *Maktum.* A medium to large, oblong, amber date with a mild flavor. It is late ripening and is of excellent quality. It is already well known in the southwestern United States, where there are a limited number of palms. The variety is widely distributed in Iraq, but is nowhere very abundant, existing largely as specimen palms for the use of garden owners rather than for commercial purposes.

80803. Obtained in Basra.

80804. Obtained in Mandali.

80805. *Nabaty.* A single offshoot brought in by one of the natives who assisted in packing at Basra and who said it was a very fine date. It is probably a seedling.

80806. *Salany.* Obtained in Mandali. A medium to large-sized reddish-brown date of fair quality.

80807. *Shalany.* A local variety obtained in Mandali.

80808. *Sayer.* Obtained in Basra. The commonest variety in southern Iraq, said to compose about 45 per cent of the total palm population. It is not generally regarded very highly in Iraq, but has certain qualities which make it desirable for testing in prospective date areas in the United States. It is very resistant to adverse conditions, survives drought better than any other variety, and is said to be less subject to insect attacks. In Iraq it is generally planted on the poorest soil, which may have something to do with the poor quality of the fruit obtained. The fruit is medium sized, oblong, deep red, cures well, and seems adapted to commercial handling.

80809. *Red Maktum.* Obtained in Mandali. An inferior seedling having no resemblance either in palm or in fruit to the real *Maktum* as far as could be observed. It is a medium-sized date of a dull reddish brown.

80810. BUDDLEIA MACROSTACHYA Benth. Loganiaceae.

From Gangtok, Sikkim, India. Seeds presented by the Sikkim Forest Manager. Received May 15, 1928. Numbered in June, 1929.

A tender shrub, 3 to 8 feet high, with white, woolly, oblong-lanceolate leaves up to 8 inches long and white flowers with an orange throat, in dense spikes 4 to 10 inches long. Native to the Himalayas.

Introductory statement	1
Inventory	3
Index of common and scientific names	41

INTRODUCTORY STATEMENT

This inventory (Nos. 80811 to 81619), for the period from July 1 to September 30, 1929, is conspicuous for the fact that it records the arrival of seeds rather than plants. This is particularly important for the reader to remember, as the acquisition of seeds in no way guarantees their germination or the production of plants. In many cases definite knowledge exists that no plants will result from the seeds recorded.

The continued activities of the agricultural explorers in the Orient, P. H. Dorsett and W. J. Morse, are attested by their long lists of soybean varieties, as well as many other forage crops and miscellaneous plants.

Particular attention may be called to the many seeds presented by S. W. McLeod Braggins, superintendent, La Mortola, Ventimiglia, Italy (81074–81208), including many species of aloe, agave, and sempervivum, for use in localities with similar climates. This material was brought in for particular experimental work and will not be available for other experimenters for several years, as some studies will have to be made in order to determine variations from seed due to cross-pollination and the breaking up resulting from hybrid seeds.

This inventory also records additions to the collection of ericas already brought in for Government testing and study. Of particular note is the gift of seeds of rare Cape heaths, presented by R. H. Compton, Director of the National Botanic Gardens, Kirstenbosch, Newlands, Union of South Africa (*Erica* spp., 81230–81247). Not all of these have produced plants, but from those that have germinated will come several new heaths for general experiment.

Several importations of sugarcanes are included from the Java Sugar-Producers Association's experiment station, Pasuruan, Java (81356–81381); from the Colonial Sugar Refining Co., Sydney, Australia (80952–80995 and 81448–81472); a collection of melons (*Cucumis melo*, 81382–81405) presented by the Deputy Director of Gardens at Saharanpur, through the Director of the Agricultural Research Institute, Imperial Department of Agriculture in India, at Pusa, and Robert Frazer, American consul general, Calcutta, India, and many palms (81581–81594) presented by R. O. Williams, Superintendent and Assistant Botanist of the Department of Agriculture, Port of Spain, Trinidad, British West Indies, for the collection at Chapman Field, Coconut Grove, Fla.

The botanical determinations of these introductions have been made and the nomenclature determined by H. C. Skeels, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

OFFICE OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., November 11, 1930.

38644—31——1

INVENTORY[1]

80811 to 80820.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry, United States Department of Agriculture. Received July 8, 1929.

80811. ASTRAGALUS SINICUS L. Fabaceae.

No. 311. Near Gifu, May 31, 1929. A red-flowered Japanese clover used extensively in this region.

80812. CAPNOIDES sp. Papaveraceae.

No. 192. Growing at an altitude of about 1,500 feet, in shady places near Daikoda, an old temple on the east side of Mount Hiei, not far from Kyoto, May 26, 1929. A plant 10 to 18 inches high, with brick-red flowers resembling in shape those of the snapdragon.

80813. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. **Four-rowed barley.**

No. 453. Barley heads from a field near Urawa, June 14, 1929.

80814. LONICERA CAERULEA EDULIS (Turcz.) Regel. Caprifoliaceae. **Honeysuckle.**

No. 308. Collected from wild plants on the side of a hill at Kamo Machu, May 28, 1929. A honeysuckle with large bright-red edible oblong fruits of very good quality.

80815. OSTERDAMIA JAPONICA (Steud.) Hitchc. Poaceae. **Japanese lawngrass.**

No. 153. Collected from a small park in the center of Tokyo, June 14, 1929. A short grass with very tough, persistent rhizomes which root at practically every joint.

80816. PHLEUM sp. Poaceae. **Grass.**

No. 310. Kyoto, May 23, 1929. *Kemuto so.* A grass used in small dishes with water scenes. The seed is sown on cotton, makes a fine sodlike mat of green, and is quite effective.

80817. TRIFOLIUM sp. Fabaceae. **Clover.**

No. 344. Collected from plants on rice paddy ridges in the vicinity of Atsuki, June 25, 1929. A species closely resembling ordinary white clover, but the seeds do not appear to be so plump nor so large.

80811 to 80820—Continued.

80818 and 80819. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

80818. No. 577. Collected on a mountain top at an altitude of about 3,500 feet, on the trail between Shoji and Kofu, June 28, 1929.

80819. No. 600. Shioza Ki, June 30, 1929.

80820. RUBUS TRIFIDUS Thunb. Rosaceae.

No. 102. Collected in Hibiya Park, Tokyo, June 7, 1929. Vigorous plants sometimes 10 feet or more high, having green canes without thorns, white flowers, and rather dull yellow fruits which are three-fourths of an inch or more in diameter and half an inch long when fully ripe, becoming bright yellow.

For previous introduction see No. 58652.

80821 to 80847. SOJA MAX (L.) Piper (*Glycine hispida* (Maxim.). Fabaceae. **Soybean**

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received July 8, 1929.

Obtained from Dr. Keiji Adachi, Chief Director of the Akita Ken Agricultural Experiment Station, Akita, June 13, 1929.

80821. No. 426. Originally from the Rikuu Agricultural Experiment Station of the Imperial Japanese Department of Agriculture and Forestry. *Rikuu nijin rokugou.* Seeds straw yellow, nearly round, but apparently mixed as the color of the hilum varies from pale yellow to brown.

80822. No. 427. Originally from the South Manchurian Railway Agricultural Experiment Station, Koshurei. *Shiheigai shirobana.* Seeds straw yellow, but apparently a mixed lot, varying in size and color of hilum.

80823. No. 428. Originally from the Niigata Ken Agricultural Experiment Station. *Kiushirou.* Seeds straw yellow, nearly round, medium sized, with distinctive brown hilum.

---

[1] It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Office of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identification, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this office, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

80821 to 80847—Continued.

80824. No. 429. A variety developed by the Akita Ken Agricultural Experiment Station. *Kuro saya shichigou.* Seeds straw yellow, nearly round, medium sized, glossy seed coat, with distinctive brown hilum.

80825. No. 430. Originally from the Rikuu Agricultural Experiment Station of the Imperial Japanese Department of Agriculture and Forestry. *Nagazuki.* Seeds straw yellow, medium large, with pale-brown hilum.

80826. No. 431. Developed by the Akita Ken Agricultural Experiment Station. *Ogon.* Seeds straw yellow, nearly round, glossy seed coat, with distinctive brown hilum.

80827. No. 432. Originally from the South Manchurian Railway Agricultural Experiment Station, Koshurei. *Shiriukou.* Seeds straw yellow, medium sized, with pale hilum.

80828. No. 433. Originally from the Fukushima Ken Agricultural Experiment Station. *Asahi rokojugo.* Seeds straw yellow, medium large, with brown hilum.

80829. No. 434. Originally from the Iwate Ken Agricultural Experiment Station. *Nooki.* Seeds straw yellow, nearly round, glossy seed coat, with distinctive brown hilum.

80830. No. 435. Originally from the Rikuu Agricultural Experiment Station of the Imperial Department of Agriculture and Forestry. *Rikuu nijin gogou.* Seeds straw yellow, nearly round, glossy seed coat, with distinctive brown hilum.

80831. No. 436. Originally from the South Manchurian Railway Agricultural Experiment Station, Koshurei. *Kaigen shirobana.* Seeds straw yellow, but apparently a mixed lot, varying in size and color of hilum.

80832. No. 437. Developed by the Akita Ken Agricultural Experiment Station. *Rikuu nijin shichigou.* Seeds straw yellow, medium sized, nearly round, with distinctive dark-brown hilum.

80833. No. 438. Originally from the Miyagi Ken Agricultural Experiment Station. *You getsu.* Seeds straw yellow, medium large, with brown hilum.

80834. No. 439. Originally from the Fukushima Ken Agricultural Experiment Station. *Daruma niju.* Seeds straw yellow, medium large, with light-brown hilum.

80835. No. 440. Originally from the Fukushima Ken Agricultural Experiment Station. *Shiro kachi koku niju.* Seeds straw yellow, large, with pale hilum.

80836. No. 441. Originally from the Niigata Ken Agricultural Experiment Station. *Kariba takiya.* Seeds straw yellow, medium sized, with a light brown to brown hilum.

80837. No. 442. Originally from the Rikuu branch station of the Imperial Japanese Department of Agriculture and Forestry. *Mejiro.* Seeds straw yellow, of medium size, with pale hilum.

80821 to 80847—Continued.

80838. No. 443. Developed by the Akita Ken Agricultural Experiment Station. *Ani.* Seeds straw yellow, medium sized, nearly round, with hilum varying from russet brown to very dark brown. The seeds are quite similar to No. 444 [No. 80839].

80839. No. 444. Originally from the Miyagi Ken Agricultural Experiment Station. *Kairyo azuma nishiki.* Seeds straw yellow, nearly round, medium sized, and with distinct brown hilum.

80840. No. 445. Originally from the Iwate Ken Agricultural Experimental Station. *Tokichi.* Seeds straw yellow, nearly round, medium sized, with distinct brown hilum.

80841. No. 446. Originally from the Iwate Ken Agricultural Experiment Station. *Niuchan.* Seeds straw yellow, medium large, with pale hilum.

80842. No. 447. Originally from the Miyagi Ken Agricultural Experiment Station. *Satou daizu.* Seeds straw yellow, nearly round, medium sized, with distinct brown hilum.

80843. No. 448. Originally from the Miyagi Ken Agricultural Experiment Station. *Tama tsukuri.* Seeds straw yellow, medium large, with pale hilum.

80844. No. 449. Originally from the South Manchurian Railway Experiment Station, Koshurei. *Ho ten shirokubi daizu.* Seeds straw yellow, medium large, with pale hilum.

80845. No. 450. Originally from the Rikuu Agricultural Experiment Station of the Japanese Department of Agriculture and Forestry. *Rikuu niju sango.* Seeds straw yellow, medium large, with light-brown hilum.

80846. No. 451. Developed by the Akita Ken Agricultural Experiment Station. *Akita.* Seeds straw yellow, glossy, nearly round, with pale-yellow hilum.

80847. No. 452. Developed by the Akita Ken Agricultural Experiment Station. *Shiro saya.* Seeds very pale straw yellow, medium large, with pale hilum.

80848. MOMORDICA COCHINCHINENSIS (Lour.) Spreng. Cucurbitaceae.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received July 15, 1929.

Tabolo. A very vigorous, tall climber, native to the Philippine Islands, producing large, round, greenish yellow, attractive fruits which should make it popular as an ornamental vine in southern Florida, Porto Rico, and Panama. The immature fruits are boiled and eaten with meat by the natives, and the tender leaves also are boiled and eaten. The numerous large, round, flat seeds appear to be very rich in oil.

For previous introduction see No. 58583.

80849. ORNITHOPUS sp. Fabaceae.

From Rabat, Morocco. Seeds presented by Dr. E. Miége, Station de Sélection et d'Essais de Semences. Received July 15, 1929.

80850. CANAVALIA sp. Fabaceae.

From Honolulu, Hawaii. Seeds presented by F. G. Krauss, Director of Extension Service, University of Hawaii. Received July 15, 1929.

A hybrid Canavalia with seeds having highly diverse markings. These stocks are the F_3 generation and are consequently still segregating freely. One of the parents, *Canavalia ensiformis*, has been grown extensively as a green-manure crop in Hawaii, and this hybrid may thrive in the southern part of the United States.

80851 to 80858.

From Manila, Philippine Islands. Plants presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received July 2, 1929.

80851. ANACOLOSA LUZONENSIS Merr. Olacaceae.

Galo. A tree about 50 feet high, with alternate simple leaves in the axils of which are borne nuts about the size of a filbert and of good quality and flavor. Native to the Philippine Islands.

For previous introduction see No. 38395.

80852. ARTOCARPUS ODORATISSIMA Blanco. Moraceae. **Marang.**

A medium-sized tropical tree which resembles the jackfruit and the seeded breadfruit in appearance, but is superior in quality to either. It is native to the southern Philippine Islands and the Sulu Archipelago. The roundish oblong fruits, about 6 inches long, have a thick, fleshy rind and white, sweet flesh which is juicy and aromatic, with a pleasant flavor.

For previous introduction see No. 58025.

80853. CUBILIA BLANCOI Blume. Sapindaceae.

Kubili. A medium-sized tree up to 25 feet high, with compound leaves and bright-green spiny oblong fruits, 2 to 3 inches long, containing a nut about an inch long, which is of excellent quality either roasted or boiled. Native to the Philippine Islands.

80854. GARCINIA MOOREANA Wester. Clusiaceae.

Bunag. A handsome tree of pyramidal habit attaining a height of 20 feet or more, native to Jolo and Palawan. The leaves are elliptic to elliptic-ovate, coriaceous, and 6 to 8 inches long. The fruit is similar to a mangosteen, except that it is somewhat smaller, is red in color, and has a thinner but fibrous, crustaceous pericarp; the flesh is white and sharply acid, of agreeable flavor, but too sour to be eaten out of hand. It would probably make a good preserve. It ripens in the latter part of July and August. The mangosteen has been successfully grafted on the bunag.

80855. LITCHI PHILIPPINENSIS Radlk. Sapindaceae.

Kamingi. A Philippine relative of the lychee (*Litchi chinensis*). The tree is about 50 feet high, with dark-green, pinnate leaves, similar to those of the lychee, and roundish oblong fruits, about an inch long, borne in loose terminal clusters. The tough leather "shell" of the fruit, which is covered with short spiny projections, incloses a scant edible pulp, in which is embedded a relatively large seed, that is roasted and eaten. The tree may have value as a stock for the lychee.

For previous introduction see No. 68957.

80856. MANGIFERA INDICA L. Anacardiaceae. **Mango.**

Carabao. Grafted plants.

80857. PANGIUM EDULE Reinw. Flacourtiaceae.

Pangi. A large tree, native to the Philippine Islands, up to 75 feet high, with very large entire or lobed bright-green leaves, yellowish green flowers, and oval brown fruits, 6 inches long, with edible flesh inclosing numerous seeds. The seeds are poisonous when fresh, but are edible after steeping in water.

For previous introduction see No. 73250.

80858. PISONIA ALBA Span. Nyctaginaceae.

Maluko. A small tree up to 35 feet high, with thin pale-green, oblong-ovate leaves, 4 to 8 inches long, which make good greens resembling spinach. Native to the Malay Peninsula.

For previous introduction see No. 54500.

80859. PISTACIA VERA L. Anacardiaceae. **Pistache.**

From Turkestan. Seeds obtained from N. I. Vavilov, Bureau of Applied Botany and New Cultures, Leningrad, Russia, Union of Socialistic Soviet Republics, through W. T. Swingle, Bureau of Plant Industry. Received July 15, 1929.

The wild form of the pistache is a xerophilous plant, able to stand great dryness of soil and air. It grows at altitudes of 2,000 to 5,000 feet in the southern parts of central Asia.

80860. FICUS sp. Moraceae. **Fig.**

Plants grown at Chapman Field, Coconut Grove, Fla., from seeds presented by G. W. Edwards, director, Agricultural Experiment Station, Guam. Originally received as *Ficus tinctoria*, these plants do not agree with the others grown from the same lot of seeds, and have therefore been segregated.

80861. SYZYGIUM CUMINI (L.) Skeels (*Eugenia jambolana* Lam.). Myrtaceae. **Jambolan.**

From Manila, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received July 18, 1929.

Duhat. A tree, native to tropical Asia, 24 to 45 feet high, with ovate, coriaceous, shining leaves, numerous yellow flowers crowded in terminal or axillary panicles, followed by loose clusters of two to seven dark-purple or black, smooth, shining, ovoid fruits with rather large clingstone seeds. The thin skin adheres to the sweet, juicy, pleasant subacid pulp, which is white tinged with purple, and the texture somewhat resembles that of the cherry. The fruits may be eaten out of hand with relish, and they make an excellent jelly. In India it is sometimes made into wine. This variety is probably of prehistoric introduction into the Philippines and is common throughout the archipelago.

80862. LILIUM sp. Liliaceae. **Lily.**

From Japan. Bulblets collected by R. K. Beattie, Bureau of Plant Industry. Received July 22, 1929.

No. 850. Natsu Kusa, Kampara Mura, Watarai Gun, Miye Ken, June 27, 1929. A very fine wild species bearing pink flowers.

80863. CURCUMA sp. Zinziberaceae.

From Java. Rootstocks collected by David Fairchild, agricultural explorer, Bureau of Plant Industry, with the Allison V. Armour Expedition. Received June 28, 1926. Numbered in July, 1929.

No. 789. Obtained in the native market at Soerabaya, May 17, 1926. A gingerlike plant up to 3 feet high, with large leaves and spikes, a foot long, of purplish yellow flowers with reddish yellow bracts.

80864. TERMINALIA CHEBULA Retz. Combretaceae.

From Darjiling, India. Seeds presented by J. E. Leslie, Curator, Lloyd Botanic Garden. Received July 13, 1929.

A large deciduous tree, native to northern India, Burma, and Ceylon, with oval-elliptic leaves about 5 inches long and terminal racemes of white flowers. The ovoid, leathery fruits are the black myrobalan of commerce, which is one of the most valuable tanning materials of India.

For previous introduction see No. 66157.

80865 and 80866.

From Lamao, Bataan, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received July 18, 1929.

80865. EUGENIA CURRANII C. B. Robinson. Myrtaceae. **Lipoti.**

From the Lamao Experiment Station. A handsome vigorous tree, native to the Philippine Islands, about 30 feet high, with a gnarled trunk and tortuous branches and dark-green, shining leaves. The fruits are in clusters of 20 to 50 on the bare boughs or between the leaves on the larger twigs; the individual fruit is about the size of a grape with thin, smooth, dark-red skin and white, dry, crisp flesh, with a flavor like that of the crab apple. The seed is comparatively large. The fruit is probably best suited for making preserves and jelly.

For previous introduction see No. 60974.

80866. EUPHORIA DIDYMA Blanco. Sapindaceae.

Alpay. From the Lamao Experiment Station. A small attractive tree, up to 50 feet high, with compound leaves made up of prominently veined leathery lanceolate leaflets and compact terminal clusters of small flowers followed by greenish warty fruits an inch in diameter, having a shell-like rind and juicy sweet translucent pulp inclosing a large seed. Native to the Philippine Islands.

80867 to 80869.

From Jerusalem, Palestine. Seeds presented by the director of the Department of Agriculture, Forests and Fisheries. Received July 18, 1929.

80867 to 80869—Continued.

80867. COLCHICUM DECAISNEI Boiss. Melanthiaceae.

A variety, native to Syria, with rosy lilac flowers which appear without the leaves in late October. It differs very little from *Colchicum laetum*, which, in turn, is much like *C. autumnale*.

For previous introduction see No. 77476.

80868. IRIS ATROPURPUREA Baker. Iridaceae. **Blackpurple iris.**

An oncocyclus iris with linear leaves about 6 inches long and a stem 6 to 8 inches high, bearing a single flower. The oblong outer segments, 2 inches long, are purplish black with a yellow patch in the throat and a yellow, black-tipped beard. The inner segments are larger, of the same color, and are veined. It is native to Syria.

80869. IRIS PALAESTINA (Baker) Boiss. Iridaceae.

Bulbs of a winter-flowering iris, closely related to *Iris caucasica*, with falcate leaves 3 to 9 inches long and a very short stem, bearing one to three flowers. These are pale yellow tinged with lilac; the outer segments are oblong with auriculate claws, and the narrowly lanceolate inner segments are very minute. Native to Palestine.

80870. LITCHI PHILIPPINENSIS Radlk. Sapindaceae.

From Bataan, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received July 19, 1929.

From the Lamao Experiment Station.

For previous introduction and description see No. 80855.

80871. LITCHI PHILIPPINENSIS Radlk. Sapindaceae.

From Botolan, Subic, Zambales, Philippine Islands. Seeds presented by the Bureau of Forestry, Manila, through W. T. Swingle, Bureau of Plant Industry. Received July 22, 1929.

Alupag amo.

For previous introduction and description see No. 80855.

80872 to 80875.

From China. Offshoots obtained from F. A. McClure, Curator, Herbarium of the Lingnan University, Canton. Received April 10, 1929. Numbered in July, 1929.

80872. BAMBUSA sp. Poaceae. **Bamboo.**

No. 1098. Originally from Heunglokeuk, Kwangtung, March, 1925. *Wong chuk.* A sympodial type of bamboo cultivated for its thin-walled culms which are used in weaving, rope making, and somewhat in the manufacture of a cheap grade of paper for ceremonial purposes. The variety is widely distributed in the Province and is most extensively cultivated in the Kwongning district of western Kwangtung. The mature culms reach a height of 24 feet and a circumference of 5 inches. The nodes are not prominent and the culms are very upright in habit

80872 to 80875—Continued.

with drooping tips. The clump habit is compact, not rapidly spreading. The branches are in fascicles, nearly all of a size, slender, and up to about 3 feet long. The lower nodes are always free of branches except when a culm is injured, and usually even free of buds. The leaves are 4 to 6 inches long.

80873. BAMBUSA sp. Poaceae. **Bamboo.**

No. 1099. Obtained at the Lingnan University, where it has been established for several years. *Fan taan chuk.* A bamboo known to occur somewhat on the upper reaches of the Sui River, western Kwangtung, and also in northern Kwangtung. It is a medium-large, thin-walled sympodial type, used chiefly for making steaming trays for Chinese restaurants. It is too brittle for most weaving purposes or for making rope, but is extremely ornamental on account of the compact clump habit. The tall, straight culms are gray with siliceous powder and naked of branches for 12 to 15 feet in mature specimens.

80874. BAMBUSA sp. Poaceae. **Bamboo.**

No. 1100. Obtained originally at Heunglokeuk, Kwangtung, April, 1925. *Ngau kan chuk.* A small to medium-sized wild bamboo of the sympodial type. The culms of the largest specimens are said to be highly esteemed for opium pipes because of their hard, smooth texture. Otherwise they are not known to be of economic importance. It is a pretty ornamental, however, and although it does not spread it produces new culms, even in very poor soil, at a prodigious rate. The bases of some of the more mature culms are inconspicuously marked with pale-yellow, longitudinal stripes.

80875. BAMBUSA sp. Poaceae. **Bamboo.**

No. 1101. From the Lingnan University Garden, Canton. *Chaang ko chuk.* A thick-walled, stiff, straight bamboo of the sympodial type, cultivated for its culms which are put to many uses such as punting poles, the weaving of heavy pig crates and chicken crates, and in making the framework of temporary buildings. The largest culms in well-established clumps are 24 feet high and about 5 inches in circumference. This bamboo occurs in many parts of this Province, especially in the North River region. It is one of the most important economic bamboos in this part of China.

80876. CASTILLA ELASTICA Cerv. Moraceae. **Mexican rubbertree.**

From Paris, France. Seeds purchased from Vilmorin-Andrieux & Co. Received July 23, 1929.

A large deciduous tropical forest tree from which rubber is obtained. It is native to Central America.

For previous introduction see No. 77387.

80877 to 80880.

From Elstree, Herts, England. Plants presented by Vicary Gibbs, Aldenham House Gardens. Received May 4, 1929.

80877. CLERODENDRUM TRICHOTOMUM Thunb. Verbenaceae. **Harlequin glorybower.**

80877 to 80880—Continued.

Variety *montanum.* A form of this upright shrub or small tree, native to China and Japan, with ovate leaves 4 to 8 inches long, loose terminal panicles of fragrant white flowers, and blue fruits with red calyxes.

80878. CRYPTOMERIA JAPONICA (L. f.) D. Don. Pinaceae. **Common cryptomeria.**

Variety *elegans nana.* A dense, dwarf, spreading form with short stiff leaves.

80879. CUPRESSUS NANA GLAUCA Hort. Pinaceae. **Cypress.**

A dwarf form with glaucous foliage.

80880. GENISTA SYLVESTRIS PUNGENS Vis. (*G. dalmatica* Bartl.). Fabaceae. **Broom.**

A shrub about 2 feet high with spiny flowering branchlets, simple linear leaves less than an inch long, and racemes 4 to 5 inches long of small yellowish flowers. Native to the Balkan Peninsula.

80881. CHAMAEDOREA TEPEJILOTE Liebm. Phoenicaceae. **Palm.**

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received August 27, 1929.

A palm, native to southern Mexico, up to 10 feet high, with pinnate leaves about 4 feet long. The undeveloped flowers are eaten as a vegetable.

For previous introduction see No. 77621.

80882. ANANAS SATIVUS Schult. f. Bromeliaceae. **Pineapple.**

From Summit, Canal Zone. Plants presented by J. E. Higgins, Director, Plant Introduction Gardens. Received June 17, 1929.

Monte Lirio.

80883 to 80896.

From India. Seeds presented by the Department of Agriculture, Madras Presidency, through Edmund B. Montgomery, American consul, Madras. Received July 19, 1929.

80883 to 80887. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

80883. No. 6. From Cuddapah. *Kalingar.* A variety producing dark greenish striped fruits about 1½ feet long and 1½ feet in diameter, which are reddish inside and contain black seeds when ripe.

80884. No. 11. From Coimbatore. A black-seeded variety bearing red fruits.

80885. No. 12. From Coimbatore. A red-seeded variety bearing reddish white fruits.

80886. No. 13. From Coimbatore. A white-seeded variety bearing white fruits.

80887. No. 14. From Nandyal. *Kharbuj Kaya.* A prolific variety bearing round, black-seeded fruits about two months after sowing.

80888 to 80896. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

80883 to 80896—Continued.

80888 to 80892. From Cuddapah.

80888. No. 1. *Khirvi, Kharbuja.* A variety producing sweet fruits 8 inches long and up to a foot in diameter. The outside is reddish and striped, and the marrow is white.

80889. No. 2. *Khanda.* A sweet variety about the same size as No. 80888. The striped fruits are white outside, and the pulp is also white.

80890. No. 3. *Bathusa.* A variety producing smooth, round, sweet fruits about the size of a big mango, which are white both inside and out.

80891. No. 4. *Sherbet amer.* A variety with round, sweet fruits about the same size as No. 80890. The outer coat is dark green or reddish, and the marrow is greenish or yellowish white. It is highly valued.

80892. No. 5. *Papaya.* A variety with smooth, white, sweet fruits about a foot long and 9 inches broad, which are white inside.

80893 to 80896. From Prodattar.

80893 and 80894. Nos. 7 and 8. *Khurbuse.* The fruits are either round or oval, and the skin is pale brown and slightly wrinkled. A mixture of two numbers.

80893. [No data.]

80894. [No data.]

80895. No. 9. *Budam khurbuse.* A variety said to be the best in Prodattar. The small, oval fruits have greenish to pale-brown skin.

80896. No. 10. *Ghanna khurbuse.* A variety producing large fruits, sometimes very sweet, which have pale brown to pale red skin.

80897 and 80898.

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received July 22, 1929.

80897. CARICA CAULIFLORA Jacq. Papayaceae.

This relative of the papaya is a tree 9 to 12 feet high, which is cultivated and probably native in Central America and Mexico. The trunk is crowned with large leaves that are cordate at the base and have the tip lobed about half way down into acuminate segments. The inconspicuous sessile inodorous flowers borne along the trunk are followed by ovoid yellow fruits 3 to 4 inches long.

For previous introduction see No. 80048.

80898. PRUNUS CAPULI Cav. Amygdalaceae. **Capulin.**

A tree, native to tropical America, up to 40 feet high, with lanceolate long-pointed coriaceous leaves 6 to 8 inches long, stout racemes, 4 to 6 inches long, of small white flowers which are followed by nearly black globose edible fruits half an inch in diameter.

For previous introduction see No. 80632.

80899 to 80904.

From Orleans, France. Plants purchased from La France Gauguin. Received April 19, 1929. Numbered in July, 1929.

80899 to 80901. CHRYSANTHEMUM MAXIMUM Ramond. Asteraceae. **Pyrenees chrysanthemum.**

80899. *Galathee.*

80900. *Mlle. Marcelle Gauguin.*

80901. *Perfection.*

80902 to 80904. HELENIUM AUTUMNALE L. Asteraceae.

80902. *Grandicephalum (nudiflorum) aurantium.*

80903. *Grandicephalum compactum bicolor.*

80904. *Grandicephalum gauffreanum.*

80905 to 80908.

From Sibolangit, Medan, Sumatra. Plants obtained by J. A. Lörzing. Received July 16, 1929.

80905. CITRUS sp. Rutaceae.

A wild lemonlike species, possibly the ancestor of the pummelo and other cultivated citrus fruits.

80906. DAEMONOROPS sp. Phoenicaceae. **Palm.**

A rattan used for plaiting.

80907. HOYA IMPERIALIS Lindl. Asclepiadaceae. **Wax plant.**

A shrubby climber with thick fleshy elliptical leaves 6 to 9 inches long and umbels of about 10 flowers which are brown-purple, whitish outside, and 3 inches across. Native to mangrove swamps in Borneo.

80908. PHOLIDOCARPUS SUMATRANA Beccari. Phoenicaceae. **Palm.**

A lofty fan-leaved palm native to the East Indies. It is 50 feet or more high, with a large strong trunk and stout, thorny leaf petioles.

80909. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

From Rostof on the Don, Russia. Seeds obtained from the North Caucasus Border Seed Cooperative Association, through J. W. Pincus, Amtorg Trading Corporation, New York, N. Y., and H. N. Vinall, Bureau of Plant Industry. Received July 24, 1929.

A French variety.

80910. KOKIA ROCKII Lewton. Malvaceae. **Kokio.**

From Hawaii. Seeds presented by Harold L. Lyon, in charge of the department of botany and forestry, Experiment Station of the Hawaiian Sugar Planters' Association. Received July 25, 1929.

Obtained at Kona, June, 1929. A handsome tropical tree, about 20 feet high, with somewhat fleshy, deep-green, orbicular leaves which are in whorls at the ends of the branches, and an abundance of bright-scarlet flowers about 6 inches in diameter.

For previous introduction see No. 69110.

80911 to 80931.

From Twyford, Berks, England. Plants purchased from John Waterer Sons & Crisp. Received April 9, 1929.

80911. CHRYSANTHEMUM MAXIMUM Ramond. Asteraceae.
Pyrenees chrysanthemum.

Phyllis Smith. A very fine Shasta daisy, 2½ feet high, bearing an abundance of beautiful lustrous white flowers on long wiry stems. The ray flowers are deeply cut, which gives the flower heads a ruffled appearance.

80912. DAPHNE HYBRIDA Lindl. Thymelaeaceae.

An evergreen garden hybrid closely resembling *Daphne odora*, with elliptic-oblong leaves 2 to 4 inches long and very fragrant violet or reddish purple flowers.

80913 to 80931. ERICA spp. Ericaceae.

80913 to 80921. ERICA CARNEA L.
Spring heath.

80913. A shrub a foot high, with soft green foliage, and bearing rosy white sweet-scented flowers between December and May.

80914. *Alba.* A white-flowered form.

80915. *Gracilis.* A variety with rich pink flowers borne during midwinter.

80916. *King George V.* An early variety bearing dark-red flowers.

80917. *Mrs. S. Doncaster.* A variety bearing light-pink flowers during midwinter.

80918. *Queen Mary.* A variety bearing beautiful rich pink flowers during midwinter.

80919. *Queen of Spain.* A variety bearing light-pink flowers during the early spring.

80920. *Thomas Kingscote.* A variety bearing pale-pink flowers during the early spring.

80921. *Winter Beauty.* A variety bearing rosy-pink flowers during midwinter.

80922. ERICA CILIARIS L. **Fringed heath.**

An evergreen shrub about a foot high, bearing large rosy-purple bells between June and September. Native to southern England.

For previous introduction see No. 79155.

80923. ERICA MEDITERRANEA L.
Biscay heath.

A large evergreen shrub 3 to 4 feet high, bearing pale-pink flowers between March and May. Native to the Mediterranean countries.

80924. ERICA SCOPARIA L. **Heath.**

Nana. A very decorative Mediterranean shrub about 2 feet high, with light-green evergreen foliage and long cylindrical spikes of greenish white flowers. It is excellent for edging beds.

80925. ERICA STRICTA Donn.
Corsican heath.

An evergreen shrub of compact upright habit, about 2 feet high, with

80911 to 80931—Continued.

whorled leaves and rosy-pink flowers which are borne during the summer. Native to southern Europe.

For previous introduction see No. 79061.

80926 to 80928. ERICA TETRALIX L.
Crossleaf heath.

80926. An evergreen shrub about a foot high, bearing rose-purple bells during the early autumn, generally August and September or later. Native to England.

For previous introduction see No. 79157.

80927. *Alba.* A white-flowered form.

80928. *Mollis.* A form with grayish white foliage.

80929 to 80931. ERICA VAGANS L.
Cornish heath.

80929. An evergreen shrub 12 to 18 inches high, bearing mauve-pink bells between August and October. Native to southern England.

For previous introduction see No. 79991.

80930. *Alba.* A variety about 18 inches high, bearing pure white flowers between August and October.

80931. *Rosea.* A pale rose-flowered variety which begins bearing in July and continues throughout the season.

80932. CRACCA TOXICARIA (Pers.) Kuntze (*Tephrosia toxicaria* Pers.). Fabaceae.

From Paramaribo, Dutch Guiana. Seeds presented by S. Sahal, Director, Agricultural Experiment Station. Received July 25, 1929.

A shrub up to 7 feet high, with nine or more oblong leaflets and racemes of white and pink flowers. Parts of the plant are crushed and thrown in the water to poison fish. Native to Peru.

80933. GEONOMA sp. Phoenicaceae.
Palm.

From Cali, Colombia. Seeds presented by M. J. Rivero, through O. F. Cook, Bureau of Plant Industry. Received July 24, 1929.

The Geonomas are native to tropical America. They have reedlike ringed stems, entire or pinnately lobed leaves, and globose black fruits.

80934 to 80950.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received July 25, 1929.

80934. BRASSICA RAPA L. Brassicaceae.
Turnip.

No. 704. From the specially selected and grown stock of the Agricultural College, Department of Agriculture, Kyoto Imperial University, July 2, 1929. *Suigukina makino.* A variety used for pickling.

80934 to 80950—Continued.

80935. CORIARIA JAPONICA A. Gray. Coriariaceae. **Japanese coriaria.**

No. 702. Collected along a water run in a big valley at Shioza Ki, June 30, 1929. *Ushi koroshi* (killing the cow). A shrub with bright-green leaves and an abundance of bright-red fruits about the size of small cherries. When fully ripe the fruits are very dark red or purple. The flowers are said to be yellow. The plant is said to be poisonous; hence the local name.

For previous introduction see No. 66546.

80936. FRAGARIA sp. Rosaceae. **Strawberry.**

No. 354. From the northern side of Mount Fuji, at altitudes between 2,000 and 3,000 feet, June 26, 1929. The berries are round and oblong, red when ripe, and of good flavor and quality.

80937 and 80938. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. **Six-rowed barley.**

80937. No. 576. Collected in a valley between two mountain ridges on a trail between Shoji and Kofu, June 28, 1929.

80938. No. 599. Collected in a good-sized valley region at Shioza Ki, June 30, 1929.

80939. LONICERA sp. Caprifoliaceae. **Honeysuckle.**

No. 332. Tokoji Temple, Ishido, Kitaadachi Gun, Saitama Ken, June 20, 1929. A species with bright-red fruits, three-eighths of an inch in diameter and five-eighths of an inch long, which are very juicy, sweet, and of good quality.

80940. LONICERA TENUIPES Nakai. Caprifoliaceae. **Honeysuckle.**

No. 357. From the northern side of Mount Fuji, at an altitude of about 2,500 feet, June 26, 1929. A shrub 3 to 6 feet high, with elliptical to oblong leaves densely pilose beneath, axillary reddish flowers nearly an inch long, and red fruits. Native to Japan.

80941. OSTERDAMIA JAPONICA (Steud.) Hitchc. (*Zoysia japonica* Steud.) Poaceae. **Japanese lawngrass.**

No. 579. From plants along river-bottom land at Anayama, June 29, 1929. A grass which makes a very tight sod and only a short growth.

80942 to 80946. RUBUS spp. Rosaceae.

80942. RUBUS sp.

No. 345. Collected near Otsuki, June 25, 1929.

80943. RUBUS PALMATUS Thunb. **Bank raspberry.**

No. 507. Growing in lava formation along a mountain trail at altitudes between 2,000 and 2,500 feet, near Shojiko, in the Mount Fuji region, June 27, 1929. A raspberry 3 to 4 feet high bearing an abundance of large, orange-yellow fruits of fairly good flavor.

80944. RUBUS sp.

No. 525. Collected from large plants along a stream in a valley between mountain ridges along the trail between Shoji and Kofu, June 28, 1929.

80934 to 80950—Continued.

A raspberry bearing bright-red fruits of good size; very sweet and of good quality when fully ripe.

80945. RUBUS sp.

No. 574. From bushes on a mountain top at an altitude of about 3,000 feet, on the trail between Shoji and Kofu, June 28, 1929. A species with bright-red glossy fruits.

80946. RUBUS PARVIFOLIUS L.

No. 701. Collected from plants growing along an irrigating ditch in the valley at Shioza Ki, June 30, 1929. A raspberry bearing red fruits which are somewhat acid but of very good flavor.

80947. SALIX sp. Salicaceae. **Willow.**

No. 353. Growing on the northern side of Mount Fuji, at an altitude of about 4,000 feet, June 26, 1929. This species appeared to be small; at least, the seeds were collected from a plant not more than 3 feet high.

80948. (Undetermined.)

No. 578. Collected on a mountain trail in the woods between Shoji and Kofu, June 28, 1929. A vine with clusters of small, oblong, bright-red fruits which turn black when ripe.

80949. VICIA HIRSUTA (L.) S. F. Gray. Fabaceae. **Vetch.**

No. 343. Collected near Otsuki, June 25, 1929. The plants, leaves, and seed pods of this variety are small. The black seed pods contain one or two small seeds mottled gray and black.

80950. VICIA TETRASPERMA (L.) Moench. Fabaceae. **Vetch.**

No. 342. Collected along the highway on a river bank, Katsuura River, well above the stream in a rather dry situation, near Otsuki, June 25, 1929. A vetch with small leaves, flowers, and pods. The flowers are white tinged with blue, and the pods contain up to four or five small black seeds.

80951. PYRENOGLYPHIS MAJOR (Jacq.) Karst. (*Bactris major* Jacq.). Phoenicaceae. **Beach palm.**

From Guatemala. Seeds presented by Wilson Popenoe, research department, United Fruit Co., Tela, Honduras. Received June 20, 1929. Numbered in August, 1929.

Biscoyol. A spiny palm, native to tropical America, with a trunk 9 to 15 feet high and 1 to 2 inches in diameter, armed with rows of black spines 2 inches long. The leaves, with spiny petioles, are 4 to 6 feet long and pinnately divided into densely setose linear segments with black hairs along the margin. The flowers are yellowish green and are followed by green edible fruits about the size of an apricot.

80952 to 80995. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Sydney, New South Wales, Australia. Cuttings presented by P. H. Goldfinch, general manager of the Colonial Sugar Refining Co. Received July 31, 1929.

80952. No. 10.

80953. No. 16.

80954. No. 18.

80955. No. 20.

80952 to 80995—Continued.

80956. No. 35.
80957. No. 36.
80958. No. 38.

80996. AMORPHOPHALLUS CAMPANULATUS (Roxb.) Blume. Araceae.

From India. Roots presented by Richard B. Gregg. Received December 15, 1928. Numbered in August, 1929.

Suran. As a food root this is highly esteemed in most Provinces of India, having a high starch content and a gently laxative effect, and is also said to improve digestive power. It is propagated by planting the large nodules which, for planting purposes, are treated like parts of a potato. The root and nodules may be dried indefinitely, and, in fact, it is considered desirable to expose the roots to strong sunshine for several days after peeling. The roots grow to a large size, as big as a large cabbage or even larger, and the meat is dull yellow. They may be cooked, baked, or fried, but if not thoroughly cooked they are a little bitter.

80997. DRACAENA sp. Liliaceae. Dracena.

From Cebu, Philippine Islands. Seeds presented by P. J. Webster, Bureau of Agriculture, Manila. Received November 7, 1928. Numbered in August, 1929.

The dracenas are tropical, woody, evergreen plants with sword-shaped to ovate, mottled leaves, clustered at the top of the stem. The greenish yellow campanulate or salverform flowers are followed by red or yellow berries.

80998. LANSIUM DOMESTICUM Jack. Meliaceae. Langsat.

From Laguna, Philippine Islands. Seeds presented by José S. Camus, Acting Director, Bureau of Agriculture, Manila. Received December 6, 1928. Numbered in August, 1929.

A tree 40 feet high, with pinnate leaves composed of five to seven elliptic leaflets each 4 to 8 inches long. The fruit varies in form and character, but is generally oval

80998—Continued.

or round, 1 to 2 inches in diameter, velvety and straw colored, with a thick leathery skin inclosing five segments of white, translucent, juicy, aromatic flesh, and one to three large seeds.

80999. LYCOPERSICON ESCULENTUM Mill. Solanaceae. Tomato.

From Carabayllo Valley, north of Lima, Peru. Seeds presented by Ralph T. Gray, Estación Experimental Agrícola, Lima. Received August 5, 1929.

Variety *cerasiforme.* A wild form of the tomato, native to Peru.

For previous introduction see No. 79532.

81000. GUNDELIA TOURNEFORTII L. Asteraceae.

From southwestern Kurdistan. Seeds presented by George E. Lamsa, Mission House, New York, N. Y. Received July 1, 1929.

A perennial herb much resembling a thistle with milky juice, spiny many-lobed leaves, and flower heads which produce seeds somewhat like those of the sunflower, *Helianthus annuus.* It is native to Kurdistan and Persia, where the young shoots are eaten as a vegetable. The seeds are also eaten.

For previous introduction see Nos. 80672 and 80673.

81001 to 81004.

From Japan. Collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry, United States Department of Agriculture. Received July 2, 1929.

81001 to 81003. LILIUM spp. Liliaceae. Lily.

81001. LILIUM sp.

No. 287. Bulbs obtained in Sapporo, Hokushu, May 29, 1929. *Taisho yuri.* An edible variety used extensively in Hokushu.

81002. LILIUM sp.

No. 288. Bulbs obtained in Sapporo, Hokushu, May 29, 1929. *Wada yuri.* An edible variety.

81003. LILIUM sp.

No. 403. Bulbs obtained in Hakodate, Hokushu, May 30, 1929. *Shoyokuyo yuri.* An edible variety.

81004. ZINZIBER OFFICINALE Roscoe. Zinziberaceae. Ginger.

No. 286. Obtained in Sapporo, Hokushu, May 27, 1929. *Imoshoga.* Used as a garnish when plants are young.

For previous introduction see No. 72730.

81005. CANARIUM sp. Balsameaceae.

From the Santa Cruz Islands. Nuts presented by Dr. Alfred Rehder, Arnold Arboretum, Jamaica Plain, Mass. Received July 2, 1929.

Anai. A species said to constitute one of the principal foods of the New Hebrides and the Solomon Islands.

81006 to 81051.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received July 2, 1929.

81006. BECKMANNIA SYZIGACHNE (Steud.) Fern. Poaceae. **Grass.**

No. 305. Collected along an irrigation ditch near the electric railway station of Kashwara Junction, May 28, 1929.

81007. DAUCUS CAROTA L. Apiaceae. **Carrot.**

No. 254. From the Yamato Seed Co., Sapporo, May 25, 1929. *Sapporo onaga ninjin.* A large long carrot.

81008. ELAEAGNUS MULTIFLORA Thunb. Elaeagnaceae.

No. 307. From the Shizuoka Agricultural Experiment Station, Shizuoka, June 3, 1929. A shrub producing bright-red fruits, about three-fourths of an inch long and half an inch wide, which may make good jelly or marmalade.

81009. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

No. 265. From the Yamato Seed Co., Sapporo, May 25, 1929. *Taikausei ruzan.* A hardy alfalfa used for forage purposes in the Hokushu district.

81010 to 81016. PHASEOLUS spp. Fabaceae.

81010. PHASEOLUS COCCINEUS L. **Scarlet runner.**

No. 268. From the Yamato Seed Co., Sapporo, May 25, 1929. *Benibana ingen.* A variety used as a string bean.

81011. PHASEOLUS LUNATUS L. **Lima bean.**

No. 271. From the Yamato Seed Co., Sapporo, May 25, 1929. *Waisei raima.* A Yamato bush Lima bean.

81012 to 81016. PHASEOLUS VULGARIS L. **Common bean.**

81012. No. 255. From the Sapporo Noyen Seed Co., Sapporo, May 25, 1929. *Otsubu uzura mame.* A large-seeded bean used as a green vegetable.

81013. No. 267. From the Yamato Seed Co., Sapporo, May 25, 1929. *Yatsubusa ingen;* Indian Chief string bean. A variety used as a green vegetable.

81014. No. 269. From the Yamato Seed Co., Sapporo, May 25, 1929. *Manshu ingen.* A variety used as a green vegetable.

81015. No. 270. From the Yamato Seed Co., Sapporo, May 25, 1929. *Shiromaru kintoki ingen.* A round white bean used as a green vegetable.

81016. No. 295. From the Sapporo Engei & Co., Sapporo, May 28, 1929. *Kurouzura mame.* A black variety used as a string bean.

81017. PISUM SATIVUM L. Fabaceae. **Pea.**

No. 298. Obtained in Hakodate, Hokushu, May 30, 1929. *Akaendo.* A red variety used in the dried form.

81006 to 81051—Continued.

81018 to 81020. PRUNUS spp. Amygdalaceae. **Flowering cherry.**

81018. PRUNUS sp.

No. 187. Obtained near the Miyako Hotel, Kyoto, May 24, 1929.

81019. PRUNUS sp.

No. 196. Near the Todai-ji Temple, Nara, May 27, 1929. An early-flowering cherry with rather small, single, pinkish white flowers.

81020. PRUNUS sp.

No. 199. A wild cherry growing at the first stop in the large natural park or mountain drive, near Nara, May 27, 1929. The tree is 8 inches in diameter and 40 feet or so high.

81021 to 81045. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

81021 to 81042. Obtained in Sapporo, Hokushu, May, 1929.

81021. No. 252. From the Sapporo Gobankan. *Aoshiro eda mame.* A greenish white variety used as a green vegetable.

81022. No. 253. From the Sapporo Gobankan. *Kuro mame.* A black variety used as a green vegetable and in making confections.

81023. No. 256. From the Sapporo Noyen Seed Co. *Honen daizu.* A variety used as a green vegetable.

81024. No. 257. From the Sapporo Noyen Seed Co. *Daiyachi ichi go.* No. 1. Daiyachi selection. Used for soy sauce, miso, tofu, roasted beans, and natto.

81025. No. 258. From the Sapporo Noyen Seed Co. *Gokuwase toka eda mame* (earliest 10-day vegetable soybean). Used as a green vegetable.

81026. No. 259. From the Sapporo Noyen Seed Co. *Ishikari shiro daizu.* A variety used for grain, soy sauce, tofu, natto, and miso.

81027. No. 260. From the Sapporo Noyen Co. *Akasaya daizu.* A red-podded soybean used as a green vegetable.

81028. No. 261. From the Sapporo Noyen Seed Co. *Rankoshi daizu.* Used for soy sauce, miso, tofu, roasted beans, and natto.

81029. No. 272. From the Yamato Seed Co. *Chusekurome daizu.* A middle-season, black-eyed soybean used as a green vegetable.

81030. No. 273. From the Yamato Seed Co. *Sousei kuro daizu.* An early black soybean used as a green vegetable.

81031. No. 274. From the Yamato Seed Co. *Banseiosayada mame.* A large-podded, late variety used as a green vegetable.

81032. No. 275. *Ao mame.* A green soybean used as a green vegetable.

81033. No. 276. *Aoshiro daizu.* A greenish white soybean used as a green vegetable.

81034. No. 278. *Kuro daizu.* A black soybean used as a green vegetable.

81006 to 81051—Continued.

81035. No. 279. From the Ghoyu Game Co. A mixture of varieties used in the manufacture of soy sauce.

81036. No. 289. *Aoii, Aoiiro daizu.* A greenish white variety used as a green vegetable.

81037. No. 290. *Kurakake daizu* (saddle soybean). Used as a green vegetable.

81038. No. 291. From the Taishoen Seed Co. *Sousei eda mame.* An early soybean used as a green vegetable.

81039. No. 293. From the Aizawa Seed Co. *Aoshiro daizu.* A greenish white soybean used as a green vegetable.

81040. No. 294. From the Aizawa Seed Co. *Cha mame* (tea soybean). Used as a green vegetable bean.

81041. No. 297. From the Aizawa Seed Co. *Kuro daizu.* A black soybean used as a green vegetable and also in making sweet bean paste and candied beans.

81042. No. 299. From the Sapporo Engei & Co. *Kurakake daizu* (saddle soybean). Used as a green vegetable.

81043 to 81045. Obtained in Hakodate, Hokushu, May 30, 1929.

81043. No. 300. *Ao daizu.* A green soybean used as a green vegetable.

81044. No. 401. *Akita daizu.* A selected yellow soybean used in making bean curd, soy sauce, natto, and roasted beans.

81045. No. 402. *Kurotsuya otsub daizu.* A black glossy soybean used as a green vegetable and in making bean confections.

81046. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

No. 277. From the Shoyu Co., Sapporo, May 27, 1929. A mixture of wheat varieties grown in Hokushu; especially suitable in the manufacture of soy sauce.

81047 to 81049. VICIA FABA L. Fabaceae. **Broadbean.**

Obtained at the Sapporo Noyen Seed Co., Sapporo, May 25, 1929.

81047. No. 262. *Nisum Sora mame.* The 2-inch horse bean. Used for food in the green and dried forms.

81048. No. 263. *Sousei Sora mame.* An early broad bean used as a green vegetable and when mature for confections.

81049. No. 264. *Otafuku mame.* A broad bean used as a green vegetable, and the dried beans are roasted and sugared.

81050. VICIA HIRSUTA (L.) S. F. Gray. Fabaceae. **Vetch.**

No. 197. From Nara, May 27, 1929. A small vetch.

81051. VICIA ANGUSTIFOLIA Grufberg. **Vetch.**

No. 306. Collected on park grounds near Unebi, May 28, 1929. A small vetch.

81052. GARCINIA BENTHAMI Pierre. Clusiaceae.

From Manila, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received July 9, 1929.

A small, evergreen, rapidly growing tropical tree, closely related to the mangosteen (*Garcinia mangostana*), native to low altitudes in the Philippine Islands. The edible fruits are very similar to those of the mangosteen except that they are slightly smaller, bright red, and have very acid flesh. They are probably suited for making preserves.

For previous introduction see No. 68179.

81053. TERMINALIA EDULIS Blanco. Combretaceae.

From San José, Mindoro, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received July 8, 1929.

Dalinsi. A large and rather ornamental tropical evergreen tree up to 75 feet high, widely distributed throughout the Philippines. The smooth, dark red fruits, about an inch in diameter and resembling small plums, have a pleasant mildly acid flavor and should make good jelly.

81054. PHASEOLUS COCCINEUS L. Fabaceae. **Scarlet runner.**

From Sapporo, Hokushu, Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received July 2, 1929.

No. 266. From the Yamato Seed Co., May 25, 1929. *Sakiwake ingen* (separate blooming string bean). Used as a green vegetable.

81055. CAJANUS INDICUS Spreng. Fabaceae. **Pigeon pea.**

From Khartum, Anglo-Egyptian Sudan, Africa. Seeds presented by H. B. Gephardt, American Mission, Deleib Hill, Nalakei. Received July 9, 1929.

An erect shrublike plant, 4 to 6 feet high, which may prove useful in improving the soil and also as a fodder plant. The natives use it for food, but it seems to be inferior to the Egyptian kind.

81056. CRACCA TOXICARIA (Pers.) Kuntze (*Tephrosia toxicaria* Pers.). Fabaceae.

From Peru. Seeds presented by W. J. Dennis, Iowa City, Iowa. Received July 8, 1929.

For previous introduction and description see No. 80932.

81057 to 81071.

From Kwangsi, China. Seeds collected by R. C. Ching and presented by Dr. Alfred Rehder, Arnold Arboretum, Jamaica Plain, Mass. Received July 10, 1929.

81057. ACER sp. Aceraceae. **Maple.**

No. 8458.

81058. CORNUS sp. Cornaceae. **Dogwood.**

81059. ILLICIUM sp. Magnoliaceae.

81060. LITHOCARPUS sp. Fagaceae.

No. 8111.

81057 to 81071—Continued.

81061. LITHOCARPUS sp. Fagaceae.

No. 8345.

81062. MAGNOLIA sp. Magnoliaceae.

81063. RAPHIOLEPIS sp. Malaceae.

81064. STYRAX sp. Styracaceae.

No. 8415.

81065. (Undetermined.)

No. 8480.

81066. (Undetermined.)

No. 7682.

81067. (Undetermined.)

No. 8090.

81068. (Undetermined.)

81069. (Undetermined.)

81070. (Undetermined.)

81071. (Undetermined.)

81072. PISTACIA CHINENSIS Bunge (*P. philippinensis* Merr. and Rolfe). Anacardiaceae. **Chinese pistache.**

From Mountain Province, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received July 12, 1929.

A large deciduous tree, sometimes reaching a height of 80 feet, native to central and western China. The pinnate leaves, about 9 inches long, consist of 10 to 12 narrow, oval leaflets. Because of its glossy green foliage which becomes brilliant crimson in autumn and its rather rapid growth this is a valuable shade tree for mild-wintered regions.

For previous introduction see No. 74678.

81073. BORASSUS FLABELLIFER L. Phoenicaceae. **Palmyra palm.**

From Gambia, British West Africa. Seeds presented by A. J. Brooks, Director, Department of Agriculture. Received July 13, 1929.

An African form of the famous Palmyra palm of India. Though a slow grower, it is a very handsome palm when old. In as much as it grows in the dry coastal regions of Ceylon, is apparently able to withstand any amount of lime, and is said to have been used successfully as a binder for sand dunes, it may prove of real value in the calcareous soils of southern Florida. In the number of uses to which it is put in Ceylon it rivals the coconut. A delicate sugar is made from the sap, which flows in abundance from its inflorescence when cut. The seeds are germinated and the young subterranean hypocotyl is used as a vegetable. The leaves are used in many different ways. The fruit, half the size of a coconut, is very attractive in appearance, and when ripe exhales a delicate fragrance. The hull is eaten by the Tamils of Ceylon.

For previous introduction see No. 78616.

81074 to 81208.

From Ventimiglia, Italy. Seeds presented by S. W. McLeod Braggins, Superintendent, La Mortola. Received April 25, 1929. Numbered in August, 1929.

81074 to 81208—Continued.

81074 to 81099. AGAVE spp. Amaryllidaceae.

81074. AGAVE ALBICANS Jacobi.

No. 50. A trunkless, cespitose agave, native to Mexico, with spreading, glaucous thin oblanceolate leaves about a foot long with close-set minute brown marginal prickles and a terminal needlelike small spine. The reddish green paired flowers are a little over an inch long and are on a spike 3 feet high.

For previous introduction see No. 79462.

81075. AGAVE AUREA Brandegee.

No. 51. A stemless plant with a rosette of about 50 gray-green, narrow-lanceolate leaves about 3 feet long, armed with unequally triangular often upcurved prickles and ending in a chestnut-colored spine an inch long. The numerous golden-yellow flowers are borne on a scape about 5 feet high. Native to Lower California.

81076. AGAVE BRACHYSTACHYS Cav.

No. 52. A trunkless agave with a thick rhizome and a rosette of linear-lanceolate green or grayish leaves a foot or more long, with margins scarcely prickly. The scape, 3 feet or more high, bears a small dense cluster of greenish flowers. Native from southern Mexico to Guatemala.

81077. AGAVE BRACTEOSA S. Wats.

No. 53. A trunkless agave with 3-sided, gray, sigmoidally spreading spineless leaves about 20 inches long, and rather small flowers on a scape 3 to 5 feet high. Native to New Mexico.

81078. AGAVE CANTALA (Haw.) Roxb.

No. 54. A variety with a short, thick stem bearing an aloelike cluster of large fleshy leaves and a tall flower stalk on which grow a large number of small bulbils. The spiny edged leaves are grouped compactly around the stem and terminate in a hard, sharp spine.

For previous introduction see No. 51206.

81079. AGAVE CHIAPENSIS Jacobi.

No. 55. A trunkless agave, probably native to southern Mexico, with upcurving lanceolate green leaves 2 or even 3 feet long, with rather small brown prickles and a narrow-grooved stout spine. The scape is 4 or 5 feet high.

81080. AGAVE CHLORACANTHA Salm-Dyck.

No. 56. An agave which develops with age into a densely cespitose mass 3 or 4 feet wide. The bright-green, fleshy, narrow leaves, reflexed at the middle point, are 2 feet or less in length, with a small fine terminal spine. The greenish flowers are on a scape about 6 feet high. Probably a native of Mexico.

81081. AGAVE FILIFERA Salm-Dyck.

No. 57. The oblong-lanceolate leaves of this Mexican agave are upcurved-spreading and 1 to 2 feet long, termi-

nating in an openly grooved spine. The maroon flowers, over an inch long, are in a stout dense cluster on a scape 10 to 15 feet high.

81082. AGAVE FRANZOSINI Baker.

No. 58. An agave with roughish white recurved ascending lanceolate leaves up to 8 feet long, armed with dark-gray marginal prickles and a large terminal spine. The tall green flower stem, 30 or 40 feet high, bears flowers over 3 inches long. It is probably native to Mexico.

For previous introduction see No. 79464.

81083. AGAVE GHIESBRECHTII Koch.

No. 59. A short-trunked agave with lanceolate, spreading, upcurved leaves a foot long, with moderately large prickles and an inrolled spine. Probably native to southern Mexico.

81084. AGAVE HOOKERI Koch.

No. 61. The rosette of leaves formed by this agave is 5 feet in diameter and 4 feet high. The narrow stout leaves are over 3 feet long, with a stout horny terminal spine 1¼ inches long and irregularly triangular prickles of variable size and shape. Probably native to Mexico.

81085. AGAVE LOPHANTHA Scheide.
Crested agave.

No. 63. An agave, native to eastern Mexico, with spreading, glossy, green lanceolate leaves a foot or more long, with small hooked marginal prickles, and terminating in a grooved brown spine. The flowers, 1½ inches long, are borne on a spike 9 to 15 feet high.

For previous introduction see No. 79465.

81086. AGAVE LURIDA Ait.

No. 64. A short-stemmed or stemless plant with a large dense rosette of lanceolate, leathery, fleshy, gray-green leaves 3 feet long, with a slender spine and small prickles. The greenish flowers are borne on a scape 15 to 20 feet high. Probably native to Mexico.

81087. AGAVE OBLONGATA Jacobi.

No. 65. A trunkless agave with fleshy bright-green oblong-lanceolate leaves 2 feet long, terminating in a conical horny spine and with small, chestnut-brown triangular prickles. The inflorescence is 4 feet high. Probably native to Mexico.

81088. AGAVE OUSSELGHEMIANA Jacobi.

No. 66. A trunkless cespitose plant, related to *Agave albicans,* with spreading glaucous thin oblanceolate leaves about a foot long, with a small needlelike spine and close-set brown prickles. The reddish green paired flowers are on a scape scarcely 3 feet high. Probably native to Mexico.

81089. AGAVE PICTA Salm-Dyck.

No. 62. A large Mexican agave, of the section Americanae, which develops a rosette up to 10 feet across and 7 feet high, composed of 30 to 40 leaves. These are dark gray-green, often reflexed at the middle, 5 to 7 feet long, with a yellow margin set with numerous straight prickles and an awl-shaped terminal spine about 2 inches long. The bright yellow-green flowers are borne in a large open panicle on a scape 25 to 30 feet high.

81090. AGAVE POLYACANTHA Haw.

No. 67. A cespitose plant, native to southern Mexico, with lanceolate, upcurving leaves sometimes 3 feet long, terminating in a stout spine and margined with close-set brown prickles. The flowers, 2 inches long, are in a spikelike inflorescence 4 to 5 feet high.

For previous introduction see No. 79466.

81091. AGAVE ROEZLIANA GILBEYI Trelease.

No. 60. A fleshy stemless agave, related to *Agave horrida,* with a simple rosette of 25 to 35 upright thick, hard-fleshed, gray, lanceolate-oblong leaves 8 inches to a foot long. The rather distant slender marginal prickles are often nearly 2 inches long, and the terminal spine is 1½ inches long. Native to Mexico.

81092. AGAVE RUPICOLA Regel.

No. 68. A cespitose plant with fleshy, spreading, grayish green, broadly lanceolate leaves up to 2 feet long, armed with small close-set dark prickles and a slender weak spine. The brownish green flowers 1½ inches long are on a scape about 10 feet high. Native to eastern Mexico.

81093. AGAVE SALMIANA Otto.

No. 69. An agave with gray-green, very thick leaves about 3 feet long, with an elongated gray terminal spine and triangular marginal teeth. The scape is covered with long, somewhat spreading bracts. Native to Mexico.

For previous introduction see No. 79467.

81094. AGAVE SARTORI Koch.

No. 70. The stem of this Mexican agave becomes a foot high with age. The deep-green spreading upright leaves, up to 2 feet long, are narrow lanceolate with a small horny terminal spine and small, close-set triangular prickles. The yellowish flowers, over an inch long, are on a scape 3 to 4 feet high.

81095. AGAVE SCHOTTII Engelm.

No. 71. A cespitose agave, native to southern Arizona, with linear-triangular leaves 6 inches to a foot in length and curved yellow flowers an inch or more long, scented like tuberoses, on a slender scape 4 feet high.

81096. AGAVE TERRACCIANOI Pax.

No. 72. A stemless agave with numerous narrowly lanceolate green leaves, spotted pale red and margined with small horny teeth. The greenish yellow flowers are borne in a dense spike on a scape 5 feet high. Probably native to Mexico.

81097. AGAVE VARIEGATA Jacobi.

No. 73. A stemless cespitose plant with a rosette of 20 to 25 upcurved, linear-lanceolate, rather fleshy leaves 1½ feet long. The greenish flowers are on a scape 3 to 5 feet high. Native to northeastern Mexico.

81074 to 81208—Continued.

81098. AGAVE VERSCHAFFELTII Lem.

No. 74. A variety with leaves 3 inches wide by 6 to 8 inches long, glaucous, tipped with red-brown spines and armed with long, rusty teeth on large, fleshy prominences.

For previous introduction see No. 47583.

81099. AGAVE WERCKLEI Weber.

No. 75. A stemless plant with fleshy, glaucous, bluish or white leaves abruptly upcurved above the base, about 6 feet long and 6 inches wide, armed with triangular straight brown teeth and terminating in a brown spine over an inch long. The chrome-yellow flowers are borne on a scape 25 feet tall. Native to Costa Rica.

81100. ALLIUM NEAPOLITANUM Cirillo. Liliaceae. **Onion.**

No. 83. A bulbous plant about a foot and a half high, with flat linear leaves about as long as the stem and ornamental white flowers with a scent like that of the English hawthorn. Native to southern Europe.

For previous introduction see No. 78985.

81101. ALLIUM ROSEUM L. Liliaceae. **Onion.**

No. 84. A plant about a foot high, with strap-shaped leaves rolled inward at the top and pale lilac-rose flowers produced in umbels. Native to southern Europe.

For previous introduction see No. 58881.

81102 to 81142. ALOE spp. Liliaceae.

81102. ALOE ABYSSINICA × STRIATA.

No. 85.

81103. ALOE AFFINIS Berger.

No. 86. A stemless aloe with fleshy ensiform leaves 8 to 10 inches long, with sinuate-dentate margins set with horny triangular teeth. The cylindrical racemes of red flowers are on a stout-branched inflorescence. Native to the Transvaal.

81104. ALOE ARBORESCENS FRUTESCENS Link.

No. 87. A shrubby variety with the habit of *Aloe arborescens natalensis*, but lower. The thick glaucous leaves are about 18 inches long, and the inflorescence is unbranched.

81105. ALOE ARBORESCENS MILLERI Berger.

No. 88. A tree 12 feet or more high, with a stout unbranched trunk. The sword-shaped, reflexed, dark-green fleshy leaves, mostly clustered at the summit of the trunk, are 2 feet or more long. The bright-red flowers, 1½ inches long, are borne in a dense raceme. Native to South Africa.

81106. ALOE ARBORESCENS NATALENSIS (Wood and Evans) Berger.

No. 89. A shrubby variety, branching from the base. Each branch ends in a dense rosette of leaves; these are linear-lanceolate, falcate, with curved marginal prickles, and are 18 to 30 inches long. The bright-red cylindrical flowers are in dense racemes. Native to South Africa.

81074 to 81208—Continued.

81107. ALOE ARBORESCENS PACHYTHYRSA Berger.

No. 90. A shrubby variety, stouter than *Aloe arborescens natalensis*, with denser gray-green foliage. The flowers are about 2 inches long, borne on curved ascending scapes 2 feet or less high.

81108. ALOE ARBORESCENS UCRIAE (Terr.) Berger.

No. 91. A shrubby variety about 3 feet high, with numerous spreading falcate, green leaves, 2 feet long, armed with curved triangular marginal teeth.

81109. ALOE ARBORESCENS VIRIDIFOLIA Berger.

No. 92. A shrubby variety with rather flat green leaves nearly 2 feet long and a branched inflorescence.

81110. ALOE BREVIFOLIA Mill.

No. 93. A stemless succulent with a dense rosette of triangular-lanceolate glaucous leaves 3 to 4 inches long, with small white marginal prickles and pale-red flowers in a simple dense raceme. Native to South Africa.

81111. ALOE BREVIFOLIA DEPRESSA (Haw.) Baker.

No. 94. A more robust form of the preceding, with leaves 6 inches long which are less glaucous.

81112. ALOE BREVIFOLIA SERRA (DC.) Berger.

No. 95. An aloe, native to South Africa, with a rosette of 30 to 40 lanceolate-deltoid leaves, 4 to 5 inches long, armed with white, horny, triangular prickles one-tenth of an inch high. The bright-red flowers are in a simple dense raceme.

81113. ALOE BRUNNTHALERI Hort.

No. 96. A horticultural name for which a place of publication or a description has not been found.

81114. ALOE CAESIA Salm-Dyck.

No. 97. An aloe with a stem 10 to 12 feet high, bearing at the summit a dense rosette of very glaucous, lanceolate leaves a foot long, margined with red when young. The raceme of bright-red flowers is borne on a simple peduncle a foot long. Native to South Africa.

81115. ALOE COMOSA Marl. and Berger.

No. 98. A stout subtropical tree 5 or 6 feet high, with an unbranched trunk crowned by a dense rosette of spreading glaucous, narrow, sword-shaped leaves a foot or more long. Native to Cape of Good Hope.

81116 and 81117. ALOE ERU Berger.

81116. No. 99. A large plant, native to tropical Africa, with a branched stem scarcely 2 feet high and very fleshy, recurved, pale glossy green, sword-shaped leaves about 2 feet long. The orange or yellow flowers, three-fourths of an inch long, are borne on a branched inflorescence 3 to 6 feet high.

81117. No. 100. Variety *erecta*. A form with narrower leaves, spotted when young and red margined.

81118. ALOE FEROX Mill.

No. 101. A perennial native to South Africa. It has a thick stem 10 to 15 feet high and a rosette of curved glaucous, lanceolate leaves 2 feet long by 5 inches wide and half an inch thick. The upper and lower surfaces are prickly, and the purple margins are armed with large red-brown teeth. The flowering stem is 4 feet high, and the greenish yellow flowers with smoky tipped segments are 1 to 2 inches long.

For previous introduction see No. 77217.

81119. ALOE GRANDIDENTATA Salm-Dyck.

No. 102. A short-stemmed fleshy plant with a dense rosette of 12 to 20 bright-green lanceolate leaves a foot or more long, with crowded brown-tipped marginal teeth. The pale-red or reddish yellow flowers are in three to seven racemes on a stout peduncle 1½ to 2 feet long. Native to South Africa.

81120. ALOE GREATHEADII Schoenland.

No. 103. A fleshy plant from the Kalahari region of South Africa. The stem is about a foot high, with a terminal dense rosette of lanceolate, dark shining-green leaves up to 9 inches long. The whitish flowers are in dense racemes in a branching inflorescence 2 to 4 feet high.

81121. ALOE HETERACANTHA Baker.

No. 105. A succulent plant with a stem a foot high and 15 to 30 lanceolate green or red tinted leaves 6 to 12 inches long, in a dense rosette. The short-tubular bright-red flowers are in a dense raceme on a peduncle 1 to 3 feet long. Native to South Africa.

81122. ALOE JOHNSTONII Baker.

No. 106. A stemless succulent plant with a globose rootstock and 8 to 12 erect linear thin leaves 1 to 1½ feet long, channelled along the upper surface. The dense capitate raceme of pale-pink flowers is on a simple, stiffly erect peduncle 1½ feet high. Native to British East Africa.

81123. ALOE LATERITIA Engler.

No. 107. A short-stemmed aloe with very thick, lanceolate, white-spotted leaves about 10 inches long with rather large horny-tipped deltoid marginal teeth. The brick-red flowers are in clusters at the ends of the branches of the peduncle. Native to Mozambique.

81124. ALOE LATIFOLIA Haw.

No. 108. The glossy green oblong-lanceolate leaves of this aloe are a foot or less long, with brown horny marginal prickles. The bright reddish yellow flowers, an inch long, are on a stout, simple or forked peduncle 1 or 2 feet long. Native to South Africa.

81125. ALOE MACROCARPA Tod.

No. 109. A short-stemmed aloe with a dense rosette of lanceolate, thin, green leaves 1½ feet long; the margins are reddish white and set with

rather large deltoid teeth. The red flowers are in oblong racemes on a peduncle 3 feet high. Native to northeastern Africa.

81126. ALOE PERCRASSA Tod.

No. 110. An aloe native to northeastern Africa. It develops a round cluster of narrow, sword-shaped, fleshy, deep-green, sometimes spotted leaves, up to 2½ feet long, with small brown marginal teeth. The red flowers are in racemes about a foot long on a branched peduncle 3 feet high.

81127. ALOE PERRYI Baker.

No. 111. A nearly stemless plant with a stem scarcely an inch high and a rosette of lanceolate, pale glaucous-green leaves 7 to 8 inches long. These are furnished with very small brown horny marginal teeth. The flowering stalk is a foot and a half high. Native to the island of Socotra.

81128. ALOE PSEUDOPICTA Berger.

No. 113. A stemless aloe with spreading, narrow, triangular, thick, fleshy, pale-green leaves up to a foot long, with reddish triangular marginal teeth. The light-red flowers are in a rather lax cylindrical raceme on a scape 2 feet high. A hybrid grown at La Mortola, Ventimiglia, Italy.

81129. ALOE PURPURASCENS (Ait.) Haw.

No. 112. The stem of this plant is 2 to 3 feet long below the dense rosette of 40 to 60 sword-shaped leaves. These are 1½ feet long, very glaucous, turning purple when old, and armed with deltoid white horny marginal prickles. The reddish flowers are in a simple dense receme a foot long. Native to South Africa.

81130. ALOE RUBROLUTEA Schinz.

No. 114. A tropical succulent native to southwestern Africa, with a stout simple trunk 7 to 12 feet or more high, bearing a dense rosette of narrow-ensiform leaves up to 2 feet long and light-red flowers in a branched inflorescence a foot high.

81131. ALOE RUBROVIOLACEA Schweinf.

No. 115. An unbranched aloe, hardly 3 feet high, with a thick, curved stem terminated by a dense rosette of triangular, purplish, fleshy leaves about 2 feet long and light-red flowers 1½ inches long in dense racemes on a forked inflorescence 2 feet high. Native to Arabia.

81132. ALOE RUNCINATA Berger.

No. 116. A dense cespitose aloe with lanceolate green or purplish leaves 16 inches long, armed with stout triangular horny marginal teeth. The stout branched scape, about 3 feet high, bears racemes of light-red flowers. Probably a native to South Africa.

81133. ALOE SALMDYCKIANA Schult. f.

No. 117. A succulent, native to South Africa, with a stem 10 to 12 feet high bearing at the summit a dense rosette of 30 to 40 dull-green, sword-shaped leaves 1½ to 2 feet long. The bright-red cylindrical flowers are in a dense raceme a foot long, on a scape about the same length.

81074 to 81208—Continued.

81134. ALOE SAPONARIA (Ait.) Haw.

No. 118. An aloe, native to the Cape of Good Hope, which grows in cespitose clusters, with ascending, oblong-lanceolate acuminate leaves about 7 inches long, often reddish with pale blotches and with large confluent brown marginal teeth. The red flowers are in a branched inflorescence 1 or 2 feet high.

For previous introduction see No. 79471.

81135. ALOE SCHIMPERI Tod.

No. 119. A fleshy aloe with oval-lanceolate glaucous-green lineate leaves a foot long, furnished with a thin reddish horny border and crowded minute marginal teeth. The stout-branched peduncle, 2 to 3 feet high, bears short crowded racemes of bright-red flowers. Native to Egypt.

81136. ALOE SPECIOSA Berger.

No. 120. A hybrid aloe, of unknown parentage, cultivated at La Mortola, Ventimiglia, Italy. It is short-stemmed, branching from the base, having triangular-acute dark-green leaves about 8 inches long, with small incurved marginal prickles. The light-red flowers, nearly 2 inches long, are on a stout 3-branched peduncle 20 inches high.

81137. ALOE SPINOSISSIMA Berger.

No. 121. A handsome hybrid aloe, nearly stemless, with a dense rosette of erect, long-acuminate leaves armed with white marginal teeth and about a foot long. The light-purplish flowers are in an elongated cylindrical raceme nearly a foot in length.

81138. ALOE STRAUSSII Berger.

No. 122. A stemless plant, native to Tanganyika, with a rosette of fleshy, lanceolate-deltoid, dark-green spotted leaves 8 inches long and pale-red flowers on a simple scape 18 inches high.

81139. ALOE STRIATA Haw.

No. 104. Variety *Hanburiana*. A fleshy plant with a short stem, 1 to 2 feet in old plants, and a rosette of 12 to 20 oblong-lanceolate, glaucous leaves 1½ to 2 feet long, with a cartilaginous reddish margin. The bright-red flowers are in capitate racemes on a stout much-branched inflorescence. Native to the coast of South Africa.

81140. ALOE STRIATULA Haw.

No. 123. An erect shrubby plant 3 to 7 feet high, with fleshy, linear-lanceolate leaves 8 inches long, in small rosettes terminating the branches. The light-yellow flowers are in dense racemes a foot high. Native to southeastern Cape of Good Hope.

81141. ALOE SUPRALAEVIS Haw.

No. 124. An aloe with a stem 5 or 6 feet high, crowned by a dense rosette of sword-shaped fleshy leaves which are 1 to 2 feet long and armed with triangular horny marginal prickles one-seventh of an inch long. The reddish flowers are in a dense raceme 6 inches to a foot long. Native to South Africa.

81074 to 81208—Continued.

81142. ALOE WINTERI Berger.

No. 125. A hybrid between *Aloe salmdyckiana* and *A. arborescens frutescens*, developed in the garden of L. Winter, Bordighera, Italy. It is an almost cespitose woody plant with numerous upright-spreading, sword-shaped leaves 2 feet long, with horny margins armed with triangular teeth. The light-yellow flowers are in a dense raceme 10 inches long.

81143. BAUHINIA GRANDIFLORA Juss. Caesalpiniaceae.

No. 203. A small tree up to 20 feet high, with subcordate leaves slightly lobed at the apex and tomentose beneath. The large, pure-white flowers, opening at night, are borne in clusters of one to three on axillary peduncles. Native to Peru.

81144 to 81147. BERBERIS spp. Berberidaceae. **Barberry.**

81144. BERBERIS ACTINACANTHA Mart.

No. 209. An evergreen shrub, native to Chile, 3 to 4 feet high, with 3-parted to 5-parted often leaflike spines, broadly ovate, spiny margined leaves, fascicles of three to six fragrant deep-yellow flowers, and dark fruits.

For previous introduction see No. 76554.

81145. BERBERIS CHITRIA D. Don.

No. 211. A spiny half-evergreen shrub, 6 feet or less high, with oblong leaves 1 to 3 inches long, deep-yellow or reddish flowers in long-stemmed panicles, and ovoid, purple berries. Native to the Himalayas.

For previous introduction see No. 73530.

81146. BERBERIS GLOBOSA Benth.

No. 213. A spiny evergreen shrub, 6 to 8 feet high, with rigid, mucronate leaves a little more than an inch long and one-fourth of an inch wide, yellow flowers a little larger than those of the common barberry, and globular fruits about the size of a small pea. Native to the Andes of Colombia.

For previous introduction see No. 44524.

81147. BERBERIS LYCIUM Royle.

No. 216. A half-evergreen shrub, 10 feet high, with narrow bright-green leaves and pale-yellow flowers followed by ovoid violet berries. Native to northern India.

For previous introduction see No. 79004.

81148. CESTRUM PARQUI L'Her. Solanaceae. **Chilean cestrum.**

No. 344. A semihardy, nearly glabrous shrub native to Chile. The leaves are lanceolate to oblong, and the long, tubular flowers are sessile, in open panicles, greenish yellow, and very fragrant at night. It is much grown in warm countries where it blooms continuously.

For previous introduction see No. 47401.

81149. CESTRUM SUBEROSUM Jacq.

No. 345. An erect glabrous shrub 5 feet high, with ill-smelling flat oblong-oval leaves up to 4 inches long, and

81074 to 81208—Continued.

sulphur-yellow flowers in axillary and terminal racemes. Native country unknown.

81150 to 81152. CYTISUS spp. Fabaceae. **Broom.**

81150. CYTISUS FILIPES Webb and Berth.

No. 614. An upright nearly leafless shrub with very slender stems and branches, native to the island of Teneriffe, Canary Islands. The few trifoliolate leaves are made up of linear-lanceolate, nearly glabrous leaflets, and the rather large, fragrant, pure-white flowers are in axillary clusters.

For previous introduction see No. 65008.

81151. CYTISUS HILLEBRANDTII (Christ) Briq.

No. 615. A suffruticose plant with long slender hairy stems and trifoliolate hairy leaves. Native to the Canary Islands.

81152. CYTISUS RACEMOSUS EVERESTIANUS (Carr.) Rehd.

No. 613. This very free-flowering form of the Easter broom, *Cytisus racemosus*, is a pubescent shrub up to 6 feet high, with grooved branches, persistent trifoliolate leaves of obovate leaflets, and deep-yellow flowers in long loose terminal and lateral racemes. A garden hybrid.

81153. DIMORPHOTHECA ECKLONIS DC. Asteraceae. **Cape-marigold.**

No. 651. A robust and erect subshrub 2 feet or more high, with crowded linear-lanceolate leaves, and terminal flower heads having rays 1½ inches long, which are white above and purplish below. Native to South Africa.

81154. ECHEVERIA AMOENA De Smet. Crassulaceae.

No. 671. A nearly stemless succulent with small dense rosettes of thick leaves and slender scapes 4 to 8 inches high, bearing 1-flowered to 8-flowered racemes of red flowers. Native to Mexico.

81155. ECHIUM CALLITHYRSUM Webb. Boraginaceae.

No. 685. A robust woody or treelike perennial with strongly nerved leaves and thyrsoid spikes of pale red flowers. Native to the Canary Islands.

81156. ENCEPHALARTOS LEHMANNI Lehm. Cycadaceae.

No. 700. A cycad with a smooth cylindrical trunk and a crown of pinnate leaves having glaucous lanceolate opposite leaflets 5 to 7 inches long, each tipped with a brown spine. Native to South Africa.

81157 to 81166. GASTERIA spp. Liliaceae.

81157. GASTERIA ACINACIFOLIA (Jacq.) Haw.

No. 776. A nearly stemless succulent plant with a 2-ranked rosette, 2 to 14 inches across, of 3-edged acute dark glossy green leaves having scattered paler dots. The reddish flowers,

81074 to 81208—Continued.

1 to 2 inches long, are borne on a stalk about 4 feet high. Native to South Africa.

81158. GASTERIA ANGULATA (Willd.) Haw.

No. 777. A succulent plant with a rosette of leaves 8 to 10 inches long and 2 inches wide, slightly concave on each face and one or both edges angularly doubled; dark green with small confluent white spots. The flower stem is about 3 feet high, bearing curved tubular red flowers scarcely an inch long. Native to South Africa.

81159. GASTERIA BREVIFOLIA Haw.

No. 778. A succulent herb, native to South Africa, with a very short leafy stem densely crowded with oblong glossy leaves 4 inches long and racemes of tubular red flowers an inch long.

For previous introduction see No. 78204.

81160. GASTERIA CARINATA (Mill.) Haw.

No. 779. A nearly stemless succulent plant with thick, spreading, triangular leaves 2 inches wide at the base and 6 inches long, grooved above, dull green with coarse whitish warts. The flower stalk is 2 to 3 feet high and is often branched. Native to South Africa.

81161. GASTERIA CHEILOPHYLLA Baker.

No. 780. A succulent with a stem about 2 inches long and 14 to 18 leaves in a spirally twisted rosette. The nearly erect, sword-shaped leaves are 9 to 12 inches long, sometimes doubled on one edge, and are dark green with copious, confluent, slightly raised white spots. Native to South Africa.

81162. GASTERIA LINGUA (Thunb.) Berger.

No. 781. A succulent, nearly stemless plant with concave oblong 2-edged leaves 2 inches wide at the base and 8 to 10 inches long, green or grayish with more or less banded pale-greenish spots. The simple flower stalk is about 3 feet high. Native to South Africa.

81163. GASTERIA MACULATA (Thunb.) Haw.

No. 782. A succulent with an evident stem on which the tongue-shaped leaves are crowded in twisted ranks. The leaves, 2 inches wide and 6 to 8 inches long, are abruptly sharp pointed, 2-edged or with one margin doubled, and are glossy dark green with oblong white spots. The branched flower stalk is 3 to 4 feet high. Native to South Africa.

81164. GASTERIA MOLLIS Haw.

No. 783. A succulent with a leafy stem 1 to 2 feet high, crowded, spreading, tongue-shaped leaves 3 to 4 inches long, dull green with small immersed spots and tubercles on the edges. The reddish flowers are in a raceme on a simple stem about a foot high. Native to South Africa.

81165. GASTERIA NITIDA (Salm-Dyck) Haw.

No. 784. A succulent with nearly radical triangular-lanceolate leaves 2 inches wide at the base and 6 to 9

81074 to 81208—Continued.

inches long, light glossy green with white-banded spots. The simple flower stalk is about 3 feet high. Native to South Africa.

For previous introduction see No. 78206.

81166. GASTERIA SUBNIGRICANS (Spreng.) Haw.

No. 785. A succulent with the radical leaves in two nearly straight ranks and a simple flower stalk about 3 feet high. The leaves are scarcely an inch wide at the base, 5 to 8 inches long, and green with small separate transversely arranged pale spots.

81167. HAKEA SUAVEOLENS R. Br. Proteaceae.

No. 815. A rounded shrub 8 to 15 feet high, with leaves 2 to 4 inches long, cylindrical, with rigid spinelike tip, occasionally entire, but usually branched into rigid cylindrical lobes and fragrant white flowers. It is an easily grown, drought-resistant, self-protective shrub, and makes a suitable covering for dry hillsides, although it is not deep-rooted and sometimes is inclined to become top-heavy. It is native to Australia.

For previous introduction see No. 42603.

81168. HAWORTHIA ATTENUATA Haw. Liliaceae.

No. 819. A cespitose succulent plant with the leaves in a spiral rosette and a flower stalk about 2 feet high, bearing tubular rosy flowers. The thick sword-shaped leaves, half an inch wide by 3 inches long, are green with the upper face roughened by minute green points and the lower surface with large white tubercles in bands or ridges. Native to South Africa.

81169. HAWORTHIA TORTUOSA PSEUDORIGIDA (Salm-Dyck) Berger (*H. subrigida* Baker). Liliaceae.

No. 822. A succulent with clustered stems up to 6 inches long, bearing small 3-ranked leaves and a flower stalk a foot high with rosy-lined tubular flowers. The dull-green fleshy leaves are 2 inches long and are roughened on both surfaces. Native to South Africa.

81170. HYMENOSPORUM FLAVUM (Hook.) F. Muell. Pittosporaceae.

No. 862. An ornamental evergreen shrub or tree, sometimes becoming 50 feet high, native to Australia. The leaves are up to 9 inches long, and the fragrant flowers, yellow marked with red at the throat, are over an inch across. Its symmetrical pyramidal habit and rapid growth make it promising as a street tree for the Gulf States and California.

For previous introduction see No. 61058.

81171. KALANCHOE CRENATA Haw. Crassulaceae.

No. 917. A succulent perennial, native to tropical Africa, 2 to 6 feet high, with a thick fibrous root, oblong or roundish oval crenate leaves about 2 inches long, and bright-yellow flowers, half an inch long, in terminal and axillary cymes.

For previous introduction see No. 79166.

81074 to 81208—Continued.

81172. KALANCHOE DYERI N. E. Brown. Crassulaceae.

No. 918. One of the most attractive plants of this genus, producing large pure-white flowers, 1½ inches long, in corymbose cymes. The entire plant is 2½ feet high, with large, opposite, green or purplish leaves speckled with white and irregularly and coarsely toothed.

81173. LAVANDULA ABROTANOIDES Lam. Menthaceae. **Lavender.**

No. 947. A herbaceous perennial about 2 feet high, native to the Canary Islands. It has green bipinnate leaves and a branched spike of bluish flowers.

81174. MELALEUCA ACUMINATA F. Muell. Myrtaceae.

No. 1042. A glabrous bushy shrub with slender branches, mostly opposite lanceolate leaves a quarter of an inch long, and lateral clusters of small whitish flowers. Native to Australia.

81175. MELALEUCA CUTICULARIS Labill. Myrtaceae.

No. 1044. A tall shrub or small tree with twisted branches and bark in paperlike layers. The thick, flat, linear-oblong leaves are half an inch long, and the small flowers are grouped in a scaly head. Native to Australia.

81176. MESEMBRYANTHEMUM ACINACIFORME L. Aizoaceae. **Figmarigold.**

No. 1061. A fleshy plant with a jointed stem 2 to 3 feet high, opposite, scimitar-shaped leaves 2 to 3 inches long, with the keel dilated, and purple flowers about 4 inches across, said to be the largest of the genus. The edible fruits, about the size of a gooseberry, are eaten by the natives of South Africa.

For previous introduction see No. 79480.

81177 to 81183. NEOMAMMILLARIA spp. Cactaceae.

81177. NEOMAMMILLARIA DONATII (Berge) Britt. and Rose.

No. 1019. A spherical or somewhat compressed cactus, native to Mexico, which is simple or with few branches in old plants. The summit, somewhat concave, is filled with white hairs through which project dark-brown spines. The tubercles are conical and about one-third of an inch high. The small carmine-red flowers, half an inch across, are mostly near the summit.

81178. NEOMAMMILLARIA ELONGATA (DC.) Britt. and Rose.

No. 1020. An erect cactus 6 to 7 inches high and 1 to 2 inches in diameter, with short tubercles having 16 to 18 yellow radial spines. The flowers are white or yellowish. Native to central Mexico.

81179. NEOMAMMILLARIA MACRACANTHA (DC.) Britt. and Rose.

No. 1016. A depressed-globular cactus, 2 to 6 inches in diameter, with ovoid tubercles crowned by one or two reddish elongated spines up to 2 inches long, and dark-pink flowers about three-fourths of an inch across, borne near the top of the plant. Native to San Luis Potosi, Mexico.

81074 to 81208—Continued.

81180 to 81183. NEOMAMMILLARIA MAGNIMAMMA (Haw.) Britt. and Rose.

A globular cactus 4 inches in diameter, often in a colony of 25 or more, with very milky juice. The conical tubercles, two-fifths of an inch high, are crowned by three to five unequal, stout, horn-colored spines, and the cream-colored flowers are borne in the axils of the tubercles near the top of the plant. Native to central Mexico.

The following are now referred to this species:

81180. No. 1014. *Mammillaria centricirrha.*

81181. No. 1015. *Mammillaria centricirrha krameri.*

81182. No. 1017. *Mammillaria centricirrha.*

81183. No. 1022. *Mammillaria schmidtii.*

81184. NEOMAMMILLARIA RHODANTHA (Link and Otto) Britt. and Rose. Cactaceae.

No. 1018. A cylindrical cactus a foot or less high, dull green, with terete tubercles one-fifth of an inch high, crowned by 15 to 20 white radial spines and 4 to 6 reddish brown central spines. The numerous rose-colored flowers are half an inch across, and the cylindrical red fruits are an inch long. Native to central Mexico.

81185. OLEA CHRYSOPHYLLA Lam. Oleaceae.

No. 1146. A small evergreen tree, closely related to the cultivated olive. Its chief ornamental value lies in the golden color of the undersurfaces of the leaves. Native to East Africa.

For previous introduction see No. 61777.

81186. PANDOREA RICASOLIANA (Tanf.) Baill. Bignoniaceae.

Ricasol pandorea.

No. 1292. An evergreen climbing shrub with pinnate leaves of 7 to 11 ovate, serrate leaflets an inch long, dark green above, pale beneath, and loose terminal panicles of large campanulate flowers 2 inches long, light pink striped with red. Native to South Africa.

For previous introduction see No. 48624.

81187 to 81201. SEMPERVIVUM spp. Crassulaceae. **Houseleek.**

81187. SEMPERVIVUM ARBOREUM L.

No. 1462. Variety *atropurpureum.* Rosettes tinged with dark purple; flowers red.

81188. SEMPERVIVUM AUREUM C. Smith.

No. 1463. A perennial succulent about a foot high, native to the Canary Islands. It has obovate-spatulate leaves and cymes of yellow flowers.

81189. SEMPERVIVUM BERTHELOTIANUM (Bolle) Christ.

No. 1464. A nearly stemless fleshy plant with a dense rosette of yellowish green, narrowly spatulate, white ciliate leaves, and 6 to 10 pale-yellow flowers on a scape a foot or more high. Native to the Canary Islands.

81074 to 81208—Continued.

81190. SEMPERVIVUM CANARIENSE L.

No. 1465. A variety forming immense rosettes of leaves, sometimes 14 inches across, which lie perfectly flat against perpendicular walls of lava rock. When there are many they give the appearance of a lot of large, green dinner plates stuck to the cliffs. From the center of these "plates" arise the flowering racemes and when the "dinner plates" are about to form these racemes they swell out in the middle and become like mammae. The flower clusters are striking but not particularly beautiful since the flowers themselves are greenish in color.

For previous introduction see No. 64593.

81191. SEMPERVIVUM CHLOROCHRYSUM Hort.

No. 1466. A horticultural variety for which a place of publication or description has not been found.

81192. SEMPERVIVUM CILIATUM Willd.

No. 1467. A woody perennial with obovate, acute leaves with the margin cartilaginous-ciliate and white flowers in dense cymes. Native to the Canary Islands.

81193. SEMPERVIVUM CUNEATUM (Webb and Berth.) Christ.

No. 1468. A fleshy evergreen plant 1 to 1½ feet high, with wedge-shaped leaves and terminal cymes of yellow flowers.

81194. SEMPERVIVUM DECORUM (Webb) Christ.

No. 1469. A much-branched shrubby succulent with a wrinkled ashy gray stem and papillose-wrinkled branches. The sessile lanceolate leaves are light greenish pink, paler beneath, and the rose-colored flowers are in a many-flowered corymb. Native to the Canary Islands.

81195. SEMPERVIVUM GLUTINOSUM Ait.

No. 1470. A viscous perennial, 1½ feet high, with large spatulate fleshy leaves and yellow flowers in terminal cymes. Native to Madeira.

81196. SEMPERVIVUM HAWORTHII Salm-Dyck.

No. 1471. A succulent evergreen perennial with a woody stem and yellow flowers. Native to the Canary Islands.

For previous introduction see No. 79184.

81197. SEMPERVIVUM HOLOCHRYSUM Webb and Berth.

No. 1472. A winter-blooming species native to the Canary Islands. It produces great masses of yellow flowers on a flower panicle 2 feet tall. It is a striking landscape plant and is worthy of being grown in southern California and Florida.

81198. SEMPERVIVUM HYBRIDUM Bruegg.

No. 1473. A natural hybrid between *Sempervivum montanum* and *S. doellianum,* closely resembling the latter. Native to Switzerland.

81074 to 81208—Continued.

81199. SEMPERVIVUM POCULIFORME Berg. and Wildem.

No. 1475. A succulent with the oblong-lanceolate basal leaves in a rosette and the stem leaves obovate-spatulate. The simple erect stem bears a glabrous panicle of yellow flowers. Probably native to the Canary Islands.

81200. SEMPERVIVUM URBICUM C. Smith.

No. 1476. A shrubby succulent with a simple stout erect stem about 3 feet high and covered with leaf-scars. The thick pale-green narrowly spatulate leaves are borne in a rosette at the top of the stem. The large pyramidal panicle of pale-yellow flowers is 3 feet high and nearly as broad. Native to the Canary Islands.

81201. SEMPERVIVUM VELUTINUM N. E. Brown.

No. 1477. A succulent plant about 2 feet high, with rosettes 6 to 9 inches broad of crowded spatulate velvety leaves 3 to 4 inches long, grayish green above and with darker green lines beneath. The bright-yellow flowers are in a compact cyme. Known only in cultivation.

81202. SOLANUM PYRACANTHUM Jacq. Solanaceae.

No. 1507. An erect shrubby plant about 3 feet high, with oblong, deeply lobed leaves 6 inches long and spiny along the midrib. The numerous blue flowers are borne in lateral racemes sometimes 6 inches long. Said to be native to tropical Africa.

81203. STAPELIA HANBURYANA Berger and Ruest. Asclepiadaceae.

No. 1528. A freely branching cactus-like plant with obtusely 4-angled stems 2 to 6 inches long. The flowers are 2 to 3 inches broad, rugose inside, greenish yellow evenly marked with small transverse purplish brown spots and lines and edged with the same color. Considered to be a hybrid of some form of *Stapelia variegata*.

81204. STYRAX OFFICINALIS L. Styracaceae. **Snowbell.**

No. 1549. A handsome shrub or low tree, 20 feet high, with hairy broadly oval leaves and numerous white bell-shaped flowers about three-fourths of an inch long, in small clusters. It is native to Europe and Asia Minor.

For previous introduction see No. 77620.

81205. TOONA CILIATA Roemer (*Cedrela toona* Roxb.). Meliaceae. **Toon tree.**

No. 1574. A large tropical tree 50 to 80 feet high, with nearly evergreen foliage and white, honey-scented flowers. The wood, which is used for furniture, carvings, and for making cigar boxes, is very durable and is not attacked by termites. Native to India.

For previous introduction see No. 61766.

81206. WIGANDIA CARACASANA H. B. K. Hydrophyllaceae.

No. 1632. A robust subshrub 9 feet high, with soft golden pubescence, long petioled, broadly ovate, crenate leaves, white tomentose beneath, 18 inches long by 10 inches broad. The broadly campanulate violet flowers are borne in a 1-sided terminal raceme. Native to Venezuela.

For previous introduction see No. 51152.

81207. WIGANDIA URENS (Ruiz and Pav.) H. B. K. Hydrophyllaceae.

No. 1633. A stout erect subshrub covered with dense whitish hairs. The short-petioled, ovate, serrate leaves are 12 inches long by 7 inches broad, and the violet flowers are in a broad terminal raceme. Native to Peru.

For previous introduction see No. 44126.

81208. SEMPERVIVUM YOUNGIANUM (Webb and Berth.) Christ. Crassulaceae. **Houseleek.**

No. 1478. A fleshy plant with a thick woody stem and thick shining dark-green obcordate-spatulate leaves with short hairs along the margins. Native to the Canary Islands.

81074 to 81208—Continued.

81209 to 81217.

From Yemen, Arabia. Seeds presented by Prince Mohamed Saiffal-Islam, Hodeida, through K. S. Twitchell, Aden. Received July 22, 1929.

81209 and 81210. PENNISETUM GLAUCUM (L.) R. Br. (*P. typhoideum* Rich.). Poaceae. **Pearl millet.**

81209. *Balade.*

81210. *Mikawi.*

81211. PHASEOLUS AUREUS Roxb. Fabaceae. **Mung bean.**

Kishrey.

81212. SESAMUM ORIENTALE L. Pedaliaceae. **Sesame.**

81213 to 81216. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

81213. *Bainey.*

81214. *Gharb.*

81215. *Hombre.*

81216. *Migna.*

81217. ZEA MAYS L. Poaceae. **Corn.**

Hind.

81218. (Undetermined.)

From Peradeniya, Ceylon. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers of the Bureau of Plant Industry, with the Allison V. Armour expedition. Received February 26, 1926. Numbered in September, 1929.

No. 256. Royal Botanic Gardens, January 1, 1926. A beautiful slender-stemmed tall palm with graceful pinnate leaves. Native to Singapore.

81219 to 81229.

From Ariana, Tunis, Africa. Cuttings presented by F. Bœuf, Chef du Service Botanique. Received August 2, 1929.

81219 to 81224. AMYGDALUS COMMUNIS L. (*Prunus amygdalus* Stokes). Amygdalaceae. **Almond.**

81219. *Abiod.*

81219 to 81229—Continued.

81220. *Constantini.*

81221. *Grosse Verte.*

81222. *A la Dame.*

81223. *Ronde Fine.*

81224. *Zaaf.*

81225 to 81229. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

81225. *Chechi.*

81226. *Hatif Musque.*

81227. *Précoce de Boulbon.*

81228. *Senadqui.*

81229. *Luizet.*

81230 to 81265.

From Kirstenbosch, Newlands, near Cape Town, Union of South Africa. Seeds presented by R. H. Compton, Director, National Botanic Gardens. Received July 8, 1929.

Native to South Africa.

81230 to 81247. ERICA spp. Ericaceae. **Heath.**

81230. ERICA ABIETINA L.

An erect glabrous shrub usually about 2 feet high, with virgate branches, densely imbricated incurved linear leaves in fours, and racemose clusters of tubular flowers, yellow with an orange limb.

81231. ERICA BOWIEANA Lodd.

A low shrub with virgate branches a foot long, small thick sulcate leaves crowded in fours, and racemose clusters of tubular flowers below the ends of the branches.

81232. ERICA CURVIFLORA L.

A shrub up to 5 feet high, with stout virgate branches, small linear-lanceolate keeled leaves, and solitary red, orange, or yellow trumpet-shaped curved flowers an inch or more long.

81233. ERICA DIOSMAEFOLIA Salisb.

A low shrub 4 to 8 inches high, with many rigid branches, small sulcate linear-trigonous leaves, and white cyathiform flowers scattered at the ends of the branches.

81234. ERICA GILVA Wendl.

An erect glabrous shrub 2 to 3 feet high, with stout ascending leafy branches, erect or spreading lanceolate leaves, and greenish white tubular flowers about an inch long gathered into lateral clusters.

81235. ERICA GLANDULOSA Thunb.

An erect shrub 2 feet or more high, with all parts covered with gland-tipped hairs. The spreading linear sulcate leaves are in fours, the bracts are foliaceous, and the club-shaped flowers are in clusters of three to five.

81236. ERICA GLAUCA ELEGANS (Andrews) Bolus.

A stout erect entirely glabrous shrub up to 3 feet high, with rigid ascending branches, linear-semiterete curved spreading leaves in threes, half an inch long, and small umbels of dull-red or purple urn-shaped flowers more than half an inch long.

81237. ERICA GLOBOSA Andrews.

An erect shrub 1 to 2 feet high, with long glandular-setose branches, spreading lanceolate leaves with recurved margins, and broadly urn-shaped rosy red flowers in terminal clusters and axillary near the ends of the branches.

81238. ERICA HEBECALYX Benth.

An erect virgately branched shrub with incurved linear sulcate leaves in threes, and club-shaped incurved flowers more than an inch long. The broad softly gray tomentose sepals and bracts give this plant a distinct appearance.

81239. ERICA LAETA Bartl.

A glabrous erect shrub about a foot high, with erect linear sulcate leaves and umbellate clusters of urn-shaped bright-red flowers.

81240. ERICA MAMMOSA L.

An erect shrub up to 4 feet high, with ascending branches which are leafy above and naked below. The scattered linear-lanceolate leaves are in fours, and the purple, red, scarlet, or white tubular flowers are in a loose raceme.

81241. ERICA PINEA Thunb.

An erect shrub a foot high, with stout rigid flexuous branches, scattered incurved linear leaves, and white or yellow club-shaped flowers crowded at the ends of the branches.

81242. ERICA QUADRANGULARIS Salisb.

An erect shrub 12 to 18 inches high, with spreading branches, spreading linear leaves, and an abundance of cyathiform 4-sided rosy or white flowers.

81243. ERICA QUADRISULCATA Hort.

A name for which a place of publication or description has not been found.

81244. ERICA SITIENS Klotzsch.

An erect shrub 1 to 2 feet high, with stout ascending branches, linear usually erect leaves, and urceolate to tubular white or red flowers mostly in fours.

81245. ERICA TAXIFOLIA Bauer.

An erect rigid shrub less than a foot high, with numerous short, straight, pallid branches, erect or spreading linear-trigonous sulcate leaves in threes, and umbellate clusters of broadly urceolate brownish flowers.

81246. ERICA UNICOLOR Wendl.

An erect shrub 3 to 4 feet high, with ascending branches, laxly spreading linear leaves with long hairs, and viscid tubular green flowers.

81247. ERICA VESTITA Thunb.

An erect virgately branched shrub 1 to 3 feet high, crowded erect linear-subtrigonous leaves in sixes, and very small club-shaped white, yellow, rosy, or crimson flowers.

81230 to 81265—Continued.

81248. FAUCARIA TIGRINA (Haw.) Schwantes (*Mesembryanthemum tigrinum* Haw.). Aizoaceae. **Figmarigold.**

An almost stemless perennial with ovate cordate white-marbled glaucous green leaves having upturning edges with long soft ciliated teeth. The large yellow flowers are nearly sessile.

For previous introduction see No. 78226.

81249. GLADIOLUS TRISTIS L. Iridaceae.

A bulbous perennial with three to five strongly ribbed terete leaves a foot long and a lax spike, 2 feet high, of yellowish white, purplish pencilled flowers. This species is said to exhale a delightful lemon perfume at night.

For previous introduction see No. 77224.

81250 to 81265. MESEMBRYANTHEMUM spp. Aizoaceae. **Figmarigold.**

81250. MESEMBRYANTHEMUM AURANTIACUM Haw.

A low fleshy plant about a foot high, with smooth leaves an inch or less long, and orange flowers about 1½ inches wide.

For previous introduction see No. 66813.

81251. MESEMBRYANTHEMUM BLANDUM Haw.

An erect perennial succulent, 2 feet high, with numerous branches, compressed-triangular leaves 2 inches or less long, with minute dots and pale-rose or white flowers 2 inches across.

For previous introduction see No. 79481.

81252. MESEMBRYANTHEMUM BOULUSII Hook. f.

A dwarf stemless succulent plant consisting at maturity of two fully formed dull-gray leaves at right angles to a pair of small withered ones, with one or two sessile yellow and dull-red flowers between them. The hemispherical-trigonal leaves are 2 inches in diameter, and the flowers are 2 to 3 inches across.

81253. MESEMBRYANTHEMUM CALAMIFORME L.

A succulent plant 1 to 2 inches high, with glaucescent-dotted nearly terete subulate leaves about 2 inches long, and dirty white flowers on peduncles an inch long.

81254. MESEMBRYANTHEMUM CONSPICUUM Haw.

A shrubby succulent 1 to 2 feet high, with rigid ascending tortuous branches, crowded incurved triquetrous green leaves, and red flowers on peduncles about 3 inches long.

81255. MESEMBRYANTHEMUM EMARGINATUM L.

A shrubby succulent about 2 feet high, with spreading flexuose branches, scattered semiterete linear leaves, and long-stemmed reddish flowers, in threes, having bidentate petals.

81230 to 81265—Continued.

81256. MESEMBRYANTHEMUM FILAMENTOSUM L.

A semishrubby succulent with angled reddish stems and decumbent branches, crowded dotted scimitar-shaped leaves 1 to 2 inches long, and purplish flowers.

81257. MESEMBRYANTHEMUM GRANULATUM N. E. Brown.

A low fleshy plant, stemless or nearly so, branching at the base and forming a clump half an inch high. The six to eight dull-green leaves are cruciately opposite, crowded, connate, thick at the base, flat above, with obtuse side angles, and acute points. The light-yellow flowers are about an inch across on a terminal peduncle.

81258. MESEMBRYANTHEMUM HETEROPETALUM Haw.

A low succulent with erect-spreading stem and branches and glaucous subfalcate leaves. The pale-red or whitish flowers are solitary.

For previous introduction see No. 79487.

81259. MESEMBRYANTHEMUM INTEGRUM Hort.

A name for which a place of publication or description has not been found.

81260. MESEMBRYANTHEMUM NOBILE Haw.

A nearly stemless succulent with four to six triquetrously clavate leaves 2 to 3 inches long, marked by large elevated tubercles, and nearly sessile yellow flowers 2 inches in diameter.

81261. MESEMBRYANTHEMUM PILLANSII Kensit.

A shrubby plant about 2 feet high, with reddish flattened branches, triangular-compressed leaves up to an inch long, and terminal whitish flowers about 1½ inches across.

81262. MESEMBRYANTHEMUM PRODUCTUM Haw.

A dwarf succulent with erect stems 1 to 2 inches high, with crowded incurved semicylindrical leaves 1 to 2 inches long, and pale rose-colored flowers in twos or threes on peduncles about an inch long.

81263. MESEMBRYANTHEMUM RIGIDICAULE Haw.

A shrubby succulent with angular stems, opposite triquetrous dotted leaves 2 to 3 inches long, and white or rosy flowers about an inch across.

81264. MESEMBRYANTHEMUM RUBRICAULE Haw.

A perennial with erect reddish stems and branches, flat triangular incurved leaves 1 to 2 inches long, and purplish flowers with lanceolate petals.

For previous introduction see No. 77236.

81265. MESEMBRYANTHEMUM SIMPSONII Hort.

A name for which a place of publication or description has not been found.

81266 to 81269.

From Guatemala. Seeds presented by Wilson Popenoe, research department, United Fruit Co., Tela, Honduras. Received August 6, 1929.

81266. COMBRETUM FARINOSUM H. B. K. Combretaceae.

Peineta. A climbing plant bearing red flowers in March. The flowers are arranged in long stiff racemes, giving the common name *peineta* (comb flower).

For previous introduction see No. 49754.

81267. GUAIACUM GUATEMALENSE Planch. Zygophyllaceae.

Guayacan. A small tree, sometimes 30 feet high, with a gnarled and twisted trunk, slender branches, and small, delicate leaves. It thrives in a warm climate with little rain. During February or March the tree comes into flower and is then a mass of lavender-purple, remaining in bloom several weeks. The wood is exceedingly hard and is of value for cabinet purposes. The heartwood is a rich brown, while the sapwood is light yellow; both take a fine polish.

For previous introduction see No. 51407.

81268. MAXIMILIANEA VITIFOLIA (Willd.) Krug and Urb. (*Cochlospermum hibiscoides* Kunth). Cochlospermaceae.

Tecomasuche. A deciduous tree, native to Central America, 35 feet in height, but flowering when only 6 feet high. The alternate leaves have five to seven serrate lobes, and the handsome bright-yellow flowers, 4 inches across, are in terminal clusters.

For previous introduction see No. 80631.

81269. PHYLLOCARPUS SEPTENTRIONALIS Donn. Smith. Caesalpiniaceae.

Flor de Mico. A handsome flowering tree native to eastern Guatemala at altitudes between 1,500 and 2,000 feet. It is of broad spreading habit, 40 to 50 feet high, with small, light-green compound leaves and clusters of small crimson-scarlet flowers borne in great profusion during January and February.

For previous introduction see No. 80696.

81270 and 81271.

From Herradura, Cuba. Seeds presented by Mrs. F. S. Earle. Received August 12, 1929.

81270. ARECASTRUM sp. Phoenicaceae. **Palm.**

A pinnate-leaved palm closely related to the coconut palm.

81271. MANGIFERA INDICA L. Anacardiaceae. **Mango.**

Philippino.

81272. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

From Sydney, New South Wales, Australia. Seeds presented by H. Wenholz, Director of Plant Breeding, Department of Agriculture. Received August 14, 1929.

Hunter River lucern. This strain does exceptionally well in Sydney, and should

81272—Continued.

be adapted to conditions in the southern United States where Peruvian alfalfa is grown.

81273. ANEMONE ALPINA L. Ranunculaceae.

From France. Seeds presented by D. C. Peattie. Received August 19, 1929.

Collected at the Col du Lautheret, Hautes Alpes, at an altitude of 6,000 feet, August 4, 1929. An alpine herbaceous perennial, native to Europe, with a thickened root, stems 9 to 18 inches high, and smooth or hairy, finely divided leaves. The attractive flowers, borne in small umbellike clusters, are 2 to 3 inches across, usually creamy white inside and purple outside with yellow stamens.

81274. ACROCOMIA SCLEROCARPA Mart. Phoenicaceae. **Macauba palm.**

From Port of Spain, Trinidad, British West Indies. Seeds presented by R. O. Williams, Superintendent and Assistant Botanist, Department of Agriculture. Received August 15, 1929.

A graceful spiny palm, 30 to 45 feet high, with a terminal cluster of narrow, pinnate leaves. It is native to tropical America. When matured the inside of the trunk furnishes excellent starch equal in quality to that of the cassava plant. The leaves yield strong fiber, utilized by the natives of Paraguay for making hammocks. From the yellowish fruits, about an inch in diameter, an excellent edible oil is expressed.

For previous introduction see No. 61385.

81275. HEMEROCALLIS FULVA L. Liliaceae. **Tawny daylily.**

From Japan. Bulbs collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received August 20, 1929.

No. 696. A double-flowered form growing along a hillside on the road between Shimizu and Yamakita, July 27, 1929.

81276 to 81283. GOSSYPIUM spp. Malvaceae. **Cotton.**

From Galápagos Islands. Seeds obtained by A. K. Fisher, Bureau of Biological Survey. Received August 2, 1929.

81276. GOSSYPIUM sp.

From Hood Island, July 5, 1929.

81277. GOSSYPIUM sp.

From a bird's nest on Charles Island, June 28, 1929.

81278. GOSSYPIUM sp.

From Charles Island, July 5, 1929.

81279. GOSSYPIUM sp.

From Indefatigable Island, June 18, 1929.

81280. GOSSYPIUM sp.

From Indefatigable Island, June 18, 1929.

81281. GOSSYPIUM sp.

From Chatham Island, July 3, 1929.

81282. GOSSYPIUM sp.

From Charles Island.

81276 to 81283—Continued.

81283. GOSSYPIUM sp.

From Charles Island, June 28, 1929. Flowers bright yellow, becoming dark pink with age.

81284. LILIUM sp. Liliaceae. **Lily.**

From Japan. Bulbs collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received August 1, 1929.

No. 910. Growing on the mountain side, Takaoyama Forest, near Takao, July 8, 1929.

81285. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

From Landsberg am Warthe, Germany. Seeds obtained from the Deutsche Saatveredelung, through the Bureau of Agricultural Economics. Received August 7, 1929.

Old Frankish lucern, produced in the vicinity of Landsberg.

81286 to 81289. FRAGARIA spp. Rosaceae. **Strawberry.**

From Sydney, New South Wales, Australia. Plants presented by C. G. Savage, Director of Fruit Culture of the New South Wales Department of Agriculture. Received August 9, 1929.

81286. FRAGARIA sp.

Creswell.

81287. FRAGARIA sp.

Fandelcino.

81288. FRAGARIA sp.

Malakoff.

81289. FRAGARIA sp.

Phenomenal.

81290 to 81296.

From Cape Town, Union of South Africa. Presented by W. S. Duke & Co. Received August 7, 1929.

81290. ANTHOLYZA REVOLUTA Burm. f. Iridaceae.

Seeds of a slender-stemmed plant, closely allied to gladiolus, bearing bright-red flowers in a few-flowered, very lax spike. Native to southwestern South Africa.

For previous introduction see No. 62799.

81291 to 81293. GLADIOLUS spp. Iridaceae.

81291 and 81292. GLADIOLUS ALATUS L.

A very interesting plant with flowers of a delightful fragrance not unlike that of the sweetbrier. The three upper petals are bright orange-scarlet, and the three lower ones are yellowish tipped with orange scarlet. The bulbs are not larger than ordinary peas and can not remain long out of the ground. Native to South Africa.

For previous introduction see No. 54304.

81291. Bulbs.

81292. Seeds.

81290 to 81296—Continued.

81293. GLADIOLUS sp.

Painted Ladies. Bulbs.

81294. IXIA sp. Iridaceae.

Seeds.

81295. SPARAXIS TRICOLOR (Curtis) Ker. Iridaceae. **Wandflower.**

Seeds of spring-flowering bulbous plant, native to South Africa, with flat sword-shaped leaves and stems a foot high, bearing clusters of funnel-shaped flowers 1 to 2 inches across which vary in color from nearly white through rose, carmine, crimson, to dark purple excluding blue and yellow, but always having a yellow blotch at the base of each segment.

81296. VELTHEIMIA VIRIDIFOLIA Jacq. Liliaceae.

Seeds of a bulbous perennial, native to South Africa, with oblong wavy-margined radicle leaves a foot long and a leafless scape 1 to 2 feet high, mottled with purple. The reddish yellow tubular flowers, with greenish tips, are over an inch long and are borne in a dense raceme 3 to 6 inches long.

81297. LILIUM sp. Liliaceae. **Lily.**

From Hanabata, Japan. Bulbs collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received August 12, 1929.

No. 959. Obtained from an agricultural fair in the public-school building, July 19, 1929. A species with edible bulbs of relatively uniform size and shape.

81298 to 81307.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received August 7, 1929.

81298. OSTERDAMIA JAPONICA (Steud.) Hitchc. Poaceae. **Japanese lawngrass.**

No. 925. Collected on Miharadai Mountain peak, July 9, 1929. A grass which makes a very tight sod, but only a short growth.

For previous introduction see No. 80941.

81299. PHYTOLACCA ACINOSA Roxb. Phytolaccaceae. **Pokeberry.**

No. 956. Collected in Tokujima Temple grounds, near Umeshimamura, July 15, 1929. A stout, almost woody, pokeberry closely resembling the native American pokeberry and used as greens in the same manner. Native to China and Japan.

81300 to 81304. RUBUS spp. Rosaceae.

81300. RUBUS sp.

No. 913. Collected on a mountain top, at an altitude of 1,300 feet, near Takao, July 8, 1929. A species with very large canes, nearly 2 inches in diameter, and bright-red fruits.

81301. RUBUS sp.

No. 914. Collected on a mountain top near Takao, July 8, 1929. A bright golden-yellow raspberry.

81302. RUBUS sp.

No. 915. From a trail near the mountain top in Takaoyama Forest, near Takao, July 8, 1929. A species with orange-yellow fruits.

81298 to 81307—Continued.

81303. RUBUS sp.

No. 916. From plants along a mountain trail near the top of Takaoyama, July 9, 1929. A fairly prolific species with quite large canes and bright-red fruits.

81304. RUBUS sp.

No. 918. From plants along a trail near the top of Takaoyama, Takao, July 9, 1929. A species with orange fruits.

81305 and 81306. SAMBUCUS RACEMOSA L. Caprifoliaceae. **European red elder.**

For previous introduction see No. 77614.

81305. No. 552. Between Shoji and Kofu, June 28, 1929. A small red-berried variety with quite large, showy clusters.

81306. No. 917. From plants along a mountain trail on Takaoyama, Takao, July 9, 1929. Bright-red seeds.

81307. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

No. 487. Near Matsushima Mura, July 6, 1929. Mixed varieties of green-seeded and yellow-seeded varieties used in making miso.

81308 to 81342. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Sydney, Australia. Cuttings presented by P. H. Goldfinch, general manager of the Colonial Sugar Refining Co. Received August 10, 1929.

81308. No. 3.	**81326.** No. 47.

81325. No. 43.	

81343. EUGENIA PUNGENS Berg. Myrtaceae. **Guabiyu.**

From El Saff, Egypt. Seeds presented by Alfred Bircher, Middle Egypt Botanic Station. Received August 12, 1929.

A bushy species native to South America, with pungent leaves and myrtlelike flowers. The black fruits, generally in pairs, are about an inch across with sweet, yellow flesh inclosing one or two large green seeds.

For previous introduction see No. 47987.

81344 to 81355.

From Tiflis, Georgia, Union of Socialistic Soviet Republics. Seeds presented by the director of the botanic garden. Received August 12, 1929.

81344. BELLEVALIA ALBANA Hort. Liliaceae.

A horticultural name for which a place of publication or a description has not been found.

81345. HEDERA COLCHICA Koch. Araliaceae. **Colchis ivy.**

A high-climbing vine with the young growth covered by golden-yellow scales, broadly cordate almost entire bright-green leaves of firm texture, and small umbels of greenish yellow flowers in paniculate clusters, followed by black fruits. It is native to the Caucasus region.

81346 to 81349. IRIS spp. Iridaceae.

81346. IRIS CAUCASICA Hoffm.

A dwarf iris belonging to the Juno section, with a stem 3 to 15 inches high, mostly hidden by the crowded clasping leaves, which have white horny margins. The pale or bright-yellow flowers, one to four on each stem, have ovate outer segments with a broad rhomboidal claw, small auricles, and a toothed or ciliated crest; the inner segments are oblanceolate. Native to the Caucasus region.

For previous introduction see No. 79909.

81347. IRIS IBERICA Hoffm. **Iberian iris.**

A dwarf iris of the oncocyclus section, with falcate leaves 3 to 6 inches long and a large flower on a stem 3 to 4 inches high. The reflexing spoon-shaped falls are obovate, 2 inches broad, and pale brown, closely veined and blotched with purple brown with a dark velvety signal patch. The standards are overarching, varying from pure white to nearly the color of the outer segments. Native to the Caucasus region.

For previous introduction see No. 79910.

81348. IRIS TASCHIA Hort.

A name for which a place of publication or description has not been found.

For previous introduction see No. 79918.

81349. IRIS sp.

Received as *Iris sulfurea*, which is usually a synonym of *I. pumila;* but the seeds received do not agree with the material of that species.

81350. MUSCARI SZOVITSIANUM Baker. Liliaceae. **Grape-hyacinth.**

A perennial with a large bulb which sends up several linear leaves 5 to 6 inches long and several scapes 4 to 5 inches high, with racemes of faintly odorous bright-blue urn-shaped flowers one-sixth of an inch across. Native to the Caucasus region.

81344 to 81355—Continued.

81351. MUSCARI TENUIFLORUM Tausch. Liliaceae. **Grape-hyacinth.**

A grape-hyacinth from south-central Europe, similar to *Muscari comosum*, but generally smaller, with upright narrow-linear leaves as long as the stem, which is about a foot high. The lower fertile flowers, in a cylindrical raceme, are apple green with deep-brown, slightly recurved segments, while the numerous sterile flowers form a rather dense long raceme above.

81352. PAEONIA MLOKOSEWITSCHI Lomakin. Ranunculaceae.

A herbaceous perennial peony with dark bluish green biternate leaves with red nerves and margins and yellow flowers 4 to 5 inches in diameter, which have numerous stamens and purple stigmas. This peony, considered the handsomest of the yellow-flowered forms, is native to the central Caucasus.

For previous introduction see No. 79924.

81353. PAEONIA TRITERNATA Pall. Ranunculaceae. **Peony.**

A herbaceous peony, native to Siberia, usually about 3 feet high, with triternate leaves and purple flowers.

For previous introduction see No. 79926.

81354. PARROTIA PERSICA (DC.) Meyer. Hamamelidaceae. **Persian parrotia.**

A shrub or small tree, up to 15 feet high, with spreading branches and ovate-oblong coarsely crenate leaves, 3 to 4 inches long, which turn scarlet, yellow, and orange in the autumn and remain on the branches a long time. The flower heads, which appear before the leaves, are rather inconspicuous except for the pendent purple stamens; the ovoid fruits are half an inch long with two recurved lobes. Native to Persia.

For previous introduction see No. 49136.

81355. PISTACIA MUTICA Fisch. and Mey. Anacardiaceae. **Terebinth.**

A deciduous tree up to 35 feet high, with pinnate foliage. It is sometimes used as a stock for pistache (*Pistacia vera*). Native to the eastern Mediterranean region.

For previous introduction see No. 73984.

81356 to 81381. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Pasuruan, Java. Cuttings obtained through the Java Sugar-Producers' Association's experiment station, by R. D. Rands and George Arceneaux, Bureau of Plant Industry. Received August 13, 1929.

81382 to 81405. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

From India. Seeds presented by the deputy director of gardens at Saharanpur, through the Director of the Agricultural Research Institute, Imperial Department of Agriculture in India, at Pusa, and Robert Frazer, consul general, Calcutta. Received August 12, 1929.

81382 to 81390. From Agra District.

81382. No. 1. *Mau.* A round greenish yellow melon with dark-green bands heavily overlain with white nettings. Flesh green and of fairly good flavor.

81383. No. 2. *Mau.* Similar to No. 1, but flesh orange.

81384. No. 3. *Bangar.* An oval round dull-red melon heavily overlaid with white netting; flesh orange, not sweet, and having very little flavor.

81385. No. 4. *Reti.* Dull-red and yellow melon with straw-colored bands; flesh pale lemon, slightly sweet, with very little flavor. Apparently two or three mixed varieties.

81386. No. 5. *Burhana (1).* Round yellow melon slightly overlaid with dull-red bands and a little white netting. Flesh greenish white and of fairly good flavor.

81387. No. 6. *Burhana (2).* A round, somewhat flat melon which is rich yellow splashed dull red and overlaid with white netting; flesh pale orange and of fairly good flavor.

81388. No. 7. *Burhana (3).* A round yellow and dull-red melon with dark-green bands overlaid with white netting; flesh orange and of fairly good flavor.

81389. No. 8. *Burhana (4).* A round yellow melon with green and orange bands overlaid with white netting; flesh orange and of fairly good flavor.

81390. No. 9. *Burhana (5).* A round dull-orange melon with green bands

81382 to 81405—Continued.

and heavily overlaid with white netting; flesh green shading to orange near the seed and of fairly good flavor.

81391. No. 10. From Ambala. An early variety producing bright-yellow fruits with very dark-green bands; flesh pale cream and of fairly good flavor. Many of the fruits are distinctly triangular in shape.

81392. No. 11. From Lucknow. *Chitla.* A round, flat melon which is light green with yellow spots and green splashes; flesh white and of fairly good flavor.

81393. No. 12. From Lucknow. *Khurra.* A round, rough-skinned melon which is yellow and slightly splashed dull red overlaid with white netting; flesh pale orange and of good flavor.

81394. No. 13. From Lucknow. *Sarda.* A round and somewhat flat, yellow melon with very narrow depressed bands of pale green; flesh pale orange and of good flavor.

81395. No. 14. From Lucknow. *Sufaida (1).* A round, flat, yellow melon with white flesh of good flavor. It is one of the best and most popular varieties.

81396. No. 15. From Lucknow. *Sufaida (2).* A round, flat, pale-cream melon slightly spotted and splashed with pale yellow; flesh white and of good flavor. It is probably a variety of *Sufaida (1).*

81397. No. 16. From Rampur State. *Chitla Jaldar.* A round, pale-yellow melon splashed with dull red irregularly overlaid with white netting; flesh pale yellow tinged with orange, very little flavor and not very sweet.

81398. No. 17. From Piranpur, Rampur State. *Geeala.* A long oval, bright-yellow melon heavily overlaid with white netting; flesh pale orange, rather juicy, but with little flavor.

81399. No. 18. From Tomri, Rampur State. *Jaldar Red.* A roundish oval, dull-red melon with dark-green bands heavily overlaid with white netting; flesh pale yellow tinted orange, not sweet and with no flavor.

81400. No. 19. From Rampur State. *Dhai Seera.* Long oval, pale yellow melon with orange bands; flesh pale orange, slightly sweet, and with very little flavor.

81401. No. 20. From Sitaria, Rampur State. *Red Jaldar.* Oval, dull orange-red melon overlaid with white netting; flesh pale yellow tinged with orange, not sweet, and with a very insipid flavor.

81402. No. 21. From Ghatampur, Rampur State. *Surkha Jaldar.* A round melon which is dark orange-red to yellow and dull orange with orange and green bands, overlaid with white netting; flesh pale yellow tinged with orange, fairly sweet, and of fairly good flavor.

81403. No. 22. From Saharanpur district. *Jalalabad.* A round flat melon which is rich golden yellow with juicy, sweet, white flesh of good flavor. Probably a variety of the Lucknow *Sufaida.*

81404. No. 23. From Saharanpur district. *Patair (1).* A round, somewhat flat,

81382 to 81405—Continued.

bright-yellow melon with dark-green bands; flesh green, fairly sweet, and of fairly good flavor.

81405. No. 24. From Saharanpur district. *Patair (2).* A handsome dark-red melon with yellow bands; flesh pale orange, fairly sweet, and of fairly good flavor.

81406 to 81417.

From Java. Seeds collected by R. D. Rands and George Arceneaux, Bureau of Plant Industry. Received August 13, 1929.

81406. ALBIZZIA FALCATA (L.) Backer (*A. moluccana* Miquel). Mimosaceae.

A rapid-growing tropical Asiatic tree with large feathery leaves and small globular flower heads. It is used for shade in coffee plantations.

For previous introduction see No. 75973.

81407 and 81408. BRADBURYA PLUMIERI (Turp.) Kuntze (*Centrosema plumieri* Turp.). Fabaceae.

A tropical ornamental vine, native to Brazil, with white and red flowers. It is of value as a green manure.

For previous introduction see No. 77622.

81407. No. 1.

81408. No. 2.

81409 and 81410. BRADBURYA PUBESCENS (Benth.) Kuntze (*Centrosema pubescens* Benth.). Fabaceae.

A leguminous vine, native to tropical America, with trifoliolate leaves and small yellowish flowers. It is used as a cover crop.

81411. CASSIA HIRSUTA L. Caesalpiniaceae.

An erect, annual herb covered with long hairs. The compound leaves are made up of three to five pairs of ovate leaflets 2 to 3 inches long, and the yellow flowers are borne in axillary racemes. It is native to Brazil.

For previous introduction see No. 47353.

81412. CASSIA LESCHENAULTIANA DC. Caesalpiniaceae.

A low diffuse perennial native to the tropical Himalayas, with slender branches and finely divided leaves.

For previous introduction see No. 72591.

81413. CRACCA CANDIDA (DC.) Kuntze (*Tephrosia candida* DC.). Fabaceae.

A low shrub with slender branches and large clusters of reddish or white flowers. Native to the Himalayas.

For previous introduction see No. 76096.

81414. CRACCA VOGELII (Hook. f.) Kuntze (*Tephrosia vogelii* Hook. f.). Fabaceae.

A shrubby legume native to tropical Africa. The leaves are macerated and thrown into the water to kill fish.

For previous introduction see No. 76098.

81406 to 81417—Continued.

81415. CROTALARIA ANAGYROIDES H. B. K. Fabaceae.

A shrubby leguminous plant, up to 6 feet high, used as a cover crop in the East Indies. Native to tropical America.

For previous introduction see No. 76099.

81416. CROTALARIA USARAMOENSIS Baker f. Fabaceae.

A crotalaria, native to East Africa, which has proved very successful as a green manure when grown in alternation with corn, producing large quantities of vegetation rich in nitrogen. In the cinchona plantations it endures partial shade and forms a low dense growth, binding the edges of the terraces. It is a very strong grower 8 feet or more high, with long spikes of yellow flowers.

For previous introduction see No. 76101.

81417. MIMOSA INVISA Mart. Mimosaceae.

A bushy tropical plant native to Brazil, about 3 feet high with feathery leaves and rose-colored flowers. It is used as a green manure.

For previous introduction see No. 77623.

81418 to 81426. CROTALARIA spp. Fabaceae.

From Honolulu, Hawaii. Seeds presented by F. G. Krauss, assistant director of agricultural extension, University of Hawaii. Received August 14, 1929.

81418 and 81419. CROTALARIA ANAGYROIDES H. B. K.

For previous introduction and description see No. 81415.

81418. No. 158. Originally from the experiment plantation, Serdang, Federated Malay States.

81419. No. 167. Originally from the College of Agriculture, University of the Philippine Islands.

81420. CROTALARIA INCANA L.

No. 15528. Originally sent to Hawaii from Savannah, Ga. A somewhat shrubby plant covered with soft gray pubescence and bearing elongated racemes of yellow flowers. It is native to tropical America.

For previous introduction see No. 76089.

81421. CROTALARIA JUNCEA L. **Sunn hemp.**

No. 166. Originally from the College of Agriculture, University of the Philippine Islands.

For previous introduction see No. 76100.

81422. CROTALARIA MAXILLARIS Klotzsch.

Originally sent to Hawaii from Savannah, Ga., under F. P. I. No. 60302. A plant 1½ to 2½ feet high, branching along the entire main stem, with broad leaflets and bright-yellow flowers. It matures in four months.

81418 to 81426—Continued.

81423. CROTALARIA RETUSA L.

Originally sent to Hawaii from Savannah, Ga., under F. P. I. No. 36969. A tropical, annual legume with yellow flowers.

For previous introduction see No. 73932.

81424. CROTALARIA USARAMOENSIS Baker f.

No. 165. Originally from the College of Agriculture of the University of the Philippine Islands.

For previous introduction and description see No. 81416.

81425. CROTALARIA sp.

Originally from Kona, Hawaii.

81426. CROTALARIA sp.

A wild species growing at the University of Hawaii farm B–2, of possible value as a cover crop.

81427 to 81429.

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received August 19, 1929.

81427. EUGENIA CAPULI (Schlecht. and Cham.) Berg. Myrtaceae.

A shrub or small tree, native to Mexico, with slender branches, dark-green lanceolate leaves 1 to 2 inches long, racemose clusters of small white flowers, and small subglobose edible fruits which are red at first but turn black in ripening.

81428. PINUS OOCARPA Schiede. Pinaceae. **Pine.**

A white pine 36 to 45 feet high, with a round compact head and stout branches, bright-green leaves 7 to 11 inches long, and cones 2 to 4 inches long, persistent, pendent or spreading, ocher-yellow, often tinged with gray or green. Native to western and central Mexico.

For previous introduction see No. 50651.

81429. TABEBUIA PENTAPHYLLA (L.) Hemsl. Bignoniaceae.

A handsome tropical deciduous tree, about 35 feet high, native to Central America. During its flowering period, from January to March, the numerous large clusters of pink flowers make the tree very attractive.

For previous introduction see No. 73286.

81430 to 81435. LINUM USITATISSIMUM L. Linaceae. **Flax.**

From Ariana, near Tunis, Tunisia, Africa. Seeds presented by F. Bœuf, Chief, Botanical Service. Received August 15, 1929.

81430. *Lin Denaiff* (Nord de La France).

81431. *Lin de Tunisie No. 15.*

81432. *Lin de Tunisie No. 16.*

81433. *Lin Lino Grande* (Italie).

81434. *Lin de Safi* (Maroc).

81435. *Lin Malabrigo* (Italie).

81436. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. **Japanese chestnut.**

From Japan. Scions collected by R. K. Beattie, Bureau of Plant Industry. Received August 19, 1929.

No. 840. Ayabe Machi Agricultural Experiment Station, Kyoto, January 13, 1929. *Goku wase.*

81437. PONGAMIA PINNATA (L.) W. F. Wight (*P. glabra* Vent.). Fabaceae.

From the West Indies. Seeds collected by Allison V. Armour. Received August 19, 1929.

A tall erect shade tree or sometimes a climbing shrub, native to tropical Asia, with compound leaves composed of four to seven pairs of oblong leaflets and simple racemes of white flowers. The woody pods are about one-fourth of an inch thick and 1½ inches long. Because of its bright, handsome foliage this tree has been recommended as an ornamental for subtropical regions. It is said to withstand hurricanes.

For previous introduction see No. 79543.

81438. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

From Landsberg am Warthe, Germany. Seeds obtained through the Bureau of Agricultural Economics. Received August 19, 1929.

Hungarian.

81439 to 81447.

From Japan. Collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry, United States Department of Agriculture. Received August 20, 1929.

81439. AQUILEGIA sp. Ranunculaceae. **Columbine.**

No. 618. Seeds obtained from plants with lavender and yellow flowers, in the woods and open field near Lake Yamanaka, July 23, 1929.

81440. CUCUMIS SATIVUS L. Cucurbitaceae. **Cucumber.**

No. 958. Seeds obtained at an agricultural fair held in the public-school building in Hanabata, July 19, 1929.

Yatsubusa. A beautiful brownish yellow cucumber about 10 inches long and 3 inches in diameter, which received second prize at the fair.

81441. FESTUCA sp. Poaceae. **Fescue grass.**

No. 615. Seeds obtained from plants along the trail near Lake Yamanaka, July 23, 1929.

81442. LILIUM CORDIFOLIUM Thunb. Liliaceae. **Lily.**

No. 681. Bulbs collected between Gotemba and Fujima, July 25, 1929.

For previous introduction see No. 75677.

81443 to 81446. RUBUS spp. Rosaceae.

81443. RUBUS sp.

No. 663. From plants on a hillside between Gotemba and Fujima, July 25, 1929. A low-spreading vine bearing bright-red fruits which separate very easily from the receptacle.

81444. RUBUS sp.

No. 695. Obtained from plants along the trail near Subashiri, July 26, 1929.

81445. RUBUS sp.

No. 697. From plants along the road on a hillside between Shimizu and Yamakita, July 27, 1929. Fruits bright red and very sweet.

81446. RUBUS sp.

No. 698. From plants along the road between Shimizu and Yamakita, July 27, 1929. Fruits are a deep purple when mature.

81447. VACCINIUM sp. Vacciniaceae.

No. 638. Seeds from plants growing in lava soil in the woods along a mountain trail near Subashiri, in the Mount Fuji region, at an altitude of 2,600 feet, July 24, 1929. A shrub up to 12 feet high.

81448 to 81472. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Sydney, New South Wales, Australia. Cuttings presented by P. H. Goldfinch, general manager of the Colonial Sugar Refining Co. Received August 24, 1929.

81448. No. 1.	**81461.** No. 213.

81460. No. 210.	

81473. FICUS CASSIDYANA Elm. Moraceae. **Fig.**

From Manila, Philippine Islands. Fruits presented by William H. Brown, Director, Bureau of Science. Received July 22, 1929.

A small, erect, tropical tree, 25 feet high, with spreading branches and grayish white bark. It is native to the Philippine Islands. The dark-green membranous, broadly heart-shaped scabrous leaves are about 8 inches long and are mostly at the ends of the twigs. The brown-hairy flat-obovoid fruits are 3 inches across.

81474. EUGENIA PUNGENS Berg. Myrtaceae. **Guabiyu.**

From El Saff, Egypt. Seeds presented by Alfred Bircher, Middle Egypt Botanic Station. Received August 24, 1929.

For previous introduction and description see No. 81343.

81475 and 81476. PETREA spp. Verbenaceae.

From Port of Spain, Trinidad, British West Indies. Seeds presented by R. O. Williams, Superintendent, St. Clair Experiment Station. Received August 24, 1929.

81475. PETREA ARBOREA H. B. K.

A vigorous tropical climber with oblong leaves about 4 inches long and harsh to the touch, and trusses of blue star-shaped flowers. It blooms more or less throughout the year, but is covered with flowers during the early spring. Native to Colombia.

For previous introduction see No. 50665.

81476. PETREA VOLUBILIS L.

A woody climber native to tropical South America and the West Indies. The beautiful white flowers are borne in loose pendent sprays which hang gracefully from the slender arching branches. These combined with the rigid green leaves produce a striking effect.

For previous introduction see No. 54325.

81477 to 81482. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. Common wheat.

From Magyarovar, Hungary. Seeds presented by Emil Grabner, Director, Royal Hungarian Plant-Breeding Institute. Received August 28, 1929.

White-bearded winter varieties.

81477 and 81478. Originated in the wheat-breeding experiments under the direction of the Royal Hungarian Plant-Breeding Institute. The selection of pure line and saving of good seeds for sowing was carried out at the home of Count Dr. Paul Eszterházy in Esterhazy, Comitat Sopron. They are long-stemmed, prolific varieties which are useful for intensive cultivation.

81477. *Eszterházai No. 11.*

81478. *Eszterházai No. 18.*

81479 and 81480. Hybrids of Hungarian and foreign winter wheat varieties originated by Dr. Endre Pap, Mindszentpuszta, Post Sarszentmiklos. Suited for extensive cultivation.

81479. *Mindszentpusztai No. 403.*

81480. *Mindszentpusztai No. 609.*

81481 and 81482. Developed from Hungarian Theiss wheats through individual selection by Head Agriculturist Elmer Székács, Budapest.

81481. *Székács No. 1055.*

81482. *Székács No. 1242.*

81483. ATTALEA GOMPHOCOCCA Mart. Phoenicaceae. Palm.

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received August 27, 1929.

An ornamental palm, 20 to 30 feet high, crowned by a magnificent cluster of large leaves, with very numerous linear or linear-lanceolate leaflets, bright green above and pale beneath. The fruit is fibrous coated. Native to Central America.

For previous introduction see No. 47440.

81484 to 81487. GOSSYPIUM BARBADENSE L. Malvaceae. Cotton.

From Ariana, near Tunis, Tunisia, Africa. Seeds presented by F. Bœuf, Chief, Botanical Service. Received August 15, 1929.

81484. No. 21 (2).

81485. No. 48.

81486. No. 60.

81487. No. 75.

81488 and 81489. MEDICAGO SATIVA L. Fabaceae. Alfalfa.

From France. Seeds obtained from Tezier Frères, Paris. Received August 30, 1929.

81488. *Luzerne de Provence.* From the valley of the Rhone.

81489. *Luzerne de Provence.* From the Alps.

81490. LIBERTIA IXIOIDES (Forst. f.) Spreng. Iridaceae.

From Nelson, Auckland, New Zealand. Seeds presented by A. Wilkinson, New Zealand Alpine and Rock Garden Society. Received August 22, 1929.

A herbaceous perennial, native to New Zealand, with a short creeping rhizome which forms a compact clump like a beardless iris. It has rigid coriaceous linear leaves a foot long, and large panicles of small white flowers on a stem 2 feet high.

For previous introduction see No. 77564.

81491 to 81493. FICUS spp. Moraceae. Fig.

From Summit, Canal Zone. Cuttings presented by J. E. Higgins, Plant Introduction Garden. Received August 27, 1929.

81491. FICUS CONORA King.

A tree, native to New Guinea, with softly pubescent branchlets, lanceolate entire leaves 7 inches long, pubescent beneath, and turbinate fruits an inch in diameter, borne on long flexuose leafless branches arising at the base of the trunk.

For previous introduction see No. 80047.

81492. FICUS INVOLUTA (Liebm.) Miquel.

A spreading tree with thick triangular branches and leathery elongate-obovate leaves 7 or 8 inches long. It is native to tropical America.

81493. FICUS MITROPHORA Warb.

A West Indian tree 15 to 60 feet high, with thick branches and dense foliage. The oblong obtuse sessile leaves are about 4 inches long, and the globose fruits are scarcely half an inch in diameter.

81494. GNETUM INDICUM (Lour.) Merr. (*G. funiculare* Blume). Gnetaceae.

From Manila, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture, Manila, at the request of P. J. Wester, Bureau of Agriculture. Received August 19, 1929.

Bulso. A tropical woody vine with brick-red fruits in bunches like grapes, each containing a nut which, when roasted, has

81494—Continued.

the flavor of a chestnut. The nuts should not be eaten raw. Native to the Philippines.

For previous introduction see No. 72597.

81495. BAMBUSA LONGISPICULATA Gamble. Poaceae. **Bamboo.**

From the Chittagong Hill Tracts, Bengal, India. Seeds presented by R. N. Parker, Forest Botanist, Forest Research Institute and College, Dehra Dun, United Provinces. Received August 22, 1929.

This species appears to differ from *Bambusa tulda* only in the larger spikelets.

81496 and 81497. ZEPHYRANTHES spp. Amaryllidaceae. **Zephyrlily.**

From Paget East, Bermuda. Seeds presented by J. C. Nauen, Horticulturist, Agricultural Station, Department of Agriculture. Received August 31 and September 3, 1929.

81496. ZEPHYRANTHES CARINATA Herbert.

A bulbous perennial with linear leaves and a scape about a foot high, bearing a single rosy flower 3 to 5 inches across and 3 inches long. Native to the West Indies. It is said to be the largest and choicest of the rosy-flowered zephyrlilies and blooms in the summer. The seeds were mixed with *Zephyranthes eggersiana* when received.

For previous introduction see No. 62796.

81497. ZEPHYRANTHES EGGERSIANA Urban.

A bulbous perennial related to *Zephyranthes citrina*, with very narrow leaves about 6 inches long and small yellow flowers an inch or so across. Native to the West Indies.

81498. ARTOCARPUS COMMUNIS Forst. Moraceae. **Breadfruit.**

From Summit, Canal Zone. Seeds presented by J. E. Higgins, Plant Introduction Gardens. Received September 5, 1929.

A tropical tree 30 to 40 feet high, with viscid milky juice and leathery ovate leaves 3 feet long, entire at the base but divided above into three to nine lobes. The seeds, which are much the size, shape, and flavor of chestnuts, are roasted and eaten. Native to the Malay Archipelago.

For previous introduction see No. 80555.

81499. SACCHARUM SPONTANEUM L. Poaceae.

From Sumatra. Cuttings obtained from Harold L. Lyon, Department of Botany and Forestry, Experiment Station, Hawaiian Sugar Planters' Association, through Sidney F. Sherwood, Bureau of Plant Industry. Received September 4, 1929.

Variety *gigas*. Collected near Prapat by Messrs. Agee and Mangelsdorf, Hawaiian Sugar Planters' Association.

81500. GOSSYPIUM sp. Malvaceae. **Cotton.**

From Barrington Island, Galápagos Islands. Seeds obtained by A. K. Fisher, Bureau of Biological Survey, United States Department of Agriculture. Received August 22, 1929.

81501. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Mayaguez, Porto Rico. Cuttings presented by Robert L. Davis, agronomist, Porto Rico Agricultural Experiment Station. Received September 4, 1929.

B 6835.

81502. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

From Berlin, Germany. Seeds obtained from the Deutsche Landwirtschafts-Gesellschaft, through H. L. Westover, Bureau of Plant Industry. Received September 5, 1929.

Old Frankish lucern.

81503. ARTOCARPUS COMMUNIS Forst. Moraceae. **Breadfruit.**

From Summit, Canal Zone. Plants presented by J. E. Higgins, Plant Introduction Gardens. Received September 13, 1929.

A seedless form of breadfruit.

For previous introduction see No. 81498.

81504. CORDIA GREGGII Torr. Boraginaceae.

From Culiacan, Sinaloa, Mexico. Seeds presented by C. J. Stafford. Received September 9, 1929.

Vara Prieta. A drought-resistant shrub 3 to 9 feet high, with mostly ovate or obovate, coarsely dentate leaves, which are very scabrous, and white flowers borne in few-flowered headlike cymes. A decoction of the leaves is said to be used as a stimulant. Native to central and northwestern Mexico.

81505. AGONIS FLEXUOSA (Willd.) DC. Myrtaceae.

From Melbourne, Victoria, Australia. Seeds presented by F. J. Rae, Director, Melbourne Botanic Gardens. Received September 10, 1929.

A tall evergreen shrub or tree up to 40 feet high, native to Western Australia. The young shoots are silky, and the linear-lanceolate leaves, 2 to 6 inches long, have in their axils small heads of flowers with persistent white petals.

For previous introduction see No. 75542.

81506. CEIBA PENTANDRA (L.) Gaertn. Bombacaceae. **Kapok.**

From Talisay, Cebu, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received September 9, 1929.

A large deciduous tree with pods which contain silky white floss (kapok) used for stuffing mattresses, etc. Although native to tropical America, it is grown extensively throughout tropical Asia.

For previous introduction see No. 74414.

81507. PYCNOSPORA HEDYSAROIDES R. Br. Fabaceae.

From Peradeniya, Ceylon. Seeds presented by F. A. Stockdale, Director, Department of Agriculture. Received September 10, 1929.

An undershrub native to southeastern Asia, with the habit of the meibomias, hav-

81507—Continued.

ing decumbent or ascending branched stems 1 to 2 feet long. The leaves are pinnately trifoliolate with obovate leaflets about an inch long, and the small purplish flowers are in terminal racemes or panicles. It is of value as a cover crop.

81508 to 81510.

From Maragha, Persia. Scions presented by Jalil K. Hashimzade, Teheran, Persia. Received July 18, 1929.

81508. PRUNUS sp. Amygdalaceae. **Plum.**

Kodja Sultan. An early variety of plum.

81509. PRUNUS sp. Amygdalaceae. **Cherry.**

A black cherry.

81510. PYRUS sp. Malaceae. **Pear.**

Norass. An early variety.

81511 and 81512.

From Little River, Fla. Seeds presented by Charles T. Simpson. Received September 16, 1929.

81511. CHRYSALIDOCARPUS MADAGASCARIENSIS Beccari. Phoenicaceae. **Palm.**

A graceful palm, native to Madagascar, about 15 feet high, with pinnate leaves 10 feet long, having the segments arranged in fascicles and appearing to be in threes, giving a triangular effect.

For previous introduction see No. 77158.

81512. LINOMA ALBA (Bory) O. F. Cook (*Dictyosperma rubra* Wendl. and Drude). Phoenicaceae. **Palm.**

A slender, spineless, pinnate-leaved palm, 30 feet or more high, resembling Areca in habit. The mature leaves are 8 to 12 feet long. When young this makes a very desirable house palm. Native to tropical Asia.

For previous introduction see No. 61495.

81513. PSIDIUM GUAJAVA L. Myrtaceae. **Guava.**

From New Smyrna, Fla. Cuttings presented by John Y. Detwiler. Received October 9, 1928. Numbered in September, 1929.

The Detwiler guava is large, very thick fleshed, and otherwise of high merit. The flesh is white, smooth in texture, and sweet, with a fair amount of acid. The seeds are small and are restricted to the rather small cavity. In a small specimen of the fruit, examined late in November, which measured 3⅛ by 2¾ inches and weighed 4 ounces, the flesh was nearly three-fourths of an inch thick. The single fruits are said by Mr. Detwiler to attain occasionally a weight of 1 pound.

81514. ELAEOPHORBIA DRUPIFERA (Thonn.) Stapf. Euphorbiaceae.

From Victoriaborg, Akkra, Gold Coast, Africa. Seeds presented by L. A. King-Church, Conservator of Forests. Received September 13, 1929.

A deciduous tree 40 to 50 feet high, with milky juice that may be a source of rubber.

81514—Continued.

The young branches are fleshy and angled, becoming round and woody with age. The thick fleshy obovate leaves are 3 to 8 inches long, with stipular spines; the flowers are similar to those of the euphorbias, and the fleshy fruits vary in size from that of a cherry to a walnut. Native to tropical Africa.

For previous introduction see No. 73010.

81515 to 81527.

From Burma. Seeds collected by Capt. F. Kingdon Ward and presented through S. C. Simms, Director, Field Museum of Natural History, Chicago, Ill. Received September 18, 1929.

81515. ADENIA sp. Passifloraceae.

No. 8473. A climber.

81516. ARISTOLOCHIA sp. Aristolochiaceae.

No. 8756. Obtained at Taungui at altitudes between 4,500 and 5,000 feet. Climbing by means of petioles and twining stems. The seeds are flat, thin, and small.

81517. CITRUS sp. Rutaceae.

No. 9060.

81518. CROTALARIA sp. Fabaceae.

No. 8874. Valley of the Nam Lwe, near Mong Wa.

An undershrub cultivated for its small seeds crowded in fat pods which open explosively. The flowers are dark blue-violet with the standard and wings prettily veined.

81519. CROTALARIA sp. Fabaceae.

No. 9050. From a plateau east of Savanakket, at altitudes between 1,000 and 1,500 feet. An erect undershrub, bearing bright sulphur flowers, which grows on an open savanna.

81520. CROTALARIA sp. Fabaceae.

No. 9059. Coast of Anam. An erect dune species about a foot high.

81521. FICUS sp. Moraceae. **Fig.**

No. 9021. Mekong River, below Luang Prabana, at an altitude of 1,000 feet. A small tree with white flowers and red fruits.

81522. LAGERSTROEMIA sp. Lythraceae.

No. 8870. Valley of the Nam Lwe, near Mong Wa. A small tree, common in thickets, which flowers as a modest-sized bush. The flowers are fragrant, almost white or beautifully flushed with lilac or pink, about an inch across, and are borne in showy heads.

81523. LEUCAENA GLAUCA L. Mimosaceae.

No. 9063. Coast of Anam. An ornamental tropical dune tree with numerous white flowers borne in globular heads.

For previous introduction see No. 43637.

81524. NICOTIANA TABACUM L. Solanaceae. **Tobacco.**

No. 8762. Salwin Valley, at an altitude of 800 feet. A large-leaved, small-flowered pink variety, 3 to 5 feet high, growing in the sandy river bed below summer flood level. The flowering stem

81515 to 81527—Continued.

is usually broken off low down, leaving the large basal leaves. At this time (March 21, 1929) the leaves are being harvested.

81525. (Undetermined.)

No. 8800. Lormive, at altitudes between 5,000 and 6,000 feet. A climber covering a garden trellis with a mass of intertwining stems supported by leaf petioles. The flowers are violet or occasionally purple. It is not yet (April 8, 1929) in full bloom, the long straggling shoots bearing numerous buds.

81526. (Undetermined.)

No. 8924–A. Mong Hsing, Haut Laos, at an altitude of 2,000 feet. A large shrub very common and conspicuous in thickets; it is 6 to 8 feet high and is used for hedges. The 3-seeded berries are at first bright orange, turning scarlet, and are slightly aromatic when crushed.

81527. (Undetermined.)

No. 9056. A small tree bearing fruits the size of a gooseberry, with smooth, purple skin, purple pulp, and containing many small seeds.

81528. FICUS CARICA L. Moraceae. **Fig.**

From the valley of the Roja, Alpes Maritimes, France. Cuttings presented by Dr. Mario Calvino, San Remo, Italy. Received March 2, 1928. Numbered in September, 1929.

A wild variety resistant to frost.

81529 to 81568.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received September 3, 1929.

81529 to 81532. ASTRAGALUS SINICUS L. Fabaceae.

Genge clover obtained from the Gifu Agricultural Experiment Station, Gifu, August 12, 1929.

81529. No. 1104. Station No. 4. An early variety used for green-manure purposes.

81530. No. 1105. Station No. 5. A middle or medium-seasoned variety.

81531. No. 1106. Station No. 6. A late variety used for green manure.

81532. No. 1107. *Sogaya.* Station No. 7. A very late variety used as a green manure.

81533. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

No. 1103. Tokyo, August 11, 1929. A light-green watermelon, 8 to 10 inches or more in diameter, with small seeds, a thin rind, and attractive red flesh which is sweet and juicy.

81534 to 81536. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

Tokyo, August 3, 1929.

81534. No. 975. A green-fleshed melon about 4 inches in diameter and 8 to 10 inches long, which is whitish green with darker lines of green from the stem to the blossom.

81535. No. 976. A melon 3 to 4 inches in diameter and 7 to 9 inches long, with greenish flesh, and the outside green overlaid with yellow.

81536. No. 977. A small bright-yellow Japanese or Chinese melon with snow-white flesh.

81537. FESTUCA sp. Poaceae. **Grass.**

No. 493. Obtained from a small bunch of grass growing near undergrowth along the road near Yamanaka Lake, July 23, 1929.

81538. HELWINGIA JAPONICA (Thunb.) Dietr. Cornaceae.

No. 662. Obtained from a plant along the trail to Mount Fuji, near Subashiri, July 24, 1929. A bushy deciduous shrub 3 to 5 feet high, with slender green branchlets, ovate serrulate leaves 2 to 3 inches long, and small umbels of greenish white flowers followed by black subglobose fruits one-fourth of an inch in diameter. It is interesting because the flowers and fruits are borne on the upper surface of the leaves. Native to Japan and China.

81539. IMPATIENS sp. Impatientaceae.

No. 661. Growing in lava soil in the woods near Lake Yamanaka, at an altitude of 3,200 feet, July 23, 1929. Flowers orange yellow.

81540 to 81542. LONICERA spp. Caprifoliaceae. **Honeysuckle.**

81540. LONICERA sp.

No. 840. From a bush growing along the roadside near Karuizawa, August 5, 1929. Fruits bright red.

81541. LONICERA sp.

No. 884. From a tree in a yard near the railway station at Kurihira, August 7, 1929. Tree about 15 feet high and 11 or 12 inches in circumference.

81542. LONICERA sp.

No. 979. Botanic Garden, Tokyo. July 31, 1929.

81543. LOTUS sp. Fabaceae.

No. 642. From plants growing at an altitude of 2,600 feet along the mountain trail near Subashiri, Mount Fuji region, July 24, 1929.

81544. LOTUS sp. Fabaceae.

No. 997. From plants along the mountain trail near Usuitoge, at an altitude of 4,200 feet, August 8, 1929.

81545. LUPINUS LUTEUS L. Fabaceae. **European yellow lupine.**

No. 1108. Obtained from the Gifu Agricultural Experiment Station, Gifu, August 12, 1929. A variety with gray-mottled seeds which have bluish black markings. It is said to be used for green manure.

81546. ORNITHOPUS SATIVUS Brot. Fabaceae. **Serradella.**

No. 1110. Obtained from the Gifu Agricultural Experiment Station, August 12, 1929. Used as a green manure.

81529 to 81568—Continued.

81547 and 81548. OSTERDAMIA JAPONICA (Steud.) Hitchc. Poaceae. **Japanese lawngrass.**

81547. No. 853. Obtained from plants growing near the station of Kitakaruizawa, at an altitude of about 4,200 feet, August 7, 1929.

81548. No. 899. From plants on a mountain top known as Sunset View, near Usuitoge, at an altitude of 4,200 feet, August 8, 1929. A grass which makes a short growth, but seeds heavily.

81549. POA sp. Poaceae. **Grass.**

No. 604. A grass, about 3 feet high, growing along the roadside near Lake Yamanaka, July 23, 1929.

81550. PRUNUS BUERGERIANA Miquel. Amygdalaceae. **Cherry.**

No. 966. Botanic Garden, Tokyo, July 31, 1929. A hardy, much-branched deciduous tree becoming 30 feet or more high, with elliptic or oblong, acuminate leaves about 4 inches long, light green beneath. The small white flowers, one-third of an inch across, in slender racemes 3 inches long, are succeeded by small, round, black fruits. Native to northern Japan and Chosen.

81551 to 81557. RUBUS spp. Rosaceae.

81551. RUBUS sp.

No. 694. Obtained from a dwarf species growing near Lake Yamanaka, July 24, 1929. Flowers large and white.

81552. RUBUS sp.

No. 860. Obtained from plants growing along a roadside between Kitakaruizawa and Kose, at altitudes between 3,800 and 4,200 feet, August 7, 1929. The vines are tall and thorny, the leaves deeply lobed, and the fruits bright red and of excellent quality.

81553. RUBUS sp.

No. 872. From vines growing along the roadside between Kitakaruizawa and Kose, at an altitude of 3,800 feet, August 7, 1929. A species with trifoliolate leaves, which are white underneath, and small steel-blue fruits.

81554. RUBUS sp.

No. 885. From tall thorny plants near Kose, August 7, 1929. Fruits bright red.

81555. RUBUS sp.

No. 887. Plants growing along a road near Kose, at an altitude of 3,800 feet, August 7, 1929. Fruits bright red.

81556. RUBUS sp.

No. 892. Growing along a road near Kose, August 7, 1929. Vines of dwarf runner type with bright-red fruits of good quality.

81557. RUBUS sp.

No. 896. From plants along the road between Kitakaruizawa and Kose, August 7, 1929.

81558 to 81560. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

81558. No. 666. From plants along the road between Gotemba and Fujima, July 25, 1929. A clover which makes an excellent growth.

81559. No. 847. From plants along the roadside near Karuizawa, at an altitude of 2,800 feet, August 7, 1929.

81560. No. 994. From plants on a mountain top known as Sunset View, at Usuitoge, at an altitude of 4,200 feet, August 8, 1929.

81561 and 81562. TRIFOLIUM REPENS L. Fabaceae. **White clover.**

81561. No. 660. Growing in lava soil along the Mount Fuji trail, Subashiri, at an altitude of 2,600 feet, July 24, 1929.

81562. No. 996. From plants on a mountain top known as Sunset View, near Usuitoge, August 8, 1929.

81563. VACCINIUM sp. Vacciniaceae.

No. 846. From a mountain near Karuizawa, August 7, 1929. A species producing almost round, tart fruits of very good quality, which are very large and fine for a wild species.

81564. VIBURNUM sp. Caprifoliaceae.

No. 679. From plants along the trail between Gotemba and Fujima, July 26, 1929. Fruits bright red, turning to a very deep purple, almost black when mature.

81565. VIBURNUM sp. Caprifoliaceae.

No. 1101. Hibiya Park, Toyko, August 11, 1929. A tree 20 feet or more high and about 8 inches in diameter, with broad dark-green leaves and oblong berries, which are black when fully ripe.

81566. VICIA SATIVA L. Fabaceae. **Common vetch.**

No. 1109. Obtained from the Gifu Agricultural Experiment Station, Gifu, August 12, 1929. Used as a green manure.

81567. VICIA TETRASPERMA (L.) Moench. Fabaceae. **Vetch.**

No. 667. From plants along a hillside on the road between Gotemba and Fujima, July 25, 1929. A very early-maturing variety.

81568. ZANTHOXYLUM SCHINIFOLIUM Sieb. and Zucc. Rutaceae.

No. 974. Botanic Garden, Tokyo, August 31, 1929. A graceful Japanese shrub or small tree with attractive compound leaves and rather conspicuous clusters of greenish or brownish fruits in autumn.

For previous introduction see No. 77870.

81569. ANNONA PURPUREA Moc. and Sesse. Annonaceae. **Soncoya.**

From Mazatenango, Guatemala. Seeds presented by Wilson Popenoe, United Fruit Co., Tela, Honduras. Received September 19, 1929.

A variety producing very attractive fruits 5 or 6 inches in diameter, but with fibrous flesh of little character. The gorgeous orange-yellow color of the flesh, however, may make this variety of value for breeding purposes.

For previous introduction see No. 54528.

81570 and 81571.

From Mount Silinda, Melsetter District, Southern Rhodesia, Africa. Seeds presented by Dr. W. L. Thompson. Received September 19, 1929.

81570. BAUHINIA sp. Caesalpiniaceae.

Chianzga. A remarkably durable timber tree especially valued for fence posts; the wood is said to last for 50 years. The tree grows over a wide range of country and conditions at altitudes between 1,000 and 4,000 feet.

81571. CITRUS sp. Rutaceae.

A wild orange.

81572. NYMPHAEA LOTUS L. Nymphaeaceae. **White Egyptian lotus.**

From Dar es Salaam, Tanganyika Territory, Africa. Seeds presented by T. H. Marshall, Department of Agriculture. Received August 19, 1929.

A water lily indigenous to Tanganyika Territory. The outer petals of the flowers are white and the inner stamens yellow.

81573 to 81576. ANANAS SATIVUS Schult. f. Bromeliaceae. **Pineapple.**

From Grenada, British West Indies. Suckers presented by W. O. O'Brien Donovan, Agricultural Officer in Charge, Grenada Department of Agriculture. Received September 18, 1929.

81573. *Chincona.* **81575.** *Red Spanish.*

81574. *Green.* **81576.** *Santa Clara.*

81577. CARYOCAR TUBERCULOSUM (Aubl.) Baill. (*C. tomentosum* Willd.). Caryocaraceae.

From Paramaribo, Dutch Guiana. Seeds presented by S. Sahal, Director, Agricultural Experiment Station. Received September 16, 1929.

A tree, native to tropical America, up to 100 feet high, with digitately three to five foliolate leathery leaves and large white flowers in terminal racemes, followed by large drupaceous fruits having a hard stone and an edible seed. One of the souari nuts.

81578. ASTRAGALUS ARENARIUS L. Fabaceae.

From Stockholm, Sweden. Seeds presented by Dr. Robert E. Fries, Director of the Botanic Garden. Received September 30, 1929.

A herbaceous gray-hairy perennial with a branched, often widespreading rhizome, and a slender prostrate or ascending stem a foot or less high. The leaves are imparipinnate. The small bright purple flowers are in long-stemmed loose clusters. Native to sandy places in eastern Europe.

81579 and 81580.

From Burma. Seeds collected by Capt. F. Kingdon Ward and presented through S. C. Simms, Director, Field Museum of Natural History, Chicago, Ill. Received September 18, 1929.

81579. MUCUNA sp. Fabaceae.

Obtained in the jungle, near Vientrave Laes, in the region of the Mekong River, at an altitude of 1,000 feet, July, 1929.

81579 to 81580—Continued.

81580. ZEA MAYS L. Poaceae. **Corn.**

Maize of Anam.

81581 to 81594.

From Port of Spain, Trinidad, British West Indies. Seeds presented by R. O. Williams, Superintendent and Assistant Botanist, Department of Agriculture. Received September 24, 1929.

81581. ACROCOMIA SCLEROCARPA Mart. Phoenicaceae. **Macauba palm.**

For previous introduction and description see No. 81274.

81582. ARCHONTOPHOENIX ALEXANDRAE (F. Muell.) Wendl. and Drude. Phoenicaceae. **Palm.**

A pinnate-leaved palm 70 to 80 feet high, with leaves several feet long, of lanceolate usually entire leaflets 1 to 2 feet long and whitish beneath. The greenish yellow flowers are borne in a cluster about a foot in length and are followed by small round fruits. Native to Queensland, Australia.

For previous introduction see No. 80171.

81583. ARECA CATECHU L. Phoenicaceae. **Betel palm.**

The betel palm is considered one of the most graceful, bearing at the top of its trunk, 40 to 100 feet high, a large crown of pinnately divided leaves 4 to 6 feet long, the lowest usually pendulous. The ovoid smooth fruits, 1 to 2 inches in diameter, are orange-yellow or scarlet, and furnish the well-known betel nut. It is native to southeastern Asia.

For previous introduction see No. 80172.

81584. CARYOTA MITIS Lour. Phoenicaceae. **Palm.**

A palm, native to the Malay Peninsula, about 20 feet high, with a straight cylindrical spineless ringed trunk 4 inches or more in diameter and bipinnate leaves 4 to 9 feet in length. The purple fruits are about the size of cherries.

For previous introduction see No. 80179.

81585. CHRYSALIDOCARPUS LUTESCENS (Bory) Wendl. Phoenicaceae. **Yellow palm.**

A spineless, stoloniferous palm up to 30 feet high, native to Madagascar. The pinnate leaves are about 5 feet long, and the fruits are violet or almost black.

For previous introduction see No. 78417.

81586. COCCOTHRINAX ARGENTEA (Roem. and Schult.) Sarg. Phoenicaceae. **Silver palm.**

A dwarf palm with fan-shaped leaves which are silvery gray underneath. Native to the West Indies.

81587. GUILIELMA SPECIOSA Mart. Phoenicaceae. **Pupunha.**

The *peach palm* of the Amazon River, which ascends to the warm temperate regions of the Andes. The clustered stems attain a height of 40 feet. The fruit grows in large bunches, has a firm, thick,

81581 to 81594—Continued.

and mealy pericarp, and when cooked has a flavor between that of the potato and the chestnut, but superior to either.

For previous introduction see No. 60367.

81588. HYOPHORBE VERSCHAFFELTI Wendl. Phoenicaceae. **Spindle palm.**

An unarmed palm, native to the island of Mauritius, with a spindle-shaped trunk 25 to 30 feet high, pinnate leaves having a yellow band along the midrib, and orange-colored flowers.

For previous introduction see No. 80182.

81589. LICUALA GRANDIS (Bull) Wendl. Phoenicaceae. **Palm.**

A dwarf palm with the stem clothed with the dead leaf sheaths, erect-spreading fan-shaped leaves having closely plicate segments which are two lobed at the end. Native to the island of New Pommern, Bismarck Archipelago.

81590. LICUALA SPINOSA Thunb. Phoenicaceae. **Palm.**

A dwarf fan-leaved palm, native to the West Indies, 10 to 12 feet high, with roundish leaves 3 feet or more in diameter and 3-angled petioles armed with brownish, hooked spines. It requires abundant heat and moisture.

For previous introduction see No. 66226.

81591. LIVISTONA ALTISSIMA Zoll. Phoenicaceae. **Palm.**

A graceful palm, up to 80 feet high, with fan-shaped leaves. The hardwood is valued by the natives for construction work. It is native to the East Indies.

For previous introduction see No. 72598.

81592. MARTINEZIA CORALLINA Mart. Phoenicaceae. **Palm.**

A spiny palm with pinnate leaves about 9 feet long and clusters, 2 to 3 feet long, of small white flowers followed by bright-red fruits nearly an inch in diameter. The pale-brown seeds are used for necklaces. Native to the island of Martinique.

For previous introduction see No. 80188.

81593. PTYCHORAPHIS AUGUSTA (Kurz) Beccari. Phoenicaceae. **Palm.**

A pinnate-leaved palm growing to a height of 100 feet, with a smooth slender trunk and bright-green leaves 6 to 10 feet long, made up of linear segments 1 to 2 feet long. The red, elliptical-oblong fruits are borne in clusters 2 to 3 feet long. Native to the Nicobar Islands.

81594. RHYTICOCOS AMARA (Jacq.) Beccari (*Cocos amara* Jacq.) Phoenicaceae. **Palm.**

A tall, feather-leaved palm, 50 to 100 feet high, with a ringed trunk and bearing a crown of large pinnate leaves resembling those of the coconut. It is native to the island of Martinique.

For previous introduction see No. 80191.

81595. PANDANUS FURCATUS Roxb. Pandanaceae. **Screwpine.**

From Darjiling, India. Seeds presented by C. C. Calder, Lloyd Botanic Garden. Received September 26, 1929.

One of the most ornamental of the screwpines, which attains a height of about 15 feet, with dark-green spiny leaves 9 or more feet long, gracefully arching and somewhat spirally arranged. The flowers are sweetly scented. Native to the East Indies.

For previous introduction see No. 73249.

81596. SICANA sp. Cucurbitaceae.

From Moca, Dominican Republic. Seeds presented by Dr. R. Ciferri, Director de la Estación Nacional Agronómica y Colegio de Agricultura. Received September 20, 1929.

A woody vine producing edible cylindrical fruits which are remarkable for their strong and persistent applelike flavor.

81597. SCHINOPSIS LORENTZII (Griseb.) Engl. Anacardiaceae. **Quebracho.**

From Tucuman, Argentina. Seeds presented by Dr. William E. Gross, Director, Estación Experimental Agrícola. Received September 26, 1929.

A deciduous timber tree, with leathery, compound sumachlike leaves and branched clusters of small flowers. The deep-red wood is very hard and durable and yields quebracho, an important tannin of commerce. Native to the drier western plains of Argentina.

For previous introduction see No. 68980.

81598 to 81601.

From Oran, Algeria, Africa. Seeds presented by Prof. A. Faure. Received September 23, 1929.

81598. CELSIA BATTANDIERI Murbeck. Scrophulariaceae.

Collected on rocky slopes at Santa Cruz, at an altitude of about 1,200 feet, January 9, 1929. A mulleinlike biennial or annual, 1 or 2 feet high, native to western Algeria. The stem is stiffly erect, and the oblong-lanceolate or ovate dentate lobed leaves are petiolate on the lower part of the stem but sessile above. The attractive orange-yellow flowers, 1 to 2 inches across, are in an elongated raceme.

81599. CELSIA FAUREI Murbeck. Scrophulariaceae.

Collected on railway embankments at Oued Imbert, at an altitude of about 1,500 feet, April 8, 1929. An erect biennial up to 6 feet high, native to Algeria. The ovate-lanceolate leaves are coarsely dentate or lobed, sessile above and petiolate below. The showy yellow flowers, about 2 inches across, are in a many-flowered lax raceme.

81600. HEDYSARUM PALLIDUM Desf. Fabaceae.

Collected in gravelly meadows in Santa Cruz, at an altitude of about 900 feet, May 26, 1929. A decumbent perennial legume, native to northern Africa, with compound pubescent leaves, clusters of purple-streaked white flowers, and spiny articulated pods. It has been recommended for green manure in olive orchards.

For previous introduction see No. 77453.

81598 to 81601—Continued.

81601. PSORALEA BITUMINOSA L. Fabaceae. **Scurf-pea.**

Collected on the edges of fields in Oued Imbert, at an altitude of about 1,500 feet, April 8, 1929. A herbaceous perennial, native to the Mediterranean region, with trifoliolate leaves and small bluish flowers in loose heads. Of value for green manure.

For previous introduction see No. 77627.

81602 to 81604. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

From Merredin, Western Australia. Seeds presented by the Merredin Experiment Farm, through J. A. Clark, Bureau of Plant Industry. Received September 27, 1929.

81602. P. 1437. *Carrabin.*

81603. P. 1440. *Merredin.*

81604. P. 1769. *Noongaar.*

81605 to 81613. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

From Palestine. Seeds presented by A. Grasovsky, Subinspector of Agriculture and Forests, Southern Circle, Jerusalem. Received September 26, 1929.

81605. No. 15. *Franji.* From Artas.

81606. No. 3. *Mawi.* From Jaffa.

81607. No. 1. *Klabi Abayd.* From Acre.

81608. No. 4. *Late Klabi.* From Motza.

81609. No. 6. *Lozi.* From Jerusalem.

81610. No. 8. *Marawi.* From Nazareth.

81611. No. 2. *Wardi.* From Artas.

81612. No. 7–A. *Mustekawi.* From Artas.

81613. No. 7–B. *Mustekawi.* From Artas.

81614. DRACONTOMELON EDULE (Blanco) Skeels. Anacardiaceae.

From Sorsogon, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received July 31, 1929.

Alauihau. A fruit resembling a greenish brown-yellow flat plum with scant but pleasantly subacid pulp, recalling the flavor of *Spondias cytherea.* It is common in the market at Sorsogon and is gathered from wild trees in the forest, in a region with abundant rainfall equally distributed throughout the year. The tree is 50 feet

81614—Continued.

or less high, with a rounded crown. The handsome dark-green pinnate leaves consist of 8 to 12 pairs of hairy pointed leaflets.

For previous introduction see No. 32293.

81615. JUGLANS JAMAICENSIS C. DC. Juglandaceae. **Walnut.**

From Moca, Dominican Republic. Seeds presented by Dr. R. Ciferri, Director de la Estación Nacional Agronómica y Colegio de Agricultura. Received September 7, 1929.

A walnut, native to Jamaica, with alternate compound leaves made up of nine pairs of lanceolate, serrate, shining green leaflets, paler beneath. The thick-shelled nuts are globose and attenuate.

81616 and 81617. CITRUS GRANDIS (L.) Osbeck (*C. decumana* Murr.). Rutaceae. **Grapefruit.**

From Pasar Minggoe, Java. Budded plants presented by the Tuinbouwkundig Ambtenaar. Received September 5, 1929.

81616. No. 1. *Djeroek pandanwangi.* The fruits have dark-red, very sweet flesh.

81617. No. 2. *Djeroek delima.* The fruits have red flesh which is very juicy but a little sour.

81618. VACCINIUM CANADENSE Kalm. Vacciniaceae. **Canada blueberry.**

From Hudson Bay Junction, Saskatchewan, Canada. Seeds collected by Knowles A. Ryerson, Bureau of Plant Industry. Received September 30, 1929.

No. 147. A variety growing on a sandy pine ridge 30 to 40 feet above the river and at least a mile away from it. The plants had had no rain for quite a while and yet they were producing very good-sized fruits; in fact, better than any found at any place farther north.

81619. CITRUS SINENSIS (L.) Osbeck. Rutaceae. **Orange.**

From the Loyalty Islands. Seeds presented by Prof. I. Franc, Noumea, New Caledonia, through Alfred Rehder, Curator of the Herbarium of the Arnold Arboretum, Jamaica Plain, Mass., and W. T. Swingle, Bureau of Plant Industry. Received September 11, 1929.

The inhabitants of the Loyalty Islands have raised trees since time immemorial and have no knowledge of grafting. Chance seedlings always produce, with some care, succulent fruits 3 to 4 inches in diameter. The variety is believed to be absolutely fixed, and comes true from seed.

Introductory statement	1
Inventory	3
Index of common and scientific names	45

INTRODUCTORY STATEMENT

The plant material included in this inventory (Nos. 81620 to 82599) for the period from October 1, 1929, to December 31, 1929, represents very largely the collections made in the Orient by W. J. Morse and P. H. Dorsett. Since forage crops in general and soybeans in particular were the aims of this expedition, it is not surprising that over 250 samples are represented. They include types and strains ranging from those bought from farmers' fields to specialized samples representing local selection work. It is interesting to observe also among the notes given for Nos. 81762 to 81786 the extent of variations already observed and isolated at the several experiment stations and to note that their collections include strains originally obtained outside of Japan. Red clovers also are well represented with samples collected in the wild in many parts of Japan, three samples coming from the Koton Experiment Station at Hokushu from seed originally obtained from Finland and one from Sweden; also four collections were obtained from Chosen.

A few alfalfas are included, some collections being from native sources, while others are purchases, but all resulting from the work of H. L. Westover, of the Division of Forage Crops and Diseases.

Adsuki beans are also included in several numbers as a result of the collecting work of Messrs. Dorsett and Morse. These show almost as much variation in character and in origin as do the soybeans. Most of these were obtained in Chosen, together with samples of mung beans and rice beans from the native markets.

Lespedezas are included also in the general collections from Dorsett and Morse, all being received as unidentified species.

In addition to the material sent in by the explorers already mentioned, this inventory includes material sent in by Messers. Ryerson, Alderman, and Leslie from Canada, by R. K. Beattie from Japan, and by W. E. Whitehouse from Persia, as well as material received in exchange from foreign collaborators and that procured by purchase.

The botanical determinations of these introductions have been made and the nomenclature determined by H. C. Skeels, who has had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

DIVISION OF FOREIGN PLANT INTRODUCTION,
Washington, D. C., February 18, 1931.

49237—31——1

INVENTORY[1]

81620. PTEROCARPUS SERICEUS Benth. Fabaceae.

From Salisbury, Southern Rhodesia, Africa. Seeds presented by the Forest Officer, Department of Agriculture, Salisbury, at the request of C. E. Legat, Chief Conservator of Forests, Pretoria. Received October 22, 1929.

An unarmed evergreen tree, native to southern Africa, with alternate, unequally pinnate leaves, shining silky beneath or on both sides, and oval-roundish pods about an inch and a half long.

For previous introduction see No. 50179.

81621 and 81622. VITIS VINIFERA L. Vitaceae. **European grape.**

From Bulgaria. Seeds obtained through George L. Husmann, Bureau of Plant Industry. Received October 23, 1929.

81621. A red variety.

81622. A green variety.

81623. LILIUM sp. Liliaceae. **Lily.**

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received October 26, 1929.

No. 1378. Obtained from plants growing in the Ainu village of Shiraoi, southern Hokushu, September 29, 1929. An edible species.

81624 to 81633.

From Quetta, India. Seeds purchased from the manager, Quetta Fruit Agency. Received October 24, 1929.

81624 to 81627. CITRULLUS VULGARIS Schrad. Cucurbitaceae. **Watermelon.**

81624. A black-striped variety.

81625. *Mashedi quality.*

81626. *Pishin.*

81627. *Quetta.*

81624 to 81633—Continued.

81628 and 81629. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

81628. *Mastung.*

81629. *Sarda.*

81630 and 81631. PISTACIA VERA L. Anacardiaceae. **Pistache.**

81630. [No data.]

81631. [No data.]

81632 and 81633. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

81632. [No data.]

81633. [No data.]

81634. ACONITUM YEZOENSE Nakai. Ranunculaceae. **Monkshood.**

From Sapporo, Hokushu, Japan. Roots collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received October 1, 1929.

No. 1193. Botanical Garden, Hokkaido Imperial University, September 24, 1929. A hardy herbaceous perennial native to northern Japan, which becomes about 5 feet high. The leaves are palmately 3-parted to 5-parted, and the large, deep purplish-blue flowers are borne in large clusters.

81635 and 81636. PITHECOLLOBIUM spp. Mimosaceae.

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director, Botanic Gardens. Received December 16, 1929.

81635. PITHECOLLOBIUM CLYPEARIA (Jack) Benth.

A low tropical ornamental tree with fine-cut foliage and small whitish flowers. Native to the East Indies.

For previous introduction see No. 73254.

81636. PITHECOLLOBIUM HYMENEAEFOLIUM (Humb. and Bonpl.) Benth.

[1] It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this division, herbarium specimens of leaves and flowers should be sent in, so that definite identification can be made.

81635 and 81636—Continued.

An ornamental leguminous tree with pinnate foliage. Native to tropical America.

For previous introduction see No. 73255.

81637. VITIS VINIFERA L. Vitaceae. **European grape.**

From Weihsien, Shantung, China. Cuttings presented by J. Ashley Fitch, American Presbyterian Mission. Received December 17, 1929.

A white or green grape a little smaller than the usual cultivated variety and rarely containing seeds. It is very good for cooking and canning, and it should make a good table variety for those who like an acid grape. It ripens about the first part of August in Weihsien. The canned fruit has a noticeable deposit of cream-of-tartar crystals when taken out of the cans. This variety is known as *Dzang* or *Dzang pu tao* in Chinese.

81638. CHRYSOPHYLLUM FULVUM S. Moore. Sapotaceae.

From Mount Silinda, Melsetter District, Southern Rhodesia, Africa. Seeds presented by Dr. W. L. Thompson. Received September 21, 1929.

A large tropical tree up to 100 feet high, with leathery, oblong-lanceolate leaves 3 to 6 inches long, small white axillary flowers, and brownish fruits which contain a milky latex. Native to Gazaland, Africa.

81639 to 81660.

From Hokushu, Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received October 21, 1929.

81639. ACANTHOPANAX sp. Araliaceae.

No. 1094. Obtained in a thicket along the road near Nokkenshi, September 23, 1929.

81640. ACER sp. Aceraceae. **Maple.**

No. 1071. Obtained along a river bank near Obihiro, September 21, 1929.

81641. ACONITUM YEZOENSE Nakai. Ranunculaceae. **Monkshood.**

No. 1367. From plants growing along the roadside near Nikoro, September 24, 1929.

For previous introduction and description see No. 81634.

81642. EUONYMUS ALATUS (Thunb.) Rupr. Celastraceae. **Winged euonymus.**

No. 1049. Obtained from a shrub in the school grounds at Obihiro, September 18, 1929. A spreading shrub, 4 or 5 feet high, with sharply toothed elliptic leaves about 2 inches long, small clusters of yellowish flowers, and small 2-seeded fruits.

For previous introduction see No. 65926.

81643. FALCATA JAPONICA Oliver. Fabaceae.

No. 1055. A leguminous vine growing along the sides of a bank near the river in the vicinity of Obihiro, September 20, 1929.

For previous introduction see No. 65278.

81639 to 81660—Continued.

81644. LESPEDEZA sp. Fabaceae. **Bushclover.**

No. 1079. Obtained from plants along a road near the table-land of Tokachi, Taisho Mura, September 22, 1929. The plants are 4 to 6 feet high and very abundant.

81645. MEIBOMIA JAPONICA (Miquel) Kuntze. Fabaceae.

No. 1372. Obtained along a path in the woods near Nokkenshi, September 23, 1929.

81646. MENTHA ARVENSIS PIPERASCENS Malinv. Menthaceae. **Japanese mint.**

No. 1370. Obtained from the Kitami Branch Experiment Station, Nokkenshi, September 24, 1929. *Kitami akamaru.* This variety is grown most generally in the district of Kitami where peppermint is extensively grown. A cultivated variety with large leaves and yielding more oil than the ordinary mint.

For previous introduction see No. 75137.

81647 and 81648. PAEONIA spp. Ranunculaceae. **Peony.**

No. 1081. From wild plants at the edge of the woods near the table-land of Tokachi, Experiment Station, Taisho Mura, September 22, 1929.

81647. PAEONIA sp.

Seeds.

81648. PAEONIA sp.

Roots.

81649. PHELLODENDRON sp. Rutaceae. **Corktree.**

No. 1090. Obtained along the road near Nokkenshi, September 23, 1929.

81650. RHAMNUS JAPONICA Maxim, Rhamnaceae. **Buckthorn.**

No. 1069. Obtained along the river bank near Obihiro, September 21, 1929. A shrub, native to Japan, up to 9 feet high, with glossy pale-green leaves 1 to 2 inches long, an abundance of greenish-brown flowers in dense clusters at the ends of the short branches, and small blackish-purple berries.

For previous introduction see No. 75689.

81651. RUBUS sp. Rosaceae.

No. 1333. Obtained in the foothills near Odomari, Sakhalin Island, September 12, 1929. A species with very spiny stems and trifoliolate leaves which are silvery beneath. This resembles the true raspberry.

81652 and 81653. SCHIZANDRA CHINENSIS (Turcz.) Baill. Magnoliaceae.

A woody vine, native to northeastern China, with shining dark-green oval leaves and clusters of coral-colored berries.

For previous introduction see No. 76188.

81652. No. 1066. From vines along the river bank near Obihiro, September 21, 1929.

81653. No. 1093. From a vine in a small park in the suburbs of Nokkenshi, September 23, 1929.

81654. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

81639 to 81660—Continued.

No. 1072. From a farmer's field near Obihiro, September 21, 1929. A very early, prolific variety with greenish-yellow seeds and tawny hairs.

81655 and 81656. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

81655. No. 1052. Obtained along the roadside where red clover was growing very abundantly, near Obihiro, September 19, 1929.

81656. No. 1077. From plants in waste places near the table-land of Tokachi, Experiment Station, near Taisho Mura, September 22, 1929.

81657. VACCINIUM sp. Vacciniaceae.

No. 1341. Obtained in Odomari, Sakhalin Island, September 12, 1929. A species about 8 inches high, bearing large clusters of small, bright-red berries with white pulp; they resemble cranberries in flavor. The berries are candied, made into jam, sweet paste, or brandy, and are also made into a sauce much like cranberry sauce.

81658. VICIA CRACCA L. Fabaceae. **Cow vetch.**

No. 1056. From plants growing along the river bank near Obihiro, September 20, 1929.

81659. VICIA sp. Fabaceae. **Vetch.**

No. 1303. Obtained along a roadside near Koetoi, September 10, 1929.

81660. VITIS sp. Vitaceae. **Grape.**

No. 1357. Obtained in Asahigama, September 14, 1929. A wild species with good-sized bunches of large, deep-purple fruits containing rather large seeds.

81661. RHODODENDRON sp. Ericaceae. **Azalea.**

From Japan. Seeds obtained by R. K. Beattie, Bureau of Plant Industry. Received October 28, 1929.

No. 852. A red-flowered species collected in the wild at Saka Ue Mura, Kuga Gun, Yamaguchi Ken, by S. Hayashi, September 25, 1929.

81662. RUBUS sp. Rosaceae. **Jamberry.**

From Dublin, Ireland. Plants presented by W. S. Gosset, Dublin, through H. D. Locklin, Western Washington Experiment Station, Puyallup, Wash. Received October 30, 1929.

The originator, W. S. Gosset, crossed the Logan with the Yellow Antwerp raspberry and selected this from among the seedlings. The variety has the Logan habit of growth and propagates from the tips, and the whole growth is only about one-third to one-half that of the Logan. The fruit is also smaller, and is said to be sweeter and especially fine when not cooked. After cooking it is very much like the Logan.

81663 and 81664. MANGIFERA INDICA L. Anacardiaceae. **Mango.**

From Manila, Philippine Islands. Plants presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received October 30, 1929.

81663. *Señora* on *Pahutan.*

81664. *Señora* on *Pico.*

81665 to 81669.

From Japan and China. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received in October, 1929.

81665. LILIUM CORDIFOLIUM Thunb. Liliaceae. **Lily.**

No. 1420. From the Botanic Garden, Hokushu Imperial University, Sapporo, Japan, October 2, 1929. A lily, native to Japan, 3 to 4 feet high, with pendulous leaves 12 to 18 inches long and wide and a raceme of 4 to 10 fragrant white flowers often 6 inches long. These seeds were received as *Lilium glehni*, which is said to differ very slightly from typical *L. cordifolium*.

For previous introduction see No. 75677.

81666. LILIUM DAURICUM Ker. Liliaceae. **Candlestick lily.**

No. 1413. From the Botanic Garden, Hokushu Imperial University, Sapporo, Japan, October 2, 1929. A plant about 3 feet high, with a smooth or slightly furrowed stem which is green or tinged with brown or purple. The 20 to 50 horizontal leaves are 3 to 5 inches long, and the flowers, one to five in a cluster and 3 to 5 inches across, are orange red, slightly spotted with purplish black and tinged with yellow in the center; the anthers are red.

For previous introduction see No. 78605.

81667. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

No. 1374. Obtained from Lukashik & Sons, Wuchang Road, Tientsin, China, September 27, 1929. An early yellow variety known as *Selection I. V. V. Croushoul*, said to ripen in the vicinity of Harbin within 90 to 100 days.

81668. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

No. 1377. Obtained along a roadside near the seacoast in the vicinity of the Ainu village of Shiraoi, southern Hokushu, Japan, September 29, 1929.

81669. (Undetermined.)

No. 1375. From plants along the roadside near Koetoi, Hokushu, Japan, September 10, 1929.

81670. UVARIA sp. Annonaceae.

From Isabela, Luzon, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received October 26, 1929.

A small ornamental tree with a dark-green, dense crown, and red, edible fruits about an inch long.

81671. ANIGOZANTHOS MANGLESII D. Don. Amaryllidaceae.

From Perth, Western Australia. Seeds presented by Miss Helen Ogden. Received October 29, 1929.

An amaryllidaceous plant native to the Swan River country of southwestern Australia. It bears scorpoid racemes, nearly a foot long, on stout, woolly, bright-red stems. The lustrous green, tomentose flowers, 3 inches long, are tubular in bud, but split nearly to the base on opening, with the tips recurved, and bear the yellow stamens on the curve.

For previous introduction see No. 51344.

81672. TERMINALIA BROWNII Fresen. Combretaceae.

From Giza, Egypt. Seeds presented by Thomas W. Brown, Director, Horticultural Section, Ministry of Agriculture. Received October 25, 1929.

A small tropical tree with ash-colored bark and broadly lanceolate leaves, 3 to 6 inches long, in large tufts at the tips of the branches. The inconspicuous greenish flowers are in long lax spikes and are followed by flat-winged purplish-red fruits 2 to 3 inches long. Native to Ethiopia.

81673 and 81674.

From Bogota, Colombia. Roots presented by Hernando Villa. Received October 30, 1929.

81673. OXALIS TUBEROSA Molina. Oxalidaceae.

Ibia. A plant, native to South America, related to the woodsorrel of the United States. It is grown in the Andes for its edible tubers.

For previous introduction see No. 74701.

81674. TROPAEOLUM TUBEROSUM Ruiz and Pav. Tropaeolaceae. **Nasturtium.**

Cubia. A tuberous-rooted herbaceous climber, with red and yellow flowers, native to the highlands of northern South America, where the tubers are boiled and eaten as a vegetable. The plant is said to be able to withstand a slight frost.

For previous introduction see No. 69896.

81675. CASTANOPSIS ARGYROPHYLLA King. Fagaceae. **Evergreen chinquapin.**

From Dehra Dun, United Provinces, India. Seeds presented by R. N. Parker, Forest Botanist, Forest Research Institute and College. Received November 1, 1929.

A tropical evergreen tree, 50 to 60 feet high, with thinly coriaceous lanceolate leaves, 4 to 6 inches long, green above and silvery beneath. The one to three rusty tomentose nuts are in a thin-walled shell which has awl-shaped hooked spines. Native to India.

81676 to 81678. FICUS CARICA L. Moraceae. **Common fig.**

From West Worthing, England. Cuttings obtained from the Tarring Fig Garden, through Dr. S. H. Cameron, University of California, Berkeley. Received October 24, 1929.

81676. *Brown Turkey.*

81677. *Honey.*

81678. *Madagascar.*

81679. ALLIUM CEPA L. Liliaceae. **Onion.**

From Valencia, Spain. Seeds purchased through Clement S. Edwards, American consul. Received October 31, 1929.

Grano.

81680. CITRUS GRANDIS (L.) Osbeck (*C. decumana* Murr.). Rutaceae. **Grapefruit.**

81680—Continued.

From Honolulu, Hawaii. Scions presented by W. T. Pope, Hawaii Agricultural Experiment Station, through W. T. Swingle, Bureau of Plant Industry. Received November 1, 1929.

Victoria shaddock.

81681 to 81685. MANGIFERA INDICA L. Anacardiaceae. **Mango.**

From Pasar Minggoe, Java. Plants presented by the Tuinbouwkundig Ambtenaar. Received August 20, 1929. Numbered in October, 1929.

81681. No. 1. *Baroengboen,* grafted on *Madoe.* An everbearing mango but of poor quality.

81682. No. 2. *Kopjor.* A very fibrous bright yellow seedling mango which is used as a stock in eastern Java where they have severe droughts and the soil is alkaline and not suited to the growth of ordinary mangos.

81683. No. 4. *Golek,* grafted on *Madoe.* A large, thin, very long, golden yellow, very sweet and juicy mango with few fibers. It is a good bearer on clay soils with stiff subsoil, but not quite as good a bearer as the *Saigon.*

81684 and 81685. *Aroemanis.* In Java this is a medium-sized mango of bluish-green color. The fruit hangs on peduncles, is of fine flavor, has no fiber, is not injured by the winds, and is an excellent shipper. It is considered the best mango in Java.

81684. *Aroemanis* grafted on *Madoe.*

81685. *Aroemanis* grafted on *Mangifera odorata.*

81686. DIOSPYROS sp. Diospyraceae. **Persimmon.**

From Denison, Tex. Plants purchased from the Munson Nurseries. Received November 12, 1929.

Kawakami. A hybrid of the Josephine (*Diospyros virginiana*) with the Yemon Japanese (*D. kaki*). The shape of the fruit is like that of the native species, but is much larger. It has much of the native quality and is an excellent persimmon.

81687 to 81689.

From Honolulu, Hawaii. Seeds presented by H. L. Lyon, in Charge of the Department of Botany and Forestry, Experiment Station, Hawaiian Sugar Planters' Association. Received November 5, 1929.

81687. ARECASTRUM ROMANZOFFIANUM (Cham.) Becc. (*Cocos romanzoffiana* Cham.). Phoenicaceae. **Palm.**

A palm, native to Brazil, with an unarmed trunk about 30 feet high and a foot in diameter, bearing a crown of plumelike pinnate leaves 12 to 15 feet long. The fruit is a pale orange drupe about the size of a large acorn, inclosing a bony seed which has three eyes near the base.

For previous introduction see No. 44534.

81688. FLACOURTIA JANGOMAS (Lour.) Gmel. (*F. cataphracta* Roxb.). Flacourtiaceae. **Paniala.**

A small spiny tropical tree of compact habit, native to India. It bears small purplish subacid fruits about an inch in diameter, which may be made into an excellent jelly.

81687 to 81689—Continued.

For previous introduction see No. 48284.

81689. PINANGA KUHLII Blume. Phoenicaceae. **Palm.**

A stout, rapid-growing palm, native to the lower altitudes of western Java, becoming 16 to 25 feet high, with annulate stems 2 inches in diameter, reddish when young, and beautiful terminal fronds with pinnate blades 4 feet long and half as wide. This is one of the hardiest species of Pinanga known.

For previous introduction see No. 51735.

81690 and 81691. MYRCIARIA FLORIBUNDA (West) Berg (*Eugenia floribunda* West). Myrtaceae. **Guava berry.**

From St. Croix, Virgin Islands of the United States. Seeds presented by J. B. Thompson, Director, Agricultural Experiment Station. Received November 5, 1929.

A small slender tropical tree with ovate-lanceolate leaves 2 to 3 inches long, and axillary clusters of small white flowers followed by globose edible fruits about a quarter of an inch in diameter. The fruits make a delicious preserve with an aromatic flavor. The tree is native to the West Indies.

For previous introduction see No. 41057.

81690. A variety bearing golden-yellow fruits.

81691. A variety bearing dark-red fruits.

81692 to 81723.

From Canada. Seeds and plants collected by Knowles A. Ryerson, Bureau of Plant Industry, W. A. Alderman, Minnesota Agricultural Experiment Station, and W. R. Leslie, Superintendent of the Experiment Station, Morden, Manitoba. Received September 30, 1929. Numbered in November, 1929.

81692 to 81702. RIBES spp. Grossulariaceae.

81692. RIBES TRISTE Pall. **Swamp red currant.**

No. 19–A. From Mari Lake, Manitoba.

For previous introduction see No. 40487.

81693 to 81699. RIBES OXYACANTHOIDES L.

For previous introduction see No. 40471.

81693. No. 29. From Mari Lake, Manitoba.

81694. No. 59. From an island at the west end of Reed Lake, Manitoba. A variety with large, purple fruits.

81695. No. 68. From an island in Reed Lake, Manitoba. A variety bearing very large fruits about half an inch in diameter.

81696. No. 69. From an island in Reed Lake, Manitoba. A very nearly spineless variety bearing red fruits.

81692 to 81723—Continued.

81697. No. 71. From an island in Reed Lake, Manitoba. A variety with dark red fruits.

81698. No. 72. From an island west of Wyckstand Island, Reed Lake, Manitoba. A variety with purplish-red, very large fruits up to half an inch in diameter.

81699. No. 75. From an island west of Wyckstand Island, Reed Lake, Manitoba. A large-fruited type.

81700 to 81702. RIBES GLANDULOSUM Grauer (*R. prostratum* L'Her.). **Fetid currant.**

81700. No. 41. Plants.

81701. No. 30. From Cold Lake, Manitoba.

81702. No. 70. A large variety.

81703. RUBUS TRIFLORUS Richards. Rosaceae. **Dwarf red blackberry.**

No. 19. From Mari Lake, Manitoba.

81704 to 81710. RUBUS IDAEUS STRIGOSUS (Michx.) Maxim. Rosaceae. **Common red raspberry.**

For previous introduction see No. 68823.

81704. No. 28. From Cold Lake, Manitoba. A fairly large form.

81705. No. 60. From an island at the west end of Reed Lake, Manitoba. A large-fruited form.

81706. No. 61. From an island at the west end of Reed Lake, Manitoba. A large-fruited form.

81707. No. 62. From an island west of Wyckstand Island, Reed Lake, Manitoba.

81708. No. 74. From Wyckstand Island, Reed Lake, Manitoba.

81709. No. 97. From a dry rocky slope, Little Quebec, Herb Lake. A large-fruited form of dwarf plants 12 to 14 inches high.

81710. From Herb Lake, Manitoba. A large-fruited form.

81711. VITIS VULPINA L. Vitaceae. **Riverbank grape.**

No. 178. Southeastern ridge of Riding Mountains, about 20 miles southwest of Dauphin, Manitoba. An early-fruiting form, maturing between two and four weeks earlier than the usual season.

81712. SORBUS AUCUPARIA EDULIS Dieck. Malaceae. **Edible mountain-ash.**

No. 185. From Blodgen's Nursery, Dauphin, Manitoba.

81713. AMELANCHIER ALNIFOLIA Nutt. Malaceae. **Saskatoon.**

No. 24. From a small lake between Barrier Lake and Cold Lake, Manitoba. Bushes 6 to 8 feet high producing an abundance of large berries.

81714. CRATAEGUS COCCINEA L. Malaceae. **Thicket hawthorn.**

No. 152. From Red Deer River, Saskatchewan, about 5 miles west of Hudson Bay Junction.

81715. FRAGARIA VESCA L. Rosaceae. **Alpine strawberry.**

No. 58. From Reed Lake, Manitoba.

81692 to 81723—Continued.

81716. FRAGARIA CANADENSIS Michx. Rosaceae. **Northern wild strawberry.**

No. 110. From Herb Lake, Manitoba.

81717. LEPARGYRAEA CANADENSIS (L.) Greene. Elaeagnaceae. **Russet buffaloberry.**

No. 10. From The Pas, Manitoba.

81718 to 81723. PRUNUS spp. Amygdalaceae.

81718 to 81720. PRUNUS PENNSYLVANICA L. **Pin cherry.**

81718. No. 66. From Bare Rock Falls, Manitoba.

81719. From Herb Lake, Manitoba.

81720. No. 44. From Second Cranberry Lake, Manitoba.

81721. PRUNUS PUMILA L. **Sand cherry.**

No. 146. From Red Deer River, Saskatchewan, about 5 miles from Hudson Bay Junction.

81722 and 81723. PRUNUS VIRGINIANA L. **Common chokecherry.**

From Blodgen's Nursery, Dauphin, Manitoba. Practically nonastringent types.

81722. No. 169. Chokeless No. 1.

81723. No. 170. Chokeless No. 2.

81724. PANDANUS PARVUS Ridley. Pandanaceae. **Screwpine.**

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director, Botanic Gardens. Received November 12, 1929.

A low slender screwpine, about 3 feet high, with linear-oblong, thin leaves, and very small spines. Native to the East Indies.

For previous introduction see No. 72605.

81725. ARUNDINARIA HINDSII Munro. Poaceae. **Ramrod bamboo.**

From Jacksonville, Fla. Plants and rhizomes presented by Mrs. J. D. Holmes, Jacksonville, through J. H. Wells, Baldwin, Fla. Received November 15, 1929.

An erect bamboo usually reaching 6 to 12 feet, but sometimes having canes about 18 feet high. The dark olive-green stems are about an inch thick, the branches are in dense clusters, and the leaves, mostly erect, are 8 to 10 inches long and less than an inch broad. Native to China and Japan.

81726 to 81760.

From Japan. Seeds, plants, and cuttings collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received in October and November, 1929.

81726. ACER DIABOLICUM Blume. Aceraceae. **Devil maple.**

No. 1421. A tree up to 30 feet high with 5-lobed leaves 4 to 8 inches across, the broadly ovate lobes being coarsely and remotely dentate. The racemes of yellow flowers are followed by winged fruits with bristly nutlets. It is native to Japan and closely resembles *A. franchetii* of central China.

For previous introduction see No. 63331.

81726 to 81760—Continued.

81727. ASTRAGALUS SINICUS L. Fabaceae. **Milkvetch.**

No. 1542. From the Gifu Agricultural Experiment Station, October 17, 1929. A red-flowered variety quite common in the farming area about Tokyo, where it is said to be used for forage and green manure. It is a winter crop, being planted early in the fall.

For previous introduction see No. 80533.

81728 to 81730. AVENA SATIVA L. Poaceae. **Oats.**

From the Hokushu Experiment Station, Kotoni, October 7, 1929.

81728. No. 1532. *Shiro kataho* (white one side of spike).

81729. No. 1533. *Victory No. 1.*

81730. No. 1534. *Belgium No. 12.*

81731. CRATAEGUS SANGUINEA Pall. Malaceae. **Hawthorn.**

No. 1154. From the Sapporo Botanic Garden, Sapporo, Hokushu, October 7, 1929. A shrub or small tree up to 20 feet high, with spreading branches and short thorns. The broadly ovate, serrate leaves are 2 to 3 inches long, and the corymbs of rather large white flowers with purple anthers are followed by bright-red fruits half an inch across. Native to eastern Siberia.

For previous introduction see No. 68414.

81732. DIERVILLA sp. Caprifoliaceae.

No. 1478. Growing wild in a field along the road near Kawazoe, October 12, 1929.

81733 and 81734. EUONYMUS spp. Celastraceae.

81733. EUONYMUS sp.

No. 1180. From trees along the trail up Moiwayama, near Sapporo, Hokushu, August 28, 1929.

81734. EUONYMUS sp.

No. 1454. From Chiaki Park, Akita, October 11, 1929. An ornamental shrub having a spread of about 8 feet and about 8 feet high.

81735. CELASTRUS ARTICULATUS Thunb. **Bittersweet.**

No. 1503. From Sapporo, Hokushu, October 3, 1929. A leafless vine with small clusters of fruit. The husk is parted and of a golden-yellow color, opening out and showing a 3-parted deep orange-red fruit.

81736. EUONYMUS sp.

No. 1504. From Sapporo, Hokushu, October 3, 1929. A beautiful shrub, densely covered wtih leaves which vary in color from green to deep red. The husk of the single orange-red fruit is red.

81737 and 81738. FAGOPYRUM ESCULENTUM Moench. Polygonaceae. **Buckwheat.**

From the Hokushu Experiment Station, Kotoni, October 7, 1929.

81737. No. 1535. *Zairai shu* (original variety).

81738. No. 1536. *Botan saba.*

81726 to 81760—Continued.

81739. FRAGARIA sp. Rosaceae. Strawberry.

No. 1506. Plants obtained October 7, 1929. Developed by the main Hokushu Experiment Station at the Kotoni Experiment Station. *Kotoni.* A variety considered one of the best at the station. The fruits are very large and dark red.

81740. HORDEUM DISTICHON PALMELLA Harlan. Poaceae. Two-rowed barley.

No. 1531. From the Hokushu Experiment Station, Kotoni, October 7, 1929.

81741. HORDEUM VULGARE PALLIDUM Seringe. Poaceae. Six-rowed barley.

No. 1530. From the Hokushu Experiment Station, Kotoni, October 7, 1929. *Sapporo Rokkaku* (Sapporo six row).

81742. LESPEDEZA STRIATA (Thunb.) Hook. and Arn. Fabaceae.

No. 1476. Along the road near Kawazoe, October 12, 1929.

81743 and 81744. LINUM USITATISSIMUM L. Linaceae. Flax.

From the Hokushu Experiment Station, Kotoni, October 7, 1929. Varieties developed by the station.

81743. No. 1537. *Sagino.*

81744. No. 1538. *Pelno No. 1.*

81745. MEIBOMIA JAPONICA (Miquel) Kuntze (*Desmodium podocarpum* DC.). Fabaceae.

No. 1493. Along the trail on Mowiayama, near Sapporo, Hokushu, October 7, 1929. A perennial, shrubby at the base, with herbaceous stems 2 to 3 feet high, trifoliolate leaves with membranous leaflets 2 to 3 inches long, and axillary and terminal racemes, often a foot long, of reddish pea-shaped flowers. Native to China and Japan.

For previous introduction see No. 60448.

81746 to 81748. ORYZA SATIVA L. Poaceae. Rice.

From the Hokushu Experiment Station, Kotoni, October 7, 1929.

81746. No. 1523. *Shihonga* (cross road). A variety of rice, adapted to very dry land.

81747. No. 1524. *Kairyo mochi ichigo.* From Imperial Station No. 1. A glutinous variety used for making a paste called *Mochi.*

81748. No. 1525. *Bozu rokuge* (Bozu No. 6).

81749 to 81753. PHASEOLUS ANGULARIS (Willd.) W. F. Wight. Fabaceae. Adsuki bean.

81749. No. 1488. From a farmer's field near Kawazoe, October 12, 1929. A very prolific variety with red seeds.

81750. No. 1489. From a farmer's field near Kawazoe, October 12, 1929. A very prolific early variety with mottled or marbled red and black seeds and rather different shaped leaves than other adsuki varieties.

81751. No. 1515. From the Hokushu Experiment Station, Kotoni, October 7, 1929. *Maruba* (round leaf). Medium-sized maroon seeds.

81752. No. 1516. From the Hokushu Experiment Station, Kotoni, October 7, 1929. *Sousei dairyu* (early large grain). Medium-large maroon seeds.

81726 to 81760—Continued.

81753. No. 1517. From the Hokushu Experiment Station, Kotoni, October 7, 1929. *Sousei maruba* (early round leaf). Medium-small maroon seeds.

81754 to 81758. PISUM SATIVUM L. Fabaceae. Pea.

From the Hokushu Experiment Station, Kotoni, Hokushu, October 7, 1929.

81754. No. 1518. *Nippon aka* (Japanese red).

81755. No. 1519. *Ball pea.* Small green peas.

81756. No. 1520. *French canning.* Small yellowish-green seeds.

81757. No. 1521. *Sapporo ao tenashi.* An improved strain of the *Ao tenashi,* which is very generally grown in Hokushu.

81758. No. 1522. From the Hokushu Experiment Station No. 6728. A yellowish-green seeded strain developed by the station.

81759. PRUNUS sp. Amygdalaceae. Cherry.

No. 1182. Cuttings collected near a shrine along Moiwayama, near Sapporo, Hokushu, October 6, 1929. A tree with light gray smooth bark, beautiful red leaves, and slightly astringent, black fruits.

81760. RAPHANUS SATIVUS L. Brassicaceae. Radish.

No. 1541. From the Gifu Agricultural Experiment Station, October 17, 1929.

81761 to 81786. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. Soybean.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received in October and November, 1929.

81761. No. 1425. Obtained from a factory making sugared soybeans, Sapporo, Hokushu, October 3, 1929. *Aojiro.* A variety with greenish-white seeds used in making sugared beans; also used as a vegetable. Said to be sweeter and to have a higher protein value than other varieties. The seeds were grown in Hokushu.

81762 to 81772. From the Akita Experiment Station, October 10, 1929.

81762. No. 1458. A variety native to Russia, with very small dull-black seeds and purple flowers.

81763 to 81768. *Moshito* (forage beans). Chinese varieties from Manchuria.

81763. No. 1459. Small shiny black seeds and white flowers.

81764. No. 1460. Purple flowers.

81765. No. 1461. Dull-black seeds and white flowers.

81766. No. 1462. Dull-black seeds and dull-purple flowers.

81767. No. 1463. Small glossy brown seeds and white flowers.

81768. No. 1464. Small glossy brown seeds and purple flowers.

81761 to 81786—Continued.

81769. No. 1465. Selection No. 502. A Chinese variety from Manchuria, with small glossy black seeds and purple flowers.

81770. No. 1466. Selection No. 503. A Chinese variety from Manchuria with small glossy brown seeds and purple flowers.

81771. No. 1467. Selection 504. A Chinese variety from Manchuria with small glossy brown seeds and purple flowers.

81772. No. 1468. Selection 505. A Chinese variety from Manchuria with small dull-black seeds and white flowers.

81773. No. 1484. From a farmer's field near Kawazoe, October 12, 1929. *Shirosawa* (white pod). An early yellow-seeded variety said to have been grown in this section for many years.

81774. No. 1485. From a farmer's field near Kawazoe, October 12, 1929. An early, gray, pubescent variety said to be native and grown in this section for many years. The seeds are straw yellow with a brown hilum.

81775. No. 1486. From the Akita Prefecture Horse Breeding Station, near Wada, October 12, 1929. A mixture of yellow-seeded varieties used for horse feed.

81776 to 81786. From the Hokushu Experiment Station, Kotoni, October 7, 1929.

81776. No. 1498. *Akazaya* (red pod). Station No. VI, 275 B. Seeds straw yellow with a dark-brown hilum.

81777. No. 1499. *Kurozaya* (black pod).

81778. No. 1500. *Chusei kura dairyu* (middle season). Tokachi Branch Station No. 3. Seeds medium sized and black.

81779. No. 1507. *Kenashi daizu*. A yellow-seeded variety developed by the station. It is resistant to the pod borer moth, one of the worst insect pests in Hokushu.

81780. No. 1508. *Tsurunoko* (young crane). Large yellow seeds with a pale hilum.

81781. No. 1509. *Oyachi ichigo* (Oyachi No. 1). A selection from Oyachi, one of the high-yielding varieties. The yellow seeds are medium sized with a deep-brown hilum.

81782. No. 1510. *Oyachi*. The Oyachi is quite generally grown in Hokushu and is a heavy yielding strain, but is very subject to attack by the pod borer moth. The yellow, medium-sized seeds have a brown hilum.

81783. No. 1511. *Gin daizu* (silver soybean). Station No. V, 35 B. Yellow, medium-sized seeds with a light-brown hilum.

81784. No. 1512. *Shiro shoyu* (small white). Yellow, medium-small seeds with a light-brown hilum.

81785. No. 1513. *Chusei hadaka* (middle season smooth). Yellow, rather small seeds with a brown hilum. It is quite resistant to attack by the pod borer moth.

81761 to 81786—Continued.

81786. No. 1514. *Kuro daizu* (black soybean). Small round black seeds with green cotyledons.

81787 to 81807.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received in October and November, 1929.

81787. STEWARTIA PSEUDO-CAMELLIA Maxim. Theaceae. **Japanese stewartia.**

No. 1414. From the Botanic Garden, Hokushu Imperial University, Sapporo, October 2, 1929. A handsome tree, native to Japan, 50 feet high, with erect branches and red bark. The thickish obovate-lanceolate leaves are bright green, and the large white flowers are borne in summer.

For previous introduction see No. 77866.

81788. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

No. 1487. From a field near Kawazoe, Akita Prefecture, October 12, 1929.

81789. TRIFOLIUM REPENS L. Fabaceae. **White clover.**

No. 1379. From plants growing in waste places near the seashore in the vicinity of Shiraoi, an Ainu village, southern Hokushu, September 29, 1929. A variety with large white flowers.

81790 to 81793. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. **Common wheat.**

From the Hokushu Experiment Station, Kotoni, October 7, 1929.

81790. No. 1526. *Sapporo haru komugi ichigo*. (Sapporo spring No. 1.) A spring wheat developed by the Kotoni station.

81791. No. 1527. *Sapporo haru komugi jugo* (Sapporo spring No. 10).

81792. No. 1528. *Marching No. 8*. A fall wheat developed by the Kotoni station.

81793. No. 1529. *Akagawa Ako Ichigo* (red skin red No. 1).

A fall variety developed by the Kotoni station.

81794 to 81797. VACCINIUM spp. Vacciniaceae.

81794 and 81795. VACCINIUM CILIATUM Thunb.

81794. No. 1419. From the Botanic Garden, Hokushu Imperial University, Sapporo, October 2, 1929. An upright branching deciduous shrub up to 15 feet high, with pubescent branchlets and ovate ciliolate-margined leaves, 2 to 4 inches long, which turn bright crimson in the autumn. The nodding bell-shaped reddish flowers are in short racemes and are followed by edible black berries a quarter of an inch in diameter. Native to Japan and Chosen.

81795. No. 1452. From Chiaki Park, Akita, October 11, 1929. A shrub about 12 feet high with racemes of blackish-purple fruit. It may be the same variety as that obtained from the Botanic Garden at Sapporo [No. 81794], but the va-

81787 to 81807—Continued.

riety from Chiaki Park bears a greater abundance of much larger fruits.

81796. VACCINIUM JAPONICUM Miquel.

No. 1495. From the Sapporo Botanic Garden, Hokushu, October 7, 1929.

81797. VACCINIUM PRAESTANS Lamb.

No. 1417. From the Botanic Garden, Hokushu Imperial University, Sapporo, October 2, 1929. A deciduous low shrub resembling the wintergreen (*Gaultheria procumbens*) in habit. The obovate leaves are 1 to 2 inches long, and the small pinkish-tinged white flowers are followed by bright-red sweet edible fruits, half an inch in diameter, with a strawberrylike fragrance. Native to northern Japan.

81798 to 81801. VIBURNUM spp. Caprifoliaceae.

81798. VIBURNUM sp.

No. 1412. Near the seashore in the vicinity of Shiraoi, Hokushu, September 29, 1929. A shrub about 6 feet high, with bright-red fruits.

81799. VIBURNUM sp.

No. 1469. From Chiaki Park, Akita, October 11, 1929. A shrub with bright-red berries.

81800. VIBURNUM sp.

No. 1472. Along the road near Kawazoe, October 12, 1929. A shrub with bright-red berries.

81801. VIBURNUM sp.

No. 1491. Along the trail to Moiwayama, near Sapporo, Hokushu, October 7, 1929.

81802. VICIA sp. Fabaceae. Vetch.

No. 1424. A wild legume growing along the roadside near Sapporo, Hokushu, October 2, 1929.

81803. VICIA sp. Fabaceae. Vetch.

No. 1441. Found abundantly in waste places near Maruyama Park, Sapporo, Hokushu, October 5, 1929. Plants 2 to 3 feet high.

81804 and 81805. VIGNA SINENSIS (Torner) Savi. Fabaceae. Cowpea.

81804. No. 1000. From a field near Honjo, August 9, 1929. The plants are more upright and of a bushy growth with no tendency to vine; the seeds are red and used when green in the same way as blackeyed peas and the dried peas are used when cooked.

81805. No. 1490. From a farmer's field near Kawazoe, October 12, 1929. A black-seeded cowpea which is rather early and has no tendency to vine.

81806. ZANTHOXYLUM PIPERITUM (L.) DC. Rutaceae. Japanese prickly-ash.

No. 1481. From thorny shrubs along the road near Kawazoe, October 12, 1929. A shrub or small tree with pubescent branchlets and slender prickles in pairs. The compound leaves are made up of 11 to 19 oblong-ovate leaflets, and the small corymbs of greenish flowers are followed by red fruits which open and reveal the black seeds. The young leaves are used as a condiment. Native to northern China, Chosen, and Japan.

81787 to 81807—Continued.

81807. ZEA MAYS L. Poaceae. Corn.

No. 1382. From the Ainu village of Shiraoi, Hokushu, September 29, 1929.

81808. TERMINALIA BENTZOE (L.) Pers. Combretaceae.

From Port Louis, Mauritius. Seeds presented by D. d'Emmerez de Charmoy, Director, Department of Agriculture. Received November 16, 1929.

A handsome tropical evergreen tree with lanceolate leaves, inconspicuous flowers, and narrowly 2-winged fruits. Native to the Malay Archipelago.

81809. TERMINALIA SERICEA Burchell. Combretaceae.

From Salisbury, Southern Rhodesia, Africa. Seeds presented by the Secretary of the Department of Agriculture. Received November 16, 1929.

A well-shaped ornamental tropical evergreen tree up to 30 feet high, with a flat crown, silvery white foliage, and yellow wood of excellent quality. Bark cloth of poor quality is made from the bark.

For previous introduction see No. 61687.

81810 to 81817.

From Russia. Seeds collected by H. L. Westover, Bureau of Plant Industry. Received November 14, 1929.

81810. ANDROPOGON ISCHAEMUM L. Poaceae. Grass.

No. 325. A wild grass found in the vicinity of Sukhum, Caucasus Mountains, October 11, 1929. A leafy variety, 3 to 4 feet high, producing a large quantity of coarse feed.

81811. BRACHYPODIUM SYLVATICUM (Huds.) Beauv. Poaceae. Grass.

No. 326. A wild grass found on partially shaded slopes at Sukhum, Caucasus Mountains, October 11, 1929.

For previous introduction see No. 78771.

81812. CASTANEA SATIVA Mill. Fagaceae. Spanish chestnut.

No. 323. From the Caucasus Mountains, south of Armavir, October 7, 1929.

81813. CHAETOCHLOA ITALICA (L.) Scribn. (*Setaria italica* Beauv.). Poaceae. Millet.

No. 327. From the Sukhum Experiment Station, Caucasus Mountains, October 12, 1929. A type with long panicles.

81814. EUCHLAENA MEXICANA × ZEA MAYS. Poaceae. Teosinte-maize hybrid.

No. 321. From the Sukhum Experiment Station, Caucasus Mountains, October 10, 1929.

81815 and 81816. MEDICAGO SATIVA L. Fabaceae. Alfalfa.

81815. No. 324. A wild alfalfa growing on the slopes of the Caucasus Mountains, Sukhum Experiment Station, October 11, 1929.

81816. No. 328. A wild plant from northeastern Turkestan, August 29, 1929.

81810 to 81817—Continued.

81817. TRIFOLIUM sp. Fabaceae. **Clover.** No. 322. Obtained in the forest, Sukhum Experiment Station, October 10, 1929.

81818. OXYTROPIS PILOSA (L.) DC. Fabaceae.

From Russia, Union of Socialistic Soviet Republics. Seeds presented by A. Kol, Chief, Bureau of Introduction, Institute of Applied Botany and New Cultures, Leningrad. Received November 19, 1929.

No. 1335. From the Botanical Garden of Saratof University. An upright or ascending herbaceous perennial about 15 inches high, densely covered with soft spreading hairs. It has a short rootstock, pinnate leaves, and bright-yellow flowers in an ovoid raceme. Native to central Europe.

81819. CITRUS sp. Rutaceae. **Cuban shaddock.**

From Holguin, Cuba. Seeds presented by Thomas R. Towns. Received November 21, 1929.

A shaddock used as a stock for citrus varieties in Cuba; especially good for navel orange, but not for grapefruit or the kumquat.

For previous introduction see No. 77306.

81820 to 81822.

From Newry, Ireland. Seeds purchased from T. Smith, Daisy Hill Nursery. Received November 19, 1929.

81820. GERANIUM IBERICUM Cav. Geraniaceae. **Iberian cranesbill.**

A herbaceous perennial, 1 to 2 feet high, with an erect villous stem branching at the top. The opposite leaves are 5-parted to 7-parted and the violet flowers, an inch across, are borne in open panicles. Native to Spain and Portugal.

81821. IRIS GRAMINEA L. Iridaceae. **Grass iris.**

A dwarf beardless iris with strongly ribbed linear leaves 12 to 18 inches long, and flowers with lilac outer segments with a yellow claw and erect red-purple style branches and inner segments. The plant is valued chiefly for its freesialike scent. Native to central and southern Europe.

81822. MORAEA SPATHULATA (L. f.) Klatt (*M. spathacea* Ker). Iridaceae.

A bulbous perennial with a single linear-falcate, strongly ribbed basal leaf 2 feet high and a stout stem, 2 to 3 feet tall, bearing a cluster of bright-yellow flowers. Native to southern Africa.

81823. FICUS RELIGIOSA L. Moraceae. **Sacred bo tree.**

From Kirkee, Poona, Bombay Presidency, India. Seeds presented by the Superintendent of the Ganeshkhind Botanical Gardens. Received November 19, 1929.

A large tropical tree up to 100 feet high, with the rotund-ovate coriaceous leaves suspended on slender petioles 4 inches long, and with the apex produced into a long linear-lanceolate, taillike appendage. The dark-purple axillary fruits are about half an inch in diameter. Native to India.

81824 and 81825. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

From Russia, Union of Socialistic Soviet Republics. Cuttings and scions presented by A. Kol, Chief, Bureau of Introduction, Institute of Applied Botany and New Cultures. Received November 23, 1929.

81824. *Cadu Khurmai.*

81825. No. 109093. From Turkestan. *Khurmai.*

81826 to 81830.

From Hanover, Germany. Plants purchased from Hermann A. Hesse. Received November 23, 1929.

81826 to 81828. CHRYSANTHEMUM MAXIMUM Ramond. Asteraceae. **Pyrenees chrysanthemum.**

81826. *Hildegard von Grüter.* Plant tall, about 28 inches high, blooming in July; disk yellow and very small. This is especially suitable for cut flowers, on account of its prolific blooming and stiff stems.

81827. *Lockenkopf.* Plant about 2 feet high, blooming in July and August. The large dazzling white flowers, with three or four series of deep-cut ray flowers, remind one of "ostrich feather asters."

81828. *Niobe.* One of the finest sorts with unusually large pure-white heads. The ray flowers are lightly undulate.

81829. DAPHNE ALPINA L. Thymelaeaceae. **Alpine daphne.**

An erect alpine shrub 2 feet high, with narrow deciduous leaves, and fragrant white or pinkish flowers in terminal clusters. Native of Europe.

For previous introduction see No. 79200.

81830. DAPHNE CAUCASICA Pall. Thymelaeaceae. **Caucasian daphne.**

A hardy deciduous shrub, up to 4 feet high, with lanceolate leaves and fragrant white flowers in terminal heads of 3 to 20 flowers. Native to the Caucasus region.

For previous introduction see No. 79203.

81831 and 81832.

From Rumania. Seeds obtained through H. L. Westover, Bureau of Plant Industry. Received November 25, 1929.

81831. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

From Transylvania.

81832. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

From Moldova.

81833. JUGLANS FORMOSANA Hayata. Juglandaceae.

From San Marino, Calif. Nuts presented by William Hertrich, Superintendent, Huntington Botanic Garden. Received November 25, 1929.

A very ornamental tree which is nearly evergreen at San Marino, Calif. The nuts resemble the butternut (*Juglans cinerea*) in size and shape. Native to Taiwan.

81834 to 81841. GOSSYPIUM spp. Malvaceae. **Cotton.**

From Tashkent, Turkestan, Union of Socialistic Soviet Republics. Seeds presented by the Turkestan Plant Breeding Station. Received November 25, 1929.

81834 to 81839. GOSSYPIUM HERBACEUM L.

81834. No. 455 A. From West Pamirian.

81835. No. 2522 B. From Khoresm.

81836. No. 2929. From Khanabad, Afghanistan.

81837. No. 3101. From Khoresm.

81838. No. 5028. From Smyrna, Turkey.

81839. No. 7172. From Artysh, near Kashgar, Sinkiang, China.

81840 and 81841. GOSSYPIUM HIRSUTUM L. **Upland cotton.**

81840. No. 0100. *Navrotsky.*

81841. No. 1838. Bred by the Turkestan Plant Breeding Station by means of hybridization.

81842 and 81843. PERSEA AMERICANA Mill. (*P. gratissima* Gaertn. f.). Lauraceae. **Avocado.**

From Mexico. Scions collected by C. V. Newman, President, and George B. Hodgkin, Manager, Calavo Growers of California, Los Angeles, Calif. Received November 26, 1929.

81842. No. 1. *Atlisco.*

81843. No. 2. *Atlisco.*

81844. ANNONA RETICULATA L. Annonaceae. **Sugar-apple.**

From Papeete, Tahiti. Seeds presented by Dr. Gerrit P. Wilder. Received November 29, 1929.

A variety of custard-apple introduced into Tahiti 50 years ago by Mr. Goupil, a Frenchman who had a coconut plantation near Papeete. It has a white skin when ripe, and a creamy white, fine-grained pulp of excellent flavor.

81845. RICINODENDRON RAUTANENII Schinz. Euphorbiaceae.

From Mount Silinda, Melsetter District, Southern Rhodesia, Africa. Seeds presented by Dr. W. L. Thompson. Received September 19, 1929.

Muzgomo. A large tree, sometimes 3 or 4 feet in diameter, with delicious edible nuts, though the shell is hard and tough. The kernel is inclosed within a second hard shell within the outer shell.

For previous introduction see No. 50029.

81846 and 81847. LACHENALIA spp. Liliaceae. **Cape-cowslip.**

From Cape Town, Union of South Africa. Seeds purchased from Charles Howie & Co. Received November 30, 1929.

81846. LACHENALIA ORCHIOIDES (L.) Ait.

A herbaceous perennial with a bulb about an inch in diameter from which arise usually two strap-shaped, smooth, spotted leaves. The spike of cylindrical, white, yellow, or red flowers is borne on a spotted peduncle a foot high. Native to southern Africa.

81846 and 81847—Continued.

81847. LACHENALIA PUSTULATA Jacq.

A herbaceous perennial with a bulb about half an inch in diameter and two fleshy, sword-shaped leaves, 9 inches long, having pustules on the upper surface. The white or reddish tinged campanulate flowers are borne in a dense raceme, 2 to 3 inches long, on a peduncle 6 inches long. Native to southern Africa.

81848. DIPELTA VENTRICOSA Hemsl. Caprifoliaceae.

From Keston, Kent, England. Plants purchased from G. Reuthe, Foxhill Hardy Plant Farm. Received December 5, 1929.

A deciduous shrub, 6 to 15 feet high, with downy young shoots and oval to ovate-lanceolate leaves 2 to 6 inches long. The bell-shaped flowers are about an inch long and borne on drooping pedicels at the end and in the leaf axils of short side shoots. The corolla is deep rose outside and paler within except in the throat, which is orange colored. Native to western China.

For previous introduction see No. 40178.

81849. PSIDIUM GUAJAVA L. Myrtaceae. **Guava.**

From Peru. Seeds presented by Dr. Wilson Popenoe, Research Department, United Fruit Co. Received November 25, 1929.

A thick-fleshed variety.

81850. POPULUS GENEROSA A. Henry. Salicaceae. **Poplar.**

From Winnipeg, Manitoba, Canada. Cuttings presented by Prof. F. W. Broderick, Department of Horticulture and Forestry, Agricultural College, University of Manitoba. Received November 13, 1929.

According to its originator, Dr. Augustine Henry, this hybrid poplar is intermediate in characters between its parents, *Populus angulata* and *P. trichocarpa.* It is a rapid-growing, unusually vigorous tree with coarsely serrate leaves which are pale gray beneath.

For previous introduction see No. 62111.

81851. ADONIDIA MERRILLII Beccari (*Normanbya merrillii* Beccari). Phoenicaceae. **Palm.**

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received October 1, 1929.

Bonga de China or *bonga de Jolo.* A medium-sized palm with graceful somewhat curved pinnate leaves resembling the common betel-nut palm but not so tall. The crimson fruits, less than an inch long, are borne just below the leaves. In Manila this palm is grown as an ornamental.

For previous introduction see No. 73693.

81852. FRITILLARIA CAMSCHATCENSIS (L.) Ker. Liliaceae. **Black lily.**

From Sapporo, Hokushu, Japan. Bulbs collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received October 1, 1929.

No. 1017. Obtained from the Sapporo Botanic Garden, September 2, 1929. A lilylike bulbous perennial with 1-flowered to 3-flowered stems 6 to 18 inches high.

81852—Continued.

The 10 to 15 leaves are lanceolate, the lower ones in whorls; and the livid wine-purple flowers are about an inch long. Native to Siberia and Alaska.

81853. MALUS SYLVESTRIS Mill. (*Pyrus malus* L.). Malaceae. **Apple.**

From Melbourne, Victoria, Australia. Trees presented by J. M. Ward, Superintendent of Horticulture, Department of Agriculture. Received October 3, 1929.

Elsie Grant.

81854. CINNAMOMUM MINDANAENSE Elmer. Lauraceae. **Kami.**

From Lipa, Batangas, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received October 2, 1929.

A small erect tropical tree, up to 30 feet high, with slender branches, smooth pale-green bark, and small pointed leathery leaves. The inconspicuous flowers are followed by numerous small shining steel-blue fruits. The bark is very similar to the cinnamon of commerce, and the tree has possibilities as a source of cinnamon. Native to the Philippines.

For previous introduction see No. 79546.

81855. HEDEOMA PIPERITA Benth. Menthaceae.

From Mexico City, Mexico. Seeds presented by A. L. Herrera, Director, Dirección de Estudios Biologicos. Received October 3, 1929.

A small annual mint with bright-green leaves less than an inch long and open spikes of white flowers, each having two red spots. Native to Mexico and a possible source of menthol.

81856. PISTACIA VERA L. Anacardiaceae. **Pistache.**

From Ariana, near Tunis, Tunisia, Africa. Seeds presented by F. Boeuf, Chief, Botanical Service. Received October 3, 1929.

81857 to 81864. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From Honolulu, Hawaii. Cuttings presented by H. L. Lyon, in charge, Department of Botany and Forestry, Experiment Station, Hawaiian Sugar Planters' Association. Received October 7, 1929.

81857. No. 28–245.

81858. No. 28–4997.

81859. No. 28–5009.

81860. No. 28–5055.

81861. No. 28–5019.

81862. No. 28–5114.

81863. No. 28–5118.

81864. Unnumbered variety (Striped Tip).

81865 to 81883. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

From India. Seeds presented by the Associate Professor of Botany, Punjab Agricultural College, Lyallpur, through Renwick S. McNiece, American consul, Karachi. Received October 4, 1929.

81865 to 81883—Continued.

81865. *D. J. Khan No. 1.* From the Northwest Frontier Province. A variety with yellow skin which is segmented by prominent black lines.

81866. *D. J. Khan No. 2.* From the Northwest Frontier Province. A variety with yellow skin which is segmented by green lines.

81867. *Jhang No. 1.*

81868 to 81871. From Jullunder.

81868. No. 1. *Phillauni Sufaida.* A white-fleshed variety.

81869. No. 2. *Local Sufaid.* A white-fleshed variety.

81870. No. 3. *Chenai white.* A white-fleshed variety.

81871. No. 4. *Nakodri red.* A red-skinned variety.

81872 to 81883. From Lyallpur.

81872. No. 1. A round variety with a smooth yellow skin.

81873. No. 2. An ovoid variety with a rough yellow skin.

81874. No. 3. An ovoid, ribbed, yellow-skinned variety.

81875. No. 4. A round, ribbed, yellow-skinned variety.

81876. No. 5. A round, yellow, smooth-skinned variety.

81877. No. 6. A round, yellow-skinned variety segmented with green lines.

81878. No. 7. A round, yellow-skinned variety segmented with green lines.

81879. No. 8. A round variety with greenish-yellow rough skin.

81880. No. 9. A round, reddish-yellow, smooth-skinned variety.

81881. No. 10. A round variety with reddish-yellow, smooth skin.

81882. No. 11. A round, yellow-skinned variety segmented with thin lines.

81883. No. 1. *Shorkot.*

81884 to 81914.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received October 1, 1929.

81884 to 81886. DELPHINIUM spp. Ranunculaceae. **Larkspur.**

From the Sapporo Botanic Garden, Sapporo, Hokushu, August 26, 1929.

81884. DELPHINIUM CONSOLIDA L. **Field larkspur.**

No. 1145. An erect hairy annual, native to Europe, about 1½ feet high, with blue or white flowers in loose panicles.

For previous introduction see No. 53044.

81885. DELPHINIUM ORIENTALE J. Gay.

No. 1147. An annual larkspur which closely resembles the rocket larkspur, *Delphinium ajacis,* but differs in being a foot to a foot and a half high, with an upright, branching stem bearing numerous dense racemes of violet, pink, or white flowers. Native to southern Europe.

81884 to 81914—Continued.

81886. DELPHINIUM PYLZOWI Maxim.

No. 1146. A larkspur, native to China, with a leafy stem, 5-parted leaves, and attractive flowers with violet sepals and blackish petals.

For previous introduction see No. 62127.

81887. FRAGARIA sp. Rosaceae. **Strawberry.**

No. 1151. From the Sapporo Botanic Garden, Sapporo, Hokushu, August 26, 1929. A species said to be grown in the mountain regions at high altitudes.

81888. LATHYRUS sp. Fabaceae.

No. 1155. From the Sapporo Botanic Garden, Sapporo, Hokushu, August 26, 1929.

81889. LONICERA sp. Caprifoliaceae. **Honeysuckle.**

No. 1159. From the Sapporo Botanic Garden, Sapporo, Hokushu, August 26, 1929. A yellow-fruited species.

81890. LONICERA sp. Caprifoliaceae. **Honeysuckle.**

No. 1161. From the Sapporo Botanic Garden, Sapporo, Hokushu, August 26, 1929.

81891 and 81892. PICRASMA QUASSIOIDES (Don) Bennett. Simaroubaceae.

A tree 15 to 25 feet high, with seeds varying from peacock green to purple. Its chief ornamental value consists in the handsome foliage which turns orange and scarlet in the autumn, and the bright-red fruits.

For previous introduction see No. 40188.

81891. No. 1163. From the Sapporo Botanic Garden, Sapporo, Hokushu, August 26, 1929.

81892. No. 1181. Along the trail up Moiwayama, near Sapporo, Hokushu, August 28, 1929.

81893. RUBUS sp. Rosaceae.

No. 1142. Along roadsides near Sapporo, Hokushu, August 22, 1929. A species with trifoliolate leaves white underneath, and rather large, bright-red fruits.

81894. RUBUS sp. Rosaceae.

No. 1164. From a farmers' market at Sapporo, Hokushu, August 26, 1929. A dwarf species, more or less of a runner, with trifoliolate leaves white underneath, and beautiful red fruits of a good flavor.

81895 to 81897. SAMBUCUS spp. Caprifoliaceae. **Elder.**

From the Sapporo Botanic Garden, Sapporo, Hokushu, August 26, 1929.

81895. SAMBUCUS LATIPINNA Nakai.

No. 1156. An ornamental shrub with compound leaves made up of three to five broadly elliptic leaflets, small white flowers in a hemispheric cluster, and attractive yellow fruits. Native to Chosen.

For previous introduction see No. 80715.

81896. SAMBUCUS SIEBOLDIANA XANTHOCARPA Nakai.

No. 1157. Fruits bright red.

81884 to 81914—Continued.

81897. SAMBUCUS sp.

No. 1158. Fruits bright pink.

81898. PANAX REPENS Maxim. Araliaceae.

No. 1184. Woods along the trail up Moiwayama, near Sapporo, Hokushu, August 28, 1929. A hardy herbaceous perennial with an elongated creeping rhizome, digitately 5-parted leaves, and globose, paired, bright-red fruits.

81899. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

No. 1012. From a tofu or bean curd factory in Sapporo, Hokushu, August 30, 1929. A variety considered by this factory to be the best for making tofu; from 5 to 8 bushels are used daily. The beans are grown in Tokachi Province, the leading soybean section of Hokushu.

81900 to 81906. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

81900. No. 1001. Near the railroad station at Asamushi, August 16, 1929.

81901. No. 1002. Along the roadside in the Sapporo Botanic Garden, Hokushu, August 19, 1929.

81902. No. 1003. From a field in the Maruyama Park, Sapporo, Hokushu, August 19, 1929.

81903. No. 1004. Along a roadside near Kotoni, Hokushu, August 22, 1929.

81904. No. 1005. From a field between Kotoni and Sapporo, Hokushu, August 22, 1929. This plant was much earlier than others and made an abundance of heads much smaller than other plants near by.

81905. No. 1006. Along the roadside near Shiroishi, Hokushu, August 24, 1929.

81906. No. 1008. From plants on top of Moiwayama, near Sapporo, Hokushu, at an altitude of 1,500 feet, August 28, 1929.

81907. ULMUS JAPONICA Sarg. Ulmaceae. **Japanese elm.**

No. 1192. From the Imperial Botanical Garden, Hokushu University, Sapporo, September 2, 1929. An elm considered as fine a lawn and park tree as the American elm, *Ulmus americana*. There are some beautiful specimens in the Botanical Garden and campus of the Hokushu Imperial University and along the streets of Sapporo.

For previous introduction see No. 76469.

81908. VACCINIUM HIRTUM SMALLII (A. Gray) Maxim. Vacciniaceae.

No. 1162. From the Sapporo Botanic Garden, Sapporo, Hokushu, August 26, 1929. A shrub 4 to 6 feet high, with spreading branches, oblong-lanceolate leaves 1 to 3 inches long, and 1-flowered to 3-flowered clusters of red campanulate flowers followed by black berries. Native to Japan.

81909. VACCINIUM sp. Vacciniaceae.

No. 1168. Growing at an altitude of 1,600 feet on Moiwayama, near Sapporo, Hokushu, August 28, 1929. Plants 12 to 18 inches high.

81884 to 81914—Continued.

81910. VIBURNUM sp. Caprifoliaceae.

No. 1165. From the Sapporo Botanic Garden, Sapporo, Hokushu, August 26, 1929.

81911 to 81913. VICIA spp. Fabaceae. **Vetch.**

81911. VICIA SATIVA L. **Common vetch.**

No. 1129. Along the roadside between Kotoni and Sapporo, Hokushu, August 22, 1929. Flowers large and single, with purple standard and pink keel.

81912. VICIA sp.

No. 1007. Along the railroad near Shiroishi, Hokushu, August 24, 1929. A species bearing medium-sized purple flowers.

81913. VICIA sp.

No. 1141. Along the roadside between Kotoni and Sapporo, Hokushu, August 22, 1929. Racemes of purple flowers.

81914. (Undetermined.)

No. 1189. From the woods along the trail up Moiwayama, near Sapporo, Hokushu, August 28, 1929. A variety about 30 inches high, producing bright-red fruits.

81915 to 81917. MALUS SYLVESTRIS Mill. (*Pyrus malus* L.). Malaceae. **Apple.**

From Lalla, Tasmania, Australia. Trees purchased from Frank Walker. Received October 8, 1929.

81915. *Lalla.* A sport from a Delicious apple tree which produced a bright, full, red fruit. The flesh is, perhaps, slightly firmer than the Delicious, but in no other respect except in the brilliance of its color is there any noticeable difference.

81916. *Tasma.* This is the most popular and well known of all the apples raised in Tasmania. It is a late variety, highly colored, and a good keeper. Though not possessing a delicate flavor, it is eagerly sought for dessert purposes because of its deep brilliant red color.

81917. *Tasman's Pride.* This is essentially a dessert apple possessing a good flavor, besides being highly colored and juicy. While not being classed as a keeping variety, it may be held for a fair period in cold storage; it is very similar to the Jonathan in this respect.

81918 to 81920. LATHYRUS spp. Fabaceae.

From London, England. Seeds presented by T. Hay, of the Park Superintendent's Office, Hyde Park. Received October 7, 1929.

81918 and 81919. LATHYRUS MAGELLANICUS Lam. **Lord Anson pea.**

A strong-growing, woody, almost evergreen species, usually a perennial, covered with a bluish bloom. The smooth, angled, somewhat branched stem is 3 to 5 feet long, the leaflets are ovate or oblong-linear, and the dark purplish-blue flowers are on long peduncles. Native to southern South America.

81918 to 81920—Continued.

For previous introduction see No. 40875.

81918. Combes No. 868. Andean expedition. A pale-purple form.

81919. Combes No. 713. Andean expedition. A dark-purple form which received the Royal Horticultural Society's Award of Merit.

81920. LATHYRUS NERVOSUS Lam. **Anson pea.**

A glabrous plant with stems about a foot long and leaves composed of two nearly sessile, large, oval, acute leaflets with conspicuous reticulate nerves. The solitary peduncles, 2 inches long, bear five to seven purple flowers. Native to Uruguay.

For previous introduction see No. 40876.

81921 and 81922.

From Lavras, Minas Geraes, Brazil. Seeds presented by B. H. Hunnicutt, Instituto Gammon, through Carlton Jackson, commercial attaché, Rio de Janeiro, Brazil. Received October 7, 1929.

81921. PITHECOLLOBIUM AUAREMONTEMO Mart. Mimosaceae.

A vine bearing seeds which are commonly used for making necklaces.

81922. DOLICHOLUS PHASEOLOIDES (Swartz) Kuntze (*Rhynchosia phaseoloides* DC.). Fabaceae. **Rosarybean.**

A slender climber with trifoliolate leaves, borne upon slender wiry stems, which suggest those of the common bean (Phaseolus). The plant is of interest chiefly for the small bright-red seeds, with a black eye, which are strikingly similar to those of *Abrus precatorius,* the crab's eye of the West Indies.

For previous introduction see No. 80090.

81923 and 81924.

From Peradeniya, Ceylon. Seeds presented by T. H. Parsons, Curator, Royal Botanic Gardens. Received October 7, 1929.

81923. ERYTHRINA VARIEGATA ORIENTALIS (L.) Merr. (*E. lithosperma* Blume). Fabaceae. **Dadap.**

A moderate-sized spineless leguminous tree native to the East Indies. It is of very rapid growth, with trifoliolate leaves and red flowers. In Ceylon the tree is used to shade crop plants, and also the foliage is lopped for use as green manure. It is being tested as a cover plant at the experiment station in Peradeniya.

For previous introduction see No. 68855.

81924. TERMINALIA KAERNBACHII Warb. Combretaceae. **Okari nut.**

A tropical evergreen tree, native to New Guinea, with very thick ash-brown branches and oblong-ovate leaves, a foot long, which are hairy beneath when young. The edible seeds, over an inch long, are inclosed in an ovoid drupe over 2 inches long.

81925. GARCINIA DIVES Pierre. Clusiaceae.

From Tanauan, Atimonan, Tayabas, Philippine Islands. Seeds presented by S. Youngberg, Director, Bureau of Agriculture, Manila. Received October 14, 1929.

81925—Continued.

Bilucao. A slender tree up to 30 feet high, with elliptical-lanceolate leaves, small inconspicuous flowers in the axils of the leaves, and globose fruits, about an inch in diameter, which are reported to be edible. Native to the Philippine Islands.

81926 and 81927.

From Bataan Province, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received October 14, 1929.

81926. SANDORICUM KOETJAPE (Burm. f.) Merr. Meliaceae. **Santol.**

An evergreen tree, native to the Philippine Islands, which becomes 80 feet high in its native country. It has trifoliolate, hairy leaves and greenish-yellow or straw-colored flowers. The chief value resides in its yellowish fruits, which are rounded or flattened, about 2 inches in diameter, with rather large seeds inclosed in translucent, acid, edible pulp of good flavor. The fruit makes a delicious preserve. This tree is not suited for cultivation in the United States except perhaps in the warmest parts of Florida.

For previous introduction see No. 79558.

81927. UVARIA RUFA (Dunal) Blume. Annonaceae.

Banawak. A much-branched shrub, native to Java, with a stem between 4 and 6 inches in diameter and alternate, elliptic-oblong, acute, or obtuse leaves 2 to 5 inches long. The purplish-red, solitary flowers are about an inch wide. The oblong kidney-shaped red fruits, about 1½ inches long, are in bunches of 18 to 20, with whitish, scanty flesh which is juicy, aromatic, and subacid, without a trace of sugar, and containing many seeds.

For previous introduction see No. 44091.

81928. CAPPARIS MICRACANTHA DC. Capparidaceae.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture, Manila. Received October 14, 1929.

Dauag. A large straggly spiny evergreen shrub or small tree with smooth bark and short stiff spines. The coriaceous shining, broad-lanceolate leaves are 4 to 8 inches long, and the white flowers, two to four in a series in vertical lines on the branches, are 1½ inches across. The smooth, subglobose fruits, 2 to 3 inches long, are a beautiful apple red and have a good flavor.

For previous introduction see No. 51191.

81929 to 81931.

From Georgetown, Demerara, British Guiana. Seeds presented by A. A. Abraham, Assistant Superintendent, Botanic Gardens. Received October 15, 1929.

81929. MARTINEZIA CORALLINA Mart. Phoenicaceae. **Palm.**

A spiny palm with pinnate leaves about 9 feet long, and clusters, 2 to 3 feet long, of small white flowers followed by bright-red fruits nearly an inch in diameter. The pale-brown seeds are used for necklaces. Native to the island of Martinique, French West Indies.

81929 to 81931—Continued.

For previous introduction see No. 81592.

81930. THRINAX PARVIFLORA Swartz. Phoenicaceae. **Jamaica thatch palm.**

An unarmed fan palm with a ringed trunk up to 20 feet high, circular leaves 1 to 2 feet across and divided on the margin into bifid segments, and inconspicuous flowers and fruits. Native to Jamaica.

81931. (Undetermined.)

81932 to 81934. ALLIUM CEPA L. Liliaceae. **Onion.**

From Santa Cruz, Teneriffe, Canary Islands. Seeds purchased from C. Garcia Dorta. Received October 19, 1929.

81932. *Crystal Wax.*

81933. *Red Bermuda.*

81934. *Yellow Bermuda.*

81935. GARCINIA MANGOSTANA L. Clusiaceae. **Mangosteen.**

From Peradeniya, Ceylon. Seeds presented by T. W. Parsons, Curator, Royal Botanic Gardens. Received October 21, 1929.

A delicious fruit about the size of a mandarin orange, round and slightly flattened at each end, with a thick, smooth, rich red-purple rind, which, when cut, exposes the white segments lying loose in the cups. The inside cup surface of the rind is a most delicate pink. The separate segments are whitish and covered with a delicate network of fibers. The texture of the pulp resembles that of the plum, and the flavor is indescribably delicious.

81936. STYLOSANTHES ERECTA Beauv. Fabaceae.

From Boma, Belgian Congo, Africa. Seeds presented by the Secrétaire Général, Congo Belge, Gouvernement Général. Received October 17, 1929.

A copiously branched ascending shrub about 4 feet high, with broad, rather stiff, compound leaves, and terminal oblong heads of inconspicuous flowers. It is native to tropical Africa and is said to be of value as a fodder plant.

For previous introduction see No. 56798.

81937. MANGIFERA INDICA L. Anacardiaceae. **Mango.**

From Honolulu, Hawaii. Bud wood presented by W. T. Pope, Horticulturist of the Agricultural Experiment Station, through Eugene May, Bureau of Plant Industry. Received October 17, 1929.

Victoria.

81938 to 81940. PANDANUS spp. Pandanaceae. **Screwpine.**

From Buitenzorg, Java. Seeds presented by Dr. W. M. Docters van Leeuwen, Director, Botanic Gardens. Received November 12, 1929.

81938. PANDANUS AFFINIS Kurz.

A low shrubby evergreen closely related to *Pandanus foetidus,* with limp, swordlike leaves, 4 to 6 feet long, which are spiny along the midribs and margins. Native to Ceylon.

81938 to 81940—Continued.

For previous introduction see No. 72602.

81939. PANDANUS ATROCARPUS Griffith.

A tree, 40 to 60 feet high and about 6 inches in diameter, with linear acuminate dark-green leaves, 20 feet long and 4 inches wide, which are used for making coverings for carts, screens, hats, etc. The fragrant white spikes are 4 to 6 inches long, and the fruits an inch long.

For previous introduction see No. 51727.

81940. PANDANUS VANDERMEESCHII Balf. f.

A screwpine, native to the island of Mauritius, up to 20 feet high, having lateral branches 8 feet long and stiff, suberect leaves 2 feet long.

For previous introduction see No. 72608.

81941. HYLOCEREUS sp. **Cactaceae.**
Nightblooming cereus.

From Honolulu, Hawaii. Cuttings obtained through T. C. Zchakke, by W. A. Lloyd, Extension Service, United States Department of Agriculture. Received October 22, 1929.

From the Pan-Pacific Club in Honolulu.

One of the epiphytic, moisture-loving cacti, with a 3-angled stem. By means of aerial roots it clings to trees and walls and climbs to great heights in tropical America, where this genus is native.

81942 to 81945.

From Burringbar, New South Wales, Australia. Seeds presented by B. Harrison. Received October 18, 1929.

81942. DANTHONIA SEMIANNULARIS (Labill.) R. Br. Poaceae. **Grass.**

A perennial, fine-leaved, tussocky grass, 1 to 2 feet high, which provides feed for the greater part of the year. It is said to be a good winter grass, will stand a great amount of grazing, and its palatability both for cattle and sheep is well known.

For previous introduction see No. 74412.

81943. EHRHARTA CALYCINA J. E. Smith. Poaceae. **Perennial veldt grass.**

A heavy-yielding drought-resistant and nutritious grass which grows to a height of over 4 feet and seeds profusely. It promises to outrival even the famous Rhodes grass, and should prove valuable to stock owners, especially in dry districts.

For previous introduction see No. 77436.

81944. LOLIUM LOLIACEUM (Bory and Chaub.) Hand.-Mazz. (*L. subulatum* Vis.). Poaceae. **Grass.**

An annual bunch grass with much-branched slender prostrate or ascending stems 2 to 8 inches long. Native to dry sandy places along the coast of southeastern Europe.

81945. LUPINUS HIRSUTUS L. Fabaceae.
European blue lupine.

An ovate-leaved lupine used for forage and green manure.

For previous introduction see No. 75914.

81946. ALLAGOPTERA CAUDESCENS (Mart.) Kuntze (*Diplothemium caudescens* Mart.). Phoenicaceae.
Palm.

From Georgetown, Demerara, British Guiana. Seeds presented by A. A. Abraham, Assistant Superintendent, Botanic Gardens. Received December 23, 1929.

A stout palm up to 25 feet high, with a trunk a foot in diameter and a crown of pinnate leaves 9 to 12 feet long, made up of narrowly lanceolate segments which are green above and silvery beneath. Native to Brazil.

81947 to 81973.

From Japan. Collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received in October, 1929.

81947. ACTAEA SPICATA L. Ranunculaceae. **Black baneberry.**

No. 1030. Seeds from plants growing in the forest reservation near Nopporo, Hokushu, September 5, 1929. *Ruiyoushoma.* A herbaceous perennial 1 or 2 feet high, with racemes of deep-blue fruits in autumn.

For previous introduction see No. 72405.

81948. CLINTONIA UDENSIS Trautv. and Mey. Convallariaceae.

No. 1029. Seeds from plants growing in the forest reservation near Nopporo, Hokushu, September 5, 1929. *Tsubame o moto.* A low-growing liliaceous perennial from damp places in southeastern Siberia. The erect broadly oblong leaves, 6 inches long, are green, paler beneath. The greenish-yellow flowers, borne on a scape, are not showy, and the fruits are deep blue.

81949. DISPORUM SESSILE (Thunb.) Don. Convallariaceae. **Fairybells.**

No. 1195. Seeds from plants growing in the forest reservation near Nopporo, Hokushu, September 5, 1929. A small herbaceous perennial closely allied to the Uvularias, of the eastern United States. The narrowly ovate leaves are sessile, and the flowers, usually solitary, are white. Native to Japan.

81950. PANAX REPENS Maxim. Araliaceae.

No. 1194. Seeds from plants growing in the forest reservation near Nopporo, Hokushu, September 5, 1929.

For previous introduction and description see No. 81898.

81951. POLYGONATUM JAPONICUM C. Morr. and Decaisne. Convallariaceae.
Solomonseal.

No. 1200. Seeds from plants growing in the forest reservation near Nopporo, Hokushu, September 5, 1929. *Ohoamadoro.* A herbaceous perennial, 1 or 2 feet high, closely related to the Solomonseal of the eastern United States. The oval leaves are 2 to 3 inches long, and the campanulate, greenish-white flowers are about one-fourth of an inch across. Native to Japan.

81952. RIBES sp. Grossulariaceae.

No. 1349. Seeds from plants growing in a field near Odomari, Sakhalin Island, September 12, 1929. Fruits red.

81947 to 81973—Continued.

81953. RUBUS sp. Rosaceae.

No. 1325. Seeds from plants growing along the seashore near Koetoi, Hokushu, September 10, 1929. A low-growing variety producing rather sour, deep-red fruits.

81954. SKIMMIA JAPONICA Thunb. Rutaceae. **Japanese skimmia.**

No. 1199. Seeds from plants growing in the forest reservation near Nopporo, Hokushu, September 5, 1929. *Miyama shi kimi.*

For previous introduction and description see No. 81898.

81955. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

No. 1026. Seeds from plants growing in a field near Maruyama Park, near Sapporo, Hokushu, September 4, 1929. A very early variety with greenish-yellow seeds.

81956 to 81963. TRIFOLIUM spp. Fabaceae. **Clover.**

Seeds.

81956 to 81961. TRIFOLIUM PRATENSE L. **Red clover.**

81956. No. 1021. From the Kotoni Experiment Station, Hokushu, September 3, 1929. Originally obtained by the Kotoni station from Orneshoken, Finland. Apparently a very prolific and early strain.

81957. No. 1022. From the Kotoni Experiment Station, Hokushu, September 3, 1929. Originally obtained by the Kotoni station from Kanhoyski, Finland. Apparently a very early strain.

81958. No. 1023. From the roadside near Nopporo, Hokushu, September 5, 1929.

81959. No. 1024. From the Kotoni Experiment Station, Hokushu, September 3, 1929. Originally obtained from Sweden as Senklover by the Kotoni station.

81960. No. 1025. From the Kotoni Experiment Station, Hokushu, September 3, 1929. Originally obtained from Ekero, Finland, by the Kotoni station.

81961. No. 1318. From the roadside near Koetoi, Hokushu. A variety found abundantly along roadsides and in open fields.

81962. TRIFOLIUM sp.

No. 1028. From the Kotoni Experiment Station, Hokushu, September 3, 1929.

81963. TRIFOLIUM sp.

No. 1329. From moist fields near Odomari, Sakhalin Island, September 12, 1929.

81964. VICIA sp. Fabaceae. **Vetch.**

No. 1360. Near Maruyama Park, near Sapporo, Hokushu, September 15, 1929. A light purple-flowered species growing in abundance and making a very heavy growth.

81965. VICIA sp. Fabaceae. **Vetch.**

No. 1121. Seeds from plants growing in Maruyama Park, near Sapporo, Hokushu, August 19, 1929.

81947 to 81973—Continued.

81966 to 81970. LILIUM spp. Liliaceae. **Lily.**

81966. LILIUM CORDIFOLIUM Thunb. (*L. glehni* F. Schmidt).

No. 1083. Seeds from plants along the road near Taisho Mura, Hokushu, September 22, 1929. A lily, native to Japan, 3 to 4 feet high, with pendulous leaves 12 to 18 inches long and wide, and a raceme of 4 to 10 fragrant white flowers often 6 inches long.

For previous introduction see No. 75677.

81967. LILIUM sp.

No. 1084. Near Obihiro, Hokushu, September 22, 1929.

81968. LILIUM sp.

No. 1085. Near Obihiro, Hokushu, September 22, 1929.

81969. LILIUM sp.

No. 1086. Near Obihiro, Hokushu, September 22, 1929.

81970. LILIUM sp.

No. 1344. Seeds from plants in a field near Odomari, Sakhalin Island, September 12, 1929.

81971. SALIX sp. Salicaceae. **Willow.**

No. 1073. Cuttings from a tree in a yard on the main road near Obihiro, Hokushu, September 21, 1929. This tree measured 76 inches in circumference 3 feet from the ground, and it was between 60 and 70 feet high.

81972. SYRINGA sp. Oleaceae. **Lilac.**

No. 1080. Scions from wild bushes along the roadside near the Plain of Tokachi, at an experiment station near Taisho Mura, Hokushu, September 22, 1929.

81973. SYRINGA sp. Oleaceae. **Lilac.**

No. 1095. Cuttings from a tree 6 to 8 inches in diameter and about 30 feet high, growing in a small park in a suburb of Nokkenshi, Hokushu, September 23, 1929.

81974 to 81981. KNIPHOFIA spp. Liliaceae. **Torchlily.**

From Haarlem, Netherlands. Roots purchased from C. G. van Tubergen. Received December 2, 1929.

81974 to 81977. KNIPHOFIA GRACILIS Harv.

81974. *Jaune Supreme.* A deep-yellow-flowered variety.

81975. *Orange Beauty.* A variety bearing bright-orange flowers on slender spikes.

81976. *Orange Princess.* An orange-flowered variety.

81977. *Sovereign.* A variety bearing canary-yellow flowers.

81978 to 81981. KNIPHOFIA HYBRIDA Hort.

81978. *Ophir.* A variety bearing orange-brown flowers on short spikes.

81979. *Royal Standard.* A variety bearing an abundance of rich golden-yellow flowers. The upper half of the spikes are a rich scarlet.

81974 to 81981—Continued.

81980. *R. Wilson.* A variety with broad spikes.

81981. *Solfatare.* A robust grower bearing broad spikes of yellow flowers shaded with bronze.

81982. SECURIDACA LONGIPEDUNCULATA Fres. Polygalaceae. **Rhodesia violet tree.**

From Salisbury, Southern Rhodesia, Africa. Seeds presented by the Secretary of the Department of Agriculture. Received November 16, 1929.

A much-branched spreading shrub, sometimes 10 feet high, native to Upper Guinea, Ethiopia, and the Mozambique district. The coriaceous leaves are revolute margined when dry, and the flowers, in terminal spreading racemes, are rose, shades of purple or violet, or variegated with white.

For previous introduction see No. 48477.

81983 and 81984. LACHENALIA spp. Liliaceae. **Cape-cowslip.**

From Stellenbosch, Union of South Africa. Seeds purchased from K. C. Stanford. Received December 2, 1929.

81983. LACHENALIA ORCHIOIDES (L.) Ait.

For previous introduction and description see No. 81846.

81984. LACHENALIA PUSTULATA Jacq.

For previous introduction and description see No. 81847.

81985 to 81987. ROSCOEA spp. Zingiberaceae.

From Liverpool, England. Plants purchased from Bees (Ltd.). Received December 5, 1929.

81985 and 81986. ROSCOEA CAUTLEOIDES Gagn.

81985. A perennial herbaceous gingerlike plant, 9 to 12 inches high, native to China. It has thick, fleshy roots, broad leaves, and showy primrose-yellow flowers borne on many-flowered scapes.

For previous introduction see No. 61793.

81986. *August Beauty.* A very vigorous variety which flowers two months later, but is otherwise like the type.

81987. ROSCOEA HUMEANA Balf. and Smith.

A stout gingerlike perennial about 8 inches high, with cigar-shaped rhizomes, four to six broadly lanceolate sessile leaves 4 to 8 inches long, and four to eight large violet-purple flowers in a terminal spike. It is native to Yunnan, southwestern China, and has flowered freely at Kew, England, where it is considered the finest of the genus and where likewise it appears entirely hardy.

For previous introduction see No. 80205.

81988. SOLANUM BULLATUM Vell. Solanaceae.

From Vicosa, Brazil. Seeds presented by P. H. Rolfs, Consultor Technico de Agricultura do Estado de Minas Geraes, Escola Superior de Agricultura e Veterinaria. Received December 3, 1929.

81988—Continued.

According to chemical analysis, the foliage of this plant contains as much nitrogen as alfalfa or possibly a little less. It very frequently grows into a small tree about the size and shape of a small plum tree, but most frequently it is browsed and then continues to sprout up from the crown. It is very drought resistant and is eaten by cattle and mules.

For previous introduction see No. 54676.

81989 to 81994.

From Ottawa, Canada. Cuttings presented by W. T. Macoun, Dominion Horticulturist, Central Experimental Farm, Department of Agriculture. Received March 7, 1929. Numbered in November, 1929.

81989. ROSA RUBROSA Preston. Rosaceae. **Rose.**

Variety *Carmenetta.* A strong-growing hybrid between *R. rubrifolia* and *R. rugosa,* with single, pale-pink flowers which are intermediate in size between those of the parents.

81990 to 81994. SYRINGA PRESTONIAE McKelvey. Oleaceae. **Lilac.**

A race of hybrids between *Syringa reflexa* and *S. villosa,* with large freely produced panicles varying in color from very pale pink to pinkish lilac.

81990. Variety *Bianca.*

81991. Variety *Jacquenetta.*

81992. Variety *Jessica.*

81993. Variety *Julia.*

81994. Variety *Portia.*

81995 and 81996.

From Manila, Philippine Islands. Seeds presented by P. J. Wester, Bureau of Agriculture. Received November 26, 1929.

81995. CITRUS MIARAY Wester. Rutaceae.

A handsome ornamental tree suggested as a stock for cultivated citrus fruits. It has slender drooping willowy branches, dark-green leaves, and fruits resembling the lime in appearance and flavor. Native to the Philippine Islands.

For previous introduction see No. 77599.

81996. (Undetermined.)

Tantelak. An asclepiadaceous vine from the lower Sulu Archipelago, with large tender pods eaten as a vegetable.

81997. STIZOLOBIUM SEMPERVIRENS (Hemsl.) Kuntze (*Mucuna sempervirens* Kuntze). Fabaceae. **Velvetbean.**

From Paris, France. Plants purchased from Vilmorin-Andrieux & Co. Received December 17, 1929.

An evergreen climbing shrub with the main trunk sometimes a foot in diameter. It is native to Hupeh, central China. The trifoliolate leathery leaves are 3 to 5 inches long, and the dark chocolate-colored flowers are borne in racemes on the old wood. The woody pods are up to a foot in length.

81998. IPOMOEA MACALUSOI Mattei. Convolvulaceae. **Morning-glory.**

From Italian Somaliland, Africa. Seeds collected by Dr. Mario Calvino, San Remo, Italy. Received December 7, 1929.

A high-climbing tropical woody vine with branches 6 feet or more long. The rounded oval leaves are 5 inches wide, and the handsome bell-shaped light-orange flowers, 2 inches or more long, have red-margined petals and are in nearly sessile cymes. Native to Italian Somaliland.

For previous introduction see No. 80046.

81999. ERICA SCOPARIA L. Ericaceae.

From Newry, Ireland. Seeds purchased from T. Smith, Daisy Hill Nursery. Received December 13, 1929.

An evergreen shrub, native to southern Europe, 10 feet high, with upright branches, small lustrous dark-green linear leaves in whorls of three or four, and long cylindrical spikes of greenish-white flowers.

For previous introduction see No. 79018.

82000 to 82007. GOSSYPIUM spp. Malvaceae. **Cotton.**

From the Galápagos Islands and the Marquesas Islands. Seeds obtained by A. K. Fisher, Bureau of Biological Survey. Received December 4, 1929.

82000. GOSSYPIUM sp.

A. From Albemarle Island, Galápagos Islands, August 22, 1929. Bolls small, three lock or four lock. Lint whitish to buff, tightly adherent to the seed. Seeds completely covered with long, buff-colored fuzz.

82001. GOSSYPIUM sp.

B. From Albemarle Island, Galápagos Islands, August 21, 1929. Leaves entire (?), pubescent above, densely tomentose beneath. Bolls larger and less pointed than in A [No. 82000], three lock. Lint whitish to pale buff, rather coarse, tightly adherent to the seed. Seeds larger than in A, completely covered with fuzz of a pale buff color.

82002. GOSSYPIUM sp.

C. From Vahuka, Marquesas Islands, September, 1929. Bolls very small, abruptly short pointed, three lock or four lock. Lint light reddish brown (some of it lighter in color), rather silky, strongly adherent to the seeds. Seeds small, lacking a well-differentiated fuzz, but partly covered with rather long, strongly adherent, whitish and tawny hairs.

82003 to 82007. From Vahuka, Marquesas Islands, September, 1929. The contents of this package were mixed. The bolls ranged from not larger than in C [No. 82002] to about twice as large. The lint was nearly white for the most part, but some of it had a tawny tinge. After removal of the lint, five different types of seeds were distinguished.

82003. GOSSYPIUM sp.

D–1. Seeds large, coffee colored, longitudinally striate, naked except for a minute tuft of tawny fuzz at the base.

82004. GOSSYPIUM sp.

D–2. Seeds as in D–1 [No. 82003], except that they are smaller and a lighter brown.

82000 to 82007—Continued.

82005. GOSSYPIUM sp.

D–3. Seeds as in D–1 [No. 82003], but a lighter brown and having a larger basal tuft of fuzz.

82006. GOSSYPIUM sp.

D–4. Seeds black, with a small tuft of whitish fuzz at the apex and a small tuft of tawny fuzz at the base.

82007. GOSSYPIUM sp.

D–5. Seeds brown, about half of the surface covered with tawny fuzz, lint less strongly adherent than in C [No. 82002].

82008. QUERCUS PHILLYRAEOIDES A. Gray. Fagaceae. **Oak.**

From Northwood, Middlesex, England. Plants presented by R. C. B. Gardner. Received December 6, 1929.

An evergreen shrub or small tree up to 30 feet high, with broad-elliptic, crenate-serrate leaves 1 to 3 inches long. Native to China and Japan.

82009 to 82020.

From Newry, Ireland. Bulbs purchased from T. Smith. Received December 7, 1929.

82009 to 82018. ALLIUM spp. Liliaceae. **Onion.**

82009. ALLIUM ATROPURPUREUM Waldst. and Kit.

An upright, rather tall onion, sometimes over 3 feet high, with two to four narrow-linear leaves much shorter than the stem. The small, dark-purple flowers, sometimes rosy purple with a darker middle stripe, are in dense hemispherical or spherical clusters. Native to meadows in southeastern Europe.

82010. ALLIUM BEESIANUM W. W. Smith.

An ornamental onion, native to western China, 9 to 18 inches high, with pendulous blue flowers.

For previous introduction see No. 78975.

82011. ALLIUM FLAVUM L.

A wild onion with an upright or ascending stem a foot or less high, narrowly linear leaves about as long as the stem, and small yellow, bell-shaped flowers in a rather dense cluster. Native to dry rocky places, especially in chalky soil, in south-central Europe.

82012. ALLIUM KANSUENSE Regel.

An ornamental blue-flowered onion native to northwestern China.

For previous introduction see No. 76205.

82013. ALLIUM KARATAVIENSE Regel.

An onion, native to Turkestan, with very ornamental broad leaves of a striking blue-green color and dense umbels of dull-pink flowers.

For previous introduction see No. 78983.

82014. ALLIUM MOLY L. **Lily leek.**

A bulbous plant with broad, glaucous leaves and scapes 10 to 15 inches high.

82009 to 82020—Continued.

The bright-yellow flowers are in compact heads. Native to southern Europe.

For previous introduction see No. 69903.

82015. ALLIUM MULTIBULBOSUM Jacq.

An onion from central Europe, closely related to *Allium nigrum*, but differing in the numerous spherical bulblets, its broader and shorter leaves, and in certain floral characters. The flowers, entirely white or with a reddish central stripe in the petals, are in a dense globular cluster. Native to mountain meadows in central Europe.

82016. ALLIUM NARCISSIFLORUM Vill.

An onion, native to Italy, about 9 inches high, with rose-colored flowers in nodding heads.

For previous introduction see No. 76207.

82017. ALLIUM OSTROWSKIANUM Regel.

A particularly striking species native to Turkestan. The deep-rose flowers are produced freely in many-flowered umbels on scapes 12 inches high.

For previous introduction see No. 78987.

82018. ALLIUM TRIQUETRUM L.

A bulbous plant with a 3-angled stem, common on the coast of Algeria. In its usual surroundings this plant is a rather dwarfed weed of dry texture, but it has been found that when it is transplanted to good garden soil with plenty of fresh water it produces, during the winter, large plants with white, tender, and succulent underground parts. If the green leaves are removed the rest of the stem forms a delicate vegetable with no odor of garlic.

For previous introduction see No. 46560.

82019. LEUCOJUM AUTUMNALE L. Amaryllidaceae. **Snowflake.**

An autumn-blooming bulbous plant native to the Mediterranean countries and best suited for growing in sandy soil in the southern half of the United States. The threadlike leaves usually appear after the flowers, which are white, tinged with red, and are borne on a slender scape 3 to 9 inches long.

For previous introduction see No. 64440.

82020. STERNBERGIA MACRANTHA J. Gay. Amaryllidaceae.

A herbaceous perennial with a globose bulb about an inch in diameter and a neck 4 to 6 inches long. The strap-shaped leaves are fully developed in June, and the bright-yellow funnel-shaped flowers are produced in autumn. Native to southwestern Asia.

82021 to 82027.

From Twyford, Berks, England. Plants purchased from John Waterer Son & Crisp. Received December 13, 1929.

82021. CLEMATIS HERACLEAEFOLIA DC. Ranunculaceae. **Tube clematis.**

Ultramarine. A variety of compact habit with an abundance of violet-blue flowers.

82021 to 82027—Continued.

82022 and 82023. CHRYSANTHEMUM MAXIMUM Ramond. Asteraceae. **Pyrenees chrysanthemum.**

82022. *Excelsior.* The very large white flowers are borne on long stiff stems. This is one of the best varieties for cutting.

82023. *Iris Carlile.* A variety bearing pure white flowers with very distinct laciniated petals. It is an especially good variety for cutting.

82024 to 82026. HELENIUM AUTUMNALE L. Asteraceae. **Sneezeweed.**

82024. *Gartensonne.* Brilliant golden-yellow flowers with distinct black centers, borne between August and October.

82025. *Madame Canivet.* Clear lemon-yellow flowers with distinct black centers, borne during July and August.

82026. *Wyndley.* A variety bearing very large reddish bronze and yellow flowers during July and August.

82027. HELENIUM BIGELOVII A. Gray. Asteraceae. **Bigelow sneezeweed.**

Variety *aurantiacum.* A variety bearing large orange-yellow flowers between June and September.

82028 to 82031. PISTACIA VERA L. Anacardiaceae. **Pistache.**

From Damghan, Persia. Cuttings collected by W. E. Whitehouse, Bureau of Plant Industry. Received in December 1929.

Scions from some of the best pistache trees in Damghan, Persia. Nuts grown here are said to have a high oil content and to be partly dehisced (split) when grown under conditions which allow normal growth and development of the nuts.

82028. D–57. November 8, 1929. Collected in the same orchard with D–68 and D–82 [Nos. 82029 and 82030].

82029. D–68. November 8, 1929.

82030. D–82. November 8, 1929. Collected from first tree in group of three.

82031. D–82–B. November 8, 1929. A small scion sample collected from a water sprout on this tree, the outside in a group of three.

82032 to 82034.

From Anam, French Indo-China. Seeds presented by M. Poilaue. Received December 10, 1929.

82032. CASTANOPSIS sp. Fagaceae. **Evergreen chinquapin.**

82033. DIOSPYROS sp. Diospyraceae. **Persimmon.**

82034. QUERCUS sp. Fagaceae. **Oak.**

82035 to 82046.

From Leningrad, Russia, Union of Socialistic Soviet Republics. Seeds presented by A. Kol, Chief, Bureau of Introduction, Institute of Applied Botany and New Cultures. Received December 17, 1929.

82035 to 82037. AMYGDALUS PERSICA L. (*Prunus persica* Stokes). Amygdalaceae. **Peach.**

82035. From Tashkent. A large-fruited variety.

82035 to 82046—Continued.

82036. No. 109320. From Tashkent. A large-fruited white variety.

82037. No. 109323. From Isfara, Ferghana Province. *Ak Tchilgi.* An early white variety.

82038 to 82046. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

82038. From the valley of the Kaindi Su River.

82039. No. 109674. From Namangan, Mashad, Uzbekistan. *Khashak.*

82040. No. 109677. From Mashad, Uzbekistan. *Isfara Kandak.*

82041. No. 109690. From Tura Kurgan, Uzbekistan. *Ak Uriuk.*

82042. No. 109701. Near Namangan, Mashad, Uzbekistan. *Psta Kandak.*

82043. No. 109707. From Mashad, Uzbekistan. *Supkhani.*

82044. No. 109708. From Mashad, Uzbekistan. *Supkhani III.*

82045. No. 109711. From Namangan, Mashad, Uzbekistan. *Psta Kandak.*

82046. No. 109735. From Namangan, Mashad, Uzbekistan. *Supkhani I.*

82047. PHYLLOSTACHYS sp. Poaceae. **Bamboo.**

From Avery Island, La. Plants presented by E. A. McIlhenny. Received December 20, 1929.

This bamboo, according to a statement of November 19, 1929, from Mr. McIlhenny, is one of two introductions sent to him from Chico, Calif., by the Department of Agriculture, April 3, 1914, under Nos. 23242 and 23243. It is believed by Mr. McIlhenny to be the smooth-sheathed *P. mitis* and has reached a height of 28 feet in poor soil at Avery Island.

82048 to 82051. HELENIUM AUTUMNALE L. Asteraceae. **Sneezeweed.**

From Dedemsvaart, Netherlands. Roots purchased from B. Ruys, Royal Moerheim Nurseries. Received December 10, 1929.

82048. *Gartensonne.* A variety bearing, between the last of August and the last of October, brilliant golden-yellow flowers with velvet-brown centers.

82049. *Autumn Sunshine.* A tall, hardy hybrid bearing pure yellow flowers.

82050. *Grandicephalum Julisonne.* A variety 3 feet high, bearing an abundance of dark-yellow flowers with dark-brown centers.

82051. Variety *pumilum magnificum.* A variety 2½ feet high, bearing a great number of large, yellow flowers from June until autumn.

82052. HEMEROCALLIS sp. Liliaceae. **Daylily.**

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received October 12, 1929.

No. 1350. From a field near Odomari, Sakhalin Island, September 12, 1929.

82053 to 82058.

From Twyford, Berks, England. Plants purchased from John Waterer Son & Crisp. Received December 13, 1929.

82053 to 82055. CHRYSANTHEMUM MAXIMUM Ramond. Asteraceae. **Pyrenees chrysanthemum.**

82053. *Marion Collier.* A splendid new fringed variety bearing semidouble flowers.

82054. *Mrs. F. Daniels.* A medium-late variety bearing snowy white flowers.

82055. *Phyllis Smith.* A variety bearing an abundance of beautiful lustrous white flowers on long wiry stems. The petals of the flowers are deeply cut, giving the flowers a ruffled appearance.

82056 to 82058. HELENIUM AUTUMNALE L. Asteraceae. **Sneezeweed.**

82056. Variety *pumilum magnificum.* A variety bearing an abundance of yellow flowers between June and September.

82057. *Crimson Beauty.* A greatly improved variety of *cupreum.*

82058. *Julisonne.* Bronzy yellow flowers borne during July and August.

82059 and 82060. AMYGDALUS COMMUNIS L. (*Prunus amygdalus* Stokes). Amygdalaceae. **Almond.**

From Marrakech, Morocco. Seeds presented by H. Brayard, Directeur de la Station d'Essais. Received December 20, 1929.

82059. No. 6054.

82060. No. 6063.

82061 to 82084.

From Chosen and Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82061. ACANTHOPANAX SESSILIFLORUM (Rupr. and Maxim.) Seem. Araliaceae.

No. 1552. From the Imperial Botanical Garden, Keijo, October 26, 1929. From shrubs 6 feet or more high, with dense, almost round clusters of black or dark-purple fruits.

For previous introduction see No. 76203.

82062. ACER sp. Aceraceae. **Maple.**

No. 1567. From the Imperial Botanical Garden, Keijo, October 27, 1929. A small cut-leaved maple with bright-red foliage.

82063 and 82064. BERBERIS spp. Berberidaceae. **Barberry.**

82063. BERBERIS sp.

No. 1705. From the Forest Experiment Station, Government General of Chosen, Keijo, November 6, 1929. A deciduous plant 10 feet high, with rather long racemes of fruits.

82064. BERBERIS sp.

No. 1709. Collected along the road between Rensen and Senkoku, No-

82061 to 82084—Continued.

vember 6, 1929. The young shoots color up beautifully, and the rather small red fruits are in good-sized clusters.

82065 and 82066. BETULA JAPONICA Sieb. Betulaceae. **Birch.**

A hardy ornamental tree, native to Japan, up to 75 feet high, with broadly oval leaves. It is closely related to *Betula pendula.*

For previous introduction see No. 75671.

82065. No. 1518. From Suigen, November 2, 1929.

82066. No. 1576. From Suigen, November 2, 1929. From a small tree at the Agricultural Experimental Forest Station.

82067. CASSIA sp. Caesalpiniaceae.

No. 1612. A wild legume growing along the road in a rather mountainous country near Kuroya, October 18, 1929.

82068. CLEMATIS sp. Ranunculaceae.

No. 1566. From the Imperial Botanical Garden, Keijo, October 27, 1929. A wild clematis having a feathery appearance during this season.

82069. CLERODENDRUM FOETIDUM Bunge. Verbenaceae. **Rose glorybower.**

No. 1543. Between the villages of Kagimori and Chichilu, October 18, 1929. Greenish to purple fruits.

82070 and 82071. CORNUS COREANA Wanger. Cornaceae. **Dogwood.**

A tree, native to Chosen, up to 60 feet high, with reddish-brown branchlets, dark-green elliptic leaves 3 to 6 inches long, loose clusters of small white flowers, and black fruits.

For previous introduction see No. 78401.

82070. No. 1550. From the Imperial Garden, Keijo, October 26, 1929.

82071. No. 1633. From the Chosen Imperial Grounds, Keijo, October 26, 1929.

82072. CRATAEGUS SANGUINEA Pall. Malaceae. **Hawthorn.**

No. 1584. From the arboretum of the forestry branch of the Agricultural Experiment Station, Suigen, November 2, 1929. A native variety with small red fruits. The bright-red globose fruits, one-third inch in diameter, are in rather dense corymbs.

For previous introduction see No. 68414.

82073. CRATAEGUS sp. Malaceae. **Hawthorn.**

No. 1574. A native red hawthorn obtained from the forestry branch of the Agricultural Experiment Station, Suigen, November 2, 1929. A plant about 12 feet high, with fairly large fruits.

82074. CROTALARIA sp. Fabaceae.

No. 1228. Along the path near Zenkoku, November 7, 1929. Wild plants 10 to 18 inches high.

82075. LESPEDEZA STIPULACEA Maxim. Fabaceae.

82061 to 82084—Continued.

No. 1734. Koka, island of Kokato, November 10, 1929. From a dry exposed situation on the dry mountain back of the village society.

82076. DIOSCOREA sp. Dioscoreaceae. **Yam.**

No. 1570. From a wild species along the road between Chotan and Koryoho, October 30, 1929.

82077. DIOSPYROS LOTUS L. Diospyraceae. **Dateplum.**

No. 1731. Sanseiri, island of Kokato, November 10, 1929. From a tree 55 inches in circumference and 30 or more feet high; it is said to be 100 years or more old.

82078. FAGARA AILANTHOIDES (Sieb. and Zucc.) Engl. Rutaceae.

No. 1554. From the Chosen Hotel grounds, Keijo, October 26, 1929. The leaves are compound, and, judging from the quantity of clusters of small shiny black seeds, this tree flowers freely. The seeds have a pleasant odor when crushed and are quite oily.

82079 and 82080. FAGOPYRUM ESCULENTUM Moench. Polygonaceae. **Buckwheat.**

82079. No. 1260. Near Kokato, November 11, 1929. *Soba.*

82080. No. 1700. From the Chosen farmers' market, Keijo, October 31, 1929. *Mei Miru.*

82081. FALCATA JAPONICA Oliver. Fabaceae.

No. 1202. From the woods of the Chosen Government Forest Reservation near Keijo, November 6, 1929. Vines 3 to 4 feet long. They may be of value for green manure.

For previous introduction see No. 65278.

82082. FORSYTHIA sp. Oleaceae.

No. 1628. From the Chosen Imperial Grounds, Keijo, October 26, 1929. A species said to be native to Chosen.

82083. GLEDITSIA HORRIDA (Thunb.) Makino. Caesalpiniaceae. **Japanese honeylocust.**

No. 1622. From the Imperial Botanical Garden, Keijo, October 26, 1929. A large tree, up to 100 feet high, with compressed thorns and purplish branchlets. The pinnately compound leaves are made up of 16 to 20 oblong leaflets 1 to 2 inches long, and the slender racemes of inconspicuous flowers are followed by flat, twisted pods about a foot long. Native to Japan and China.

82084. GOSSYPIUM NANKING Meyen. Malvaceae. **Cotton.**

No. 1710. From the village of Rensen, November 7, 1929. Said to be a native variety. The plants in the small area along the road outside of Rensen, between there and Zenkoku, were not more than about 2 feet high.

82085 to 82101.

From Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82085 to 82101—Continued.

82085 to 82087. HORDEUM VULGARE PALLIDUM Seringe. Poaceae.
Six-rowed barley.

From the Chosen farmers' market, Keijo, October 31, 1929.

82085. No. 1833. *Kannori.* Said to be a spring variety.

82086. No. 1834. *Kannori.* Said to be a spring variety.

82087. No. 1835. *Pori.* Said to be a fall variety.

82088. INDIGOFERA sp. Fabaceae. **Indigo.**

No. 1900. Near Kuroya, October 18, 1929. A species of possible value as a green-manure crop.

82089. JUNIPERUS RIGIDA Sieb. and Zucc. Pinaceae. **Needle juniper.**

No. 1583. From the arboretum of the forestry branch of the Agricultural Experiment Station, Suigen, November 2, 1929. A graceful pyramidal shrub or small tree up to 30 feet high, native to eastern Asia. The branches are ascending and the branchlets pendulous; the spreading, linear-subulate, sharp-pointed leaves are an inch long; and the globose fruits, a quarter of an inch in diameter, are brownish black, covered with bloom.

For previous introduction see No. 78402.

82090 to 82101. LESPEDEZA spp. Fabaceae.

82090. LESPEDEZA sp.

No. 1227. Along the road near Zurkoku, November 7, 1929. Plants, 12 to 18 inches high, growing on rather poor lava soil.

82091. LESPEDEZA sp.

No. 1581. From the forestry branch of the Agricultural Experiment Station, Suigen, November 2, 1929.

82092. LESPEDEZA sp.

No. 1631. From the Chosen Imperial Grounds, Keijo, October 26, 1929. A species known as Chosen tree clover which grows between 10 and 16 feet high. Some of the shrubs measured 1 to 2 inches in diameter.

82093. LESPEDEZA sp.

No. 1632. From the Chosen Imperial Grounds, Keijo, October 26, 1929. A fairly erect, branching variety 12 to 20 inches high, bearing an abundance of small, nearly black seeds.

82094. LESPEDEZA sp.

No. 1634. From the Chosen Imperial Grounds, Keijo, October 26, 1929. A species quite frequent in the woods and waste places in the Chosen Imperial Grounds. It resembles very closely sweetclover in growth and habit, and ranges from 4 to 8 feet high. The black, somewhat elongated seeds are very numerous. Most of the stems are still green, and the buds show prominently and are very abundant about the base of the stem. This species looks promising as a forage plant and no doubt would give a good second growth if cut at blooming time.

82085 to 82101—Continued.

82095. LESPEDEZA sp.

No. 1732. From Koka, island of Kokato, November 10, 1929. A small-leaved, rather tall species.

82096. LESPEDEZA sp.

No. 1733. From Koka, island of Kokato, November 10, 1929. A species growing on the dry clayey mountain back of the village.

82097. LESPEDEZA sp.

No. 1832. From plants, 16 to 24 inches high, growing on very poor soil along a dry bank near Koryoho, October 30, 1929.

82098. LESPEDEZA sp.

No. 1879. From plants, 20 to 30 inches high, in dry sandy foothills near Keijo, November 1, 1929.

82099. LESPEDEZA sp.

No. 1893. From much-branched plants, 18 to 28 inches high, growing on a steep dry rocky hillside near Kami Jinsen, November 4, 1929.

82100. LESPEDEZA sp.

No. 1897. From plants, 4 to 5 feet high, in the woods of the Chosen Government Forest Reservation near Keijo, November 6, 1929. The seeds are borne in clusters on the top branches, and the leaves are broader, longer, and larger than most other lespedezas so far gathered.

82101. LESPEDEZA sp.

No. 1898. From plants in the woods of the Chosen Government Forest Reservation near Keijo, November 5, 1929. The plants are 2 to 3 feet high, with small narrow leaves, and the seeds extend all along the branches and main stems.

82102 to 82107.

From Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82102 and 82103. AESCHYNOMENE INDICA L. Fabaceae.

A bushy leguminous annual with pale-green, feathery leaves, native to the Tropics.

For previous introduction see No. 64616.

82102. No. 1241. Plants, 30 to 40 inches high, growing in the woods of the Chosen Government Forest Reservation near Keijo, November 8, 1929. They may be of value as green manure.

82103. No. 1880. Plants, 24 to 30 inches high, growing under moist conditions in a ditch in the foothills near Keijo, November 1, 1929.

82104. MEIBOMIA JAPONICA (Miquel) Kuntze. Fabaceae.

No. 1899. Plants, 30 to 40 inches high, from the woods of the Chosen Government Forest Reservation near Keijo, November 6, 1929. They may have value as green manure.

82105. OPHIOPOGON sp. Liliaceae.
Snakebeard.

82102 to 82107—Continued.

No. 1556. From a hillside in the Imperial Botanical Garden, Keijo, October 26, 1929.

82106 and 82107. PAEONIA SUFFRUTICOSA Andrews (*P. moutan* Sims). Ranunculaceae. **Tree peony.**

82106. No. 1568. From the Imperial Botanical Garden, Keijo, October 27, 1929.

82107. No. 1627. From the Chosen Imperial Grounds, Keijo, October 26, 1929.

82108 to 82152. PHASEOLUS spp. Fabaceae.

From Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82108 to 82133. PHASEOLUS ANGULARIS (Willd.) W. F. Wight. **Adsuki bean.**

82108. No. 1233. From the Chosen Fair exhibit, Keijo, November 8, 1929; originally grown in the Kokaido Prefecture. Seeds medium sized and maroon colored; used in making confections.

82109. No. 1234. From the Chosen Fair exhibit, Keijo, November 8, 1929; originally grown in the Heian Nando Prefecture. Seeds medium sized and maroon colored; used in making confections.

82110. No. 1240. From plants growing in the woods of the Chosen Government Forest Reservation near Keijo, November 8, 1929. Vines, 5 to 8 feet long, with pods, about 2½ inches long, which shatter very readily. The seeds are very small and black.

82111. No. 1261. Near Kokato, November 11, 1929. *Chokutsu.* A mixed sample of maroon seeds varying in size; used in making confections.

82112. No. 1265. Near Kokato, November 11, 1929. *Chanpatsu.* Seeds medium small and marbled gray and black; used in grinding for cattle feed.

82113 to 82129. From the Chosen farmers' market, Keijo, October 28, 1929.

82113. No. 1678. *Kuzu.* A marbled black and gray variety used, after grinding, for cattle feed.

82114. No. 1679. *Choutsu.* A red variety used in making confections.

82115. No. 1680. *Kuruinpatsu.* A marbled red and black variety used, after grinding, for cattle feed.

82116. No. 1681. *Purugunpatsu.* A red variety used in making confections.

82117. No. 1682. *Chindare.* A marbled gray and black variety used, after grinding, for cattle feed.

82118. No. 1684. *Harugonpachi.* A reddish-brown variety used in making confections.

82119. No. 1685. *Paragonpachi No. 2.* A medium-small, brownish-red variety used for confections.

82108 to 82152—Continued.

82120. No. 1686. *Chaputon.* A mixed sample used, after grinding, for cattle feed.

82121. No. 1687. *Patsu tauri.* A red variety used in making confections.

82122. No. 1688. *Patsu.* A black and red variety used, after grinding, for cattle feed.

82123. No. 1689. *Kunipatsu.* A marbled gray and black variety used, after grinding, for cattle feed.

82124. No. 1690. *Yoganunipatsu.* A black and white variety used, after grinding, for cattle feed.

82125. No. 1691. *Pitanpa.* A marbled black and red variety used, after grinding, for cattle feed, and also for confections.

82126. No. 1692. *Kandopai.* A marbled red and black variety used, after grinding, for cattle feed.

82127. No. 1694. *Kenpipa.* A marbled gray and black variety used, after grinding, for cattle feed.

82128. No. 1695. *Chiyokutsu.* A red variety used in making confections.

82129. No. 1696. *Patsu taure.* A red variety used in making confections.

82130. No. 1831. From plants 18 to 24 inches high, along a dry hillside near Koryoho, October 30, 1929. A prolific variety of good growth.

82131 to 82133. From the Chosen farmers' market, Keijo, October, 1929.

82131. No. 1868. *Kunpun.* A mixed sample used, after grinding, for cattle feed.

82132. No. 1869. *Pachi yappa.* A mixed sample used, after grinding, in making cattle feed.

82133. No. 1870. *Yongonnipa.* A black and white variety used, after grinding, for cattle feed.

82134 to 82145. PHASEOLUS AUREUS Roxb. **Mung bean.**

82134. No. 1235. From the Chosen Fair exhibit, Keijo, November 8, 1929; originally grown in the Heian Hokudo Prefecture. A medium-sized, glossy, olive-green variety used for sprouts.

82135. No. 1236. From the Chosen Fair exhibit, Keijo, November 8, 1929; originally grown in the Kokaido Prefecture. A medium-sized, glossy, light-green variety used for sprouts.

82136. No. 1262. Near Kokato, November 11, 1929. *Rokuto.* A very small olive-green variety used for sprouts.

82137. No. 1263. Near Kokato, November 11, 1929. *Rokuto.* A medium-sized, olive-green variety used for sprouts.

82138 to 82145. From the Chosen farmers' market, Keijo, October 28, 1929.

82138. No. 1683. *Rokuto.* A variety used for sprouts and bean vermicelli.

82108 to 82152—Continued.

82139. No. 1801. *Rokuto.* A green variety used for sprouts and bean vermicelli.

82140. No. 1802. *Rokuto.* A green variety used for sprouts and bean vermicelli.

82141. No. 1803. *Rokuto.* A green variety used for sprouts and bean vermicelli.

82142. No. 1804. *Rotsu.* A green variety used for sprouts and bean vermicelli.

82143. No. 1805. *Tonoran notsuku.* A golden variety used for sprouts.

82144. No. 1806. *Rokutsu.* A variety used for sprouts and bean vermicelli.

82145. No. 1838. *Rokuto.* A variety used for sprouts and bean vermicelli.

82146 to 82150. PHASEOLUS CALCARATUS Roxb. Fabaceae. **Rice bean.**

82146. No. 1210. From plants in the Chosen Government Forest Reservation near Keijo, November 6, 1929. Vines 4 to 6 feet long.

82147. No. 1239. From plants in the woods of the Chosen Government Forest Reservation near Keijo, November 8, 1929. Vines with pods 2½ to 3½ inches long, and small, brown seeds which shatter easily.

82148. No. 1699. From the Chosen farmers' market, Keijo, October 31, 1929. *Ipatsu.* A mixed sample of maroon and greenish-yellow seeds used for cattle feed, and also for cattle medicine for fever.

82149. No. 1839. From the Chosen farmers' market, Keijo, October 31, 1929. *Ipa.* A maroon variety said to be used for cattle feed and especially as a medicine for fever.

82150. No. 1878. From the Chosen farmers' market, Keijo, October 31, 1929. *Ipa.* A greenish-yellow variety used for cattle feed.

82151 and 82152. PHASEOLUS VULGARIS L. **Common bean.**

From the Chosen Fair exhibit, Keijo, November 8, 1929.

82151. No. 1231. Originally grown in the Kankyo Hokudo Prefecture. The medium-small white seeds are like the small pea bean and are used for food.

82152. No. 1232. Originally grown in the Zendra Nando Prefecture. A variety with medium-sized, kidney-shaped seeds which are mottled red and white; used for food.

82153. PHYLLOSTACHYS PUBERULA (Miquel) Munro. Poaceae. **Bamboo.**

From Avery Island, La. Plants presented by E. A. McIlhenny. Received December 21, 1929.

A large bamboo which grows to a height of 50 feet or more, with culm diameters up to 4 inches. The leaves are rather small, 2 to 5 inches long, and two or three on a branchlet. The new culms appear in the spring slightly later than those of *Phyllostachys edulis* and earlier than those of

82153—Continued.

P. bambusoides. The fresh culm sheath is plain mauve colored, puberulent above, glaucous all over, and very handsome with its small terminal wavy pseudophyll of bright green. These plants are from some which were previously sent to Mr. McIlhenny under No. 24761.

82154 to 82160.

From Chosen. Collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received in December, 1929.

82154 and 82155. PISUM SATIVUM L. Fabaceae. **Pea.**

Seeds obtained at the Chosen Fair exhibit, Keijo, November 8, 1929.

82154. No. 1237. Originally grown in the Zendra Nando Prefecture. A medium-sized, nearly round, smooth variety used for food.

82155. No. 1238. Originally grown in the Kankyo Hokudo Prefecture. A medium-sized, light-green, wrinkled variety used for food.

82156. PRUNUS ARMENIACA L. Amygdalaceae. **Apricot.**

No. 1765. Near the village of Ryugakeku, northwest of Heijo, November 17, 1929. Scions cut from a small tree growing in the wild. The branches are a beautiful bright red.

82157. PUERARIA THUNBERGIANA (Sieb. and Zucc.) Benth. Fabaceae. **Kudzu.**

No. 1204. Seeds from plants along the road between Chotan and Koryoho, October 30, 1929. A kudzu which may prove to be a hardier form than the one grown in the United States.

For previous introduction see No. 47579.

82158 and 82159. PYRUS FAURIEI C. Schneid. Malaceae. **Pear.**

For previous introduction see No. 47155.

82158. No. 1578. From Suigen, November 2, 1929. Seeds from a very thorny tree about 8 feet high, with fruits up to the size of a Concord grape, and russet with numerous brown spots. It is said to be a native variety.

82159. No. 1593. From the Forest Experiment Station of the Government General of Chosen, Keijo, November 6, 1929. Seeds from a thorny tree 10 to 12 feet high.

82160. RHAMNUS sp. Rhamnaceae. **Buckthorn.**

No. 1572. Seeds from small spiny shrubs in a river bottom near the Keijo seed and nursery farm outside the East Gate, Keijo, November 1, 1929.

82161 to 82175. RHODODENDRON spp. Ericaceae. **Azalea.**

From Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82161 and 82162. RHODODENDRON DAURICUM MUCRONULATUM (Turcz.) Maxim. **Korean rhododendron.**

82161 to 82175—Continued.

An upright shrub, up to 6 feet high, with rose-colored flowers which appear very early in the spring. The leaves turn a beautiful scarlet in the autumn.

For previous introduction see No. 71126.

82161. No. 1589. From the Forestry Experiment Station of the Government General of Chosen, Keijo, November 6, 1929.

82162. No. 1739. From the mountain side adjacent to the boat landing at Kokan, island of Kokato, November 11, 1929.

82163 and 82164. RHODODENDRON SCHLIPPENBACHII Maxim. **Royal azalea.**

A beautiful deciduous shrub 15 feet high, with large clear pink flowers appearing before the leaves in the spring. The broadly obovate leaves, 2 to 4 inches long, are dark green above, paler beneath, and change to yellow, orange, and crimson in the autumn. Native to Manchuria, Chosen, and Japan.

For previous introduction see No. 78411.

82163. No. 1558. An azalea collected in the wild in the Botanical Garden, Keijo, October 27, 1929.

82164. No. 1590. An azalea from the Forestry Experiment Station of the Government General of Chosen, Keijo, November 6, 1929. It was found growing wild on the decomposed granite hillside.

82165. RHODODENDRON sp.

No. 1557. From small-leaved plants growing wild in the Imperial Botanical Garden, Keijo, October 27, 1929.

82166. RHODODENDRON sp.

No. 1587. A rhododendron, native to Chosen, from the Forestry Experiment Station, Keijo, November 6, 1929.

82167. RHODODENDRON sp.

No. 1588. From the Forestry Experiment Station of the Government General of Chosen, Keijo, November 6, 1929. An azalea, native to Chosen, about 2 feet high, found in decomposed granite soil in exposed dry situations.

82168. RHODODENDRON sp.

No. 1591. From plants in the wild at the Forestry Experiment Station of the Government General of Chosen, Keijo. A native variety with small leaves and lavender-pink flowers.

82169. RHODODENDRON sp.

No. 1620. From the Imperial Botanic Garden, Keijo, October 26, 1929.

82170. RHODODENDRON sp.

No. 1624. From the Chosen Imperial Grounds, Keijo, October 26, 1929.

82171. RHODODENDRON sp.

No. 1625. From the Chosen Imperial Grounds, Keijo, October 26, 1929.

82172. RHODODENDRON sp.

No. 1637. From the woods of the Chosen Imperial Grounds, Keijo, October 27, 1929. Said to be native to Chosen.

82161 to 82175—Continued.

82173. RHODODENDRON sp.

No. 1638. From the woods of the Chosen Imperial Grounds, Keijo, October 27, 1929. Said to be native to Chosen.

82174. RHODODENDRON sp.

No. 1722. From Funai or Koka village, island of Kokato, November 10, 1929.

82175. RHODODENDRON sp.

No. 1723. From the village of Kanchori, island of Kokato, November 10, 1929.

82176 to 82181.

From Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82176 and 82177. RIBES FASCICULATUM Sieb. and Zucc. Grossulariaceae. **Winterberry currant.**

82176. No. 1580. From the arboretum of the forestry branch of the Agricultural Experiment Station, Suigen, November 2, 1929. An interesting native variety.

82177. No. 1714. Collected on the mountain side south of the village of Rensen, November 7, 1929.

82178 to 82180. ROSA spp. Rosaceae. **Rose.**

82178. ROSA sp.

No. 1582. From the arboretum of the forestry branch of the Agricultural Experiment Station, Suigen, November 2, 1929, and said to have originally come from Siberia. A small plant with very small shiny green leaves and black hips.

82179. ROSA sp.

No. 1594. A native Chosen species from the Forestry Experiment Station of the Government General of Chosen, Keijo, November 6, 1929.

82180. ROSA sp.

No. 1598. From the Forestry Experiment Station of the Government General of Chosen, Keijo, November 6, 1929. A strong-growing species with rather long, pointed, bright-red hips.

82181. RUBUS sp. Rosaceae. **Raspberry.**

No. 1592. From the Forestry Experiment Station of the Government General of Chosen, Keijo, November 11, 1929. Trailing vines with rather small leaves.

82182 to 82330. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

From Chosen and Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82182. No. 1203. Obtained in the woods of the Chosen Government Forest Reservation near Keijo, November 6, 1929. Slender vines, 4 to 7 feet long, with small pods which shatter easily.

82183. No. 1206. Obtained near the East Gate, Keijo, November 6, 1929. *Chonte.* A variety bearing medium-sized, yellowish-green to green seeds with a brown hilum. The seeds are used as boiled beans with other foods.

82182 to 82330—Continued.

82184. No. 1207. Obtained near the East Gate, Keijo, November 5, 1929. *Pepute.* A variety bearing medium-sized yellow seeds having a pale-brown to dark-brown hilum, used as boiled beans and for cattle feed.

82185. No. 1208. Obtained near the East Gate, Keijo, November 6, 1929. *Kirugumutu.* A variety having medium-sized yellow seeds with a light-brown hilum, used for making bean curd, miso, and soy sauce.

82186 to 82195. Obtained in the village of Rensen, November 7, 1929.

82186. No. 1211. From the grain market. *Rensen.* Medium-sized yellow seeds with a light-brown hilum; used for making bean curd, miso, and soy sauce.

82187. No. 1212. Obtained in the grain market. *Rensen.* Medium-sized yellow seeds mottled with brown, and having a light-brown hilum; used as boiled beans with other foods and also boiled for cattle feed.

82188. No. 1213. From the grain market. *Rensen.* Medium-sized, yellow seeds with the hilum varying from pale brown to dark brown; used in making bean curd, miso, and soy sauce.

82189. No. 1214. From the grain market. *Rensen.* Medium-sized, yellow seeds with the hilum varying from pale brown to a russet brown; used in making bean curd, miso, and soy sauce.

82190. No. 1215. A large black-seeded variety, used as boiled beans and in making confections.

82191. No. 1216. Medium-sized yellow seeds with a light-brown hilum; used as boiled beans and also boiled for cattle feed.

82192. No. 1217. A slender variety 3 to 4 feet high, with medium-sized seeds having a brown hilum; used as boiled beans and also boiled for cattle feed.

82193. No. 1218. Medium-sized yellow seeds with a brown hilum; used as boiled beans and also boiled for cattle feed.

82194. No. 1219. Medium-small greenish-yellow seeds with a brown hilum; used as boiled beans.

82195. No. 1220. Medium-sized yellow seeds with a brown hilum; used as boiled beans.

82196 to 82201. Near Zenkoku, November 7, 1929.

82196. No. 1221. *Pura Page.* A variety with very large pods, 2½ to 3½ inches long, containing large, much flattened, black and greenish-yellow seeds; used as a green vegetable and as boiled beans.

82197. No. 1222. *Kirugunte.* A variety 30 to 36 inches high, bearing very small yellow seeds with a russet-brown hilum; used for sprouts and as boiled beans with other foods.

82198. No. 1223. *Komijankon.* Large black seeds with the seed coat more or less split; used as boiled beans.

82182 to 82330—Continued.

82199. No. 1224. *Pankon.* Large yellow seeds with seed coat split to a very considerable extent; used as boiled beans and also boiled for cattle feed.

82200. No. 1225. *Pura Page.* Medium-large yellowish-brown seeds; used as a green vegetable and also as boiled beans.

82201. No. 1226. Medium-sized greenish-yellow seeds used as boiled beans and also boiled for cattle feed.

82202. No. 1229. From the Chosen Fair soybean exhibit, Keijo, November 8, 1929; originally grown in Kogendo Prefecture. Large, nearly round, yellow seeds with a light-brown hilum; used in making bean curd, soy sauce, and miso.

82203. No. 1230. From the Chosen Fair soybean exhibit, Keijo, November 8, 1929; originally grown in Keikido Prefecture. Seeds medium sized, nearly round, with a pale hilum; used in making bean curd, miso, and soy sauce.

82204 to 82216. Obtained near Kokato, November 11, 1929.

82204. No. 1242. *Hinkurukon.* Medium-sized, slightly greenish-yellow seeds with a slate-brown hilum.

82205. No. 1243. *Komjankon.* Medium-sized, black, slightly flattened seeds used as boiled beans and in making confections.

82206. No. 1244. *Hinkon.* Medium to medium-large seeds usually with a pale hilum, but sometimes having a brown hilum; used as boiled beans and also boiled for cattle feed.

82207. No. 1245. *Kirumukon.* A variety with very small, nearly round, yellow seeds with a light-brown hilum; used for sprouts.

82208. No. 1246. A variety with very small, nearly round, black seeds which are of the Kingston type [No. 17255], but the hilum is yellow. The variety may be of value for sprouts.

82209. No. 1247. *Hinkon.* Glossy yellow seeds with a brown hilum; used as boiled beans and also boiled for cattle feed.

82210. No. 1248. Seeds medium sized and marbled with brown and yellow, and having a brown hilum; the seed coat is glossy.

82211. No. 1249. *Komujankon.* Seeds mixed blacks, very similar to those of the old Wilson variety [No. 19183].

82212. No. 1250. Mixed sample of medium to medium-large seeds varying from greenish yellow to yellow; used as boiled beans for cattle feed.

82213. No. 1251. *Nuyupuru.* Medium-sized greenish-yellow seeds with a bluish tinge; used as boiled beans.

82214. No. 1252. *Funkon.* Mixed sample of yellow seeds varying in size and shape and in the color of the hilum. The seeds are more or less mottled with brown.

82215. No. 1253. *Komjonkon.* Mixture of black seeds varying in size and shape, but all more or less flattened.

82182 to 82330—Continued.

82216. No. 1254. *Keryian.* Medium-sized yellow seeds varying somewhat in the color of the hilum.

82217. No. 1255. From Sosha, near Jinsen, November 11, 1929. *Komujankon.* Medium-sized black, somewhat flattened seeds; used as boiled beans.

82218. No. 1256. From Sosha, near Jinsen, November 11, 1929. *Funkon.* Medium-sized yellow seeds, more or less mottled with brown, with a light-brown to brown hilum; used as boiled beans and also boiled for cattle feed.

82219. No. 1257. Near Kokato, November 11, 1929. *Burukon.* Medium-large brown seeds used as boiled beans.

82220. No. 1258. Near Kokato, November 11, 1929. A selection from Burukon. Seeds medium large and buff colored.

82221. No. 1266. Near Kokato, November 11, 1929. *Chonteprunkorp.* A mixed variety, undoubtedly heterozygous, with yellow to yellowish green, medium to medium-large seeds; used as boiled beans and also boiled for cattle feed.

82222. No. 1604. From the Asami bean curd or tofu shop, Kagemori, October 18, 1929. Medium-seized yellow seeds grown in this region and used in the manufacture of bean curd.

82223. No. 1605. From the Asami bean curd or tofu shop, Kagemori, October 18, 1929. *Sapporo.* A medium-sized, round, yellow-seeded variety grown in this region and used in the manufacture of bean curd.

82224 to 82228. From a farmer's field near Kagemori, October 18, 1929.

82224. No. 1606. A medium-sized yellow-seeded variety, said to be native to Manchuria; used in the manufacture of bean curd.

82225. No. 1607. A medium-sized, round, yellow-seeded variety with a pale hilum, said to be native to Manchuria; grown extensively for the seeds, which are used in the manufacture of bean curd.

82226. No. 1608. A medium-large, nearly round, yellow-seeded variety with a brown hilum, said to be native to Manchuria; grown in this region for the seeds, which are used in the manufacture of bean curd.

82227. No. 1609. A medium-sized yellow-seeded variety with a light-brown hilum, said to be native to Manchuria; grown largely in this section for the seeds, which are used in the manufacture of bean curd.

82228. No. 1610. A medium-large, greenish-yellow seeded variety with a gray pubescence; said to be native to Manchuria; used for bean curd.

82229 to 82267. Obtained in the Chosen farmers' market, Keijo, October 28, 1929.

82229. No. 1640. *Pimajo.* A variety bearing black-and-white seeds with the seed coat split in fine network; said to be used in making confections.

82230. No. 1641. *Kamunjon.* A medium-sized, slightly flattened, black-seeded variety, said to be native to Chosen; used for making confections.

82182 to 82330—Continued.

82231. No. 1642. *Purukon.* A brown medium-sized, nearly round-seeded variety, said to be native to Chosen; used in making confections.

82232. No. 1643. *Ute.* A very small, light-yellow, round-seeded variety, said to be native to Chosen and to be used for sprouting.

82233. No. 1644. *Mennun.* A variety bearing medium-large, slightly flattened, black-and-brown seeds with the black in concentric rings like the Meyer variety [No. 17852]. It is said to be used in making confections.

82234. No. 1645. *Parakon.* A medium-large green-seeded variety, said to be native to Chosen.

82235. No. 1646. *Taichukon.* A medium-sized, nearly round, brown-seeded variety, said to be native to Chosen.

82236. No. 1647. *Purukon.* A medium-large, slightly flattened, green-seeded variety, said to be native to Chosen.

82237. No. 1648. *Hinkon No. 2.* A yellow-seeded variety which appears to have variations in the size of the seeds and in the color of the hilum; said to be native to Chosen.

82238. No. 1649. *Hinkon No. 1.* A medium-sized yellow-seeded variety with a pale hilum; said to be native to Chosen.

82239. No. 1650. *Konchonkon.* A medium-large, nearly round, black-seeded variety, said to be native to Chosen.

82240. No. 1651. *Kurugunbunko.* Large, nearly round, yellow seeds slightly mottled with brown and having a pale hilum; said to be native to Chosen. The seeds are of the Dixie type.

82241. No. 1652. *Chonte.* A medium-large, nearly round, green-seeded variety, said to be native to Chosen.

82242. No. 1653. *Funkoe.* A medium-sized yellow-seeded variety, more or less mixed; said to be native to Chosen.

82243. No. 1654. *Menunikon.* A variety with medium-sized, slightly flattened, black-and-brown seeds, the black arranged in concentric rings like the Meyer variety [No. 17852]. It is said to be native to Chosen.

82244. No. 1655. *Kirugunte.* Medium-small green-and-yellow mixed varieties, said to be native to Chosen.

82245. No. 1656. *Kirugomu.* A very small yellow round-seeded variety, excellent for sprouts and used in Chosen for this purpose. It is said to be native to Chosen.

82246. No. 1657. *Funkonja.* A medium-sized, nearly round, yellow-seeded variety, more or less mixed. It is said to be native to Chosen.

82247. No. 1658. *Hinkon Kamujankon.* A medium-large, slightly flattened variety which is not a pure sort, as the seeds vary from black and brown

82182 to 82330—Continued.

to black. It is said to be native to Chosen and is used for confections.

82248. No. 1659. *Kamujan.* A medium-large, slightly flattened, black-seeded variety, said to be native to Chosen.

82249. No. 1660. *Hinkon.* A medium-large, nearly round, yellow-seeded variety, said to be native to Chosen.

82250. No. 1661. *Purunkon.* A medium-sized, slightly flattened, deep-green seeded variety said to be native to Chosen.

82251. No. 1662. *Hinkonyon.* A variety bearing medium-large, yellow seeds with a pale hilum, said to be native to Chosen. The seeds are of the Dixie type.

82252. No. 1663. *Funron.* A variety bearing medium-large, nearly round, deep-green seeds, said to be native to Chosen.

82253. No. 1664. *Komujonkon.* A variety bearing medium-large, nearly round, black seeds which are used in making confections. It is said to be native to Chosen.

82254. No. 1665. *Kirukun.* A very small, nearly round, yellow-seeded variety with a pale hilum. It is said to be native to Chosen and to be used for sprouting.

82255. No. 1666. *Kamujankon.* A variety bearing medium-large, more or less flattened black seeds, said to be native to Chosen and used in making confections.

82256. No. 1667. *Kirunte.* A variety bearing medium-small, round, yellow to olive-yellow seeds, said to be native to Chosen and used for sprouting.

82257. No. 1668. *Fukute.* A variety bearing medium-large, slightly flattened, black seeds. It is said to be native to Chosen and to be used for making confections.

82258. No. 1669. *Kirute.* A variety bearing medium-small, nearly round, yellow seeds with a pale hilum. It is said to be native to Chosen and to be used for sprouting. It appears to be an excellent bean for this purpose.

82259. No. 1670. *Chonte.* A medium-sized greenish-yellow variety with a pale hilum, said to be used as boiled beans and also boiled as cattle feed.

82260. No. 1671. *Chonte.* A medium-large, green, nearly round variety, used for boiling with other foods.

82261. No. 1672. *Chonte.* A medium-sized green variety with a light-brown hilum; used for boiled beans and also boiled as cattle feed.

82262. No. 1673. *Pepute.* A medium-large yellow variety with variations as to the color of the hilum; used in making bean curd, miso, and soy sauce.

82263. No. 1674. *Pepute No. 2.* A medium-sized, yellow, more or less mixed variety, used for making bean curd, miso, and soy sauce.

82182 to 82330—Continued.

82264. No. 1675. *Kwan Jo.* A very small, nearly round, yellow variety, used for sprouts and also cooked as cattle feed.

82265. No. 1676. *Ko Ko Te.* A very small black-seeded variety, nearly round, very similar in size and shape to the Kingston [No. 17255]. It is used for boiling.

82266. No. 1677. *Shin Fun.* A medium-sized green variety, used for boiling with other foods.

82267. No. 1693. *Hinkon.* A medium-large yellow-seeded variety, used in making bean curd, miso, and soy sauce, and also boiled as cattle feed.

82268 to 82281. Near Koryoho, October, 1929.

82268. No. 1814. *Bam Pan Kon.* A variety bearing medium-sized green seeds with a deep-brown hilum; used for food purposes.

82269. No. 1815. *Bam Mi Kon.* A medium-large brown variety with a split seed coat; used as boiled beans with other foods.

82270. No. 1816. *Chotan.* Medium-sized yellow seeds with variations in the color of the hilum; used for bean curd, miso, and soy sauce.

82271. No. 1817. A variety said to be wild; it is undoubtedly an escaped cultivated variety that volunteers freely. The seeds are olive green, medium sized, and much flattened, and are easily shattered.

82272. No. 1818. *Chotan.* A variety classed as an excellent grade. The seeds are medium sized, yellow, and have a pale hilum; used extensively because of their quality for bean curd.

82273. No. 1819. *Bam Pan Kon.* Medium-large buff-colored seeds with the seed coat more or less split; used as boiled beans and also cooked as cattle feed.

82274. No. 1820. *Chotan.* A medium-sized yellow variety more or less mixed as to the color of the hilum; used for bean curd, miso, and soy sauce.

82275. No. 1821. A mixture of brown, yellow, and black beans, used as boiled beans with other foods.

82276. No. 1822. *Oriaru Kon.* Seeds mixed, but mostly of a bluish-green color; used for cooking.

82277. No. 1823. Medium-sized black, slightly flattened seeds, used as boiled beans with other foods.

82278. No. 1824. A variety said to be wild, but it appears much like Sooty [No. 16790–A]. The plants are erect, not viny, quite branching, and the seeds are easily shattered. The seeds are medium small, much flattened, and a sooty black.

82279. No. 1825. Mixed sample of black and yellow beans used as boiled beans.

82280. No. 1826. Seeds medium large, black; used for boiled beans and in making confections.

82281. No. 1827. A mixture of yellow seeds, used for making miso, bean curd, and soy sauce.

82182 to 82330—Continued.

82282. No. 1828. Obtained at the railway station, Chotan, October 30, 1929. *Chotan.* Medium-sized yellow seeds with a pale hilum; used for making bean curd, miso, and soy sauce.

82283. No. 1829. From a farmer's field near Koryoho, October 30, 1929. A large, yellow-seeded, somewhat flattened variety; used for boiling with other foods.

82284. No. 1830. A sample of the improved Chotan variety, obtained from the Director of the Soybean Improvement Society in the Yunai section, Chotan, October 30, 1929. A medium-sized yellow variety with a pale hilum. Because of its high protein content it is especially valuable for making soybean curd, and is exported to the main island largely for this purpose.

82285 to 82316. Obtained in the Chosen farmers' market at Keijo, October, 1929.

82285. No. 1840. *Somo Kute.* A very small, nearly round, black variety, very similar to Kingston [No. 17255], but with a yellow germ; used for boiling and also boiled as cattle feed.

82286. No. 1841. *Kon Chote.* A very small, nearly round, yellow-seeded variety, more or less mixed, used for sprouts and also boiled as cattle feed.

82287. No. 1842. *Kon Pute.* A mixed sample of black varieties ranging from medium small to medium large; used as boiled beans with other foods.

82288. No. 1843. *Paru Kon Hon.* Medium-sized brown seeds, used as boiled beans with other foods.

82289. No. 1844. *Kon Pute.* Medium-large black seeds with the seed coat having a tendency to split; used as food.

82290. No. 1845. *Kon Chotan.* Medium to medium-large yellow beans, more or less mixed; used for tofu, miso, and soy sauce.

82291. No. 1846. *Kon Sui Yen.* Seeds very small, yellow, nearly round; used for sprouting and also for cooking.

82292. No. 1847. *Kon Chonge.* Seeds green with a light-brown hilum.

82293. No. 1848. *Purute.* Seeds medium sized, brown; used as boiled beans.

82294. No. 1849. *Kon Chotan.* Medium-sized yellow seeds, grown in the Chotan section; said to be excellent for making bean curd.

82295. No. 1850. *Maru Kon Chotan.* Seeds medium sized, yellow, but mixed as to the color of the hilum; originally from the Chotan district; used for making bean curd, miso, and soy sauce.

82296. No. 1851. *Kon Kongenoto.* Seeds medium-large, yellow, mixed as to color of hilum; used for bean curd, miso, and soy sauce.

82297. No. 1852. *Oiaru.* Medium-large black-and-brown seeds with the colors arranged in concentric bands like the Meyer [No. 17852]; used as boiled beans and in making confections.

82298. No. 1853. *Kon Jon Kon.* A medium-sized black variety, used for boiling with other foods and also in making confections.

82299. No. 1854. *Kon Kiru Muten.* A small, yellow to greenish, nearly round variety, used for sprouting and also cooked for cattle feed.

82300. No. 1855. *Kon Papute.* Mixed sample of yellow-seeded varieties.

82301. No. 1856. *Kiru Gunte.* Medium-small, nearly round, yellow seeds with a slate-brown hilum; used for sprouting and as boiled beans.

82302. No. 1857. *Kiru Gunte.* Very small, nearly round, yellow variety, somewhat mixed; used for sprouting and boiled as cattle feed.

82303. No. 1858. *Hon Kon.* Medium-large yellow seeds with a pale hilum; used for bean curd, miso, and soy sauce.

82304. No. 1859. *Fin Kona Pute.* A medium-sized, yellow, more or less mixed variety; used for bean curd and also boiled as cattle feed.

82305. No. 1860. *Kon Jon Kon.* A medium-large black variety, used for boiling and also for making confections.

82306. No. 1861. *Kirun Kon.* A very small, nearly round, yellow, more or less mixed variety, used for sprouting and also boiled as cattle feed.

82307. No. 1862. *Hon Kon.* A medium-sized yellow variety with a pale hilum; used for making bean curd, miso, and soy sauce. It is very similar to Chotan.

82308. No. 1863. *Kon Chonte.* A medium-sized greenish-yellow variety, very similar to Tokyo [No. 17264]. Used as boiled beans and also cooked as cattle feed.

82309. No. 1864. *Hon Kon.* A medium-sized yellow-seeded variety with a russet-brown hilum; used for bean curd and miso and also boiled for cattle feed.

82310. No. 1865. *Kon Jon Kon.* A large black-seeded variety, used for boiling with other foods and also in making confections.

82311. No. 1866. *Kon Papute.* Seeds medium sized, yellow, with variations in the color of the hilum; used for cattle feed when boiled.

82312. No. 1867. *Kitu Gunte.* A very small, nearly round, yellow-seeded variety, used for sprouts and also boiled for cattle feed.

82313. No. 1871. *Kon Chon.* A medium-small green variety with a light-brown hilum; used for cooking with other foods.

82314. No. 1872. A medium-sized yellow sample, but mixed as to varieties; used for bean curd, miso, and soy sauce, and also boiled for cattle feed.

82182 to 82330—Continued.

82315. No. 1873. Medium-sized, yellow seeds, more or less mottled with brown, with many variations as to color of hilum; used for miso and also cooked for cattle feed.

82316. No. 1874. A medium-large, black, slightly flattened variety, used as boiled beans and also for making confections.

82317. No. 1876. Obtained in Suigen, November 2, 1929. *Kom Jon Kon.* Black seeds of evidently several varieties varying from medium small to medium; used for boiled beans with other foods.

82318. No. 1877. Obtained in Suigen, November 2, 1929. *Fun Kon.* Seeds yellow, but of several varieties; used in making miso and also cooked for cattle feed.

82319 to 82325. Obtained in Kami Jinsen, November 4, 1929.

82319. No. 1881. *Hinkon.* A very small, nearly round, yellow-seeded variety with a light-brown hilum; used for making sprouts.

82320. No. 1882. *Fu Yon Kon.* Medium-small green seeds with a white hilum; used for sprouts and boiled beans.

82321. No. 1883. *Fun Ban Kon.* Mixed sample with large percentage of bluish black on yellow; used as a cattle feed when cooked.

82322. No. 1884. *Kiru Gunte.* A small yellow-seeded variety with a pale hilum; used for sprouts.

82323. No. 1885. *Pa Ran Kon.* Medium-small greenish-yellow seeds with a light-brown hilum; used for sprouts and as boiled beans.

82324. No. 1886. *Komu Jon Kon.* Medium-large black seeds, used as boiled beans and in making confections.

82325. No. 1887. *Hon Jon Kon.* Mixed sample of yellow-seeded varieties, used as boiled beans and also boiled for cattle feed.

82326 to 82330. Obtained in Jinsen, November 4, 1929.

82326. No. 1888. *Chotan.* A medium-sized, nearly round, glossy yellow variety with a pale hilum. It is extensively grown and considered one of the best varieties for making bean curd, and is also used for making miso and soy sauce.

82327. No. 1889. *Chotan.* Seeds medium sized, yellow with a pale hilum; used for bean curd, miso, and soy sauce.

82328. No. 1890. *Rensen.* Medium-sized, glossy yellow seeds with a pale hilum and a light mixture of yellow seeds with a light-brown hilum; used for bean curd, miso, and soybean sauce.

82329. No. 1891. *Rensen.* Seeds medium-sized, glossy yellow, with a considerable proportion having a light-brown hilum; used for bean curd, miso, and soy sauce.

82330. No. 1892. Seeds of a medium-sized yellow variety with a russet-brown hilum; said to be an excellent oil variety.

82331 to 82341.

From Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82331. SOPHORA sp. Fabaceae.

No. 1201. Plants, 3 to 4 feet high, growing in the woods of the Chosen Government Forest Reservation near Keijo, November 6, 1929. Of possible value as a green manure.

82332 and 82333. SORBUS ALNIFOLIA (Sieb. and Zucc.) Koch (*Pyrus alnifolia* Franch.). Malaceae. **Mountain-ash.**

An upright tree with a dense round head, attractive bright-green foliage, and clusters of small red and yellow fruits. Native to eastern Asia.

For previous introduction see No. 77844.

82332. No. 1551. From trees, 20 feet or more high, growing in the Imperial Botanical Garden, Keijo, October 26, 1929.

82333. No. 1564. From Keijo, October 28, 1929.

82334 to 82340. SORGHUM VULGARE Pers. Poaceae. **Sorghum.**

82334. No. 1264. Near Kokato, November 11, 1929. *Susa.* A variety used as a food.

82335. No. 1708. From an upland valley with apparently rather adverse conditions, between Rensen and Zenkoku, November 7, 1929.

82336 to 82340. From the Chosen farmers' market, Keijo, October 31, 1929. *Susu.*

82336. No. 1807.

82337. No. 1808.

82338. No. 1809.

82339. No. 1810.

82340. No. 1811.

82341. SPIRAEA SALICIFOLIA L. Rosaceae. **Willowleaf spirea.**

No. 1579. From the forestry branch of the Agricultural Experiment Station, Suigen, November 2, 1929.

82342 to 82358.

From Chosen and Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82342. SYRINGA sp. Oleaceae. **Lilac.**

No. 1595. From the Forestry Experiment Station of the Government of Chosen, Keijo, November 6, 1929. Said to be the best white variety; native to Chosen.

82343 to 82345. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

82343. No. 1617. From the Chosen Imperial Tree Peony Gardens, Keijo, October 26, 1929. Plants about 3 feet long with numerous long stems and quite an abundance of flower heads.

82344. No. 1618. From the Chosen Imperial Grounds, Keijo, October 26, 1929. Seeds deep purple.

82342 to 82358—Continued.

82345. No. 1619. From the Chosen Imperial Grounds, Keijo, October 26, 1929.

82346. VIBURNUM sp. Caprifoliaceae.

No. 1553. From the Imperial Botanical Garden, Keijo, October 26, 1929. A variety said to be native to Chosen, with handsome foliage varying from green to deep maroon, and black fruits.

82347 to 82351. VIGNA SINENSIS (Torner) Savi. Fabaceae. **Cowpea.**

82347. No. 1259. Near Kokato, Chosen, November 11, 1929. *Tonbu.* A brown-eyed, small, white variety used as food.

82348 to 82351. Obtained in the Chosen farmers' market, Keijo, October 31, 1929.

82348. No. 1697. *Sasage.* A medium-small variety, white, with brown eye; used for food.

82349. No. 1698. *Tongu.* A medium-small variety, white, with brown eye; used for food.

82350. No. 1836. *Tonbu.* A medium-small variety, white, with brown eye.

82351. No. 1837. *Tonbu.* A medium-small variety with brown eye; used for food.

82352. VITIS sp. Vitaceae. **Grape.**

No. 1548. Obtained along the railroad between Onohara and Kuraya, October 18, 1929. A low vine with small compact clusters of small deep-purple to black berries.

82353. ZELKOVA SERRATA (Thunb.) Makino (*Z. acuminata* Planch.). Ulmaceae. **Sawleaf zelkova.**

No. 1565. From the Imperial Botanical Garden, Keijo, October 27, 1929. A handsome tree up to 90 feet high, with a short trunk dividing into many upright spreading branches and forming a broad, round-topped head. The sharply serrate leaves are ovate and are usually 2 to 3 inches long, or on young shoots up to 8 inches long.

For previous introduction see No. 79148.

82354. (Undetermined.)

No. 1209. From the Chosen Government Forest Reservation near Keijo, November 6, 1929. A plant about 3 feet high which may be of value for green manure.

82355. (Undetermined.)

No. 1630. A shrub about 8 feet high used as an ornamental in the Chosen Imperial Grounds, Keijo, October 26, 1929. This somewhat resembles the tree lespedeza, but bears beanlike pods.

82356. GREWIA PARVIFLORA Bunge. Tiliaceae.

No. 1517. From the Forestry Experiment Station of the Government of Chosen, Keijo, November 6, 1929.

For previous introduction see No. 71146.

82357. (Undetermined.)

82342 to 82358—Continued.

No. 1611. A very viny legume growing along the road near Onohara, October 18, 1929. It makes a fairly abundant growth and may have value as green manure.

82358. (Undetermined.)

No. 1703. From the Forestry Experiment Station of the Government General of Chosen, Keijo, November 6, 1929. A small deciduous shrub about 5 feet high.

82359 to 82383.

From Nancy, France. Plants purchased from Lemoine & Sons. Received December 17, 1929.

82359 to 82365. CLEMATIS spp. Ranunculaceae.

82359. CLEMATIS CHRYSOCOMA Franch.

A woody vine up to 20 feet high, or often an upright shrub, with the young branchlets, leaves, and flower stalks covered with dense yellow pubescence. The leaves are made up of three ovate to obovate 3-lobed or coarsely toothed leaflets, and the pink-tinged white flowers, nearly 2 inches across, are borne either in fascicles of one to five from axillary buds or on the new growth, continuing to bloom through August and September. Native to western China.

82360. CLEMATIS FARGESII Franch.

A woody climber up to 20 feet high, with bipinnate leaves made up of five to seven 3-foliolate or incisely serrate ovate leaflets. The pure white flowers, 1 to 2 inches across, are solitary or in 3-flowered clusters and are borne on a peduncle 4 to 8 inches long. Native to western China.

For previous introduction see No. 49935.

82361 to 82363. CLEMATIS MONTANA Buch.-Ham. **Anemone clematis.**

82361. Variety *Perfecta.* A variety bearing lilac-white flowers with broad sepals.

82362. Variety *Superba.* A hybrid between *Clematis montana rubens* and *C. patens.* It is a very vigorous climber with large white flowers.

82363. Variety *Undulata.* A variety bearing large flowers which are white flushed with mauve and have waved sepals.

82364. CLEMATIS MONTANA LILACINA Lemoine.

A variety with large azure-lilac flowers.

82365. CLEMATIS MONTANA WILSONII Sprague.

A hardy climbing clematis native to western China. It often attains a height of 20 feet or more, and during June and July bears an abundance of sweet-scented flowers about an inch long, which are white, occasionally yellowish, or rosy tinged. There is generally a second flower in the autumn.

For previous introduction see No. 62705.

82359 to 82383—Continued.

82366. CLEMATOCLETHRA INTEGRIFOLIA Maxim. Dilleniaceae.

A deciduous climbing shrub with ovate-oblong leaves 2 to 4 inches long, and white clethralike flowers, either solitary or in few-flowered clusters, followed by berrylike black fruits. Native to northwestern China.

82367. ESCALLONIA sp. Escalloniaceae.

C. F. Ball. A red-flowered hybrid made by C. F. Ball at the Botanic Gardens, Glasnevin. It is believed to be a cross between *Escallonia rubra* and *E. macrantha.*

For previous introduction see No. 80101.

82368 to 82371. JASMINUM spp. Oleaceae. **Jasmine.**

82368. JASMINUM BEESIANUM Forrest and Diels. **Rosy jasmine.**

A slender shrub about 3 feet high, with grooved branchlets and leaves reduced to one lanceolate leaflet 2 to 4 inches long. The pink to deep-rose, salver-shaped fragrant flowers are borne in clusters of one to three. Native to western China.

82369. JASMINUM GIRALDII Diels.

A spreading deciduous shrub up to 6 feet high, with hairy, angled branchlets, compound leaves of three to five ovate leaflets, and yellow flowers in clusters of three to nine, followed by black fruits. Native to central China.

82370 and 82371. JASMINUM HETEROPHYLLUM Roxb.

82370. A stout shrubby jasmine with shiny, alternate, narrowly oval leaves up to 5 inches long. The flowers are yellow, up to one-third of an inch long, and occur in compound cymes.

82371. Variety *glabricymosum.* A smooth-flowered form of this Himalayan shrub which is said to be native to China. It is a strong-growing bush with a profusion of golden-yellow flowers.

For previous introduction see No. 76581.

82372 to 82374. NEILLIA spp. Rosaceae.

82372. NEILLIA LONGIRACEMOSA Hemsl.

A deciduous shrub up to 10 feet high, with ovate-cordate, usually entire leaves 2 to 3 inches long, and tubular pink flowers in dense solitary racemes sometimes 6 inches long. Native to western China.

82373. NEILLIA RIBESIOIDES Rehder.

A deciduous shrub 3 to 6 feet high, with triangular-ovate, usually 3-lobed leaves, and clusters of pink flowers. Native to western China.

82374. NEILLIA THIBETICA Franch.

A deciduous shrub closely related to *Neillia longiracemosa,* but usually 3 to 6 feet high, the leaves slightly three lobed, and the racemes shorter. Native to western China.

82375. NOTHOPANAX DAVIDI (Franch.) Harms. Araliaceae.

An evergreen shrub with smooth brownish bark, thick leathery bright-green entire or sometimes 3-lobed leaves, and rather large greenish-white flowers in terminal racemose umbels up to 6 inches long. Native to the mountains of Moupin, China.

82376. OSMANTHUS ARMATUS Diels. Oleaceae.

An evergreen shrub, native to China, up to 15 feet high, with opposite, oblong, spiny-toothed leaves 4 to 6 inches long, axillary or terminal panicles of small fragrant white flowers, and ovoid fruits.

For previous introduction see No. 77688.

82377. OSMANTHUS SERRULATUS Rehder.

An evergreen shrub or small tree, native to China, sometimes 35 feet high, with coriaceous obovate spiny serrulate leaves 3 to 5 inches long, panicles of fragrant white flowers, and black fruits. It is closely related to *Osmanthus fragrans.*

For previous introduction see No. 77689.

82378. STYRAX JAPONICUM Sieb. and Zucc. Styracaceae. **Japanese snowbell.**

Variety *fargesii.* A handsome variety introduced from central China by the late Maurice de Vilmorin. It differs from the well-known type by its taller branches, more ample foliage, and larger pendulous flowers of a snowy whiteness.

For previous introduction see No. 78156.

82379 to 82383. VIBURNUM spp. Caprifoliaceae.

82379. VIBURNUM BITCHIUENSE Makino. **Yeddo viburnum.**

A deciduous shrub, closely related to *Viburnum carlesii,* with more slender branches and smaller leaves and cymes. It is a shrub 3 to 5 feet high, bearing fragrant white flowers and blue-black fruits. Native to Japan.

82380. VIBURNUM CYLINDRICUM Buch.-Ham.

A handsome evergreen shrub or small tree which is very distinct because of its tubular-campanulate flowers. The dark dull-green, nearly entire oblong leaves are 3 to 8 inches long, the white flowers have violet anthers, and the fruits are purplish black. Native to the Himalayas and western China.

For previous introduction see No. 47826.

82381. VIBURNUM FRAGRANS Bunge.

A shrub up to 10 feet high, bearing an abundance of very fragrant flowers which are white shaded with rose and appear in the early spring before the leaves. The elliptic, serrate leaves are 2 to 4 inches long, with purplish petioles, and the ovoid fruits are blue black. Native to northern China.

For previous introduction see No. 66319.

82382. VIBURNUM PROPINQUUM Hemsl.

An evergreen shrub with lustrous reddish-brown branchlets, elliptic to ovate-lanceolate nearly entire leaves 2 to 4 inches long, and greenish-white flowers followed by globular blue-black fruits. Native to central and western China.

82359 to 82383—Continued.

82383. VIBURNUM UTILE Hemsl. Service viburnum.

A handsome evergreen shrub of rather open habit with dark glossy green, leathery leaves and pure white flowers produced in dense, terminal, rounded trusses during the spring. These are succeeded by oval, blue-black berries. The shrub is native to western China, where it is said to grow on limestone soils.

For previous introduction see No. 66323.

82384 to 82396.

From Erfurt, Germany. Bulbs purchased from Haage & Schmidt. Received December 16, 1929.

82384 to 82394. ALLIUM spp. Liliaceae. Onion.

82384. ALLIUM ATROPUREUM Waldst. and Kit.

For previous introduction and description see No. 82009.

82385. ALLIUM AZUREUM Hort.

A blue-flowered onion, to be grown for identification.

82386. ALLIUM CYANEUM Regel.

A rather dwarf plant, less than a foot high, with small heads of pendulous bright-blue flowers. Native to northern China.

For previous introduction see No. 78979.

82387. ALLIUM GIGANTEUM Regel.

One of the tallest members of the genus, becoming 4 feet high. It is native to the Himalayas. The bulbs are large, and the fleshy leaves are about 18 inches long, lying close to the ground. The bright-lilac flowers are in heads 4 inches in diameter.

For previous introduction see No. 78981.

82388. ALLIUM GLAUCUM Hort.

An onion with broad glaucous leaves and small heads of rose-colored flowers in September.

82389. ALLIUM NARCISSIFLORUM Vill.

For previous introduction and description see No. 82016.

82390. ALLIUM OSTROWSKIANUM Regel.

For previous introduction and description see No. 82017.

82391. ALLIUM PENDULINUM Tenore.

An alpine, native to Italy, with linear keeled leaves and long-peduncled nodding whitish flowers.

For previous introduction see No. 78990.

82392. ALLIUM ROSENBACHIANUM Regel.

A bulbous perennial, native to Turkestan, with oblong lanceolate leaves 8 inches high, and a large globular umbel of purple flowers on a scape 2 feet high.

For previous introduction see No. 76209.

82393. ALLIUM SCHUBERTII Zucc.

A large bulbous plant, native to Asia Minor and Persia, with broadly strap-shaped leaves, and huge subglobose rose-colored flower heads which are at times a foot in diameter.

82384 to 82396—Continued.

82394. ALLIUM STIPITATUM Regel.

A herbaceous perennial with linear-lanceolate leaves, a stem 2 to 3 feet high, and many-flowered hemispheric umbels of rose-lilac fragrant flowers. Native to central Asia.

82395. NOTHOSCORDUM FRAGRANS (Vent.) Kunth. Liliaceae.

A bulbous plant, native to tropical America, closely related to the onion. The bulb is round and yellowish white, and the linear, obtuse leaves are 8 to 12 inches long. The fragrant flowers, white flushed with pink, have purplish stamens and anthers and are borne on a scape 20 inches high.

For previous introduction see No. 79175.

82396. ROSCOEA PURPUREA J. E. Smith. Zinziberaceae.

Variety *sikkimensis*. A form with more numerous flowers of a different shade of purple from the type, which is a herbaceous perennial a foot high with lanceolate leaves and purple, pale-lilac, or white flowers in a sessile spike. Native to the Himalayas in northern India.

82397. QUERCUS SUBER L. Fagaceae. Cork oak.

From Santa Olalla, Huelva, Spain. Acorns presented by Edward E. Silvers, Armstrong Cork Co., Seville, through Frank L. Goll, Bureau of Plant Industry. Received December 20, 1929.

For previous introduction see No. 76019.

82398. FICUS ALTISSIMA Blume. Moraceae. Lofty fig.

From Oneco, Fla. Plants presented by N. A. Reasoner, Royal Palm Nurseries. Received November 4, 1929.

A large spreading tree native to the tropical Himalayas. It is said to yield as good caoutchouc as its relative, *Ficus elastica*.

For previous introduction see No. 47843.

82399. BUTIA CAPITATA (Mart.) Beccari (*Cocos capitata* Mart.). Phoenicaceae. Palm.

From Nice, France. Seeds collected by Dr. H. S. Fawcett, College of Agriculture, University of California, Riverside, Calif. Received December 12, 1929.

A large coconutlike palm, native to Argentina, with a spineless trunk, pinnate leaves, and large bunches of small edible fruits. It is said to be hardier than any species of Cocos.

For previous introduction see No. 77149.

82400. MALUS SYLVESTRIS Mill. (*Pyrus malus* L.). Malaceae. Apple.

From Saonara, near Padua, Italy. Trees purchased from Fratelli Sgaravatti. Received December 14, 1929.

Limoncella. A winter apple producing ovoid, medium-sized fruits with yellow skin and tender flesh of exquisite flavor.

82401 to 82403.

From Heijo, Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 16, 1929.

82401 to 82403—Continued.

82401. CRATAEGUS sp. Malaceae. **Hawthorn.**

No. 1784. Obtained in the market, November 18, 1929. *Irubin.* The native name may mean hawthorn or small fruit. The fruits are medium sized.

82402. CELASTRUS ARTICULATUS Thunb. Celastraceae. **Bittersweet.**

No. 1768. A vine climbing over a rosebush along the roadside northwest of Heijo, November 17, 1929.

82403. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

No. 1282. November 16, 1929. *Purakon.* A variety with medium-sized oval-shaped brown seeds, said to be used for cattle feed when boiled.

82404 and 82405. MEDICAGO SATIVA L. Fabaceae. **Alfalfa.**

From Italy. Seeds obtained through H. L. Westover, Bureau of Plant Industry. Received December 20, 1929.

82404. From the Stabilimento Guido Calosi, Florence.

82405. From Fratellia Ingegnolia, Milan.

82406. FRAGARIA HAGENBACHIANA Lange. Rosaceae. **Strawberry.**

From Paris, France. Plants presented by Vilmorin-Andrieux & Co. Received December 26, 1929.

A French strawberry closely related to *Fragaria viridis,* but flowering earlier and having all the leaflets petiolate.

82407. PISTACIA VERA L. Anacardiaceae. **Pistache.**

From Rahimabad, Persia. Seedlings collected by W. E. Whitehouse, Bureau of Plant Industry. Received December 27, 1929.

No. 174. From the nursery of Cholam Reza Yazdi, November 19, 1929. Seedling trees grown by a Persian pistache grower from selected nuts of large size.

82408. BROMELIA PINGUIN L. Bromeliaceae.

From Rio Piedras, Porto Rico. Seeds presented by Pedro Osuna, Horticulturist, Insular Experiment Station, Department of Agriculture and Labor. Received December 27, 1929.

A tropical succulent plant, 3 to 4 feet high, with spiny margined leaves that turn red with age. The reddish flowers are in dense panicles, and the acid fruits, the size of plums, yield a cooling juice. Native to the West Indies.

For previous introduction see No. 76199.

82409. CEIBA AESCULIFOLIA (H. B. K.) Britt and Baker. Bombacaceae.

From Zacuapam, Huatusco, Vera Cruz, Mexico. Seeds presented by Dr. C. A. Purpus. Received December 27, 1929.

The horsechestnut-leaved pochote is a medium-sized tree 20 to 30 feet high and usually diffusely branched. Its trunk and larger branches bear stout coarse spines. The leaves are palmately compound, with five to seven elliptic or obovate leaflets, 2 to 8 inches long, usually glaucescent beneath. The flowers are white at first, but turn brown with age. The petals are 4 to 6 inches long, yellow, hairy on the outside. The seed pods are ellipsoid oblong, 5 to 8 inches long, five celled, with five segments about one-fourth of an inch thick, and bearing on the placental membranes white downlike kapok and brown finely roughened seeds, irregularly spheroidal, one-fourth of an inch in diameter. The down, consisting of fine unicellular hairs about an inch long, may serve the same purpose as kapok for filling mattresses, cushions, life preservers, and insulation. This tree is native from Vera Cruz across southern Mexico to southern Jalisco and southward to Guatemala.

82409—Continued.

82410 to 82412. DIOSPYROS KAKI L. f. Diospyraceae. **Kaki persimmon.**

From Keijo, Chosen. Scions collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 23, 1929.

Obtained from trees at the residence of Chinzo Herata on Keijo Shrine, November 21, 1929.

82410. No. 1931. *Banshi.* A variety bearing rather small flat fruits.

82411. No. 1932. *Banshi.* A rather small flat persimmon, supposed to be the same as No. 1931 [No. 82410], but the scions are from a different tree.

82412. No. 1933. *Dangu rana.* A rather small round-fruited variety.

82413 to 82418. AMYGDALUS PERSICA L. (*Prunus persica* Stokes). Amygdalaceae. **Peach.**

From Palestine. Seeds presented by A. Grasovsky, Subinspector of Agriculture and Forests, Southern Circle, Jerusalem. Received December 30, 1929.

82413. No. 1. *Baladi.* From Jerusalem.

82414. No. 2. *Baladi.* From Motza.

82415. No. 6. *Baladi.* From Safed.

82416. No. 3. *Franji.* From Nazareth.

82417. No. 4. *Franji.* From Artas.

82418. No. 5. *Franji.* From Acre.

82419 to 82446.

From Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 23, 1929.

82419. CHRYSANTHEMUM MORIFOLIUM (Ramat.) Hemsl. Asteraceae. **Mulberry chrysanthemum.**

No. 1745. Obtained at the base of Shariin Fuji to the south and southeast of Shariin, November 14, 1929. A rather tall-growing wild species with yellow flowers about half an inch in diameter.

82420. COCCULUS TRILOBUS (Thunb.) DC. Menispermaceae. **Japanese snailseed.**

No. 1738. Growing near the top of the mountain near the office of the village society at Koka, island of Kokato, November 10, 1929. Fruits bright blue.

82421. DIOSPYROS LOTUS L. Diospyraceae. **Dateplum.**

82419 to 82446—Continued.

No. 1730. Obtained from young trees or rather water sprouts at Koka, island of Kokato, November 10, 1929. A native wild species used for stocks.

82422. CELASTRUS ARTICULATUS Thunb. Celastraceae. **Bittersweet.**

No. 1719. From a vine on the hill north of the village of Koka, near the office of the village society, island of Kokato, November 10, 1929.

82423. EUONYMUS sp. Celastraceae.

No. 1766. Near the village of Ryugakaku, northwest of Heijo, November 17, 1929. *Daido gun.* A dwarf-growing species.

82424. EUONYMUS sp. Celastraceae.

No. 1771. Near the village of Ryugakaku, November 17, 1929. Small plants with winged branches.

82425 to 82427. FAGOPYRUM ESCULENTUM Moench. Polygonaceae. **Buckwheat.**

82425. No. 1748. Obtained in the market at Kokaikashu, November 15, 1929. Used chiefly for noodles.

82426. No. 1749. Obtained in the market at Kokaikashu, November 15, 1929. Used chiefly for noodles.

82427. No. 1789. Heijo, November 18, 1929. Used chiefly for noodles.

82428. FRAXINUS sp. Oleaceae. **Ash.**

No. 1746. From a small tree at the base of Shariin Fuji, November 14, 1929. One tree in the village measured 18 inches or more in diameter and 50 feet or more high. It is probably a good timber tree.

82429 and 82430. GOSSYPIUM NANKING Meyen. Malvaceae. **Cotton.**

82429. No. 1735. Koka, island of Kokato, November 10, 1929. From a small planting on very poor land, the plants measuring 18 inches to 2 feet high.

82430. No. 1770. Ringen, November 17, 1929. Seeds from what was left in a small planted area of Chosen native cotton.

82431. HEMEROCALLIS sp. Liliaceae. **Daylily.**

No. 1772. Obtained from plants in the woods near the road a short distance from the small village of Ringen, November 17, 1929. The flower stalks are 1 to 2 feet high and the flowers probably light yellow.

82432 to 82438. LESPEDEZA spp. Fabaceae. **Bushclover.**

82432. LESPEDEZA sp.

No. 1273. From plants near the top of Shariin Fuji, November 14, 1929. A fairly erect variety 12 to 18 inches high.

82433. LESPEDEZA sp.

No. 1274. From plants along the slope of Shariin Fuji, near Shariin, November 14, 1929. An erect variety, 2 to 3 feet high, with an abundance of pods on the branches and main stem.

82434. LESPEDEZA sp.

No. 1275. From plants along the slope of Shariin Fuji, Shariin, November 14, 1929. An erect variety, 2 to 3 feet high, with buttonlike clusters of pods on the main stem and branches.

82435. LESPEDEZA sp.

No. 1778. From plants along the mountain side near Fusanmeu, November 17, 1929. A variety over 3 feet high.

82436. LESPEDEZA sp.

No. 1779. Gathered along the mountain side near Fusanmeu, November 17, 1929. A variety of excellent growth 10 to 16 inches high, with an abundance of pods.

82437. LESPEDEZA sp.

No. 1780. Gathered from plants along the mountain side near Fusanmeu, November 17, 1929. A variety over 3 feet high, bearing pods along the main stem and branches.

82438. LESPEDEZA sp.

No. 1781. Gathered from plants along the mountain side near Fusanmeu, November 17, 1929. A variety 3 to 4 feet high.

82439. PISUM SATIVUM L. Fabaceae. **Pea.**

No. 2015. Obtained in the Chosen grain market at Keijo, November 21, 1929. Reddish, medium-sized, wrinkled seeds.

82440. RHAMNUS sp. Rhamnaceae. **Buckthorn.**

No. 1783. Northwest of Heijo. A variety over 5 feet high.

82441 to 82443. RHODODENDRON spp. Ericaceae. **Azalea.**

82441. RHODODENDRON sp.

No. 1750. Obtained from the garden of the Chikuzenya Inn, Shariin, November 15, 1929. A rather small-leaved variety 5 to 6 feet high.

82442. RHODODENDRON sp.

No. 1767. From small plants on the mountain side northwest of Heijo, November 17, 1929.

82443. RHODODENDRON sp.

No. 1773. From small plants, seldom more than 18 inches high, growing on an exposed dry rocky hill or mountain side, Ringen, November 17, 1929.

82444. RIBES sp. Grossulariaceae.

No. 1721. Collected just back of the office of the village society, Funai or Koka, island of Kokata, November 10, 1929, and also from plants in the village of Sanseri.

82445. ROSA sp. Rosaceae. **Rose.**

No. 1769. Collected from plants along the roadside northwest of Heijo, November 17, 1929. A variety 6 feet or more high which did not resemble the common wild rose of Japan.

82446. TRIFOLIUM PRATENSE L. Fabaceae. **Red clover.**

No. 1271. From plants in front of the Western Chosen Agricultural Experiment Station, Shariin, November 13, 1929. A variety about 2 feet high, with many stems and an abundance of seeds.

82447. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae.
Common wheat.

From Russia. Seeds collected by A. J. Bruman. Received December 26, 1929.

From the Chongar Peninsula, a small peninsula in the Azof Sea, north of the Crimea, August, 1929. *Krimka Chongarka.* A winter wheat of the variety *Krimka* which was brought to Chongar from the Crimea about seven or eight years ago. It has apparently become thoroughly acclimated to the severe winters and extremely dry summers of Chongar. The name *Krimka Chongarka* is suggested for the reason that the variety has become quite distinct from the original Krimka.

82448 to 82467. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae.
Common wheat.

From Sydney, New South Wales, Australia. Seeds presented by J. T. Pridham, plant breeder of the Cowra Experiment Farm of the Department of Agriculture. Received November 1, 1929.

82448. *Aussie.*

82449. *Bena.*

82450. *Bobin.*

82451. *Boolaroo.*

82452. *Boonoo.*

82453. *Bredbo.*

82454. *Burrill.*

82455. *Canberra.*

82456. *Canimbla.*

82457. *Duchess.*

82458. *Exquisite.*

82459. *Gluyas.*

82460. *Gresley.*

82461. *Marshall's No. 3.*

82462. *Nabawa.*

82463. *Ranee.*

82464. *Union.*

82465. *Wandilla.*

82466. *Waratah.*

82467. *Yandilla King.*

82468. DIOSCOREA SEPTEMLOBA Thunb. Dioscoreaceae. **Yam.**

From Keijo, Chosen. Tubers collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 23, 1929.

No. 1929. November 21, 1929. The tubers received were irregularly subglobose and weighed slightly more than a pound each. The flesh of this yam is fine grained and very white and when cooked might easily pass for a white potato of exceptionally high quality.

82469. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae.
Common wheat.

From Heijo, Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 23, 1929.

No. 1785. November 18, 1929. *Poubiru.* Said to be a spring wheat.

82470 to 82488.

From Chosen. Seeds presented by T. Watanabe, Forest Experiment Station, Keijo. Received December 26, 1929.

82470. ABIES HOLOPHYLLA Maxim. Pinaceae. **Needle fir.**

From Kyosen. A tall, handsome fir, eventually 100 feet or more high, with stout spreading or ascending branches and dark-green foliage.

For previous introduction see No. 66257.

82471. ACER PSEUDO-SIEBOLDIANUM Komarov. Aceraceae. **Maple.**

From Hosen. A small maple, native to Manchuria, with cordate leaves divided into 9 to 11 lanceolate serrate lobes, and corymbs of purple flowers.

For previous introduction see No. 78399.

82472. ACER TRIFLORUM Komarov. Aceraceae. **Maple.**

From Hosen. A tree up to 25 feet high, with glabrous branchlets. The leaves are made up of three oblong-lanceolate leaflets with entire or coarsely toothed margins, and the flowers, in groups of three, are followed by densely pubescent fruits having wide-spreading, nearly straight wings nearly 2 inches long. Native to Chosen and Manchuria.

82473. ALNUS HIRSUTA SIBIRICA (Fisch.) C. Schneid. Betulaceae. **Alder.**

From Keijo. A handsome tree, native to Siberia, 60 feet high, of broad-pyramidal habit and vigorous growth, with broadly ovate leaves, about 5 inches long, which are dark green above and glaucous beneath.

For previous introduction see No. 76050.

82474. BETULA DAVURICA Pall. Betulaceae. **Birch.**

From Keijo. A tree up to 60 feet high, with widespreading branches and purplish-brown flaky bark. The broadly wedge-shaped leaves, 2 to 4 inches long, are dark green above and have serrate margins.

For previous introduction see No. 78400.

82475. CORNUS COREANA Wanger. Cornaceae. **Dogwood.**

From Heizan. A tree, native to Chosen, up to 60 feet high, with reddish-brown branchlets, dark-green, elliptic leaves 3 to 6 inches long, loose clusters of small white flowers, and black fruits.

For previous introduction see No. 78401.

82476. CORNUS OFFICINALIS Sieb. and Zucc. Cornaceae.
Japanese cornelian-cherry.

From Hosen. A shrub or small tree up to 30 feet high, closely resembling the common cornelian-cherry, *Cornus mas.* The ovate to elliptic leaves are 2 to 6 inches long and have large axillary tufts of brown hairs on the under side. The umbels of small yellow flowers are followed by oblong scarlet fruits. Native to Japan.

For previous introduction see No. 56024.

82470 to 82488—Continued.

82477. FORSYTHIA KOREANA Nakai. Oleaceae.

From Keijo. While a place of publication or a description for this name has not been found, the forsythias are hardy ornamental shrubs with yellow flowers much used in ornamental plantings, and the addition of another form is desirable.

82478. FRAXINUS CHINENSIS RHYNCHOPHYLLA (Hance) Hemsl. Oleaceae. **Ash.**

From Junten. A rather small ash, native to China, 40 feet or less in height, with dark-green leaves, lighter beneath, consisting of five to seven narrowly oblong, irregularly toothed leaflets 2 to 5 inches long.

For previous introduction see No. 66258.

82479. FRAXINUS MANDSHURICA Rupr. Oleaceae. **Manchurian ash.**

From Inritsu. A handsome ash, often 100 feet high, native to Japan and the adjacent parts of the Asiatic mainland. The leaves are up to 15 inches long, with dull-green bristly leaflets. The tree is said to be susceptible to late spring frosts.

For previous introduction see No. 71390.

82480 to 82488. LESPEDEZA spp. Fabaceae.

From Keijo.

82480. LESPEDEZA BICOLOR Turcz. **Shrub bushclover.**

A bushy, herbaceous perennial, native to Japan, which bears a profusion of rosy purple flowers, during the early autumn, practically covering the drooping branches which sometimes become 6 feet in length.

For previous introduction see No. 69812.

82481. LESPEDEZA FORMOSA (Vogel) Koehne. **Purple bushclover.**

Received as *Lespedeza japonica intermedia,* which appears to be a form of *L. formosa. L. japonica intermedia* was originally described as an erect semishrubby plant, 6 to 12 feet high, with trifoliolate leaves of oblong leaflets and racemes of rosy purple flowers. Native to Chosen.

82482. LESPEDEZA MAXIMOWICZII C. Schneid. **Bushclover.**

A shrubby bushclover from Chosen, resembling *Lespedeza buergeri,* from which it differs in the structure of its calyx. The leaves are very thin, dull-green above, bright green below, and the violet flowers are arranged in loose whorls.

82483. PINUS KORAIENSIS Sieb. and Zucc. Pinaceae. **Korean pine.**

From Hosen. A 5-needle pine, up to 100 feet high, native to Japan. It produces valuable lumber and edible seeds and is also of ornamental value, being slow in growth and forming a dense broad pyramidal head with handsome foliage.

For previous introduction see No. 75680.

82484. PINUS TABULAEFORMIS Carr. (*P. leucosperma* Maxim.). Pinaceae. **Chinese pine.**

82470 to 82488—Continued.

From Mozan. A pine up to 75 feet high, with dark-gray bark on the trunk, red on the branches, and orange or grayish-yellow branchlets. The glaucescent leaves, usually two in a cluster, are stout and 3 to 6 inches long, and the ovoid cones, 2 to 4 inches long, are pale tawny yellow, changing to dark brown and persisting for several years.

For previous introduction see No. 78405.

82485. RHODODENDRON SCHLIPPENBACHII Maxim. Ericaceae. **Royal azalea.**

For previous introduction and description see No. 82163.

82486. SYRINGA OBLATA DILATATA (Nakai) Rehder. Oleaceae. **Lilac.**

From Heizan. A loosely branched shrub up to 12 feet high, with ovate, long-pointed leaves 6 inches long, and loose clusters of pale, purple-lilac flowers. Native to Chosen.

For previous introduction see No. 78412.

82487. ULMUS PARVIFOLIA Jacq. Ulmaceae. **Leatherleaf elm.**

From Keijo. Received as *Ulmus sieboldii koreana,* which is a form of *U. parvifolia,* said to differ from the usual form in having deciduous rather than half-evergreen leaves, persistent deeply fissured bark, and larger fruits. Native to Chosen.

82488. ZELKOVA SERRATA (Thunb.) Makino (*Z. acuminata* Planch.). Ulmaceae. **Sawleaf zelkova.**

For previous introduction and description see No. 82353.

82489 to 82495. DIOSPYROS spp. Diospyraceae.

From Koka, island of Kokato, Chosen. Scions collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82489 to 82494. DIOSPYROS KAKI L. f. **Kaki persimmon.**

82489. No. 1724. November 10, 1929. *Shushi.* From a tree about 30 or 40 years old, producing round, somewhat-flattened fruits about 2 inches in diameter. Said to be an astringent and seedless variety and is used rather commonly for drying.

82490. No. 1725. November 10, 1929. *Panyori* or *Panshi.* A flat variety 2 to 3 inches across and over 1 inch deep. This variety is rather abundant, and the fresh fruits are extensively used on the island. At one time they were used for drying.

82491. No. 1726. November 10, 1929. *Koka.* A large flat persimmon somewhat larger than the Panyori [No. 82490], but not so thick and not so extensively grown, though the fruits are very good; they are nonastringent and seedless.

82492. No. 1727. November 10, 1929. *Tizon.* A good-sized flat variety, grown only for local use.

82493. No. 1728. November 10, 1929. *Choshi.* An extensively grown variety producing seedless, astringent

82489 to 82495—Continued.

fruits which are somewhat longer pointed than those of No. 1729 [No. 82494].

82494. No. 1729. November 10, 1929. *Choshi.* A medium-long pointed and round variety. While not the largest, it is one of the best.

82495. DIOSPYROS LOTUS L. **Dateplum.**

No. 1730. November 10, 1929. From water sprouts from an old kaki tree.

82496. EUONYMUS sp. Celastraceae.

From Chosen. Plant collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

No. 1742. From the mountain adjacent to the boat landing at Kokan, island of Kokato, November 11, 1929. The dwarf habit of this Euonymus may be due to adverse conditions on the mountains, combined with annual cutting back. The husk of the fruit is pink and the berries are red.

82497 to 82503. PHASEOLUS spp. Fabaceae.

From Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 23, 1929.

82497 to 32501. PHASEOLUS ANGULARIS (Willd.) W. F. Wight. **Adsuki bean.**

82497. No. 1267. From Kokato, November 11, 1929. *Chapa.* A medium-small olive-and-black marbled variety, used, after grinding, for cattle feed.

82498. No. 1268. From Kokato, November 11, 1929. *Chapa.* A medium-small greenish-yellow variety.

82499. No. 1798. From the Chosen grain market, Keijo, November 21, 1929. *Jappa.* A mixed sample of varieties which are coarsely ground and used as cattle feed.

82500. No. 2001. From the Chosen grain market, Keijo, November 21, 1929. *Kepipa.* A medium-large gray-and-black variety, coarsely ground and used as cattle feed.

82501. No. 2017. From the Chosen grain market, Keijo, November 21, 1929. A medium-sized red-and-white variety, used, when ground, for cattle feed.

82502. PHASEOLUS AUREUS Roxb. **Mung bean.**

No. 1921. From the Chosen grain store, Heijo, November 18, 1929. *Rokuto.* A medium-sized glossy green variety with a white hilum; used for sprouts.

82503. PHASEOLUS VULGARIS L. **Common bean.**

No. 1276. *Kotebo.* A small white bean from Shariin, November 14, 1929; originally grown in the Kanto section, northeastern Manchuria.

82504 and 82505.

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82504 and 82505—Continued.

82504. QUERCUS sp. Fagaceae.

No. 1545. Between Onohara and Kuraya, October 18, 1929.

82505. QUERCUS sp. Fagaceae.

No. 1546. From Kagemori, October 18, 1929. From an evergreen tree, 30 feet or more high.

82506 to 82508.

From Keijo, Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929.

82506. CELASTRUS ARTICULATUS Thunb. Celastraceae. **Bittersweet.**

No. 1561. October 27, 1929. A fine specimen with corky or winged branches which showed most beautiful fall coloration.

82507. CELASTRUS ARTICULATUS Thunb. Celastraceae. **Bittersweet.**

No. 1555. A vine growing to the top of a tree about 20 feet high, in the grounds of the Chosen Hotel. The yellow husks of the fruit open and persist, showing the red fruit.

82508. EUONYMUS ALATUS (Thunb.) Rupr. Celastraceae. **Winged euonymus.**

No. 1560. October 27, 1929. A species with corky or winged branches.

For previous introduction see No. 81642.

82509 to 82598. SOJA MAX (L.) Piper (*Glycine hispida* Maxim.). Fabaceae. **Soybean.**

From Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 23, 1929.

82509 to 82511. Obtained near Shariin, November 13, 1929.

82509. No. 1269. *Hinkon.* A variety with medium-sized glossy yellow seeds with a pale hilum; used for miso, soy sauce, and tofu.

82510. No. 1270. *Pokon.* A variety with brown, medium-sized, much flattened seeds, very much the color and shape of the Virginia variety. The plants are somewhat slender and 36 to 42 inches high. It is commonly called the cow or ox bean.

82511. No. 1272. Selected out of the Hinkon variety. The seeds are greenish yellow, more or less mottled with brown, and have a brown hilum. They are flattened and much like the Virginia variety in shape. Used when boiled for cattle feed.

82512 to 82527. Heijo, November 16, 1929.

82512. No. 1277. *Chankon.* A yellow, medium-small to small variety with a pronounced brown hilum; said to be used for sprouts.

82513. No. 1278. *Chinunikon.* A medium-sized, nearly round, brown variety, said to be used for cattle feed.

82514. No. 1279. *Purunkon.* A mixture of yellow-seeded varieties ranging from medium small to medium large; said to be used for cattle feed.

82509 to 82598—Continued.

82515. No. 1280. *Chokute.* A mixture of brown-seeded varieties ranging from medium to medium large; said to be used for cattle feed.

82516. No. 1281. *Komujankon.* A medium-sized, oval, black variety, said to be used as boiled beans and in making confections.

82517. No. 1283. *Suigen.* A medium-sized to medium-large yellow variety, used for bean curd, miso, and soy sauce. The hilum varies from pale to light brown.

82518. No. 1284. A medium-sized oval variety with a pale-brown hilum; used for bean curd, miso, and soy sauce.

82519. No. 1285. *Kaijankon.* A large, oval, yellow variety with a light-brown hilum; used for bean curd, miso, and soy sauce.

82520. No. 1286. *Chankon.* A medium-sized, oblong, greenish-yellow variety, said to be used for sprouts.

82521. No. 1287. *Tatekon.* A medium-sized, oval, yellow variety with a pale to light-brown hilum; said to be used for miso, soy sauce, and bean curd.

82522. No. 1288. *Irute.* A medium-small to medium-sized oval yellow variety with a pale to light-brown hilum; used for bean curd, miso, and soy sauce.

82523. No. 1289. *Tatekon.* A mixture of medium-sized yellow varieties with the hilum from pale to dark brown; used as boiled beans and also boiled for cattle feed.

82524. No. 1290. *Chonte.* A medium-sized greenish-yellow variety with a slate-black hilum; used as boiled beans and also boiled for cattle feed.

82525. No. 1291. *Panunkon.* A mixture, evidently of hybrid origin, of medium-sized greenish-yellow seeds; used for cattle feed when boiled.

82526. No. 1292. *Purunumkon.* A medium-sized oval green variety, used as boiled beans and also boiled for cattle feed.

82527. No. 1293. *Pumunkon.* A medium-sized oval greenish-yellow variety with a pale to light-brown hilum; used as boiled beans and also boiled for cattle feed.

82528. No. 1294. Near Kokaishu, November 15, 1929. *Komjankon.* A medium-large, somewhat flattened, black variety, used as boiled beans and also in making confections.

82529. No. 1295. Near Kokaishu, November 15, 1929. *Ginta Untei.* A mixture of yellow varieties, said to be used as boiled beans and also boiled for cattle feed.

82530 to 82533. From the Chosen farmers' market, Shariin, November, 1929.

82530. No. 1296. *Chafatekon.* A medium-sized oval yellow variety with a pale hilum; used for miso and soy sauce.

82531. No. 1297. *Sonkon.* A mixture of medium-small to small yellow varieties, used for sprouts.

82509 to 82598—Continued.

82532. No. 1298. *Oiarukon.* A medium-large, oval, yellow variety with a pale to light-brown hilum; used for bean curd, miso, and soy sauce.

82533. No. 1299. *Sankon.* A mixture of medium-small, yellow, greenish-yellow, and brown varieties; used entirely when boiled for cattle feed.

82534. No. 1300. From the Chosen Kogyo Co. farm near Kokaikoshu, November 15, 1929. *Chotan.* A medium-sized, oval, glossy yellow variety, mostly exported to the main island of Hondo for making soy sauce, miso, and bean curd.

82535 to 82537. From the Chosen farmers' market, Shariin, November 15, 1929.

82535. No. 1751. *Chankon.* A medium-sized oval glossy yellow variety, used for making bean curd, soy sauce, and miso.

82536. No. 1752. *Chunonkon.* A small, greenish-yellow to yellow, round variety with a pale to light-brown hilum; used for sprouts.

82537. No. 1753. *Tatteikon.* A mixed sample of yellow varieties, used as boiled beans and also in making miso and soy sauce.

82538. No. 1754. From a warehouse in Kokaikoshu, November 15, 1929. *Koshumitta.* A medium-small, nearly round, glossy yellow variety, used for miso, soy sauce, and bean curd.

82539. No. 1755. From a warehouse in Kokaikoshu, November 15, 1929. *Chotanchame.* A medium-sized, nearly round, glossy yellow variety with more or less variation in the color of the hilum; used for bean curd, soy sauce, and miso.

82540 to 82547. From the Chosen farmers' market, Shariin, November 15, 1929.

82540. No. 1756. *Bankon.* A medium-sized oval glossy yellow variety, used for soy sauce, bean curd, and miso.

82541. No. 1757. *Chabatekon.* A medium-sized oval glossy yellow variety, used for making miso, soy sauce, and bean curd.

82542. No. 1758. A medium-large, nearly round variety with a light-brown hilum; used for making bean curd, soy sauce, and miso.

82543. No. 1759. *Pattekon.* A mixture of medium-small, yellow, greenish-yellow, and brown varieties; used when boiled for cattle feed.

82544. No. 1760. *Chankon.* A medium-small, much flattened, yellow variety more or less mixed with greenish-yellow and brown varieties; used when boiled for cattle feed.

82545. No. 1761. *Oiarukon.* A medium-large, nearly round, yellow variety with a light-brown hilum; used for bean curd, miso, and soy sauce.

82546. No. 1762. *Chonte.* A medium-sized oval glossy yellow variety with a pale hilum; used for soy sauce, miso, and bean curd.

82547. No. 1763. *Chunnonkon.* A very small, nearly round, yellow variety, used for sprouts and also boiled for cattle feed.

82509 to 82598—Continued.

82548. No. 1764. Kokaikoshu, November 16, 1929. *Chotan.* A medium-sized oval glossy yellow variety with a pale hilum; used in making miso, bean curd, and soy sauce.

82549. No. 1774. Near Ryugaku, November 17, 1929. *Chonkon.* A medium-sized green oval variety with a mixture of brown and slate-black hilums; used for food when boiled.

82550. No. 1775. Near Fusanmen, November 17, 1929. *Pakute.* A mixture of yellow-seeded varieties, used for boiled beans, soy sauce, and miso, and as cattle feed when boiled.

82551. No. 1776. Near Ryugaku, November 17, 1929. *Papute.* A medium-sized yellow oval variety with a pale hilum; used in making miso and soy sauce, and also boiled with rice.

82552 to 82558. From Keijo, November, 1929.

82552. No. 1790. *Hinkon.* A mixture of yellow varieties ranging from medium small to very large; used as boiled beans and also boiled for cattle feed.

82553. No. 1791. *Komujonkon.* A large, black variety, used in making soybean confections.

82554. No. 1792. *Haiyonkon.* A large, oval, yellow variety with a pale hilum; used in making miso, natto, soy sauce, and bean curd.

82555. No. 1796. *Chanpakute.* A medium-sized oval glossy yellow variety with a pale hilum; used in the manufacture of bean curd, soy sauce, natto, and miso.

82556. No. 1797. *Futte.* A medium-sized, somewhat flattened black variety, used in making soybean confections, especially candied beans.

82557. No. 1799. *Kirgunte.* A medium-small, nearly round green variety with a light-brown hilum; used for sprouts.

82558. No. 1800. *Somokute.* A medium-small round black variety, used in making soybean confections.

82559 to 82578. From Heijo, November, 1929.

82559. No. 1901. *Kirupakute.* A mixed sample of yellow varieties varying in size and shape and in the color of the hilum; used for miso and soy sauce, and also boiled for cattle feed.

82560. No. 1902. *Pakute.* A mixture of yellow and greenish-yellow varieties; used for miso and soy sauce, and also boiled for cattle feed.

82561. No. 1903. *Shote.* A medium-small, nearly round, yellow variety with a light-brown hilum; used for sprouts.

82562. No. 1904. *Irukon.* A medium-sized oval yellow variety with a pale hilum, somewhat similar to *Chotan.* Used for miso, soy sauce, and tofu (bean curd).

82563. No. 1905. *Chikamunkon.* A medium-small green variety with a brown hilum; used for sprouts.

82509 to 82598—Continued.

82564. No. 1906. *Kirumukon.* A mixed sample of yellow-seeded varieties; used for miso and soy sauce, and also boiled for cattle feed.

82565. No. 1907. *Purunkon.* A medium-sized greenish-yellow variety with a pale hilum, resembling the Tokio [No. 17267]; used for cattle feed.

82566. No. 1908. *Purukunkon.* A medium-sized oval green variety with a white hilum; used as boiled beans and also boiled for cattle feed.

82567. No. 1909. *Namuri.* A medium-small greenish-yellow variety with variations in the color of the hilum; used for cattle feed when boiled.

82568. No. 1910. *Purute.* A medium-large seal-brown variety, used as boiled beans for cattle feed.

82569. No. 1911. *Kon.* A medium-small yellow variety with a brown hilum; used for boiled beans and also boiled for cattle feed.

82570. No. 1912. *Fukuto.* A medium-large brown variety, used for cattle feed when boiled.

82571. No. 1913. *Namute.* A medium-sized greenish-yellow variety with a brown hilum; used as boiled beans and also for sprouts.

82572. No. 1914. *Hinkon.* A medium-sized yellow variety with a pale hilum; used as boiled beans and also boiled for cattle feed.

82573. No. 1915. *Pankute.* A medium-large, nearly round, yellow variety with a light-brown hilum; used for bean curd, miso, and soy sauce.

82574. No. 1916. *Chosenkon.* A sample of mixed yellow beans of medium-large size and with variations in the color of the hilum; used as boiled beans and also for miso, soy sauce, and bean curd.

82575. No. 1917. *Pakukon.* A mixed sample of yellow varieties varying in the size and shape of the seeds and in the color of the hilum; used for miso, soy sauce, and bean curd.

82576. No. 1918. *Urukon.* A mixed sample of yellow varieties varying from medium small to medium sized; used when boiled for cattle feed.

82577. No. 1919. *Kirukon.* A medium-sized brown variety with a small mixture of yellow beans; used when boiled for cattle feed.

82578. No. 1920. *Pakute.* A medium-sized yellow variety varying in the color of the hilum; used as boiled beans and also in making miso and soy sauce.

82579 to 82598. From Keijo, November, 1929.

82579. No. 1922. *Komujonkon.* A medium-sized black variety, used in making soybean confections.

82580. No. 2002. *Hinkon.* A medium-sized oval yellow variety with a pale hilum and a slight mixture of beans with brown hilums; used in making natto, bean curd, soy sauce, and miso.

82509 to 82598—Continued.

82581. No. 2003. *Chontekon.* A medium-large, nearly round, green variety with a light slate-black hilum; used as boiled beans.

82582. No. 2004. *Komujankon.* A medium-sized, somewhat flattened black variety, used in making soybean confections, especially candied beans.

82583. No. 2005. *Oriarukon.* A medium-sized greenish-yellow variety with a black hilum; used when boiled as cattle feed.

82584. No. 2006. *Kirugunte.* A medium-small, nearly round, yellow variety with a brown hilum; used for sprouts.

82585. No. 2008. *Pakute.* A mixed sample of yellow seeds varying from medium to very large; used in making miso and soy sauce, and boiled as cattle feed.

82586. No. 2009. *Purunkon.* A medium-sized green variety with a light-brown hilum; used as boiled beans.

82587. No. 2010. *Kirugunkon.* A very small, nearly round, yellow variety with a pale hilum; used for bean sprouts.

82588. No. 2011. *Kahei.* A medium-sized oval glossy yellow variety with a brown hilum; especially good in making a high grade of natto, and also used for soy sauce and bean curd.

82589. No. 2012. *Kirugunte.* A very small round yellow variety with a pale hilum; used for sprouts.

82590. No. 2013. *Tetsukon.* A medium-large, yellowish-brown, slightly flattened variety, used as cattle feed when boiled.

82591. No. 2014. *Papute.* A large nearly round, yellow variety with a pale hilum; used in making miso and soy sauce, and also boiled for cattle feed.

82592. No. 2016. *Funkon.* A medium to medium-large oval yellow variety with a pale hilum, and a slight mixture of beans with a brown hilum; used as boiled beans and also as cattle feed.

82593. No. 2018. *Futti.* A medium to medium-large black variety, used in making soybean confections, especially candied beans.

82594. No. 2019. *Chonte.* A medium-large, green, nearly round variety with a green germ; used as boiled beans.

82595. No. 2020. *Chimnikon.* A medium-sized oval glossy yellow variety with the color of the hilum varying from pale brown to a darker brown; used in making bean curd, soy sauce, and natto.

82596. No. 2021. *Ajukarukon.* A medium-sized, slightly flattened black and white variety, used in making soybean confections.

82597. No. 2022. *Chonte.* A medium-large oval green variety with a brown hilum; used as boiled beans.

82598. No. 2023. *Kirugunte.* A mixed sample of small, nearly round, yellow varieties with variations in the color of the hilum from pale to black or brown; used for sprouts.

82599. VIGNA SINENSIS (Torner) Savi. Fabaceae. Cowpea.

From Chosen, Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 23, 1929.

No. 2007. Obtained in the Chosen grain market at Keijo, November 21, 1929. *Tonfu.* An edible variety with medium-small white seeds with a brown eye.

Cornelian-cherry. See *Cornus officinalis*.
Cornus coreana, 82070, 82071, 82475.
officinalis, 82476.
Cotton. See *Gossypium* spp.
upland. See *G. hirsutum*.
Cowpea. See *Vigna sinensis*.
Cranesbill, Iberian. See *Geranium ibericum*.
Crataegus spp., 82073, 82401.
coccinea, 81714.
sanguinea, 81731, 82072.
Crotalaria sp., 82074.
Cucumis melo, 81628, 81629, 81865–81883.
Currant, fetid. See *Ribes glandulosum*.
swamp red. See *R. triste*.
winterberry. See *R. fasciculatum*.

Dadap. See *Erythrina variegata orientalis.*
Danthonia semiannularis, 81942.
Daphne alpina, 81829.
caucasica, 81830.
Daphne, alpine. See *Daphne alpina.*
Caucasian. See *Daphne caucasica.*
Dateplum. See *Diospyros lotus.*
Daylily. See *Hemerocallis* sp.
Delphinium consolida, 81884.
orientale, 81885.
pylzowi, 81886.
Desmodium podocarpum. See *Meibomia japonica.*
Diervilla sp., 81732.
Dioscorea sp., 82076.
septemloba, 82468.
Diospyros spp., 81686, 82033.
kaki, 82410–82412, 82489–82494.
lotus, 82077, 82421, 82495.
Dipelta ventricosa, 81848.
Diplothemium caudescens. See *Allagoptera caudescens.*
Disporum sessile, 81949.
Dogwood. See *Cornus coreana.*
Dolicholus phaseoloides, 81922.

Ehrharta calycina, 81943.
Elder. See *Sambucus* spp.
Elm, leatherleaf. See *Ulmus parvifolia.*
Japanese. See *Ulmus japonica.*
Erica scoparia, 81999.
Erythrina lithosperma. See *E. variegata orientalis.*
variegata orientalis, 81923.
Escallonia sp., 82367.
Euchlaena mexicana × *Zea mays,* 81814.
Eugenia floribunda. See *Myrciaria floribunda.*
Euonymus spp., 81733–81734, 81736, 82423, 82424, 82496.
alatus, 81642, 82508.
Euonymus, winged. See *E. alatus.*

Fagara ailanthoides, 82078.
Fagopyrum esculentum, 81737, 81738, 82079, 82080, 82425–82427.
Falcata japonica, 81643, 82081.
Fairybells. See *Disporum sessile.*
Ficus altissima, 82398.
carica, 81676–81678.
religiosa, 81823.
Fig, lofty. See *Ficus altissima.*
Fir, needle. See *Abies holophylla.*
Flacourtia cataphracta. See *F. jangomas.*
jangomas, 81688.
Flax. See *Linum usitatissimum.*
Forsythia sp., 82082.
koreana, 82477.
Fragaria spp., 81739, 81887.
canadensis, 81716.
hagenbachiana, 82406.
vesca, 81715.
Fraxinus sp., 82428.
chinensis rhynchophylla, 82478.
mandshurica, 82479.
Fritillaria camschatcensis, 81852.

Garcinia dives, 81925.
mangostana, 81935.
Geranium ibericum, 81820.
Gleditsia horrida, 82083.
Glycine hispida. See *Soja max.*
Gossypium spp., 82000–82007.
herbaceum, 81834–81839.
hirsutum, 81840, 81841.
nanking, 82084, 82429, 82430.
Grape. See *Vitis* spp.
European. See *V. vinifera.*
riverbank. See *V. vulpina.*
Grapefruit. See *Citrus grandis.*
Grass, perennial veldt. See *Ehrharta calycina.*
